HOPE, BOB May 29, 1903- Radio entertainer; film actor

Address: c/o Paramount Pictures, 5451 Marathon St, Hollywood, Calif.

Bob Hope, one of the most ingratiating zanies in motion pictures and radio. was born in Eltham, Kent, England, the son of a stone contractor and a Welsh concert singer, Agnes Townes Hope. He started life as Leslie Townes Hope, but quickly shifted to "Bob" when the boys in school began to call him "Hope-less." By this time he had settled in Cleveland with his family (the Hopes came over in 1907 when Bob was four) and had started a busy boyhood. There were six children in his not-too-prosperous family, and Bob sold papers, collected money prizes in Cleveland's racing events (he was the best sprinter in school), won prizes for Charlie Chaplin imitations, saved carfare by singing for his fare on streetcars (his was a lovely soprano voice before it changed) and worked as a helper in his older brother's butcher shop.

After he was graduated from high school, Bob Hope started looking around for a trade for a bright young man. He tried boxing and got to the semi-finals of the Ohio novice championship under the name of "Packy East." There his boxing career was cut short, and Hope began giving lessons in Sojack's Dancing Academy. For a short while he held a job with the Chandler Motor Company, keeping it, he claims, only because of his ready wit which shone brightly during conventions and picnics. Finally he decided to go on the stage. With a partner, another stage-struck lad called George Byrne, he toured Midwest towns hoofing and singing in blackface until he discovered, or was told by show business colleagues, that he was much funnier without blackface and a better monologuist than dancer. (This was after he and Byrne joined the act of a pair of Siamese twins.)

For a while Hope starved in Chicago, living in a Southside theatrical boarding house where "the maid came in once a day to change the rats." Little by little, however, he worked his way into the larger Midwest circuits and was able, finally, to form his own Chicago company. Edgar Bergen and Charlie McCarthy were in it, and it was quite successful. Hope moved on to New York. Here again his steady flow of superior wisecracks took him into the hearts of large and sophisticated audiences. For a while he tapped the RKO vaudeville circuit, then in 1927 was given a small part in *The Sidewalks of New York* and in 1928 a larger one in *Smiles.*

His first big stage part came in the *Ballyhoo of 1932* and it was followed in 1933 by *Roberta,* in which he played Huckleberry Haines, a fast-talking, piano-playing, singing, dancing part that established him in the theatre. It was during the run of *Roberta,* too, that Hope met and married Dolores Reade, then a singer at the Vogue Club. In 1936 he was capering on the stage with Fannie Brice in *Ziegfeld Follies*; from that show he was snatched to play with Ethel Merman (see sketch this issue) and Jimmie Durante in Cole Porter's *Red, Hot and Blue.*

His reputation as a successful comedian with a swift, crackling style of patter securely established, radio claimed him. Hope had once declined a radio offer because he felt "radio would never amount to anything" and so lost five years of ether bonanza. He now began making up for those five years, his first appearance being on the *Atlantic Family* program in 1935. Then he starred for the Jergens-Woodbury Sales Corporation in the *Rippling Rhythm Review,* where he left an indelible mark on the radio, and doubtless on his own history, by inventing a stooge called "Honeychile" Wilder, possessor of a syrupy Southern drawl and a minimum of brains. Hope is generally fond of surrounding himself with stooges of weird and marvelous personality, like Jerry Colonna of the eerie mustache, Brenda and Cobina, and an attenuated character called Skinnay Ennis. He became well known in Hollywood for his program *Music for Hollywood,* and in 1941 boosted Pepsodent. His Crossley rating is third highest, which means 22,000,000 listeners for the Pepsodent Company.

Bob Hope's film career began in 1938 when he was put into the *Broadcast of 1938* to sing a sentimental song called *Thanks for the Memory* with Shirley Ross. The song survived the picture and resulted in a screen venture of the same name, in which Hope played the lead. For the next year he appeared in lively but not too distinguished comedies for Paramount, and then, with *The Cat and the Canary,* which starred him and Paulette Goddard, a successful formula for him was found. It consisted of building up a sinister situation and then injecting Hope into it. In *The Cat and the Canary* (1939) his long, curious nose pursued mystery along dark, damp Florida bayous. In his next picture, *The Ghost Breakers,* he pursued it in a forsaken castle in Cuba, complete with ghosts, skeletons, zombies and other ghastly effects. He was no hero, but a frank and shameless coward who found himself in ticklish situations merely from sheer good nature and curiosity.

BOB HOPE

In the tenth film of his career, *The Road to Zanzibar* (1941), shovel-chinned, wise-cracking Bob Hope played Fearless Frazier and with Bing Crosby managed to present one of the best musical comedy successes of the year. The scene was darkest Africa; the plot just "one darn gag after another."

Hope fans had hardly stopped laughing in it when they were given *Caught in the Draft,* a "lively package of nonsense" in which Hope tears himself to pieces all because of the Selective Service Act. Its successor, just as beautifully abundant in gags and also blessed with Hope's dry, off-hand delivery, was *Nothing But the Truth,* an ancient farce kicked around blithely, with Hope trying ($100,000 was at stake) to tell the truth for 24 hours.

All these parts together combined to get Hope a new term contract at a reported $150,000 a picture. Other comedians undoubtedly envy him his contract, but many of them turn greener at his ad libbing prowess and his irresistible facility in producing gags. Some of his quips, indeed, have become a part of everyday conversation: "You and your education", "That's what I keep on telling them down at the office", "How do you like that traffic cop?" and the ingenuous query of "Who's Yehudi?" Hope doesn't write all of his own gags, but he is admitted to be the

HOPE, BOB—*Continued*

best radio gag editor in the business. And he does all right on his own, as his performance at the Annual Film Award banquet proved. He was unexpectedly given a medal "in recognition of his unselfish services to motion pictures" (in the form of 258 benefit appearances) and made a knockout impromptu speech. In the fall of 1941 his autobiography, *They Got Me Covered,* appeared.

Bob Hope has been described as a "portrait of a young man in a hurry." He is unhappy in repose, but is fortunately kept busy—and prosperous—what with peddling Pepsodent on the radio, making pictures for Paramount, endorsing testimonials and occasionally issuing from Hollywood to make incursions on local purses in the form of tremendously successful personal appearance tours. Bob Hope at home is very like Bob Hope on the screen or radio. A genial, brawny six-footer, with gimlet-like brown eyes and chin and nose profiled like ski-slides, he loves playing golf, driving fast, funnies, detective stories, billiards. He collects bad notices, carefully frames them and hangs them in his bar. He is fairly superstitious, believes in hunches, will never miss a boxing match. His favorite occupation is being a comedian, and you can depend on him for a Hope-ism almost any time.

HOPKINS, HARRY L(LOYD) 1890- Executive Secretary of the United States War Cabinet to Administer the Lend-Lease Act

Address: c/o The White House, Washington, D. C.

Harry Hopkins, most commentators agree, is "uniquely the President's friend, counselor and confidant." Since the day Germany invaded Belgium and Holland he had slept in the White House, one of Roosevelt's key aids on national defense. In January 1941 he was sent to London as Roosevelt's personal representative, without diplomatic standing. He returned to this country five weeks later after conferring with England's leaders to inform the United States that Great Britain needed our help "desperately" and needed it "now" and to present the Administration with details of how that aid should be given. Not long afterward he was given the responsibility of administering the Lend-Lease Bill. In his capacity of administrator he flew back to England in July 1941 and from there hopped over to Moscow to offer Stalin an immediate flow of United States war supplies to aid Russia's fight against the German armies. Then he returned to Washington.

Facts about all that Harry Hopkins observed abroad and all that he has the responsibility of observing here are relayed directly to the President. For many years now these two men have been exceedingly close, and since 1933, when Hopkins came to Washington as head of the Federal Emergency Relief Administration, he has been considered one of the strongest personal influences on the President. It was he, opinion has it, who sold the President the idea that the unemployed must be fed and given work; he who, according to Raymond Clapper, led Roosevelt to dramatize the one-third of our population which he described as ill-fed, ill-housed and ill-clothed. As Secretary of Commerce, Hopkins' relationship with the President continued exceedingly close, and it was he who in 1940 handled the draft-Roosevelt movement at the Democratic Convention, performing "like a commanding general in the field."

This "rangy, slangy Iowan" and the President see eye to eye on social, economic and political questions, despite innumerable differences of background, upbringing and training. Hopkins' interest in social questions is the interest of a lifetime spent working with poverty, of a lifetime "deeply devoted to the cause of human welfare." Virtually every position he has held since college has been devoted to making better the condition of that unhappy "one-third of a nation."

Harry Hopkins was born in Sioux City, Iowa, where his father was a harness maker. Later his father became a traveling salesman in leather goods, and the family moved to a small town in Nebraska, then to Chicago and finally to Grinnell, Iowa, where Hopkins senior opened another harness shop. Mrs. Hopkins was a pious Methodist who gave her five children a thorough Methodist training, taught them hymns and saw that they attended church regularly.

Harry was 11 when his family moved to Grinnell, a homely, big-eared youngster who was continually getting himself into hot water. Like others in his family he went to the college there (Grinnell) and was the "big man of the class of 1912," business manager of the college paper, a member of the varsity basketball and tennis teams, and a politician of note. His majors were history and political economy, and he was graduated *cum laude.*

Out of college, he was about to take a job on a Montana weekly newspaper when one of his professors urged him to spend the summer as director of a boys' camp in New York State, run by Christadora House, a settlement house on the lower East Side of New York City. After a summer at camp he began work for the settlement house in New York. After a year there he went to the New York Association for Improving the Condition of the Poor, in charge of fresh air work and unemployment relief. While working for this organization he was married to Ethel Gross, secretary to the head of Christadora House. (There are three sons of this marriage, which was ended by divorce in 1930.)

From 1915 to 1917 Hopkins was handling widows' pensions for the New York City Board of Child Welfare. Then came the First World War. Rejected from the Army because of defective eyesight, Hopkins became chairman of the Southern Division of the Red Cross with headquarters in New Orleans. After taking this Division through the War and the depression of 1921, Hopkins returned to New York and the A. I. C. P. (now Community Service Society of New York) as assistant director. Two years later, in 1924, he became head of the New York Tuberculosis Association (now the New York Tuberculosis and Health Association) and proceeded to build up an organization which has become "one of the most potent forces in the country for research in preventive medicine and the encouragement of local action."

It was in 1928 that Hopkins first met Roosevelt—during the Al Smith campaign. The two men instantly liked each other, and when in 1931, as Governor of New York, Roosevelt wanted somebody to head his Temporary Relief Administration, he remembered Hopkins and his experience. While still keeping part of his Tuberculosis Association position, Hopkins became working director of the Relief Administration and in 1932 its chairman. In two years he spent $140,000,000 in public relief funds. Swimming pools were built, day schools for practical training of the unemployed were opened, forestry camps were set up and few new methods of relief were left untried.

Hopkins worked hard and efficiently at his administrator's job and at the same time was generally "indefatigable in promoting sound living." He wrote hundreds of letters to editors of papers on safety rules for swimmers, exterminating flies, tuberculosis, letters praising girls who led healthy outdoor lives, condemning women who spent more on cosmetics than toothbrushes. And he managed at the same time to lead a fairly regular suburban life which included golf, poker and playing with his sons. He had been married again in 1931, too—to Barbara Duncan, whom he met while he was working with the Tuberculosis Association. She died in 1937, and the one daughter by this marriage spends much of her time at the White House.

Then came Washington. When Roosevelt transplanted New York's Temporary Emergency Relief Administration on a national scale, he transplanted Hopkins with it. He had never had any other man in mind for the job, he said. Hopkins immediately took over the job of Administrator of the Federal Emergency Relief Act and from that date, May 20, 1933, until July 1, 1938, spent almost $8,500,000,000 for unemployment relief. As one columnist put it: "Hopkins is history's greatest spender. Beside him Solomon was a miser . . . the Caesars a bunch of small town boys on a Saturday night spree at the local tavern."

Associated Press

HARRY L. HOPKINS

With a "wild slicing of red tape," Hopkins got under way. Shortly after, in November 1933, the President set up the Civil Works Administration to put men to work on simple activities that needed arms and legs rather than complicated plans and machinery. Paul Ward says the CWA was Hopkins' own idea. Whether it was or not, he headed it with the firm belief that the necessary thing for the Government to do in those days of unemployment and relief was to "get projects that have dignity and are useful." The CWA fixed up rural schools, repaired courthouses, brought school records up to date, did health research and many more things. Its life was brief but many felt when it was ended in 1934 that it stood out "as the most successful of New Deal endeavors."

By the time of its demise Hopkins was a well known figure in Washington. His plain speaking had become famous even before his tilt with Al Smith, who called the CWA "a grapefruit halfway between the lemon of public works and the orange of relief." Hopkins talked right back: "If putting 4,000,000 men back to work means going into the grapefruit business then I am delighted to be in it. Al Smith taught me the word 'baloney' and now he has taught me sour grapefruit juice." Hopkins told state Governors: "You're getting in my hair"; he urged Senators to "quit lousing up my office with protests." He informed General Johnson that his NRA codes were

HOPKINS, HARRY L.—*Continued*

"lousy" and Secretary of the Interior Ickes (see sketch this issue) that his public works program was "all haywire." The critics of his projects were just "too . . . dumb to understand." Harry Hopkins has never been one to mince words.

When the CWA was terminated, the FERA took over the work of relief and Hopkins inaugurated its Rural Rehabilitation Program in 1934. In 1935 he was put in charge of the Works Progress Administration, which was created to carry out constructive work. Roads were drained, bridges built, storage dams improved, roads built. There was an Emergency Educational Program which taught 2,000,000 adults to read and write; and there was the NYA, under the WPA, which helped boys and girls to get an education. "The fastest, hardest worker in the Federal service," Hopkins was active during these years not only in his own job but on the President's Drought Committee and on the Committee on Economic Security; he handled the Federal Surplus Relief Corporation, too, and became a member of the National Emergency Council and the National Resources Board.

In his four and one-half years as head of Federal relief, Hopkins was the subject of "more criticism and controversy than all other New Dealers combined." People appreciated his determination "that no one shall go hungry," the humanity behind his hard-boiled briskness, his vision of a better time when the "people in America are going to live in decent homes, the fear of unemployment will be abolished in America, the economic losses due to illness will be abolished, old age will be made secure, and above all, people will have through their days an opportunity to live in an environment from which fear of economic insecurity is banished." People, too, recognized that he was an administrator and organizer of the first class—"he thinks faster than any one working for, against or with him. He remembers everything. He thinks in chunks of detail, smashes systems and gets things done."

At the same time there were many who accused him of playing Santa Claus, of building up a huge political machine to keep him and his friends in power. (There was the report of his saying before an election: "Spend and spend, tax and tax, elect and elect.") His "ribbing of businessmen in public and private" was resented, and he was believed to have designs on the capitalistic system because he stated that he had no faith in any relief program that did not remedy the underlying causes of destitution.

To these critics his appointment as Secretary of Commerce in December 1938 came as a shock. To others it came as a sign that the President intended, by the appointment of his "closest counselor," to crack down on business; to still others as a sign that he was offering business an olive branch. And some were sure it was a sign that Roosevelt was grooming him for the 1940 Presidential nomination. Unperturbed by the fuss, to the Senate Committee Hopkins affirmed his belief that, despite lack of business experience, he could do the job. "I have bought and sold millions and millions worth of goods. I have negotiated with businessmen on hundreds and thousands of deals." He also said he would mostly "just listen to what businessmen have to say." His job, he knew, was to study every aspect of the problems he would have to solve —labor, taxation, the utilities, the railroads, trade with Latin-America, the improvement of business conditions.

High-strung, hard-driven, hit by the death of his second wife at the end of 1937, it was not very long before Secretary Hopkins' health began to fail. Finally, in August 1940, he resigned his position, and Roosevelt wrote him: "Dear Harry. . . You may resign the office—only the office—and nothing else. Our friendship will and must go on as always." The friendship has continued, with Hopkins living in the White House, "one of the family, friend and counselor." And Harry Hopkins wasn't without an office long.

Even before he came to live at the White House or became Lend-Lease Administrator, Harry Hopkins never had much time for social life. When he did get a free evening he spent it at home playing poker—"an infrequent but frenzied player." George Creel once accused this long, loose-jointed, mildly lantern-jawed government worker of having something "of the weary, melancholy look of an ill-fed horse at the end of a hard day," a verdict that may or may not be generally acceptable. Probably the one written in *Fortune* in 1935 hits a little closer to most people's reaction to Harry Hopkins: "He gives off a suggestion of quick cigarets, thinning hair, brief sarcasm, fraying suits of clothes and wholly understandable preoccupation."

HORE-BELISHA, LESLIE (hōr-bĕl-lē-sh*ȧ*) Sept. 7, 1893- British member of Parliament; former Secretary of State for War

For a short while after Leslie Hore-Belisha had resigned from the Chamberlain Government on

January 4, 1940 there were few signs of life from him. But soon he was back in the limelight making public speeches that became increasingly stormy as Britain's military forces suffered reverses. By the time the "military disaster" of Crete was over, he was saying: "We suffer defeat after defeat and always for the same reasons—lack of appreciation, lack of preparation and the imperfect execution of the project. Each reverse is glossed over by the same series of incompatible explanations and the narcotic of false confidence in the future is invariably applied." Repeatedly he has warned Parliament, the Government and the people that "you cannot win a 1941 war at a 1914 pace." He has criticized the British information service; he has demanded that Britain invade the German-held coastline as a means of helping the Russians. A daring suggestion in the typical Hore-Belisha style was his proposal of a common citizenship for the British Empire and the United States.

Because of his energetic work as Minister of Transport, his efforts in building the first "National" Government, his whirlwind activity at the War Office, Hore-Belisha's words carry weight, especially among those English who for many years have seen him as an energetic, unconventional, original-minded man, constantly being hindered by stuffy formalists. But there are some in England who have never quite trusted him or his judgment—to them he is a go-getter, a careerist with too much of an eye on the main chance, a playboy seeking publicity and meddling with matters he doesn't know anything about.

Hore-Belisha is a Sephardic Jew whose ancestors came to Portugal from Morocco. His father, Captain Jacob Isaac Belisha, emigrated from Portugal to England and became a successful real-estate trader and financier. Leslie Belisha was born in a tall brick house in Kilburn, a London suburb, and was sent at 17 to Clifton College, in Bristol. His father had died, and while Leslie was in school his mother was remarried, to Sir Adair Hore, permanent secretary to the Ministry of Pensions. As was not unusual, Leslie hyphenated his new name to his old one and became Hore-Belisha.

At Clifton, Hore-Belisha was a sprinter who won the 100-yard dash two years in succession, and he was the school's "show-boy" on speech day. Already he showed "definite leanings to law and oratory"; he developed a feeling for words and periods which he never lost, and spent a good deal of time learning and declaiming famous speeches. Just before the First World War he took his first trip abroad, visiting Paris and Heidelberg. Then, in the autumn of 1913, he went up to St. John's College, Oxford.

His stay there was interrupted by the War and in October 1914 he joined the Public Schools Battalion as a private. Later he got his commission, in the Royal Army Service Corps, and served throughout the War, in France, Salonika and Cyprus. He was mentioned in dispatches and promoted to major. In 1919 he returned to Oxford and there played rugby, lived in luxurious rooms, staged a good many parties, and still found time to become the first post-War president of the Union (the University Debating Club), that "famed springboard to Parliament," and to be graduated with honors in history.

British War Office

LESLIE HORE-BELISHA

Out of college, Hore-Belisha began to read law and to write articles on politics for the *Daily Express* and *Sunday Express*. Then, in 1922, his stepfather suggested that he stand for Parliament. He entered the contest in the dockyard town of Devonport, as a Liberal, since the incumbent was a Conservative, and was beaten. He tried again in 1923, won the seat and has held it easily ever since. All the time he was in Parliament, particularly in 1928 and 1929, he was associated with the formation of various companies to sell or exploit one thing or another. His record here was one of general failure, and at the time of his resignation the weekly *Truth* pointed out examples of his financial incompetence.

In Parliament he made little impression until 1931, at the time of the British financial crisis, when he began to ask embarrassing questions. Then he helped bring about the mutiny against Lloyd George in the Liberal Party, leading a good number of its members out of Lloyd George's camp. In the National Government then formed he was rewarded with the minor post of Parliamentary Secretary to the Board of Trade and later, from 1932 to 1934, acted as Financial Secretary to the Treasury.

Hore-Belisha got his first big job in 1934, when he was made Minister of Transport. Immediately he announced that he was going to stop "mass murder" on the roads and began flooding the country with pamphlets, rules and safety hints. Among other measures, he installed the "Belisha Beacon," a yellow globe on a black and white post to mark pedestrian crossings all over England—they

HORE-BELISHA, LESLIE—*Continued*

used to call him "the archbeacon" for this. His picture, for one effort or another, appeared in the papers almost every day. He was a success as Transport Minister and in October 1935 was appointed Privy Councillor and taken into the Cabinet.

It was May 1937 when Hore-Belisha took Duff Cooper's place as head of the War Office and proceeded to turn everything upside down. He retired old generals and appointed young ones. He raised the pay, improved the uniform, gave the soldiers better food, granted them leaves more freely. He made promotions from the ranks and "vigorously democratized" the Army. (Later, in his resignation speech, he was to remark: "It did not occur to me that we were making the Army too democratic to fight for democracy.") Hore-Belisha went to Paris, Alsace, Rome, Malta and Gibraltar, interviewing high officers and statesmen and attending maneuvers. He provided more guns and personnel for anti-aircraft work. And he even started a national fitness campaign, with the "people doing physical jerks and nip-ups all over the place and children getting free milk." When, in December 1938, he survived what was known as a "revolt of the under-secretaries," there were some who went so far as to talk about "a second Disraeli."

Yet at the beginning of 1940 Hore-Belisha resigned. Hundreds of reasons were advanced: he was a victim of anti-Semitism and snobbishness; he had had a "quarrel with the brass-hats"; he had disagreed with the Army over the kind and amount of aid to be given Finland; he split with the Government over English policy toward Russia; there was objection to his tactic of staying on the defensive in the War. According to the London *Times,* however, the cause was "a cumulative series of minor personal frictions," and this seemed confirmed by Chamberlain's explanation to Parliament: "I had become aware of difficulties—perhaps I might describe them as arising out of the very great qualities of my right honorable friend—which, in my view, made it desirable that a change should occur."

There was some fear of a domestic crisis as newspapers of all persuasions and the public in general demanded to know the reason for the ouster of a Minister "with Mr. Hore-Belisha's energy and imaginative grasp." The man in the street, according to one commentator, had come to think of Hore-Belisha as being a good deal like his own bull terrier —"no beauty, but a dandy fighter snapping energetically at festoons of dusty red tape and through it all remaining the comedian who never forgot to grin broadly, usually toward the cameras, before nipping another august shin." The crisis was averted by Hore-Belisha's graceful acceptance of Chamberlain's wish. He refused a position as head of the Board of Trade which was offered him, and contented himself with being a private, if far from retiring, member of Parliament. He also resigned the chairmanship of the Liberal National group, obtaining thereby, it was said, greater freedom to assist those elements which through public criticism hoped to infuse a greater vigor into the direction of the War.

When speaking Hore-Belisha is ready and resourceful. "From the standpoint of abstract elocution he is perfect. He articulates every syllable; he 'gets across' his matter superbly well, but to him 'getting across' has no relation to sympathy," J. Johnston says. He also comments that Hore-Belisha "is ambitious. Probably however, he suffers from the divided mind which is hostile to political success. He has interests other than politics and he is too attached to them and too doubtful of the political prospect to pledge his time and his abilities entirely to politics."

Among his "other interests" are dining out, playing golf and generally leading the life of a bachelor around town. His home in London was designed by Sir Edwin Lutyens, president of the Royal Academy, and is supposed to be a good example of Hore-Belisha's rich, flamboyant tastes. It is hung with heavy gold curtains, filled with heavy, rococo furniture and surmounted by innumerable gilded cupids. There is another piece of architecture associated with Hore-Belisha—the Belisha Hall—erected in his honor in 1931 by his constituents of Devonport, a tribute which has been accorded to no other living member of Parliament.

HORNEY, KAREN (hôrn-ī') Sept. 16, 1885- Psychiatrist

Address: 240 Central Park South, New York City

In psychoanalytic circles 1941 will probably be remembered as the year in which the Association for Advancement of Psychoanalysis was formed. Among its members are some of the most eminent names in the field and on its Executive Council is Dr. Karen Horney, prominent European analyst and teacher. Formation of the new group took place after a meeting of the New York Psychoanalytic Institute disqualified Dr. Horney as training analyst and instructor. No official reason was given, and it was estimated that almost 50 per cent of the members present refrained from voting.

One of the first concrete steps taken by the new group was the promulgation of a training center, the American Institute for Psychoanalysis, of which Dr. Horney was elected dean. The constitution of the Association is so designed that no one individual's or group's theories may control it; the democratic principles of its foundation are enunciated in its Statement of Principles that reads, in part: "To advance the science of psychoanalysis in a spirit of free inquiry, tolerance and open-mindedness upon the foundation laid by the basic discoveries of Freud. . . We believe that mankind is inherently constructive and capable of creating an environment in which the potentialities of each individual may be encouraged to unfold." Through the fall and winter of 1941 to 1942 the New School for Social Research (New York) was sponsoring a series of lectures and seminars in which members of the Association participated.

"Dr. Horney," we learn from an interview with the magazine writer, Evelyn Seeley, "is white-haired, vital, strong and direct in appearance and manner. There is a trace of German in her speech; for years she was secretary of the Berlin Psychoanalytic Institute before coming to the United States as associate director of the Chicago Institute for Psychoanalysis and then to New York as practicing analyst and lecturer at the New School for Social Research.

"Her apartment, high up in a modern apartment house, is like her—warm, strong colors; furniture luxuriously comfortable but austere in design; no gadgets to distract you or make you ill at ease, and the view of Central Park undramatic and comprehensible."

Dr. Karen Horney was born September 16, 1885 in Hamburg, Germany, the daughter of a Norwegian father and a Dutch mother, Berndt and Clotilde (van Ronzelen) Danielsen. It was while studying at medical school at the University of Berlin that she first became interested in psychoanalysis. She took her examinations in 1911, began to practice in 1913, and from then until 1915 studied with Dr. Karl Abraham.

After her intern year Dr. Horney was a resident physician at a psychiatric hospital in Berlin for four years, 1915 through 1918, and for a further year was on the staff of the Neurological Out-Patient Clinic in the same city. Besides working as a practicing analyst she gave courses in the technique of analysis from 1920 to 1932 at the Berlin Psychoanalytic Institute.

DR. KAREN HORNEY

One day in 1932, as she sat working at her desk, the phone rang. It was a transatlantic call from Dr. Franz Alexander, head of the Institute for Psychoanalysis in Chicago, inviting her to go there to be assistant director of the Institute, a post she held until 1934. In that year Dr. Horney moved to New York, where, since that time, she has given lectures at the New School for Social Research, trained analysts at the New York Psychoanalytic Institute, written extensively and worked as a practicing analyst.

She has also published two books: *The Neurotic Personality of Our Time* (1937) and *New Ways in Psychoanalysis* (1939). The first is a thorough description of her theory of the neurotic's "attempt to cope with life under difficult internal conditions"; Dr. Bernard S. Robins found it "a genuine contribution to the study of interpersonal relationships." *New Ways in Psychoanalysis* clarifies the various concepts in psychoanalytic theory, explains both her own attitude and wherein she disagrees with others, and is said to have provided great impetus to the scientific advance of psychoanalysis.

Her views and those of an increasing number of psychoanalysts represent, in the words of Leonard S. Cottrell, Jr., a "decided trend toward a restatement of Freudian theory that is at the same time more useful to and in line with sociological and anthropological theory and research. Dr. Horney's work is to date the most explicit and complete statement of the shift in orientation."

Dr. Horney first studied with a well known pupil of Freud's, Dr. Karl Abraham, and she has remarked that "I could not have made a

HORNEY, KAREN—*Continued*

step without Freud." But though she considers that her interpretation rests on Freudian grounds she is unwilling to accept without question all the tenets of the founder of modern psychoanalysis. In the introduction to her first book she states: "I believe that deference for Freud's gigantic achievements should show itself in building on the foundations that he has laid, and that in this way we can help to fulfill the possibilities which psychoanalysis has for the future, as a theory as well as a therapy."

"My desire to make a critical re-evaluation of psychoanalytical theories," wrote Dr. Horney in her second book, "had its origin in a dissatisfaction with therapeutic results." Her first important difference with Freudian concepts was formulated almost two decades ago and dealt with the concept of feminine psychology. She has written many papers on this subject, both in German and in English, and a chapter devoted to it in *New Ways in Psychoanalysis* shows in what way her approach differs from that of Freud and also reveals her emphasis on the impact of cultural factors on the personality structure.

Dr. Horney's attitude is positive, and in her lectures she stresses that human beings are essentially constructive, that we want happiness, that we want to develop, to unfold. Significantly, her second departure from strictly Freudian principles consisted in a refutation of his explanation of the so-called "destructive drives." Dr. Horney's insistence also that "every neurosis is essentially a character disorder," and that "this view introduces social viewpoints into a field claimed by medical psychiatry," has resulted in much controversy. At one discussion on theory, the chairman, a prominent psychoanalyst, remarked: "Well, we have *our* differences, to be sure, but at least we don't mix psychoanalysis with cultural anthropology."

"The relevant factor in the genesis of a neurosis," Dr. Horney writes, "is neither the Oedipus complex nor any kind of infantile pleasure strivings but all those adverse influences which make a child feel helpless and defenseless and which make him conceive the world as potentially menacing. Because of his dread of potential dangers the child must develop certain 'neurotic trends' permitting him to cope with the world with some measure of safety. Narcissistic, masochistic, perfectionistic trends seen in this light are not derivatives of instinctual forces, but represent primarily an individual's attempt to find paths through a wilderness of unknown dangers. The manifest anxiety in neuroses is then not the expression of the 'ego's' fear of being overwhelmed by the onslaught of instinctual drives or of being punished by a hypothetical 'super-ego,' but is the result of the specific safety devices' failure to operate."

Concluding a series of lectures on Self-Analysis at the New School for Social Research in the spring of 1941, Dr. Horney commented: "I must leave it entirely open, because I simply don't know how many people can analyze themselves, and to what extent, whether it is possible without the previous experience with an expert. But the experiences I have had with it have encouraged me, and have made it an obligation to me to start a ball rolling, to encourage people to make the attempt to do something with their own problems, at any rate to give up that paralyzing attitude of helplessness, as if one couldn't do anything about one's problems oneself, and as if one were entirely dependent on the help of a specialist." In the spring of 1942 her publishers plan to issue her third book, which will discuss the possibilities and limitations in self-analysis.

Of medium height, Dr. Horney has light brown eyes set wide apart. Prominent cheekbones lend angularity to her features. Her hair is white, her forehead high and rounded. A student's remark: "She smiles with her whole face," is descriptive and perhaps indicative of her personal charm. On the lecture platform she is completely informal, her affirmative attitude suggesting an unusually well-balanced personality.

She was married, in Berlin in 1909, to Oscar Horney, a lawyer, and has three daughters. The eldest is Brigitte Horney, the actress. Of the other two, one is a practicing psychoanalyst in New York City and the other, the youngest, is married and living in Mexico. Dr. Horney does a seemingly incredible amount of work, is a member of the Association for the Advancement of Psychoanalysis, of the American Institute for Psychoanalysis and of the American Psychiatric Association, and will now have additional duties thrust upon her in connection with the new Association, whose membership is growing rapidly. Yet she finds time to spend week ends in the country, driving to her place on the Hudson, where she paints and putters about the garden.

She is outspokenly anti-Fascist. She believes that democratic principles, "in sharp contrast to Fascist ideology", "uphold the independence and strength of the individual and assert his right to happiness."

HORSFALL, FRANK L(APPIN), JR. (hôrs'fäl) Dec. 14, 1906- Physician; medical research worker

Address: b. Rockefeller Institute for Medical Research, York Ave. & 66th St, New York City; h. 400 E. 59th St, New York City

If the vaccine discovered in the spring of 1940 by Dr. Horsfall and Dr. E. H. Lennette proves successful, it will mean protection against the most fatal epidemic mankind has suffered. The last worldwide wave of influenza swept from the South Seas to the Arctic Circle and carried off 20 million people, dwarfing the toll of the First World War and the great plagues of history. For years medical research workers have been seeking an effective way to cope with this elusive and complex disease.

Like many important discoveries, Dr. Horsfall's climaxed a succession of studies carried on in a number of countries. Since 1933 it had been established that influenza is caused by a virus too minute to be detected by a microscope, and not nourished by the usual broths used for breeding bacteria. Presently it developed that a number of different viruses were responsible for various types of flu.

The actual discovery of a vaccine which may be effective against what Dr. Horsfall calls "Virus A" resulted from an accident that occurred shortly after he took charge of influenza research at the Rockefeller Institute in New York. An epidemic of distemper attacked the hundred ferrets being used for test purposes, and those which had been innoculated for distemper apparently became immune to the influenza virus. This was the first step that led to a vaccine combining the flu virus from human beings and the distemper virus from dogs, cultured in an egg deposited in an incubator which is kept at 100° F.

The results on ferrets have been highly satisfactory, but the human response has yet to be determined definitely. A hundred laboratory volunteers in New York were innoculated, and a check indicated that they are one-eighth as likely to get the disease as those who have not been innoculated. But fortunately for that city, no real epidemic has put this to the test.

In the summer of 1940 vaccine was rushed to Puerto Rico where an epidemic had broken out, but the disease left before the cure arrived. The following December innoculations were given during an outbreak of flu on the West Coast, but results are not yet definite. Meanwhile, there has been much foreboding that conditions in England will make for an influenza epidemic there, which might develop into a pandemic comparable to that of the First World War; and plans are under way to combat such a possibility with the new vaccine. British health authorities are interested in cooperating, and technicians at the Rockefeller Institute are working overtime to prepare a million doses for immediate use—with the hope that the "Virus A" of Dr. Horsfall's vaccine would prove to be the required type.

When Dr. Horsfall announced his discovery to the American Public Health Association in the fall of 1940, he was 34 years old. Born in Seattle, Washington, on December 14, 1906, he shares his father's profession and Alma Mater as well as his name. Dr. Frank Lappin Horsfall, Sr. was graduated from the medical division of McGill University in Montreal, Canada, in 1903; twenty-nine years later his son took a medical degree there. In 1937, after completing his internship at the Rockefeller Hospital, he received his official license.

DR. FRANK L. HORSFALL, JR.

From the hospital Dr. Horsfall, Jr., went to the Rockefeller Foundation, where he is now a staff member of the International Health Division, in charge of their work on influenza. Two other things he has done since that transfer were to be married and to become, in 1939, the father of a son. To the layman his dark good looks and mellow voice may suggest a bedside manner somewhat wasted on a swarm of ferrets and an incubator full of eggs. If the threatened epidemic comes, however, he will be ready to administer by proxy to a host of human patients.

HRDLIČKA, ALEŠ (hûr′dlĭch-kȧ) Mar. 29, 1869- Anthropologist

Address: b. United States National Museum, Washington, D. C.; h. 2900 Tilden St, N. W., Washington, D. C.

Called "the Grand Old Man of American anthropology," Dr. Aleš Hrdlička, since 1910 director of the United States National Museum, has staunchly defended from that date to the present his convictions, based on numerous surveys of fossil sites, that America's first settlers were migrants from Asia. Willing to concede the existence of man in North America some 8,000, perhaps even 10,000 years, to all anthropological proponents of greater antiquity Dr. Hrdlička says no. As Harvard's anthropologist, Earnest Albert Hooton, remarks: "Dr. Aleš Hrdlička has stood like Horatius at the land bridge between Asia and North America, mowing down with deadly precision all would-be geologically ancient invaders of the New World."

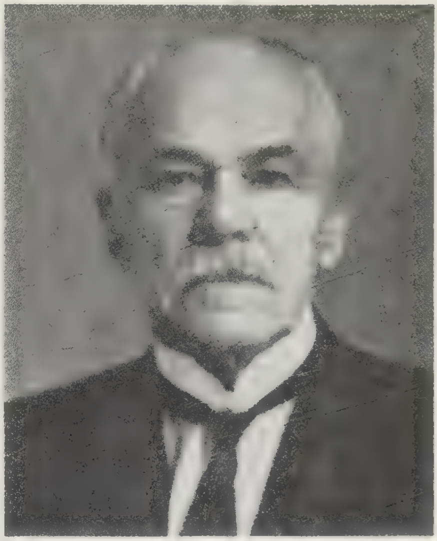
But the problem of keeping America young has in recent years (according to *Time*, February 19, 1940) "got tougher for Horatius Hrdlička." Chief challengers to the Hrdlička stand are the "Folsom" men, whose skeletons have never been found, but whose weapons have been turned up in abundance near Folsom, New Mexico—some of them imbedded in fossil bison said by other anthropologists to be as old as 20,000 years. Early in 1940 two Harvard geologists studied a "Folsom" site in Lindemeier, Colorado and concluded that the bison bones found there (with tool points in the vertebrae) were quite possibly 25,000 years old. Said Dr. Hrdlička: "It's a delusion. . . The geology of the earth is not like writing or even hieroglyphics—it is vague and indecisive. I have stopped arguing."

It was in 1939, after several years of digging in fossil sites in Alaska, Kodiak Island and the Aleutians, that Dr. Hrdlička's theories received substantial bolstering through a remarkable discovery by a young Soviet scientist who found a fossilized Neanderthal child's skeleton on a high cliff in Middle Asia. Hrdlička pronounced it a genuine Neanderthal specimen—"one of the most precious children in anthropology's bare nursery." The skull of this child, together with the measurements of a large series of important neolithic crania, showed close affinities with certain types of American skulls. "We had been hoping," Dr. Hrdlička said, "but hardly daring to hope, for some such discovery, and now this young Soviet archeologist has done it. It shows that Neanderthal man was widely spread over the Old World. For the first time it gives us evidence of a culture extending clear across Europe to the Far East." Hrdlička is convinced that prehistoric Siberian skulls "may now be definitely connected with Siberia, and Alaska with the rest of America."

It is almost literally true that Dr. Hrdlička's scientific activities are his whole life. He was born on March 29, 1869, the first of seven children in a middle-class family in Humpolec, Bohemia. His father, Maxmilian, was a master cabinetmaker; his mother, Karolina, the daughter of a cabinetmaker. Young Aleš, who learned rapidly, was taught reading and writing at the age of four by his mother, and once in school his ability to learn drew the attention of a Jesuit priest, who tutored him for two years in Latin and Greek.

In 1882, when Aleš was 13, his father decided to come to New York to make a new home to which in due time the rest of the family would come. The boy brought with him a recommendation from his Jesuit friend to an American college. But when he arrived in New York he learned that the college was in the Middle West and that knowledge of English was necessary for admission. Accordingly Aleš went to work in a tobacco factory in order to help his father earn money and studied English at evening schools. In 1886 he suffered a severe attack of typhoid fever. His physician, Dr. M. Rosenbleuth, formerly a rabbi, took an interest in him and suggested a medical course instead of the proposed business career which he found so distasteful. Since the Doctor was a trustee in the Eclectic Medical College of New York, he acted as preceptor for the boy's entrance there.

The young student had so little money left after his tuition was paid that he walked daily to and from his home on 71st Street to the college on East 14th Street, three miles away. Later, when he could afford to take the streetcar, he studied languages as he rode. In the meantime Dr. Rosenbleuth would take him along to visit his cases; he had his own pharmacy where Aleš learned to identify drugs and how to use them. By the third year of his medical course Hrdlička was given charge of the college dispensary one day a week. At this time, too, he began taking cases in the Margaret Strachan Home for Wayward Girls. He also lectured to a group of medical students. Attending these lectures was Marie S. Dieudonnée, a girl of French descent, who in 1896 became Mrs. Hrdlička.



ALEŠ HRDLIČKA

After his graduation from medical school in 1892 at the head of his class, he set up practice and became almost immediately physician to some six organizations on the East Side. But he soon realized it would be advantageous to have a degree from schools specializing in homeopathic and allopathic medicine; therefore he entered the New York Homeopathic Medical College, going to classes and clinics in the daytime and attending to his own practice at night. Following his graduation in 1894 from this college, he went to Baltimore and took the State Board Examination in order to enter Johns Hopkins Hospital. The same year, however, he was offered and accepted a research position at the new State Homeopathic Hospital for the Insane at Middletown, New York.

Dr. Hrdlička's earliest publications were concerned with his studies of the insane, and there was early evidence of his anthropological interests. In 1895 he published a study of the measurements of 1,000 individuals arranged according to sex and types of insanity. These researches led to an invitation to join the staff of the Institute of New York State Hospitals as associate in anthropology. On Dr. Hrdlička's request, however, he was permitted to go first to Europe for further studies which he considered necessary.

(Continued next page)

HRDLIČKA, ALEŠ—*Continued*

In 1896 he left for Paris. There he studied anthropology, physiology and medico-legal problems under famed specialists and attended numerous clinics. He also visited institutions in several European countries, including his native Bohemia. On his return to New York he devised a far-reaching program for the Pathological Institute, a detailed study of some 40,000 abnormals of all classes cared for in state institutions. He had lined up 22 collaborators for the work when he encountered a major obstacle: there was no comparable data on normal people. While searching for normal subjects to furnish the comparison with the abnormal, Hrdlička made a number of contacts that were to influence his later career. One was Professor George S. Huntington, an anatomist who was assembling a vast skeletal collection; another, Professor Frederick W. Putnam, in charge of the American Museum of Natural History in New York. Through the latter he learned of Lumholtz's work in Mexico. Hrdlička believed that among the primitive Mexican tribes he might find the "normal" population for which he was looking. His first visit there was in 1898. The following year he was given charge of physical and medical anthropological research on one of the Hyde Expeditions for the American Museum: thus began his systematic trips to the Southwest and Mexico yearly until the end of 1902.

When it was decided to establish a National Museum to house the Huntington and other skeletal collections, Dr. Hrdlička was put in charge of the division. At the beginning his entire equipment consisted of an old kitchen table, chair, inkwell, pen and pencil. But he proceeded to build up his division until it has come to rival in size and importance the oldest and best collections in the world.

Between 1905 and 1910 Hrdlička continued his investigations and field studies. He published his observations on the tribes of the Southwest and Mexico; he investigated fossil remains in Florida; he spent some time investigating tuberculosis among various Indian tribes; and in 1909 he went to Egypt, where he measured the pre-dynastic remains stored in Cairo and secured for the National Museum a large collection of skeletal remains. The results of his various expeditions are included in the publications of the American Museum of History, the reports of the Smithsonian Institute and journals dealing chiefly with anthropological and archeological findings.

In connection with his work on the antiquity of man in North America, Dr. Hrdlička in 1910 found it possible to extend similar studies to South America, where he examined remains attributed to ancient man in Brazil, Argentina and Peru. In 1912 he was asked to prepare an exhibit in anthropology for the forthcoming Panama-California Exposition. On his $30,000 grant for this job Hrdlička arranged for seven expeditions to obtain data and materials, and a number of publications were made on the findings from these.

Several important studies of the status of blood mixture with Whites among the Chippewa and Sioux Indians were made in 1915. In that year also Dr. Hrdlička was named general secretary of the Nineteenth International Congress of Americanists. Continued studies of the American Indians and of the "normal" American population were undertaken. In 1918, following the death of his wife, Dr. Hrdlička was urged to make a short trip to Florida; and this trip served to round out his anthropological survey of the state.

An invitation to give a series of lectures before the Peking Union Medical College resulted in extensive work in the Far East in 1920. During the early '20s he made further expeditions to sites relating to early man in England and on the Continent, in Australia and South Africa. In the last-named region he investigated the site of Rhodesian Man; and the trip also furnished him with new examples of a phenomenon that he had been observing since his first visit to Mexico: quadruped progression in the human child. A book on this, *Children Who Run on All Fours,* was published in 1931. In 1927 Hrdlička gave the Huxley Lecture before the Royal Anthropological Society, and his findings on early man in Europe were published in 1930 as *The Skeletal Remains of Early Man.* His other publications include *Physical Anthropology* (1919); *Anthropometry* (1920); *Old Americans* (1925); and *Anthropology of the American Indian* (1927).

Besides publications already mentioned, Dr. Hrdlička has done considerable writing as editor of the *American Journal of Physical Anthropology* which he founded in 1918. He was also for some years associate editor of the *American Naturalist,* and in 1929 he became the first president of the American Association of Physical Anthropologists. Two of the important books in his field are his account of the scope, aims and history of physical anthropology and a book on anthropometry. For many years Hrdlička contributed funds for anthropological work in Czechoslovakia, and for the establishment of various foundations there, notably at the Charles University in Prague. His efforts in these and other lines have won for him a number of honors. Important among his works of recent years has been the laying of foundations for a future "Museum of Man" under the Smithsonian Institution.

Dr. Hrdlička was married for the second time in 1920. "It is his firm belief that woman's place is in the home; women are the chief pivots of human relationships, he says, and their first duty is to their homes and their families. He hints that past civilizations have fallen out of joint when their women obtained too many privileges." He is a "square-built, stocky man, speaks with a trace of foreign accent, likes baseball and sports generally, also music. He used to get most of his clothes abroad, doesn't believe in wearing an overcoat, and recommends heavy woolen underwear, two suits if necessary."

HUBERMAN, BRONISLAW Dec. 19, 1882- Violinist

Address: Plaza Hotel, New York City

"The story of the Palestine Symphony Orchestra," Ross Parmenter observed, "is largely the story of Bronislaw Huberman." Huberman, world-famous violinist, went to Palestine some years ago for a concert tour and was much impressed with the enthusiastic manner in which audiences participated in musical experiences. "Here," said Mr. Parmenter, "were audiences to whom music seemed to mean more than to any audiences in the world. His third visit was in 1933. Hitler had come to power. This time Mr. Huberman discussed the idea of an orchestra with representatives of the people. Steps were taken to organize it. 'I had a great helper in Mr. Hitler,' Huberman said with a smile. 'He furnished me with the cream of Central Europe's orchestras.' "

Huberman undertook the difficult task of forming an orchestra and assuring its support first of all because he had faith in the people. "I would never have given so much of my life to an orchestra that would be just a wonderful orchestra," he said afterward.

This faith was justified. The Federation of Labor contributed an unsolicited gift of $5,000. Workmen agreed to work at night so that the orchestra might give its first scheduled concert, waiving the overtime pay but asking for seats for the concert. Huberman raised $80,000, auditioned musicians (several hundred of them) and found halls in which the orchestra might play. Among the exiles were both Jews and non-Jews, a circumstance gratifying to Mr. Huberman. Of Polish-Jewish parentage, he has always thought of himself as a European and an internationalist. In 1925 and again in 1932 he published books on the Pan-European idea (for a United States of Europe).

When Toscanini consented to open the series of concerts by the Palestine Symphony Orchestra December 26, 1936, Mr. Huberman had not dared to ask him to sacrifice the time for a second visit. "But after the final concert—for workers—he had the saddest expression on his wonderful face. . . He said: 'I am so sad to leave this wonderful audience.' There was a silence. Then he said, 'I must come back. I feel I must come back.'" That, Huberman felt, was the greatest possible tribute to the orchestra he had organized, and to its audiences. And Toscanini did return for a second season, despite Mr. Huberman's plea that he needn't attempt the trip because of unsettled world conditions.

Suse Byk
BRONISLAW HUBERMAN

At the start of the fourth season in 1939 war broke out. Felix Weingartner was able to fulfill his engagement as guest conductor, but Eugen Szenkar, Malcolm Sargent and Issay Dobrowen all had to cancel theirs. Huberman felt personally responsible, and left his Switzerland home for appearances with the orchestra in order to make up for the absence of the conductors the subscribers had been promised. There followed a tour to South Africa during which France was conquered, and the violinist found himself cut off from the orchestra as well as from his former associates on the continent. Meanwhile the orchestra carries on. Cut off from the choice of guest conductors it has had in the past, it manages with local conductors. In 1941 it went on several Egyptian tours and more concerts than ever in Palestine, where audiences include increasing numbers of the Arabian, as well as the Jewish, population.

Born in Czestochowa, near Warsaw, December 19, 1882, Bronislaw Huberman is the son of Jacob and Alexandra (Goldman) Huberman. His father was a lawyer. When

HUBERMAN, BRONISLAW—*Continued*

he showed an aptitude for music, at the age of six, his parents brought him to the Warsaw Conservatory to study with Michaelovitch, Rosen, and Isidor Lotto. At seven he performed a Spohr concerto and participated in a concert with a string quartet. He next studied in Berlin with Gregorovitch, under the supervision of Joseph Joachim, the famous teacher, and in 1892 gave his first recital at the International Exhibition of Music in Vienna, after which he was commanded to play before Emperor Franz Joseph of Austria. This was the first of many command performances, and Huberman recalls it with pleasure, for Franz Joseph presented him with a valuable violin.

At 11 his concert career got under way with recitals in Holland, Belgium, France, England and Germany. Hearing him in London, Adelina Patti engaged him to appear with her at her farewell concert in Vienna, January 12, 1895. This led to a series of 12 concerts, climaxed by one at which Brahms put in a surprise appearance in order to listen to the playing of his own D Major violin concerto. The appearance of Brahms caused a flutter backstage as well as in the auditorium, for the aged composer was supposed to have a chip on his shoulder. He didn't believe in immature children playing mature works. But to the young violinist his presence was merely a challenge to do his best. Recalling the incident later, he remarked that perhaps his own youthfulness helped him to go through with it: he could think of Brahms as being great without being perturbed by his actual presence. And after the concert the great man, his tears not dry on his cheeks, came down to the musicians' room and embraced the young violinist, saying: "My heavens, what an interpretation!"

In 1896 Huberman made the first of many concert tours to the United States. Wearing a dark velvet or white silk suit with a sailor-style blouse, he faced his audiences with solemn gray-blue eyes, dark wavy hair, and the underlip prominent, as it is today. After commenting on his fine technique the critic of *Harper's Weekly* wrote: "An interesting lad in looks, too, with his grave unchildish eyes, the spiritual upper half of his face and thick dark hair like a heavy silk fringe falling about his cheeks."

"The youthful artist achieved a success so brilliant," wrote another critic on that occasion, "as could not be exceeded by the brightest star in the galaxy of artists," and he possessed "a phenomenal endowment of musical inspiration and musicianly capacity." But his parents and tutors did not wish him to burn himself out, and after the American tour there was a period of six years during which the violinist gave few concerts. He had, however, been appointed Court Violinist to the Queen of Romania in 1896. In 1902 he resumed his concert career, giving a recital in Budapest, Hungary, and in 1903 he was invited by the municipality of Genoa to play a recital on Paganini's violin (a rare Guarnerius). A special law was passed to permit the temporary removal of the instrument from municipal museum to concert hall. Today Huberman has his own 1754 Guarnerius, which he almost always uses for concerts. He keeps it together with his rare Stradivarius in a double violin case, pneumatic-lined.

He gave a series of eight concerts in St. Petersburg, Russia, in 1911, fourteen in Paris in 1920, ten in Vienna in 1924, and eight in Berlin in 1926, in each city establishing records. Huberman has worked steadily at his profession since childhood and has toured most countries not once, but many times. In 1926 the city of Vienna offered him the use of Hetzendorf Palace, former residence of Emperor Karl. For years he was on the staff of the Vienna State Academy, leaving it in August 1936 to devote his full time to the organization of the Palestine Symphony Orchestra.

After the Nazis came to power in 1933 Huberman was invited by Dr. Wilhelm Furtwängler to play in concerts with the Berlin Philharmonic—as he had for many years prior to that year when President Hindenburg invited Hitler to form a Cabinet. Mr. Huberman refused in a powerful indictment that called to task the apathy of certain German intellectuals as well as the barbarism of Fascism itself. In it he said: "In reality it is not a question of violin concertos nor even merely of the Jews: the issue is the retention of those things that our fathers achieved by blood and sacrifice, of the elementary pre-conditions of our European culture, the freedom of personality and its unconditional self-responsibility unhampered by fetters of caste or race."

In reporting a concert given by Mr. Huberman in 1934 a critic wrote: "Mr. Huberman's popularity has grown of late, not just because he plays Beethoven and Mozart better than formerly, but for one reason because he is a true humanitarian, and because, for another, he so handsomely threw down the argumentative glove to Furtwängler and reduced the worthy State Councilor to a helpless splutter of Nazi platitudes."

Typical of the superlatives heaped upon Huberman as a violinist is the statement by Olin Downes: "He is an artist of the experience and authority which equip him to interpret a work of the dimensions of the Brahms D Major concerto with an authoritative grasp of the composition as a whole, and to deliver certain passages with the sweep and breadth of line of a greatly gifted artist." His accurate sense of tempo, his sensitive bowing, and his virtuoso gifts have often been commented upon.

Huberman today is a stocky man, a little less than medium in height, with gray-brown hair thinning back from a broad forehead. He married once, was divorced 25 years ago, and has a son, John. He came to New York in the spring of 1941 after completing a successful tour of Canadian cities in the winter. He went on a concert tour of the United States in the fall of that year. Meanwhile he intends to rest and, as he expressed it, "pray for England, Poland, and humanity."

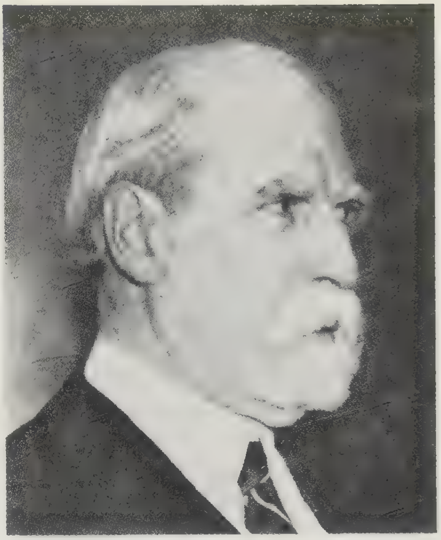
HUGHES, CHARLES EVANS Apr. 11, 1862- Former Chief Justice of the United States Supreme Court

Address: h. 2223 R St, Washington, D. C.

On June 2, 1941 Chief Justice of the United States Supreme Court, Charles Evans Hughes, retired from active service under the provisions of the Act of Congress of March 1, 1937. "Considerations of health and age," he wrote President Roosevelt, "make it necessary that I should be relieved of the duties which I have been discharging with increasing difficulty." President Roosevelt acknowledged his letter—"My every inclination is to beg you to remain; but my deep concern for your health and strength must be paramount," he wired—and at the age of 79 the justice who has been hailed as "a great liberal" and a "deadly conservative" stepped down from the highest judicial position in the world.

Charles Evans Hughes was born in Glens Falls, New York, where his father, the Reverend David Charles Hughes, a preacher who had come over from Wales in 1855, headed a Baptist congregation. He was educated at first by his mother, Mary Catherine (Connelly) Hughes, and then in the public schools of Newark, New Jersey and New York City. The minute he set foot in school he was recognized as a prodigious young man, and he himself acknowledged this by evolving at a very early age what he called "The Charles Evans Hughes Plan of Study," a curriculum which added new and ambitious subjects to regular studies and allowed no time for review of lessons already covered. Unfortunately, or perhaps fortunately for his classmates, this was never adopted. Undaunted, Charles studied enough in orthodox fashion to write a high school essay on "The Limitations of the Human Mind," and another on "The Evils of Light Literature."

Once out of high school, at the age of 13 or so, Charles' parents kept him at home, reading, playing, exercising until he was 14, and then sent him to Colgate University. He stayed there the two years from 1876 to 1878 and then transferred to Brown University. He went there intending to become a preacher but soon gave up this ambition, and reports that "I spent my time playing cards when I was an undergraduate." Despite this convivial occupation, he made Phi Beta Kappa and was graduated third in his class with a B. A. in 1881.



Harris & Ewing
CHARLES EVANS HUGHES

Hughes decided to teach school for a while to earn enough to get through law school. But he was 19 and looked younger. No school would have him, until he hit upon the idea of conducting his entire application for a position by mail. Even so, there were difficult moments when he showed up at the Delaware Academy in Delhi, New York and was accused of having "no more beard than an egg." As soon as he could he remedied this. (His retirement, incidentally, left the Supreme Court whiskerless for the first time in at least 80 years.)

From teaching, Hughes entered Columbia University's Law School and in 1884 received his LL. B. with highest honors, plus an annual fellowship of $500 for three years. In that same year he was admitted to the Bar and without difficulty got himself a position with the firm of Chamberlain, Carter and Hornblower. He plunged into work which gradually became more responsible, and distinguished himself by an aptitude for cross examination and for rapid mastery of involved problems. He also, four years after he was hired, married Antoinette Carter, the senior partner's daughter.

Hughes never spared himself at his work, and by 1891 his health had given way. As a partial rest he accepted a law professorship at Cornell University and for two years taught there, known to his students for both his understanding and his preciseness. He was the kind of teacher who always used to take the same number of steps from door to desk, and always demanded, above all, accuracy.

Back from Cornell, Hughes resumed practice with the reorganized firm of Carter, Hughes and Dwight, while still acting as special lecturer on the Cornell faculty for the next two years

HUGHES, CHARLES EVANS—*Continued*

and later on that of the New York Law School. He lived quietly on West End Avenue in New York City, taking long and fairly frequent vacations in Europe, Bermuda and Maine. Occasionally he played golf or went fishing or rode in a motor car or went to the theatre; many evenings he spent at home reading aloud to his children from *Uncle Remus* and *Mr. Dooley* in dialect. He had no interest in politics and his only outside activity was the organization of the Bible class in the Fifth Avenue Baptist Church which John D. Rockefeller, Jr., (see sketch this issue) later taught.

In 1905 this retirement ended. The Stevens Committee of the New York Legislature, about to start an investigation into gas rates, was looking for a bright attorney for counsel. Hughes got the job, did exceptional work, and as a result $800,000 annually was saved in the lighting of the city's streets and the gas rate for consumers was reduced from $1 to 80c. Impressed, the Armstrong Committee of the New York Legislature, in that same year, asked him to direct its investigation of the insurance companies. Hughes went to work, and most of the financial figures of New York squirmed under his probing questions as he proceeded to establish a link between corrupt politics and corrupt finance. The public hailed him as the man who changed the insurance business "from a public swindle into a public trust," and the newspapers called him a wizard of the Bar. This annoyed Hughes. "There is no wizardry about it," he said. "It is work."

While the insurance investigation was under way Hughes had been offered the Republican nomination for Mayor of New York but turned it down to finish what he was doing. His work completed, in 1906, he accepted the Republican nomination for Governor of New York to campaign against William Randolph Hearst. He won the election, the only one on his ticket to do so, and on January 1, 1907 took office. On January 1, 1909 he entered the Governor's mansion for a second term.

Even before he became Governor, Hughes had a reputation for austerity—when asked to lighten his sensible campaign speeches, he had replied that he would not "make any appeal to the passions of the populace"—and he did nothing to change it. He lived and worked efficiently, restricting himself to a rigid half hour for lunch, working in a room littered with papers, not politicians. There were some mutterings when he refused with chilly contempt to appoint political friends to office; there were loud cries of "Charles the Baptist" when he attacked race track gambling and had it banned from the State.

In many ways his was a reform Administration: Hughes secured legislation to set up a system of commission regulation for utility rates; he recommended passage of a child labor law, urged the passage of a workmen's compensation act, sponsored and put through reforms in insurance company regulations, fought and lost a battle for a direct primary. At the same time, it has been pointed out, he vetoed a two-cent railroad-rate bill and opposed a constitutional amendment for an income tax.

On October 6, 1910 Governor Hughes resigned to become an Associate Justice of the Supreme Court with the understanding, some historians say, that he would be elevated to the position of Chief Justice should a vacancy occur. (A vacancy did occur, but he did not fill it.) On the Supreme Court, Justice Hughes was no flaming liberal or great dissenter, but a judge whose opinions were solid, analytical, carefully prepared and usually a little to the left of center. Significant are his decisions championing the right of Federal and State governments to regulate industry, railroads and utilities; his opinions upholding an Illinois statute prohibiting the employment of children under 16, upholding a California statute forbidding the employment of women for more than an eight-hour day or forty-eight-hour week, upholding an act of Congress limiting the hours of work on interstate railroads. Significant, too, was his vote that an Alabama law which held Negro farm laborers criminally liable for violations of wage contracts was unconstitutional and his dissent in the Coppage *vs.* Kansas case which upheld the "yellow-dog" contract. When the score is added up for his six years there, he voted with the liberals 51 times, with the conservatives only 10 times.

It was only after long consideration that he stepped down from the Supreme Court, and only because an even higher office than that of Associate Justice seemed possible for him. He accepted the Republican Party's nomination for President in 1916 and in his acceptance speech called for a firmer diplomatic policy, for the maintenance of America's rights as a neutral, for preparedness. Then, despite advice from the politicians, he made a tour of the country. His speeches were earnest, careful, honest, well thought out. But they were not the speeches of a practicing politician, and the epithets "animated feather duster" and "the human icicle" followed him from coast to coast. According to many, however, he still might have become President had he supported Hiram Johnson of California (see sketch this issue) openly and not snubbed him (actually he didn't, but the impression was the same) when he visited California. He went to bed on the evening of November 6, 1917 thinking himself President; he woke on the morning of November 7 to discover he had lost to Wilson by merely the margin of California's electoral votes.

Hughes retired to practice with the law firm of Hughes, Rounds, Schurman and Dwight (his clients included the New York Life Insurance Company, the Beech-Nut Packing Company, the Interborough Rapid Transit Company, the Wabash Railroad and the United Mine Workers), to the presidency of the Union League Club, the presidency of the New York State Bar Association, to membership in many societies and foundations. Yet, when asked to, he helped Wilson's Administration, first as chairman of the district board of appeals, then as special Federal investigator of the wartime aviation industry, heavily subsidized by the Government.

He continued a staunch Republican, nevertheless, and in 1920 strongly supported Harding. On the day Harding took office as President, Hughes became Secretary of State. Immediately reporters began to write about the "new Hughes" who, it seems, was no longer cold and reserved but a warm and jovial sort of fellow, witty, pleasant, almost a backslapper. The man who had been remote from Washington's social life as Associate Justice began attending social functions nearly six nights a week as Secretary of State, distinguishing himself as a raconteur—in practically every dialect—as a charming guest and equally charming host.

Confronted with many problems left over from the First World War, in the State Department he became what Pearson and Allen (see sketch this issue), no great admirers of his, call "one of the most outstanding and forthright Secretaries of State in recent years." During his term of office he was able to conclude more than 50 treaties with foreign nations; he was able to reestablish friendly relations with South America; he was able successfully to negotiate the treaties made at the 1921 Washington Disarmament Conference which he headed. Yet, though praise for his activities as Secretary of State is almost unanimous, those who hesitate to call Hughes a liberal, or even a great statesman—the *New Republic,* for instance—point out that he was active "in defending the interests of American capitalists in Mexico," that he was conservative enough to refuse to recommend recognition of Soviet Russia, that he was consistently and acutely aware of property rights and their maintenance all over.

This latter group found confirmation of their opinion when Hughes resigned in 1925 to recoup his private fortune. Although he continued to work for Pan-American friendship (he spent two months at the sixth Pan-American Conference in Havana in 1928 and in 1929 served on the Pan-American Arbitration Conference); although he served well as a member of the Permanent Court of Arbitration at The Hague from 1926 to 1930; although he was chairman of the New York State Reorganization Commission in 1926, still his major interest was in his practice with Hughes, Rounds, Schurman and Dwight.

His was a lucrative practice, and Hughes himself was one of the most expensive and successful of corporation lawyers. As in his previous period of practice Hughes' clients were powerful ones, and their interests, for which he fought, weren't always the interests of the public. He attempted to free public utilities and large business concerns from the burdens of taxation and regulation; he defended Truman Newberry, the Michigan Senator-elect whom the Senate refused to seat because of the excessive money spent in his successful campaign. A powerful pleader with a persuasive voice and appearance, he won many cases. He lost some, too, partly because they were already lost when turned over to him; partly, some say, because of the large number he had to handle.

His effective service in his clients' interests was remembered by the Senate when Herbert Hoover in 1930 sent in his name for the position of Chief Justice of the Supreme Court. The Senate growled. "No man in public life so exemplified the influence of powerful combinations in the financial and political world," it was pointed out by Norris of Nebraska, Borah of Idaho, Coleman Blease of South Carolina. And other Senators, less worried than they about Hughes' taking "the most perfect care of their [the corporations'] interests" challenged, in the words of Carter Glass (see sketch this issue), his "lack of sensibility" in leaving the bench in 1916. For four days the fight raged, fuel for the opposition heaped up by the liberal papers such as *The Nation,* which held forth on Hughes' "fixed, set, intolerant mentality, closed on various issues and deadly conservative"; support coming from those who held him to be "the country's greatest advocate." Finally, on February 14, 1930, his appointment was confirmed, with 26 Senators voting against it. Charles Evans Hughes, "looking like a Victorian child's image of Almighty God," became Chief Justice of the Supreme Court, and his son, Charles Evans Hughes, Jr., resigned his position as solicitor general.

One year later, after his first term on the Bench, Senators, President Hoover and Justice Hughes' fellow justices were pleased or annoyed to find that his decisions lined him up with the liberals on the Court. He upheld a New Jersey act regulating insurance rates and an Indiana tax on chain stores. He wrote an opinion about a Minnesota "gag" law which was a forthright defense of the freedom of the press; another in a California case in which a woman was convicted for waving a red flag stating that free political discussion was essential if the Government was to remain responsive to the will of the people; and he upheld the rights of the railway clerks to form their own labor union. With the liberals he dissented in the famous MacIntosh case, in which a Canadian-born Yale professor was denied citizenship for refusing to take the oath to bear arms in case of war.

In fact, until New Deal days, the case for Hughes as a liberal seemed clinched. And then discussion rose again, discussion that continued past his resignation in 1941. There are those who say that as Chief Justice he combined "vision with the practical talents of a constitutional arbiter"; others who with Pearson and Allen call him an "acrobatic liberal"; still others who agree with the analysis of his liberalism in a 1937 *New Republic* article which pointed out that when the Court was liberal and Hughes one of the liberals he wrote more than his share of opinions, while when the Court was reactionary and Mr. Hughes one of the reactionaries he practically never wrote the opinion. In other words, he is a "combination of voluble liberalism and silent conservatism."

The record shows that in twenty-seven measures covering a wide range of social legislation

HUGHES, CHARLES EVANS—*Continued*
he voted for Administration measures eighteen times and in five of them his vote was the deciding one. With the liberals he wrote the opinion upholding the constitutionality of municipal bankruptcy acts; with them he wrote the opinion upholding the Government of the gold clause decisions. He furthered the rights of Negroes in the Scottsboro case and in the decision of April 1941 which ruled that Negroes were entitled to railroad accommodations equal to Whites'. He sustained the National Labor Relations Act, the TVA, the social security laws; and in his last term on the Bench he upheld the Federal Wages and Hours Act, the Government's power of regulation over navigable streams and the Government's power to regulate State primaries and upheld the National Labor Relations Board and the unions in several cases.

On the other hand, he voted against the AAA, limited the power of the Securities and Exchange Commission to protect the investing public, declared the Guffey Coal Act unconstitutional, and was on the conservative side in the cases of Rogers *vs.* the Guaranty Trust Company and the United States *vs.* the Elgin Railway. Actually, a summation shows that in his 10 years as head of the Supreme Court, Justice Hughes carefully avoided permanent alignment with any side. When asked once whether he regarded himself as a liberal or a conservative, he replied: "These labels do not interest me."

As Chief Justice, Mr. Hughes developed a mania for speed and was able to keep the docket fairly clear—it was on the basis of efficiency that he argued against Roosevelt's attempt to pack the Court. Court sessions, under his leadership, moved briskly. (He was ruthless in holding attorneys to their time allowance, stern in keeping them to the point. And at the same time he was rarely caustic in asking them questions, almost always gracious.) His decisions were written quickly—sometimes as many as thirty in an eight months' session—and about them, as about the man, critics disagree. To some they are vigorous, vital and pointed; to others "dull and ponderous, wading through reams of ambiguous language before coming to the conclusions."

To keep the court up-to-date on its business and to get his own decisions written, Justice Hughes drafted and kept to a rigid schedule of living, which he adhered to from 6:30 a.m. to 10 p.m. At 6:30 he got up and not long afterward breakfasted with Mrs. Hughes. Then at 8:00 came his morning walk and at 9:00 he was in his study on the ground floor of his house reading or dictating until 11:30 when, during the time Court sat, he was driven to the Capitol. Back at 5:00, he would work for an hour or so before dinner. After dinner he read for a while—newspapers, magazines, fiction, biographies—and by 10:00 he would be in bed. Social life was sternly restricted and limited mainly to Saturday nights, for which he was dated up months ahead. "I'm to see you at a dinner in May," a friend once told Mrs. Hughes in January. In retirement, life will probably be less rigidly scheduled: there will be more reading, more travel with Mrs. Hughes, and perhaps more time spent with their children: Charles Evans Hughes, Jr., head of a New York law firm; Mrs. William T. Gossett, whose husband is a member of Charles, Jr.'s legal firm; Mrs. Chauncey L. Waddell, who is in 1941 chairman of the drive to raise $50,000 for the Polish Medical Center in Edinburgh. (There was another daughter, Helen, who died.)

Mr. Hughes, whose long and active life has been honored by countless college degrees, by countless medals and awards (the latest was given him in December 1940 by the National Conference of Christians and Jews for his contribution toward the improvement of human relations) retires from the highest judicial position in America while still considered "something of a paradox." "His life is an example to the nation of that virtue of disinterested service of which he has long been an earnest advocate," says one commentator, and many agree with him. Still Pearson and Allen and some others suggest that occasionally Hughes was less public minded than he might have been. Perhaps the judgment with which most agree, however, is that of J. P. Pollard. As a lawyer, he points out, Mr. Hughes was retained by powerful clients; as a judge he was retained by the American people. In both positions he served his clients well.

HUGHES, HOWARD (ROBARD) Dec. 24, 1905- Motion-picture producer; aviator
Address: b. Hughes Tool Co, Houston, Texas; c/o 20th Century-Fox Film Corp, Beverly Hills, Calif; h. 3921 Yoakum Blvd, Houston, Texas

Howard Hughes had just broken the transcontinental flying record in 1936. Reporters crowded around him asking for his comments. "I haven't anything to say," he answered. "I didn't do anything sensational." In 1938 he broke the round-the-world record. On his return he had to make the second public speech of his life. He confessed that he was a great deal more nervous over the speech than he had been over the flight.

That is typical of this remarkable young man, who at 20 had an income of $2,000,000 a year, yet has remained "simple in manners, careless in dress, unconscious of social distinctions." He was born December 24, 1905 in Houston, Texas. His father, Howard Hughes, Sr., had invented important oil-well drilling machinery, and headed the Hughes Tool Company. The boy and his father (who was a brother of Rupert Hughes, the writer) were great friends, and the son inherited mechanical ability and scientific curiosity. At 12 he made a radio transmitter out of a doorbell and a self-starting motor for his bicycle. He was a member of the Radio Relay League, and he made his first airplane flight at 14. He was educated at the Fessenden School, West Newton, Massachusetts, the Thatcher School, Ojai, California and Rice Institute of Technology in Houston. He was a freshman there when his father died; his mother, Alene (Gano) Hughes, had died when he was 16.

He left college (though afterward he took some courses at the California Institute of Technology) and took over direction of his father's huge business. When he was offered $7,500,000 for it, he refused, and he still controls it. But he wanted something else to do that would require more personal attention. He came to Hollywood before he was twenty-one, and in six years there he produced many prize-winning pictures, as well as a few of lesser caliber. *Hell's Angels,* the first and only $4,000,000 picture in Hollywood's history, was one of the big box-office hits of all time. It was really made twice, for just as the silent version was finished, the talkies arrived. For the sound version, Hughes selected an unknown girl to play the star feminine role. Her name was Jean Harlow; that was the beginning of her fame.

He has, indeed, a flair for making unknowns into celebrities. He did the same thing with Paul Muni in *Scarface,* one of the first, and one of the most successful, of the gangster pictures. *The Front Page* (recently remade by another producer as *My Girl Friday,* with a girl in the reporter's role) was another smash hit—which, incidentally, fixed in the public mind a conception of newspaper editors and reporters and how they act, which newspapermen deplore! Among his other successful pictures were *The Sky Devils, The Racket* and *Two Arabian Knights.* Some critics felt dubious before *Scarface* was shown, especially as the name inevitably suggested Al Capone; but the picture (like other gangster films which followed it) provided a strong moral lesson as well as an exciting story, and it started a new fashion in pictures—as well as giving Muni his start as a character actor.

HOWARD HUGHES

While he was in Hollywood, Hughes lived simply, in apartments or rented houses, and took little part in the social life of the film world. He had been married, very young, to Ella Rice, of Houston, but they were divorced by 1929, and he has not remarried though he has been frequently engaged.

It was natural that the boy who had led all his classes in science should be irresistibly drawn back to his early love, aviation. He established an experimental aviation company, and in 1935 he set a record for land flying speed of 352 miles per hour. In January 1936 he broke all records for transcontinental flight by flying from Burbank, California to Newark, New Jersey in nine hours, twenty-five minutes, ten seconds, and he won the Harmon Trophy. Exactly a year later he flew the same course again and broke his own record, cutting his time down to seven hours, twenty-eight minutes, twenty-five seconds. Then, in July 1938, he flew around the world in a Lockheed monoplane, *New York World's Fair 1939,* again breaking all records. His time for 14,716 miles was three days, nineteen hours, eight minutes, ten seconds. He made six stops: at Paris, Moscow, Omsk, Yakutsk, Fairbanks and Minneapolis. To him these flights were not stunts, but scientific experiments; he has plenty of daring but no bravado whatever. He made the most careful preparations for every eventuality, testing and retesting even to the kind of bread which would keep fresh longest for sandwiches. His plane was equipped

HUGHES, HOWARD—*Continued*

with a Sperry Gyro-pilot and a Line of Position Computer, and proved the worth of both these inventions. Once more he received the Harmon Trophy, and the Collier Trophy as well.

Then he gave up aviation and went back to Houston, where for three years he devoted all his time to his tool business. But in 1940 he came back to Hollywood and to films. In 1941 he produced a picture called *The Outlaw,* based on the life of the bandit, Billy the Kid. It has been held up by censorship trouble. The leading roles were given to a boy and girl utterly unknown to the screen and without film experience of any kind—Jack Buetel and Jane Russell.

The same swift, methodical and thorough workmanship which distinguished Mr. Hughes' flying exploits marks his motion picture work as well. One man, watching his decisiveness and energy on the set, was heard to exclaim: "Holy cats! He's still flying!" In spite of his forcefulness he is shy and reticent—people who are less discreet have called him secretive—but when he feels at ease he is a friendly young man with an infectious grin, a young man who looks strikingly like Gary Cooper, six feet three inches tall, lanky and dark. At school he played baseball and football, and he still plays golf. He is one boy who started from the top and made good!

HUGHES, MARTHA GROOMES *See* Hughes, T.

HUGHES, TONI Artist

Address: c/o Willard Gallery, 32 E. 57th St, New York City

Toni Hughes calls herself a "chicken wire sculptor" and proves it by cutting caricatures from bits of tin and wire netting. She considers her work "perfectly sound modern art"; others consider it a unique form of fantasy in hardware materials. The Willard Gallery in New York City gave her her first one-man New York show, *Hardware Arabesques,* in January 1941. "Though some serious art critics sniffed a little at the unorthodox figures," many people came, blinked, gaped and found much to admire.

Among those who admired was the critic of *Art News,* who found the arabesques "only more expressive and modeled mobiles." He called it an "intriguing and blithe new art form" of "cut-out silhouettes made to sway ever so slightly," and, he continued: "Just when you might consider stopping to marvel at the expressiveness of line and economy of delineation—electric-light bulbs for heads, birthday-cake rosettes for bouquets, etc.—you will discover that music boxes can be wound underneath the figures. All of Miss Hughes' concoctions are great good fun."

Fred Hamilton

TONI HUGHES

Before Miss Hughes took hardware shears in hand, she had tried various activities, mostly in the art field. Born Martha Groomes Hughes in Portland, Oregon, she is the daughter of Sterling Worth Hughes and Maude (Gilliland) Hughes, descendants of New England and Oregon covered-wagon pioneers. After study at the Los Angeles Art Institute, she began her career as a photo retoucher on the Los Angeles *Examiner.* While using the black and white retouching inks, she began experimenting with display cartoons and sold enough of them to finance a trip to New York, where she conducted an illustrated column in the New York *Mirror* in 1929. The next year found her in Paris, where she painted "acres of nudes" at the Julian Academy on an exchange scholarship from the Los Angeles Institute. Modern art forms seemed too static as a means of expression and she found a job as "handyman" to a French motion-picture company, working as script girl, scenarist and cutter with Alberto Cavalcanti from 1932 to 1934.

Returning to New York then, she began to experiment with the creative possibilities of the short film as a vehicle for the expression of abstraction and fantasy. Though at the time she was not very successful, in 1941 she plans to animate her figures for film production in short subjects. By 1936 she had returned to her native West Coast and settled down in Hollywood. Here she made her first metal figure, inspired by her childhood tinkering with an Erector Set. When this first figure, constructed from scraps of wire and metal found in an airplane factory, was exhibited it brought her orders for window displays of football and baseball players made of hardware. Miss Hughes felt that she had finally found her art medium. In early 1940 she had a first one-man show at the Walker Galleries in Hollywood. MGM ordered some of the figures for decoration for the film *Susan and God.*

Miss Hughes' studio does not look like a sculptor's. Her sources for material to work with "may be the dime store, a junk yard, or a hardware shop. She creates best with wire screening, all kinds of perforated metal (especially the lacework pattern variety), plumber's tape (the kind which braces pipes), chicken wire, nuts, bolts, screws, rubber balls, tin globes, wheels from kids' toys, and even Christmas-tree ornaments. Her tools are whopping metal shears, a screw driver, a hammer, pliers, and a hacksaw." It all adds up to a small boy's dream workshop.

This "Thurber in sheet metal" does both window exhibits (such as the series of decorative functional figures made for Macy's in New York City) and abstractions (like the 20 shown in her one-man show). All belong in the realm of fantasy. Most of them have no faces but all of them have wit and spirit, such as the "buxom body of an elegantly attired female known as 'Miss Columbia the Gem of the Ocean.'" The figure called "The Extrovert" beats his own drum and blows his own horn; a trio of chorus girls is "mostly plumbers' tape, with shreds of copper scouring pads for bodices, and bells on their toes." "Gibson Girl" is an empty Chianti bottle, topped with coiled wire for hair.

The humor in Miss Hughes' work is reflected in her person. "Addicted to sticky caramels," says one observer, "with tousled hair and casual clothes, mostly a turtle-necked sweater, green slacks and sneakers, she stands on no ceremony—which is probably one reason why her 'art' is so much fun and why Toni always seemed a better name than Martha."

Miss Hughes likes her work. She says she is "tired of neurotic art," and is all for the healthy kind that makes people happy. "To me a surrealist is a guy being sick in public."

HUNTLY, FRANCES E., pseud. *See* Mayne, E. C.

HUNTZIGER, CHARLES (LÉON CLÉMENT) (hŭn'tzĭg-ẽr) June 25, 1880—Nov. 12, 1941 Late Minister of War of the Vichy Government and commander in chief of the French land forces

CHARLES HUNTZIGER

Bulletin: General Charles Léon Clément Huntziger was killed on November 12, 1941 in an airplane accident as he was returning from a tour of inspection of the defenses of France's African colonies. The crash occurred at Le Vigan, not far from Nîmes, in the south of France.

When Vice-Premier Darlan (see sketch March issue) took over the post of War Minister in the Vichy Government, General Charles Huntziger was transferred from his position as national defense head to Algiers, with authority over General Weygand (see sketch 1940 Annual), commander of French-African forces. Most London observers interpreted this move of August 1941 as further evidence of Darlan's determination to hand over the French-African colonies to the Germans, since it was believed that Weygand stood in the way of certain measures of "collaboration" which the Nazi Government demanded. The transfer was also believed to be linked with efforts to undermine American influence in French North Africa.

A blond, sharp-featured Breton, General Huntziger was one of the French Army's most distinguished officers, having attained his distinction chiefly through his colonial administrative career. The son of an Alsatian who was given his choice of citizenship in 1871 and chose French citizenship, Charles Léon Clément Huntziger grew up in Lesnevan, "fervently patriotic and fervently anti-German." He was graduated from St. Cyr when he was not quite 20, and left immediately for the colonies with the 2nd Colonial Infantry Regiment in search of adventure and battle. He found both in Madagascar, the Senegal and the Sudan. He took brief time out to attend L'École Supérieure de Guerre; then, with the rank of captain, went on to Tankin.

(Continued next page)

HUNTZIGER, CHARLES—*Continued*

With the outbreak of the First World War he returned to France in 1914. In a brilliant two-day and two-night battle near Mantez (December 1914) he victoriously withstood with two companies a vastly superior German force. For this he won his Croix de Guerre. A major in 1916, he was called to the general staff of the 2nd Colonial Army Corps, then to the general staff of the Armies of the Orient. There, as second in command, he rendered noteworthy service, mapping under the most difficult conditions the great victory of Skra di Legeor, which brought about the capitulation of Bulgaria.

As lieutenant colonel he was, in 1922, with the Ministry of War, and he attended classes in high military training. In 1924 he became a colonel and took command of the Army of Occupation in China. In 1928 he was made a brigadier general, the youngest general in France. He first headed General Claudel's general staff, then became inspector general of colonial troops, and afterward served as head of the French military mission to Brazil. In 1934, as major general, he was called to the high command of the French troops in the Near East.

When the Germans attacked in the Second World War, Huntziger became commander of the 2nd Army during the Battle of France. Following the collapse of France, Huntziger attained world-wide notice on June 22, 1940 when he headed the French Armistice delegation that signed the peace terms with Germany at Compiègne Forest. At that time he announced that he had been ordered to sign the terms, and in a tense voice cried: "I would like to make a personal statement. France is forced to accept conditions whose severity must be emphasized. I appeal to the soldiers' spirit in the hope that the French will never have cause to regret the step we are now taking."

Close to Pétain in all French military maneuvers, the "lean, unsmiling, poker-faced" Huntziger was known to have a strong distaste for the British Empire and as a colonial administrator had often tangled with the British. By decree of the Pétain Government, in September 1940 he was named generalissimo and commander in chief of the French land forces, thus succeeding General Weygand. In the "Vichy Triumvirate" to aid Pétain, Huntziger was appointed Minister of War in charge of defense.

The recent transfer of Huntziger to Algiers completed the cycle of France's outstanding colonial careerist, the "cold, inscrutable and ambitious" leader of her "manifest destiny" group. In view of British plans for offensive moves in the Mediterranean area, Huntziger was given a highly important key position in Axis defense.

HUROK, S(OLOMON) Apr. 9, 1888- Theatrical impresario

Address: b. Hurok Attractions, Inc, Rockefeller Plaza, Radio City, New York City; h. 145 W. 58th St, New York City

S. Hurok, whose name appears on the programs of scores of music and dance recitals, is a "thickset, moon-faced Russian" who, according to the New York *Times*, "has done more for music in America than the invention of the phonograph." Marian Anderson, Rudolph Serkin and the Kolisch String Quartet made their first United States tours under his management; Anna Pavlowa, Feodor Chaliapin, Tetrazzini, Mischa Elman, Mary Wigman are only a few of the world's gifted who have appeared under his aegis; and he has presented entertainment as varied as the Monte Carlo Ballet Russe, the Moscow Cathedral Choir, the German Grand Opera Company and the Habima Players.

This "most irrepressible of music managers" is today the fountain head of personal information about most famous singers, dancers and instrumentalists. He can and will reminisce about Chaliapin tantrums and his ability to handle them. He tells of Richard Strauss' inveterate poker playing, of Isadora Duncan's habit of signing checks that bounced, of Pavlowa's eating habits. He can describe at length the dressing, shaving, marital and artistic habits of almost any artist the world is curious about. And there is nothing he doesn't know about artistic temperament.

He believes temperament to be the sole property of genius, however; impresarios can't afford to be anything but calm and collected. And it is probably this trait of always knowing exactly what he is about, together with a real flair for recognizing attraction, which has brought him, through ups and downs, to a position of real importance in the cultural entertainment world.

Solomon Hurok was born in Pogar, Russia, the son of Israel Hurok, a hardware merchant, and Anna (Schream) Hurok. In his early teens he was sent with 1,500 rubles to the big city to learn the hardware business. He didn't even inquire into its workings but ran away to America and arrived there in 1903 knowing no English and with less than three rubles in his pockets. He decided to make his way in Philadelphia—"I wanted to start where Benjamin Franklin started, in the city where the Declaration of Independence was signed." It was an inauspicious start. First he peddled needles, but found his job complicated by the fact that he couldn't explain to housewives what he was selling and why.

From selling needles Hurok went on to running a streetcar. This didn't last long. either, after the company discovered he was letting people off at the wrong corners. Then came jobs washing soda pop bottles for $1 a day, working in a mattress factory, bundling newspapers for the midnight edition of the Philadelphia *Press*. Finally, Hurok decided that he had done his duty by Philadelphia and set out for New York, where his first job, thanks to early training, was in a hardware store.

During these months of unprofitable jobs Hurok heard music whenever he could, standing for hours at the box office of the old Hammerstein Theatre and spending scraped-together pennies for the privilege of standing for five hours to listen to *Parsifal*. He began to see a career in music, and at 18 organized the Van Hugo Musical Society and arranged concerts for clubs and labor organizations. Pretty soon, whenever a Brooklyn charity wanted to give a concert, Hurok was the one who engaged the artists and made all the arrangements. By the time he was 21 he was renting huge Madison Square Garden and offering concerts there. And he had already presented top-notch artists at popular prices at the Hippodrome.

From the time he started, long-established managers looked upon him as an upstart, and they have continued to be astonished by the lavish amount of talent he has steadily produced. In 1925 Hurok seemed to justify the other managers' opinion of him: he went into bankruptcy. But during the depression, when they were retrenching, his presentations were more lavish than ever. In 1934 he opened the *Continental Varieties* at the Little Theatre in New York, presenting Lucienne Boyer, Vicente Escudero and others. And in that same year he spent $75,000 to import the Monte Carlo Ballet Russe. Great names continued to appear under his management and in the 1941 season he was presenting Artur Rubinstein, the Don Cossack Chorus, Argentinita, Marian Anderson—to name only a few.

Before the Second World War, Hurok used to travel every year to Europe looking for talent, "signing more new big contracts than any one man in his risky profession." Today he is spending most of his time going around the country, finding out the likes and dislikes of every sizable town in the Postal Guide. His spare time he spends listening to music (he still can't read it) and devouring all the political and international news he can get hold of. A good many important artists have discovered by now that if Hurok is not in his Radio City offices, Carnegie Hall, Town Hall or the Opera House they're pretty sure of catching him up in the NBC radio room with his ear glued to the amplifier. Hurok is married to Emma Rifkin and has one daughter, Ruth, who is Mrs. Barry Hyams.

ICKES, HAROLD L(E CLAIRE) (ĭk'ĭs) Mar. 15, 1874- Secretary of the Interior; Petroleum and Solid Fuels Coordinator for National Defense

Address: b. Interior Bldg, Washington, D. C.; h. Headwaters Farm, Olney, Md.

One of the most forceful and colorful personalities in Washington is Harold L. Ickes, who, in his capacity as Secretary of the Interior and "the custodian of National resources," carries perhaps wider responsibilities than any other Cabinet member. He administers, among others, the General Land Office, Office of Indian Affairs, Geological Survey, Fish and Wildlife Service, Bureau of Reclamation, National Park Service and the National Power Policy Committee. This full slate, however, has never prevented him from periodically declaring his readiness to take on other duties For over a year he had been issuing warnings about the oil shortage in the East. On May 28, 1941, President Roosevelt named him as Petroleum Coordinator for National Defense, making him the virtual czar of the American oil industry and establishing what came close to government control of oil. Mr. Ickes, who has always advocated strict conservation of petroleum resources, served as head of the Federal Oil Administration during the NRA days and had many clashes with private oil interests. In his present post, however, the specific "recommendations" which he is authorized to make are expected to be enforced. His first move in his new office was to call an oil parley in Washington to discuss plans for more effective utilization of the United States' petroleum resources. Next he asked for the arrest of "jackrabbit" starters and requested, successfully, the closing of Eastern gas stations from 7 p.m. to 7 a.m. each day. Later, however, the oil shortage was found to be less acute than he had believed, and by the end of October gas stations were once more in full-time operation.

In November 1941 Ickes was also appointed Solid Fuels Coordinator for National Defense, charged with assuring an adequate supply of coal and coke.

Harold Le Claire Ickes was born on March 15, 1874 on a farm in Frankstown Township, Blair County, near Hollidaysburg, Pennsylvania, the son of Jesse Boone and Martha Ann (McEwen) Ickes. His family comes from old stock. Its founder came to Pennsylvania with William Penn, and there exists a city of Ickesville, named after another ancestor who fought in the Revolution. When young Ickes was 16 his mother died and he went to live with his aunt in Chicago. There he attended the Englewood High School and the University of Chicago, getting his B. A. degree in 1897. He had worked his way through college by teaching in public evening schools.

He worked as a reporter for a while and covered the Democratic and Republican conventions in Chicago in 1900 for the Chicago *Record*. Then he dropped his journalistic career to return to the University of Chicago to study law, from which he was graduated *cum laude* in 1907. Soon after he was admitted to the Bar. By 1911 he was fully launched as a reformer and politician and had married Anna Wilmarth Thompson, who had gone to college with him and later married and divorced Professor James Westfall Thompson. Daughter of a wealthy manufacturer of gas fixtures, she had a distinguished career of her own, was a trustee of the University of Illinois and subsequently was elected several times to the state legislature. (She died in 1935, victim of an automobile accident.)

Harold Ickes' career as a crusading politician had begun in his senior year at the University of Chicago, when he campaigned for John Maynard Harlan, an independent Republican candidate for the office of Mayor of Chicago. Though a novice who did not "know a precinct from a ward," he made an impressive showing, and in 1905, when he was a sophomore in law school, was once again invited to help with a campaign of Harlan's. In 1911 he managed the unsuccessful campaign of Charles E. Merriam for Republican Mayor of Chicago. Although originally a Republican, Ickes did not mind reversing his affiliations, preferring to cleave to principles rather than parties. In 1912 he backed Theodore Roosevelt's Bull Moose campaign for President and after his defeat threw in his lot definitely with the Progressives and supported Hughes (see sketch this issue) in 1916. In 1920 he attended the Republican Party Convention as a delegate-at-large, helping to block the attempt to nominate Harding unanimously and then switching over to work for the Democratic nominees. Until 1932 Ickes' candidates—at least to national office—uniformly failed to be elected.

In-between his political activities, Ickes divided his time between his residence in Winnetka (Thorncroft) and his law office in the Chicago Loop. He took civil liberties cases without pay, taught Americanization classes at Hull House and waged a bitter fight against the utilities and for municipal reform. Named by his enemies "the gadfly of Cook County," he lived up to his name by sniping at Chicago's "Big Bill" Thompson, whom he was at last instrumental in unseating for a brief while, and at Samuel Insull. The latter was his special aversion and Ickes did everything in his power to make things unpleasant, from opposing Insull in his struggle to get a perpetual street railway franchise to blackballing him out of the Chicago City Club. He became known as a slightly embittered reformer, the champion of the underdog.

In 1932, Ickes, at 58 "a futile worker for civic betterment," finally hit the jackpot. Roosevelt was elected, and Ickes had helped by swinging the liberal Midwest Republicans to his side. In February 1933 he received an invitation from the President-elect to attend a conference on general economic problems. He came as an acknowledged student of conservation, with a strongly developed interest in Indian affairs. It was at this conference, held in the President's home in New York City on February 22, that Roosevelt saw him and "liked the cut of his jib." The result of their long and stimulating interview was the Secretaryship of the Interior. The liking was heartily reciprocated: ever since, Ickes has been the most loyal and uncompromising supporter that the President has had.

In 1933 it looked as though Ickes were going to make up with a vengeance for his years of "futile crusading." He was once again pleasantly surprised when to his already considerable responsibilities was added the monumental one of administering the Public Works Administration. For six years he had under his jurisdiction the expenditure of more than $5,000,000,000 on non-Federal and Federal public works projects, which included construction of public works of all kinds such as sewage systems, public buildings, highways and dams—public works which served the double purpose of answering public needs and giving work to the vast number of unemployed during America's worst depression. He owes his nickname of "Honest Harold" to the fact that billions of dollars were spent under his supervision without a breath of scandal. His detractors accuse him, however, of impairing departmental morale by suspicion and espionage. The fact remained that PWA contracts were graft-proof.

A particularly important part of PWA was the work it did in power and irrigation—among its projects were the gigantic Boulder Dam, Bonneville Power and the Grand Coulee Dam. Often the use of Federal money to build municipal projects brought Ickes into conflict with private utilities like Commonwealth and Southern. There was protest, for example, when Ickes offered 21 municipalities a total of over $9,000,000 to build power plants of their own when they were already served by private utilities. Ickes was charged with using his program as a "club" to drive down rates. His course of action was upheld by the Supreme Court in 1938, however, and the saving of millions of dollars of consumers' money, as a result of providing "yardsticks" through the Federal and Municipal power projects, has been called one of PWA's most important accomplishments. The first Federal low-cost housing program in America was another. Ickes himself, in his book *Back to Work* (1935), evaluates the PWA: "The Government embarked on the public works program because of the timidity of private capital and its refusal to come out from under the bed."

Ickes' fighting temperament has often brought him to the rostrum and microphone as a fervent apologist of the Administration, often, it is claimed, to say things that Roosevelt would like to but is not in a position to say. From his mouth have come fiery diatribes against Big Business that have caused disgruntled opponents to call him "Roosevelt's hatchet man." He has been known to draw material for his attacks from such books as *America's 60 Families* by Ferdinand Lundberg. As early as 1934 he formulated the New Deal credo in his *The New Democracy.* This has been unsympathetically described as "the triumph of wishful thinking so dear to the savage, the child and the reformer." Another critic, however, says: "It is impossible not to feel drawn toward Mr. Ickes if you have ever met him; and it is equally hard not to admire the fine liberal spirit which animates his book. He wants everyone in this country to be prosperous and happy."

HAROLD L. ICKES

In 1938, Ickes, at that time "one of the few men around here who [was] not a candidate for President," toyed briefly with the idea of becoming Mayor of Chicago. The idea of smashing the Kelly-Nash machine in the city where he had spent most of his political life was an inviting one. But eventually he turned it down; he found sufficient excitement in his own department. For one thing, a debate over the air with Frank Gannett, owner of a chain of newspapers, started a controversy in 1939 that has shown no sign of ending in 1941. The subject was the freedom of the press and Ickes claimed that the press in the United States is subject to financial pressures which limit its freedom, cause improper slanting of news and editorials and make it unfair to certain groups of citizens. After Roosevelt's re-election in 1940 he continued his attack, pointing out that "we elected a President who was supported by less than 23 per cent of our daily press. . . This reveals a perilous situation requiring public consideration."

He pursued this thesis in two books: *America's House of Lords* (1939), and *Freedom of the Press Today* (1941), which assembles to-

ICKES, HAROLD L.—*Continued*

gether discussions on the subject by such newspapermen as Herbert Agar, Ralph Ingersoll, William Allen White and Raymond Clapper. On several occasions his sorties on columnists, or, as he indignantly calls them, "calumnists . . . ex-reporters who waste good white space to spread injurious gossip," made good copy. He found much pleasure in commenting on Walter Winchell's "obstetrical turn of mind," Dorothy Thompson's tendency to cover too much ground, Boake Carter's ability to "enter any intellectual goldfish swallowing contest." Sometimes his attacks took a poetical turn, as in this:

> *Who knowing scarce their ABC*
> *Rank doctors of philosophie?*
> *Who but the columnists?*
> *Who expound the Constitution*
> *Adding circum to locution?*
> *Why, the columnists.*
> *I'd like to strut and look profound*
> *And order Presidents around.*
> *I'd like to be a columnist.*

It has been rather unkindly suggested that the last remark is simon-pure truth.

Ickes played a most important part in the 1940 Presidential elections. It was General Hugh Johnson (about whom Ickes once ruefully moaned, "I would that he loved me much, much less than he does") who called him the "original triple termite" and claimed that he wrote the platform, uttered the keynote speech, mapped the whole strategy and prepared an outline for most of the campaign speeches. Though that is undoubtedly an exaggeration, it is true that Ickes, a veteran campaigner and properly inspired by having so much more promising a candidate than in the past, covered the country, lining up the votes. It was he, too, who answered the speeches of the Republican Party while the President was, in contrast to Willkie, resting his throat for the final spurt in the campaign. Ickes' gift for lethal invective came in handy. Before the nomination he had deflated candidate Dewey (after Dewey "had finally thrown his diaper into the ring"). The campaign for Willkie under way, he called the Republican nominee "a rich man's Roosevelt" and a "simple, barefoot Wall Street lawyer" (this last in deadly allusion to his emphasis on his clean, country-life antecedents). His activities during the campaign finally caused the *New Republic* to remark with some astonishment: "The Ik . . . is now one of the major political bosses of the country."

Ickes has been called a contentious and quarrelsome soul unable to live at peace with fellow New Dealers and possessor of "the worst temper between the Hatfield-McCoy country and La Guardia's office in City Hall, New York." Among people with whom he has tangled are Gifford Pinchot, Henry Wallace, whose Forest Service Ickes has coveted, Cissy Patterson, the publisher of the Washington *Times-Herald,* and Congressman Dies. He has more than once denounced "our native Fascists and appeasers," too—naming among them Merwin K. Hart, Lawrence Dennis, Charles Lindbergh (see sketches this issue), Henry Ford, Father Coughlin, Major Al Williams. And he himself has been the recipient of some inspired name-calling, most of it, however, directed at his personality rather than his integrity or efficiency. He has been called "Harold the Meddler", "Donald Duck of the New Deal," a "professional rabble-rouser," a "common scold." The doughty secretary can take it, however, and give back as good as he gets. The worst press he ever got was on the pages of *Völkischer Beobachter* on the occasion of his refusing to permit the export of helium for the use of German dirigibles in 1939, and he welcomed it. Germany has continued to give him a bad press for his urging the United States to support Britain and Russia fully, to reject a "craven's truce."

Ickes is a rather thickset, bespectacled, vigorous man, with his gray hair growing thin on top. In 1938 he fluttered the Washington dovecots by marrying the 25-year-old Jane Dahlman (Smith '35, *cum laude*) sister of the widow of his late stepson, Wilmarth. With her and their two children, Harold McEwen, who was born September 4, 1939, and a daughter, Jane, born on May 26, 1941, he spends all the time he can on their estate at Headwaters Farm, Olney, Maryland. He has one child by his previous marriage, Raymond Wilmarth, a lawyer. He collects stamps. An ardent dahlia fan, he originated a peach-colored species which he patented and named Anna W. Ickes. He likes to garden without gloves, with his hands in the soil. Altogether he is a robust person and on occasion grows Whitmanesque, as in his 1940 Fourth of July speech, when he asked: "When are you going to laugh, Americans? When is the great, hard, angry, shouting, raspberry laugh of the American people going to yell down the west wind of this continent and out to sea and on out past the horizon?"

INFELD, LEOPOLD (ĭn-fĕld) Aug. 20, 1898- Professor of applied mathematics, University of Toronto, Canada; physicist; author

Address: b. University of Toronto, 5, Ontario, Canada; h. 61 Austin Terrace, Toronto, Ontario, Canada

Leopold Infeld ("a tall, jovial man" with dark hair and gray eyes), professor of applied mathematics at the University of Toronto, author of more than thirty scientific papers printed in French, German, English and Polish, collaborator with Einstein on *The Evolution of Physics,* is the author of *Quest; The Evolution of a Scientist* (1941). It is an autobiography that has three subjects: "The Polish ghetto, from which Infeld originated; Leopold Infeld; and the discoveries of theoretical physics in which Infeld participated." And it is a fascinating and completely, sometimes painfully, honest book, more sensitively written than any but the rare novel.

Leopold Infeld was born on the principal street in Kraków's ghetto on August 20, 1898, the son of Salomon and Ernestine (Kahane) Infeld. Although his family was fairly prosperous, through his entire life he was to fight "the dark, narrow atmosphere" of the ghetto in which he was born. "To the ghetto Jew the Polish city was a strange and hostile world." At six, Leopold left his crowded, odorous Jewish school for the public school to which everyone went for four years by Franz Joseph's imperial decree. There he first learned Polish; there he got his first real glimpse of the larger world. He was determined to go on to a Gymnasium and thence to a university, but his father closed this, the "easiest exit from the ghetto," by sending him to a citizen's school so that he might become a businessman like himself rather than a doctor or a lawyer.

LEOPOLD INFELD

Temporarily Leopold lost all interest in study, all ambition. Not until he was 13 did he discover the excitement of books and friends. It was then, too, that he lost his religious faith, began to commit all possible sins against the ritual. When his father found out, Leopold was beaten, but gradually his independence was accepted—and in more than religious matters. His father did not argue when Leopold bought three heavy volumes of physics, and after discovering that he needed a mathematics textbook in order to understand them, decided to study by himself in order to pass the University examination (the *matura*). Now his great ambition was to become a Gymnasium teacher, perhaps because he himself had been unable to attend. But his great passion was already for physics: "What I loved in physics was the rigorous character of its reasoning."

Young Infeld took his oral *matura* on May 9, 1916, passed with first honors—and on May 11 was drafted into army service. He found the War senseless and barrack life unbearable, but after a corruptible corporal helped him to desert he found himself in a more precarious situation than he had bargained for. Throughout most of the War he lived in constant fear of being discovered, until shortly before the Armistice he succeeded in getting himself classified as feeble-minded and returned safely to civilian life and the University of Kraków.

The defeat of the Central Powers brought independence to Poland; yet "in the fight for power in young Poland the reactionary forces won." It was not long before Infeld learned what real anti-Semitism meant. He left the University of Kraków for Berlin; there he found prejudice against the Poles. He enlisted Einstein's (see sketch this issue) help to gain admission to the University of Berlin and after much difficulty was allowed to enroll as a "special student," but his studies there brought him no credits toward a degree and he eventually returned to the inferior University of Kraków, where he obtained his Ph. D. in 1921.

In the Poland of 1921 no Jew could dream of becoming a teacher in any but a Jewish Gymnasium. For eight years the first doctor of theoretical physics in free Poland worked as a schoolteacher in small Polish provincial towns, although no university in Poland had a man able to teach theoretical physics. "Dependent on stupid, narrow, dull people who were the trustees of the school, constantly fighting with them for decent salaries, burdened with teaching, hating the streets, buildings and faces around me, I slowly lost all desire to open a scientific book and forgot what I had learned." Some interest returned when he joined the Polish Physical Society. Gradually he began doing scientific work again, publishing articles in German and French scientific journals.

It was at a meeting of the Physical Society in Wilno in 1928 that Dr. Infeld met and fell in love with a young woman scientist. Later he described that first meeting to her: "I behaved so badly, so noisily." "I know," she replied. "That kind of behavior comes from unfulfilled ambitions and an unhappy life." With his marriage to Halina, Infeld's life changed. But she was not well. He accompanied her to Vienna and to Italy for treatment. In the meanwhile his school was disqualified for an incident which had happened when he was in charge. He found a senior assistantship at the University of Lwów and in his second year there ("by an almost fantastic *coup* in which the anti-Semites canceled one another's arguments") was habilitated as a docent; but once more Halina became ill. It was in Leipzig that she died, in the last year of the Weimar Republic, and only the vision of a book "dedicated to Halina's memory" saved her husband from self-destruction. True, physics was all he knew; but even a book on physics might be written in a popular way. Eventually it appeared, with the dedication as he had envisioned it; its title was *New Pathways of Science,* later published in England as *The World in Modern Science* (1934).

Shortly afterward Dr. Infeld himself went to England, to Cambridge, on a Rockefeller scholarship. There he helped Max Born formulate a field theory which, according to *Time,* "bridges modern Quantum Mechanics and the nineteenth century electromagnetic wave equations of Scotland's brilliant James Clerk Maxwell." After England it was hard to return to Lwów, for all over Poland the tide of anti-Semitism was increasing, but Infeld still hoped to get a promotion to a professorship at his University. In the meanwhile he began writing articles against Fascism and against anti-Semitism for liberal papers. It was this, rather than the fact that he was a Jew, that was used as an excuse for his not receiving the promotion. When Infeld finally learned how foolish his hopes had been he once more turned to Einstein (now at Princeton) for help. Not long afterward he learned that the Institute for Advanced Study in Princeton had granted him a small fellowship for the academic year 1936 to 1937.

At "the most famous school of mathematics in the world," Fine Hall in Princeton, Infeld met Einstein, with whom he was to work on gravitational waves, for the second time in his life. Infeld's impressions of the great scientist form one of the most warm and interesting parts of his book, according to one reviewer, "an excellent condensed biography of Einstein, a biography of Einstein's spirit." Even when Infeld's fellowship was not renewed he determined to remain in the United States. But at least $1,500 was needed in order to work for another year. How to get it? Once more the vision of a book appeared. He would write a popular book with Einstein! Einstein was enthusiastic; Simon and Schuster even more so; and the exciting work began. The remainder of the story of *The Evolution of Physics,* 1938 best seller, is well known. "To the end of my life I am stamped as the 'collaborator of Einstein,'" Infeld mourns; but "I no longer sat alone at teatime in the commons."

Soon, too, he was offered a year's lectureship at the University of Toronto, "a position very similar to the one in which I had begun my scientific career in Lwów 10 years before," and near the end of his academic year there accepted a professorship of applied mathematics. As soon as he finished his lectures (in April 1939) he left for New Jersey to marry Helen Schlauch, whom he had met in New York at the American Mathematical Society. (There is now one son, Eric.) Life, at last, was good.

But in August 1939, somewhere in the wilds of New England, he and Helen heard for the first time the news of Warsaw's bombardment, saw the ugly headlines. Infeld was torn between an unreasonable desire to return to die with his people and an unholy joy that he, at least, was safe. "Poland was beaten before the War began . . . by its own reactionary regime . . . by its own treatment of peasants, workers and Jews"; but he was a Pole. And was even America completely safe? "Am I witnessing here the beginning of a process of which anti-Semitism is an external sign, or are these only isolated insignificant cases and not characteristic of the greatest nation in the world?"

Something more than a physicist, Dr. Infeld's life even more than his words mark him as one who belongs to "the generation of scientists who were forced to view the world outside their island, who had to learn to ask: 'What are the forces which try to destroy science? How can we save our kingdom? How can we by our own efforts prevent or delay the decline of the world in which we live?' " "The scientist," he writes sadly, "tries to understand the origin of our solar system, the structure of the universe and the laws governing the atom. He has discovered X rays, the radioactive substances, and he has built cyclotrons. He has foreseen the existence of electromagnetic and electronic waves. Out of his thought has grown the technique of our century. But not until today has he begun to notice that the earth on which he moves is covered with sweat and with blood and that in the world in which he lives the *son of man has nowhere to lay his head."*

INÖNÜ, ISMET (ē-nû-nü') Sept. 24, 1884- President of Turkey
Address: Ankara, Turkey

Turkish Embassy

ISMET INÖNÜ

Ismet Inönü, whom John Gunther (see sketch this issue) calls "one of the best diplomats of modern times," has repeatedly announced that Turkey wants peace—although not at the price of her independence. For months during the Second World War he turned down the offers of Germany's Ambassador Von Papen (see sketch this issue) for a rapprochment between his country and the Nazis; he resisted the hints of Turkey's British ally that his country aid the Greeks; he maintained a friendly, if delicate, relation between Turkey and Russia. Until the signature of the Turkish-Bulgarian non-aggression pact of February 17, 1941 many observers believed that the use of Bulgaria for the passage of Nazi troops would cause Turkey, watchdog of the Dardanelles, to become actively belligerent, however, and when this did not prove to be the case they insisted that she would not be able to maintain her neutrality if Russia were involved. Yet the fall of 1941 found Turkey still not in the War, although in a position that could best be described as sitting on a powder-keg.

Ever since the Turkish Republic was founded by Kemal Ataturk in 1923 Ismet Inönü has been a leader of his people. He was born in 1884 in Izmir (then Smyrna), the son of Reshid and Djevriye, his father a judge on English Hill. At the age of twelve he entered the artillery school in Istanbul (then known as Constantinople) and then went on to the General Staff College, where he was two years behind Ataturk. He was graduated first in his class and immediately commissioned a captain. By the time he was 31 he had become a colonel in the Army.

During the First World War Inönü was sent to Palestine to fight the British and later, in 1917, was chief of staff to Ataturk in the fighting against the Russians in eastern Turkey. Then, after the War, when the national movement was formed, he joined forces with Ataturk. When the Greek Army invaded Turkey "with the blessing of Britain and France," Inönü once again was Ataturk's chief of staff, his job the holding off of Greeks with guerrilla irregulars while the regular army was being organized. Twice he defeated the Greeks at the village of Inönü. Later, when Ataturk decreed that all Turks must have last names, he took his name of Inönü in memory of this victory.

When the Republic was proclaimed on October 29, 1923 Inönü became its first Premier, one of the triumvirate of Ataturk, Inönü and Fewzi Çakmak that directed its destinies. Ataturk was the President of the Republic and its creator and inspirer; Inönü was his right-hand man, the administrator and executor of the laws and reforms instituted. Under their leadership Turkey "passed from the Oriental middle ages to the twentieth century of the Occident." The hold of the Mohammedan Church was broken; progressive schools were started; clothes were westernized; women were given freedom; society as a whole was completely modernized and changed.

During the years that Ataturk was President, Inönü and Ataturk disagreed about many things, for Inönü's was a more moderate approach to reform than Ataturk's. Yet the two men never disagreed about Turkey's place in the modern world, and under them "the sick man of Europe" became a lusty one. In diplomacy, it was Inönü who did the guiding, aided by that greatest of all diplomatic blessings—deafness. It was he who had had the first and hardest job of making the peace with Greece legal at Lausanne in 1923 and he who faced down the annoyed Allied statesmen and won absolute sovereignty for the Turkish Republic. Later it was he who established friendly relations with all the contiguous states and most of the major powers in a long list of bi-lateral treaties. His was a policy founded on col-

INÖNÜ, ISMET—*Continued*

lective security which, he felt in 1937, was "in spite of everything the only possible remedy against the visionary aims of the peoples and the only basis on which one can reasonably hope to found a better world."

In 1937 Inönü resigned the Premiership after a period of fourteen years in office, except for a four months' interval from November 1924 to March 1925. The reasons for his resignation were the subject of much speculation. Some said he was forced out; others that he stepped out. Some said Ataturk had found him too pro-Russian; others that the cause was "probably mutual irritation despite mutual respect." Then in November 1938 Ataturk died, and 24 hours after his death the Grand National Assembly (parliament) unanimously chose Ismet Inönü as his successor for a four-year term.

Ismet took over, announcing: "It will be our task to see that Turkey falls neither into anarchy nor tyranny. The nation in the past has given ample proof of its heroism. With the support of its glorious army it will give further proof, if need be, in the future." Under Inönü the Turkish Republic continued much in the same form as under Ataturk, an authoritarian regime, but, most observers agree, not a Fascist one. Inönü, who believes in the Republic and modern reforms, still feels that the Turkish nation as a whole is not ready for the kind of political democracy which has been developed in western Europe. Yet, "though the Government directly or indirectly owns most of Turkey's new industry and controls everything," according to *Life* "Turkey is still a republic and Inönü still a President."

During Inönü's term as President, Turkey concluded a number of important negotiations and treaties, the most important the 1939 treaty of mutual assistance with England and France. This treaty stated that England and France would go to the aid of Turkey if it were attacked and in return Turkey would give help to the Allies if war spread to the Mediterranean area and if the Allies got into war by helping Romania or Greece (a promise that has not been kept). In any other war Turkey would remain benevolently neutral. But nothing, Inönü was careful to have inserted in the treaty, would compel Turkey "to take action having for its effect or involving as its consequence entry into armed conflict with the U. S. S. R."

It has been said that "the sober personality of Inönü is in itself an answer to the old charge that Turkey is a Fascist dictatorship." It is an explanation, too, of Turkey's diplomatic maneuvers. Unlike his roistering, lusty predecessor Inönü is "quiet, studious, monogamous, good-tempered, pious and conservative"—everything that Ataturk was not. He loves his shy wife, Mevhibe (whom he married in 1916), his sons, Omer and Erdel, and his daughter, Ozden; he likes to play bridge and billiards, ride fine horses, work out chess problems and listen to the Ankara Philharmonic Orchestra. And he looks the quiet sober man he is, with his small, frail body and small façe, "dominated by a monumental nose" and topped by gray hair.

JEANS, SIR JAMES HOPWOOD Sept. 11, 1877- Astrophysicist; author

Address: Cleveland Lodge, Dorking, England

Few men of science have been showered with as many medals and honorary degrees as Sir James Jeans has won by his contributions to our knowledge of the solar system, the stars, radiation and related subjects. And probably no other scientist of like distinction has been the author of four best sellers in four successive years. Beginning as a teacher of applied mathematics, he has become a major figure in astronomy and cosmogony, and is today one of the two foremost popularizers of these subjects—the other being Sir Arthur Stanley Eddington (see sketch this issue).

Sir James received his title from the King, and not from his Scotch-descended father, W. T. Jeans. He was born in Lancashire on September 11, 1877, and although his family moved to London when he was three, a certain quiet solidity about him still gives the impression of a country rather than a city gentleman. After preparatory years at the Merchant Taylors' School he went to Trinity College, Cambridge, in the late '90s, expecting to make a study of the classics his life work. In this beginning, as well as in the final linking up of science and God, he resembles another scientist, Robert A. Millikan.

Before Jeans emerged from the famous "capital of the scientific world" he had transferred his attention to mathematics and had brilliantly distinguished himself. In 1900 he was Smith's Prizeman and in 1901 was made a Fellow of Trinity College. In 1904 he became university lecturer in mathematics. The following year he made his first trip to America, in response to an invitation from Woodrow Wilson, then president of Princeton University, to become professor of applied mathematics at that institution. During his five years in America the shy, handsome Britisher endeared himself to his colleagues, issued a number of important publications and married Charlotte Tiffany Mitchell of New London, Connecticut—a niece of "Ilk Marvel" renowned in the sentimental '80s as author of *Reveries of a Bachelor* and *Dream Life*.

Jeans' Alma Mater recalled him to England in 1910, and he taught applied mathematics at Cambridge. Four years later, when his brilliant *Radiation and the Quantum-Theory* was published, some of his American colleagues were "thrilled" to learn that this ardent disciple of the venerable Newtonian school had become "an inspired apostle of the new physics first inaugurated by Planck and Einstein in the beginning of this century." Einstein (see sketch this issue) himself was at this time still a clerk in the patent office of Switzerland

Continuing his researches and his emergence as a leading astrophysicist, Jeans in 1919—the year his *Problems of Cosmogony and Stellar Dynamics* was published—received the Medal of the Royal Society and became secretary of the Royal Astronomical Society.

(Continued next page)

SIR JAMES HOPWOOD JEANS

This position he held for 10 years, resigning then to devote himself entirely to his own scientific problems. In 1922 he received the Gold Medal of the Royal Astronomical Society. Since 1923 he has been research associate of the Mount Wilson Observatory, where, during his visits to this country, he has profited by the opportunity to examine the skies through the world's largest telescope.

Sir James was knighted by the King in 1928, in recognition of his contributions to science. This was the year his *Astronomy and Cosmogony* was published and also, in America, his first popular book, *Eos. The Universe Around Us* followed in 1929, and the next year *The Mysterious Universe.* Four other popular books have been published since then, all of them having sales unprecedented for scientific books. Seventeen thousand copies of *The Mysterious Universe* were sold the first week after its publication in England, and in 1934 it was announced that his last four books had sold 300,000 copies in England and America. Meanwhile he had become familiar to radio audiences through a series of talks, sponsored by the BBC, which formed the basis of his *The Stars in Their Courses,* published in 1931.

As popular author, Jeans is unanimously voted "a master of English and of mathematical physics" who, with his "incomparable gifts of lucid exposition, persuades even the non-mathematical mind that it can probe the secrets of inter-stellar space." When he begins, however, to discuss the "Great Architect of the Universe," whom he conceives as "a pure mathematician," to describe the cosmos as "his thoughts," and to dilate upon the philosophical implications of all this for mankind, opinion divides. From one school of critics we hear that *The Mysterious Universe* is "admirable for its mastery of its subject, its clarity and the philosophical soundness of its conclusions," that "it would be difficult to find more real thought packed into such small compass" and that its "last chapter cannot possibly be ignored by anyone who wants to remain in touch with modern thought." The other side remarks that "doubtless some of [Jeans'] admirers will not applaud his present incursion into the domain of what Dr. David Starr Jordan calls 'sciosophy,'" that "we do not go to the most brilliant scientist of our time to hear things that might be excused in an Early Victorian," and, more excitedly, that "the public is being played upon and utterly misled by the dreamery of the rival mathematical astronomers and physicists."

The same type of comment has been passed on succeeding books. *New Backgrounds of Science* (1933) was termed "unrivaled as a broad outline of the most recent developments of theoretical physics" which could be "recommended with equal confidence to the physicist, the philosopher and the layman." But another critic commented: "Instead of disclosing the new backgrounds of science this book exhibits the new science against the background of an old philosophy. The dilemmas in which the author finds himself are the inevitable consequence of this incongruous setting."

His tremendous popular following did not come between Sir James and the scientific world. In 1931 he was awarded the Medal of the Franklin Institute for his "many fruitful contributions to mathematical physics, especially in the realms of the dynamical theory of gases and the theories of radiation, his challenging explanations of astronomical problems and his illuminating expositions of modern scientific ideas." When he came to this country to receive the medal he was honored at a dinner given jointly by the New York Museum of Science and Industry, the American Institute, the American Museum of Natural History, the Amateur Astronomers Association, the New York Academy of Sciences and the magazine *Scientific Monthly.* His speech to the guests was broadcast over the NBC network.

Still higher on his ample list of honors, degrees, medals, offices and memberships stands the Order of Merit, awarded to him in 1939. This is one of the greatest distinctions an Englishman can attain, and membership is limited to twenty-four. American newspapers, however, gave far more space that year to a controversy set off by his statement that "touch" in piano playing was merely a matter of how hard one hit the keys, and that a single tone struck by an umbrella would be no different from one made by the finger of Paderewski. The comment was made during a talk to the English Music Teachers' Association—no doubt a result of his book published in 1937, *Science and Music.*

In 1934 the beautiful Lady Jeans died, bequeathing to her husband the whole of her $500,000 estate. The following year Sir James was married to Susi Hock, a gifted young organist from Vienna whom he had met when she was playing in a Handel festival in Cambridge. About this time the Royal Institution won him back to teaching; he accepted their newly established chair in 1935. In 1936, at 59, he became the proud father of his first son, and later another boy was born. He has one daughter by his earlier marriage.

Rugged, handsome and quiet are the adjectives most often applied to Sir James, whose spacious home in Dorking, surrounded by huge rhododendrons, seems a more appropriate setting than a banquet chamber in a New York hotel. He likes to smoke an old briar pipe, with which he gestures as he talks, and to quote poetry in a deep voice. Very much the substantial Britisher, there is about him a simplicity and an air almost of boyishness—personal expression of the enthusiasm that has marked both his researches and his popular interpretations of them. It is the spirit that is apparent in his exclamation, (back in 1932) that "we of the present age know . . . almost nothing; we are pioneers setting out to explore . . . the glorious morning of the world."

JENKINS, LEW Dec. 4, 1916- Former world's lightweight champion

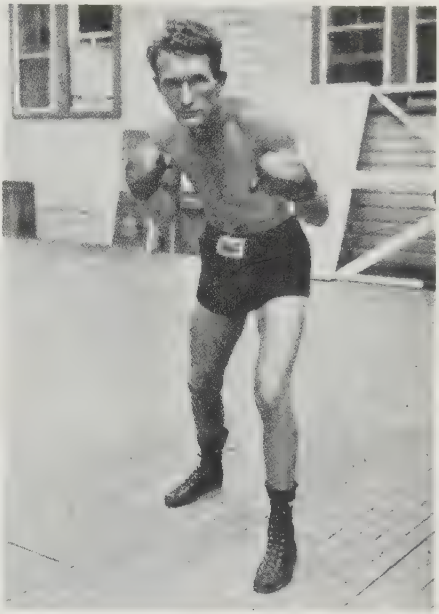
Address: c/o Twentieth Century Sporting Club, Inc, 1619 Broadway, New York City

Bulletin: Lew Jenkins lost the world's lightweight championship to Sammy Angott on December 19, 1941 at Madison Square Garden.

From January 1941 issue (revised):

Lew Jenkins leaped from obscurity to newspaper headlines and the lightweight championship of the world in one brief year. In May 1939, in New York City's Madison Square Garden, Jenkins scored a three-round technical knockout over the 135-pound champion, Lou Ambers, to annex the title. Barely a year before, Lew had arrived in New York an unknown, run-of-the-mill boxer who had barnstormed all over the country fighting wherever he could find a spot. Lew's climb to the top has been the result of a lot of hard work, some lucky breaks and some particularly shrewd management. In his last 58 fights he has scored 31 knockouts.

Lew Jenkins was born of Irish stock in Brownwood, Texas on December 4, 1916, and when he was very young his parents moved to nearby Sweetwater. There the "Sweet Swatter from Sweetwater" went to school intermittently, but mostly was apt to be on his hands and knees between two rows of West Texas long staple cotton, transferring the contents of the little green bolls to a 12-foot canvas sack tied around his neck. He was a "good" boy and the people of Sweetwater can't recall that he ever showed any of the traits which, later in the ring, made him one of the most relentless fighters the game has produced. Lew enjoyed all the sports that the average American boy likes, but horses and riding were (and still are) his favorites. So, in 1936, he went to El Paso, Texas to join the United States 8th Cavalry at Fort Bliss.



20th Century Sporting Club

LEW JENKINS

Private Jenkins was assigned to the task of fitting iron shoes to the feet of Uncle Sam's mules. While watching the inter-company boxing matches, he became interested and soon began fighting preliminaries in small town rings, receiving pay enough to buy his boxing gear. Lew once hitchhiked to Silver City, New Mexico, a distance of about 100 miles, for a match. He left Fort Bliss early in the morning and reached his destination just in time to enter the ring. Immediately after the bout he had to hike back to the

JENKINS, LEW—*Continued*

Fort to report for duty in the morning. His percentage of the gate receipts was $3.

On a furlough Lew went to Dallas to engage in his first real professional bout. His opponent, Kid Leva, was stiffened in short order. Although Lew received only $16 for this fight he aroused the interest of Fred Browning, well-to-do Dallas sportsman. After watching Jenkins train, Browning purchased his discharge from the Army. At the same time Lew met Katie Lucille Jenkins, midget auto-racer who invited him to see her in action. Lew accepted and saw the 100-pound Katie take the wheel of a stock car, miss a turn, catapult through the rail, turn over three times; then right the car, drive through the fence onto the track again and win the race. In less than four months he persuaded her to change the Miss to Mrs. and thereafter Katie was an important figure in Lew's management. She accompanies him to all his fights and is usually in his corner at bell time.

Lew and Katie traveled throughout most of Texas and made a trip to Mexico which was a "bust" financially. In some of the places where Lew fought, before his opponent climbed through the ropes, he didn't know whether he was going to fight a lightweight, middleweight or welterweight. There is no accurate check on just how many matches he engaged in during this period, and Jenkins himself doesn't know how many he won and lost. The important thing then wasn't the winning or losing, but getting enough money for hotels and meals and gasoline to the next town. In Los Angeles, Lew, who arranged his own fights, won a few bouts in the smaller arenas, but was unable to get suitable matches.

In the latter part of 1937 Lew and Katie drove to Chicago. There he began to fight regularly and in the better clubs. He won a lot of fights and lost some and, while most of the time the pay was small, he picked up valuable experience. Because Katie wanted to see the World's Fair, they came to New York. After a shaky start, Lew began piling up the imposing list of knockouts that brought him his title chance. When Lew first arrived in New York his affairs were handled by Frank Bachman, under agreement with Fred Browning. After a misunderstanding, Hymie Caplin, the Broadway legend, replaced Bachman. In Jenkins' first bout in Madison Square Garden he knocked out Primo Flores in five rounds; six weeks later kayoed Mike Belloise in seven rounds; and a month after stopped Billy Marquart in three rounds.

Jenkins has fought a number of times since he won the title from Ambers. The first was an overweight, non-title bout with the then welterweight champion, Henry Armstrong. It was generally agreed by sports writers that this was an overmatch for Jenkins, for Armstrong was considered one of boxing's all-time-greats: he held the featherweight, lightweight and welterweight titles at the same time. The bout, however, was a natural from the spectators' point of view, with the hard-hitting Jenkins and the perpetual-motion Armstrong in the ring. Jenkins stopped a punch by the heavier Armstrong early in the fight and collapsed in his corner after the seventh round. He fought dusky Bob Montgomery in Philadelphia in his next fight, and although Jenkins was floored in the second round he went on to take a clean decision in 10 rounds. A 10-round non-title match with the world welterweight champion, Fritzie Zivic, resulted in a draw.

In his first defense of his title Lew gained sweet revenge over Pete Lello, who had knocked him out a few months before in Chicago. Of that fight Jenkins says that a cut eye forced the referee to stop the fight, but Lello says that he "knocked Jenkins colder than a herring." After the usual sparring first round, Jenkins went to work on Lello in the second and smacked his opponent to the canvas right after the bell. Although Lello gained his feet he had a "goofy" look on his face, and after three more trips to the deck, referee Arthur Donovan mercifully stopped the slaughter.

Bob Montgomery gave Lew a fine licking in a return match in May 1941, but since Montgomery exceeded lightweight limits, Jenkins retained the title. He was trounced again in October of the same year by Red Cochrane, but again in a non-title bout.

"Nobody," says Lew, "taught me to fight. Nobody teaches anybody to fight. They teach 'em to be smarter or carefuller, maybe, but you got to be a fighter right from the start, else you're never a fighter." Lew is cold, hard, merciless and has no nerves. His weatherbeaten face, with lumps of scar tissue over the eyes and the beginning of cauliflower on his ears, bears mute evidence that he has no high regard for the scientific end of the game—he just hits harder and oftener than his opponents. Someone once told him that if you batter at anything long enough something has to give, and that is just the way "this lad conducts his blitzkriegs" in the ring: a "hell-bent-for-leather, slam-bang fracas that never ebbs until the other half of the shindig starts sinking by the stern end."

Outside the ring Lew is a modest, unassuming young man with high cheekbones, a beak of a nose and tousled brown hair. He is five-feet-seven in height and the 135 lightweight limit bothers him not at all. He eats what he wants and his best fighting weight is around 131 pounds. He cares nothing for the extensive wardrobe that most boxers acquire, and is frequently seen in Broadway nightspots in polo shirt and slacks. When he retires he wants to buy a ranch in Texas and stock it with blooded cattle. With more than $50,000 from his last four fights he should be able to do this soon. But, with his dynamic punch, tremendous endurance and unquestioned courage, he may remain at the top for quite awhile. "Lew," says one sports commentator, "may not be the greatest champion his division has ever had, but he is certainly one of the most pleasing to watch in action."

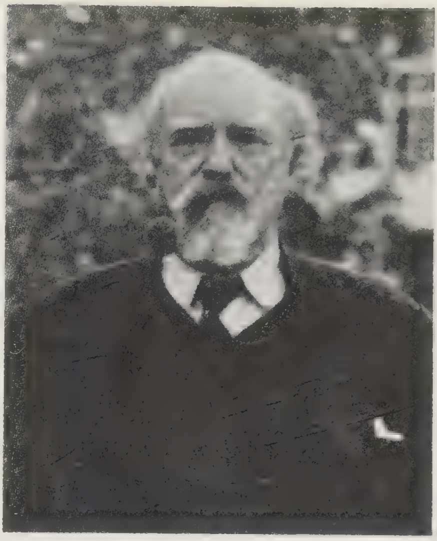
JOHN, AUGUSTUS (EDWIN) Jan. 4, 1879- Welsh painter; etcher; lithographer; draughtsman

Address: h. 33 Tite St, Chelsea, London, S. W., England; Fryern Ct, Fordingbridge, Hampshire, England



AUGUSTUS JOHN

Bearded, eccentric Augustus John, Britain's most famous living artist, possibly the most famous living portrait-painter in the world, and generally accepted as the original of Aldous Huxley's satyr-like John Bidlake in *Point Counter Point*, may or may not have Romany blood in him. It is known that he was born at Tenby, Wales on January 4, 1879, but further details are difficult to get. As T. W. Earp, art critic of the London *Daily Telegraph*, expressed it: "At a time when artists, along with other persons of repute, are inclined to meet willingly, if not even to induce, curiosity as to the non-professional side of their existence, John has been content to display himself through his work alone."

John was first heard of in 1894 as an art student at the Slade School, University College, London, where he studied under Professors Frederick Brown and Henry Tonks and in 1898 won a prize for composition against such competition as was furnished by fellow students like the late Sir John Lavery and the late Sir William Orpen. Even in those early days there was the wonderful "Old Masterish" quality about his drawing that later caused John Singer Sargent to say: "John's drawings are the best since the Renaissance"; and by 1899 this young man of 20 was having drawings accepted by the New English Art Club, then regarded as the *avant-garde* of British art. In 1901, the year he married Ida Nettleton, he was called up to Liverpool as instructor in drawing at University College.

C. H. Reilly, the eminent teacher of architecture, gives some lively pictures of those early days. "Liverpool in 1904," he writes, "was still arguing about a caravan on its way there (North Wales) going down Bold Street at the fashionable hour with the Hon. Mrs. Dowdall, her one aristocrat, seated stockingless—a first-class event in those days—on the steps and behind her the Sampson and John families, with Dowdall, a rising young barrister now the County Court Judge, and [Augustus] John riding on nags behind." Under the tuition of Sampson and of the gypsies themselves John became expert in the difficult Romany language; and he learned to speak five other foreign tongues. "John as I knew him then," Reilly adds further, "was a glorious-looking young man of about twenty-five, tall and graceful with longish hair, big magnetic eyes, bearded like the pard, picturesquely dressed with big hat, sailor's jersey and earrings and with a fine springy walk."

During his Liverpool days John started his portrait practice (not without causing considerable local controversy, hardly understandable in 1941), and earned a great deal of fame by such pictures as *Merekli* (1902) and *Dorelia* (1904) at the New English Art Club. The "John girl" has become well known since that time. She is a raven-haired, bold, vivid creature, loosely attired in flaming crimson or in some rich color combination of oranges and blues; and she has a certain dash and spirit hard to put in words. Once young John left a train at Marseille and went back to Spain to paint a girl he had seen from a train window.

It was also during this period that John began to etch; most of his etchings date between 1901 and 1910. They derive from the Rembrandt tradition, and their subjects are often types found in the slums of Liverpool, but his etching of W. B. Yeats as a young man is the one which is probably most famous. (Many of these early etchings were included in the comprehensive exhibition of his prints which was shown at the M. A. McDonald Gallery in New York City in December 1941 and was then presented to the Boston Public Library.) For a year or two John lived at Matching Green, Essex, a village which he left periodically to wander around in a caravan and make his first landscapes. He kept up his friendship and gypsy-lore studies with Sampson, who had a cottage in North Wales from which expeditions could conveniently be made.

John also lived for some time in Paris and on the Breton coast. His first one-man exhibition took place in 1908 at the Chenil Gallery, Chelsea, and in 1909 he settled in London. By the outbreak of the First World War he was well established, and by 1917 E. L. Allhusen was to call him "the most talked of artist in England today." During the War he served as an official artist with

JOHN, AUGUSTUS—*Continued*

the Canadians, holding the rank of major. He produced a big cartoon for the Canadian War Memorial and many portraits, including one of Premier Lloyd George; he was at the Peace Conference in 1919 and painted many of the participants; and he did some of the portraits for T. E. Lawrence's *Seven Pillars of Wisdom.* Lithography (which he started in 1917) had been added to his work with the brush, the pencil and the etching-needle.

In 1920 (the year when the practical British soap king Lord Leverhulme cut the head out of John's portrait of him so that he could get it into his safe and when nearly all the artists and dealers in London protested by a 24-hour strike) John had a show at the Alpine Club Gallery. He had always ignored the Royal Academy, but by 1921 the Academy could no longer ignore him, and he was elected an associate. In 1928 he became a full academician. Ten years later he resigned in a fit of temper because a portrait of T. S. Eliot by his friend Wyndham Lewis had been refused a place in the annual exhibit ("an inept act," John called it); but in February 1940, for the third time in its history, the Academy re-elected a resigned member.

It would have been quite simple for Augustus John to have become a fashionable portrait-painter and nothing more, for he has painted such eminent sitters as Lord Cecil, T. E. Lawrence, King Feisal, Herr Stresemann and, more recently, Britain's Queen Elizabeth for commissions ranging up to $15,000. But he has rejected the temptation. He need not paint a vulgar face because it has a good checkbook, and is at his best with a worthy subject—a weighty thinker like Thomas Hardy, or an enigmatic, provocative, anonymous figure like *The Smiling Woman,* or a fine interpretative artist, like Madame Suggia, the cellist. He is also capable of producing a whole show of, say, unknown West Indian sitters, as he did at Arthur Tooth's Bond Street gallery one year.

He is a great master of line whose actual brushwork in oil portraiture is loose, free and forceful and who as a draughtsman has done "work as precise and as punctilious and done with as much delicacy of skill as any by Ingres himself." The author of this last phrase, Arthur Symons, goes on to point out that John can at times be a satirist, "setting paint and pastel to play games of their own, burlesquing Rubens and Rembrandt and Millet as only one great painter could burlesque another"; but this is not a frequent mood, and John never makes fun of his portrait sitters, as Sargent so patently and constantly did.

Among John's figure compositions, both etched and in oil, there are some very notable ones of the gypsies, who are still his friends. They used to congregate on Epsom Downs some days prior to the Derby and all through the Epsom meeting, but were finally warned off one year, and John defended them. In November 1931 he took a prominent part in the funeral ceremonies of Dr. John Sampson, ceremonies which were carried out in the Romany way. The ashes were carried up the Welsh mountain, Moel Coch, and Augustus John, cigaret in hand, recited from memory a Romany poem composed by Sampson and delivered an eloquent oration before seeing the ashes scattered from the mountain summit. In 1937 he served as president of the Gypsy Lore Society.

"Everything about Augustus John is picturesque," says Mary Cass Canfield, "—his name, his appearance, his point of view, his artistic career." *Time* credits him with dressing "like a Paris Bohemian of 1890" and possessing the remarkable trick of "looking fierce in one eye and hunted in the other." He is a man of wide culture with a taste for singing little French ballads and declaiming poetry. He lived for some time in Mallord Street, Chelsea, making frequent visits to Martigues, near Marseille, but in late years has been at Fordingbridge, Hampshire, where he owns an old stone manor and a bright pink studio.

John is a member of the New English Art Club, a Fellow of University College, London, president of the Society of Mural Painters, and has been a trustee of the Tate Gallery since 1933. That he is generous in his impulses is shown by his painting of Professor Oliver Elton on his retirement from Liverpool in 1926. The literature students wanted the portrait done, but they were not rich; so John accepted what they could raise, and produced a masterpiece.

Since the beginning of the Second World War he has been painting almost more than at any other time in his life. His sons are all fighting for England; a daughter, "Poppet," who can be described from his portrait of her as "a ravishing brunette whose hair cascades over her white shoulders," is divorced and living in London. There may or may not be another artist of talent in the family. Late in 1939, on seeing an exhibition of landscapes by his daughter Vivien, Augustus John gave his own frank opinion: "Rubbish!"

JOHNSON, HIRAM (WARREN) Sept. 2, 1866- United States Senator from California

Address: b. United States Senate, Washington, D. C.; h. 1360 Montgomery St, San Francisco, Calif.

In 1940 Senator Hiram Johnson ran for his fifth term as Senator from California on the Republican, Democratic and Progressive tickets—"as happy as a clam at high tide" at the triple nomination—and was sent back to the Senate by 483,328 Democrats and 581,858 Republicans. "In 30 years of victory Senator Johnson had never enjoyed such a vote of confidence."

He enjoyed it despite the opposition of Roosevelt, who once hailed him as the greatest liberal of our time and later sadly commented that no one in his wildest dreams could possibly consider Johnson a liberal or a progressive. He got these votes despite his own strong and consistent opposition to Roosevelt during the 1940 election campaign. Willkie and McNary were eternally right, he said, "upon the great issue, the all-important one of a third term," and he warned the voters: "Power is a heady wine. . . The gentleman who seeks it now . . . has gathered unto himself more power than any ruler on earth has, save in the totalitarian governments. . . All of the forebodings of Washington, Jefferson and Jackson are fulfilled and justified."

Associated Press

HIRAM JOHNSON

Johnson's platform for the 1940 campaign was the platform that had been his almost all his political life—a platform of complete isolationism for America. In his victory Senator Rush Holt saw a victory for isolationism in this country. Representative Joe Martin saw in it a rebuke to Roosevelt; other Republicans saw in it a happy omen for Republicanism in general. But *Time's* summary of the general reaction was: "When a state once acquires a solid admiration for the gnarled, hickory character of an elder statesman, it often continues to vote for him regardless of issues."

Senator Johnson, who is known less for the statutes that bear his name than for those he has stopped, is proud of his record of dissent and particularly proud of the fight he has waged against America's involvement in foreign affairs. It was Johnson who helped keep us out of the League of Nations, out of the Four-Power Pact; Johnson who opposed the London Naval Treaty, the World Court, our revised neutrality legislation; Johnson who fought, mainly on the basis of the Johnson Act, which placed a Federal ban on loans to governments in default of their war debts, against the President's proposals to aid Great Britain. Johnson is always fighting. "A man must be a crank to do this sort of thing," he admits. "I guess that's what I am. It always seems that the unpleasant jobs fall to me."

Conservatives have fairly consistently distrusted Hiram Johnson as too much of a progressive and liberal. Liberals have called him a reactionary. Both groups admit that he is a complex mixture of revolutionary and

JOHNSON, HIRAM—*Continued*

standpatter. Both groups admit that he throws himself heart and soul, mind and body into any cause he believes in and against any cause he hates. Not all, however, will agree with the late Senator Borah's judgment of this: "The difference between me and Johnson," he once said, "is that I regard questions from the point of view of principles while he regards them from the point of view of personalities. When a man opposes me I do not become angry with him. On the next issue he may agree with me. When a man opposes Johnson, he hates him."

Hiram Johnson was born in Sacramento, California on September 2, 1886. His father, Grove Laurence Johnson, was a corporation lawyer, regarded as one of the cleverest members of the California Bar, a politician and a Congressman. It was of him that a native historian wrote: "The long continuance in the legislature of this adroit and malevolent man is one of the heaviest burdens carried by California today." Hiram Johnson's mother was Annie (DeMontfredy) Johnson.

Young Hiram went to public school in Sacramento and was graduated from the Sacramento High school when he was 17. He studied shorthand and then went into his father's office to study law and work as a stenographer. After a year of this, he left to enter the University of California, but stayed there only until his junior year, when he quit to marry Minnie L. McNeal. He was just 20.

In 1888 Johnson was admitted to the California Bar and began to practice in Sacramento with his father and his brother, Albert. He became a young and respected trial lawyer, "not particularly noted for the quality of his community service." His first fame came around the turn of the century, when he drove the gamblers out of the city; his next when he campaigned for a reform Mayor for the city. When the regular Republicans in this campaign tried to stop him by hiring every hall in the city, Johnson went out and hired a circus tent. His vituperative speeches attracted hundreds and his candidate was elected in a landslide.

In 1902 Johnson and his brother moved to San Francisco. Their partnership was soon dissolved, and Johnson proceeded by himself to build up a successful practice and to become one of the best jury lawyers on the Pacific Coast. But a storm was stirring in California. This state, long machine-ridden, began to bestir itself, and Johnson threw himself into the fight on the side of civic virtue. He became the spokesman of public protest and began to feel he was really working for something. As he put it: "My real life began when I was given an opportunity to quit working for myself and begin working for the people of the State." Johnson was a member of the staff of the prosecuting attorneys investigating the bribery cases which involved leading city officials and almost all public utility corporations in San Francisco, and he was selected in 1908 to take the place of the prosecuting attorney, Francis J. Heney, when the latter was shot down in court during a bribery prosecution.

In 1910 Johnson campaigned for Governor of California, touring the state in a little red automobile with one son driving the car and the other swinging a cowbell to tell the citizens he was going to speak. His platform was clean, reform government and a pledge to drive the Southern Pacific Railroad, of which his father was an attorney, out of politics. He won the fight and kept his pledges. First he assembled a cabinet and official family of young and idealistic reformers and then he proceeded to impress the state with "his simple direct manner and bulldog courage." He instituted a direct, non-partisan primary, a shorter ballot, prison reform, a workmen's compensation law, shorter hours for women—in brief, he made California "a laboratory of reform and advancement."

In 1912 Johnson emerged from local to national importance. In that year he ran for Vice-President with Theodore Roosevelt on the Bull Moose ticket and, though defeated, made an impact on the American political scene. Of him Theodore Roosevelt said to a friend: "Try to keep in touch with Hiram Johnson, for of all public men in this country he is one with whom I find myself in most complete sympathy. You are perfectly safe to follow his lead."

Johnson was re-elected to the Governorship of California in 1914 but served only until 1917, when he was elected United States Senator. It was during the 1916 campaign that he is supposed to have caused the defeat of Charles Evans Hughes (see sketch this issue), who, when he came to California, forgot to shake Johnson's hand, and "thus lost Johnson, California and the election." Once in the Senate, Johnson opposed our entry into the War and later Wilson's attempts at the League of Nations.

In 1920 Harding asked Johnson to be his Vice-President but Johnson, unsympathetic to Harding's political philosophy, refused, and in so doing lost himself the Presidency. Reelected to the Senate in 1922 and 1928 after an unsuccessful campaign for the Presidency in 1924, Johnson in his third term bitterly opposed all of Hoover's policies and fought almost every major proposal Hoover advanced. He and Hoover hated each other.

The political atmosphere around Johnson calmed down a bit, however, when President Roosevelt took office in 1932, for the two men were, at that time, much in sympathy. Yet when Roosevelt offered Johnson a Cabinet post he refused, and he refused also a place on the 1933 Economic Conference. Johnson, staunch individualist, wanted to leave himself free to fight, if cause for fighting came up. It came in 1935, after Roosevelt endorsed him for his re-election in 1934 (which was won with the support of Hearst and the largest majority any Senator ever got), when Johnson blocked the World Court Plan. And fighting on foreign policy—on reciprocal trade treaties, on neutrality legislation, on international relations —continued long after that, stronger in 1941 than ever before. Johnson in that year sponsored the minority report of the Senate Foreign Relations Committee opposing the Aid-to-Britain Bill; he asserted in the Senate that Roosevelt "in violation of the Constitution" had entered into an "offensive and defensive" alliance with Churchill; he shouted against aid to Russia—"Good God! Did we ever sink so low before as to choose one cutthroat out of two?" Even on December 10, 1941, after he had voted along with all the rest of the Senate for a declaration of war, he attempted to hold up the passage of the bill authorizing the use of National Guard troops and selectees outside the Western Hemisphere.

This "baggy old man in a blue serge suit with white piping on his vest" is admired and respected for the real good he has done, for his tenacity and his fighting ability, but there are some who feel that from a vigorous crusader he has become a rather dour old man. They admit that "when Hiram Johnson is pleased to be genial there are few more winning men alive"; but insist that "when he is pleased to be cantankerous he steps out of competition."

In Washington his is the only Senator's office remaining in the Capitol Building itself, for he refused to move when the Senate Office Building opened. He was too fond of his old three-room suite there with its pictures of California and of himself in various stages of his career and its framed quotation from Lincoln which seems to dominate the room: "I must stand with anybody that stands right; stand with him while he is right and part with him when he goes wrong."

When he leaves his office Senator Johnson, known as a hard worker but a poor mixer, usually walks home (his only exercise now, though he once was a fine rider and swimmer) to spend his evenings with his wife and a detective story, or at the movies, or playing dominoes—"the best domino player in the world," his friends call him. In California the routine is much the same, with just about as much politics as in Washington. There he explains to his judge and lawyer friends that he has always voted as his conscience dictates, that he scorns party labels. "I'm a rotten politician," adds California's biggest vote-getter.

JOHNSON, MORDECAI WYATT Jan. 12, 1890- President of Howard University
Address: Howard University, Washington, D. C.

On March 1, 1941, the 74th annual Charter Day of Howard University, the students, faculty, employees, alumni and trustees of the University presented Mordecai Wyatt Johnson with a testimonial, paying tribute to his 15 years of service there. In it they cited the achievements of this "bald, spectacled, light-skinned" educator and clergyman who is the first Negro president of the largest Negro University in the country. They told how he had revolutionized the physical plant of the University, how he had placed its running on a sound financial basis, improved the quality and security of tenure of the teaching staff and insisted on high standards of scholarship.

Tributes to Mordecai Johnson, which include the Spingarn Medal, have been many during the years he has served his people—which means during all his adult life. He was born in Paris, Tennessee, the son of the Reverend Wyatt Johnson, a "silent and stern man, of unbending rectitude," and Carolyn (Freeman) Johnson, "emotional, energetic, inspiring." Mordecai went to public school in his home town and then in the fall of 1903 entered the high school department of Roger Williams University in Nashville. His career there was terminated a year later when the school burned down, and Mordecai moved on to Howe Institute in Memphis, Tennessee. In the fall of 1905 he entered Morehouse College in Atlanta, Georgia and in 1911 was graduated with a B. A.

Johnson received an appointment as a professor of English at Morehouse immediately after graduation. But teaching English wasn't what he wanted to do. That summer he attended the University of Chicago to study the social sciences, and in the fall of 1912 returned to Morehouse to teach economics and history, instead. Other summers of work at Chicago followed, and in 1913 he received a B. A. from this University.

Despite his second degree and his success at teaching, Johnson decided that he wanted to be a clergyman. He left his position at Morehouse in 1913 and entered Rochester Theological Seminary. While there he was pastor of the Second Baptist Church at Mumford, New York. He was graduated from Rochester in 1916—in 1921 he received his Bachelor of Divinity degree for a thesis entitled *The Rise of the Knights Templars*—and

Bachrach

MORDECAI WYATT JOHNSON

proceeded to take the position of student secretary for the Y. M. C. A. For one year he traveled around the Southwest, making a careful study of Negro schools and colleges, as a result of which he recommended the formation of the Southwestern Annual Student Conference. There was a future for Mordecai Johnson in Y. M. C. A. work, but he turned it down. He still wanted to preach. And with his wife—he had been married less than a year to Anna Ethelyn Gardner—he entered the pastorate of the First Baptist Church in Charleston, West Virginia. The Johnsons now have two daughters and three sons.

In Charleston, Dr. Johnson built up a strong church organization and became "the leading spirit in the social and economic life of the colored people" there. He threw himself into every forward movement—was active in the Negro Baptist Convention, became organizer of a cooperative society and a cooperative grocery, was founder of the Charleston branch of the National Association for the Advancement of Colored People. In 1921 he took a leave of absence to do graduate work at Harvard University and in 1922 was awarded a Master of Theology degree. He was one of the speakers at this commencement, and his address on *The Faith of the American Negro* has been called "the most notable one given by a representative of the Negro people since the speech of Booker T. Washington in Atlanta in 1895." This degree was followed by a D. D. from Howard in 1923 and from Gammon Theological Seminary in 1928.

After nine years in Charleston, Dr. Johnson was called to the presidency of Howard University despite his limited academic experience and lack of administrative training. His first address to the University was a call to duty, "simple, sincere, reassuring." His activities were even more reassuring. Early in his administration the Twenty-Year Plan, a program of educational and physical development, was adopted, increased appropriations from the United States Government and private philanthropy were secured. During the years Dr. Johnson has headed Howard, there have been new academic buildings, new dormitories, new laboratories; the teaching staff has been doubled, teachers' salaries increased, teachers' tenure and security advanced; scholarly publications have been contributed by the faculty; academic standards have been raised to the point where the College of Dentistry, the Law School, the School of Religion and the College of Liberal Arts have all become accredited institutions. These are only steps forward, Dr. Johnson feels: his annual report for 1940 said that the University still needed more teachers, more books, more scholarship aid, more buildings. Under him, the more than 10,000 alumni and more than 200 students of the University feel this will be possible.

In his years at Howard, Dr. Johnson has occasionally been the subject of criticism, most notably in 1938, when a group of alumni charged him with the misuse of PWA money and unsympathetic behavior toward the Dean of Women. He denied these charges and said they were inspired by a group of Negro intellectuals close to the Government who hoped to get jobs in a shake-up. Most of the alumni agreed with him and in their Charter Day Tribute to him in 1941 cited not only the material achievements made during his administration but said to him: "You have instituted and developed democratic practices in the internal administration of the University and, in the face of criticism and pressure and at great personal sacrifice, you have at Howard University maintained academic freedom—the very life blood of a university in a democracy."

JOHNSON, NUNNALLY Dec. 5, 1897-
Scenarist; motion-picture producer

Address: b. c/o 20th Century-Fox Film Corp, Beverly Hills, Calif; h. 621 N. Maple Dr, Hollywood, Calif.

In February 1941, when the "Oscars" were being awarded at the banquet given by the Academy of Motion Picture Arts and Sciences, *The Grapes of Wrath* came into the limelight twice. Jane Darwell (see sketch this issue) was voted best supporting actress for her portrayal of Ma Joad, and John Ford (see sketch this issue) won an "Oscar" for his work as director of the picture. Behind the scenes was assistant producer Nunnally Johnson, who wrote the script for 20th Century-Fox, transcribing the Steinbeck novel more faithfully than most critics had thought possible. "The story line was clear," Johnson said with reportorial directness, "as old as the Bible—the migration of a people forced from their homes."

If Nunnally Johnson has a credo it might be expressed in the adage: "The story's the thing." This helps to make him a capable producer as well as a talented writer. But he is a writer first of all, aware of the seriousness of his craft. In 1935, when Darryl Zanuck (see sketch this issue) introduced him to the production end of the film business, Johnson took a script to Florida to mull over. He finally confessed that he wasn't getting anywhere. His fingers itched for a pencil or a typewriter. Zanuck gave in and said that he could, from then on, both write and produce.

"The nice thing about it," the thin, nervous, energetic writer-producer explained to critic Van Gelder, "is that since I'm hired as producer I can go out on a lot where a director is kicking my script around and say, 'Listen, what we want you to do is make this picture the way it's written heah on this papuh. Jus' you stick to this papuh.'"

The accent comes from Columbus, Georgia, where Nunnally Johnson was born in 1897, the son of James Nunnally and Pearl (Patrick) Johnson, and where he was educated. He got his first newspaper job there at the age of 16 and stayed in the newspaper business, off and on, until the late '20s, when magazine work occupied most of his time. He worked in the New York *Herald Tribune* city room, had as colleagues Ward Morehouse, Edward Hope, and a young bespectacled fellow named Richard Watts, Jr., who was Harriet Underhill's assistant. Newspaper work there, and on the New York *Post* and other papers, established him in that field. Humorous short stories, especially those for the *Saturday Evening Post,* made him known to a far wider public.

With the depression it became difficult, even for known talents like Nunnally Johnson's, to find markets. "Especially when you are writing humor," he expressed it, "a main thing you need is confidence—you must be sure that your little jokes are funny or you can't keep thinking up little jokes. My jokes hadn't sold, so how could I be sure of them? I was a real worried would-be humorist when I hit this town."

That, of course, was an exaggeration. He could even be humorous in a wry way about the Hollywood venture that dates from 1933: "They told me I could have a job at Paramount if I would pay my own fare from New York. It was humiliating to be so little wanted and—what was worse—I had to borrow the money to pay the railroad."

His first picture as scenarist was *A Bedtime Story.* He also did *Mama Loves Papa* for Paramount in 1933 and *Moulin Rouge* the following year. It was in that year, 1934, that he began to work with Darryl Zanuck, 20th Century-Fox producer. Three pictures on which he collaborated were good box office and identified him as a versatile and talented screen writer. The pictures were *The House of Rothschild, Bulldog Drummond Strikes Back* and the Eddie Cantor (see sketch this issue) film *Kid Millions.*

NUNNALLY JOHNSON

He credits much of the success of the latter to the ideas and dialogue of Arthur Sheekman and Nat Perrin, talks vaguely and humorously of how this comedy success was written. "They say, 'Well now, wouldn't it be funny to have Eddie in a palace?' So you write a big dramatic foundation for a comedy about a palace. Then they say, 'How would it be to have Eddie funny on a desert?' So you work on a desert sequence on the palace foundation. Then you get in something about a sheik and an ice cream factory. Well, I don't know just how it all gets written."

"I make faces when I write," Mr. Johnson admits candidly. "The most fun I have out of writing is imitating the characters. I act out all the parts as I write them. Eddie Cantor watched me one day for 10 minutes [unknown to Mr. Johnson, of course]." He rolled his blue eyes violently to demonstrate. But *Richelieu,* with George Arliss, gave him trouble. "It held me up, trying to get that lip right, like this, see. Very difficult, yes, but I finally got the technic."

Nunnally Johnson is of medium height, his hair thinning out at the part. If one were to type him it would probably be as a newspaperman. He has the keen look of the veteran reporter on the trail of a good story. "He looks like Lee Tracy," said Eileen Creelman, "a tall, lanky, blue-eyed Irish Lee Tracy from the deep South."

In 1935, after he had completed the scenario for *Thanks a Million,* producer Zanuck in-

JOHNSON, NUNNALLY—*Continued*

duced him to accept a contract as assistant producer. That year he did *The Man Who Broke the Bank at Monte Carlo,* a deft comedy with subtle undertones, starring Ronald Colman. In 1936 he worked on *The Prisoner of Shark Island, The Country Doctor* and *Banjo On My Knee.* As assistant producer for 20th Century-Fox he did five pictures the following year and his contract was renewed more favorably. (He is now writing and producing exclusively for 20th Century-Fox.)

Recent successes have been *The Grapes of Wrath; Chad Hanna; Wife, Husband and Friend; Rose of Washington Square; I Was an Adventuress;* and *Tobacco Road,* for which he went back to the Caldwell novel to find a good "story line" for picture purposes. *Roxy Hart* is his latest film. He works in a quiet office, dislikes telephones and probably has a pull with the operator, for his seldom rings. In completing a scenario and putting it on the screen Johnson fuses with his writing talent a capable executive sense. His varied experience has taught him to approach every writing job on its merits, with none of the lost motion that accrues when a writer tackles a new field insufficiently aware of its technical demands.

But Johnson's most valuable asset is his story sense. In writing *Jesse James* for the screen he wanted to recapture the narrative impact he felt when as a boy he first saw it dramatized. "When Jesse put down that gun and turned around, we used to scream at him, and yell, 'Look out, Jesse. Don't put down that gun.' It was a terrific moment. We all knew what was coming. I tried to get some of that in the picture. I wanted to get the feeling of that last scene."

In his work on scenarios, Johnson rewrites page by page, "until every word is the word I want." He has an understandable scorn for scenarists who take their work casually. "Writing is a profession, wherever you do it. And anyone who doesn't take his profession seriously is a fool." He believes that the days of the "idea" man are numbered and that respect for trained writers is on the increase in the cinema capital. This is all to the good, for, "like everybody else, we all want our names on stuff we are not ashamed of."

When Johnson departs from work in pictures it is usually to "relax" in some other field of writing. In 1939 he helped polish up the musical comedy *Nice Goin'* and in 1940 he did some feature work for the newspaper *PM,* in the form of humorous letters to the film editor. Rumor had it that these were terminated, (1) because the movie industry's feelings were being hurt by Johnson's sharp humor, and (2) because *PM* was willing to pay more money for Ben Hecht's column than for one by Johnson. Neither rumor has been confirmed.

Mr. Johnson's marriage on February 4, 1940 to Doris Bowdon of Memphis, Tennessee was his third. She is a 20th Century-Fox starlet who played Rosasharn in *The Grapes of Wrath.* He has two daughters: one of them, Marjorie Johnson, the child of his first marriage, is a writer; the other, Nora, is by his second marriage in March 1927 which ended in divorce in February 1938.

One of the highest-paid writer-producers in Hollywood, Johnson probably enjoys his work for its own sake as sincerely as anyone in Hollywood. He likes Hollywood but takes it with a sense of humor, confesses that he "almost rented a house out there because the owner had invented a contraption to cool off the roof. Water poured down on it like rain. . . Did you know at picture openings they often applaud the sight of rain? At one Christmas week preview everyone cheered a snowstorm.

"Yes," he continued, "Hollywood is all right. I have a good time there. In fact, it's about the only place now where I can find my friends. A party looks like the old *Herald Tribune* city room. . . No, it looks more like a speakeasy."

JÓNASSON, HERMANN (yōn'á-sŭn)
1896- Premier of Iceland
Address: Reykjavik, Iceland

Since April 1940, when the *Althing* voted that "the situation now created makes it impossible for His Majesty, the King of Iceland, to execute his royal power" and vested it in the Icelandic Premier, Hermann Jónasson, and his Cabinet, Iceland has been an independent state, no longer under the sovereignty of King Christian of Denmark. And this actual independence, born of war, conquest and blockade, was legitimatized in May 1941 when the *Althing* moved to establish a republic.

Yet Iceland, a country without a navy, army or air force, strategically situated in the North Atlantic, has not been left to guard its independence unaided. Early in 1939 Germany sent warships and a "scientific expedition" there, but despite them the *Althing* refused Nazi demands for an air base on the island. Later, at the beginning of the War, a good many Germans were "touring" there, and shipwrecked Nazi crews frequently turned up. Aware of this and aware of Iceland's potentialities as an air and naval base for convoy work in the Atlantic, the British on May 10, 1940 occupied the island.

Premier Jónasson formally protested the landing of the expeditionary force, and it is rumored that the natives' reception of the troops was "anything but warm." Nevertheless, relations between the occupiers and the Icelanders soon became settled when it was demonstrated that the British had no intention of interfering in Iceland's internal affairs. It was little more than a year later, however, when the British suggested to Premier Jónasson that their Canadian and English troops there were needed elsewhere and that the United States was prepared to take over if "invited." He accepted the British suggestion and wrote President Roosevelt a letter stating the conditions under which occupation would be acceptable.

On July 7, 1941 President Roosevelt formally announced to Congress that American troops had landed in Iceland and that he had given the people of Iceland "the assurance that the American forces sent there would in no way interfere with the internal and domestic affairs of that country and that immediately upon the termination of the present international emergency all American forces will be at once withdrawn." The British hailed the occupation as "one of the most important events for some time past," and the Icelandic *Althing* voted its approval of it, 39 to 3.

Although American and possibly some British troops are in late 1941 busy in Iceland, providing aerial guardians for British-bound cargo ships clear up to the shores of England and erecting a dome of air power over the whole North Atlantic, the people of Iceland intend to continue their life in its ordinary, everyday way. The fishermen will continue to get their livelihood from the herring that swarm in island waters; the farmers will continue to till their bleak and unfertile land; the cows will be led out to pasture in the morning and brought home to milk at night. And the parliamentary form of government will prevail as it has prevailed in Iceland for more than a thousand years.

Under the Danish crown since 1381, and in 1918 declared an independent state with the Danish King as its monarch, Iceland has been governed during almost its entire history by its *Althing,* now an assembly of 42 popularly elected members, and in later years by its own Prime Minister as well, who must be an Icelander and live in Reykjavik. The man who has that position today is Hermann Jónasson, a powerfully built Icelander who was born in 1896 on a farm in northern Iceland.

Jónasson went to high school in the capital city of Reykjavik, and then to the University of Iceland, where he specialized in the study of law. After being graduated he became the assistant to the Reykjavik judge and continued in this position until 1928, when "the bulging Jónasson biceps and barrel chest filled the uniform" of police commissioner of Reykjavik. He held this position for six years, until 1934, when he entered politics.

In the spring of that year he was elected to the *Althing* as a member of the Progressive Party and by August of the same year had become Prime Minister. When in 1937 a coalition government was formed and the Cabinet, formerly composed of three members, was enlarged to five—two Progressives, two Conservatives and one Socialist were in it—Jónasson became Prime Minister of the new Cabinet. He continued to head it, without interruption, not faced, as were other Prime Ministers, by problems of unemployment, indebtedness or factionalism.

Keystone

HERMANN JÓNASSON

Nevertheless on October 22, 1941 the Iceland Government resigned. The reasons for Premier Jónasson's resignation were thought to be sharp rises in living costs and "unsettled difficulties" in connection with the joint occupation of Iceland. Although this first resignation was not accepted, on November 7 he resigned again. This time it was accepted. The Regent, as before, asked him and the Cabinet to remain in office until February 1942 when a new government could be formed.

In his youth Premier Jónasson, a rugged man with thick dark hair, square jaw and "a face that reflects determination and courage," was annually crowned king of the *Glima* and for many years kept winning this Icelandic wrestling championship in Norse games handed down through the centuries from the Vikings. He is still interested in this sport, and hopes to be able to enjoy it for a long time to come.

JONES, RUFUS M(ATTHEW) Jan. 25, 1863- Quaker leader; professor emeritus of Haverford College

Address: h. Haverford, Pa; South China, Me.

Dr. Rufus M. Jones, Quaker leader, preacher, author of almost 50 books, professor emeritus of philosophy, for many years has been "the nearest thing the Friends have to an international spokesman." In his late 70's, he is still active, still a vital part of that work which, carried on without any distinctions of race, creed or political party, "has always been received with warm and tender love, answering the love that came to give." The Friends' Service Committee, which he helped to found and which he heads, is under his leadership bringing succor to war-racked Europe, to underprivileged America. Under his guidance camps have been established in this country for conscientious objectors so that they may "make a constructive contribution to national life." And with all this, Dr. Jones continues to preach at colleges and churches and to produce a book a year.

His latest published work (August 1941) is *A Small-town Boy*, in which he writes in fond and friendly fashion of life in China, Maine—of its town meeting, of Quaker meetings, of the old grocery store, the town's center of debate and culture, of local characters. A "genuine and genial" book, it reflects the spirit and the history of the man who wrote it. Together with *Finding the Trail of Life* (1926) it reveals the boyhood of Rufus Matthew Jones, who was born in the small Quaker village of South China, Maine on January 25, 1863. At his birth, his Aunt Peace, who was supposedly gifted with prophetic vision, announced: "This child will one day bear the message of the Gospel to distant lands and to peoples across the sea."

These words meant much in the Jones home, a home "where religion kept its fires always burning." Young Rufus' father, Edwin Jones, was a pious Quaker farmer; his mother, Mary G. (Hoxie) Jones, was the daughter of a Quaker cabinetmaker. At his mother's knee Rufus learned his Bible, and he learned its meaning and the meaning of his religion from the many itinerant Quaker preachers who came to stay with the Joneses. "I said 'thee' and 'thy' to everybody and I would fully as soon have used profane words as have said 'you' or 'yours' to any person," he remembers, and he grew up not only with a firm belief in the Quaker religion but with a certain conviction that he belonged to a chosen people.

Rufus Jones started his formal education at the age of four at the little country schoolhouse in South China and continued there until he transferred for three months to Oak Grove Seminary. Then, at the age of sixteen and one-half, he was granted a free scholarship in the famous Friends' School in Providence, Rhode Island—now the Moses Brown School. He set out for Providence, a lad who was, according to his own description, "very thin, nearly six feet tall, extremely green and awkward, but wide awake, keen, eager, and ambitious. I had never seen a real city. I had never been inside a railroad train. I had no idea what a steamboat was like."

The years there were "wonderful" years: Rufus was on the athletic teams, at the head of his classes, and his religious life was "steadily developing." Then Haverford College in Pennsylvania gave him a scholarship covering full tuition and living expenses. He entered this Quaker school in 1882 and three years later received his B. A. He had studied Greek, Latin, mathematics, philosophy; he had done research on American history and on "Mysticism and its Exponents"; he had been business manager and editor of *The Haverfordian*, president of the college Y. M. C. A., president of the political club; and he had been active among Friends and in Friends' work in Philadelphia and Germantown. One year after graduation he received a Master's Degree. He also holds D. D., Th. D., Litt. D., and LL. D. degrees.

Rufus Jones had intended, during his first undergraduate years, to study law, and a generous Quaker merchant offered him the necessary money. But Jones saw, "at first dimly and then more clearly," that he could not accept the offer. And as he worked on his thesis for graduation, on mysticism, he knew that "I had here found the field of my life work. Hereafter all my reading and thinking and research work bore directly or indirectly on some phase of mysticism." In later years he was to write many comprehensive volumes on the subject and to demonstrate in what H. H. Brinton calls his greatest contribution to Quaker history, that Quakerism "is not an isolated phenomenon but a movement which took shape and persisted as an integral part of the great current of mystical religion flowing out of a remote past."

The decision to study mysticism marked one turning point in Jones' career; the decision to teach at Oakwood Seminary, a Quaker boarding school at Union Springs, New York, instead of accepting a fellowship for graduate study in history at the University of Pennsylvania, marked another. He stayed there for a year and then went on the first of many trips abroad, studying in Paris and at the University of Heidelberg, meeting other Quakers. He returned to America to accept a position as teacher at the Friends' School in Providence, where he had formerly been a student. At the end of his first year of teaching he married Sarah Hawkshurst Coutant. "It was a beautiful union," he says, "and though destined to be short, it has through all the successive years colored and hallowed my life." After Mrs. Jones died, Dr. Jones was both mother and father to their son, Lowell Coutant, until he died in his eleventh year.

Two years in Providence were followed in 1899 by four years as principal of Oak Grove Seminary, a Quaker boarding school at Vassalboro, Maine, ten miles from his old home. This position, "full of responsibility and labor," was ended when "the call came to me" to become editor of the *Friends' Review* in Philadelphia, which later became *The American Friend*, and to be an instructor in philosophy at Haverford with an opportunity to do work in philosophy at the University of Pennsylvania. Rufus Jones began those 40 years of teaching (he became professor emeritus in 1934), which have associated him so inseparably with Haverford, and that Quaker work on a wider scale which has made him perhaps the best known member of his faith.

Hans Roth

RUFUS M. JONES

In 1890 Rufus Jones had been "recorded" a minister in the Society of Friends, and in the years that followed he preached widely in colleges, churches, meetings and at one period as an "itinerant preacher" in the West. He had decided from the first, he says, "never to write a sermon, and I have always been resolved throughout my life not to preach in any case unless I felt profoundly impressed at the time that I had in my soul a living message for the particular occasion in hand." Along with his preaching, Rufus Jones was busy studying philosophy, at Harvard (M. A. 1901) and elsewhere, acting as trustee of Bryn Mawr College, teaching his classes, and traveling all over the world, especially in England. In this work, from 1902 on, he had the "rich cooperation" of his second wife, Elizabeth Bartram Cadbury of the Quaker Chocolate family. They have one daughter, Mary Hoxie.

In the winter of 1905 to 1906 Professor Jones set to work "seriously and systematically" on what was to be for many years his "magnum opus." When done, it covered the complete history of the Quaker movement from its birth to the year 1900 and further included a history of the mystical movements which preceded the rise of Quakerism. Six volumes, two of them by W. C. Braithwaite, presented these studies, the last of them, *The Later Periods of Quakerism*, published in 1921. He was doing this research and writing, along with other work which included the editing of *The American Friend*.

In 1912 Dr. Jones resigned the editorship of this paper. A year later he was editing an international monthly journal, *Present Day Papers*, which was forced to cease publication when the First World War broke out. This War brought Dr. Jones new duties and

JONES, RUFUS M.—*Continued*

new responsibilities. Like all Quakers a militant pacifist who believes that there is no good war or bad peace, Dr. Jones in 1917 organized the Friends' Service Committee to show that, while Quakers wouldn't accept military service, they were still ready to accept danger and hardship. He fought a long and eventually successful battle to have service with Friends' overseas units accepted as an alternative to service under arms.

These units, under Jones, went into the destroyed areas of northern France, rebuilt villages, including the whole destroyed Verdun section. When the Armistice was signed they bought up miscellaneous stores which the Army in Europe had left over and then sold them, using the profits to put up new buildings, to pay wages to German prisoners which their families got, for rehabilitation work in general. The Friends' Service Committee fed German children, put Polish refugees back on their farms, fought the famine in Russia. Later, during the Spanish Civil War, they fed both sides; and in 1941 they were still helping Spanish refugees in France. After the German anti-Jewish activities of November 1938, the Friends offered their services to the destitute thousands. When the Reich refused the offer, Jones himself with two associates went to Berlin and personally asked for permission to send relief workers. He told the heads of the Gestapo there: "We represent no governments, no international organizations, no sects, and we have no interest in propaganda in any form. . . We do not ask who is to blame for the trouble which may exist; we do not come to judge or criticize but to inquire whether there is anything we can do to promote human welfare and to relieve suffering." The request was granted, and Dr. Jones recalls that "when we left the room, they helped us on with our overcoats. And that," he adds with a grin, "is more than any one in Washington ever did for us." Two years later Dr. Jones was preparing to lead the Friends to the relief of Poland; after Poland to France; after France to other devastated countries. And at the same time he guided and guides their activities in the United States when they work with and for West Virginia miners or California Okies; when they build schools in Mexico or hostels for European refugees in Indiana.

Despite all the activity he leads and inspires, and despite illnesses that have plagued him much of his life, Dr. Jones today is a "tall, pink-cheeked, white-crested," erect man who looks taller than his six feet and walks with enormous strides at a fast pace. He still lives overlooking Haverford's cricket green and likes to watch from the window the sport he once played. But that's during school sessions only. Once spring comes he hastens up to South China, where he roams through the countryside and goes swimming (the doctors won't let him swing an ax as he used to love to do). He enjoys this sport "with loud whoops that startle his native Maine woods."

Many honors have come to Dr. Jones during his years of work. Ten colleges have given him honorary degrees; in 1938 he was the joint recipient of Philadelphia's Bok Award of $10,000 as that city's outstanding citizen; on his seventy-fifth birthday students of Quaker history presented him with a book in his honor, *Children of Light*, edited by H. H. Brinton. Probably the honor that has meant as much as any was accorded him in 1937 when he was made chairman of the Second World Conference of Friends, for as chairman he was able to address the world through an international radio hookup. To the world he gave the Quaker creed: "Quakerism as a way of life partakes of a universal spirit. . . Quakers are bound to keep humble and recognize their littleness. The Quaker philosophy of life sees in a human spirit something that of all things in the universe is most like that ultimate reality we call God. who is Spirit. Spirit like ours cannot come from anything else than Spirit."

JORDAN, JAMES EDWARD *See* McGee, F. and McGee, M.

JORDAN, MARIAN *See* McGee, F. and McGee, M.

JOWITT, SIR WILLIAM ALLEN (jou'-it) 1885- British Solicitor General

Address: b. Royal Courts of Justice, London, W. C. 2; h. 35, Upper Brook St, London, W. 1, England

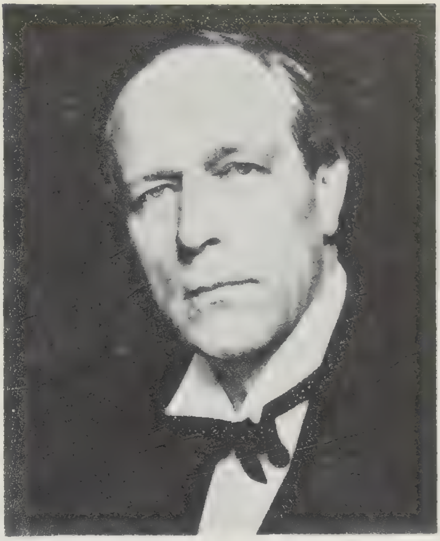
When in 1929 Sir William Allen Jowitt was elected to Parliament on a Liberal ticket and within a week changed over to the Labor Party and accepted a remunerative office under it, there were many who questioned his motives. In 1941 he is England's Solicitor General, responsible with the Attorney General for all the legal business of the Crown. And none in England questions either his motives or his competence.

"A cool, self-possessed duelist with a mind as keen as a sword blade, wary and nimble-witted, thoroughly sure of his ground," Jowitt is never "truculent or overbearing" as he sustains the case of the Crown against individuals or companies in civil and criminal suits. "His strokes of wit leave no ugly wounds." In appearance he lacks completely the keen, eagle glance or strong features of the popular idea of a successful prosecuting lawyer, and an air of detachment and impartiality is characteristic. His voice is "easily produced; it has little volume, but carries well. Colorless and toneless and marvelously even, yet it is genuinely pleasant." In court and out, Sir William has a charming personality—even-tempered and patient.

This distinguished lawyer was the only boy in a family of 10 children. His father, the Reverend William Jowitt, Rector of Stevenage, Hertfordshire, sent him to Marlborough and then to New College, Oxford. After Oxford he read for the Bar and was called by the Middle Temple in 1909. Very shortly after, he began to prove the fine quality of his legal mind. He was a success as an advocate, his reputation and fortune grew, and he became a K. C.

It was in 1922 that Jowitt decided to go in for politics. He was elected to Parliament for the Hartlepools division, a shipbuilding and general industrial region in the Northeast, as a Liberal of radical tendencies. Two years later he was a member of the Royal Commission on the Lunacy Law and in that same year, at the division which wrecked the first Labor Administration, he voted not with his own party but for the Government. At the next election he lost his seat.

At the time of Labor's second victory, in 1929, Jowitt, who had been spending his time in private law practice, came back to Parliament, elected as a Liberal for Preston, Lancashire. The late Ramsay MacDonald at that time was forming his Administration and found himself faced with a dearth of learned advocates who held Labor views. MacDonald asked Jowitt to become Attorney General and Jowitt accepted. "Those like myself," he wrote to MacDonald, "who have hitherto taken their stand as Radicals must now consider whether they ought not to render active support to your party as being today the only party which is an effective instrument to carry through those reforms which the country desires."



SIR WILLIAM ALLEN JOWITT

There was an immediate controversy over this shift, and arguments and brick-bats flew in the pages of the London *Times* and other journals. Jowitt's constituents didn't ask him to resign, but the Preston Reform Club passed a strongly-worded resolution against his action. Jowitt decided the only thing for him to do was to seek re-election as a Labor member, and on July 31, 1929 he got in without difficulty. Since Attorneys General are always knights, he became Sir William.

Jowitt's chief Parliamentary task in 1930 was the Trades Union Bill, and in the year following he brought in the Trades Disputes Bill to clarify the right to strike in a purely industrial cause. In 1931 he also became a Privy Councillor. This was the year of the financial crisis, and MacDonald took office as Prime Minister of a National Government. Jowitt went over with him and as a result was expelled from the Labor Party. He ran for election from the Combined Universities constituency, but the voters wouldn't have him. Several attempts were made to find him a seat in Parliament, but they all failed. As a result, in January 1932 he resigned his post as Attorney General and went back to private practice.

Private practice proved twice as lucrative as a Government post. (An Attorney General makes £10,000 a year, twice the salary of the Prime Minister.) He specialized in difficult and complicated commercial cases. In one of these, a suit between two radio companies in 1933, he spoke for 17 days running, and it

JOWITT, SIR WILLIAM ALLEN—*Cont.* was estimated that his speeches totaled about half a million words.

In November 1936 Jowitt made his peace with the Labor Party and was elected for Ashton-under-Lyne, near Manchester, without opposition. He continued to serve in Parliament, "one of the most unpartisan speakers the House has known," and in May 1940 was made Solicitor General by Winston Churchill. In these years his principles have been made clear. He is a free trader and exponent of orthodox finance. In the days when peace seemed possible he was for arbitration in international affairs rather than for increased armaments. He believed then and he believes now in an active fight against unemployment, in the extension of social insurances, in the progressive improvement of working conditions.

Jowitt's London home is in aristocratic Brook Street and he has a country house at Wittersham in Kent. In 1913 he married Lesley, the second daughter of J. P. M'Intyre, and they have one daughter.

KAGAWA, TOYOHIKO (kä-gä'wä tō'-yô-hē'kô) July 10, 1888- Religious leader
Address: c/o Harper & Brothers, 49 E. 33rd St, New York City

Toyohiko Kagawa, it was once said, "is a prophet without a beard, a Mussolini without authority, a Gandhi without the local color of goat, loin cloth and loom." Evangelist, Christian leader, author, social worker, poet, pacifist, he has brought his message to millions in Japan and all over the world. It is a message of economic Christianity, through the cooperative movement. This to him is "the Christian way of economics," and "we cannot build a Christian world," he says, "until our economic life is Christian."

Kagawa has won millions of his countrymen to the cooperative plan—fishermen, weavers, doctors, farmers among them. He would like to win the world. Then, he feels, there would be peace. As he said some years ago: "The way to stop war is by cooperative movements, by cooperative international trade, by cooperative marketing. . . We must have the spirit of God incarnated in economic schemes and projects." He still believes this, despite his own country's conflict with China. An ardent pacifist who as late as 1936 was assuring the Western world that 99 per cent of his people wanted peace, he has become since the outbreak of war a thorn in the side of the Japanese militarists. His followers have been threatened, his public appearances met with resistance, and he himself in August 1940 was put in jail, charged with "violating the military code." He was freed after a month, prohibited from writing any article or book, preaching or giving out any interview on the subject of the War.

After that time he kept busy with his practical work among the poor and in the church. It was while occupied with this work that he came to the United States in January 1941—to confer with church and mission leaders here on the newly organized Church of Christ in Japan, created with his help from the merging of 42 denominations. He and Bishop Abe spent much time reassuring American churchmen that this merger was not the result of government domination or pressure, that it would not make the Japanese Church "a sycophantic instrument of empire." And

Kagawa also spent some time in beginning negotiations for a patent on a new game called "chemical chess" which he worked out in prison. Its purpose, he says, is to drive home to its players "the divine design in nature."

Half blind, his heart, kidneys and lungs weakened, a short, slight man with thick glasses who "looks more like a blind beggar than one of the most powerful forces among the masses of Japan," Kagawa has never ceased working for those things in which he believes. "Doctors gave me up years ago. It is faith in God that has kept me going," he says. From that faith he has launched and now supports in part or whole nineteen churches, seventeen kindergartens and schools, six cooperative societies, an ex-prisoners' home, an employment agency for girls, a social research bureau and two monthly periodicals, *Clouds* and *Columns*. With that faith he has converted thousands upon thousands.

He was not born with that faith. His father, Junichi Kagawa, was a Buddhist, a member of the Japanese Cabinet who served one term as secretary of the Privy Council. His mother was not a Christian either. His father left his wife for her, a Geisha girl in Kobe, where their son, Toyohiko, was born. Both parents died when he was only four, and he was brought up in Awa by his father's neglected wife. She hated this son of her errant husband. "You are the son of my enemy," she screamed at him day after day.

Toyohiko was sent regularly to the Buddhist Temple to study the Confucian classics and to be drilled in the fundamentals of the faith. He left Awa in his teens, however, to live with an uncle in the city of Tokushima, and there he entered the Boys' Middle School. At the same time he received permission to attend English Bible classes in order to learn the language. He learned more than just the language. The Bible opened up "vistas of a new and ever-enlarging life." Kagawa became a Christian. His uncle stormed and threatened and finally turned him out. But Kagawa prayed: "Oh, God, make me like Christ!"

Christian missionaries, impressed by his prayer, took him in and gave him a scholarship to the Presbyterian College in Tokyo. He entered this school in 1905 and for a while devoted himself avidly to the study in English of the works of Kant, Darwin, Ruskin, and especially Tolstoi, from whom he received his still-ardent belief in nonviolence. His college studies were cut short when he became stricken with tuberculosis. He went to a fishing village not far from Kobe to recover, but the poverty and misery there wouldn't let him rest. Told by the doctors that he had only a short while to live, he replied: "If that is so I will make every day count."

In 1908 Kagawa settled down in the slums of Shinkawa, probably the worst of any in the world at that time. His home was a hut, six by six, surrounded by poverty and misery. For 14 years he lived there, visiting the sick, preaching to thieves and murderers and derelicts about the "God who cares," doing all he could to improve conditions. While there he finished his *Before the Dawn* (1924) and *The Psychology of Poverty*, both of which sold thousands of copies in Japan and brought the Japanese Government's attention to slum conditions. To these books and to Kagawa's work, almost directly, can be traced the Government's decision in 1921 to set aside 20,000,000 yen to clean up the slums.

Blackstone

TOYOHIKO KAGAWA

When Kagawa quit work in the slums, because "one individual working for individuals cannot change society," he had contracted trachoma (thirteen operations have not been able to cure it, and he has lost the sight of one eye altogether), four front teeth had been lost when a criminal attacked him, his health had been weakened. But he had gained a wife and helpmate. In 1914 Haru, daughter of Fusakichi Shiba, had married him and begun to assist him with his work. And he had laid a solid foundation for his views as a Christian radical.

After spending some time at Princeton University in the United States, Kagawa returned to Japan to organize the Labor Federation in 1918. This wasn't his first attempt at labor organization—in 1912 he had founded the first labor union in Japan among the shipyard workers—nor was it his last. He organized the Farmers' National Federation, the first laborers' school, the first laborers' newspaper. From 1919 on he took an active part in politics, speaking and writing for universal suffrage, for social reform in general, for the improvement of labor conditions. For this he was jailed during the rice riots of 1919 and again during the shipyard strikes of 1921. But the things he worked for were temporarily obtained: the Japanese won universal manhood suffrage, and in 1925 the law against trade-unionism was amended.

(Continued next page)

KAGAWA, TOYOHIKO—*Continued*

Even before then, however, the Japanese Government recognized the effectiveness of his work. In 1923 he was asked to help on the relief committees after the earthquake and fire that ravaged Kobe. One year later he became a member of the Imperial Economic Conference. Five years later, in 1929, the Government asked him to organize the social work in the city of Tokyo at a salary of $9,000 a year and the use of an auto. Kagawa took the job but not the money or auto and, working 10 days each month, brought about a complete reorganization of the Bureau of Social Welfare. When this was finished he resigned, for there was much else to be done.

There was his labor work: since 1923 he had been an active member of the Labor Exchange Committee. There was political work: never a candidate for Parliament himself, he had been organizing the masses to elect farmer and labor candidates to the national Diet. And there was, finally, his cooperative work, which, more than anything else, seemed to him the answer to Japan's and the world's needs. Kagawa revitalized the cooperatives which had existed for some years in Japan, built up new ones, remade the credit union movement, helped found cooperative schools. As part of all this there was the work of Christianizing Japan.

In 1931 Kagawa came to America to explain and to spread his ideas. He told of his program of social action, of its three foundation stones: first, the conversion of "individualists in whose conscience society is still unborn"; second, Christian fellowship on community lines, which meant approaching people "from their occupation, their daily work"; third, the relation of the converted individualist to the Christian community through "mutual aid" or "love in action." His tour was fairly successful, but caused no great excitement.

It was different when he came to America again at the end of 1935. The Federal immigration authorities refused him admission because of his trachoma, and it was only after church members throughout the country interceded in his behalf that President Roosevelt allowed him to enter on a seven months' visitors' permit and under the condition that he be constantly accompanied by a doctor and nurse and follow regulations laid down by the Public Health Service. His tour was sponsored by liberal evangelical churchmen, and there was wide interest wherever he spoke—among ministers whom he had scolded because they did nothing but "preach, preach, preach," among laymen who were eager to meet the man who had performed such practical miracles as marketing three-piece men's suits for $1.35. There was also strong opposition. A number of churchmen under the leadership of Dr. J. Frank Norris claimed that he was preaching "a sinister plan to advocate consumers' cooperatives and socialism under the cloak of the Christian Church." And there were businessmen who were alarmed at his doctrines and at his successful sponsorship and convincing exposition of seven kinds of cooperative movements.

But antagonistic groups were unable to keep Kagawa from speaking. He answered their accusations in his reedy voice with its heavy Japanese accent. "Because I want the love of God to be applied in industry, in economics, in daily life, I am criticized as a Communist," he said. "What a joke!" And 750,000 people in 150 cities heard his message.

When Kagawa sailed from the United States for the annual convention of the World Sunday School Association in Norway, he left behind him a National Coordinating Advisory Committee to attempt to carry on his work and a committee to raise $300,000 in 10 years to build 1,000 rural churches in Japan. He also left a plea. "I ask your prayers," he told the American people, "for the maintenance of peace between this country and Japan."

He returned to his own country just before the beginning of the war with China, and when the war began found quite helpless the All-Japan Anti-War League which he had organized in 1928 with the Japanese Federation of Labor as its center. He remained silent for a while on the subject of the War, though his actions (he was the only one of the Japanese Christian leaders who refused to sign a statement saying that the fighting in China was a war of self defense) showed his uncompromising pacificism. Quietly he continued with his work, and in 1940 he headed an aggressive nationwide evangelistic movement which drew 86,485 people in 247 meetings.

After his prison term in 1940 he retired for recuperation, meditation and writing to an island in the Inland Sea. But he was shortly back in Osaka, Japan, revitalizing the evangelical work of the National Christian Council, teaching the Bible in the mornings and preaching the Gospel at public meetings in the evening of every day. This work, together with his leadership of the "Friends of Jesus," the Kingdom of God movement and the Kagawa Fellowship, as well as his continued efforts for cooperatives, became his concern again after his return to Japan in September 1941. In December 1941, with Japan and the United States at war, his American publishers could give no word of him.

Japan's most prolific writer, in his many years of activity Kagawa has written more than 100 works on economic, agrarian and devotional subjects, on history, philosophy, sociology. There are novels, poems, articles, too—among those available in English translations *A Grain of Wheat* (1933); *Christ and Japan* (1934); *Songs From the Slums* (1935); *Meditations on the Cross* (1935); *Brotherhood Economics* (1936); and *Behold the Man* (1941), a life of Jesus in the form of a novel, called "vivid, emotional, at times almost cinematic in its blood-and-thunders."

Despite the royalties from these works and the income from his magazines, Kagawa is a poor man. With his wife and their son and two daughters he lives simply and humbly in a modest home outside Tokyo.

The family budget is limited to $40 a month, and the rest of Kagawa's income is devoted to his work. His wife, whose special field is social work among women, still helps him, and his son is already a leader in Sunday School activities.

KANIN, GARSON (kā'nĭn) Nov. 24, 1912- Motion-picture director

Address: b. c/o Training Film Laboratory, Fort Monmouth, N. J; RKO Radio Studios, Inc, 780 Gower St, Los Angeles, Calif.

Hollywood is famous for boy wonders, most of whom flash brilliantly one week and are never heard of again. Garson Kanin is another of Hollywood's boy wonders, but one who has been doing spectacular feats for almost two years and seems likely to keep on doing them until long after the "boy" will have to be dropped before the "wonder." He has directed six pictures, and all of them have been remarkably good. In 1941 as Private Kanin he was working just as well for the Government at the Training Film Laboratory at Fort Monmouth, New Jersey. As technical adviser on war films, he was called frequently to Washington and various army camps before being mustered out of the Army and transferred to the Division of Information of the Office of Emergency Management. He started production of his first Government sponsored film in December.

Kanin was born in Rochester, New York, in a family that was poor but keenly conscious of music and the arts. By the time they had moved to New York, when he was 12, he could play the saxophone and clarinet well; when, after a short term at James Madison High School, his father, a builder, went broke, he was able to support himself playing. His first job was in a small orchestra; his next in vaudeville. The results of both, to quote Kanin, were "lousy." Then came burlesque, sessions as social director for summer camps and a short stretch as master of ceremonies in a night club. Finally he decided he needed training and enrolled in the American Academy of Dramatic Arts in New York.

Three days after graduation he landed a part in *Little Ol' Boy* and followed it up with small parts in a number of George Abbott plays, including *Boy Meets Girl* and *Three Men on a Horse*. "Then I went to Mr. Abbott to get a job," he says. There wasn't any, but "I got in the habit of coming up there every day and hanging around. One day there was an empty desk and by that time they had gotten used to me so I sat down and there I was." For George Abbott, Kanin read, acted, directed, painted scenery, everything.

(Continued next page)

GARSON KANIN

Then one day in 1937 Samuel Goldwyn came along and hired Kanin as a director. As Kanin tells it: "He brought me out to the coast and told me to familiarize myself with the studio. . . I kept asking Mr. Goldwyn what I was supposed to do, but all he would tell me was to take my time and learn the ropes. . . Finally I discovered what I was supposed to do. Whenever Mr. Goldwyn held a conference he loved to have a lot of men rush into the room and listen to him. I was just one of those men."

After Kanin had pleaded for any kind of work at all to do he stood up to Goldwyn. "Look," he said, "I'm a director. Give me some picture to do." Goldwyn scornfully asked: "Should I give you a million dollars to play around with?" When Kanin asked Goldwyn to give him a smaller picture, he was outraged. "I don't make smaller than million dollar pictures," he said. Kanin finally got a release from his contract and left, but not without having learned a good deal at Goldwyn's studio. "I spent nearly a year studying the mechanics of film-making before I got my first assignment," he says.

Kanin then signed with RKO and was given an obscure story, *A Man to Remember*, and only $100,000 (peanuts in Hollywood) to make a picture. What he made, made history. He followed it up with *Next Time I Marry*, also a limited budget picture, and *The Great Man Votes*, with John Barrymore in the leading role. From then on his budgets were not restricted, and he was given the job of directing Ginger Rogers in *Bachelor Mother*, a picture distinguished by its neat directorial touches.

The next picture Kanin was asked to make was *Anne of Windy Poplars*. Kanin refused and was suspended from the studio, but came back amicably enough to direct Irene Dunne and Cary Grant (see sketch this issue) in a sprightly comedy hit called *My Favorite Wife*. His reputation was already well established, but critics did not hesitate to heap further laurels when *They Knew What They Wanted*, starring Charles Laughton and Carole Lombard, appeared. It was shortly after this last picture was shown in New York that Kanin was at a party. As he tells it: "Mr. Goldwyn was across the room. Suddenly he pointed at me and shouted: "You double-crosser, you. Why didn't you tell me you could direct?' "

Kanin is five-feet-seven inches tall and weighs 130 pounds, slender, nervous, "with a boy's face and a wide grin that leaps up toward each of his ears." In Hollywood he lives with his mother, father and his sister, Ruth, who for many months was considered by uninquiring Hollywood gossip scouts to be his "current" because he took her to dinner once in a while. A situation like this, or that with Goldwyn, amuses Kanin, who has a bright sense of humor. Toward his work, however, he is intensely serious and intensely earnest. Though acclaimed as the most inspired directing talent to come to Hollywood in years, he can say with complete sincerity: "I haven't yet made a picture that entirely pleases me. I haven't yet done anything that has come out on the screen just the way I saw it in my head. I guess I haven't quite got the technique yet."

KARLOFF, BORIS Nov. 23, 1887- Stage and screen actor

Address: c/o Fulton Theatre, 210 W. 46th St, New York City; h. 45 E. 66th St, New York City

When the shadow of a sinister newcomer falls on the living room door in the peculiar household depicted in Joseph Kesselring's farcical murder mystery, *Arsenic and Old Lace*, there are squeals of delighted horror in the audiences which have filled the Fulton Theatre since the première of the play on January 13, 1941. They know that they are about to behold in the flesh the screen's most celebrated menace, none other than Boris Karloff, who has made Mary Wollstonecraft Shelley's *Frankenstein* a household word in America. It is just as likely that millions of film-goers are hazy in their minds as to the distinction between the monster and the scientist who invented him. "There goes Frankenstein," mutter people who see the actor on Manhattan streets, and nudge each other. The most famous misquotation in English literature is not easily corrected.

"Boris Karloff" is William Henry Pratt, an English gentleman who is tall, lanky and soft-voiced, with kind brown eyes and a disarming smile. In Baltimore on Christmas Day 1940 he dressed up as Santa Claus and handed out

BORIS KARLOFF

the presents at a Christmas party for about 300 crippled children, and in 1941 he played Santa Claus again.

He was born in London on November 23, 1887, the son of Eliza Sara (Millard) Pratt and a British Indian civil servant, Edward Pratt, who decided that this youngest son in a family of eight sons and a daughter should have a career in the British consular service. When he died all William's brothers had the same idea for him. As he tells it: "One after the other they went into the consular . . . and one after the other they would come back on leave and get after me. I would no sooner be rid of one than another would come along and speak to me sternly about my negligence in preparing for the consular." But William was not to be persuaded. After an education at Merchant Taylor's School, London, at Uppingham and King's College, he gathered together what funds he could and left for Canada in 1909.

His first work in Canada was on a farm in Ontario, followed by a day laborer's job at $2.50 a day. Then came a stab at selling real estate, another shift as a laborer and in 1910 he found himself in Vancouver still unsure of what he wanted to do. By the next year he had found out. He joined a theatrical company in Kamloops, British Columbia at $30 a week, playing the villain in his first part. He took the name of Karloff from ancestors of his mother's and added the appropriate Boris out of his head. The Kamloops troupe was stranded in Saskatchewan and before long Karloff was in the repertory company of an old actor, Harry St. Clair.

"St. Clair was absolutely honest," Karloff told Helen Ormsbee of the New York *Herald Tribune*. "If there was no money in the box office the ghost didn't walk, but whenever business was good he paid what he owed us. In some towns we stayed a week, in others we settled down for a run. It was in Minot, North Dakota that we stayed 53 weeks and I played 106 parts. I was a quick study and the quickest study got the longest parts. So I played leads in *Paid in Full, Charley's Aunt, East Lynne, Way Down East, Bought and Paid For, Baby Mine, What Happened to Jones, Why Smith Left Home*—and many more. We all took turns at being stage manager and we never had a dress or prop rehearsal. We must have done some terrible acting, but let me say a word for the intelligence of our audiences. In towns where we did a different play each night we asked the audience to vote for the one they wanted us to repeat as our closing bill. You couldn't fool that public; it invariably put its finger on the best play. Today, when I hear people speak condescendingly of the sticks, I remember that."

He left St. Clair to join a road company of *The Virginian* in Chicago. With this troupe he toured the Western states for a year, winding up in Los Angeles in 1917. There the company disbanded. He found a place with a stock company in San Pedro, stayed a short time and then joined the Maude Amber Players of Vallejo because prospects looked brighter. The flu epidemic raised havoc with theatres and the Maud Amber Players disbanded for lack of funds.

Karloff again sought a job as laborer and subsequently worked long hours each day piling sacks of flour in a storeroom. Then, hearing that extras were being taken on at the Universal Studios, he applied for a job and was assigned to be a member of a mob in a picture being directed by Frank Borzage. Thereafter he was sometimes an extra, sometimes a player in small-time stock companies and sometimes a truck driver. He gradually obtained more important parts in pictures, but no real notice was taken of him until he was tested, with other candidates, for the monster in *Frankenstein.* He had meantime played in two British-Gaumont pictures in England.

During the filming of *Frankenstein,* Karloff's make-up required three hours to put on. An immense amount of nose putty had to be applied to his features, and his whole figure built up as well. The late Colin Clive played Frankenstein in the first picture of the series, released in 1931, but "it was the appalling creature called to life by Frankenstein that everybody talked about." That creature was, of course, Karloff. *The Bride of Frankenstein* was the first sequel; it was directed by James Whale, and John L. Balderston and Edmund Pearson worked on the scenario. Karloff was by this time married—to Dorothy Stine of Michigan, formerly a children's librarian,—and while *Son of Frankenstein,* the second sequel, was in production their first child, Sara, was born in 1938. (Another child has been born since then.) Karloff also played the title role in *The Mummy* and parts of varying importance in *The Mask of Fu Manchu, The Raven, Devil's Island, The Ghoul,* and most recently in

KARLOFF, BORIS—*Continued*

a picture based on the novel of psychical horror called *The Edge of Running Water.*

In *Arsenic and Old Lace,* "the comedy parts in the play are what float me along," Karloff has said. "If it weren't for the delightful acting of Josephine Hull, Jean Adair and Allyn Joslyn, my part would go for nothing. I'm content to be the villain in every piece, because I know it is expected of me. I've played a few straight parts in pictures, but the audiences were sure I was going to do something terrible and I think they were sorry I didn't. That is what it means to be typed."

"Playing to an audience is a great joy after years of acting for the camera," he states. "An audience's responses tell you everything, if you will listen. Sometimes they say: 'Yes, that's funny. We'll laugh if you'll give us a chance.' But if you hear coughing and rustling out in front, people are saying to you: 'Don't do that. It's no use. We aren't noticing.' The most beautiful thing of all is the complete stillness of an audience so intent that it scarcely breathes. I had almost forgotten these things. In pictures the director is your only audience."

Karloff also has had experience broadcasting, when he took a vacation from films in 1938 to play the lead in the NBC *Lights Out* dramas. Here he did not keep in character so far as to appear in his usual plaster, spirit gum, clay and paint.

KAUFMAN, GEORGE S. (kôf′măn) Nov. 16, 1889- Playwright; director

Address: b. c/o Random House, Inc, 20 E. 57th St, New York City; h. Holicong, Pa.

Despite the fact that he has been the biggest money maker in the contemporary theatre, George S. ("for nothing") Kaufman still is a picture of pale despair on first nights, looking "a little like the late Marie Antoinette in the tumbrel." And even when a play he was certain would flop proceeds to run for hundreds of performances, he starts working on another right away. The result has been at least one Kaufman play a year on the stage since 1921, and almost always one success a year.

In these years he has responded to nearly everything in American life, "from its pleasant private vagaries to political mismanagement and the serious threat of Fascism," and has almost consistently made sport of it. He is a satirist, though he refuses to concede the title, ("Satire is something that closes on Saturday night," he says), who has the gift of being able to make us laugh at ourselves. And yet he never gives offense.

To serious drama critics, this is a weakness. According to one: "He has amazing foresight in always taking the pulse of Broadway as the clue to its heart, a habit of always writing fashionable plays and never revolutionary ones." He will, they say sadly, sacrifice artistic integrity to stage demands, "let the least worthy of the drama's patrons establish its laws."

Kaufman shakes these criticisms off. There is little value, he feels, in talking about art in plays when all there actually is is good workmanship. He himself sticks to "dramatic construction which is seldom if ever really subtle or original but is always precisely right at the moment"; he concentrates on stretches of dialogue and touches of characterization which are amazingly shrewd and telling; he tosses off wisecracks, scornful observations, flippant repartee. He is, actually, a "really great practical theatre mind with no philosophy except that the theatre is entertainment and good entertainment pays."

This triumphantly successful writer and director of brightly studded plays, musical comedies and revues was born in Pittsburgh into a middle-class Jewish family whose members "managed to get in on every business as it was finishing and made a total of $4 among them." He went to public school in Pittsburgh and then moved north to Paterson, New Jersey with his father and mother, Joseph S. and Nettie (Schamberg) Myers Kaufman. He studied law for a while, three months to be exact, but still kept looking for his niche in life. A succession of jobs didn't seem to fill this, especially his job as wholesale agent for hatbands and pump ribbons—he was "almost spectacularly unsuccessful" at this, Alexander Woollcott (see sketch this issue) says.

He was doing better, though, outside his jobs, with his contributions to Franklin P. Adams' (see sketch this issue) column in the old *Evening Mail*. On the strength of them he eventually got an invitation to lunch; "F. P. A." took an interest in the lad and when the chance came recommended him for a position on the Washington *Times*. For a year, from 1912 to 1913, Kaufman conducted a column there called "This and That and a Little of the Other." Then, when he lost this job, F. P. A. helped him get his own on the *Evening Mail* (he had already gone on to other pastures). This column was called "Be That As It May" and appeared from 1914 to 1915.

Kaufman's next step up was to the New York *Herald Tribune*, where he served as drama reporter under the late Heywood Broun. It has been reported that Broun once lent Kaufman his job "in a burst of bad judgment" and rushed to take it back as soon as he read Kaufman's reviews. Kaufman got a chance to express his drama opinions, nevertheless. The New York *Times* took him on, and for 13 years Kaufman's criticism and editing brightened its pages. He threw out publicity handouts, dull recitals of plays and players and deftly waved his light touch over all. One of his light touch efforts has become legend. The *Times* used to run a drama information box which by means of asterisks, daggers and other signs dispensed information in voluminous footnotes. Deciding this had gone far enough, Kaufman one day found a new symbol in the composing room and placed it in front of *Strange Interlude*. The trail led to a footnote reading, "Does not carry dining car."

The New York Public Library
GEORGE S. KAUFMAN

It was while he was on the *Times* that Kaufman wrote his first play, a farce called *Going Up*, which never saw an audience. Kaufman's agent, however, remembered its snappy dialogue when he was looking for somebody to fix up a comedy by the late Larry Evans. Kaufman came in as co-author with Evans and Walter Percival, and the play, *Someone in the House*, ran for 37 performances in 1918. That was the time of the influenza epidemic, which didn't help attendance much. Kaufman wanted to advertise: "Avoid crowds. See *Someone in the House*." His adaptation, *Jacques Duval*, did even worse in 1920.

Then came *Dulcy*, the great hit of the 1921 to 1922 theatre season, and Kaufman's first important collaboration. He and Marc Connelly borrowed the central character from F. P. A.'s column, where she appeared from time to time as a retailer of bromides, and proceeded to introduce something novel on the stage—satire from a point of view that was "smart" rather than popular. *Dulcy's* never-failing middle-class dullness was infinitely amusing, and the most famous playwrighting team of the '20s was launched.

They were more than just rising young playwrights, however. Kaufman and Connelly in those days were part of a group which "by virtue of talent, wit and hobnobbing together was coming to dominate the sophisticated Manhattan scene." It called itself the Thanatopsis Literary and Inside Straight Club and lunched at the Algonquin, while merry quips darted among its now-famous members—Dorothy Parker, the late Heywood Broun, Alexander Woollcott, F. P. A., the Marx Brothers and others.

Away from the club, Kaufman and Connelly kept working, and in 1922 their *To the Ladies* appeared, a warmly human play with its share of irony at the expense of masculine

KAUFMAN, GEORGE S.—*Continued*

complacency. It was followed in the same year by *The 49'ers* and *Merton of the Movies,* a sharp satire on Hollywood, from time to time revived by Hollywood itself. In 1923 Kaufman and Connelly had two more plays produced, *Helen of Troy, New York* and *The Deep Tangled Wildwood,* both failures. But they redeemed their reputations the next year with *Be Yourself* and *The Beggar on Horseback,* the latter an extremely effective play about a man who has a horrible dream that he has left the artistic life to enter big business.

This last play was the climax of their collaboration, and after it Kaufman and Connelly separated amicably. Kaufman immediately set to work on his own, and the result was *The Butter and Egg Man* (1924), a highly successful comedy which combined a terrific pace with realistic and minute detail, and *The Coconuts* (1925), a zany vehicle for the Marx Brothers. But Kaufman found he disliked working alone, and by 1926 was back to collaboration, this time with H. J. Mankiewicz on a not very profitable play named *The Good Fellow.*

Since then, with one exception, Kaufman has always been part of a two-man team. Joseph Wood Krutch explains it by saying that Kaufman is mainly a wit and skillful builder of character without much ability in creating plots, and Kaufman himself has said he doesn't think his work alone is particularly good. With someone else he is an ideal collaborator. "His adaptable, accommodating mind is geared to avoid collision. It is also geared to let the other fellow's personality rather than Kaufman's permeate the play." His work with Connelly has a kindliness and humanity evident in Connelly's own plays, and *The Beggar on Horseback,* particularly, is "obviously dominated by Connelly's delicate fantasy." In *The Royal Family* the tone "clearly results from the bravura touch of Miss Ferber"; the nostalgic sentimentality of *The Channel Road* is "pure Alexander Woollcott"; *Of Mice and Men,* which he staged, remains John Steinbeck's work.

Achieving the results of perfect collaboration with Kaufman, however, is no easy matter. Writing the play is always an evenly shared two-man job with long preliminary stretches for working out plot details before the dialogue is even started. And Kaufman is a perfectionist. Moss Hart (see sketch 1940 Annual) still calls their first job together "the Days of the Terror." From 10 a. m. "until exhausted" they worked and starved together, with Kaufman sometimes spending "two whole hours shaping one short sentence, a whole day discussing an exit." Kaufman prowls around and, according to Woollcott, "in the throes of composition seems to crawl up the walls of the apartment in the manner of the late Count Dracula." He picks up anything that catches his eye, looks it over, throws it down. This annoyed Edna Ferber, and once she placed a telegraph blank face down among the personal papers on her desk. Eventually Kaufman got around to it, picked it up, and read: "George Kaufman is an old snoop." This sort of thing can go on for anything from five weeks to seven months, and has.

Back in 1924 Kaufman had written a sad venture, *Minick,* with Edna Ferber. Undiscouraged, he tried again with her in 1927 and this time clicked with *The Royal Family,* a history of the tumultuous vagaries of a theatrical family. With this play Kaufman had the added satisfaction of knowing that he was being taken seriously as a director as well as a playwright. It was, however, five years before he and Miss Ferber collaborated again, and in those years Kaufman's name appeared with those of five other theatrical lights.

In 1928 came another opus for the Marx Brothers, *Animal Crackers.* In 1929 came his first play with Woollcott, *The Channel Road,* a thoroughly panned venture. (His next, *The Dark Tower,* did even worse in 1933.) And in that same year *June Moon* was written with the late Ring Lardner. One year later Kaufman hitched up with Morrie Ryskind for a successful musical comedy called *Strike Up the Band,* and in that same year his first effort with Moss Hart, *Once in a Lifetime,* delighted audiences with its brilliant satire on Hollywood at the time talkies came in. Kaufman, who acted in this in the first dramatic appearance of his career, commented on his new collaborator, 15 years younger: "I have always been smart enough as I grew older to attach to myself the most promising lad that came along in the theatre."

The year 1931 was another big one for Kaufman. In it he and Howard Dietz presented *The Band Wagon,* "the wit, irony and beauty of whose sketches and musical numbers inaugurated a new era in musical revues," and in this year he and Ryskind gave the country the Pulitzer Prize-winning satire on American politics, *Of Thee I Sing.* The next year, which saw *Dinner At Eight* (Ferber and Kaufman) pulling in the audiences, wasn't a bad one either, and even 1933, in which *Let 'Em Eat Cake, Of Thee I Sing's* not quite so famous successor, appeared, can be considered good. The year 1934 actually had two hits: *Merrily We Roll Along,* a serious drama on disillusionment written with Moss Hart, and *Bring on the Girls,* a gay work by Kaufman and Ryskind; and in 1935 Washington society in national politics came in for satirization in *First Lady,* written with Katherine Dayton.

In 1936, though, Kaufman really hit the jackpot. *Stage Door,* with Ferber, was a hit; *You Can't Take It With You,* with Hart, was a wow (837 performances on Broadway) and a Pulitzer Prize winner. Then in 1937 came *I'd Rather Be Right,* with the book by Kaufman and Hart, music by Richard Rodgers and Lorenz Hart, acting by George M. Cohan and tickets for opening night selling for $165 a pair at a gentlemen's club. In 1938 *The Fabulous Invalid* and in 1939 *The American Way,* "that noble but glib paean to democracy" (both with Moss Hart), did pretty well for themselves, but it wasn't until Kaufman and

Hart's seventh collaboration that the bell rang loud again. *The Man Who Came to Dinner,* "an unexpurgated version of Alexander Woollcott," became one of the biggest smash hits of the past 10 years. It continued to run through July 12, 1941, long after *George Washington Slept Here,* their tenuous tale of life in the country promptly called by skeptics "George Kaufman slipped here," left the boards.

Kaufman broke away from successful writing for a while in 1941 to direct *Mr. Big* by Arthur Sheekman and Margaret Shane. The critics found his doing so a mistake; they bemoaned the play itself and looked sadly and futilely for "the usual Kaufman touch." Their only comfort came from reports of a new collaboration with Edna Ferber, *The Land Is Bright.* When it opened in October 1941, despite some misgivings on structure and theme, they conceded he had done it again. The play was a hit.

All these years of hits have meant that George S. Kaufman is the greatest success in the American theatre. Of his plays more than 15 have run close to 200 or more performances; 20 have been sold to the movies; and Kaufman, who usually has an interest in his productions, gets his share of the profits as well as royalties. But he shrugs his shoulders. "All I know is that I have earned a great deal of money and I haven't got any of it. If I don't get a hit each year I am in a darned bad way."

Kaufman, who is one of the best doctors in the theatre—on anyone's plays—does everything to see that his own will be hits, even after they are written—by directing the film versions and by directing and staging them in the theatre. It used to drive him crazy to see other directors mar his lines, twist his meanings, spot in laughs, and since 1925 he has not been giving them many chances to. One of the best directors in the business now, he usually starts with the last act and works backward, quiet, unobtrusive, listening in the back, "his head tilted a little to one side, his finger cocked in the corner of his mouth." Always he gives the impression that playwrighting and directing are part of the same thing, that gesture and movement are as much a part of the play as words. Because this is so, he rewrites as he goes along, shifting line, phrase, speech to suit the tempo and rhythm of movement he wants. But no one else dares shift them, and no actor ever ad libbed a syllable without his knowing it. Once during a performance he discovered that a star had made some changes in the script. "Your performance magnificent and improving every day," he wired. "Sorry I can't say same about the lines."

Kaufman is famous for quips like this, and his conversation off the stage is supposed to equal that of his plays. Puns are his forte, and some of them, like "One man's Mede is another man's Persian," will probably be quoted forever. He delivers them dead pan, and always there is a "look of utter mournfulness" on his face. Carelessly dressed, usually hatless, he sports a bushy pompadour, rimless glasses and heavy black eyebrows. Whether in his Manhattan town house or out on his Buck's County, Pennsylvania farm, he is bored by social rigmarole, fights innovation, and abhors athletics, except for an occasional fierce game of croquet. Poker and bridge are really his games, and Ely Culbertson calls him "the best amateur bridge player in the United States." He is the kind of player who detests dubs and says things like "I'd like a review of the bidding with the original inflections."

His dark-eyed, gray-haired wife, Beatrice Bakrow, whom he married in 1917 (they have one daughter), is gay and sociable, and it is she who keeps her husband in touch with friends like Robert Sherwood, Alexander Woollcott, Harpo Marx, Irving Berlin. He himself, according to *Time*, is "rangy and restless, hard to know, harder to understand, always blunt, always brusque, occasionally brutal, completely free from affectations, but bulging with quirks. He is frightened of growing old or being considered rich or losing his hair. He forms friendships slowly, feels he has few friends. He talks to himself, makes strange faces, nods his head."

KAYE, DANNY 1913- Comedian

Address: c/o Imperial Theatre, 249 W. 45th St, New York City

As the owner of "the most expressive mitts in the theatre," Danny Kaye might have expected to leap to top Broadway billing in the space of a few years. If so, he never admits it. This pleasant, rather shy youth with a gangling six-foot frame and an apologetic smile is still a bit dazed and bewildered by his success, but withal entirely pleased. Much of his time is spent thinking of his good fortune and plotting ways to make it a permanent state. He certainly hopes it keeps up at least until he can realize one

Marcus Blechman

DANNY KAYE

of his major ambitions: "to buy an apartment house in his old neighborhood and collect rents himself—and always, every time, say 'thank you' to the tenants—even if they can't pay anything."

Danny was born Danny Kominski, the youngest son of an East New York (Brooklyn) dress designer, in an environment where the rent was a pressing and everlasting problem. Neighborhood friends of his father's generation remember him as a bright social light, for even at the age of 10 he was able to make the most wonderful faces and could keep his audience (on the street corners or at the socials of East New York) convulsed whenever he felt like it. As a tender youth he made his first "professional" appearance as a pickaninny in a minstrel show given at P. S. 149, the set being an immense slice of watermelon with a pickaninny for every pit. Danny is somewhat dubious as to the success of this performance, for his hair at the moment was an uncompromising red and he had extremely white ears. (The ears are still white but the hair is now brown.)

For a time, after that, the theatre was neglected completely. At Thomas Jefferson High School, Danny became quite an athlete, devoting his time to handball, the breast stroke and the pole vault. Though he weighs only 150 pounds, he is still proud of his muscles and insists that interviewers poke them. In spite of the muscles, he was apparently shy even then, for he describes himself as "the kind of guy who stood behind the guy who whistled at the girls." At any rate, after three and one-half years of high school, Danny found his yearning for adventure more powerful than his zest for learning and departed abruptly for Florida with another boy. The pair started out with $1.50 and returned with $7—by virtue of Dan's singing and the other boy's guitar playing—making hitchhiking a profitable pastime.

Danny's ventures were not always so successful, however. He got himself a soda-jerking job which he loathed and soon lost. After that, a job as an insurance clerk was given him which he held successfully for 10 months. Then, unfortunately, he was promoted to appraising cars. Made dizzy by lines of cars, he made his Big Mistake—one which cost the company $40,000. For this he was rewarded by being fired and, in addition, was shadowed by two Pinkerton men for months. The president of the company has apparently forgiven him now, for he wrote Danny a letter not long ago, saying: "I saw your act at the Riviera Club and enjoyed it very much. Back when you cost us that $40,000 I thought you were either a thief or a nitwit. It didn't occur to me that you were a comedian."

After his business fiasco, Danny started on his climb to stage fame by taking an entertainer's job at a summer camp in the Catskills, where he did anything remotely connected with the theatre. For this he was paid $200 for the first season and in several years worked up to a $1,000 salary. In the winter he lived on what he earned in the summer and tramped Broadway looking for an opening, but with no success. At the end of his fourth season at the camp, however, he joined two dancers to form a team called "The Three Terpsichoreans," and the act managed to get vaudeville bookings. At one point in their performance, Danny was to mince up to the girl and kiss her fingers gracefully. This he did very well until one night, just as he reached for her hand, he fell flat on his face and split his trousers. Shaken and bewildered, Danny had no choice but to obey the instructions the girl was hissing at him from the wings: "Wait for the laugh, Danny! Wait for the laugh." And the audience loved it. The incident became part of the routine and Danny received billing, choosing the name of Danny Kaye.

Eventually the act reached Detroit, where it was spotted by A. B. Marcus, proprietor and producer of an Oriental touring variety show which is an annual event, like the rainy season, in such cities as Peking, Tokyo, Penang and Singapore.

The ways of the East were mysterious to Danny. On one occasion when facing an audience in Tokyo composed chiefly of rigid-faced military men, who understood not a word of English, Danny struggled and sweated to promote a laugh. No response. Deciding that he was using the wrong tactics, he essayed a sad ballad. Still no response. As he tottered into the wings in desperation, he was met by the theatre manager who realized his despair—and explained that the Japanese were too polite to interrupt the lovely entertainment with noisy laughter and applause.

In spite of situations like this one, and Oriental stagehands who did their jobs of adjusting lighting and curtain ringing with true Eastern disregard of time and cues, Danny loved the East. In fact, he was just considering remaining there with a Dutch vaudeville group (A. B. Marcus, Inc., was about to sail for home) when the Japanese hurricane of 1936 arrived unexpectedly, bringing with it a loose brick which settled Danny's plans for him. When he woke up, he found himself on shipboard with A. B. Marcus.

He returned to America for a tour of the West, but finally decided he was getting nowhere and left the troupe for a job as Nick Long, Jr.'s, stooge at the Casa Mañana. After a season at another camp, he was eventually invited to Camp Tamiment, a summer spot for young professional people not far from Stroudsburg, Pennsylvania. It had been Max Liebman's custom for some seven years to put on a new revue at Tamiment every Saturday night for the ten weeks of the season, and it was with this that Danny was asked to assist. In this particular year, 1939, Max Liebman also had to assist him a young lady by the name of Sylvia Fine. She and Danny worked out some numbers together, Sylvia composing the lyrics and music. They found they had the same type of humor, and the acts were wonderful and much appreciated by the rural theatregoers. As a finale, on the last Saturday night of the season, the best numbers of all the revues were chosen and worked into one—and the *Straw Hat Revue* was born. By the end of September it was launched on Broadway by the Shuberts, and Danny had come into his own.

After the success of the *Straw Hat Revue,* Danny and Sylvia found they had much in common besides an ability to collaborate on sketches. They had lived as children on the same block in Brooklyn, and Danny had spent the summer of his thirteenth year running errands for her father. It seemed incredible that they hadn't met, but apparently they never had. They made up for their lack of earlier acquaintance by eloping to Florida and by being married at Fort Lauderdale on January 3, 1940. Danny still refers to his wife as Miss Sylvia Fine, and she still writes his sketches and helps him rehearse them, for which he gives her full credit, realizing that it is lack of good material which has kept many a good comedian in the "borscht circuit" rather than on Broadway.

Once Danny got a toe-hold on the ladder of success, he managed to keep climbing. As a result of his work in *Straw Hat Revue,* he was offered top billing at a cafe, La Martinique, and was there discovered by the swank set and the Broadway columnists. He even managed to convulse the waiters night after night, a much more difficult feat than amusing the customers. Other impressive engagements followed, among them one at the Chez Paris in Chicago and one at the Paramount Theatre in New York.

Then came the signing-up for *Lady in the Dark,* in which he played the part of Russell Paxton, doubling as chauffeur and magazine photographer. Critics acclaimed him. His most hilarious and best-remembered number was his Tschaikowsky number which is nothing more or less than the names of 50 genuine Russian composers strung together by Ira Gershwin simply for the tongue-twisting effect.

In 1941 Danny left *Lady in the Dark* for the featured lead in *Let's Face It,* a Broadway hit. The reviewers still agreed that both he and the audience appeared to be having the time of their playgoing lives, particularly when he went into his *Melody in F* number—a narrative of the career of a selectee, told in "triple-talk" and by means of pantomime, squeals, grunts and action. There's little doubt that in two years Danny Kaye has become one of the most important comics on the American stage.

The apartment in which he and Sylvia Fine live is on Central Park South—"right down the street from the Plaza." Danny loves to spend money. In fact, "because of Danny's idea that money should be scattered around like so much scrap paper, the Kaye finances have been put in the hands of a business manager. Danny still thinks that if he buys anything and sends the bill to his manager, he isn't spending money—because it doesn't come out of his weekly allowance."

KELLY, JUDITH Jan. 4, 1908- Author
Address: b. c/o Harper and Brothers, 49 E. 33rd St, New York City; h. Beverly, Mass.

The author of the $10,000-Harper Prize novel for 1940 to 1941 is Judith Kelly, an attractive, fair-haired woman who is the mother of two children. Clifton Fadiman (see sketch this issue), one of the judges in the contest, called her novel "a warm, precise and searching study of the first few uncertain years of an American marriage." The story of a young couple who, "like all the other characters of her book, are blessed with education, social position and assured income," the particular contribution of *Marriage Is a Private Affair* (1941) is to illuminate a social class which (again in Fadiman's words) "has of late been neglected in our literature."

(Continued next page)

Royal Atelier

JUDITH KELLY

Other reviewers, for the most part, agreed with the *New Yorker* critic's appraisal, Sterling North finding the book completely deserving of the Harper Prize. And although Edith H. Walton, writing in the New York *Times Book Review*, thought the story that Judith Kelly had to tell conventional and familiar, she credited her with having "told it in terms which are so completely contemporary," with having "endowed it with so much freshness and sensitiveness and genuine intuition that it has the shock of truth and novelty." Her main weakness was "a tendency to dress up the obvious as portentous truth."

Born in Toronto, Canada on January 4, 1908, the daughter of Mr. and Mrs. Henry Grattan Kelly, Judith Kelly writes about people with a background similar to her own. Racially she is a mixture of "well-born, over-intellectualized New England, blended with immigrant Irish; and the two re-blended with impoverished Southern gentility." She attended Branksome Hall School until the age of 14, when her family moved to Boston; there she attended Miss Lee's School.

"During the early part of my life," she says, "we were what I guess you'd have to call rich. That is, the horses were ours, and good; and so were the dogs; and I had far too many clothes and too much pocket money. I was sent to Vassar [1927] and for three years had a perfectly heavenly time, which certainly had nothing to do with studying, but was entirely composed of boys, New Haven parties, special delivery letters (the more you got, of course, the more simply wonderful you were), clothes, telegrams, telephone calls and the absolute minimum of work.

"This might have gone on indefinitely if 1929 had not come along and, even worse, 1930. All at once we had no money at all, not even enough to see me through the last year of college. So a scholarship was necessary, and I was forced for the first time in my life to do a little real work; quite astonishingly it turned out to be fun. Even more important to me was the discovery of people's goodness, kindness and generosity in times of need."

"Well, after college" she goes on, [she was graduated in 1931], "there was still no money, so the next quest was jobs. People went on being wonderful—they got me jobs one after another, almost as fast as I lost them; they lent me money; they gave me needed clothes; and above everything they offered me the immense help of never doubting for one moment that I would some day pay them back." She worked in a bookshop and in a department store before her marriage, in the summer of 1933, to William D. English, a Boston lawyer. It was he who, as a wedding present, quietly paid off all her debts.

Regarding those first few years of her own marriage Judith Kelly is very modest. "Debts weren't my only drawback as a bride either. I wanted terribly to be a good cook but I was an abominable one; and over my housekeeping it is better to draw a veil. My husband, instead of justly resenting this, said straight off that if I could earn the money for a maid he would much rather have me doing something I liked and was qualified for than to see me struggling with burnt fingers and collapsible cakes. So after our marriage I kept on having jobs." There was a year on the Boston *Globe* and a year on the Boston *Transcript*. "Then unaccountably one day I remembered that my father had always said firmly I should be a writer, and just as unaccountably I heard myself saying to my husband: 'You know what I'd love to do? I'd love to stop working and write a novel.' To my terror my husband said: 'All right. Why don't you take a year off? I'll pay for the maid and you can have a little office somewhere and I'll get you a typewriter.' So there I was: committed."

Somehow Judith Kelly's first novel got itself written and published, though, as did a few short stories. *It Won't Be Flowers* (1936) made what she calls "the large noise of a feather falling on velvet." The story of a young woman, happily married and without any grave economic problems, who nevertheless acquires a social conscience, one reviewer found its handling "feebler and more rarefied than one could wish," the style "self-conscious," the adjectives "frequent and lush." Another, however, called it "lovely and moving, because it shines with youth and the never-to-be recaptured radiancy of the first venture." And most critics found it promising, at least.

"And then," Judith Kelly confesses, "our daughter was born and all mental equipment fled from me for over a year. I couldn't even write a grocery order. But somehow—after failures and false starts and mistakes that piled up on each other like mountains—this second book also got itself written, being finally completed only a month before our son was born." *Marriage Is a Private Affair* took two years to write, and the first draft seemed to her so bad that she hesitated even to show it to a publisher. When she finally did, he suggested that she enter it in the Harper contest, to which between 500 and 700 entries were submitted. The judges (Clifton Fadiman, Josephine Johnson, Louis Bromfield) cast their votes without knowing who the authors were.

There will, Judith Kelly hopes, be a third book, and a fourth, even though "now the whole cycle of brainlessness is starting all over again." She says: "I remember how, when I began writing, I promised myself that I would efficiently stagger babies and books—one of a kind on alternate years. Whenever I think of that neat, admirable plan I don't know whether to laugh or to burst into tears. Six years have passed and there are only two children and two books. My hope is to do much, much better in the next six."

KEMMERER, E(DWIN) W(ALTER)

(kĕm'ẽr-ẽr) June 29, 1875- Economist; educator

Address: b. Princeton University, Princeton, N. J.; h. 161 Hodge Rd, Princeton, N. J.

Known the world over as the "Money Doctor," Professor Edwin Walter Kemmerer, expert economist, has successfully treated ailing currencies in more than a dozen different nations. Since 1928 he has been Walker Professor of International Finance at Princeton University, and from 1937 to 1940 was president of the Economists' National Committee on Monetary Policy. Following his first "doctoring" job in 1903, that of putting Philippine currency in a healthy condition, Dr. Kemmerer has performed similar services, heading committees of financial advisers, in Mexico, Guatemala, Colombia, the Union of South Africa, Chile, Poland, Ecuador, Bolivia and other countries. He was also instrumental in organizing the statistical department of the Federal Reserve Bank and is an authority on the Federal Reserve System. Among his more recent books which are standard as college texts and references are *Kemmerer on Money* (1934); *Money; The Principles of Money and their Exemplification in Outstanding Chapters of Monetary History* (1935); and *Inflation and Revolution; Mexico's Experience of 1912-1917* (1940).

Dr. Kemmerer's boyhood and early education provide a background story of handicaps, physical and financial, overcome by applying an early-developed theory of economics to living and earning a schooling. One of six children, Edwin Walter Kemmerer was born in Scranton, Pennsylvania on June 29, 1875, the son of Lorenzo Dow and Martha H. (Cortright) Kemmerer. His ancestors on both sides came to this country in Colonial days, fought in the War of Independence. His own father, after serving as a drummer boy in the Civil War, became train dispatcher and yardmaster at Scranton. Because of two severe attacks of diphtheria, Edwin could not go to school until after he was eight years old; he found himself a frail, "hot-house" product among rough, healthy boys. "I was a goody-goody boy," he confesses, "and I'm ashamed of it. I ran away from school only once, and then I am afraid it was because the other boys forced me."

Orren Jack Turner

E. W. KEMMERER

Times were hard; and when the boy was 14 his family moved out to the little village of Factoryville because the father wanted his children to grow up in the country, and because an excellent school, the Keystone Academy, was located there. This school young Kemmerer was encouraged to enter, although he knew that because of the family's slim financial circumstances he must earn his own way. But he had from the start his parents' backing. "My father and I were chums when I was a boy," he says. "We used to enjoy particularly going fishing together. . . He was keenly interested in my ambitions and helped me in every way he could. My mother's influence was also very strong. She was always interested in what I was trying to do and no sacrifice was too great for her to make for her children."

Kemmerer decided that, since fishing was his recreation, he would also turn it to getting a much-needed income. The trout he caught in upland brooks he sold in Scranton; soon he was buying the catches made by other boys and re-selling them in town. Later he

KEMMERER, E. W.—*Continued*

added eels and bullheads to his fish business. In the summers he also spent hours in the hills picking huckleberries to be sold at three cents a quart. Soon realizing that he needed a year-round business, he developed an egg route. He called on farmers, bought their surplus eggs and resold them in Scranton. But he decided he could do better in the way of finances if he gave up school for a year and accumulated a certain amount of capital to go on with. So he took a job as train boy with the Union News Company, which he was able to continue along with his Saturday egg business. He saved enough to take up again, after a year, the purely scholastic side of education at the Academy.

For a short time young Kemmerer wanted to become a missionary; but this desire soon gave way to that of preparing himself for civil engineering. So he studied mathematics almost exclusively until he was 17, and even joined a Lackawanna Railway surveying corps. Then he decided that he didn't care overly much for mathematics. About this time he bought secondhand a book called *Getting on in the World, or Hints on Success in Life.* He thoroughly studied this book and underscored several passages in it. That which impressed him especially was a quotation from the historian Gibbons: "Every person has two educations—one which he receives from others, and one, more important, which he gives himself." To this Kemmerer added the proposition that in life, as in business, the return was proportionate to the amount of effort expended. Also, one must not specialize too soon. He decided a classical course would demand the most of him, and enrolled at Keystone Academy. Through sheer hard work he won the Latin and the Essay Prizes, and was graduated at the head of the school. His prize essay was called *Climbing the Industrial Ladder.* And the course in college which had interested him more than any other was the one in political economy. Then and there he determined he would devote his life to its study and become a professor of economics.

Which college for further study should he choose? He decided on Wesleyan University because its catalog contained the largest number of men with Ph. D.'s after their names. He hoped to give all his time to his studies during the college terms, so he worked summer vacations selling stereoscopes and stereoscopic views from house to house. In this he did so well that he organized groups of other college men to do it, and soon had a force of some 20 working for him, upon whose sales he received a commission. He read college alumni statistics and found that there was a close relation between scholarship in college and success in later life. So Kemmerer studied hard and was graduated in 1899 with Phi Beta Kappa honors and special distinction in economics.

His essay on the "Theory of Money" so impressed professors at Cornell that he was given $500 to continue his studies there. At the age of 26 he finished his graduate work at Cornell, receiving his Ph. D. in 1903. He had married Rachel Dickele in 1901. There were two positions open to him: one a $600-a-year instructorship at Purdue University; the other a managerial position at $3,000. The latter was a big temptation to a young married man; but Kemmerer stuck to his earlier decision to be a professor of economics.

Soon his first opportunity in applied economics came. William Howard Taft, then Governor of the Philippines, was having trouble over the currency question there and asked Kemmerer for an immediate report on the situation. He worked all of one night to get the report ready and, though the Secretary of War at first turned down his recommendations, they were later put into practice: Philippine currency was put on the gold standard in a healthy condition. Following this success he went on with his studies in the practice and theory of international banking while continuing teaching economics at Cornell and later at Princeton. He was financial adviser to the Government of Mexico in 1917, to Guatemala in 1919, and in 1923 chairman of the Committee of American Financial Advisers to Colombia.

In 1922 Kemmerer took his wife, his son Donald, then 17, and his daughter Ruth, 13, with him on his investigation of conditions in South America. It was a trip involving a dangerous adventure in which he and his family almost lost their lives. They had decided to visit the Iguassú Falls, probably the most beautiful in the world, and boarded a small river steamer for a three days' journey up Paraguay. The first night out they were awakened by a terrific explosion. All four had just time to jump into the water before it was covered with burning oil from a second explosion that killed the remaining passengers who had not escaped from the boat. One by one Kemmerer and his family succeeded in getting to shore, where they were given shelter until they could make the journey back to Buenos Aires.

To become a more competent "Money Doctor," Kemmerer studied the history of previous illnesses in each nation, and parallel cases. Hence when he was called upon to serve a particular government he already had the case in hand. As a result, he was able to reorganize the country's currency promptly and surely. This study contributed to his prompt and effective work with the Dawes Commission in 1924, the American Commission to China in 1929, and that to Turkey in 1934. During recent years several Latin-American countries have employed American financial advisers, prominent among them Dr. Kemmerer.

Kemmerer says there are two types of advisers: the general practitioner type, "which diagnoses the disease, prescribes the medicine, and then undertakes to take care of the patient until he has reasonably recovered," and the diagnostician or consultant type, "which merely diagnoses the difficulties, prescribes remedies, and then goes away."

Kemmerer says most of his advisory financial work has been of the second, or consultant, type. In making up a commission he is always careful to obtain "at least two men who can qualify as experts in each of the major fields of work."

Kemmerer's skill in choosing men to work with him has played no small part in his success. The sickly, "goody-goody" boy managed to overcome those psychological handicaps which other men retain in later life. "It is one of the triumphs of Kemmerer's self-education that it enabled him to disprove an almost invariable rule. He meets all sorts and conditions of men with that utter frankness and friendliness which is the hallmark of those who have finally achieved mastery of themselves." Fishing is still his favorite recreation, and he also enjoys a game of golf whenever he can.

KEMPER, JAMES S(COTT) Nov. 18, 1886- Former president of the United States Chamber of Commerce; insurance executive

Address: Mutual Insurance Bldg, Chicago, Ill; h. 945 Sheridan Rd, Winnetka, Ill.

In May 1940 "conservative yet liberal" James Scott Kemper was chosen president of the United States Chamber of Commerce. Most of the members were familiar with their "energetic, enthusiastic president" who "for 20 years out of the 54 of his hard-working life" has been associated with the United States Chamber of Commerce as officer, director and vice-president. As president of the organization until May 1941 he had followed in the conservative footsteps of his predecessors and had been the spokesman for business to the Federal government.

Since his election Kemper's pronouncements have frequently made news. *Life* Magazine (January 20, 1941) listed his name in an article called *The Ism of Appeasement*, quoting him as "doubting that the United States should trouble itself about anything except North America and the Panama Canal." On January 28 the committee of manufacture of the Chamber of Commerce announced that it believed "that anti-strike laws will prove ineffective and that they will deny fundamental rights to our citizens." It urged employers "to develop plans with their employees designed to promote the amicable and prompt adjustment of labor disputes which may arise." Speaking before the Senate Foreign Relations Committee on February 5 in opposition to the Lend-Lease Bill, Kemper said that the Chamber of Commerce believed in full defense for the United States but sought prevention of involvement in war. He emphasized that business not only did not embrace war as an opportunity for profit, but was definitely opposed to any profiteering on war materials. And at the twenty-ninth annual meeting of the Chamber of Commerce, in April 1941, at which the best business conditions since 1929 were reported, he spoke out against "hysterical derangement of our normal production" in order to speed up defense. In May 1941 Albert W. Hawk was elected president of the United States Chamber of Commerce.

A descendant in the sixth generation of John Peter Kemper of Germanna, Virginia, James Scott Kemper was born at Van Wert, Ohio, son of Hathaway and Mary Jane (Scott) Kemper. He comes of an old Virginia and Ohio family which from generation to generation produced Presbyterian clergymen. Apparently the blood of the circuit-riding parson still flows in the Kemper family, for Kemper is a past president of the Presbyterian Union of Chicago and a trustee of various theological and charitable organizations.

Although in 1941 he is president of a score of corporations, Kemper's career began modestly enough. After being graduated from high school in Van Wert, Ohio, he entered the employ of the Central Manufacturers Insurance Company of that city. In his early 20's he was made manager of the Western

JAMES S. KEMPER

department of the company with headquarters in Chicago. In 1912, when he was only 26 years old, the lumber interests of the nation sought his counsel in an effort to achieve lower insurance costs in operating under the then newly-enacted Workmen's Compensation Acts. His success in reducing insurance costs by removing the causes of accidents brought him nationwide recognition as an effective leader in the "Safety First" movement. After the First World War there was a strong need for insurance protection against loss of life and property caused by automobiles. Kemper was a pioneer in the cause of automobile accident prevention. He endowed the Kemper Foundation for Traffic Police Training at Northwestern University, which has since become an authority on traffic problems.

In 1912 Kemper became vice-president and general manager of the Lumbermen's Mutual Casualty Company. As president since 1916 of that organization (the largest writer of automobile casualty insurance in the country), he has devoted himself to the intricate problems of insurance underwriting. Since 1921 he has been president of James S. Kemper and Company, and at various other times has been made president of five other insurance companies, vice-president of another company and director of three other insurance companies. In addition he is now a member, formerly president, of a number of insurance organizations.

Although president of so many companies, he still finds time to be active in Republican politics—twice he was a delegate to Republican National Conventions. He is active in most local and state political campaigns and his advice to his 10,000 employees and representatives has always been: "Vote as you please but be sure to vote. Choose what party you prefer but keep your interest alive in all that concerns your local and national government." He believes firmly that American businessmen in every community must take a more active part in politics if they want to see improvement in government.

Mr. Kemper's first wife (Mildred Estelle Hooper) died in 1927. He has two daughters and a son. In 1931 he married Mrs. Gertrude Ziesing Stout. He is "short, stocky," with a "slightly bald head and a rather mischievous mustache, with pearl stickpin and spectacles." Away from business Kemper is a lover and collector of great books and a keen yachtsman. He confesses that he is the world's worst golfer.

KEYNES, JOHN MAYNARD (kānz) June 5, 1883- English economist; financial adviser to the British Treasury

Address: b. King's College, Cambridge, England; h. 46 Gordon Sq, W. C. 1, London, England

John Maynard Keynes, "the most gifted and provocative of contemporary economists," Fellow and Bursar of King's College, Cambridge, editor of the *Economic Journal*, former chairman of the National Mutual Life Insurance Company, secretary of the Royal Economic Society, member of the Economic Advisory Council, director of the Bank of England and financial adviser to the British Treasury, arrived in the United States in May 1941. He had been sent by Sir Kingsley Wood, Chancellor of the British Exchequer, to confer with the Washington Administration and the British Supply Council on the operation of the lease-lend law and other related matters.

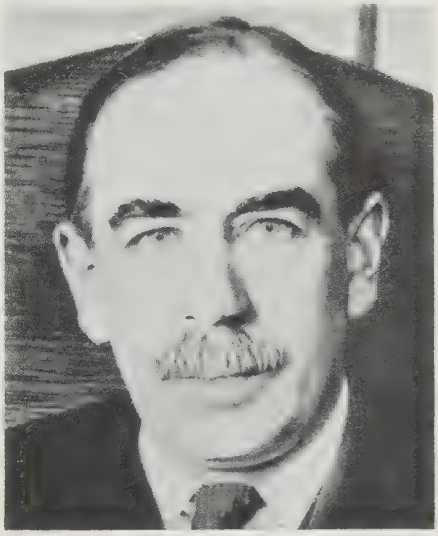
To the United States he brought a warning that our economic life would be disrupted by a German victory and advice on the prevention of inflation. What Mr. Keynes has to say is heeded in Washington, for his influence there has been strong for many years. Back in 1933 he is said to have sold the pump-priming plan of government to Roosevelt (some still call him "the economic godfather of the New Deal"), and ever since then his disciples have played an important part in guiding government spending. He is, too, the author of a plan for England's financing of the War which has had an effect on government spending plans both in this country and in his own.

This plan was first presented in two articles to the London *Times* in November 1939 and in 1940 published in book form (*How to Pay for the War*) in a modified version. Its basic theory is that in wartime there is a scarcity of the goods ordinarily consumed by the civilian population. This, plus peak production for war, leads to a heavy demand for all goods, which in turn results in sharp increases in prices, or inflation. Keynes' proposal is to deflate while the War is going on by giving England less to spend.

Under his plan all earners would be allowed minimum incomes and from all earnings above them the Government would deduct a proportion as "deferred savings." These would be allowed to accumulate until after the War and then be paid out at such a time and in such a way as to avoid or restrict any post-War slump. The savings collected would be available for special emergencies and would be repaid through a capital levy after the War. At the same time that they were being collected the Government would provide a minimum ration of essential consumption goods at low prices for all and grant family allowances to the low income groups.

When the plan was first proposed, Britain was skeptical. The Labor Party objected to the element of compulsion; the Conservative Party didn't believe the liquidation of the "deferred savings" could be properly accomplished; other groups called it a slur on British patriotism. But as the War went on and threats of inflation became more and more apparent, large groups began to agree with the *Spectator's* verdict: "A reasoned scheme for avoiding the disaster of inflation." In April 1941 the deferred savings proposal and some of the least radical of Keynes' other suggestions were adopted in the new and heavy British budget.

Keynes himself emphasizes the fact that his aim in his plan was not only to solve the financial problem of England but "to snatch from the exigency of war positive social improvements." "The combination of universal family allowances in cash, the accumulation of working-class wealth under working-class control, a cheap ration of necessaries and a capital levy after the War," he says, "embodies an advance toward economic equality greater than any which we have made in recent times." This conception, like many of the implications of Keynes' general attitude on economic affairs, is closely allied to socialism, and his ideas on economic policy are said to "exercise a greater influence on the Labor movement than those of probably any other single person." Yet Keynes is not a Socialist, nor a member of the Labor Party. Despite his perennial criticisms of laissez faire, his theory of peace and war debts, his attitude toward the gold standard, Keynes has been consistently allied with the Liberal Party and has occasionally written with some scorn about the Labor Party.



Planet News, London

JOHN MAYNARD KEYNES

His father's attitude was in some respects similar. John Neville Keynes is also a leading British economist, long prominent in the faculty and administration of Cambridge University. On his father's side and on that of his mother, Florence Ada (Brown) Keynes, John Maynard Keynes has also a heritage of non-conformism. His grandfather, John Keynes, was a famous non-conformist; his maternal grandfather, Dr. John Brown, preached in Bunyan's church at Bedford and was one of the great historians of non-conformity.

John Maynard Keynes was born in Cambridge, England and went to Eton College, where reports have it that the boys used to call him "Snout." (He still has a thin face and longish nose.) From Eton he went on to King's College, Cambridge. Here he was Twelfth Wrangler and president of the Cambridge Union Society, and was graduated in 1905 with highest honors and an M. A. Immediately he entered the India Office and spent two years there before he returned to Cambridge University as a lecturer in economics, a position he has continued to hold until today, though he has taken assignments from the government from time to time.

One of these came in 1913 and 1914, when he served as a member of the Royal Commission on Indian Finance and Currency;

KEYNES, JOHN MAYNARD—*Continued*

another in 1915, when for four years he was associated with the British Treasury, for two of these years as principal clerk. Because of this position Keynes was made the Treasury's representative at the Paris Peace Conference and the British Chancellor of the Exchequer's deputy on the Supreme Allied Economic Council. In 1919 he withdrew from the Conference in disgust, certain that the people there were merely sowing dragon's teeth that would sprout new wars, and not long afterward he published his *Economic Consequences of the Peace* (1919), still called "the most important study of the Treaty of Versailles that has yet been published."

Much of the book is taken up with a demonstration of the economic impossibility of the reparations section of the Treaty, its basic thesis that the peacemakers of 1919 concentrated on political and military considerations when they should have been thinking of economic ones. It created a sensation. Its argument was unpopular, its author damned by the critics, and yet the book itself was widely read and translated into every continental language.

From then on almost anything Keynes wrote or stated in the many lectures and speeches he made was bound to be significant to other economists and to many who weren't economists. He was soon recognized as the challenger of the whole tradition of economic orthodoxy. In 1920 appeared his *A Treatise on Probability*, which, "according to some commentators, only three men are capable of understanding." In 1924 his tract *Monetary Reform* was published. This investigated the element of instability in England's economic system due to its dependence upon a monetary standard liable to great fluctuations in value, and demonstrated the results of a situation in which capitalism leaves savings and investment to the individual without imposing a social control. After the publication of *A Short View of Russia* in 1925 and *The End of Laissez-Faire* in 1926, Keynes' well-known *Treatise on Money* appeared in 1930, elaborating the view that the lack of coordination between savings and investment is the main cause of trade depression.

In the 1930's Keynes pleaded for a broad credit base and denounced the gold standard as a "barbaric relic." He also argued strongly in lectures, in the many articles he contributed to economic journals, in speeches and in his position as member of the Committee on Finance and Industry from 1929 to 1931 for the "gradual reconstruction of our social system with the object of providing everyone with the means of maintaining a decent level of consumption." During depression years he diagnosed the cause of the depression as a lack of mass purchasing power caused by a severe deflation, and suggested, the first economist of international reputation to do so, wide government spending to restore it and set industry in motion again. The British Government was largely unpersuaded, while the American Government listened to his ideas and carried many of them out. Many of his views on a flexible money policy and the expansion of social service expenditures were presented in *The General Theory of Employment, Interest and Money* (1936), which was acclaimed in one quarter at least as "the most important theoretical economic writing since Marx's *Capital* or, if only classical economics is to be considered as comparable, since Ricardo's *Principles*." It was preceded by *Essays in Persuasion* (1931), "a record of his advice and warnings on the economic issues of the post-War years," and by *Essays in Biography* (1933), a book whose first part contained estimates of men in public life whom Keynes knew, its second an account of a series of notable economists. Like his other books it is written in language that is both precise and vivid. *The General Theory of Employment, Interest and Money* was published in 1936.

During the War period Keynes' attitude toward government spending changed from that which influenced the New Deal. The time is past, he believes, for the Government to stimulate business activity; it should, instead, devote its efforts to the contrary policy—to a deliberate attempt to slow down the forces threatening boom conditions. This meant, he said, a cessation of public works, an increase in taxes, a reduction of the public debt. He also advocated strong rearmament and a policy of "positive pacifism" involving a League reorganized really to enforce the decisions of its members. For a time he hesitated to condemn completely the policies of the Government ("Herr Hitler, however disagreeable a creature, is a queer one. National hysterias do not last forever"), but by 1938, although he had written that "Czechoslovakia should at least attempt to negotiate with Germany a reasonable solution of the problem of the Sudeten Germans," he had become one of the most bitter critics of Chamberlain's policies. Munich was, to him, both dishonorable and suicidal. Since July 1940 a member of the Treasury Consultive Council and author of plans for financing the War and the peace, John Maynard Keynes is today doing all he can to stop Hitler. It is also in this capacity that he is able to see many of his economic ideas put into effect, his activities far from hampered by the position as director of the Bank of England which he has held since October 1941.

He is a "tall, heavily stooping figure, with a pale face and hair growing very thin," and has occasionally been as unconventional in his living as in his economics. In 1925 he startled a good part of two continents when he married Lydia Lopokova, a famous Russian dancer. A member of the Bloomsbury group, he continues to be interested in the ballet, in art collecting. Frequently he has upset the officials at the British Treasury. There was the time, once, when he wanted to use a slang word in a grave, semi-official document. Sir Herbert Samuel admonished him: "There is no such word in the English language." Unperturbed, Keynes replied: "But I wish to extend the English language."

KILMER, MRS. JOYCE *See* Kilmer, A.

KIRKPATRICK, HELEN (PAULL) Oct. 18, 1909- Journalist

Address: c/o Chicago Daily News, Chicago, Ill.

Helen Kirkpatrick is the sole woman member of the Chicago *Daily News* foreign staff and one of the few American women correspondents in London. Though she is only in her early 30's, she is already being compared in journalistic circles with Dorothy Thompson and Anne O'Hare McCormick.

According to Ben Robertson of *PM*, she has been "in the thick and thin of everything since the Germans began raiding London. Long before the battle of London began she went to Dover, and that took courage as she never had been under fire before and Dover was not only being bombed, it was being shelled." By now she is used to it all, Helen Kirkpatrick says, and admits she has been able to sleep right through the biggest attacks. That is undoubtedly a necessary ability for a correspondent who files as many as three and four dispatches a day, most of them syndicated by the *Daily News* to twenty-four other leading American newspapers.

Much of her life, since the day she entered college, has been directed toward making Helen Kirkpatrick the successful foreign correspondent she is. She was born in Rochester, New York, the daughter of Lyman Bickford Kirkpatrick, a retired real estate broker and a direct descendant of the Colonel Joshua Fry who preceded George Washington as the first commander of the Virginia forces, and Lyde (Paull) Kirkpatrick, and was educated at private schools in Rochester and at the Masters School at Dobbs Ferry, New York. In 1927 she entered Smith College. Here she did Special Honors work in history, was president of the International Relations Club in her senior year and in the spring of that same year won the $1,000 fellowship offered to Americans by the Students' International Union. She was graduated from Smith in 1931 and spent the following summer at the Zimmern School in Geneva and the winter at the Geneva Institute of International Relations. In 1932 the National Student Federation of America chose her as one of the two official student observers at the Disarmament Conference.

HELEN KIRKPATRICK

Back in America, Miss Kirkpatrick got herself a job at R. H. Macy & Company, the New York department store which is so often a temporary stopover for bright young college graduates. She started out as a salesclerk in the electrical appliance department and after a period of executive training was promoted to the position of assistant buyer in the lamp department. Later she was shifted to the same position in the handkerchief department—and this was the position from which she resigned in 1934 to go back to the field of international relations, only a short time after her marriage to Victor Polachek.

In November of that year Helen Kirkpatrick became executive secretary of the American Russian Institute for Cultural Relations with the Soviet Union. From here she went to Geneva for the Foreign Policy Association, to prepare reports on matters coming before the League of Nations for the Foreign Policy Association's *Research Bulletin*. In Geneva she addressed the League on several occasions as a representative of American students in-

KIRKPATRICK, HELEN—*Continued*

terested in promoting peace and world understanding. She tried to interpret events there to others. "One could wish," she wrote, "that the enthusiasm and challenge, combined with a dreadfully pessimistic facing of facts, that are felt here, could be felt in other places."

The more she was in Geneva, the more Helen Kirkpatrick wanted to write of her activities and discoveries. She was meeting important people like Anthony Eden, Pierre Laval, Litvinov (see sketch this issue), De Madariaga; she was becoming friends with the newspaper correspondents there. Occasionally she substituted for these correspondents when they were sick or vacationing and by 1937 was able to write: "I've finally got into the field I've always wanted, newspaper work. I started out by replacing the regular correspondent for the London *Daily Telegraph* and then got taken on during the League Assembly by the New York *Herald Tribune*." That same year she obtained a divorce from her husband.

Other newspapers began to notice her work, and before long Helen Kirkpatrick was writing for many of the leading British newspapers and magazines, including the *Manchester Guardian* and the London *Daily Chronicle,* while acting as Geneva correspondent for the New York *Herald Tribune.* She was important enough in 1938 to give a radio talk from London on "Reaction in England Toward the Resignation of Anthony Eden."

By 1939 Miss Kirkpatrick had published her first book in London, *This Terrible Peace;* had lectured in America on "The Future of the British Empire", "Careers for American Women in Europe", "Behind the Scenes in London" and similar topics; and had founded and was editing the *Whitehall Letter,* a "highly influential" weekly digest of the news, published in London and distributed through the British Empire. To get material for this bulletin, read closely by Eden, Churchill, the King of Sweden and other statesmen, she commuted from one European trouble center to another. She was in Prague during the Sudetenland crisis; she covered Spain, the Balkans, Italy, Poland, Germany and France.

Then, in September 1939, she was asked to join the Chicago *Daily News* foreign staff, and proceeded to turn up "exclusives" that made her masculine competitors in such capitals as Prague, Madrid and Berlin green with envy. Time and again she filed world beats—on May 2, eight days before the Nazi invasion of Belgium, she cabled a message to the Chicago *Daily News,* which printed the following: "A private message from one of the best informed European correspondents of the *Daily News* says that the King of Belgium yesterday informed the United States Government that Belgium expects to be the next victim of Germany."

Helen Kirkpatrick continued to write books—her *Under the British Umbrella* was published at the end of 1939; and she lectured again in 1940 in the United States. Her topics this time were "Britain Looks at the Peace", "Behind the Barbed Wires of Europe", "A Foreign Correspondent Looks at Europe," and her audiences were enthusiastic. It was exciting to hear this tall, handsome, engagingly frank correspondent who looks like a typical American college girl tell of what she herself had seen and known in troubled Europe.

Back in London after this 1940 tour, Helen Kirkpatrick continued to win what are said to be among the best contacts of any American journalist resident in London by her forthrightness and sincerity, her perception and charm. And she continued to file those dispatches which are to many Americans, all over the United States, one of the best sources of information on Britain and the War.

KIRKUS, VIRGINIA (kẽr'kŭs) Dec. 7, 1893- Bookshop and library consultant

Address: b. Virginia Kirkus' Bookshop Service, 439 E. 51st St, New York City; h. Redding Ridge, Conn.

Almost 300 booksellers and libraries subscribe to Virginia Kirkus' Bookshop Service. To them she and her two assistants give expert, unbiased information on new books and carefully considered opinions on their sales possibilities, in bulletins sent out every two weeks. Under heads like "Don't Overlook", "Must Books," and "Dark Horses," there are thumbnail descriptions of the plots and Miss Kirkus' recommendations, written in chatty, informal style.

Miss Kirkus pulls no punches. She is willing to "crack down on an author, however important, in spade-calling terms" if she doesn't think his latest work will sell. Once in a while she is wrong—Thomas Wolfe's *Of Time and the River* had only "snob appeal," and Mortimer Adler's *How to Read a Book* wouldn't sell, she said. But on the whole she manages to keep a batting average of about 85 per cent. She also is able to "discover" books published with little fanfare or by unknown authors. John Steinbeck's *Tortilla Flat* and Rachel Field's *Time Out of Mind* were enthusiastically hailed "Must promote."

In addition to the prepublication service, Miss Kirkus' office keeps its subscribers abreast of changing titles, prices, publication dates; it aids them in promotion ideas, prepares broadsides for their use among customers; it does holiday book lists, locates out-of-print books and answers all sorts of odd questions about books. And Miss Kirkus herself travels from coast to coast visiting booksellers and libraries, lecturing to women's clubs, discussing book problems.

Virginia Kirkus has been doing literary and related work for a good many years now. She was born in Meadville, Pennsylvania, the daughter of the Reverend Frederick Maurice Kirkus and Isabella (Clark) Kirkus. Her education was received first at the Misses Hebbs School in Wilmington, Delaware, then at Hannah More Academy in Reisterstown, Maryland and finally at Vassar College, from which she was graduated in 1916.

Out of college and fortified by teachers' training courses, Miss Kirkus settled down at the Greenhill School in Delaware (forerunner of the Tower Hill School), teaching English and history. At the end of three years she felt she had had enough teaching, even in a progressive school, and set out for New York and an editorial career.

Her first job was that of fashion editor for the Pictorial Review Company; her next, "back of the book" editor for *McCall's* Magazine. Meanwhile she was doing special free-lance jobs for Doubleday, including the writing of *Everywoman's Guide to Health and Beauty* (1922). Before she did this book all she knew was that this publishing house wanted a book about something or other within five weeks. Miss Kirkus applied for the assignment, discussed terms and dates for half an hour and agreed to do the book. Then she discovered what it was to be about!

From *McCall's,* Miss Kirkus went to the children's book department of Harper & Brothers and stayed there as its head until 1932, responsible for the success of many new books and for the abridgments of many old ones, including *The Mill on the Floss* and *The White Company.* Then came the depression, which hit the children's book business between the eyes. "Publisher after publisher," Miss Kirkus says, "discontinued their departments, and my department at Harper's fell under the axe." This was the end of "the most responsible position I ever had."

Harper's gave Miss Kirkus six months to look for another position. "In the realization that perspective was needed to keep from being panicked into taking anything that was offered," she remembers, "I went ahead with plans to go abroad. On the homeward voyage the idea was born: that a service be established to act as liaison between publisher and bookseller, by providing the bookseller with prepublication information based on actual reading of advance material."

The service was launched in January 1933 with 20 publishers supplying material, and 10 subscribers ("optimists and progressives all of them"). Then when booksellers began finding how accurate Miss Kirkus' predictions were they began to sign up fast, and the publishers became even more cooperative. During the first year of the service 999 titles were reported; in 1940 almost 5,000 were covered.

During the years she has been heading her service, Miss Kirkus has found time to write a good many articles and, in collaboration with Frank Scully, two books for children, both published in 1935: *Fun in Bed for Children* and *Junior Fun in Bed.* "I'm bad at paper games myself," she explains, "so my mentality was probably just right for a sounding board for the audience for the books." She also found and still finds time for all those things a country place involves—old furniture, cooking, planning—in the home near Redding, Connecticut which she and her husband, Frank Glick, former football star at Princeton and now a personnel executive, remodeled and landscaped. Her most recent book, *A House for the Week Ends* (1940) sets down her personal experiences with a Connecticut farmhouse and adds to it practical data, lists, costs "for the city dweller with a limited income, a yen for the country and limited time to enjoy it."

KOLB-DANVIN, MRS. CHARLES LOUIS *See* Radziwill, C., Princess

KOO, V(I) K(YUIN) WELLINGTON (kōō) 1888(?)- Chinese Ambassador to the Court of St. James's

Address: Chinese Embassy, London, England

Dr. V. K. Wellington Koo, who ever since he left college "has moved suave and unruffled through a chaotic world of shifting diplomatic scenes, wars and revolutions," has been China's Ambassador to Great Britain since April 1941. Cultured, polished and tremendously educated politically, he is representing China with all the diplomatic understanding and finesse years of activity for his country have given him.

Ku Wei-chun (V. K. Wellington Koo, as the Western world knows him) was born in Shanghai, the son of a wealthy father whose hero was the Duke of Wellington. From 1899 to 1900 he studied at the Anglo-Chinese College in Shanghai and then spent a year at the Yu Tsai School before entering St. John's University. In 1904 he came to the United States to enroll in Cook Academy in Ithaca, New York in order to prepare himself for an American college. His choice was Columbia University, which he entered in 1905. As an undergraduate Koo took a liberal arts course, distinguished himself for brilliancy in his studies and rolled up a remarkable record of extracurricular activities at the same time. He was editor in chief of the *Spectator*, manager of the *Columbia* and *Columbia Monthly*, winner of the Columbia-Cornell Debating Medal (after a "suavely compelling, charmingly persuasive" speech defending America's foreign policies), runner on the track team, winner of the Philolescean Literary Prize and member of Delta Epsilon Rho. After receiving his B. A. in 1908, he shifted from liberal arts to political science and received an M. A. in 1909 and in 1912 a Ph. D. for a thesis on "The Status of Aliens in China." (Yale has since given him an honorary LL. D., and his own Government has honored him with many decorations.)

Soon after he received his degree Koo returned to China to begin his political career. His first position was that of secretary of the Cabinet and to the President; his next that of secretary to the Ministry of Foreign Affairs. Later promoted to councilor and active as head of the publicity office and as vice-chairman of the commission to settle international claims arising out of the Revolution, Koo continued to deal with foreign affairs until July 1915, when he was appointed Minister to Mexico. Three months later he appeared in Washington as Minister, the youngest diplomat of that rank ever to come to this country.

At the Paris Peace Conference in 1919 Dr. Koo was China's delegate, "spokesman for one-quarter of the human race," in his own words. Here he presented China's claim for direct restitution of the leased territory of Kiaochow, the Tsingtao-Chinan Railroad and other German rights in Shantung Province, and when these claims were turned down, he refused to sign the Treaty of Versailles. He stayed in Europe, however, as Chinese delegate to the International Labor Conference in 1919 and in August 1920 as chief Chinese delegate to the League of Nations and a member of the Administrative Council, the man, according to John Gunther (see sketch this issue), responsible for bringing China into the League.

By then he had become, in September 1920, Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James's. He had also become the husband of Hui Lan, daughter of Oei Tiong-han, one of the richest men in China. The Koos spent their honeymoon in Geneva and Mrs. Koo, 15 years younger than her husband, began a life of shuttling back and forth over the world and a career which has made her an outstanding figure in international diplomacy. Their elder son, Wellington, Jr., was born in Washington, and after education in China entered Columbia; their younger, Freeman, born in Peking, went from a Chinese school to Harvard.

From London, Dr. Koo went to Washington in 1922 as one of the four Chinese delegates to the Conference on the Limitation of Naval Armaments and then returned to Peking to confer with his Government on the diplomatic questions raised by this conference. He stayed in China for many years, his first position that of president of the Commission for the Discussion of National Financial Questions. His next was that of Acting Minister of Foreign Affairs. In August 1922 he took this portfolio for the first of many times, was relieved of it in November of that same year and presented with it again in April 1923, after service as chief of the Preparations Bureau for the Special Tariff Conference.

In January 1924 Dr. Koo became Minister of Foreign Affairs for the third time and as such he signed the Sino-Russian Convention of 1924 which restored diplomatic relations with the Soviet Union. But when the Chihli Party was defeated by the Anfu-Fengtien faction in October 1924, his service ended and he fled from the capital, disguised, it is reported, in women's clothes. Before his next term as Foreign Minister, Dr. Koo served, in May 1926, as Minister of Finance, and set a precedent by publishing when he resigned a complete statement of the receipts and disbursements during his term in office.

In October 1926 Dr. Koo became Acting Prime Minister and president of the Customs Tariff Commission; in January 1927 he formed his second Cabinet. After a period as Prime Minister, Dr. Koo went into retirement which ended in 1931, when the Japanese began their invasion of Manchuria. Once again Minister of Foreign Affairs, Dr. Koo went to Geneva to represent China and became Chinese assessor to the Lytton Commission of the League which inquired into the situation. In playing that important role he was able to "make the members of the Commission appreciate fully the Chinese side of the problem," and though the Lytton report did not save Manchuria for China "it confirmed the condemnation of Japan as an international highway robber."

In 1932 Dr. Koo became Chinese Ambassador to France, a position he held until his transfer in April 1941 to the Embassy in London. Here he and Mrs. Koo entertained in a home decorated with Chinese furniture and furnishings, serving their guests famous Chinese dinners. But there was more work than entertaining for Dr. Koo. In 1933 he addressed the Assembly of the League of Nations, laying down the case against imperialism and militarism. In 1934 he was the chief delegate to the League and in that same year a member of the International Court of Arbitration at the Hague.

Although at one time some years ago there were rumors that Dr. Koo disapproved of the policies of the Nanking Government, he has never stopped working for it. When hostilities with Japan commenced, he was and has continued to be one of China's firmest fighters on the international front, representing China at League meetings, seeking China's inclusion in an Anglo-French-Soviet accord, enlisting aid for his country from the democracies, warning the British not to make further concessions to Japan. "The recent history of both Europe and Asia," he said in 1939, "shows beyond a doubt the futility of trying to turn a tiger into a kitten by giving it a dish of cream." This is the policy he has maintained and the policy which, as Ambassador to England, he is undoubtedly urging the British to maintain.

KORIZIS, ALEXANDER (kô-rē-zĭs') Apr. 15, 1885—Apr. 18, 1941 Late Premier of Greece

> Bulletin: On April 18, 1941 the death of Premier Korizis was reported. It was known that a few hours before his death the supporters of a policy of further resistance against the Germans, who had finally moved in to help their Italian allies, had proposed the Government's immediate departure for Crete, and that he had opposed leaving Athens. The rumor that he had committed suicide remained unverified. General Tsalakoglou, who finally signed the Greek surrender and became head of the Axis-controlled Government, had been an old protégé of his.
>
> From March 1941 issue:

Premier John Metaxas, Greece's strong man since 1936, died while his country was in the midst of a fierce struggle to preserve its independence. He was succeeded on January 29,

Greek War Relief Ass'n

ALEXANDER KORIZIS

1941 by Alexander Korizis, named by King George II to occupy not only the position of Premier but also the posts of Minister of Foreign Affairs, War, Aviation, Navy and Education.

The "complete antithesis of the man he succeeded in both background and appearance," this dignified, cultured, gray-haired banker was generally spoken of in the American press as a wise choice, despite his lack of military and even political experience. For years he has been a close friend of both King George and of Metaxas, "credited by the Greeks with knowing more about the affairs of his country than any other man living." Even more important, there are few groups in Greece likely to withhold their support from him at this critical time. Nevertheless there are some commentators who feel that there may be a weakening of Greek morale because of his lack of military knowledge; many others who see in his appointment merely a continuation of Metaxas' repressive dictatorship.

The Greeks themselves are not busy with speculation. They have the war with Italy to prosecute; they are faced by the added dangers that England's breaking off of diplomatic relations with Romania and Turkey's alliance with Bulgaria have brought. German troops are massed in Romania, and there are rumors of more German troops in Bulgaria; the fear of German assistance to Italy is a very real one. The Greeks are eager for encouragement, and this Korizis is giving them. As he said at Metaxas' funeral: "You have opened the road to victory. We shall march along inflexible and determined. We shall reach the end." Yet it is reported that he has refused to oust the Nazi military attaché from Greece.

Korizis has not often made ringing political speeches—most of his talking until now has been on national welfare work and on banking. Since 1903 he has devoted his life to banking, with the exception of two periods spent in the service of his Government. He was born in Poros, Greece, the son of George Korizis, a politician, and Catherine (Missirli) Korizis. His first ambition was to be a lawyer, and with this in view he attended the University of Athens to study law. He found he preferred finance and in 1903 started out in the banking world as a clerk in the National Bank of Greece.

Korizis' is the usual bank-clerk-to-bank-president story. He rose steadily—taking time out in 1912 to act as artillery captain in the Balkan War—until in 1928 he was made a vice-governor of the National Bank of Greece and in 1939 its governor. During these years Korizis was an active supporter of the farmers' cooperative movement and the originator of a branch bank of agricultural credit which was later succeeded by the Agricultural Bank of Greece, of whose board he became president.

It was in 1933 that Korizis first entered politics—as Minister of Finance. He kept this position only a short while, and it wasn't until 1936 that he again became associated with the Government. In this year, the year in which by a *coup* Metaxas established himself as dictator, Korizis became Minister of Public Assistance (Welfare), working closely with the man he succeeded but keeping himself clear of party politics. It was under Korizis that the first systematic social security plan in Greece was organized and got under way. In July 1939 he resigned his Cabinet position to take over his old duties as vice-governor of the National Bank of Greece and by August of that same year he was its governor.

Since the war with Italy began, Korizis' obvious role in it has been neither a military nor a political one. Mostly he has been doing national welfare work, both for the Government and as chairman of the Vanderbilt committee to aid civilian victims; mostly he has been urging the Greeks to "service." These affairs kept him busy—he used often to work the clock around. His new responsibilities will undoubtedly make his former activities seem almost like a vacation and leave him very little time for his wife, Elisabeth, his daughters and his son—and, of course, none at all for his hobby of yachting.

KOZLENKO, WILLIAM (kôz-lĕng'kô) Oct. 1, 1908- Author; editor
Address: 3921 45th St, Long Island City, N. Y.

The revival and rejuvenation of the one-act play, usually credited to the radio and to Noel Coward (see sketch this issue), owe a good deal also to the efforts of William Kozlenko. Many a director of little theatres and settlement groups or radio programs would probably have even more gray hairs if it were not for the *One-Act Play Magazine* he founded in 1937, and his two boon books for amateur groups—*One Hundred Non-Royalty One-Act Plays* and *One Hundred Non-Royalty Radio Plays,* both published in 1940. The former volume "offers a well selected compilation of short dramatic vehicles which should prove helpful to amateur groups of all sorts." Beset with the problem of finding a suitable play for a special occasion or the needs of a particular group, a director need only consult a well-classified table of contents in order to find *the* play. Comedies, dramas, pageants; religious, holiday, historical plays, all are included. "Although designed to meet a definite need in the amateur play field, the plays may also be used by professional stage and commercial radio groups through payment of royalties and written permission from the publisher." Those which have been well recommended are: *And No Birds Sing, The Long Retreat, The Darkest Night, Who Stand and Wait* and *Saturday Supplement.*

The man who has made the one-act play his province was born in Philadelphia on October 1, 1908, the son of Jacob and Sara Kozlenko. When he was graduated from Central High School in Philadelphia he expected to be a musician, devoted himself assiduously to violin and piano, and even composed a little. Presently, however, he turned to literature and began writing about music, the theatre, fiction. In 1930 he published a monograph on George Jean Nathan which he signed Vladimar (a Russian equivalent of William). Presently, he became editor of the international publication, *Europa.* In 1937 he founded the *One-Act Play* Magazine, and he served as its editor until he resigned in 1940. Under his direction it became one of the few publications in America which offered an outlet to the gifted novice as well as to the established playwright. In selecting all types of plays for publication and including a number that are royalty free, as well as articles on all phases of theatrical endeavor, he made the magazine a valuable tool to various groups whose interest lies behind the footlights.

Kozlenko is author of a number of short plays published in various volumes: *This Earth Is Ours, Trumpets of Wrath, Not for Glory, The Street Attends a Funeral, Jacob Comes Home, The Devil Is a Good Man.* All have been produced in Europe and in America. (Two of his full-length plays were expected to see production in 1942, and in the fall of 1941 he was engaged on another.) His knowledge of craftsmanship has behind it the practical experience gained as organizer of the One Act Repertory Theatre in New York and consultant-director of the One Act Variety Theatre at the Provincetown Playhouse. He has been particularly interested in the social drama, and in 1939 he edited *The Best Short Plays of the Social Theatre.* Each play in this volume "is a drama of protest, crying out against the insidious forces which tend, in a subtle or manifest way, to destroy freedom of thought and vitiate the right to live and work as free men in a free commonwealth." His most recent book, *American Scenes* (1941), gives "a panoramic study of America, seen through the eyes of the dramatists of the regions in which they live." Through the medium of the short plays represented in this book Kozlenko as editor presents "a document of contemporary democracy, with all its faults and virtues." He has been named editorial adviser to the John Day Company on the "Living Drama Series."

WILLIAM KOZLENKO

Music, displaced as a profession, has become Kozlenko's chief hobby, and he still hopes to finish a critical study of Beethoven which he began in 1939, as well as a novel. He has also been invited to write for motion pictures in Hollywood. His favorite sport is rowing. He and his wife Lenore, whom he married in 1931, have one son, Paul.

KRAUS, RENÉ (krous) 1902- Author; journalist

Address: c/o J. B. Lippincott Co, 250 Park Ave, New York City

An eminent journalist and writer, René Kraus has gained considerable renown today as the biographer of one of the most fascinating and important personalities of our time, Winston Churchill. Particularly significant because of his personal acquaintance with "England's 11th-hour man," Kraus' book "commingles the well known facts of Churchill's career with intimate glances of the human being behind the legend." One critic writes

RENÉ KRAUS

about his *Winston Churchill* (1940): "Mr. Kraus is not, it seems to me, a great biographer; he is workmanlike, competent and not without a shrewd insight into his torrential subject, and the tremendous drive and brilliance of the extraordinary career which he describes supply the rest. Until the final accounts are cast up, the end is known and perspective is available, this is all one could reasonably ask. And it is quite enough."

The author has fought hard to achieve the detachment and the sense of perspective which are so difficult to attain in the midst of history in the making. André Maurois thinks that he has not altogether succeeded. "Coming events with him cast their shadows not before them but behind them. . . At times toward the end his book becomes a political pamphlet but . . . he is a good and reliable chronicler." The consensus of critical opinion is on the whole that René Kraus' book is "interesting, informative and bold" but that the author is completely overshadowed by the dynamic subject of his biography.

René Kraus, a tall handsome man with "flashing blue eyes and a cavalier manner," was born in Paris in 1902. His father was an Austrian and his mother a Frenchwoman. To complete his cosmopolitan background, he grew up in Vienna and in Berlin. He was graduated from the University of Vienna and worked for a time on a Paris newspaper. An interview with Chancellor Stresemann resulted in his getting a position with him as his Press Secretary. Later he became editor of Stresemann's *National Liberal Correspondence*, the official organ of the Liberal Party in Germany.

He left Germany a year after Hitler came to power. During that year he made himself very disagreeable indeed to the Nazis because of his secretly published diplomatic newsletter which was circulated all over Europe. Eventually he got into hot water with the Gestapo: the intrepid journalist was imprisoned three times before he went to Austria in 1934. There he wrote for leading Austrian newspapers and was given the post of counselor to Chancellor Schuschnigg's Press Department. His last assignment before Hitler clamped down on Austria was as press attaché in the United States.

During his many years of diplomatic and journalistic activity in Europe he gained considerable personal knowledge of British public figures which he utilized in *The Men Around Churchill*, the book dealing with the important figures in England, that was published in the fall of 1941. This book, "chatty, generally well informed," presents studies of Lord Halifax, Anthony Eden, Ernest Bevin, Herbert Morrison (see sketches 1940 Annual), Sir John Dill (see sketch this issue), and many others of the men who are in charge of Britain's war effort. Kraus considers Churchill one of the really great men he has known—the only other one is Clemenceau.

Kraus used to spend a few months every year in London and still divides his time between that city and New York. Since coming to the United States, René Kraus has become an American citizen and has been a steady contributor to American national magazines. His work has appeared in *Redbook*, *Liberty*, *Cosmopolitan*, *Coronet* and the *Saturday Evening Post*, among others. The first interview with the late Lord Lothian to be given to any journalist, after his appointment as British Ambassador here, was given to René Kraus and appeared in *Liberty*. That magazine also published in serial form his Churchill biography before it was published by Lippincott.

Kraus' biography of Churchill and his sketches of the men around him represent a great stride in time from the subject of his former books. In 1938 his *Theodora, the Circus Empress* was published, a fictionized biography which the critics approved as a "fascinating . . . carefully done account of a most unusual woman and a decadent period." Of *The Private and Public Life of Socrates* (1940) a critic wrote: "First and last a clever book, [it] . . . manages to tell a familiar story with an air of strangeness and suspense, an ancient story with compellingly modern accent, a moral story with an unusual alternation of high seriousness and lighthearted sophistication."

KRAUSE, ALLEN K(RAMER) (krous) Feb. 13, 1881—May 12, 1941 Physician; prominent in the study of the pathology of tuberculosis; author of three books on disease and numerous articles for magazines and important encyclopedias; managing editor and editor of the *American Review of Tuberculosis* from 1916 to 1939; taught at Johns Hopkins and Stanford Universities; received the Trudeau Medal for Tuberculosis Research in 1931.

KUNIYOSHI, YASUO (kŭn-nĭ-yōsh'ĭ yä-sōō'ō) Sept. 1, 1893- Artist

Address: 118 Waverly Pl, New York City

Yasuo Kuniyoshi has been described as "Japanese by birth but American by long residence and conviction." Some of his best paintings suggest the almost monochrome work of the Chinese masters of landscape and yet, though conditioned by his early Oriental background, Kuniyoshi's technique and mode of expression are those of the Western World,

(Continued next page)

KUNIYOSHI, YASUO—*Continued*

His canvases, whether they are "socially conscious landscapes," wittily incongruous still lifes, or his characteristic pictures of women with drowsy slanted eyes and richly provocative mouths, have considerable influence on his contemporaries.

Kuniyoshi was born in Okayama, Japan, on September 1, 1893, the son of a small businessman, Ukichi Kuniyoshi, and his wife Itoko. When he was six years old he saw his first Western picture, a realistic battle scene, and was greatly impressed. But he did not intend to become an artist and willingly trained to become a weaver and dyer of fine fabrics. When he was sent to the United States in 1906, it was to study methods of industrial production, particularly in the textile field. Once in Seattle, however, he liked it so much that he decided to stay in America forever, and with an heroic gesture he sent back the money his parents had given him for his stay. The immediate result was a period of semi-starvation, spent sitting by the Seattle harbor, watching the boats go in and out, munching peanuts (he has never eaten a peanut since). Finally he bestirred himself and went on to Los Angeles to earn a meager living as a houseboy and as a fruit picker in the Fresno and Imperial valleys. Evenings he spent at the Los Angeles School of Art and Design.

Peter A. Juley & Son

YASUO KUNIYOSHI

In 1910 Kuniyoshi came to New York to study art in earnest. He stayed with a friend of his father, a Mr. Kawabe, and attended the National Academy of Design from 1912 to 1914, when he changed to the Independent School of Art and studied under Homer Boss. He was poor, of course—odd jobs gave no kind of decent living, and it wasn't until his third winter in the East that he could afford a winter coat—but he was cheerful, impressed by the art he was learning and discovering. The great Armory Show, particularly, left its mark on him. It was, in fact, too much of a mark, for it was only after he began to attend the Art Students League in 1916 and to study with Kenneth Hayes Miller that be began to develop a style of his own.

In the Art Students League, Kuniyoshi flourished. He made friends with other talented, up-and-coming artists like Alexander Brook, Reginald Marsh (see sketches this issue), Peggy Bacon, Henry Schnakenberg and Katherine Schmidt (whom he later married). He spent pleasant summers in Ogunquit. He was introduced into the famous Penguin Club and worshiped at the feet of Max Weber (see sketch this issue) and Jules Pascin. Soon he began timidly to exhibit—two paintings at the Daniel Gallery, a joint exhibition with Thomas Hart Benton in the first show of modern Americans organized by the Pennsylvania Academy of Fine Arts. *Fishing Village* was his first exhibited work.

Kuniyoshi's first one-man show in 1922 created a furore. But he came through unscathed, "except for the astonishing assumption that I was a humorist." It was an easy assumption to make, for the paintings abounded in grimacing brats, strangely foliated pastures with odd barns and geometric cows with triangular hips. The cows, especially, brought fame to the Kuniyoshi of this period. He objected. "I wasn't trying to be funny. I was painting cows because somehow I felt near to the cow." And he explained that he had been born in a "cow year" and that therefore, according to legend, his fate has been guided by bovine wisdom.

Recognition had come, but not prosperity, and until 1928 Kuniyoshi had to make a living by photographing the work of his fellow painters. He got to be quite an expert at it and once won first prize in the International Leica Exhibition. But he kept on painting and exhibiting steadily. In 1925 he went abroad and was so impressed by the work of Goya, Daumier and Renoir that he toyed seriously with the idea of remaining in Paris. He returned to America, however, and not long after became interested in lithography. It all started at the Whitney Studio Club when George Miller was demonstrating how lithographs were made. Kuniyoshi was asked to help Miller, and not long after saw possibilities for himself in this medium. He went to Paris again, in 1928, to work in black and white, and though his work was somewhat limited by his subjects (circus performers, his famous razor-backed cows, a few rocky landscapes and eccentric still lifes) it showed sure and lucid draughtsmanship and a permeating sense of color.

Not long after his return from this second trip to Paris, Kuniyoshi saw himself represented as one of 19 contemporary artists in an exhibition at the Museum of Modern Art in New York City. This was in 1929; two years later one of his works received an honorable mention at the Carnegie International Exhibition at Pittsburgh. Kuniyoshi, finally established as an artist, felt it was about time for him to return to Japan (it had been 25 years since he had seen his parents), and he managed to do this when sponsored by the paper *Mainichi* of Osaka. The trip was a mixture of triumph and disappointment. Although the great Japanese tycoon, Baron Mitsui, bought two of his pictures, Japanese artists and critics called his work typically European. Altogether Kuniyoshi felt strange and unnatural, and sailed back to America convinced that "my adopted home was really my home."

Recognitions, honors and sales continued to come to Kuniyoshi until today his place in American art is secure. He has maintained his record of winning a prize a year—among them the Temple Gold Medal of the Pennsylvania Academy of Fine Arts (1934) and the Los Angeles Museum Prize that same year; a Guggenheim Fellowship, on which he went to Mexico (1935); first prize in the American Section of the Golden Gate Exposition in San Francisco and second prize at the Carnegie International (1939). His works are represented in museums all over the country: in the Museum of Modern Art and the Whitney Museum, New York City; the Columbus Museum in Ohio; the Chicago Art Institute; and many others. Although he is considered an American artist, his not being a citizen (because of his Japanese birth) prevents his work from being bought by the Hearns Fund for the Metropolitan Museum. The Radio City Music Hall, though, boasts a brilliant mural by him, and his lithographs are owned by many museums. Kuniyoshi himself believes that "it's important for people, not just rich collectors and patrons, to buy pictures of their own. . . When I see people here buying pictures the way they buy radios and electric refrigerators, then I'll believe the American Renaissance is really at hand." He is proud that average people, rather than collectors, buy his work, and proud that he sells more pictures on the installment plan than any other American artist.

In the last decade Kuniyoshi has simplified his palette and subject matter and enlarged his canvas. His economy with paint has become more pointed: he tries to produce more color without using many colors. But his paintings are still flooded with an irridescent shimmer of color, with tender pinks, creamy flesh tones, opalescent silky greens. His nudes, particularly, have a special mother-of-pearl quality, a luminosity which he achieves by building a darker color on top of a lighter one. A theme upon which he particularly likes to elaborate is that of girls in attitudes of relaxation and contemplation—such paintings nearly all have the graphic titles of *All Alone, Waiting, I'm Tired, The Morning After.* As a rule over-ripe, sensuous, drowsy-eyed models dreamily looking at tabloids or listlessly leaning against a table are his favorite subjects and provide him with an opportunity for subtle and complicated tonal schemes. But there are sociological landscapes, too, tinged with mordant irony: *Cemetery* and *Pie in the Sky* are pointed social comment.

Kuniyoshi never makes a small-scale preliminary composition, but draws straight onto the canvas. Usually he starts his paintings during the summer and keeps several of them going at the same time during the winter. The dealers complain that he never produces enough, and his shows, one every three years, have only about 15 canvases. Painting is a difficult and terribly important process for Kuniyoshi, one that is not to be hurried or slurred over. He starts "from reality, stating the facts before me. Then I paint without the object for a certain length of time, combining reality and imagination."

During the years Kuniyoshi has become identified with many organizations that aim to increase the dignity and standing of the American artist. He has been active in the Artists' Congress, in the American Society of Painters, Sculptors and Engravers, in the American Group, is a member of the American Printmakers and many other societies. He teaches at the Art Students League and has an evening class at the New School for Social Research in New York. After the outbreak of Japanese-American hostilities, Kuniyoshi's students gave him a "vote of confidence."

Kuniyoshi is a slender, comparatively tall man, with a thin line of mustache emphasizing his slightly sardonic grin, wears tortoise-shell glasses and is usually dressed in a sweatshirt, slacks and neat brogues. Summers are spent with his second wife, the former Sara Mazo, whom he married in 1935 (he was divorced from his first wife) in Woodstock, New York, that famous haunt of painters.

KUNZ, ALFRED A(UGUSTUS) (kōōns) May 21, 1893- Religious leader; camp director

Address: b. Pocket Testament League, 156 Fifth Ave, New York City; h. 17 S. Lyle Ave, Tenafly, N. J.

Just back from an exploratory 12-day, 3,000-mile tour of the United States military camps of the Middle West during which he conferred with chaplains in a dozen Army camps, held meetings in several, Alfred A. Kunz, executive secretary of the Pocket Testament League, is in 1941 and 1942 planning to accept invitations to "come back and stay longer" all along the way. He is encouraged in this plan by the consent and cooperation of the chief of

ALFRED A. KUNZ

chaplains, the Corps Area Commanders and the chaplains in the various camps, as well as by other Army and Government officials, many of whom have expressed their conviction that there is a vital spiritual need among the boys in the Army today.

The son of Alfred R. and Lena A. (Wolfe) Kunz, born in Brooklyn on May 21, 1893, Alfred Augustus Kunz feels that there is "a great deal of misunderstanding on the part of well meaning people today regarding God's requirements of man. Most people feel if we do the best we can, it is all that God can expect. The fact remains, however, that no one of us does really do the best he can, and even if he did, that would not be good enough because God requires perfection.

"As a boy of sixteen I joined the church, was active in church work, lived a respectable and moral life, only to discover after six years of church membership that I had no standing with God because the question of sin had never been settled in my life. At that time I held the belief that it doesn't make any difference what a man believes, as long as he is sincere. I have since discovered that it doesn't make any difference how sincere a man may be; if his trust is misplaced he is doomed to disaster. A sailor might have all the confidence possible in his ship, but if the vessel were leaking, his confidence would not keep it afloat.

"I was going my religious way to Hell, when at 22 I made the first great discovery a man must make in dealing with God—that I was a sinner and needed a Saviour. Shortly thereafter I made the second discovery necessary—that the Lord Jesus Christ . . . was the Saviour and Friend that I needed." Undoubtedly he was encouraged in this decision by Florence Palmer, whose spiritual life, even before their marriage in May 1917, he says, "made me see she had something I lacked."

Alfred Kunz is not at all new to Army camps, having spent nine years as executive secretary of the YMCA, beginning back in 1917, first briefly at Camp Mills and Camp Merritt and then, until September 1926, at Fort Hancock. Tall, rangy, agile, his hobbies and favorite recreation including "all outdoor sports," the young "Y" secretary at first concentrated his efforts on athletics and educational service. Later he concluded that only spiritual work would have lasting values, and he decided to "put first things first" and devote his time exclusively to spiritual work.

As he had taken special courses to increase his speed and efficiency in his first business and advertising jobs (a short course at Cornell Agricultural College having persuaded him not to be a farmer), it was natural that later, when going into religious work, he felt he should study "so that my life in the Lord's work should be used as efficiently as possible for Him." The combination of part-time "Y" work at Fort Hancock and study at the Philadelphia School of the Bible proved exceedingly strenuous. This the Kunzes felt especially since they entered Bible school directly after the birth of their third daughter, Ruth Marianne (Carol Rae and Lois Hazel had come before; later came a son, Harvey Wadham). Nevertheless the young husband attended classes every day and "minded" the children at night while his wife took evening courses. When they completed their courses in 1926 Kunz "left a good salary to step out in faith, with nothing in view except serving the Lord in Christian work." But he soon found that "there is no waste in God's economy. When God has work in view for a man He fits him for it in advance."

Since 1926 he has been actively engaged in evangelistic and pastoral work and Bible teaching. He was for six years a teacher in the Hawthorne Evening Bible School, the Leader of the large Everyman's Bible Class of Hackensack, New Jersey for four years, and dean of the Elizabeth Evening Bible School since 1937.

Several men among the undenominational group known as "Plymouth Brethren," who were active in the YMCA, encouraged Kunz to center his activities in work with young people, which he has done with particular success. He likes to be with the younger generation, often seems to be one of them, with his disarming manner, his lively brown eyes quick to sober in understanding or crinkle with his ready smile, his love of the outdoors, his athletic leadership, his readiness for anything and suggestions for more.

His "vision" of a Christian camp for boys, "where, in addition to a healthy and happy vacation a lad could also secure a real and lasting spiritual benefit," became a reality with the opening of Deerfoot Lodge in the Adirondacks to 20 boy campers in 1930. By 1941 an enlarged camp was taxed to capacity with over 100 boys during the six weeks' season. In the meantime, so popular was Deerfoot Lodge that the boys' sisters begged for a camp, too, and in 1936 Kariwiyo Lodge was opened as a Christian camp for girls. Mrs. Kunz assists her founder-director husband as Camp Mother and nurse for both camps.

Early in 1941 Kunz was made executive secretary of the Pocket Testament League, which has had over a million voluntary members since its establishment in New York in 1916. Although the League is active in churches, schools, rural sections and prisons, Secretary Kunz is concentrating on work in CCC areas, where "Gospel Teams" of four or five young Christian businessmen conduct short services, distributing Gospels and Testaments, and in Army camps, supplying chaplains with Gospels and Testaments for free distribution, and holding services in the camps whenever possible.

A typical camp program includes organ music, a "chalk talk" and an illustrated lecture. One of a series of these talks is "America's Spiritual Foundation," in which Mr. Kunz quotes from the Presidents and great generals of America's early history, briefly outlines the history of the Bible through the days of the early martyrs and Pilgrims, emphasizing the place of the Bible in their lives, and picturing the "true torch of our Liberty" as the Statue of Liberty holding a Bible aloft. One of his slides is from the photograph of a New Testament that literally stopped a bullet, saving the life of the soldier who carried it in the First World War.

Copies of the Gospel of St. John are distributed free at the close of the meetings, with cards giving the Pocket Testament League membership pledge: "I hereby accept membership in the Pocket Testament League by making it the habit of my life to read a portion of the Bible each day (at least a chapter if possible), and to carry a Bible or New Testament with me." Any soldier signing the "pledge," either at the meeting or later, receives a special Army edition of the New Testament as a gift.

Most of the meetings will be held in the new Army chapels, of which a good many have already been completed at an average cost of $20,000 each. Planned so as to be quickly adaptable to any type of religious service whether Protestant, Catholic or Hebrew, these chapels each have a Hammond electric organ, accommodate about 400 and are placed conveniently in various parts of the camps, some camps having several—Fort Leonard Wood, for instance, has 12 of the new chapels. Although a very busy man, Mr. Kunz plans extensive tours to military camps in all parts of the country.

KYSER, KAY (kī'zẽr) June 18, 1906- Bandleader

Address: c/o Radio Features Service, Inc, 40 E. 49th St, New York City

KAY KYSER

Had he followed more than 100 years of family tradition Kay Kyser would have become a college professor. Almost every known relative of the popular bandleader has been associated with the field of education in North Carolina. Kay Kyser chose instead to follow a musical career, building up his talent for genial comedy as an asset. In the 15 years since he left the campus at Chapel Hill, he has progressed to the point where, as "Professor" of the *College of Musical Knowledge,* his "classroom" consists of some millions of listeners, his gross income upwards of $10,000 weekly.

Recently at New York's Roxy Theatre a film featuring Kyser dominated the screen, his personality dominated the stage show and his followers filled the auditorium. Cecilia Ager, in reviewing the event, said: "It is hard to pinion Mr. Kyser's charm, examine and define it. He won't stay still long enough. On stage, he flits. On screen, he also flits. On screen there are close-ups, yet conscientious study of them still does not reveal Mr. Kyser's secret. . . Flash. I've got it. Mr. Kyser's allure is not so much physical as spiritual. He has a noble soul. He helps people in distress. He asks people questions, then answers them himself. He can't bear to see people tortured by doubts. He's humane. He's kind."

Kay Kyser comes by his Southern accent naturally—he was born in Rocky Mount, North Carolina, June 18, 1906. Nor is he a cultured hillbilly, as some writers have made out. The scholastic achievements of his forebears have been recorded by his 75-year-old mother (Kay's inspiration in his work), who was Emily Royster Howell before she became Mrs. Paul B. Kyser. First in line was Iowa Michigan Royster, elected to the Chapel Hill faculty almost a century ago. He was followed by other members of the family who became, respectively, professor of medicine, dean of the medical school and professor of surgery, dean of the graduate school and head of the Department of English, professor of Latin and Greek. And just prior to Kay's generation was Edward Vernon Howell, KYSER, KAY—*Continued*

founder and dean of the present school of pharmacy.

With this background it was natural that his parents should anticipate a scholarly career for the boy whom they christened James King Kern Kyser, particularly since his mother had distinguished herself by becoming the first registered woman pharmacist in the state. Kay's father, also a pharmacist, passed the state examinations despite almost total blindness, with the help of his wife who read aloud the necessary textbooks. Their pharmacy in Rocky Mount had a statewide reputation and at one time they hoped that James might some day carry on the business. Kay's mother recalls looking at him for the first time and thinking: "You're a strange-looking baby—wonder what kind of druggist you'll make?"

Kay discarded his given names and settled down to his nickname at an early age, as well as to that flair for showmanship that went along with his more serious studies. It was during his high school years that his youthful energies began to find specific outlets. During his senior year he was cheerleader, class president, editor of the school's first Annual, member of various scholastic societies and coach of the junior football team. Lacking sufficient brawn to make high school varsity, he had formed the second-string team called the Tigers. Undefeated, they scored 261 points to their opponents' 23 in that single season. "Before entering the game," reported one observer, "they went into a huddle and James would lead them in prayer. It was selfish to pray for victory, so the prayer was for the strength to play the best game possible." Nor did his sense of sportsmanship stop there. On one occasion the opposing team had exhausted its reserves and Kay stepped in, playing against his own team. It is not recorded who won.

He entered the University of North Carolina in 1924 and it was not long before he had taken over most of the undergraduate events that called for a measure of showmanship. He was cheerleader, impresario of the University's three most pretentious musical shows and conductor of the proms, and when the late Hal Kemp, favorite bandleader of the campus, went North he bequeathed the campus musical rights to Kay and a band of six. Nor did it come as a surprise to his friends when in his junior year he gave up the study of law and turned to music as his main interest.

Kay's original idea had been to play clarinet but after a tryout the boys persuaded him to take the baton instead. Each of the boys in the group knew one tune, making a total of six to begin with. Kay filled in with showmanship. For their first out-of-town assignment they piled into an old Model-T jollopy—called *Passion* because it "het up" so quickly—and drove to Oxford, North Carolina, for a dance job that netted them $60. That was in 1926 and the boys who were with him on that date are still in the band. In 1927 George Duning joined on trumpet. A graduate of the Cincinnati Conservatory of Music, he soon forsook the trumpet to play piano and make arrangements for the band. Meanwhile Kay had pursued his study of theory, giving the band a solid musical foundation.

The theme chosen by Kyser in 1926 was Walter Donaldson's *Thinking Of You.* While still in college the group took dance jobs, many of which were far away from Chapel Hill. Forty colleges in the South, West and Midwest hired the orchestra for proms and hops.

Nor was Kay to be completely outdone scholastically by brother Edward (now associate professor of pharmacy at the University of North Carolina). In his senior year he was class president, editor of the college Annual, director of theatricals, conductor of a one-man tutoring system and "one of the best cheerleaders N. C. ever had." Membership in Sigma Nu and Alpha Kappa Psi didn't hurt the band business and the B. A. degree he got that year was a source of satisfaction to one who required not a sheepskin, but merely a baton and a band, to get ahead in life.

Never spectacular from an orchestral point of view, Kay Kyser's Orchestra has nevertheless been a favorite for many years in the "sweet" category of polls conducted by such musicians' magazines as *Down Beat.* As clowning and comedy featured the band's work it piled up votes in the "corn" division. Though a term of derision originally, the *corn band,* in today's musical parlance, may be either a novelty outfit or a band with specialized non-musical pretensions. About 1934 Kyser's Orchestra began to use musical devices that *set* them in the public mind. Numbers were announced by singing the song's title and the imminence of a vocal was announced by four bars from its theme. Another distinctive Kyser touch is a trill played by three muted trumpets, and known musically as a "bridge."

During his years in the band business Kay has broken scores of attendance records, starred in an RKO film, *That's Right, You're Wrong,* and was called back to mix music and showmanship with murder melodrama in *You'll Find Out. Playmates* was released in late December. For 1942 release he has appeared in *My Favorite Spy.* The most important single factor in his rise to fame was his elusive style of comedy that seemed hilariously funny in the aggregate, yet proved difficult of analysis. He was once described as "combining the snooping pantomime of Jimmy Durante, the mock seriousness of Eddie Cantor [see sketch this issue], the repartee of Fred Allen [see sketch this issue] and the shyness of Harold Lloyd." And while this is hyperbolic it suggests what is true, that Kay has in him a little of everything comic.

A few years ago the kidding that went on between Kay and his listeners crystallized in a radio program from the Blackhawk Hotel in Chicago. Presented as a sustaining feature over WOR, it was called *Kay Kyser's Kampus Klass.* It acquired a sponsor and became *Kay Kyser's College of Musical*

Knowledge. With quiz programs on the way up, this idea was the crowning touch to one already known as an incomparable showman.

Bespectacled, slender, average in height and with ash-blond hair, bachelor Kay often has a mildly surprised look in his blue eyes that fits perfectly into his role of "Professor." His nervous energy finds an outlet in his work, just as it did when he was high school cheerleader. "Dressed in a white flowing professor's robe, with a red hood and mortarboard," reported one visitor to a studio broadcast, "he jumps, cavorts, parades, mugs and waves his arms like a dervish with the tingling memies."

Known as one of radio's hardest workers, it is not unusual for Kyser to appear on the stage five times, hold a three-hour rehearsal for his broadcast, conduct the network show, then go off and play at a prom. As a fillip to such a day, he often bones up on the next week's script before turning in for the night. In November 1940 *Variety* reported that his earnings had gone so high that further bankroll pyramiding would be only for the benefit of the Government—in view of which he would "do nothing outside of one-nighters and his broadcasts until the first of the year!"

With Kay Kyser and his orchestra are such notables of sweet music as Ginny Simms, Harry Babbitt, Ish Kabibble and Sully Mason. In private life he has a Negro valet known as Mac, whose engraved calling cards list his six given names and the capacities in which he serves Kyser—"chef, chauffeur, personal secretary and chaperon to Mr. James K. Kyser, valet, the Man from the South."

Mustaches are Kyser's pet aversion and none of his musicians wears them. As for hobbies, he likes and finds time for swimming, horseback riding, movies and roller coasters—and always gets back in time to say familiarly, "Evenin', folks, how y'all?"

LA CAVA, GREGORY (*lȧ kä'vȧ*) Mar. 10, 1892- Film director

Address: b. Universal Pictures Corp, Universal City, Calif.

Gregory La Cava likes to think of himself as Hollywood's Neanderthal man, "a rebel, a throwback, a rugged individualist, a gay sprite, and an inveterate non-conformist." He has resisted all attempts to modernize his methods and has "sneered at Hollywood's phony caste system." His methods, he claims, are the same as they were in the early days of the cinema, and his cronies, today as then, are "newspapermen, ex-prize fighters, and W. C. Fields."

GREGORY LA CAVA

It was a long time before La Cava got the right to make pictures without studio interference, but his success has been so great that today, it is said by Hollywood wags: "If La Cava suddenly decided that the sound stages should be painted a lurid green, an obscure clause in his contract would be found giving him the right to have the paint job launched at once at the studio's expense." His contracts are 60 pages long and provide for every imaginable contingency. It has been suggested to him that he throw away his script and shoot his contract instead.

Gregory La Cava was born in Towanda, Pennsylvania on March 10, 1892, the son of Pascal Nicholas and Eva (Wolz) La Cava. His father, musician and linguist, was the only Italian in that Irish town. Gregory attended the Towanda elementary school and the high school in Rochester, New York, where his family had moved. While in high school he worked for more than a year as a reporter on the Rochester *Evening Times.*

During his elementary and high school career, La Cava had shown promise in art work. He finally left his newspaper job to attend the Chicago Art Institute and later the Art Students League and the National Academy of Design in New York. Then La Cava opened his own studio in New York, but he "found art unremunerative." He managed to succeed moderately as a cartoonist for the American Press Association, the *Evening World,* and the *Sunday Herald.*

As a newspaper cartoonist, La Cava became interested in the problems and possibilities of animated cartoons for the screen. A pioneer in the field, he drew some of the early *Mutt and Jeff* cartoons. He organized and later headed the animated cartoon department of the William Randolph Hearst Enterprises. At this time he was a "hard-boiled, tough citizen who would fight any man in the house for $2 (and probably lose), and who never said 'No' when drinking unless someone asked,

LA CAVA, GREGORY—*Continued*

'Have you had enough?' He had more enemies than a centipede has legs."

In 1921, after four years of animated cartoon work, La Cava got his first job in the motion-picture industry which at that time was largely in and around New York. He wrote the *Torchy* stories for Johnny Hines, who was making two-reel comedies for Charles Burr. In 1922 La Cava began directing the Johnny Hines pictures, and it was in one of these La Cava two-reelers that Clara Bow made her screen debut. In 1924 he began writing and directing for Paramount. When the Company transferred the bulk of its activities to the West Coast in 1927, La Cava went to Hollywood. In 1929, after leaving Paramount, he accepted an offer from First National to direct Corinne Griffith in *Saturday's Children*.

The success of *Saturday's Children* induced him to abandon writing and drawing for directing. But his objection to supervision and the subsequent explosions and feuds caused him to move from studio to studio even though his work was generally conceded to be good. He went first to Pathe, where he directed *Big News* and *His First Command*, and then to RKO, for whom he directed *Laugh and Grow Rich, Smart Woman, Symphony of Six Million, Half-Naked Truth, Bed of Roses* and other pictures.

Among his successful pictures have been *Gabriel Over the White House* (1933); *Gallant Lady* (1933); *The Affairs of Cellini* (1934); *Private Worlds* and *What Every Woman Knows* (1935); *She Married Her Boss* and *My Man Godfrey* (1936); *Stage Door* (1937); *Fifth Avenue Girl* (1939); *Primrose Path* (1940); and *Unfinished Business* (1941). Almost every picture he has made has been a hit, and he has many imitators. His recent pictures strike a compromise between the "artistic" and the "commercial," and many critics believe that he and Frank Capra are the greatest directors in Hollywood. Although he makes only one picture a year, he is among the highest paid of the film capital's directors.

La Cava's unorthodox methods include his "cuff shooting" technique, a relic of the silent picture days when the director made up the story and dialogue as he went along. His "script" is merely a series of indexed notes in a loose-leaf notebook. It contains a description of the settings and also first-person narratives by the principal characters. La Cava has several alternate situations for each episode and he selects the one he wants the night before he is ready to film the scene. He often writes the dialogue right on the set. "A picture," he says, "is always in solution. It must be molded from day to day to suit the personalities of the people involved. It should crystallize only on the high point of any scene or action."

Another La Cava device which differs from the practices of other directors is that of shooting the picture in narrative sequence. Most directors shoot all the scenes that take place in one setting regardless of where they occur in the story. Their way saves money, but it is La Cava's contention that his way makes for better pictures. "The players get a better grasp of their characterization my way," he says. "They grow into the parts."

La Cava also used "mood music," another relic of silent picture days. He keeps a pianist playing on the set all the time except when a scene is actually being shot. He claims it improves both his and the actors' powers of concentration.

Because his script is never finished until the picture itself is completed, La Cava's performers never know what is going to happen next; nevertheless his policy is not to treat his actors as puppets, but to allow them reasonable freedom in the expression of their characterization and full freedom to suggest additions or changes in action and dialogue. He makes no retakes and "cuts and edits his film in the camera."

La Cava is interested in the operation of the human mind, and his admirers consider him a "truly distinguished psychologist, in an amateur way." In his pictures, he tends to place the emphasis upon people rather than events. He is said to love the "screwball type" both in life and on the screen, and it is reported that his idea of a "swell springboard" for a story is a situation involving a man who "ax murders" his wife after 40 years of married life and then explains that he "just got tired of her doing nothing for 40 years but smiling and rocking back and forth in a rocking chair." To "connoisseurs of movie craftsmanship" the earmarks of a La Cava picture are: mature and witty dialogue, sound psychology, and the "sure humanity with which it pries out the secret feelings of its gay but troubled characters."

Described as a "grizzled, bald, vigorous man with an irrepressible fund of humor, a fierce integrity, and an unholy belligerence that has kept him in hot water most of his life," La Cava is five feet nine inches tall, weighs 155 pounds, and has dark eyes and receding gray hair. He has been married twice. His present wife is Grace Garland, to whom he was married in March 1941. He has one son, Billy, by his first marriage.

La Cava's favorite recreations are playing golf and studying psychology. He also likes to sit around and drink or gossip with old friends, or "punch the bag with Grantland Rice (see sketch this issue), Damon Runyon, or Rube Goldberg."

LAHEY, FRANK H(OWARD) June 1, 1880- Surgeon; president of the American Medical Association

Address: b. 605 Commonwealth Ave, Boston, Mass; h. 118 Bay State Rd, Boston, Mass.

DR. FRANK H. LAHEY

In June 1940 Dr. Frank Lahey was made president-elect of the American Medical Association and in June 1941 he took office in the Association. The unanimous election, which received an ovation from the House of Delegates of the A. M. A., was a fitting culmination to the years in which Dr. Lahey has been active in the Association as member of its Council on Scientific Assembly and its Council for Medical Education and Hospitals. It was also a recognition of the vastly important contributions which Dr. Lahey has made to surgery.

Dr. Lahey was also honored in 1940 when *Frank Howard Lahey: Birthday Volume* was published on his sixtieth birthday. In it there are medical articles by famous doctors, many of them inspired by his own work. As the dedication states: "We of the medical profession . . . offer to you this birthday volume in which you will find yourself reflected more often than we intend to confess."

Dr. Lahey's rise in the medical world has been steady ever since the day he left medical school. He was born in Haverhill, Massachusetts, the son of Thomas and Honora Frances (Towers) Lahey, and received his M. D. from Harvard in 1904. Then came two years of internship in the Long Island Hospital and the Boston City Hospital, followed by a position as resident surgeon of the Haymarket Square Relief Station in 1908 and an instructorship in surgery at the Harvard Medical School that same year. Dr. Lahey stayed at Harvard only for a year, until 1909, the year he was married to Alice Wilcox, but in 1912 returned to his old position there.

While acting as instructor at his Alma Mater, Dr. Lahey was also assistant professor and later professor of surgery in Tufts Medical School, from 1913 to 1917. (Ten years later Tufts gave him the honorary degree of Doctor of Science.) Then came the War; Dr. Lahey served as a major in the Army Medical Corps and also as the director of surgery in Evacuation Hospital Number 30, A. E. F., before returning to America to private practice.

It was in 1922 that Dr. Lahey first started his now famous Lahey Clinic, in a small building on Commonwealth Avenue. His own specialty was operating upon thyroids, and he developed a technique that has proved almost uniformly successful. Within 17 years he and his associates performed over 15,000 operations and lost only 100 patients. Under Dr. Lahey the clinic developed along other lines, too. Its doctors were able to contribute to knowledge of the treatment of peptic ulcer and cancer, the surgical treatment of thoracic diseases, techniques in surgery of the digestive tract. In 1941 the Lahey Clinic, a privately operated hospital, is housed in a large four-story building, staffed by 56 doctors who perform some 7,500 operations a year. "Its operating rooms presided over by Frank Lahey and his associates have long been a Mecca for surgeons seeking the most accepted and advanced methods in the surgical treatment of disease."

Dr. Lahey has spent the years since 1922 (with the exception of one year, in 1923 and 1924, which he spent as professor of clinical surgery in the Harvard Medical School) as an active, practicing surgeon in the Lahey Clinic and as chief surgeon of the Deaconess and Baptist Hospitals. He is famous for his discoveries of techniques and cures, and during these years he has made his presence and opinions and contributions felt in most of America's medical associations. He is a fellow and member of the board of governors of the American College of Surgeons, the American Association for the Study of Goiter, the American Surgical Society, the Massachusetts Medical Society, the International

LAHEY, FRANK H.—*Continued*

Surgical Society and many others. He is also the author of a number of articles and a member of the editorial boards of the *New England Journal of Medicine* and other medical publications. Despite his large practice and association activities, Dr. Lahey still finds time to talk widely on his failures and successes, illustrating his subject with colored films of operations. And he also finds time occasionally to play golf and indulge his ardent love of hunting.

LAMBERT, SYLVESTER MAXWELL

Dec. 28, 1882- Physician; author

Address: b. c/o Little, Brown & Co, 34 Beacon St, Boston, Mass; h. Walnut Creek, Calif.

Bachrach

DR. SYLVESTER MAXWELL LAMBERT

"If any man should write a book it should be Lambert," Dr. Victor Heiser once said. It was Heiser (of *An American Doctor's Odyssey* fame), who many years before had sent Dr. Lambert to the South Sea Islands to fight hookworm—"to put the South Seas back 100 years, to the days when everybody was happy and well." And Lambert had done it. With "native assistants, hypodermic needles, microscopes and gallons of medicines," he had practically wiped out that disease, had cured more than a half million natives of hookworm, had made himself known and loved over "six million miles of island-sprinkled sea."

Eventually Dr. Sylvester Maxwell Lambert wrote that book, too. *Yankee Doctor in Paradise* (1941), produced after his retirement in 1939 because of failing eyesight, tells his remarkable story in a "candid and amusing" way and is called by Ralph Thompson "one of the better and brighter specimens" of the doctor-autobiography crop.

This amazing man was born on December 28, 1882 in Ellenville, New York, the son of William Walter and Harriet Celia (Taylor) Lambert. His mother's people had been small-town newspaper publishers for nearly a century; his father was a leather tanner and freethinker. Parental sacrifices sent him to Hamilton College in Clinton, New York. There he played football and was given his Ph. B. in 1903, and in 1904, although he had prepared for Johns Hopkins, he entered the Medical School of Syracuse University. Four years of "Spartan scholarship" brought him his M. D., and then there were four more years spent in practice in Rochester, New York before, in 1913, he took a position as medical director for the United Sugar Company in San Blas, Sinaloa, Mexico.

He had been in Mexico before. During his period in medical school he had taken a summer position as a nurse in a traveling hospital operated by a company constructing a railroad line through the states of Sonora and Sinaloa, and it was there that he had met Eloisa Tays, whom he married in October 1912. Now, from 1913 to 1916, he "practiced medicine between raids by Carranzistas, Villistas, Yaquis." Adventure pursued him. Finally, when one of Obrégon's most valued officers died after he had operated on him, he was jailed and sentenced to be shot. His case became an international affair; William Jennings Bryan sent down a cruiser; and eventually a gunboat deposited Dr. and Mrs. Lambert and their 10-months-old daughter safely in San Diego.

Next, from 1916 to 1918, he worked as a member of the staff of the United Fruit Company in their hospital in Limon, Costa Rica. Even then his eyesight was beginning to fail. In the First World War he was rejected as a doctor, and by 1918 his eyes had become so bad that he was unable to perform a major operation. He returned to the United States, believing himself finished as a medical practitioner.

Actually his real life as a medical practitioner was only beginning. Dr. Victor Heiser, then head of the Eastern Division of the Rockefeller Foundation, promptly offered him a position as the Foundation's representative in the South Pacific. He was to go to Papua (the southeast portion of New Zealand). Accepting even before he found out exactly where Papua was, he set out for Australia a few days later. There was a pause in North Queensland in order to cooperate with the Government in a health survey and to ballyhoo "a Yankee's message to Australasia—privies and more privies!" And then, in January 1919, two weeks after he had landed, he came down with the sprue. Doctors told him it was sure death unless he got out of the tropics. His weight went from 234 to 193 pounds, but he refused to return to the United States. "No man ever had the opportunity I've got," he insisted—"an untouched market to sell health in. With a little hard work, hundreds of thousands of lives can be saved. No blankety-blank disease can kill me!"

It didn't, either. Dr. Lambert, by some coincidence, read an article which contained a new remedy for the sprue. He had to guess at the dose, but he evidently guessed correctly, for in six months he was well. Leaving North Queensland soon after he had saved a little girl's life by a delicate operation performed without a license, he finally arrived in Papua in May 1920.

Dr. Lambert describes the Rockefeller Foundation's theory of economics: "Keep the native alive, restore his health, give him enough European knowledge to fend him against the evils of Europe, then he will go happily ahead cultivating the soil for the world and himself." In the South Seas he found much to be done. In some Pacific areas infections from hookworm ran as high as 98 per cent and leprosy, tuberculosis, malaria, yaws, dysentery and elephantiasis were also rampant. As he puts it: "Epidemics are the fruits of island hospitality."

There was much to be done, but superstition and, often, hostility toward the white man stood in the way of doing it. Dr. Lambert learned pidgin English. He learned to use the superstitions of the natives for his own purposes when he could not overcome them. He forgot dignity. Although his eyesight did not improve, eventually he was going around from island to island, lecturing, successfully treating 6,000 people a month for hookworm. "I've had natives faint in the middle of a hookworm lecture," he says. "I scared hell out of 'em." He did pioneer work in the mass treatment of intestinal parasites by carbon tetrachloride, treating practically the entire population of Fiji without an examination after his first experiments with it in 1922.

Said a British doctor in Fiji: "Only Lambert could have done this job. We British medical men are so overloaded with dignity we couldn't have unbent enough to get the confidence of the natives. Lambert plunged into villages and sold health as vigorously as though he were a peddler with a patent painkiller, cutting red tape and trampling on convention." Richard Crooks called him "the livest man in Fiji." In one part of Papua he was known as The Man Who Takes Off His Feet; in the Rennell Islands a chief tattooed on his left ankle a decoration consisting of two tiny fish, touching one another—a decoration which meant Lambert was to him as his own son.

But the treatment of hookworm was not all that Lambert did during his 20 years in the South Seas. He fought against "the hellish Mother Hubbard," which increased susceptibility to white men's diseases, and got the missionaries' and steamship companies' backing for his campaign. He was responsible for the building of thousands of latrines. And, perhaps most significant of all, he was the prime mover in founding the Central Medical School in Suva and in opening it to students from other islands as well as the Fiji Islands. Dr. Heiser hadn't wanted the school for native medical practitioners, hadn't believed the descendants of cannibals capable of becoming good doctors, but Dr. Lambert proved he was right. He is proud of his students who are now expert and conscientious surgeons and doctors; he has a great respect and admiration for the natives, particularly for the Fijians. He says: "The islander will survive to achieve great things in a brave new world. . . Utopia is always a long way off, but I'll risk a prophecy. Guide the native with sympathetic intelligence, and the time will come when he will cease to be our pupil. He will become our teacher. Not in the science of war, God deliver us, but in the more difficult art of living together in harmony and peace."

Bald, nearly six feet tall, rather plump, Dr. Lambert looks "like a popular country practitioner." Quick-tempered, he is capable of awe-inspiring profanity, hates formality—although in the South Seas he was quite willing to get dressed up when it was absolutely necessary and to go through interminable Government-demanded ceremonies, making flowery speeches to "British Big Shots." He wears heavy glasses which, in order to read, he takes off and holds three or four inches from his nose. In 1941 he, his wife and his two daughters, Harriette Rose and Sara Celia, live in Walnut Creek, California, where his hobbies are walking, contract bridge and weeding his garden. "Weeds stir my antagonism," the doctor confesses.

LAND, EMORY S(COTT) Jan. 9, 1879- Chairman of the United States Maritime Commission

Address: b. United States Maritime Commission, Washington, D. C.; h. 2500 Massachusetts Ave, Washington, D. C.

EMORY S. LAND

According to Emory S. Land, chairman of the United States Maritime Commission, in 1941 "the need is for ships, ships and more ships."

To get these ships the Maritime Commission has been taking away everything from tankers to passenger ships such as the *America* from shipping lines operating under government subsidies; it has been building hundreds of new ones; it has been scraping together and repairing old vessels; and under a Congressional bill signed by the President in June 1941 it has requisitioned tons of idle alien ships which have been lying in American harbors. By September 1941 Land could announce that the construction program was not behind but ahead, and in December, with a war in the Pacific vastly increasing demands on American shipping facilities, he had confidence that it could eventually be doubled.

Admiral Emory Scott Land, on whom rests much of the responsibility for United States trade throughout the world with all that implies today, has been a Navy man all his life. But he was born far from the sea, in Canon City, Colorado, into a landlubber family. His parents were Scott E. and Jennie Taylor (Emory) Land, related to Charles A. Lindbergh's (see sketch this issue) family. Emory went to grammar, high school and college in the West and in 1898 was graduated from the University of Wyoming with B. S. and M. A. degrees. He went on to a distinguished career at Annapolis, marked by a last-minute winning touchdown in the Army-Navy game of 1900, by stellar activities in track, baseball and swimming (they won him the Athletic Sword upon graduation) and by a scholastic record that placed him sixth in his class. The description of him in the class book of 1902 analyzes his personality: "Started right in the beginning and the rest was easy. Naturally of a timid, bashful disposition, he overcame it by strenuous effort. Has discovered that the best way to get what you want is to ask for it. Is not afraid of the good things of life."

Lieutenant Land was not long out of Annapolis when, in 1904, he was assigned to construction work in the Navy. A few years later he was sent to the Massachusetts Institute of Technology to take a postgraduate course in naval architecture; he left this college in 1907 with an M. S. degree and continued helping the Navy build right through the First World War, during which he was on duty in the Bureau of Construction and Repair. For his work here and for his comprehensive, technical study of German submarines he was awarded the Navy Cross for distinguished service. In 1919 he served with the Naval Armistice Commission—as Captain Land—and in 1920 he was for a short while Naval Attaché at the American Embassy in London.

The next 17 years, except for a year's leave of absence in 1928 and 1929 when he was vice-president and treasurer of the Guggenheim Fund for the Promotion of Aeronautics, were spent in the Navy in various capacities. In 1926 he was made assistant chief of the Bureau of Aeronautics of the Navy Department—he learned how to fly a plane in the 1920's—and continued in this position until 1928. In 1932 he was made head of the Navy's Bureau of Construction and Repair, in charge of building up the Navy to treaty strength. As though this job weren't enough, Rear Admiral Land regarded as part of his duties coaching, scouting and refereeing for Navy football teams.

Suddenly, in 1937, "the busiest guy in the Navy" announced he was going to retire. Fellow officers refused to believe it and quoted at the trim, wiry Admiral his own saying that "you can't keep a squirrel on the ground." He did resign, but he was out of the traces for only a few weeks, at the end of which President Roosevelt announced that he had been appointed a commissioner of the United States Maritime Commission. Less than a year later, when Joseph P. Kennedy, its first head, became Ambassador to England, Land was made chairman.

The Maritime Commission had been set up in 1936 when Congress finally realized the straits into which United States shipping had fallen. The fleet, most of which had been built during the First World War, was obsolescent and replacements weren't being made; operating costs were high and American shipping wasn't able to compete with foreign carriers; times were bad, business was bad; seamen were complaining about their wages and working conditions. The new Maritime Commission, replacing the "ineffectual, graft-ridden" Shipping Board, conducted a survey to decide what was to be done about all this, and when the survey was over orders started popping like bullets.

To meet the labor problem, higher wage scales and better conditions were instituted for the seamen, and the union question dealt with more reasonably. Land's own opinion on this was that "collective bargaining organizations provide a basic stabilizing influence and are therefore most desirable." At the same time, however, he attacked union hiring-and-firing control on government-owned ships.

The Maritime Commission's program called for the construction of 500 ships over a 10-year period, but Land, even in 1938, wasn't willing to go that slowly. He pushed things along so energetically that within two years the United States rose to second place among maritime powers, possessed of a merchant marine stronger than any since clipper ship days. Land introduced new ideas into their building. The new ships had special bulkheads, modern fire defense and navigation equipment. They were made with standard designs for the most part. Many of them were convertible ships which could be turned from liners or freighters into aircraft carriers, tankers, supply ships. Under his leadership the largest and costliest passenger ship ever built in the United States, the *America*, was launched; under him the first all-welded passenger liner in maritime history, the *African Comet*, took to the seas.

When built, these ships were either sold or chartered to private operating companies, and the difference between the cost of building them with American labor from American materials and the cost of building them abroad absorbed by the Commission. In return the operating company agreed to let the Government take over these ships if needed for defense. Land's contribution to this plan was a scheme which allows shipowners to turn in old vessels for credit against new ones.

Even after shipping line subsidies were reduced by the Neutrality Act and its restrictions, Land kept as busy as ever, finding new assignments for merchant ships, working out new routes, doubling his efforts to build the Merchant Marine. He also devoted his energies to building up personnel. New recruiting stations were set up; the system of maritime schools was expanded; the officer training system was standardized; competitive examinations for cadets were inaugurated.

Back in the summer of 1939, before the Second World War had begun, Admiral Land decided that an emergency was coming. In 41 days he let contracts for 67 ships, running the Commission into a deficit and scaring the daylights out of the red-tapers. He merely grinned at them: "See you in jail," and proceeded to get his ships built at pre-emergency prices. Then the War started, and by the end of 1940 the Commission had placed contracts for nearly 200 ocean-going vessels. By this time Land was warning the country: "We need at least a thousand good ships. Fifty ships a year multiplied by twenty years is a thousand. But the legal life of a ship is only 20 years. Therefore, we are engaged on a program of 50 ships a year forever."

In July 1940 Land was made coordinator of shipbuilding activities for the National Defense Commission, in addition to his other duties. In February 1941 President Roosevelt added to them by assigning him the task of coordinating facilities for ocean transportation to see "that our shipping needs are cared for in an expeditious and effective manner." In March 1941 the Division of Emergency Shipping was created with Land at its head, and it was made his job to supervise the sale, charter, transfer and requisition of all emergency transportation tonnage and to exercise general control over American vessels transporting materials essential to national defense.

From time to time the duties of the Maritime Commission and Admiral Land continue to be extended. The bill authorizing the requisition of foreign merchant ships in American harbors was followed by an executive order empowering the Maritime Commission to take over these vessels and to operate or to dispose of them in the interests of national defense. And a bill put before Congress in July 1941 would give the Commission new and sweeping powers—the authority to control the movements, routes, services and cargoes of all merchant vessels.

There's "a touch of the mule skinner about Admiral Land when he's driving things through," and once in a while energetic activities lead to criticism. There has been criticism of his failure to utilize idle Great Lakes shipyards and to give shipbuilding orders to the small companies as well as to the large ones. In September 1941, after A F of L seamen along the East Coast struck for bigger bonuses, he seized several strike-stranded ships and had his Commission set up its own hiring hall in order to break the strike. Part of organized labor resented this, though much of the country-at-large had sympathized with his dictum on the San Francisco shipyard strike in the spring of 1941. He said there was "justification for every possible step the Government can take up to and including the use of United States forces to take those picket lines away so people who want to go to work can go to work."

Admiral Land doesn't always state his views in quite such dignified language and there are rumors current that he is the "casual dispenser" of the Maritime Commission's "most lurid and effective seagoing profanity." It is more than rumor that he is one of the best tennis players in it and better than middling in his poker and bridge. He sticks pretty much to walking these days, though, and can be seen almost any morning leaving his Massachusetts Avenue home, where he lives with Mrs. Land (she was Elizabeth C. Stiles of Newton Center, Massachusetts before their marriage in 1909), at a brisk trot. He arrives at the office in probably the best condition of all the Washington officials who get their exercise this way.

LANG, COSMO GORDON, ARCHBISHOP OF CANTERBURY Oct. 31, 1864-

Address: Lambeth Palace, London, S. E. 1, England

The Right Honourable and Most Reverend Cosmo Gordon Lang, D. D., D. C. L., LL. D., D. Litt., Prelate of the Order of St. John of Jerusalem, owner of the Grand Cross of the Victorian Order, Lord Archbishop of Canterbury, Primate of All England (and known to irreverent Britishers as "Cosmo" or "The Arch") once described his position as "incredible, indefensible, inevitable." It is easy to see why. The Church of England, with its affiliates, includes many millions of members, runs 13,500 churches and 8,500 schools in England alone, owns vast lands and has an income of around £13,000,000 a year. Even during peaceful times the Archbishop of Canterbury has been burdened with the duties of being on the right side every time a controversy arises in this immensely powerful Church, of representing the Church in legislation, of presiding at the Lambeth Conferences of Anglican Bishops as well as at countless other conferences, of delivering thoroughly considered public pronouncements on issues political, moral and esthetic—and, incidentally, of blessing "more masonry than any other churchman in Christendom."

In 1941, with England embattled, the prestige and responsibilities of Cosmo Cantuar (as he signs himself) are perhaps greater than at any time in his long career. At the very beginning of the Second World War he announced: "The whole people of the United Kingdom, as they enter upon the terrible ordeal of war, may be able to join together as one company in committing the national life and cause to Almighty God." Early in the War he requested that conscientious objectors be treated fairly, that the Government stop spreading fear by exaggerated precautions, that evacuated wives be enabled to join their husbands. More recently he has had something to say about British war aims: "Our task is . . . to establish among nations the great principles of justice and freedom. . . As for the claim that in trying to establish justice and freedom we are doing God's will, it lays on us the responsibility at least of establishing these principles in our own land." And in July 1941 he set at rest the souls of Church of England communicants who were bothered by Britain's alliance with the Soviet Union. "We must wish every success to the valiant Russian armies and people," he said, "and be ready to give them every possible help."

Cosmo Gordon Lang was the seventh son of the Very Reverend John Marshall Lang, D. D., C. V. O., who was moderator of the Presbyterian Church of Scotland and principal of Aberdeen University. He grew up in the village of Fyvie, Aberdeenshire, the seat of his father's country parish. After attending Glasgow University, which gave him his M. A. at the age of 18, he won a scholarship and went to Balliol College, Oxford in 1882. There he showed no symptoms of excessive piety. He was elected to the presidency of the Oxford Union, that "nursery for British statesmen"; he wrote plays; he acted in amateur theatricals given by the Oxford University Dramatic Society. Of one of his performances a critic wrote: "Mr. C. G. Lang delivered his lines fairly well, although the reason he had attired himself as a Doctor of Divinity was scarcely apparent."

At this time Lang was studying law, preparing for a political career. Having taken a Second in the classics in 1885 and a First in modern history the next year, he continued his studies at the Inner Temple, London, until 1889. The night before his Bar examinations, according to one story, he was converted to the Church, telegraphed his excuses to his law examiners, and almost immediately departed for a theological seminary. Only a year before he had been riding from Oxford to Yorkshire to deliver a political speech. As he himself put it: "The train was delayed outside the station at Leeds. From the window I looked down at slums, the like of which I had never seen in East London. I saw a black-coated figure and said to myself: 'There is a poor devil of a parson spending his life in hovels like these.' Within less than two years, I was myself the black-coated parson."

Ordained a minister of the Church of England in 1890, Lang was for three years a curate in Leeds, where he slept in a condemned tenement in a board bed two feet wide. But such a life was obviously not to be the permanent destiny of a young man with ambition and influential friends, a Fellow of All Souls College at Oxford. In 1893 Lang became a Fellow and a Dean of Divinity at Magdalen College, Oxford, where he was also the vicar of St. Mary's until in 1896, on the recommendation of Arthur Balfour, he was appointed vicar of the largest parish in England, Portsea. Portsea was just across from the Isle of Wight, where the late Queen Victoria spent her summers. She heard him preaching, thought him "so human," and from that time on they were good friends. He was until the Queen's death her Honorary Chaplain, and his rise in the Church was rapid. By 1901 he had become Bishop of Stepney, London's East End diocese, and Canon of St. Paul's; only seven years later he had the privilege of declining the Archbishopric of Montreal. A month after his refusal of that very important church post the Archbishop of York, Primate of England, died, and Lang received the appointment. He became the youngest archbishop in Europe.

As Archbishop of York (he was also appointed Privy Councillor in 1909), Cosmo Gordon Lang was said to have been a match for the "Edwardian liberals" who talked of disestablishment. In 1918, during the First World War, he visited the United States. In 1923 he was honored with the Royal Victorian Chain. And in August 1928 he was named to succeed Randall Thomas Davidson as Archbishop of Canterbury, a post of such shining importance that at State functions its incumbent ranks sixth after the King of England, England's Prime Minister ninth.

Nine years later Cosmo Cantuar played what was perhaps the most prominent and controversial role of his career, in the abdication of Edward VIII, the present Duke of Windsor. Personally very close to the late George V and Lord High Almoner to the King since 1933, the Archbishop delivered his finest oratory on the occasion of that sovereign's death. But his son seemed to him of an entirely different mold. In October 1936 Cosmo Cantuar and his colleague of York declined a dinner invitation at St. James's Palace at which Wallis Simpson would be present. Later, it is said, he threatened to withhold communion from Edward. The King replied: "Please remember that I am the head of your organization." On November 17 the Archbishop presided at a secret meeting of the House of Lords at which the *affaire Simpson* was thrashed out; by December 10 it was all over.

Even after Edward's abdication, however, Cosmo Cantuar did not relent. In a radio speech that same month he called for a return to religion, attacking Russia, birth control, and Mrs. Simpson, rebuking Edward "for having sought his happiness in a manner inconsistent with the Christian principles of marriage and within a circle whose standards and ways of life are alien to all the best instincts and traditions of his people." It was also he who refused to allow any form of Church of England service at the Duke's wedding.

The New York Public Library

COSMO GORDON LANG, ARCHBISHOP OF CANTERBURY

As a result, for months afterward the Archbishop was the subject of jibes and criticism, even from some who were not Edward's supporters. The Bishop of Durham announced: "I was always trained to believe that the Church of England is governed by the several bishops reigning in their several dioceses. I now find it is come to be some kind of novel body governed by the British Broadcasting Corporation and by two archbishops, Canterbury and York. I do not like it." A *New Statesman and Nation* correspondent was sarcastic: "The archbishops would call the nation back to Christianity with a couple of negatives. We are to hate Russia rather more and love women rather less." And one partciularly venomous poet contributed:

Milord Archbishop, what a scold you are.
And, when your man is down, how bold
you are.
Of Christian charity how scant you are—
Ah, Auld Lang Swyne, how full of
cant-u-ar!

At the coronation of George VI in May 1937 the Archbishop of Canterbury was, however, the most impressive figure present. It was he who stood on the dais as the King approached, who presented him to the four sides of the Abbey, who administered the oaths in an untrembling voice, placed the crown on his sovereign's head and anointed him with holy oil. He thoroughly approves of the present rulers of England, and it is said

LANG, COSMO GORDON—*Continued*

that King George, in turn, "looks to the Archbishop for political as well as spiritual advice."

A "ruddy, worldly wise, eloquent, opinionated" old man with a hawk nose, "pink, stern face . . . bald head fringed with a halo of delicate white fuzz . . . powerful stocky frame . . . imposing manner and . . . sonorous voice, which gives his best wisecracks a happy incongruity," Cosmo Cantuar looks his role. He is paid £15,000 a year, and is called one of the best-dressed clerics in England. He has a Lanchester limousine for town, an Armstrong-Siddeley for country trips. He is hardly on speaking terms with the "Red" Dean of Canterbury, but among his intimate friends are powerful political and financial figures, mainly ardent conservatives: Sir John Simon and J. P. Morgan, whose home he has visited and on whose yacht he has cruised the Mediterranean more than once.

Nevertheless in his own political pronouncements Cosmo Cantuar has not been found consistently in Tory ranks—although years ago he was burned in effigy in protest against the Church's refusal to lower rents on its Bayswater tenements, although in 1931 he offered public thanks when MacDonald made possible the formation of the National Government, and although in 1933 the farmers rioted against paying tithes to the Church of England.

In 1934, for example, the Archbishop was advocating disarmament and support of the League of Nations and prodding the Government for its slow work in slum clearance, and early in 1939 he advocated an Anglo-Russian alliance in the House of Lords. (In 1938, however, when Jewish persecutions in Germany were at their height, he had been only wistful: "Would that the rulers of the Reich could realize that such excesses of hatred and malice put upon the friendship which we are ready to offer them an almost intolerable strain!")

The Archbishop has never married. Queen Victoria once suggested that he might be able to get along without so many curates if he did just that. Replied Cosmo Cantuar: "I can sack a curate, but I cannot sack a wife." In spite of his bachelor state and attitude toward divorce, the Archbishop is responsible for some singularly unprudish statements. But he cannot be called a feminist. He believes that "the best and greatest career for girls is that of making an English, Christian home." He gives women further advice: "Keep an eye on your husband but don't nag."

One of the things that few people know about him is that he is an author of a romance of the Scottish wars called *The Young Clanroy*, published in 1897. Only such titles as *The Miracles of Jesus, as Marks of the Way of Life* (1900); *The Parables of Jesus* (1906); and *The Opportunity of the Church of England* (1906) appear under his name in *Who's Who*, and perhaps there is a reason. That earlier effort has been described by one critic as follows: "It contains blood and thunder, an extraordinarily dewy heroine named Dorothy and a character called the Black Priest who might interest students of Freudian psychology. . ."

Up until the War the Archbishop's normal day was busy, but fairly routinized: he would arise around 7, attend chapel at Lambeth Palace, have breakfast, spend most of his morning taking care of correspondence and callers, and then, after a light lunch, drive to the House of Lords, attend a public function or make a speech. Five o'clock would find him at tea; he would then write a few more letters before changing for dinner. Although a temperance crusader, he is no ascetic, enjoys port, claret, whisky, brandy and hock, and is numbered "among the town's five best after-dinner speakers." In those peaceful days he would nearly always go to the country during week ends, too, on Sundays preaching at small country churches in the diocese rather than at Canterbury Cathedral. Today his responsibilities are graver, his heart heavier.

HAROLD LASKI

LASKI, HAROLD (JOSEPH) (lăs'kê) June 30, 1893- Political scientist; author; historian

Address: h. Devon Lodge, Addison Bridge Pl, London, W. 14, England

Since the Second World War, Harold Laski has been the intellectual spokesman of the British Labor Party outside the Government, often criticizing the conduct of the War in its details, but always preaching that the first aim of the working class, to which all other aims must temporarily be subordinated, is the defeat of Hitler. A masterful pamphleteer, his book, *Where Do We Go From Here?* (1940), in which he made himself the apostle of "revolution by consent," has been perhaps the most lucid and widely read exposition of the views of those liberals and socialists who have supported the War wholeheartedly from its inception. And in 1941 he has produced several more short tracts, among them *Strategy of Freedom; an Open Letter to American Youth,* telling why the Axis powers must be defeated.

He was born in Manchester, England, on June 30, 1893, the second son of Nathan Laski. Brought up in an orthodox Jewish household, he attended Manchester Grammar School. Even before he went up to New College, Oxford, he had read the books of Beatrice and Sidney Webb and had been moved by Keir Hardie's tale of the bitter labor struggles of the Scottish miners. It was almost inevitable that he should join the Fabian Society at Oxford and engage in propaganda for the great social issue of the day: woman suffrage. Meetings with the late George Lansbury and H. W. Nevinson did much to confirm his convictions: from the first he learned the "meaning and importance of equality," from the latter the "meaning and importance of liberty." And when he was graduated in 1914, an Honorary Exhibitioner who had received the Beit Essay Prize and a First Class in the School of Modern History, Lansbury asked him to write editorials for the *Daily Herald.*

His time with the *Herald* was brief. Within a few weeks the First World War broke out ("I should have liked to see a general strike proclaimed against the outbreak of war in 1914," he said, much later), and Laski volunteered. Rejected because of a weak heart, he accepted a position as lecturer in history at McGill University, Canada. He was there for two years, managed to get himself officially disliked by attacking Lloyd George's "bitter-endism," and in 1916 went on to Harvard to teach politics. While still at Harvard, he lectured at Amherst as Henry Ward Beecher lecturer in 1917 and at Yale as Harvard lecturer from 1919 to 1920. In the United States, too, he found his opinions disagreeable to university authorities. When the famous police strike broke out in Boston, Harvard offered its services to the city before finding out the reasons for the strike or the rights and wrongs of the city's position. Laski publicly doubted the wisdom of this attitude; he was "investigated," and although it was finally announced that he was "not to be dismissed," he quit Harvard in 1920 and went back to England.

In America, he says, he had seen, "more nakedly than I had seen in Europe, the significance of the struggle between capital and labor. I learned how little meaning there can be in an abstract political liberty which is subdued to the control of an economic plutocracy. . . I came back from America convinced that liberty has no meaning save in the context of equality, and I had begun to understand that equality also has no meaning unless the instruments of production are socially owned."

(Continued next page)

LASKI, HAROLD—*Continued*

Upon his return to England he joined both the Labor Party and the faculty of the London School of Economics and Political Science. He already realized that "to teach political science, it was not enough to read books; one had to learn politics from actual experience of their working." It remained only to put this knowledge into practice, while teaching, engaging in political journalism (he was for a time on the staff of the London *Nation*), and writing, on the average, a book a year.

In this he was remarkably successful. From 1921 to 1930 he served as vice-chairman of the British Institute of Adult Education; from 1922 to 1936 he was a member of the Fabian Society Executive. He "deviled" for ministers when Labor Governments were in power. He participated in industrial arbitration as a member of the Industrial Court after 1926; he helped the trade unions in every important strike, especially the general strike of 1926; he spent five years as alderman of a London borough. In 1929 he became a member of the Lord Chancellor's Committee on Delegated Legislation, in 1931 a member of the Departmental Committee on Local Government, in 1932 a member of the Departmental Committee on Legal Education and of the Council of the Institute of Public Administration. Almost the only thing he refused to do was to stand for the "surest Labor seat in England," and that seat was later conferred on Ramsay MacDonald.

At the same time Laski was gradually becoming a familiar figure at universities all over the world. Although retaining his professorship at the London School of Economics, from 1922 to 1925 he also lectured in political science at Magdalene College, Cambridge, and in 1926 he returned to teach political science in the University of London. From 1931 to 1933 he was at Yale as a visiting lecturer; in 1934 he gave a series of lectures at the Institute of Soviet Law in Moscow; in 1936 he was Donnellun Lecturer at Trinity College, Dublin. Students in France, Spain, Greece and pre-Hitler Germany knew him. And he returned constantly to America, where his friends included presidents and professors, writers and Supreme Court judges.

But it is as the author of works on political science that Laski has made his chief reputation. As Max Ascoli put it in 1935: "No other political scientist is giving such a stimulus to the development of political thought as is Harold Laski. No other has a greater capacity to open debates and at the same time to commit himself in a demonstration of responsible thinking by taking a definite stand." His "lucid dignity," his "admirable absence of passion," his "gift of terse epigrammatic statement and cogent argument," combining "theoretical acuteness with a feeling for practical politics," have caused him to be likened to Macaulay, to John Stuart Mill, to Bagehot.

What has always preoccupied him above all else is the problem of "combining individual freedom with social order" within the modern state. Known for many years as a member of the Left-wing within the Labor Party, his varied attempts at solution of this problem have permitted him, at times, to be described as a near-Communist by Labor's Right-wing and as a Social Democrat by the Communists. In Laski's own words, up to 1920 his socialism "was above all the outcome of a sense of the injustice of things as they were. It had not yet become an insight into the processes of history." But by the late '30s he was writing, more bluntly: "I have been driven to the conclusion that no class voluntarily abdicates from the possession of power."

Although this last orthodox Marxist conclusion has presumably been abandoned in *Where Do We Go From Here?*, it is quite true that Laski's writings throughout the '20s and '30s were marked by an increasing pessimism at prospects of peaceful reform within the framework of present society, by increasing preoccupation with economic realities rather than abstract theories of the State. In *Studies in the Problem of Sovereignty* (1917); *Authority in the Modern State* (1919); and *Foundations of Sovereignty, and Other Essays* (1921), "an attempt at the reconstruction of political theory in terms of institutions more fitted to the needs we confront," Laski mainly confined himself to pleading the virtues of decentralization, of the pluralistic, as opposed to the monistic, State. In contrast, *A Grammar of Politics* (1925), while rejecting Marx's "prophecy of inevitable conflict" and complaining that the prospect he envisaged was "less a remedy than an unexplored formula," reflected Laski's own great concern with social injustice. Charles A. Beard (see sketch this issue), who had found his *Political Thought in England from Locke to Bentham* (1920) conventional and academic, announced: "Here is an author who quits hemming and hawing and asserts, declares and challenges."

Communism (1927) approached its subject with "intelligent and sympathetic skepticism." Laski continued to challenge both Marx and modern society, at that time seeing a possibility that "better industrial organization and the prospects of scientific discovery might easily make of capitalism a system able to satisfy the main wants of the workers." As late as 1930, writing in *Liberty in the Modern State*, he was optimistic about bringing about a permanent peace through the League of Nations. In November 1932, moreover, he was writing: "I think it is a safe prophecy that the Hitlerite movement has passed its apogee."

Perhaps, then, it was the depression that was responsible for the gloomier outlook of *Democracy in Crisis* (1933). (*Dangers of Obedience, and Other Essays* [1930]; *Politics* [1931]; and *Studies in Law and Politics* [1932] had appeared in the years between.) "Capitalism is doomed," Laski announced in this book, "and . . . the only alternative to revolution is the peaceful acceptance of socialism," the only alternative to war "the abrogation of the sovereign national state." By the next year, when a sequel, *The State in Theory and Practice*, appeared, Laski was speaking not of alternatives but of "the inevitability of revolution as the midwife of social change," the complete impossibility of creating an international order without that change. He ridiculed the argument that capitalism could enter on a new phase of economic well-being by extending the field of state-regulation, although continuing to write sporadically encouraging articles about the Roosevelt experiment. And in 1936 *The Rise of Liberalism* took the tone of an elegy.

The years immediately preceding the Second World War were stormy ones in the British Labor Party, as well as all over the world. In 1937, after a heated controversy, the Socialist League, of which Laski was a founder, was dissolved. Laski took no pains to hide his disapproval of the "defeatist" leadership of the British trade unions, particularly of Ernest Bevin (see sketch 1940 Annual) and Sir Walter Citrine (see sketch this issue), for their willingness to collaborate with Chamberlain's Government. He stressed the need for unity on the Left, castigated the timidity of the Labor Party, backed Sir Stafford Cripps' (see sketch 1940 Annual) proposal for a united front with the Communists and the Liberals, worked for an alliance with the Soviet Union.

In August 1939, when war seemed inevitable, Laski pleaded for a "Peace Conference Before the War"; otherwise, he predicted, its result could be nothing but "a Carthaginian peace . . . which will merely transfer the impact of Fascism from its present theatre of influence to a new stage." After Britain declared war he nevertheless remained hopeful enough about the future to contribute to the *New Statesman and Nation's* prompt discussion of what peace terms should include, although in October 1939 he wrote: "Until the specific aims of the British Government are known, the Labor Party must remain an opposition which purposes to become the Government of the country at the earliest moment." By May 1940, however, he was heralding the "birth of a new spirit in Britain with Mr. Churchill's Premiership and the entrance of the Labor Party as a 'full partner' in his Government." And by the time of the appearance of *Where Do We Go From Here?* Laski had returned to the implied hope of his pre-Marxist days: that it might be possible to conquer the "inherent tendencies of privilege to deny to democracy and freedom any power to expand which threatens its vested interests"; possible to form a "partnership between privilege and the masses" in England that would be "of a permanent character." With the British-Soviet alliance of June 1941 he became an eloquent spokesman for fuller understanding between the two nations, but remained distrustful of the British Communists.

In *The Danger of Being a Gentleman*, a collection of essays written, for the most part, in previous years but also published in 1940, the *Saturday Review of Literature* finds "not much trace of the militant Marxist Laski," either. In the eyes of most critics this is all to the good. *The American Presidency*, a third book published in that same year, has been placed alongside De Tocqueville and Bryce in importance, and the *New Statesman and Nation* called this analysis of the "traditions, conventions and laws in their relationship to the Cabinet and the Congress, and particularly to the people themselves," one of the best books ever written about the institutions of another country by a foreign observer. Laski has a particular faculty for wooing those who are in political disagreement with him into unwilling admiration by the urbanity of his style. As one critic puts it: "Like all courteous men, Laski gets away with murder."

Dark mustached, bespectacled, completely unmurderous looking, Laski was married to the former Frida Kerry of Acton Hall, Suffolk in 1911. There is one daughter, Diana.

LAWES, LEWIS E(DWARD) Sept. 13, 1883- Penologist

Address: h. Cloverly, Cold Spring-on-Hudson, N. Y.

"Punishment never reforms. Prison administrations are in the nature of emergency governments, but prisoners should be allowed a normal experience of life as far as possible." In these words Lewis E. Lawes, probably the best known prison warden in America, expressed the principle which guided him through 36 years of service in the Prison and Correction Department of New York State. On July 16, 1941 he said goodbye to Sing Sing, where he had been warden since 1920. A testimonial scroll was engraved and given him by the prisoners, a silver service by the civilian employees. In his letter of resignation he said he wanted to get out of harness while he was still "vigorous, both physically and mentally."

Warden Lawes, as probably he always will be called even in his retirement, came up from the ranks the hard way—just as did another distinguished American penologist, August Vollmer. Lewis Edward Lawes was born in Elmira, New York, within a mile of the New York State Reformatory. His father, Harry Lewis Lawes, was a guard in the prison; his mother was Sarah (Abbott) Lawes. The salary of a guard did not provide any luxuries, and the young boy found the drill team at the reformatory the most interesting thing in town. He was told to stay away from the "bad boys," but to him they looked just like other boys, and he would have given a lot to have been able to drill with them.

Instead, when he was just 15, the big blond boy turned up at a recruiting station and tried to enlist in the Army for the Spanish-American War. The recruiting sergeant told him to go back to school—Elmira Free Academy—so, reluctantly, he did, for three years more. In 1901 he finally succeeded in enlisting in the Army, and he did a three-year stretch in the Philippines. Then, back in Elmira, he decided to get into that reformatory as a guard if he couldn't do it any other way. He took examinations and was appointed in 1905—but not to Elmira Reformatory. Instead, he was sent to Clinton Prison, called "the Siberia of America" and located at Dannemora, New York. When he got off the train on a rainy day and viewed the prospect, he was so discouraged he wanted to go right back. There was no train back, though, so he decided to take a look, anyway. He stayed at Clinton for six months, then was transferred to Auburn for six months more. Finally, in 1906, he was sent as a guard to Elmira.

In those days, a guard had almost no chance of advancement: politics stood in the way. In 1912 Lawes nevertheless asked for leave of absence and went to New York to study sociology at the New York School of Social Work. When he went back to Elmira it was as chief guard and chief record clerk. In 1914 he became overseer of the New York City Reformatory, and in 1915 its superintendent. Alfred E. Smith was at that time Governor of New York, and he had been watching Lewis Lawes' work. In 1919 he sent for him and asked him (though Lawes was a Republican) to become warden of Sing Sing. Against his will, Lawes finally consented, knowing that Sing Sing had broken practically every warden who served there.

On January 1, 1920, Lawes made his first talk to the men in his charge at Sing Sing. He quoted the old saw that "the easiest way to get out of Sing Sing is to go in as warden"—the average term for wardens had been eleven months, and the one before him had lasted six—and the men laughed. It was his first step in winning their cooperation. Immensely interested in the pioneer prison reform work at Sing Sing of the late Thomas Mott Osborne, Lawes was yet more of a realist and less of a sentimentalist than Osborne had been. He kept many of Osborne's famous reforms, but he exempted from their benefits the eight per cent or so of the prisoners whom he considered incurable.

In his 21 years in Sing Sing, Warden Lawes had in his care 36,750 prisoners. (The average prison population is 2,500.) There were only two violent attempts at escape—there used to be twenty or more a year—and only two successful escapes, neither of them violent. He stressed athletics, entertainment, education. He went to bat for his men—as in the case of "Alabama" Pitts, the sensational outfielder developed in the prison, who was later denied a job on the Albany baseball team till Lawes went to Judge Kenesaw Mountain Landis about it. He directed the electrocution of two hundred ninety-nine men and four women but never saw one of them: he always turned his head when the current was switched on. He is strongly opposed to capital punishment on the ground that it is not a deterrent to murder. Among the notorious prisoners in Sing Sing during his service were Ruth Snyder, Judd Grey, Two-Gun Crowley, "Lucky" Luciano, Owney Madden, Charles E. Chapin (the New York editor who killed his wife, and who during his life-term built up the beautiful garden the prison now boasts), Fritz Kuhn (the Bundist), and Richard C. Whitney of the New York Stock Exchange.

The stories of many of the prisoners have been told by Warden Lawes in his books and over the radio. He has often been accused of publicity-seeking, because he will avail himself of any and every avenue of approach in order to put over his experiences and his penological beliefs. For several years, for example, he appeared as an actor in a series of radio plays built around Sing Sing stories. In 1935 he edited a magazine, *Prison Life Stories.* (That same year he went to London and was welcomed as a distinguished colleague by Scotland Yard.) He gave John Wexler the title for his famous play, *The Last Mile*, and he himself collaborated with Jonathan Finn in 1935 in a prison play called *Chalked Out.* It was pure melodrama, but critics remarked on its "chilling authenticity."

His books have never been dull treatises, but every one of them has carried a sermon as well as a story. They are: *Man's Judgment of Death* (1924); *Life and Death in Sing Sing* (1928); *Twenty Thousand Years in Sing Sing* (1932), an autobiographical account of Warden Lawes' life which was almost universally acclaimed by critics, became a choice of the Book-of-the-Month Club and sold 150,000 copies; *Cell 202, Sing Sing* (1935); *Invisible Stripes,* a book about the parole system, (1938); *Meet the Murderer* (1940); and *Stone and Steel* (1941). *Twenty Thousand Years in Sing Sing* was made into a movie, but Warden Lawes didn't like it much; he says every suggestion he made in its filming was disregarded. His standing as a penologist is attested by the honorary D. Sc. degree which Colgate University gave him in 1934 and by the social service societies of which he has been an officer.

LEWIS E. LAWES

In 1905 Lawes married Kathryn Irene Stanley, an Elmira girl who was his best helper in the prison, especially with the women prisoners. They had three daughters, of whom the youngest, popularly known as "Cherie," was born in the prison and brought up by a series of "nurses" all of whom were husky convicts. She was the idol of the whole prison. Lawes' granddaughter is also prison-born. The first Mrs. Lawes died in 1937, and in 1939 Mr. Lawes married Elise Chisholm of Jackson, Mississippi.

His blond hair thinning, but his blue eyes still bright and his tall frame still sturdy, Lawes, said Henry F. Pringle, "looks a great deal like an able businessman, not a little like a priest, and something like a cop. He is well dressed and direct in his manner. He can be as sympathetic as any cleric . . . or he can be extraordinarily hard-boiled." He has, Mr. Pringle added, "done more than any other prison administrator in history to spread the gospel that vengeance is not a cure for crime, that rehabilitation is possible if convicts are treated like men instead of beasts." He himself says of his methods: "When you're mad at a man, make a boob of him and not a martyr." That is the way he tamed Two-Gun Crowley when that young desperado set fire to his cell and choked the plumbing: Lawes ordered him to be stripped naked—and his cellmates laughed at him instead of admiring his rebellion. He has the crusading spirit, but he is no long-faced re-

LAWES, LEWIS E.—*Continued*

former; to quote one commentator, his are "the steady hand and the open heart."

For twenty-one years Warden Lawes was on duty or on call twenty-four hours a day, seven days a week. His highest salary has been $9,000 a year; he will retire on a pension of $6,000. He has already accepted a non-salaried post as president of the Boy Rangers of America. For a few months he played with his little granddaughter, dug potatoes, romped with the Labrador retriever, "Muffin," whom he bottle-fed as a puppy. In addition to the Boy Rangers' appointment he will probably take other positions—perhaps lecturing, perhaps acting as technical adviser in Hollywood, perhaps teaching, and almost certainly writing. Born crusaders like Lewis E. Lawes never quit crusading until they are brought home on their shields.

LAWSON, ROBERT Oct. 4, 1892- Artist; author

Address: b. c/o Viking Press, Inc, 18 E. 48th St, New York City; h. Rabbit Hill, Westport, Conn.

Ferdinand the Bull, smelling flowers; the Wee Men of Ballywooden; the first pictures for Carl Sandburg's *Rootabaga Stories* in *Designer* Magazine—these live with delight in the minds of grownups as well as children. Their creator, Robert Lawson, noted illustrator and etcher, was awarded the Caldecott Medal, 1941, for the most distinguished picture book for children. The book is *They Were Strong and Good* (1940), and Robert Lawson is responsible both for its pen-drawings and its simple running narrative concerning his ancestors: his grandfather, a sea captain; his mother, who as a little girl kept bees at a convent-school—all hard-working folk, not famous, but "strong and good."

Because he believes that today, in particular, it is important to give American children an interest and pride in their own backgrounds, Robert Lawson made this book. "He knew that all families tell children stories about their grandparents and sometimes about their great-grandparents and sometimes about their mothers and fathers, that children love these stories and get their own standards of conduct from them. He thought if he told just a few of the incidents that had impressed him as a child and gave them pictorially they would inspire other children to demand more stories about their fathers and mothers and their grandfathers and grandmothers." As a result, May Massee says, "we have had hundreds of letters from all over the country telling stories to show that the writers' ancestors too were 'strong and good.' They prove that this book is doing just what Mr. Lawson hoped it would."

American clear through—there were, of course, Scotch, Irish and Dutch among his ancestors—Robert Lawson was born in New York City on October 4, 1892, the son of William Bethel and Elma Cecilia (Bowman) Lawson. As his book tells us, his forefathers were people who did things: his grandfather fought Indians; his father, at 14, enlisted as a flag boy in the Confederate Army; his mother's father was a sea captain "who didn't run away from storms." Growing up in Montclair, New Jersey, "Rob" Lawson was also more interested in doing things than in being an artist. "As a child," he says, "I did not have any particular interest in drawing and did none until my last year in high school, when it was pointed out to me that I must prepare to do something in the world. I had always had a vague idea that I should like to be an engineer and build bridges, but, having managed to avoid every form of mathematics, this career did not seem very possible."

After high school in Montclair, New Jersey, Lawson entered, in 1911, the New York School of Fine and Applied Art, studying there three years under Howard Giles and Ray Sloan Bredin. From 1914 to 1917 he was in Greenwich Village doing odd scraps of illustration and designing scenery for the Washington Square Players. He worked there with Robert Edmond Jones, Lee Simonson and Joseph Platt, and began to "consider a career as a great scenic artist." The first drawings he sold were to *Harper's Weekly* (1914); he also illustrated for *Delineator* and *Vogue*. But the War stepped in between him and his career. He volunteered in the A. E. F., where he spent a year and a half in the Camouflage Section, 40th Engineers.

When he came back from France, Lawson worked for some 10 years at magazine illustration and commercial art. He made posters, advertisements, even greeting cards with "an imagination and technique that made his stand out far above the usual work in this field." Lawson believes that being forced to be practical as well as decorative in commercial work is excellent training for any artist.

In 1922 he married Marie Abrams, of Atlanta, Georgia, also an artist; and they settled in an old colonial house in Westport, Connecticut. Later they built their own home at Rabbit Hill, a few miles away, "where we hope to spend the rest of our days." In a successful effort to pay off the mortgage on the first house, they designed a Christmas card apiece a day for some two or three years.

Lawson's first offer of book illustration came in 1930, when he drew the dwarfs and gnomes for *The Wee Men of Ballywooden*, by Arthur Mason. At this time he also took up etching. In 1931 he was awarded the John Taylor Arms Prize given annually by the Society of American Etchers, and in the same year was included in the 20 leading American etchers commissioned to do a series of plates for the George Washington Memorial Association. In 1932 he was asked to do the annual members' plate for the S. A. E., and in that year he also had his first one-man show.

For a few years in New York he continued his commercial work, drew for the New York *Herald Tribune Magazine* section, and illustrated books for Ginn and Company. In 1937 he illustrated nine books—"my record for one year." Besides those already named, notable among books illustrated by him are Ella Young's *The Unicorn with Silver Shoes* (1932); Helen Dean Fish's *Four and Twenty Blackbirds* (1937); Elizabeth Coatsworth's *The Golden Horseshoe* (1935); Richard and F. H. C. Atwater's *Mr. Popper's Penguins* (1938); John Bunyan's *Pilgrim's Progress* (1939); Ruth Barnes' *I Hear America Singing* (1937); Samuel Clemens' *The Prince and the Pauper* (1937). He started writing his own books, in 1939, with *Ben and Me*. "Being an author," he says, "isn't so bad. It's only one step lower than being an illustrator."

Hansel Meith

ROBERT LAWSON

He does not consider himself a "children's illustrator." He believes, however, that children are much less limited in their tastes and understandings than adults are: they haven't been told what they ought to like, or what they ought to think. "Working for children pays much less money, much more in self-respect." When Lawson was doing the drawings for *The Story of Ferdinand* (1936) his elderly aunt said: "The idea of a bull smelling flowers; it just doesn't make sense." He explained that it was supposed to make nonsense, but she refused to be impressed: "Well, I guess I'm just not whimsical." To this Lawson adds: "If you knew my aunt Emma you'd realize what an understatement that was."

He sees much to admire in contemporary comic strips because they are covering fields of action interesting to children, and also show excellent draughtsmanship. Hence "thousands of children have the 'bad taste' to prefer them to children's books." His fear is lest the latter be "improved" too much. "We must not use children as guinea pigs for theories or as excuses for beautiful and unsalable editions. I would rather see 100,000 children writhing with glee over a small, dog-eared, cheaply printed book than to have had a hand in producing the most perfect specimen of the publisher's art, with 79 copies in circulation and 4,000 in the warehouse."

Helen Dean Fish says that, though he is a genial and delightful soul, there are two types of strangers who really irk him. "The first is the lady who greets him on introduction with a remark that shows she is quite unaware that he has even approached a drawing board except for the illustrating of *Ferdinand*. Secondly, he wearies of the would-be

LAWSON, ROBERT—*Continued*

writer of children's books—and these are legion—who sends him a manuscript (often without return postage) with the proposal that he illustrate the story, in which event the author is sure she can find a publisher and a huge popular success will result. These are the things that drive Robert Lawson out of his studio to work off steam in the lovely rose garden that he and Marie Lawson have made on Rabbit Hill. But before long he is back at work with pencils and brush, calling from his rich imagination drawings that stir emotions of humor, wonder and joy."

Lawson also collaborated with his good friend Munro Leaf, creator of *Ferdinand*, on a second book, *Simpson and Sampson*, which was published in the autumn of 1941 and was acclaimed by critics. Lawson also wrote and illustrated *I Discover Columbus* (1941), a tale of the voyages of Columbus as seen by his pet parrot. "My hobbies," he says, "are work, gardening, and disliking Mr. Roosevelt."

LEAHY, FRANK (WILLIAM) Aug. 27, 1908- Football coach

Address: University of Notre Dame, South Bend, Ind.

No one will ever tackle the job of football coach at the University of Notre Dame without a sense of solemn obligation, for the spirit of Knute Rockne still hovers above the campus like a spectral overseer. Most of the educators and clerics still like to reminisce about the great genius of the gridiron, and his trail-blazing technique still dominates the Varsity team.

Rockne's numerous understudies still carry the torch of his tradition to other colleges where they serve as coaches. Some have even returned to the Alma Mater herself. Coaching at Notre Dame demands originality, audacity and experience. For all his mere 33 years, Frank Leahy, Notre Dame's newest coach, possesses these qualities in rich abundance. Close association with Rockne himself provided Leahy's extraordinary background.

Frank William Leahy was born in O'Neill, Nebraska in 1908, the son of Frank and Mary (Kane) Leahy. His father was a former Canadian, while his mother was a native of Pennsylvania. When Frank, Jr., was only a year old the Leahys moved to a town in South Dakota with the prophetic titles of Winner. Here Frank grew up in the buoyant atmosphere of the rural West and began, even as a boy, to show prowess as an athlete. He boxed, ran, wrestled and played baseball, football and basketball. Leahy came to the attention of the noted Notre Dame athlete, Earl Walsh, when the latter assumed the job of football coach of Winner High School where Leahy was a student. It was Walsh who convinced Knute Rockne that Leahy deserved a grid scholarship to Notre Dame. In order to amass some necessary credits Leahy went to Omaha to attend Central High School, but scholarship wasn't his only concern. While in Omaha he boxed in amateur bouts, including one with Ace Hudkins, the Nebraska Wildcat, who was so impressed with Leahy that he advised him to become a professional fighter. The bout with Hudkins occurred when the fighter needed a sparring partner.

At Notre Dame Leahy began playing football as a freshman tackle, but the coaches soon saw that he had potentialities as a center. Aided by a classmate, he practiced snapping the ball indefatigably, even during study periods, and as a result won the Heving Medal in 1928 for being the most improved center. Then, after spring practice, he was again shifted to the backfield and made his mark as right tackle. He played on the National Championship team of 1929 and also began with the regular team the following year.

During the two seasons, Rockne's elevens went through 19 games without a defeat. Then, in the midst of the 1930 season, Leahy's football career was disrupted by a knee injury of serious proportions, and he had to undergo an operation. While waiting for his release from the hospital he turned from football action to theory, for it soon became evident that he would never be able to play again. His hospital sojourn had its compensations, though. Rockne himself was a frequent bedside companion and during these memorable visits poured a wealth of football knowledge into Leahy's eager ears. When Leahy came out of the hospital he knew more about football than when he had entered.

In spite of his disability Leahy insisted on appearing at scrimmage. Rockne decide to use him rather than risk the possibility of his entering into actual practice. Leahy was chosen coach for the tackles, told to put to use his knowledge gained on the field. Delighted, he decided to become a football coach, and on his graduation in 1931 accepted a position as line coach at Georgetown. In the two seasons he served there Leahy was able to experiment with many of his own ideas as well as with some handed down from the Old Master.

Leahy's next job was as assistant to Jim Crowley at Michigan State University, and when Crowley went to Fordham as head coach Leahy went along. Leahy served under Crowley for six seasons. His value was known to Crowley and to Fordham football analysts, but to the public at large he was a virtual unknown when he was offered the head coaching post at Boston College in 1939.

Leahy's position was not particularly exalted; Boston had dropped game after game with blithe abandon, and the sport was definitely in the "red." But what he did there is now football history. His energizing of one of the most uninspired football teams in the country was little short of miraculous.

The lackadaisical gridders appeared on the field during Leahy's first season as renovated men, filled with agility and driving forward with unwonted power, flashing startling plays with baffling frequency. Football interest was revived, and the sport boomed.

In Leahy's first season Boston won every game in its regular schedule except the one with Florida, but in his second season the Bostonians rode roughshod over every one of their ten regularly-scheduled opponents. To cap the climax they defeated Tennessee in the Sugar Bowl classic in New Orleans.

At the end of the 1940 season Boston tore up its previous contract with Leahy, although it had an additional year to run, and offered him another for a five-year term at a huge increase in salary. Leahy had already signed when news came that Elmer Layden had resigned as coach at Notre Dame to take the post of professional football commissioner. When he was sounded out as to the possibility of his taking Layden's vacated post, he asked for and received a release from his newly-signed contract with Boston.

"No other offer would have made me leave Boston," Leahy stated. "Practically every Notre Dame man wants to go back to his Alma Mater." Although his salary was not revealed it is known that his long-term contract with Notre Dame meant a drop in Leahy's earnings. He had, in addition, received offers from three other colleges and a professional team, one of which, he said, would have made him financially independent for life. But the lure of Notre Dame proved overpowering, and he spurned the other offers. His three assistants, Ed McKeever, John Druze and Joe McArdle, were retained on his staff when Leahy took his new post. McKeever is a Notre Dame alumnus, the others ex-stars from Fordham. Leahy lived up to expectations. In his first season Notre Dame was unbeaten, tied only by Army. For his achievement he received the New York *World Telegram's* Coach of the Year award, voted by 274 coaches throughout the country.

When he was appointed, Father O'Donnell of Notre Dame said: "Everywhere Frank has been he has exercised a fine influence on his associates." Leahy is a granite-jawed, blond, blue-eyed chap who looks even more youthful than his actual years. He has the knack of establishing perfect relationship with his men, and his metallic voice distributes football secrets and homilies on morals and behavior with impartiality. Like his unforgettable teacher, he likes to point out that there's a parallel between football and the even better known "game of life." As a coach he is noted for the unpredictable, tirelessly coming up with new plays and new twists to the old ones.

Leahy is known as a first-rate diplomat and an excellent after dinner speaker. In addition to his coaching he holds an important sales post with the United States Rubber Company. His chief hobbies are cards and golf, but during the football season he has little time for either.

FRANK LEAHY

Leahy is married to the former Florence Reilly of Brooklyn, whom he met in his Fordham days. They have three children: Sue, Frank, Jr., and Florence Victoria, who was born on the day before Boston's 1940 victory over Tulane.

LEAHY, WILLIAM D(ANIEL) (lā'hê)

May 6, 1875- United States Ambassador to France

Address: b. Vichy, France; Department of State, Washington, D. C.

On November 23, 1940 President Roosevelt selected retired Admiral William D. Leahy, who was finishing his second term as Governor of Puerto Rico, as Ambassador to France to succeed William C. Bullitt. General John J. Pershing had previously refused the appointment on the grounds of ill health. The Senate unanimously confirmed Admiral Leahy's appointment on November 27. It was generally believed that, as Ambassador, Leahy would strengthen Pétain's hands in his negotiations with Germany by assuring him of the understanding and friendship of the United States. Further, the Vichy press praised President Roosevelt's selection. "The decision is considered as new proof of Mr. Roosevelt's sincere friendship for France," said the *Temps*. The French knew that, as admiral, Leahy had closely followed the situation at Martinique; and that his appointment was further expres-

WILLIAM D. LEAHY

sion of the Roosevelt Administration's interests in the problem of the West Indies.

In December Leahy sailed hopefully for France. But soon events were making it increasingly clear that his main task, the stiffening of Pétain's spine against collaboration, was an impossibly difficult one. And soon, too, there was a growing demand at home that the United States sever diplomatic relations with Vichy entirely and recognize De Gaulle.

Our Ambassador, who has probably played a larger part than any other man in shaping the policies of the United States Navy, is a native Iowan, born in Hampton, May 6, 1875, son of Michael Arthur and Rose (Hamilton) Leahy. He was graduated from the Ashland, Wisconsin High School in 1892 and from the United States Naval Academy in 1897. In 1904 he married Louise Tennent Harrington of San Francisco. They have one son, William Harrington. Leahy first saw service in the Spanish War during the Philippine Insurrection. In 1912 he was chief of staff of the Nicaraguan occupation and in 1916 held the same position in the Haitian campaign.

During the First World War Leahy attained the rank of captain, after being in command of the *U. S. S. Dolphin* in the Mexican Punitive Expedition of 1916. From 1927 to 1931 he was chief of the Bureau of Ordnance with the rank of rear admiral. In 1936 and 1937 he was promoted to admiral in command of the Battle Force, and he was chief of Naval Operations until he retired, at 65, in 1939. He is the only officer in naval history to have been chief of the two important bureaus of Ordnance and Navigation, as well as chief of Naval Operations. President Roosevelt awarded him the D. S. M. in 1939. He was appointed Governor of Puerto Rico in that year also.

It is said that, as Governor, Leahy liked the Puerto Ricans, and they liked him. The only exception to his administration reported was that there was fear that he "might allow politicians to get away with practices that ought to be stopped." Radicals said: "He actually seems to believe in the Bill of Rights." Said to be an open-minded conservative, Leahy in general was considered "a straightforward, but businesslike and hardheaded person." To President Roosevelt he appealed "as a counselor on defense and as a man of superb, all-around ability." A tall man with a weatherbeaten face and bushy eyebrows, he is a strict disciplinarian, but easy and friendly when off duty. He plays a fair game of golf and likes bridge. His pet hobbies are his two grandchildren.

Prior to his Ambassadorial appointment, the Admiral in a White House conversation in June 1940 (according to *Newsweek*) "appeared intent upon shelving the Wage and Hour Act, outlawing strikes and other immediate moves to prohibit labor troubles in the defense program." He also advocated prompt purchase of British, French and Dutch possessions in the Caribbean. The Admiral said further that Puerto Rico was being turned into an American Gibraltar of such strength that no invader would be able to attack us without first reducing our island defenses in the Caribbean. "Bases capable of operating airplanes," he said, "could be prepared in the course of a few months." Puerto Rico had an allocation of some 20,000 relief workers, but at that time needed 10,000 more for the present defense program.

LEATHERS, FREDERICK JAMES, 1ST BARON 1881(?)- Head of the Ministry of War Transport and Shipping

Address: b. Ministry of War Transport, London, England; h. 3 Whitehall Court, London, S. W. 1, England

The first man ever to be put in control of all British shipping and transport services, from railroads to ports and highways, is "a tall, lanky man with a deeply creased, pleasant face, reminiscent of Viscount Halifax." The name of Frederick James Leathers does not appear in the British *Who's Who* for 1941, but there is no doubt that it will appear in the future: on May 1, 1941, when Lord

BARON LEATHERS

Beaverbrook became Minister of State, Winston Churchill announced that Leathers had been put in charge of the combined Ministries of Shipping and Transport and also named a member of the Privy Council.

Before he took over this post, critics in Britain had been complaining that lack of coordination between land and sea communications had caused damage from German bombers to valuable materials held at the ports. Now Leathers is the man responsible for "getting goods across the oceans and also for getting them unloaded, releasing the ships as quickly as possible." The measure of his success will be the success of Britain in the Battle of the Atlantic.

Leathers' career, while by no means so spectacular as that of Lord Beaverbrook, is the story of another poor boy who became wealthy and a peer. Frederick James Leathers was born in London's poor East End district the son of Robert and Emily (Seaman) Leathers and has lived all his life in the City of London; his father was a carpenter who died when his son was four months old. Frederick was only 14 when he began working as an office boy in the coal firm of William Cory & Sons, Limited, his weekly salary the extraordinary sum of seven shillings sixpence. Today he is not only the managing director of the firm with which he started, but also the director of 50 or 60 shipping, lighterage, cement, coal and transportation companies—British, Dutch and French. He married Emily Ethel Baxer in 1907 and has two sons and a daughter.

An expert on shipping, coaling and bunkering, soft-voiced Frederick Leathers had already made himself valuable to the British Government by serving as an adviser on coal in the Ministry of Shipping. In that capacity he met exigencies as they arose by directing shipments of coal to ports all over the world. His first public appointment, however, was made in 1939, when he was appointed to the committee to advise the Lord Privy Seal on air raid shelter policy. Since he has never been elected to Parliament, and since before the appointment to his new post there was no time for an electoral contest that would put Leathers into the House of Commons, Churchill asked King George to raise him to the peerage as Baron Leathers of Pursfleet, Essex. Leathers' seat in the House of Lords will now permit him to sit in the Cabinet as well.

LEHMANN, LOTTE (lā′män lŏt′tȧ) Opera singer

Address: Riverdale, N. Y.

Lotte Lehmann is a "musician's singer." Richard Strauss wrote an entire opera especially for her; Bruno Walter often stepped down from the conductor's podium to accompany her at the piano; her good friend Toscanini once joined in the *bravos* of the audience after her performance in *Fidelio*. She has been called "the singer who transcends mere singing, the artist with whom those of lesser vision could share exalted thought and feeling, and the woman of rare charm and warmth and human understanding. Her appeal as a public performer may derive from each or all of these compounds of her personality; but it is her chief glory that she can make the greatest part of her art the most simple, the most accessible and the first to capture the mind."

Born at Perleberg, near Hamburg, Germany, Lotte Lehmann was the daughter of Carl and Marie (Schuster) Lehmann. Her father was a small-town government official who wanted her to become a respectable stenographer or schoolteacher, and after the family moved to Berlin when Lotte was in her early teens she received the standard education for young ladies of good family at the local high school: music, languages, drawing. At first she thought she wanted to be a poet—a poet not of love, but of religion—and she still remembers the time she saw her first poem in print as one of the supreme moments of her life. But early in her adolescence she began to realize what she really wanted to do: to sing. This one thing she wanted desperately, in spite of her parents' puzzled and affectionate opposition. Even the suburban train sang to her, "I think I can—I knew I could," and she clung to her ambition stubbornly. Finally a neighbor's influence made it possible for her to enter the Royal Academy of Music.

She had little confidence in herself; she was shy, nervous. She worked hard to please her eminent teachers at the Academy, but could not. Finally they sent her home; she would never be a singer, never. Half-believing them, she still refused to turn to a "sensible" career. Finally a celebrated Wagnerian singer heard her sing, encouraged her, became her teacher—and young Lotte hounded the manager of the Hamburg Opera House into giving her a three-year contract, playing minor roles. Her debut as Freia in *Das Rheingold* brought the following comment: "A Fräulein Lehmann sang and played the part of Freia with touching awkwardness. As to the vocal qualities of the young lady, whose throat seemed constricted by excessive nervousness, we can as yet say nothing."

Her first success in Hamburg came when she substituted for a colleague as Elsa in *Lohengrin*. She has written about that experience: "The evening of the performance I did not see the audience. I did not even see the face of the director. I forgot everything—where I was, what the evening meant to me. I was Elsa, the Elsa that was first revealed to me by Klemperer, the Elsa that I now fully understood for the first time. Tears came to my eyes as the chorus sang *Heil dir Elsa*. And *Heil dir* my whole heart sings to the day of days which was the real beginning of my life."

Gradually more important parts came; she began to gain confidence, helped both by Gustav Breycha and by Otto Klemperer; and one evening after playing Micaela in *Carmen* she found the director of the Vienna State Opera waiting to give her a contract. He had been in the audience, hoping to find a tenor for his company.

It was in Vienna that Lotte Lehmann evolved her famous roles of Sieglinde in *Die Walküre,* of the Marschallin in *Der Rosenkavalier,* of Leonore in *Fidelio*—roles in which she was later to become so familiar to American audiences; it was there that she gave the first of her classic *Lieder* recitals. It was during one Vienna rehearsal that Richard Strauss heard her and selected her for the leading role in his *Ariadne auf Naxos.* She became the leading European interpreter of Strauss, once even staying with him and his wife in order to study for her role in *The Intermezzo* in which she took the part of his wife, and he wrote *Arabella* especially for her. And in Vienna, too, she met and in 1926 married an army colonel, Otto Krause. After her appearance in 1927 in the leading soprano role of Erich Korngold's *The Wonder of Heliane,* then having its première, the Vienna *Zeitung* wrote: "Lotte Lehmann is one of the greatest of the dramatic singers of our time." The Government conferred upon her the highest honor any artist could receive—the title of *Kammersängerin*—and she became an honorary member of the Vienna *Staatsoper* (State Opera).

But the Viennese were by no means alone in doing her honor. At the Paris Opéra in 1927 she sang the title role of *Fidelio.* It was the first time since the War that a German opera had been performed, and her triumph was such that she was offered the Légion d'Honneur for "distinguished artistic service." So moved was she at its presentation (she is one of the few women, and the only German woman to have been thus distinguished) that she didn't wait for the government official to kiss her on both cheeks, as was customary, but bent over and kissed him! In London she was made a member of the Covent Garden Opera, where she had won international fame in 1923; Sweden gave her its Medal of Art.

It was 1930 when Lotte Lehmann first came to the United States to sing with the Chicago Opera Company. She made her debut on October 28 as Sieglinde in *Die Walküre,* and more than one critic proclaimed her voice one of "heavenly beauty." At a recital debut in New York City not long afterward people were turned away from the doors, and at a second recital a month later the audience overflowed onto the stage. Wrote Olin Downes: "Some songs such as Schumann's *Der Nussbaum* and *Aufträge* had such effect that one is willing to go some time without hearing them sung by other singers."

On January 11, 1934 Lotte Lehmann made her debut on the Metropolitan stage, once more as Sieglinde. The next day the New York *Post* announced: "Never before in the history of the Metropolitan has there been such a scene . . . the instant the curtain fell the applause rang out spontaneously, and when Lotte Lehmann came before the footlights it rose in volume. Her confreres left her alone—something rare on the first curtain call—and the whole audience broke into cheering which lasted a full 10 minutes."

LOTTE LEHMANN

Since that time her warmth, her vitality, her "unique manner of projecting her personality across the footlights, making of each individual in the auditorium a rapt audience of one" have made Lotte Lehmann one of the most beloved figures in the American musical world. She has sung in nearly every city in the United States. Of all her roles, the Marschallin in *Der Rosenkavalier* is the one with which she most identifies herself—and actually she has given more than two hundred-fifty performances in *Der Rosenkavalier,* in all three leading feminine roles, with fourteen different operatic organizations!

Today, however, she is even more interested in *Lieder* than in the opera. To her the *Lied* is like "a beautiful garden into which one goes, never wishing to open the gate and come back again into the world-glare." At first it was difficult for her to stay within the frame of a *Lied,* for she has the theatre in her blood; but with maturity she has learned constraint. In the future she plans to teach the art of *Lieder* to a few select pupils, in conjunction with her brother, Fritz Lehmann, who is at the David Mannes School. He and Bruno Walter, she says, are the two people who understand German *Lieder* as she does.

To these young pupils she will probably say: You must devote nearly every moment of your time to singing, to study. Languages and acting are almost as important as the development of the voice, and going to school is the least expensive way of acquiring them. A switch in teachers is good, however: it will broaden your viewpoint. Quick success is not good, so do not be discouraged. But the most crying need in America, where there is so

LEHMANN, LOTTE—*Continued*

much native talent, is for small opera troupes and companies to train you.

Lotte Lehmann herself still practices every day, still searches for new songs to increase her repertoire ("there is always something new to be learned"). But she also manages to read a great deal and to swim and ride horseback. According to *Time,* she resembles "the Viennese *Hausfrau* of tradition"; but audiences, more appreciative of her deep blue eyes fringed with dark lashes, her aristocratic small nose and her dimple, are inclined to disown the description.

Certainly Frau Lehmann isn't interested in home management; she can't cook, and has never tried to; she isn't in the least concerned with budgets, and is extravagant in her generosity toward her friends. And neither in taste nor in temperament is she anything but an artist—an artist of rather varied talents. She writes: her published works—a novel, *Eternal Flight* (1937), an autobiography, *Midway In My Song* (1938) and poems and articles in *Harper's Bazaar, Vogue* and other magazines—have earned praise from critics, and she has also written a book of poems, illustrated by herself. She paints. And she is one of the few opera stars who can act—critics call it acting, although she herself says: "When I play a part it must be an expression of something within myself; I must feel it." Speaking of her *Lieder* recitals, she says: "In this I cannot act; it is my sincerity which creates the bond between myself and my audience."

Formerly the "moving spirit" of Salzburg in the summers, today Lotte Lehmann's homeland lives for her mainly in her songs. In 1933, when the Nazi Government came to power in Germany, she renounced her fatherland and adopted Austria as her country. Then in 1938 the Nazi troops entered Austria, and in 1939, the year her husband died, Lotte Lehmann applied for her American citizenship papers. Her rambling residence in Riverdale, New York is her first permanent home in the United States, the country which must henceforth "keep peace, humanity and art treasures."

LEONIDOFF, LEON (lĕ'ŏn-ĭ-dŭf" lĕ'ŏn) Jan. 2, 1895- Senior producer and vice-president of the Radio City Music Hall

Address: Radio City Music Hall, Rockefeller Center, New York City

If one were to name America's leading director of spectacular stage productions and dance ensembles, it would probably be small, wiry, dark-eyed Leon Leonidoff. He is responsible for from 30 to 48 shows each year at Radio City's Music Hall, pride of New Yorkers and mecca for visitors from out of town.

On Friday at lunch—unless a show has been held over—department heads discuss the next show with Mr. Leonidoff. Monday the costume makers get to work. Material for a typical performance includes 90 ostrich boas, 1,700 yards featherbone, 4 gallons lacquer, 3 lbs. gold powder, 12 gross pompons, 775 yards red net, 2 gross great hooks and eyes, 35 yards velvet, 61 yards satin, 150 yards pattern cloth, etc. Promptly at 9 a. m. the photogenic Rockettes begin to master the intricacies of the new routines, rehearsing in shorts and blouses in their long mirrored hall. Precision is almost a god at Radio City, and they streamline their dances that way, under the watchful eyes of Rockette captain Emilia Sherman. The girls vary from five feet three inches to five feet seven inches in height, and when they face the audience in line formation—the taller girls placed near the center—the impression is created of a line of girls of even height.

During the week, while one show goes on for the Radio City audiences, another is being prepared backstage. Erno Rapee is in charge of music, Russell Markert and Gene Snyder direct the Rockettes, and Florence Rogge takes the kinks out of the Corps de Ballet. At 6 a. m. on Thursday the final rehearsal is called. An incredibly busy week behind him, the indefatigable Leonidoff sits down in the middle of the vast empty auditorium, armed with a script of the show, drawings of the scenes and portable microphone: "Then the whole spectacle, bit by bit, unfolds on the stage while he drones instructions, suggestions, criticisms through the microphone that carries his voice all over the theatre—never sharp or angry, always persuasive, almost gentle."

As a young man Leon Leonidoff was slated to become a doctor of medicine but he turned from this family choice of a profession to become, in turn, dancer, dance director and impresario. In moments of relaxation there comes to his features an expression that is puckish, alert, responsive, as though one part of his mind is occupied with the prescription for next week's audience. And, as one writer observed: "Like a wise doctor, he sugars his medicine with music and comedy. He takes a dash of opera, a bit of ballet, the colors of a desert sunset, then throws in clowns, chorus girls and a movie—and sells it four times a day to packed houses."

Arthur Ermates

LEON LEONIDOFF

Leon Leonidoff was born January 2, 1895, the son of Jacob Leonidoff, a wealthy Bessarabian grain dealer, in the little Romanian village of Bender. The first "spectacle produced by Leonidoff" was put on in his father's back yard. With his young and enthusiastic colleagues, Leon managed to secure a quantity of his mother's fine linens and drapes to use as backdrops. And for the *opéra bouffe* atmosphere what could have been more appropriate than the bright buttons from elegant uniforms? Leon got his first "notice," too, in the form of a vigorous spanking from his father.

At the University of Geneva, where Leon studied chemistry, physics and did laboratory work in his medical course, he became a leading spirit in the dramatics club. They put on melancholy Russian dramas, light French farces, and, best of all, sprightly revues. The latter gave scope to Leon both as performer and as director, for he was a student of ballet. When the famous Russian director, George Pitoëff, came to Geneva, he invited Leonidoff to appear in several productions. Soon Pitoëff organized his own troupe, inviting the young medical student to join him as assistant producer and to dance leading roles with ballerina Ludmilla Pitoëff.

When the Pitoëff troupe moved to Lausanne, Leon gave up all pretense of studying medicine and went along with them. There wasn't much money in dance productions, but he liked the work. In collaboration with director Bonarell of the Lausanne Theatre of Drama and Opera, Leon helped to stage benefit performances with Russian students. Out of this grew the celebrated Isba Russe group. Their performances and their dances were of such verve and brilliance that they became known throughout Europe. Soon a wealthy broker sponsored them and brought the group to London, where their success encouraged them to try their luck in America.

LEONIDOFF, LEON—*Continued*

The Isba Russe dancers had their American debut January 25, 1920, at New York's Manhattan Opera House, where they put on *Dance of the Simpletons*. Leonidoff's success was almost immediate, for within a few months after his arrival in the United States he was made ballet director of the Capitol Theatre. Soon after that, Roxy (the late S. L. Rothafel) made him associate producer. At the Capitol, Leonidoff put on spectacles based on the music of Victor Herbert, and in 1923, on a Canadian tour, he worked with Victor Herbert on a production featuring his music. Before returning to the United States, Leonidoff ran a dancing school in Toronto for a brief period. Gradually, as he was called on to devote more attention to the production end of stagecraft, he found less and less time for dancing. From 1927 to 1932 he directed production at New York's Roxy Theatre and in the latter year (1932) Merlin H. Aylesworth, then president of NBC, invited him to become producer of spectacles at the world's newest and most elaborate of pleasure domes, Radio City Music Hall. Since 1934 Leonidoff has been senior producer and vice-president of the theatre.

At the Roxy, Leonidoff, who has a reputation for putting shows together on short notice, staged some 350 productions. On one occasion he did the seemingly impossible feat of starting from scratch and presenting an elaborate spectacle in two and one half days' time. At Radio City some six million persons each year come to see his creations. His Easter and Christmas shows have become national institutions, and ballets such as *Giselle* and *Scheherazade* have been highly praised as outstanding in that exacting field. An experiment in grand opera—one of the most difficult problems of staging that Leonidoff faced in his entire career—drew more than 250,000 people in two weeks. It was the famous *Madame Butterfly*.

In addition to giving his audiences the tried and true production numbers that they seem to expect, Leonidoff occasionally startles them with something different on the theory that "we've got to keep ahead of our audiences all the time." To this end he has brought to mass audiences the modernistically folksy *Petrushka* of Igor Stravinsky and Darius Milhaud's (see sketch this issue) *La Salade*, with scenery by the French painter Dérain and choregraphy by Serge Lifar. Said Leonidoff: "We must plan an entertainment that will satisfy many kinds of people. So if we have a heavy picture we try to put on a light show. If the picture is a comedy we use that chance for a more serious ballet, or perhaps an opera." As to the tremendous amount of work involved he says simply: "I have capable coworkers. We all do our best."

Called to Hollywood in 1937 to produce a dance sequence for the Grace Moore starring vehicle, *When You're in Love*, Leonidoff found a unique solution to the problem of placing ballet on the screen. First of all he recognized two objectives, only one of which was to express ballet forms on the screen. The other was to fit this sequence to the rest of the film, much as a muralist adapts his work to its architectural setting. He consciously avoided showing movements that would be appropriate to stage choregraphy but might look awkward from a camera angle. Ballet shots alternated with close-ups of Miss Moore, and the former showed completed steps, not shifts from one position to another. "Thus," said Leonidoff, "the ballet is unique in showing not a single dance step, but only poses expressive of a mood."

Among Leonidoff's achievements is the Mickey Mouse extravaganza, staged in 1938, that pleased children, adults and even critics. In 1940 Leonidoff made all former glories pale with his *American Jubilee*, staged for the New York World's Fair, then promptly followed through with the spectacular *It Happens On Ice*. The former, said Brooks Atkinson of the New York *Times*, was "circus, show and copy-book lesson in Americanism." And of the latter he observed: "It is not much like the old frog pond where most of us awkwardly began with double-runners."

Leonidoff married St. Louis playwright Fannie Todd Mitchell at Mamaroneck, New York on October 6, 1930. The marriage ended in a Reno divorce, given Mrs. Leonidoff on October 26, 1932. After divorcing Leonidoff, Miss Mitchell married Seymour Woolner, who subsequently sued Leonidoff for alienation of affections. The Radio City producer retaliated with a countersuit, on the grounds that the Reno divorce was not legal in the state in which Woolner had been married. The tangle was resolved in September 1933 when in a higher court suits aggregating $1,125,000 were settled and discontinued.

Five feet five inches tall, Leonidoff appears to be super-charged with energy. Until 1940 he made annual trips abroad for study and rest. "The atmosphere about him," one learns, "is always tense. The small wiry Russian has an air of being about to spring frantically from his desk into the middle of one of his own extravaganzas. Quiet, courteous, attentive, his manner is still that of a man rushed to death and enjoying it."

LESCOT, ÉLIE (lĕs-kō′ â-lē′) Dec. 9, 1883- President of Haiti

Address: b. Port-au-Prince, Haiti

On May 15, 1941 chubby Élie Lescot, former Haitian Minister to the United States and a member of the governing board of the Pan American Union, was inaugurated as the thirtieth President of the Republic of Haiti in the brilliantly decorated capital city of Port-au-Prince. M. Lescot had been elected President of Haiti a month before, although on April 9 United States newspapers had carried stories of crowds demonstrating in Port-au-Prince against his candidacy. At that time it was reported that thousands stormed the Legislature, smashed desks, shouted angrily. There seems to be some reason for believing that Lescot's predecessor, Stenio Vincent, was only too happy to give him the transfer of office at the National Palace after the inauguration ceremonies.

In the Black Republic, whose population is somewhere around 3,000,000, both Vincent and Lescot belong to the Élite—the comparatively small class which has from the beginning of its history been dominant both politically and socially. (A distinguished Haitian once said that 2,000 men from this class controlled Haiti absolutely.) Lightness of skin color, a predominantly European cultural pattern, a knowledge of French rather than Creole—these are among the features which distinguish Haiti's ruling class from the Noirs.

Lescot was born on December 9, 1883 in the village of Saint-Louis du Nord, where his parents always spent the summer. A member of an old family of Cap-Haïtien, he was educated there, and by the time he was 27 had become a member of the Legislative Assembly. After only three years in the Assembly he left to enter the judiciary, however, and was successively commissioner of the Court of the First Instance at Port-au-Prince, judge of the same court, examining magistrate at the capital, commissioner in the Court of Cassation.

At the same time he was taking an interest in politics. During the administration of President Borno, from 1922 to 1930, he served as Secretary of Public Education and of Agriculture; and when Vincent came into power in 1930 Lescot became Secretary of Justice and of the Interior. Vincent had been elected for a term of six years at a time when the United States was still occupying Haiti, but in 1935 he put through a plebiscite extending his term for five years more. According to *Time,* he "managed Haiti much as the late Huey Long managed Louisiana, sometimes sending to his Chamber of hand-picked deputies bills in sealed envelopes, which they passed without breaking the seal." He was hated by the Haitian exiles in Harlem, and the leader of the Party of Democratic Action, another exile in the United States, called his government "a pocket-sized version of Nazism."

Nevertheless Lescot and Vincent got along very well, and in recognition of Lescot's services as Secretary of the Interior, Vincent raised him to the rank of Grand Officer of the Order of Honor and Merit of Haiti and appointed him Haiti's Envoy Extraordinary and Minister Plenipotentiary at Ciudad Trujillo, capital of the Dominican Republic.

In the Dominican Republic, no stronghold of democracy either, Lescot apparently served his country well. For years a territorial dispute had been going on between the two republics: after less than two years in Ciudad Trujillo, Lescot worked out a formula acceptable to the Presidents of both countries whereby they would share the sovereignty of the West Indian island of Hispaniola. He was appointed chairman of the Haitian section of the Boundary Commission, and the Dominican Government conferred upon him the Cross of Grand Oficial del Orden de Mérito de Juan Pablo Duarte.

Albee

ÉLIE LESCOT

But Lescot's friendship with leaders of the Dominican Republic, particularly with President-dictator Rafael Trujillo (see sketch this issue), author of the 1937 Dominican invasion of Haitian territory in which several thousand border residents were massacred, did not add to his popularity in Haiti. And in the eyes of his political opponents the fact that he managed to secure indemnities for the victims did not make up for the fact that he accepted the grand cross of the same Dominican order of merit just before leaving the country to present to Franklin Delano Roosevelt his letters of credence as Envoy Extraordinary and Minister Plenipotentiary in the United States. That was on April 12, 1937. With him came his wife, the former Georgina Saint Aude.

Up to the last minute everyone expected that President Vincent would have himself re-elected for a third term by the members of the Senate and Chamber of Deputies when they convened as a National Assembly in April 1941. (There is no popular vote.) Vincent threw his support to his absent Minister, however, and on April 15 the vote in Lescot's favor was fifty-six to two. In a short speech issued from the United States, Haiti's President-elect then pledged himself to follow the policies of his predecessor; and on April 29, before departing for Haiti, he was entertained for the last time at the White House by a luncheon in his honor. A strong believer in cooperation with the United States, less than eight months later President Lescot followed President Roosevelt in declaring war on Japan, Germany and Italy.

LEWIS, SIR WILLMOTT (HARSANT) June 18, 1877- Washington correspondent of the London *Times*

Address: h. 2356 Massachusetts Ave, Washington, D. C.

"On February 7, 1941, entranced listeners to the *Information Please* program were startled to hear an unbelievably British bass dispose with equal ease of questions dealing with *Alice in Wonderland* and the world situation, and efficiently exchange quips with Clifton Fadiman (see sketch this issue). The bass belonged to Sir Willmott ("Bill") Lewis, doing his best for England—as he had been doing it for the last 20 years in his official capacity as London *Times* correspondent in Washington and as unofficial liaison officer between the United States and the British Empire.

In Washington "Bill" Lewis reaps the mingled advantages of an impeccably British appearance and a thorough knowledge of American psychology. His appearance and speech are those of a stock Englishman—of the cocked eyebrow and stiff upper lip kind—and he plays this role with great enjoyment, to the delight of many Americans. But he has lived in the United States so long and studied life and customs here so thoroughly that his compatriots consider him an American with an invaluable knowledge of this country. (Even as early as 1914 some of them thought he was "a Harvard man putting on the dog.") He explains the Americans to the British and the British to the Americans. Few British visitors to Washington fail to avail themselves of the advice which Bill Lewis is always ready to dispense.

Sir Willmott Lewis was born in Cardiff, Wales, June 18, 1877, son of James Oliver and Marion Harsant (Butler) Lewis. His family was well-to-do and respected; his grandfather—incidentally, a fervent believer in the glorious destiny of the United States—was justice of peace and twice Mayor of his home town of Cardiff. Young Willmott Lewis had his preliminary schooling in Eastbourne and later went to Heidelberg and to the Sorbonne. He became proficient in languages and easily assimilated such culture as could be found in classrooms and cafes. One of the reasons for his later success was that chameleon-like ability to adapt himself to any environment. At the time, however, his accomplishments could get for him only a meager job writing wedding notices and obituaries on a Brighton newspaper. He taught himself shorthand, becoming as proficient in it as Billy Rose once was, and went to London to become a newspaperman in earnest.

His career underwent a slight detour when, for lack of anything else to do, he became an actor. This adventure lasted only for a short time, however, and after a brief sojourn in the provinces Willmott came back to London on the alert for another opportunity to practice journalism. When the call came he followed it to the other end of the world, where he joined the staff of the North China *Herald* in Shanghai as a combination assistant editor and shorthand reporter. In Shanghai he lived spectacularly, mostly on credit, owned a stable of ponies and was the pride of Shanghai society. Then he moved to Nagasaki, Japan, to edit a small newspaper. While there he married Lina Jessie Ringer.

In 1903 he talked James Gordon Bennett of the New York *Herald* into giving him a job covering the imminent disturbances in the Far East. Then he went to Korea to wait for the developments. His extreme popularity—he was universally beloved as a good singer, drinker and poker player—and his excellent though unobtrusive knowledge of Japanese, Chinese and Korean languages proved useful: he was able to scoop the beginning of the Russo-Japanese War and, as a matter of fact, was in the midst of the first naval action. Thereafter he covered the War, together with aces like Richard Harding Davis and Martin Egan.

After the War was over, Willmott Lewis drifted to San Francisco. That first visit to the United States was not so successful as the subsequent one, and he led a none too prosperous existence. At one time he opened a gymnasium with a friend of his called Philadelphia Jack O'Brien. He returned to the Orient, finally turning up in 1911 in the Philippines, where he was set to editing the Manila *Times* under his friend and fellow correspondent Martin Egan. Incongruously enough, his was the voice of militant Americanism in the Philippines. He wrote the editorials and, unable to afford the use of the Associated Press, would substitute astonishingly correct guesses about the news.

He got to Paris in 1917, after the United States had entered the War, and was immediately put to work on the Paris headquarters staff of George Creel's Committee on Public Information, which was run by James Kerney, editor of the Trenton, New Jersey, *Times*. His personality and flawless knowledge of French made him extremely valuable to that organization and subsequently, when Kerney went home, Willmott Lewis ran the whole show, producing excellent propaganda for the A. E. F. and finally winning a decoration, the Légion d'Honneur. The Armistice left him stranded in Paris in one of his occasional periods of indigence. He even worked for a time on the Paris *Herald,* that haven for temporarily embarrassed newspapermen.

He did not stay there long. He was soon unearthed by Lord Northcliffe, the owner of the London *Times,* who had been impressed by his knowledge of American psychology and his general efficiency. He offered him the post of Washington correspondent of the London *Times,* vacated by Sir Arthur Willert. Lewis got to Washington in 1920 and has been there ever since. As he himself says: "I have exhausted time in Washington. I am impinging upon eternity." The same social talents that made him welcome in Shanghai, Manila and Paris endeared him to Washington. He became known as a fashionable figure, a *bon vivant,* a brilliant conversationalist. In 1926 he married Ethel Noyes, the daughter of Frank Noyes, president of the Associated Press (his first wife had died). One son and two daughters were born to them. In 1931 he was made Knight Commander of the Order of the British Empire.

Harris & Ewing

SIR WILLMOTT LEWIS

Unofficially Sir Willmott Lewis has done more to foster good relations between Great Britain and the United States than any other Englishman residing in Washington. He has been the unofficial adviser and guide of all the official ambassadors from England. His unofficial cables to 10 Downing Street are read perhaps more closely than his dispatches to his paper. For important things to be done unofficially—from arranging private talks with Stettinius and Knudsen to getting a daughter of a Congressman presented to their Majesties at the Court of St. James's—Bill Lewis is the man to talk to. Besides, he influences American opinion in countless other ways—especially by lecturing. Sir Willmott is an indefatigable and ardent lecturer, although lately he has somewhat abated his activity for fear of being accused of propagandizing. His fees as a lecturer are low; his speeches are ornate and somewhat over the heads of the listeners —which is a very subtle form of flattery. His memory and erudition are fabulous, and he is particularly fond of quoting from early American history. In March 1940 he began to put out a weekly newsletter review of events abroad, called *Foreign Correspondence.*

Sir Willmott has gained considerable renown in Washington as a witty and polished

LEWIS, SIR WILLMOTT—*Continued*

speaker. He likes to talk and does so with relish. The extent of his information is incredible, especially for a man who prefers talking to listening. He is the best-informed man in Washington even though he stays away from the traditional news sources such as press conferences and the State Department. The dispatches he sends to the London *Times* are thoughtful and well liked by his readers, although they naturally lack the sparkle and charm of his conversation. His style is generally somewhat heavy, weighted down by quotations from Santayana, Bacon, Tawney, Emerson, John Jay Chapman, Walter Bagehot, Arthur Twining Hadley, John Richard Green and countless others.

Sir Willmott is, of course, an ardent New Dealer—and not only since the War but from the earliest days of the New Deal. The results of the 1940 elections heartened him considerably. He has been, incidentally, not quite so farsighted about European as about American politics (in 1936 he predicted the size of Roosevelt's majority), and as late as March 1939 he refused to believe that Hitler would go to war. He himself has explained his pro-New Deal sympathies by saying ingenuously: "It is very much easier to be a liberal in your attitude to a country not your own than it is toward your own country." It may not be wrong to say that another good reason is that as a good Britisher he has always wanted the United States to abandon what he has politely preferred to call her policy of "unilateralism" and embark upon the policy of world-wide Anglo-American cooperation. But also he has often, though in terms veiled enough to be inoffensive to his listeners, deplored the "dangerous inequality of economic advantage; an inequality of contractual status as between industry highly integrated and labor still unorganized."

Sir Willmott is famous for his quips. Some of the wags in the National Press Club (where he spends a lot of time playing cards, talking steadily and absorbing information "through the pores") have said that his name should be Bonmott. It was he who said once, "I feel like a lion in a cage of Daniels." He remarked anent the London Naval Conference of 1930 that the American people insisted on "faith, hope, and parity." He characterized one politician as "Savonarola and soda," another as "a moralist in the worst sense of the word." His social activities have somewhat abated now from the frenzy that marked them in the first Washington years. He has been married for the third time—to the wealthy former Mrs. Norma (Bowler) Hull—and now lives a somewhat more sedate life in their beautiful house on Massachusetts Avenue in Washington, D. C., where there is a library of 7,500 books. Sir Willmott is an inveterate reader, particularly of American history.

LEY, WILLY (lā vĭl'ē) Oct. 2, 1906-
Author; scientist

Address: c/o Modern Age Books, Inc, 245 Fifth Ave, New York City

The May 1941 choice of the Scientific Book Club was "An Excursion into Romantic Zoology," or, as one reviewer describes it, a book "on the lunatic fringe of zoology" called *The Lungfish and the Unicorn* (1941). Willy Ley is the author. Says McCready Huston: "His clearing away the mists that hang over the twilight zones of knowledge is not only delightfully done but necessary. He is a master of the half-world where fact and fancy meet in the realm of beasts, birds, and fishes. He is never dull."

The Lungfish and the Unicorn deals with remarkable creatures: "those presumably mythological, those presumably extinct and those which ought to have become extinct but for various reasons didn't." The legendary dragon, basilisk, unicorn and sea serpent have probably never been honored with inclusion in a scientific volume before, but Willy Ley makes quite a case for some of them. The tatzelwurm, the geirfugl, the hoatzin, the okapi and the quagga have been more or less neglected, too. And it seems unlikely that many people know that the Cyclopes were elephants; that the last *real* penguin was killed in 1844; or that the horseshoe crab, found on Jones Beach and Cape May, is not only America's oldest inhabitant but actually a "freak hangover from Mesozoic times and earlier, a kind of antediluvian pre-scorpion or pre-spider," not really a crab at all. The New York *Times* reviewer, who presumably didn't know either, calls this "a good book all through."

Willy Ley was born on October 2, 1906 in Berlin, Germany, the son of Julius Ley, a business man, and Frida (May) Ley, the daughter of a government official. At intervals between 1920 and 1926 he attended the Universities of Berlin and Koenigsberg, where he specialized in zoology, paleontology and the history of science in general. His newspaper and literary career didn't begin, though, until he sent the correction of an error to a newspaper in Germany, saw it printed and actually received a small check besides. Encouraged, he began writing regularly about science for a number of magazines, and his first book, entitled *Trip Into Space* and concerning rocket ships, was published in Germany in 1926.

For a long time rockets remained Ley's chief preoccupation. In 1928 he published a treatise on the possibility of space travel which is said to have inspired the novel which was made into a movie by UFA and shown in the United States under the title *By Rocket to the Moon*; he then set to work on a history of rockets from the days of the ancient

Chinese and Greeks, of the fireworks-makers of Italy and of William Congreve to the present. (This was completed and published in 1931.) Nor did he limit himself to writing about rockets: he became the vice-president and secretary of the *Verein für Raumschiffahrt* and built it up from a small group of people interested in rockets to an organization which at one time had more than 1,000 members, a rocket-proving field on the outskirts of Berlin and a full-time staff of six engineers and mechanics. Ley, who spoke and wrote German, English, French, Latin, Dutch, Russian and Italian, kept up a correspondence with nearly every rocket experimenter in Europe and in America, and the *Verein für Raumschiffahrt* became the world center for news and information on rocketry. It also made the first really important contribution to the construction of liquid-fuel rockets in Europe, a subject on which Ley furnished some fundamental ideas. Finally, when the society was dissolved after the Hitler revolution, Ley became the moving spirit (officially, the vice-president) of its successor, which went under the name of the *E. V. Fortschrittliche Verkehrstechnik* and was located in Berlin.

In the meanwhile, though, Ley had not lost his interest in other phases of science. His studies formed the basis for a book on dragons which was published in 1928 and a biography of Konrad Gesner published the next year, and he continued to contribute steadily to magazines. Altogether there were eight books before *The Lungfish and the Unicorn,* and innumerable articles.

But there was no living in Hitler's Germany. On February 21, 1935 Willy Ley, like many a distinguished German refugee before him, arrived in New York City; one of his first acts was to travel down to Jones Beach to pay his respects to the horseshoe crab, to him a rare specimen previously glimpsed only in well-stocked European museums. His articles soon began to appear in *Esquire, Coronet, Natural History Magazine, Fauna, Frontiers* and *Zoo* as well as foreign periodicals. (The English titles, at least, show a talent for making a scientific study sound like a mystery story—particularly *The Fish That Made History, How the Moon Got Its Crater, Sad Story of the Lying Stones, Fire in the Anthill.*) Finally, in May 1940, Ley came to the newborn newspaper *PM* as one of three members of its department of scientific research. He has been there ever since, although he now constitutes the entire department. And through his editorship of the "New Weapons" page of that paper he was inspired to write another book, *Bombs and Bombing: What Every Civilian Should Know* (1941). In this the various types of bombs and methods of attack are described and information on how any attack can be countered by an equally well-prepared defense is given.

Willy Ley is described as tall, with "a mop of black hair and an intellectual, serious face." He will become a full-fledged United States citizen in 1942, having taken out his first citizenship papers in June 1937. On Christmas Eve 1941 he married Olga Feldman, *PM's* writer on physical culture. His profession is his hobby, he says: at least he collects neither stamps, antiques nor matchboxes. *The Lungfish and the Unicorn* may be his first book in English, but it will not be his last. At present he is working on a book telling how the world was formed and developed and tentatively titled *Days of Creation,* a book which Modern Age is expecting to issue early in 1942. If it is characterized by his usual "vigorous style" and "agreeable humor" there may be some danger that the weakhearted will find the past of our planet more attractive than its future.

WILLY LEY

LINDBERGH, CHARLES A(UGUSTUS) Feb. 4, 1902- Aviator

Address: h. West Tisbury, Martha's Vineyard, Mass.

> Bulletin: Upon the outbreak of the Japanese-United States hostilities Colonel Lindbergh issued the following statement: "We have been stepping closer to war for many months. Now it has come, and we must

CHARLES A. LINDBERGH

> meet it as united Americans regardless of our attitude in the past toward the policy our Government has followed. Whether or not that policy has been wise, our country has been attacked by force of arms, and by force of arms we must retaliate." Later Lindbergh offered to help in the war effort and requested active Army air service. Secretary of War Stimson approved Lindbergh's offer.

From July 1941 issue (revised):

"The three most important groups who have been pressing this country toward war are the British, the Jewish and the Roosevelt administration. . . Their greatest danger to this country lies in their large ownership and influence in our motion pictures, our press, our radio and our government." "It is Roosevelt himself who advocates world dominion." "We in America have no reason to fear. . . We lack only a leadership that places America first —a leadership that tells what it means and means what it says." "I believe it is now too late for us to avoid going through in an American way what the nations of Europe have been going through in a European way. We are about to meet the greatest test since the Civil War."

It is Charles Lindbergh speaking in 1941—a new Lindbergh who frequently calls attention to the fact that during the First World War his father was also speaking on platforms against American intervention in Europe. His father was the late Charles Augustus Lindbergh, the son of a Swedish émigré who had been a member of his country's Parliament before coming to the United States. In the antitrust movement of 1906 he was elected to Congress, and there he raised his voice against the "money trust," against the "House of Morgan," against the maldistribution of wealth in the United States. After the United States entered the War in 1917 his book, *Why Is Your Country at War?*, was suppressed by government agents; he himself was called seditious, pacifist, unpatriotic, Bolshevik, and was defeated when he ran for Governor of Minnesota in 1918. His argument was that a war economy further enriched the exploiting classes and impoverished the exploited. Critics of Colonel Lindbergh, however, have looked in vain in his speeches for the same preoccupation with the "little man"; the one thing he has yet to be called is Bolshevik.

Born in Detroit, Michigan on February 4, 1902, Charles Augustus Lindbergh grew up in Little Falls, Minnesota. His mother, the former Evangeline Lodge Land, a teacher of science, was of partially Irish descent. Of her son she said later: "He . . . lived a life more to himself than most boys. . . He does not take strikingly after one of his relatives. . . I would say that the out-of-door life was characteristic of his individuality, coupled with his love of being alone—with, first, animals, and then machines." On their Minnesota farm he "would spend entire days in the woods alone with his dog or some other animal." Then he designed and built a boat up there in the woods, and began to go boating with his dog. Next, for a while, his main preoccupation was "bronco busting," and when he went to the University of Wisconsin in 1920 to study mechanical engineering "he took his greatest interest in pistol shooting." "He finally left the University," she said, "because it was not teaching him what he liked to study, probably. Then he took to puttering about machinery. He had taken to motorcycles and automobiles, going on long tours over the country with them."

It was February 1922 when Charles Lindbergh left the University. On his motorcycle he headed for Lincoln, Nebraska, where he was already enrolled as a flying student with the Nebraska Aircraft Corporation. By summer of that year he was "barnstorming" with another aviator (he had had eight hours of actual instruction), and in April 1923 he bought his first plane—a wartime training plane—for $500. The next day he took his first flight alone, and in March 1924 he enrolled as a flying cadet in the United States Air Service Reserve at Brooks Field, San Antonio, Texas. In November 1925 he was commissioned a first lieutenant in the Missouri National Guard; for a while he was a test pilot at Lambert Field; and in April 1926 he made his first flight as a pilot in the United States Air Mail Service, a flight from Chicago to St. Louis. He was as fond of stunting as he was of practical jokes, and there are dozens of stories telling how, "when a certain St. Louis mail pilot came roaring in with capers which today would bring instant dismissal," the manager of the Chicago field would call: "Bellies to the ground! Here comes 'Slim'!"

For some time a prize of $25,000 had been posted for the aviator making the first flight between New York and Paris. Lindbergh was determined to win it. In February 1927, after finally acquiring the backing of a group of St. Louis businessmen who weren't averse to a little publicity for their city, he went to San Diego to order an airship made—*The Spirit of St. Louis.* It was May 10 when he took off from San Diego. He landed at Curtiss Field 21 hours and 20 minutes later, establishing a coast-to-coast record; and on May 20 he took off from Roosevelt Field alone, bound for Paris, with a few sandwiches in his pocket and some letters of introduction carefully tucked away.

All the world knows what happened after he landed in Paris the next day, remembers his touchingly naïve "I am Charles Lindbergh," the crowds gone mad, the joyful headlines, the receptions by heads of European governments, the special cruiser which President Coolidge ordered to bring the young flyer home. Before Lindbergh landed in Washington he had been promoted to a colonelcy in the Air Reserve, too, and a uniform was sent out to the cruiser, although he refused to wear it. On a triumphal tour of the United States 1,800 tons of paper were thrown on him in New York City alone; streets and even a town were named after him; his blond boyishness, his reticence, and even his apparent discomfort at so much public adulation captured the imagination of the people who cheered him in the streets almost as much as the daring thing he had done. He was "Lucky Lindy"—although even then some said it wasn't luck, that Lindbergh always planned everything very carefully in advance, that he was, in other words, as much a "good American businessman" as he was a great aviator. He was "the Lone Eagle." He was the young hero of whom *The Nation* wrote: "The happiest feature of the country's acclaim of Captain Lindbergh is that for once everybody, of every shade of opinion, can agree." He was a successful author: The New York *Times* syndicated his story of the flight and presented him with $250,000 in return, and his book, *We* (1927), was an immediate best seller. He was United States aviator No. 1: that year the Daniel Guggenheim Foundation for the Promotion of Aeronautics sponsored his air tour to 75 cities in the United States.

And, most of all, Lindbergh was America's "Ambassador of Good Will." In December 1927 he made a "good-will," non-stop flight to Mexico City, staying there a fortnight; "the good results . . . were even registered in the bond market, gains from fractions to as much as 1⅞ points being registered in Mexican bonds on the New York Stock Exchange on December 15." High government authorities next sponsored flights to Central America and the West Indies, including Havana, Cuba; and when in 1929 his engagement was announced to Anne Spencer Morrow (see sketch 1940 Annual), daughter of the late Dwight Morrow, former Morgan partner and at that time Ambassador to Mexico, the publicity attending their romance almost rivaled that of a Presidential election.

They were married on May 27, 1929. In 1930 the Lindberghs made their first transcontinental record together; and that same year a son, Charles Augustus, Jr., was born. Unlike many Americans who have leaped to fame, Lindbergh remained the public's darling. But by this time his feud with the press was well known. Most people blamed it on the callousness of reporters; even during the Lindberghs' honeymoon at sea, for instance, a photographer had pursued them in a motorboat. Others complained that their hero was more than a little inconsiderate, too: at a Cleveland air meet in 1929 he had made a dangerously low dive at a transport over the field (he was trying to warn the pilot to get out of the military zone, he explained); another time he sent a propeller blast of water into reporters' faces ("The trouble with those Washington men was that they simply did not know what to expect from an airplane in a wet field," remarked a friend of his); and puzzled newsreel audiences watched Lindbergh standing beside his plane while Anne struggled out of it with the luggage. All that seemed certain about his relationship to the press, however, was that although he was glad to have publicity for any aviation project at hand, personal publicity irritated him beyond measure, and he had a genius for making reporters his sworn enemies.

By the end of 1930, Lindbergh's personal fortune was estimated at over $1,500,000. Members of the New York Stock Exchange had at one time offered him $1,000,000 if he would not join a commercial aviation firm; he had refused and had accepted positions as technical adviser for both Transcontinental & Western Air Transport and Pan American Airways, with stock in both companies and a large annual salary from each. A domestic air route across the country was later initiated at his personal direction, and he did the official survey work, established operating policies and considered technical questions for a network of international lines.

In 1931 the Lindberghs flew across the Pacific to act as "Ambassadors of American Good Will in the Orient." Not long after their return to the United States, in March 1932, the world was startled and shocked by the news of the kidnapping of their son. Lindbergh insisted upon supervising the search himself, even negotiated with the underworld for the child's return; but two months later his body was discovered near the couple's New Jersey estate. For a long time the case remained unsolved, while Lindbergh's antipathy for the press was intensified by its relentless pursuit of him, particularly after a second son, Jon Morrow, was born in August.

The Lindberghs continued to live in the United States for three years, however, although in June 1933 they gave their estate as a welfare project for children and that same year made a five months', 40,000-mile flight over five continents to survey transatlantic air routes, not returning until December. Then in 1934, after a United States Senate investigation headed by Senator Hugo Black (see sketch this issue) had turned up evidence of graft, the Government canceled air-mail contracts with all private lines. Lindbergh pro-

LINDBERGH, CHARLES A.—*Continued*

tested, and when called to testify was accused by Black of having received from the air lines money to which he was not entitled.

The episode was not pleasant; even less so was the ordeal of appearing in court after Richard Hauptmann was finally arrested that autumn as a suspect in the kidnapping of Charles Augustus, Jr., and the subsequent barrage of unpleasant publicity as the case dragged on through 1935. Finally, in December 1935, the Lindberghs set sail for England with their three-year-old son—in search of more protection against both kidnappers and Yellow Journalism than the United States could afford them. The Chicago *Tribune* announced: "No battle lost could bring the American People so great a humiliation"; Walter Winchell was "ashamed" of being an American citizen. Very few took the attitude of the Dayton *Daily News,* which proclaimed: "It is not a game thing the Lindberghs do. . ." There were rumors that Lindbergh would become a British citizen, but since he kept his commission as a reserve Army flyer as well as continuing as an unsalaried technical adviser for Pan American Airways, these were discounted.

In England the Lindberghs took up residence in the Weald, near Sevenoaks, where they lived in the "L-shaped 'hard-to-heat' house of Harold Nicholson, M. P., and of [his wife], novelist Victoria Sackville-West. . . The grim young man was hard to know, his smiling little wife more friendly but almost equally elusive, seldom seen." There, at least, they had privacy; for a very short time they almost dropped from the front pages. Then, in July 1936, Lindbergh received a letter from the United States military attaché in Berlin asking if he would accept an invitation from Hermann Goering (see sketch this issue) to visit Germany. He would. Once in Berlin, he made his first protracted tour of German aviation centers, was fêted everywhere.

On his return to England, Lindbergh warned Prime Minister Baldwin of Germany's air power. He was ignored, as Churchill and others were being ignored at that time. It is reported that he emerged from the interview "in a cold rage."

The years 1936 and 1937 were spent in England, for the most part, although much time was spent on the continent. There was also a two months' trip to India in an airplane which the Lindberghs purchased and outfitted in England. In May 1937 another son, Land Morrow, was born; and October found them once more in Germany, receiving an ovation at the Munich Air Congress and being entertained by Goering again. When in December 1937 they left their children in England and returned to the United States, Lindbergh brought with him "probably more complete information on Europe's air plans, particularly those of Imperial Airways, than any individual on this side of the Atlantic." After three days of conferences with the Colonel, Pan American called for bids on plans for up to a dozen *Yankee Clippers* "of breath-taking size."

The visit to the United States was brief, however; in March 1938 the Lindberghs found a refuge on the Island of Illiec, near Port-Blanc, France, not far from the island laboratory of Lindbergh's friend Dr. Alexis Carrel (see sketch 1940 Annual), who in *Man the Unknown* openly expressed his contempt for democracy and for the "average man." While living in the United States, Lindbergh had worked for some time at the Rockefeller Institute as a biochemical assistant to the Nobel Prizeman, had designed a perfusion pump for Carrel's artificial heart, in which organs could be revived and made to function again; with him he later wrote *Culture of Organs,* published in 1938.

The Lindberghs were reported as frequent visitors to Lady Astor's Cliveden estate, too, and when the late Neville Chamberlain's visit to Berchtesgaden followed their visit to Russia in August that same year, the Soviet press was indignant. Said *Pravda*: "He had an order from English reactionary circles to prove the weakness of Soviet aviation and give Chamberlain the argument for capitulation at Munich in connection with Czechoslovakia." Although this was denied by his friends at the time (Lindbergh himself remained silent, as usual), in his own article in *Collier's* in 1941 the Colonel stated that at the time of Munich he "went to see one of the foremost leaders of England . . . at the request of other English leaders, to tell him my belief that the strength of German aviation was underestimated in England, and that the strength of Russian aviation was almost as much overestimated." He expressed the same opinion to an unnamed member of the French Cabinet.

The Lindberghs' third visit to Germany in October 1938, coming on the heels of Munich, was unfortunate. It was then that at a banquet (which Lindbergh attended at the request of Hugh Wilson [see sketch this issue], then United States Ambassador to Germany), that Goering presented the Colonel with the Service Cross of the Order of the German Eagle. It was a complete surprise to the State Department. In November the Lindberghs thanked Goering for his hospitality and made inquiries about leasing a house in Berlin; and by December public reaction in the United States had taken such a turn that Lindbergh's name had to be removed from the TWA slogan as no longer an asset to the sale of air travel. The Lindberghs, however, did not go through with their plans to live several months in Germany, but instead spent the winter in Paris. By April 1939 they were all back in the United States, planning to fly back in the spring of 1940 for a trip to Italy. In America the Colonel worked for the Air Corps and National Advisory Committee for Aeronautics, visiting practically all aircraft factories in the United States and maintaining his Army status on this basis. But this four month's tour of duty has been his only active service in the United States Army, and since that time he has not been in close touch with developments in military aviation in the United States.

In August 1939 Fulton Lewis, Jr., Washington commentator for the Mutual Broadcasting Company, invited Colonel Lindbergh to make a speech over that network giving his ideas on the tense international situation. Lindbergh refused at that time, but three weeks later accepted, and two days before his first speech pleading for strict American neutrality in the Second World War he terminated his four months' tour of duty as a reserve officer. (An article in the *Saturday Evening Post* claims that shortly before the speech he was visited by an emissary who offered him a future position as United States Secretary for Air if he would not criticize President Roosevelt's foreign policy, but that he refused.) It was the first of many such speeches. By the summer of 1940 when, after the fall of France, the Colonel predicted the demise of Great Britain within a few weeks, *Social Justice* was doing him the unsolicited honor of backing him for vice-president as running mate for Wendell Willkie.

The full storm of public criticism did not break over Lindbergh's head, however, until after his Chicago speech of August 1940, when he announced that "when the rich become too rich and the poor too poor, something happens." Widely quoted were a recommendation of cooperation with a victorious Germany—"never impossible when there is sufficient gain on both sides"—and an anxiety to "maintain the supremacy of our Western civilization" which reminded some people of an earlier plea for Anglo-American-German collaboration against the "pressing sea of Yellow, Black and Brown."

Of the many attacks which followed, perhaps Ralph Ingersoll's was the most immoderate: "I say very simply that Colonel Lindbergh in his speech in Chicago Sunday identified himself as Spokesman No. 1 for the fifth column." There were other editorials like that. But the *Commonweal* reproved him more mildly: "We may agree with you that America cannot solve Europe's problems, and yet disagree strongly with your solution of the general problem." And the *Christian Century*, which didn't agree with Lindbergh's views on a coming race conflict, still regretted the mud-slinging campaign against the Colonel and called him "America's war enemy No. 1."

In October 1940 came Lindbergh's first outspoken call for "new leadership"—in a radio speech that at the time was interpreted as a plea for the election of Wendell Willkie. Anne Lindbergh's *The Wave of the Future* had just been published, and their first daughter, Anne Spencer, born. In January 1941 the Colonel testified in Congress against the Lend-Lease Act, saying that Germany was producing 5,000 planes a month, that Britain could not win even with the help of the United States and that the United States itself would be in no danger of invasion if she would build up a force of 10,000 modern fighting planes and provide adequate bases for them. "I would prefer to see neither side win," he said; "I'd like to see a negotiated peace." In February, Senator Nye (see sketch this issue) suggested that Lindbergh seek a place in Congress. In March *Collier's* published Lindbergh's *A Letter to Americans*, although the editors themselves were not in sympathy with his views. Finally, in the middle of April, the Colonel joined the America First Committee.

Since that time he has spoken to tremendous and enthusiastic crowds at America First rallies in many cities; he has been constantly attacked by interventionists as ambitious and Fascist-minded and by many non-interventionists as representing something greatly different from genuine American peace sentiments; some have called him "sincere" but "mistaken"; some suspect his motives but respect his information; and there are still others who think of him as a courageous American patriot who is being persecuted for his opinions (he has frequently been denied meeting places and, although he has been given much free time on the air, charges that there is a radio conspiracy against him, too). On April 28, 1941, offended by Roosevelt's reference to him as a "Copperhead," Lindbergh resigned his colonel's commission in the United States Army Air Corps Reserve. Stephen T. Early (see sketch this issue) wondered whether he was also returning his decoration to Hitler, but the New York *Times* found that neither Roosevelt nor Lindbergh was justified, called it an "Unhappy Incident." By May there were rumors that he was planning to run in Minnesota for his father's seat in order to make his voice felt in foreign policies and also that he might run for President in 1944.

It took Lindbergh nine days after the German invasion of Russia on June 22 to make any comment on the new turn in the War. Then he confided that he would rather be in alliance with Germany "or even England" than with Russia. His interpretation of the Second World War was that France and Britain brought it about in September 1939 by refusing to follow his advice and allow Hitler's expansion eastward.

In August, Lindbergh embroidered his theory further by suggesting that Great Britain might be against the United States before the War was over—her changed relations with Pétain's France and Mannerheim's Finland proved her fickleness. In September came the speech which caused charges of anti-Semitism to be leveled against Lindbergh and the America First Committee, though denied by both. And the ex-flyer's next speech, in October, discussed "the procedure" he believed should be followed if free speech ended in America and Roosevelt suspended the 1944 elections, both dangers which, he suggested, were imminent.

Lindbergh has often insisted that democracy no longer exists in the United States; his enemies, in turn, have challenged his devotion to the democratic principle. Harold Nicholson, British author and statesman, wrote as early as October 1939 that after the ordeal that the flyer was subjected to in his own country "he began to loathe democracy," to worship "virility." Such statements as "Racial strength is vital . . . politics a luxury" have also been quoted against him, and his close association with individuals like Law-

LINDBERGH, CHARLES A.—*Continued*

rence Dennis (see sketch this issue) and his acceptance of support from groups like Father Coughlin's have created further suspicion. Press comment in Rome and Berlin is uniformly laudatory of Lindbergh, and translations of his speeches turn up as Nazi propaganda in as out-of-the-way places as Ecuador. However, Lindbergh understandably resents reflections on his patriotism and has several times announced that he would welcome an investigation of his alleged Nazi connections.

Lindbergh is "still thin and young-looking, his wavy hair now receding a little." When he makes a speech his delivery is calm and unimpassioned—he is "calculating and cold," his enemies say, while his friends call him "undemonstrative, reserved, severe." James A. Mollison, the first man to fly from Britain to America, wrote in 1940 that when he met Lindbergh he would talk about nothing but aviation, that he wouldn't smoke, wouldn't drink—wasn't "one of us." Others say that he "seems content to have shut himself off completely from his life before his flight to sudden fame," has few personal friends, is no longer the young practical-joker who put kerosene in his roommate's water pitcher but rather "a very rich man with a very rich man's interests and, presumably, a very rich man's attitude toward life." One reporter, who says he knew him well, remarks: "He has figured everything out. He knows where the America First movement is going to take him." It seems certain, at any rate, that it will not take him away from the spotlight from which he had been retreating for so long.

Who's Who in America

LITVINOV, MAXIM (MAXIMOVITCH) (lĭt-vē′nôf) July 17, 1876- Soviet Ambassador to the United States; Deputy Commissar for Foreign Affairs

Address: Soviet Embassy, Washington, D. C.

"We always realized the danger which a Hitler victory in the West could constitute for us," said Maxim Litvinov in a radio broadcast to the United States and Great Britain on July 8, 1941. The "we," according to some American commentators, was Litvinov himself, and his statement, in the tactful language which underlings must apply to dictators, was tantamount to "I told you so." He reminded the Western powers that they, too, suffered by not taking his advice. As a matter of fact, if it had not been for the bloodshed and the burning cities, the occasion could have been considered a "great personal triumph for Litvinov."

After the Munich pact, symbol of Litvinov's failure in his campaign for collective security, the world at large wondered what the eventual reaction of Russia would be to the unequivocal snub by the Western powers. Those who were "informed," however, said: "Don't watch Russia; watch Litvinov." If he lost his job, Russia would be at best neutral in the inevitable conflict; at worst, an open ally of Germany. On May 1939, Litvinov was relieved of his post; in August, Stalin signed a nonaggression pact with Hitler. In June 1941, Germany invaded Russia; in November, Litvinov was designated Ambassador to Washington and appointed Deputy Commissar for Foreign Affairs.

Maxim Maximovitch Litvinov was born in Bialystok of a poor Jewish family on July 17, 1876. He is using one of his many *noms de révolution*, among which have been Papasha (dear papa) Felike, David Mordecai Finkelstein, M. G. Harrison and others. His real name is Meer Moiseëvich Vallakh, son of Moses and Anna (Perló) Vallakh.

At 17, after he had been graduated by the Bialystok Gymnasium, Maxim volunteered for service in the Russian Army and served five years as a common soldier. It was his army experiences, humiliating for a Jew in the Czar's Army, and his recollections of life in the ghetto at home which turned young Maxim into a revolutionary. In 1898 he joined the Social Democratic Party and in 1901 was arrested and sentenced to exile in Siberia. He never reached the Ural Mountains, but escaped to Switzerland, where he met Lenin, continued his revolutionary activities and edited a paper, *Iskra* (The Spark).

With a group of revolutionaries, he returned illegally to Russia and worked in the underground organization which precipitated the unsuccessful 1905 revolution. After "Bloody Sunday" and the collapse of the Party's plans, Litvinov was engaged in storing contraband arms in a secret depot on an island near Tallinn.

The following year found Maxim Litvinov quietly editing a legal newspaper, *New Life*, in St. Petersburg. On the side, however, he continued his revolutionary activities and in 1907 was sent abroad by Stalin to sell some bank notes seized in a bank raid at Tiflis, an action which the Czarist press characterized as a "holdup" rather than an act of revolution. In the course of his successful financial negotiations, Litvinov was arrested in Paris and expelled from France.

After a brief return to Russia, Litvinov went to London, where he worked for 10 years as salesman, clerk, teacher of languages and writer. In 1916 he married Ivy Low, an English radical writer, one of whose uncles was a former Lord Mayor of London, and another, Sir A. Maurice Low, the Washington correspondent of the London *Post*. It was during this period that Litvinov acquired his fluent English. His accent is irremediably tainted by years of association with London's East End slums, and came in for much ridicule during his early years as a diplomat.

When the First World War started, the underground revolutionary movement gained new momentum. Litvinov met Lenin and Bukharin in Zürich for a revolutionary conference and in 1917 Litvinov, under surveillance of the English secret police, became the Soviet Government's first representative to England. Since the British Government did not recognize the Soviet Government, it did not know what to do with him until August 1918 when the police arrested him and held him as a hostage for the British agent, Bruce Lockhart. When he was released, it was on condition that he leave England.

On his return to Russia, accompanied by his English wife and his son, Mischa, Litvinov became a member of the collegium of the *Narcomindel* (Foreign Office) and remained Assistant Commissar for Foreign Affairs under Tchicherin until 1930, when he replaced his superior as Commissar. His diplomatic career took him to Stockholm in 1918, Tallinn in 1919, Copenhagen in 1920 and Geneva in 1922. As a member of the Soviet delegation he made agreements with the American Relief Commission in 1922 and commercial treaties with Germany and Norway. In 1926 he began his annual "explosive" visits to disarmament *pourparlers*, where he "provoked the successive amusement, indignation, rage, and finally respect of the Western powers." In 1933 he came to the United States and successfully negotiated recognition of the U. S. S. R. In 1934 he piloted the Soviet Union into the League of Nations, and until 1939 he fought at Geneva for collective security.

At Geneva, Litvinov was responsible for one of the most dramatic moments in the history of mankind. The time was March 19, 1928; the scene, the meeting of the Preparatory Disarmament Committee of the League of Nations at Geneva; the protagonist, Maxim Litvinov, representative of a nonmember country. "It seems to me," he said, "there has been more than enough discussion of disarmament. . . The Soviet Union declares it is ready to abolish all military forces as soon as a similar decision is passed and simultaneously carried out by other states. The Soviet Government asks the other Governments here if they are also ready."

Sovfoto

MAXIM LITVINOV

Of course they were not ready and there is little doubt that Litvinov knew his bluff, if bluff it was, would not be called. The newspapers, however, made much of it, and peace-loving people all over the world saw a Utopian dream just miss reality.

The delegates of the other powers immediately rushed to their own defense. Litvinov was "sabotaging disarmament." By exposing the hypocritical motives governing the delegates, he rendered them ridiculous and thereby ineffective. They accused him of speaking over their heads to the proletariat of their countries, arousing hopes that neither he nor any other man or country could fulfill.

Early in 1935 Litvinov began his campaign to bring the Western democracies into a proposed "Eastern Locarno" to preserve the *status quo*. With the increasing strength of Fascism and the successive violations of the Versailles Treaty (to which Russia had not been a party), Litvinov increased his efforts to bind the Western democracies to a promise of mutual assistance. When Russia entered the League in 1934, Litvinov had promised the Western Powers that the Third International and political aggression would be put into the background. In May 1935 Laval signed a Franco-Soviet Pact, and two weeks later a Czecho-Soviet Pact was signed which provided for mutual assistance against aggression, provided France helped the victim.

(Continued next page)

LITVINOV, MAXIM—*Continued*

It was the Munich pact to bring "peace in our time" that defeated Litvinov and lowered his prestige in the Kremlin. After Chamberlain, Bonnet, the capitulation at Munich, the ill-dissimulated Franco-British hesitations, Stalin claimed that the international policy of his supposed allies was deceptive and vacillating, and that Russia would have to abandon hope for collective security and proceed to further her own interests.

Russia's most successful diplomat was not her most trusted Bolshevik. Within the Kremlin he was respected but neither a "dominant" figure nor a member of the powerful *Politburo*. As a Jew and the chief proponent of collective security against Fascism, Litvinov was unable to negotiate with Germany. In May 1939, therefore, Premier Molotov (see sketch 1940 Annual) relieved the Foreign Commissar of his portfolio and retained it with the premiership. In March 1941 Litvinov was dropped from the Central Committee of the Communist Party because of an "illness" from which he recovered as soon as Hitler invaded Russia. According to Walter Duranty, it was natural enough for him to withdraw when he ceased to be Foreign Commissar.

Until the German invasion of Russia, June 22, 1941, Litvinov was living in Russia. It was reported in the foreign press that he was exiled and perhaps executed. When Stalin took down his former plans for cooperation with Great Britain and the United States from the shelf and dusted them off for current use, he brought out Litvinov, alive and apparently as healthy as ever. The former Foreign Commissar's first job was to act as unofficial liaison officer between the Soviet Union and the United States and Britain. He was expected to become Joseph Stalin's "Colonel House" and visit London and Washington as the Soviet Ambassador at large. On November 6, 1941, however, it was announced that Russia's "ace diplomat" was named Ambassador to Washington to replace Oumansky (see sketch this issue), who had gone to Russia with the American supply mission and had not returned. Five days later his appointment as Deputy Commissar of Foreign Affairs was announced. The appointment of Litvinov to these important posts was taken as an indication not only of Russia's desire for close cooperation with the United States, but also of the fact that the Russians "do not expect military developments in the near future to cut short this cooperation." He arrived in Washington, after a long and difficult trip, on December 7 and on December 11 was able to set at rest rumors that the U. S. S. R. might consider a separate peace. "We have a common cause and a common enemy," he said. A few days later Madame Litvinov, speaking to 10,000 at a Russian war relief rally in Boston, affirmed: "Our war is your war just as your war is our war."

Described as a salesman for the Soviets who "has the maddening persistence of a house-to-house oil burner vendor in a New Jersey suburb," Litvinov has been noted in international circles for his keen intelligence, his double-edged wit, and his lack of social graces. He wore the proper clothes of a diplomat but without the usual elegance. He failed to give diplomatic dinners and balls or to be properly impressed by the entertainment of his colleagues. He is "pudgy," and wears horn-rimmed spectacles to aid his gray-green eyes. His appearance is "far less like an international statesman than a New York cloak and suit salesman." His chief quality has been analyzed as an "inveterate stubbornness in argument which arises from his unvarying consistent point of view, plus an elasticity in negotiation that few statesmen can equal."

LLOYD OF DOLOBRAN, GEORGE AMBROSE LLOYD, 1ST BARON Sept. 19, 1879—Feb. 5, 1941 Late British Secretary of State for the Colonies

> Bulletin: On February 5, 1941 Lord Lloyd died in London of a recurrence of a type of poisoning contracted while he was campaigning in the desert with Lawrence of Arabia.

From January 1941 issue:

A picture of Lord Lloyd might well be called: "Portrait of an Imperialist," for the British Empire has been the inspiration of his career and he holds fast by all for which it stands. Compton Mackenzie once wrote to him: "I began for the first time in my life to appreciate that Imperialism could touch a man's soul as deeply as religion. . . If anyone could have converted me to Imperialism it would have been you with your passionate sincerity and high purpose and infinite seriousness."

Lloyd, in his full life, has done all the "right" things and been to all the "right" places. He has been by turns diplomat, army officer, bank director, Governor of an Indian province, Conservative Member of Parliament, High Commissioner, chairman of the British Council and Minister of the Crown. And in all these things he has shown himself a man of abundant energy, fearless, imaginative, fond of panoply and ceremony, a natural ruler of men, with the ruler's defects as well as his virtues.

George Lloyd was born at The Priory, Warwick, the son of S. S. Lloyd, member of the big banking house which runs Lloyds Bank. After schooling at Eton and university life at Cambridge, where he played a good deal of polo, George went into business in London. This didn't last long, for he already was smitten with wanderlust. At 15 he had been to Fez, Tangier and Gibraltar, and in 1899 he began to wander over Central Asia, India, the Persian Gulf, Syria and Turkey, and even went into Tibet over the Zogi La Pass. He wasn't traveling to see scenery or picturesque costumes: his interest was in studying political and social conditions, in learning the nature of the Oriental mind. To do this he became fluent in Turkish and Arabic.

In 1905, after his travels, Lloyd was appointed honorary attaché to the British Embassy at Constantinople, now Istanbul. One year later came his first big job: the working out of a trade route in Turkey, Mesopotamia and the Persian Gulf. He continued to study Turkish affairs and was in Constantinople in 1908 when the young Turks drove out Abdul Hamid. In the Balkan War of 1912, though British opinion was overwhelmingly with the Serbs and their allies, Lloyd was with Enver Pasha in the Tchataldja Lines.

Before this, however, Lloyd had returned to England and had entered Parliament in 1910 as Conservative Member for West Staffordshire. He held this seat until 1918, though all through the First World War he was engaged in military service with the Warwickshire Yeomanry—in Egypt, Gallipoli, Mesopotamia and the Hedjaz—and rose to captain, won the D. S. O. and was mentioned in dispatches six times. In 1917, after being present at the first Battle of Gaza, he was sent to the Hedjaz to assist T. E. Lawrence, who was fomenting the Arab revolt against the Turks. He proceeded with the advancing Arab forces as far as Jefer, but wasn't present at the fall of Damascus. Of him Lawrence wrote: "To him many things were needful; and so he did not stay very long with us. He did not see how much we liked him."

LORD LLOYD

When the War was over Lloyd was offered the post of Governor of East Africa, but refused it. When he was offered the Governorship of Bombay, however, he accepted and was made a Knight of the Grand Cross of the Indian Empire. In Bombay Lloyd's regime was an iron-handed one—he even went so far as to have Gandhi arrested. Yet he is remembered there not only as the author of repressive measures and policies but also as the creative thinker who inspired fine housing schemes and the making of a great dam across the Indus at Sukkur, now called the Lloyd Barrage.

Lloyd's term as Governor expired in 1923 and he returned to Parliament in the following year as Conservative Member for Eastbourne. One of his associates in the House was the present Lord Halifax, with whom in 1919 he had collaborated on a book called *The Great Opportunity*. In 1923 Lloyd was made Privy Councillor and a Knight of the Grand Cross of the Star of India and in 1925 he was raised to the peerage as Baron Lloyd and sent out as High Commissioner for Egypt and the Sudan to succeed Lord Allenby.

Lloyd found Egypt, as he had previously found Bombay, in a highly disturbed political state following the assassination of the Sirdar, Sir Lee Stack. It was again, he felt, a case for the pressure of the iron hand. This lasted until 1929 when a Labor government came into power in England. This government wanted to push an arrangement for at least partial independence for Egypt through to completion, but "Lord Lloyd refused to grant the additional concessions to Egyptian

LLOYD OF DOLOBRAN, GEORGE AMBROSE LLOYD, 1ST BARON—*Cont.*

nationalist opinion to bring this about." His view was that the safety of Britain's vital trade route to India through the Mediterranean and the Suez Canal would be endangered; consequently he resigned.

Lloyd wasn't heard much of again until 1937, when he became chairman of the British Council, a newly formed organization created to promote British cultural ideas and ideals in foreign countries. Successful institutes and classes were formed in many countries, but the Government was far from generous in its contributions and in some quarters it was felt that Lloyd wasn't the right man to head this work.

In the Churchill Government, formed in May 1940, Lloyd is Secretary of State for the Colonies, a man who frankly supports the present British policy in Palestine, who is considered in the Cabinet to be a reinforcement on the Right, and most important, a man who is known to retain his stand for administrative efficiency, patriotism and energy, qualities much in demand in the present War crisis. He is also the author of *The British Case* (1940), a brief résumé of War issues from the British point of view. The London *Times* found it "as lofty, straightforward and succinct a presentation of the British case as could be wished"; the *Manchester Guardian,* however, while respecting him for "the sincerity and consistency of his Tory convictions," decided that it would be unfortunate if anyone got the impression that he was stating the opinions generally held in Great Britain, or that his book "represents the mind of the Government." His view of the Nazi-Soviet pact, for instance, was that Hitler had betrayed Western Europe—presumably in not going immediately ahead with his plans for eastward expansion.

In 1911 Lloyd married the Honorable Blanche Lascelles, who was Maid of Honour to the late Queen Alexandra. They have one son and heir, the Honorable Alexander David Frederick Lloyd, who was born on September 30, 1912.

LOEWY, RAYMOND (FERNAND) Nov. 5, 1893- Industrial designer

Address: b. 580 Fifth Ave, New York City; h. Sands Point, Long Island, N. Y.

America has no industrial designer with a work-career more dynamic than that of Raymond Loewy. During 1940 products manufactured from his design specifications, it is said, have aggregated more than one-half billion dollars. Among his fifty clients Mr. Loewy includes five national railroads, three national automobile companies, four airplane manufacturers, two streetcar firms, three manufacturers of cosmetics, a bus company, six department and chain stores, and three steamship lines.

Early in 1940 Mr. Loewy made a trip from his Long Island home to Palm Springs, California, by auto, train and plane. All of these travel vehicles were personally styled by him. For Studebaker, Loewy designed the *Champion* passenger car; the *Broadway Limited* of the Pennsylvania Railway was once a blueprint in his drafting room; and for Transcontinental and Western Air, Incorporated, he designed the interiors of the Douglas and Boeing *Stratoliner* transports.

Whether he travels or stays at home, Loewy has right at hand his own designed products. In his kitchen he may have his own model of *Frigidaire,* or Sears Roebuck's *Coldspot* refrigerator. In his bathroom one may find Loewy-designed Pepsodent packages and toothbrushes or the Schick electric shaver; his wife may have her choice of perfume and toilet packages of Woodbury's, Jergen's, Elizabeth Arden's or Schiaparelli's products—all package-designed by her husband. And in the Loewy cellar there may even be Loewy-designed bottles of Seagram whiskey. If Loewy has his way, too, he will be safe from bombs in a place of his own designing—his latest idea is for a helicopter landing field in mid-town New York City, under which would be a great air-raid shelter.

The man whose ideas of design, present and future, are strictly streamlined Americana, was not born in this country. That event took place in Paris, France, on November 5, 1893; he was the son of Maximilian and Marie (Labalme) Loewy. Raymond Loewy was a student at the Chaptal College, Paris, from 1905 to 1910, and was graduated from L'École de Lanneau in 1919. During the First World War he was a captain in the French Army, winning the Légion d'Honneur and the Croix de Guerre.

After the Armistice, Loewy came to the United States to take up a career in engineering. Only an incident occurring on the voyage changed these plans and resulted in Loewy's American career's starting in the fashion field. On shipboard he was asked to make a charitable donation and could not afford it: he had just been discharged from the army with a brilliant record but with scarcely a *sou* to his name. But Loewy could draw, and as his contribution he made a sketch of one of the young women passengers. This was sold at auction to the British Consul General of New York at an exceptionally high price for an unknown artist—$100. As a result, young Loewy decided to go into fashion illustration. He began designing for *Vogue* and *Harper's Bazaar*—later did window displays for Saks Fifth Avenue, Macy's and other New York stores.

In 1926 Mr. Loewy decided to apply his taste for simple lines and his flair for fashion to industrial design. He designed an automobile for a national manufacturer; then, in rapid succession, office equipment, refrigerators, washing machines, stoves, heaters, etc. During the late '20s manufacturers became conscious of the trend toward well-styled and good-looking merchandise to increase sales-appeal. An example of what good design can do occurred in 1934 when Sears Roebuck consulted Loewy on engineering and styling their refrigerator. Loewy produced the now-famous *Coldspot* unit that was a complete departure from anything this company (or any other) had done before. From the first it was a notable sales success. In 1934 Sears Roebuck sold 140,000 units; in 1937 the number had jumped to 275,000. The design won first prize at the Paris International Exposition in 1937. Loewy is now also consultant stylist to the Frigidaire Corporation.

Raymond Loewy is probably the most important industrial designer in the field of transportation. In its September 1940 issue the magazine *Art and Industry* describes him as "perhaps the best-known in Europe. Raymond Loewy, whose organizations have been responsible for the design or redesign of products as wide apart in size and use as railway engines and saucepans, has during the past few years penetrated the British market to an unparalleled degree. Loewy himself can be classed as a public utility. Americans travel on his transcontinental buses, in his streamlined ships, his speed-conditioned automobiles, by the locomotives which are his special pride. Models in the Chrysler Motors Building at the New York World's Fair revealed him as a go-getter visionary of the Wellsian brand. The elliptical taxi, the sealed air liner, the streamlined, rear-engined car: these might have been lifted from Wells' *Things to Come.* The important difference is that many of Loewy's projects have already arrived."

Among notable Loewy creations are Greyhound bus terminals, Savarin bars, International Harvester equipment and the W. T. Grant stores. The fate of the *Morro Castle* set him to thinking of all-metal ships' interiors: accordingly chairs, closets, bureaus, tables, even lamp shades have been designed in metal by him for Pan-American ships such as the *Panama* and the *Cristobal.*

Loewy's own penthouse office and reception room are said to resemble "a Hollywood production." He employs some 75 designers: architects, engineers and artists, all busy in huge, beautifully lighted workrooms. "There is the pleasant sound of music from radios; Loewy thinks it stimulates the imagination." In his own personal apartment Loewy has used laminated plastic materials in the design of his furniture.

In a recent address to Harvard University students of the School of Business Administration, Loewy said that executives "must give major consideration to esthetics in industry." He believes that simple, esthetic lines are more pleasing than designs submerged under superfluous ornamentation. He attempts to reduce a product to its absolute essentials without reaching the stage of aridity. He feels that the industrial designer must function as artist, engineer, silent salesman; and must coordinate his efforts so that, if possible, manufacturing costs may be lowered. The present design for taxis is his one big grievance. His idea of a taxi would be a light, short, three-wheeled affair, with doors opening automatically when the cab stops at the curb; the whole vehicle would be small enough to occupy very little parking space, and would be operated most economically.

RAYMOND LOEWY

Mr. Loewy is the recipient of many honors and prize awards. These include the degree of Royal Designer of Industry, conferred on him by the British Royal Society of Arts, which thus dignified an American for the first time in its 185-year history. In 1906 (at 13) he won the J. Gordon Bennett Medal for a model airplane that established a distance record; he owns the Branger Cup, given to him for the fastest speedboat ever built; and he was awarded the Gold Medal in the transportation field at the Paris Exposition in 1937, and first prize in the "All-American Package Competition" in 1939.

Soon after arriving in this country Loewy became a naturalized citizen, and in 1931 he married Virginia Thomson of Englewood, New Jersey. He lives in New York City, and often lectures at New York University and at the New School for Social Research. He says that his hobby is "deep sea diving," and of his future plans he states: "My future plans are to find a practical way to make plans for the future."

Who's Who in America

LOMAX, ALAN Jan. 15, 1915- Musical specialist; assistant in charge Archive of American Folk-song, Library of Congress

Address: Division of Music, Library of Congress, Washington, D. C.

Speaking before a group of librarians, Alan Lomax once said: "For the past five or six years, since graduating from college, I have been traveling the roads, smooth highways, the rough mountain tracks, the corduroy lumbering roads, the little muddy lanes and the wagon tracks, putting down on records what the people of America—the hardhanded and fey people of this country—have been singing and saying for the past hundred years and more. Having listened and recorded, I feel that these people have their own version of American history, their own literature, their own music . . . as worthy of being carefully guarded, stored up, used and studied as the accumulation of printed culture in libraries."

This young man whose main occupation in life is seeing to it that this folk art is recorded and studied was born on January 15, 1915 in Austin, Texas, the son of John A. and Bess (Brown) Lomax. His father came to Texas by oxcart soon after that state was admitted into the Union. Nine of the old cattle trails crisscrossed the state, and riders on the trails had their six-shooters ready for rustlers or rattlesnakes, whichever showed up first. In addition to songs of the trail the Lomaxes—there were two boys and two girls—heard songs of canebrake and cottonfield, Spanish settlers and shantymen of the Gulf ports, railroads and camp meetings, and, eastward in the Red River country, the deep bottom blues.

A Sheldon fellow of Harvard University in 1910, his father, John A. Lomax, soon completed a first folk-song collection, *Cowboy Songs and Other Frontier Ballads*. (In it was a song whose words and music had been given to him by a Negro camp cook; the song, *Home on the Range*, has since swept the country.) He then began the Library of Congress Archive that in 1941 comprises some 12,000 titles. Thus for Alan, and for his sister Bess (who has since sung with him on the radio), acquaintance with native music began in the home. There, and on long trips in the family car, they were never without music. They sang, and they sang all the time—the songs that document America more pertinently and often more accurately than the history books—songs of every phase of the country's rich development.

Alan went to Terrill Preparatory School, Dallas, to Choate School, had a year at Harvard and took his B. A. at the University of Texas. He then interrupted his studies at the latter University to go on his first recording trip with his father in 1933. In an old car and with a tent they headed for the Brazos bottoms and the prison camps. Alan's first experience in actual collecting is described by him in the following words: "That evening, when darkness had come up out of the bottom and settled over the whole plantation, we lighted a little kerosene lamp inside the schoolhouse and found that the room was full of Negroes—old men, peering at us out of dim eyes; young men, hats cocked at a rakish angle, red bandannas high about their throats, sitting off away from the women; women with babies; big-eyed children; young women with their backs to the men, giggling."

Another session was at a sharecropper's cabin, and "out in front lay the yard, deep with dust, turned silver by a full moon. . . Presently the guests began to arrive, some on horseback, some appearing suddenly on foot out of the tall weeds; rattling up in flivvers or driving their squeaking wagons. . .

De sun gonna shine in my back
door some day,
De win' gonna rise an' blow
my blues away..."

This trip was financed by a grant from the Carnegie Corporation, its results deposited in the newly constituted Archive of American Folk Song in the Library of Congress, and John A. Lomax made its first curator. In the years from 1933 to 1935 he and his son prepared and published their first collaborations, *American Ballads and Folk Songs* (1934) and *Negro Folk Songs as Sung by Lead Belly* (1936).

In 1935 Alan returned to college to his undergraduate passion, epistemology. In 1936 he wrote a paper on Saunders Pierce, founder of pragmatism and teacher of William James. Graduated that June, he spent a few months in Mexico, then came to Washington to assist his father in the Library, with the expectation of returning to epistemology after two years or so. It was December of that year when he revealed to librarian Putnam that he had had a letter from Zora Neal Hurston, well known Negro writer, concerning the possibilities of folk-music collecting in Haiti. Putnam immediately arranged for his travel expenses and recording equipment, and finally young Lomax was off on his first solo jaunt.

His fiancée, Elizabeth Harold—pretty, blonde and young—followed him to Port au Prince, where they were married in February 1937. There the age of consent was 21 for the bride and 23 for the groom, and since the former was 19 and the latter 22 it was necessary for the President of Haiti to waive the bans before they could be married. It was done impressively, by parental consent and governmental decree, and the couple was presented with a long illuminated scroll in official French. They saved all the records made during the trip but lost the scroll, and to this day the precise date of their marriage is a matter of conjecture.

In Haiti the Lomaxes lived in a thatched hut, recorded native songs and voodoo dance rituals from 7 p. m. to anywhere between 2 and 5 a. m. each morning. They traveled about in a strictly native jollopy, painted yellow and trimmed in scarlet. "It was," said Alan, "like a great, square-cut, tropical fowl, a fantastic bird with an olive green beak and a black toupee, and it was named *Fleur d'Innocence.*" When they returned Alan helped his father to edit a new edition of *Cowboy Songs and Other Frontier Ballads* (1938). That was in May 1937. In June he was named assistant in charge of the Archive of American Folk Song under his father, its curator, and Dr. Harold Spivacke, who heads the music division; and both that year and the next he and his father carted their portable recording apparatus down the Library's quaint winding stairway and piled it into their car for further recording trips.

It seemed very unlikely, after all, that epistemology would turn out to be his profession. Even while taking a graduate course in anthropology at Columbia early in 1939 he continued his work in the folk-music field. In the spring of that year he supervised an album by Lead Belly (Huddie Ledbetter), the great folk singer who, "with his 12-string guitar, had sung his way out of both the Texas and Louisiana penitentiaries," and the success of this album of "Negro Sinful Songs" encouraged recording companies to bring to the public more and better examples of folk music. In the summer he did a documentary series of recordings by Ferdinand (Jelly Roll) Morton—pianist, composer, orchestra leader—one of the outstanding pioneers of jazz.

The early method of recording was to take a verse or two on the machine and write down additional verses. Gradually the idea of documentary records evolved. Some would begin with a dialogue between informant and collector. Others would continue the informal dialogue throughout the record. Finally as many as 75 records would be made to document the story, say, of Aunt Molly Jackson, "ballit" singer from the coal-veined hills of Kentucky. And funds for making some of these records available at cost to musicologists and others interested in grass-roots music were supplied by the Carnegie Corporation.

This folk music also reaches some 15,000,000 young listeners via Lomax's "Well-Springs of America" Series broadcast on *Columbia's School of the Air*. Begun in 1939, as the series continued it became more and more a survey of a state or an area, and radio listeners began paying tribute to this documentary approach by writing: "I like to listen to the songs about the unknown heroes of labor and the farms," or, regarding programs of Negro songs: "In them one sees courage and a rhythmic dignity." Folk singers are guests and contribute to material used in the script, but Lomax frequently sings too: he was good enough to entertain the King and Queen of England at the White House in 1939. He also collaborates with director Nicholas Ray on the popular CBS feature, *Back Where I Come From,* featuring folk singers, tall tales and local lore; and in the summer of 1941, while off the air for the season, he was hard at work with his father and Ruth Seeger putting the finishing touches to *This Singing Country,* which was published by Macmillan.

ALAN LOMAX

In January 1941 he was appointed consultant on the Library of Congress Radio Project, set up by the Rockefeller Foundation to do experimental work in the field of educational radio. In 1942 he plans to travel in South America making more folk song records.

Slight of build, six feet tall, with dark brown eyes, wide forehead and black hair, Alan Lomax has a keen glance, a quick warm smile and a thoroughly democratic manner. He includes among his friends innumerable folk singers, many of them obscure and impoverished, others, like Woody Guthrie, well known. Such prominent American composers as Earl Robinson, Charles Seeger and Roy Harris are other friends of his. He works as long as 12 hours a day and when not working he is, like as not, playing his guitar and singing either for friends or for strange audiences. Sometimes, too, he finds time to go sailing, a favorite recreation, or to settle down with a good book for a few hours.

LONE RANGER See Graser, E. W.

LOSOVSKY, SOLOMON ABRAMOVICH *See* Lozovsky, S. A.

LOZOVSKY, S(OLOMON) A(BRAMOVICH) (lô-zôf'skê) 1878- Vice-Commissar for Foreign Affairs, U. S. S. R.

Address: c/o Commissariat of Foreign Affairs, Moscow, U. S. S. R.

The New York Public Library

S. A. LOZOVSKY

"The blitzkrieg is a washout."

"The German claims of mighty victories remind me of the story of the hunter who shouted: 'I have caught a bear but he won't let me go!' "

With these attention-getting press dispatches, Vice-Commissar Lozovsky launched his new career as official press spokesman for the Soviet Union. A veteran Bolshevik, renowned for the number and variety of his speeches, writings and arrests, Lozovsky left the field of trade-union organization in 1939 to become Vice-Commissar for Foreign Affairs and in June 1941 added to his activities those of assistant director of the Soviet Information Bureau.

Like most of the Russian revolutionaries, Lozovsky has retained his party pseudonym, chosen originally to protect his real identity. The name is probably derived from Lozovaga, a small town where he began his revolutionary activities. He was born Solomon Abramovich Dridzo. His father was a Hebrew teacher whose earnings were not sufficient to support his family adequately, and Solomon's earliest recollections are of extreme poverty and privation. At the age of 11, young Dridzo left the classroom to help the family income and worked both as blacksmith and as butcher.

At the turn of the century, when he was 22, Lozovsky, the revolutionist, took the place of Dridzo, the hard-working son of the village "Malamud." In Panyutena and Lozovaga he organized Social Democratic Clubs among the railroad workers. Looking for broader fields of work, he left for the big city, St. Petersburg, where he very soon found himself in jail in the first of the many arrests which were to dot his colorful career. In 1904, after a year's imprisonment, he was expelled from the capital and sent to Kazan, where he found work as an agitator for the Kazan Committee of the Russian Social Democratic Revolutionary Party.

October 1905, date of the abortive October Revolution, when blood flowed in the streets of St. Petersburg and scattered riots and uprisings spread over Russia, found Lozovsky prominent in the Kazan agitations. As a result, he was tried and arrested several times.

He then moved the center of his activities to Kharkov, where in 1908 he was arrested and sentenced to exile in Siberia. He escaped on the way to his destination and went to Paris, where he remained from 1909 to 1917, an active member of the Paris division of the Russian Social Democratic Party.

During the First World War, Lozovsky was editor of several Russian publications in Paris, among them *Golos* (The Voice) and *Nasha Slovo* (Our Word). He was chosen secretary of the Hatters Trade Union and Bakers Cooperative in Paris and at the same time took active part in numerous international organizations, both political and trade union. As a result he was expelled from France.

In 1917 Lozovsky returned to Russia, where at the third All-Russian Conference of Trade Unions he was chosen secretary. In July of the same year he joined the radical Left wing of the Social Democratic Party, the new Russian Communist Party of the Bolsheviks. By the end of 1917 he was expelled from the ranks of the Party because he openly opposed Party policies, especially those dealing with trade unions, but in 1919 he made his peace with the orthodox and was readmitted.

From 1918 until 1939 Lozovsky was an executive member of most of the important trade-union organizations. In February 1918 he was chosen secretary of the Textile Workers Union and in July he became secretary of the Railroad Workers Union. He took part in the international trade-union organization which in 1921 became known as the Red International of Labor Unions. He was one of the founders of the *Profintern* (Trade Union International) and was chosen general secretary in April 1921.

As president of the Soviet delegation, Lozovsky attended the All-China Conference and the Pacific Trade Union Conference. He was candidate for membership in the praesidium of the Comintern and, during the election of deputies to the All-Russian Congress of the Soviets, he was elected deputy from Kurgizy, U. S. S. R., to the Soviet National assembly and a member of the council of the Communist Academy.

As one of the founders of the *Profintern,* Lozovsky was editor in chief (October 1928 to May 1933) of the official organ, *The Red International of Labor Unions Magazine,* published monthly in English, Russian, German, French and Spanish. His editorials cover a wide variety of topics from concrete methods of trade-union organization to more abstract discussions of internationalism. His style is direct, repetitious and full of slogans and catch phrases. His favorite expression is "self-criticism," and few of his articles fail to discuss the need for improvement from within. He continually preaches internationalism, singleness of purpose and revolutionary fervor. In his own life, although he has on occasion been at odds with the Party line, he has never wavered from following the correct procedure as he saw it.

In June 1939, three months before the Nazi-Soviet pact, Lozovsky was appointed Vice-Commissar for Foreign Affairs and exchanged the trade-union platform for the diplomatic banquet. In June 1941, at the outbreak of the Russo-German War, he was named assistant director of the Soviet Information Bureau, and most of the communiqués issued from Russia today are by Lozovsky. He is certain that "the farther east the Germans go the closer Hitler approaches the grave," and he has further described Nazi allegations of success to be "as much like the truth as Goebbels looks like Apollo."

His proven ability to hold several positions without neglecting the duties of any of them makes him especially well fitted to execute the exacting demands of the important offices he now holds. Described by *Time* as "rambunctious" and a "comedian," the new Soviet spokesman is a small, hirsute and energetic. Quentin Reynolds found "no trace of a peasant accent in his cultured speech. In addition to Russian, he speaks perfect French and German. He speaks English reluctantly but much better than he realizes, and his Spanish is good." Reynolds added that although the correspondents in Russia hate censorship, they "respect his because he does not lie."

International Who's Who

LUBIN, ISADOR (lū'bĭn) June 9, 1896- Economist; assistant director of the Labor Division of OPM

Address: b. The White House, Washington, D. C.; h. 2737 Devonshire Pl, N. W., Washington, D. C.

Dr. Isador Lubin, economist and statistician, is a "progressive" with pro-labor leanings who has always shared the broad philosophy of the New Deal. It is easy to understand why he has filled increasingly important positions in Washington in recent years, climaxed by his appointment in June 1941 as aide to Harry Hopkins (see sketch this issue) in the organization and carrying out of the lease-lend program. Although this appointment, which necessitated Lubin's moving into the White House, was surrounded by secrecy, it was generally accepted that his special problem was to keep track of the nation's armament program—finding out where the money was going, how much material England was getting, the effect of the spending on domestic economy.

ISADOR LUBIN

This sort of economic and statistical checkingup has been bald, spectacled Isador Lubin's specialty almost since he left college. He was born in Worcester, Massachusetts, the son of Harris and Hinda (Francke) Lubin, and after grammar and high school in Worcester attended Clark College there. After he received his B. A. in 1916 he went on to the University of Missouri for a year's graduate study which was followed by a year as economics instructor. With the First World War, Lubin entered government service, first as a statistician for the United States Food Administration, then, in 1918 and 1919, as a special expert on the United States War Industries Board.

His job here finished, Lubin returned to academic life and for a year continued his graduate studies, this time at the University of Michigan, where from 1920 to 1922 he was an assistant professor of economics. From here he went to the Brookings Institution in Washington, D. C., a research institution of wide repute which sometimes annoys New Dealers very much, and with the exception of one year, in 1924, when he was associate professor of economics at the University of Missouri, he was associated with this organization for nine years. From its graduate school he received his Ph. D. in 1926; he was a member of its research staff specializing in labor's economic problems; he was a member of its teaching staff.

While still at Brookings, Dr. Lubin assisted the Government in 1928 and 1929 as

LUBIN, ISADOR—*Continued*

economic advisor to the Senate Committee on Education and Labor in its investigation into unemployment and in 1931 as adviser to the Committee on Manufacturers in its investigation into economic planning. Then, in 1933, he was made United States commissioner of labor statistics and took over the supervision of the Bureau's compilation of data on employment, pay rolls, labor turnover, wage and hour rates, cost of living, prices, industrial accidents and industrial agreements and its research into industry and living conditions.

From the time he became commissioner of labor statistics, Dr. Lubin functioned as one of the Administration's high ranking advisers on wages and prices, working quietly behind the scenes year after year during the Roosevelt Administration. He also took on an impressive list of duties for the Government. He has been chairman of the Labor Advisory Board of the Federal Emergency Administration of Public Works; vice-chairman of the United States Central Statistical Board; a member of the Advisory Committee to the Federal Co-ordinator of Railroads; a member of the Technical Board of the President's Economic Security Committee; a member of the Cabinet sub-committee on the economic status of the cotton textile industry; a member of the Industrial Resources Committee; and, from 1938 to 1940, a member of the Temporary National Economic Committee.

When the TNEC conducted the most searching investigation of the internal economic and financial structure of industry made since the Pujo money trust investigation 29 years before, Lubin not only helped direct the general conduct of the investigation, but also appeared as witness before the Committee. Flanked by charts portraying the various aspects of the structure and performance of the economic system, he demonstrated the need for an adjustment to a better set of working principles made necessary by the weakening of the automatic force of competition. His testimony was impressive, and *Business Week* pointed out: "Lubin walks fast but he walks on the ground. Businessmen rely on his figures and respect his opinions."

It was inevitable that Dr. Isador Lubin should play a prominent part in the defense program from its very beginning. He served as consultant on many agencies set up, as administrative assistant to Sidney Hillman (on leave from the Bureau of Labor Statistics), assistant director of the Labor Division of OPM, as aide to the OPM Priorities Division. In most of these positions his main concern was with labor problems, and it was as a labor expert that he went out to the West Coast in April 1941 to make an agreement between the shipbuilders and the unions to prevent strikes. The agreement, the first overall zone-wide agreement of its kind, did not, however, prevent a long and difficult strike of machinists from breaking out almost immediately in violation of the orders of the Metal Trades Council which was a signatory to the contract in the shipyards. Still Lubin maintained consistently in reference to the defense program that the rights of labor must be safeguarded and argued frequently that strikes hadn't interfered with production as much as other factors under the control of management. He urged, too, the adoption of a nation-wide dismissal wage plan for persons working on defense orders in order to cushion the country against the effects of the wholesale layoffs expected to follow the completion of the defense program.

In all the years that Dr. Isador Lubin has been working for the Government, he has managed to find time to be an active member of the American Economic Association, of the American Statistical Association (vice-president in 1937 and 1938), of the International Association of Governmental Labor Officials, of the International Association of the Industrial Accident Board and Commissions. He is also the author of various monographs and reports, a frequent contributor to economic journals, and the author of a number of books on economic problems. In 1941 Clark University awarded him an honorable LL. D. degree and in that same year Lubin was made representative of the United States Government on the governing body of the International Labor Organization.

Dr. Lubin was married in 1923 to Alice E. Berliner of Washington, D. C. There is one daughter, Alice, of this marriage which ended in divorce in 1928. Dr. Lubin's second wife, Ann Shumaker, whom he married in 1932, died in 1935, leaving a daughter, Ann.

LUCE, HENRY R(OBINSON) (lo͞os) Apr. 3, 1898- Editor; publisher

Address: b. Time & Life Bldg, 9 Rockefeller Plaza, New York City; h. Greenwich, Conn.

"Not since the time of S. S. McClure," says Quincy Howe, "has the United States seen a magazine genius who is Henry Luce's equal, and if his career follows his present course he is likely to become the most powerful American magazine editor of all time."

Howe might have called him an American publisher. But Henry R. Luce, co-founder, principal stockholder and chairman of the board of Time, Inc., remains primarily an editor. In 1941 his *Time, Life* and *Fortune* can boast a combined circulation of 4,232,000. The *March of Time* appears 13 times a year in 8,000 American, 3,000 foreign film houses. In 1940 alone Time, Inc., with 1,557 employees, 10 branch offices and 175 correspondents, made a net profit of $3,494,589.66—higher than any other United States magazine publisher. Time, Inc., has been called "the greatest success story of American journalism." And one of the secrets of its success is its major emphasis on its editorial department, presided over by Henry R. Luce, rather than on its advertising and circulation departments.

The key figure in this success was born on April 3, 1898 in Tengchow, China. The son of Dr. Henry Winters Luce, a well known Presbyterian missionary who died in December 1941, and of Elizabeth Middleton (Root) Luce, who was related to the late Elihu Root, Henry Robinson Luce spent most of his grade-school years in Shantung Province. He was 14 before he was sent to the United States to attend the Hotchkiss School at Lakeville, Connecticut, where he earned part of his board by waiting on table and working after school hours; there he met Briton Hadden, future co-founder of *Time*. They began their collaboration early—by editing the Hotchkiss school paper—and when that was over in 1916 they chose the same university: Yale.

At Yale young Luce edited the *Daily News*. As its editor he fought to double the hours of military training, and during 1918 he served for a short time as a second lieutenant (R. O. T. C.) of Field Artillery at Camp Jackson and Camp Zachary Taylor. A big man on the campus (Skull and Bones, Alpha Delta Phi, Phi Beta Kappa, Student Council), when he was graduated in 1920 he was voted "Most Brilliant" member of his senior class. Hadden was "Most Likely to Succeed."

After a year at Oxford, Luce worked for two months as a $16-a-week cub reporter on the Chicago *Daily News*, then joined his friend as reporter on the Baltimore *News*. While still at college they had cooperatively "reached the conclusion that most people were not well informed and that something should be done": what they now proposed to do was to start a news magazine. Within three months, working double time, they actually perfected their long-discussed invention, which they first thought of calling *Facts;* the next step was the announcement that they were quitting the *News*. That was in 1922.

The managing editor had been incredulous and pitying as he watched them depart—and so were others. But after nine hard months they succeeded in raising $86,000 to start their magazine, partially by canvassing their college friends for names of prospects, partially by peddling the stock from doorstep to doorstep. Offices were in a shabby brownstone house on New York's East Side; staff consisted of Luce, Hadden and three full-time writers, none of them with professional newspaper experience; equipment was a couple of secondhand desks, a used set of the *Encyclopaedia Britannica*, the daily papers. And the first issue of *Time* ("free from sensationalism . . . windy bias," boasted the final prospectus) not only came out as scheduled (March 3, 1923), but went to 12,000 readers.

HENRY R. LUCE

At this time Luce and Hadden were paying themselves $30 a week, working seven days a week, alternating each year as editor and business manager. S. J. Wolff comments: "Surely no stranger combination ever got together than these two young men." But intimates of the young men have quarreled with this statement by the noted artist-writer. As one of them puts it: "Hadden and Luce complemented each other to an amazing degree. In those early years Luce was much the quieter of the two, Hadden gayer, more ebullient. But fundamentally both were much the same. Luce was seeking out editorial ideas when acting as business manager, and conversely, Hadden was a very astute business manager when he was editor."

Certainly it was an extraordinarily fortunate combination. By the end of the first year what has since become known as *Timestyle* was already beginning to evolve, and soon "backward the sentences rumbled in *Time*." Expressions like "tycoon" and "cinemaddict" made their appearance; in *Time's* pages people became "able", "potent", "nimble"—or "beady-eyed", "snaggle-toothed", "pig-faced." Emphasis was on personalities; to Luce: "People just aren't interesting in the mass. It's only individuals who are exciting." Circulation increased; *Time* moved its offices to Cleveland, and back to New York again. By 1927 the magazine was showing a profit ($3,860), and the next year circulation jumped from 171,600 to 219,000, while profits soared to $125,787. Luce was planning a deluxe, $1-a-copy business magazine called *Fortune* when Brit Hadden died of a streptococcus infection Deeply shaken, Luce confided to one of his writers: "With Brit gone, I frankly don't know how we'll come out of this. . ." Hadden's mother was paid almost a half million dollars in stock which he had

LUCE, HENRY R.—*Continued*

left her, so profitable had their project become by this time.

In spite of Hadden's tragic death, the first issue of *Fortune* appeared in January 1930, its contents ranging from articles on branch banking, hogs and glass blowing to advice on how to live in Chicago on a paltry $25,000 a year. Time, Inc., expanded rapidly: the *March of Time* broadcast its first news dramatization on March 6, 1931; in 1932 the *Architectural Forum* was purchased, the only one of its publications not based on an original journalistic concept, and its only unprofitable venture; the first *March of Time* newsreel was shown in February 1935.

In 1923 Luce had married Lila Ross Hotz of Chicago (there are two children: Henry III and Peter Paul), and in 1935 they were divorced. It was in November of that same year that Luce married Clare Boothe Brokaw, almost immediately after the inauspicious opening of her first Broadway play, *Abide With Me*. Her Broadway successes—*The Women, Kiss the Boys Good-Bye* and *Margin for Error*—came later.

In 1936, after several years of experiment, the first issue of *Life* appeared. A magazine aimed at "making of the unrespected photograph an instrument of significant journalism," it was one of the greatest sensations in publishing history but lost over $3,000,000 its first year because advertising rates had been figured on a circulation of only 250,000. Circulation quickly rose to 1,500,000; before long *Life* was turning in substantial profits and by 1941 had a circulation of over 3,250,000.

Now senior editor of all the publications, Luce keeps in close touch with the editorial activities of his staff, to whom he gives generous credit for the success of Time, Inc. He also credits the theory of "group journalism" —which in practice means that stories are worked out over the conference table rather than by any one writer. At editorial conferences he listens as intently to a cub as to a senior writer. Earlier to the office than they—writers arrive about 10:00—he crowds a prodigious amount of work into a long day, calls them together in his big penthouse office for a free airing of views, sends them memos which sometimes reiterate old dictums: "To keep men and women well-informed—that is the only axe *Time* has to grind. It is not the duty of the editorial department to win friends and influence people other than by putting out a fair and readable magazine."

Critics of his publications, however, have from time to time made light of what they call merely an illusion of objectivity. In 1937 Dwight MacDonald wrote a series in *The Nation* in which he attacked *Time, Life, Fortune*: "The Right object to Luce's journals because they indulge in 'personalities,' because they make fun of stuffed-shirt dignity, because they are often 'sensational' and 'in bad taste.'.. What liberals object to is the habitual distortion or suppression of labor and radical news, the constant pooh-poohing of all movements for social progress." But, according to Quincy Howe, although for several years the foreign department of *Time* was left largely to an editor who "had a schoolgirl crush on Mussolini and who, after Hitler came into power, referred to Léon Blum as 'spidery Jew Blum,'" after that editor was eased out a much more liberal approach to news resulted. A third critic, Ferdinand Lundberg, in *America's Sixty Families* claimed that the editorial policies of Luce's journals were greatly influenced by the fact that Luce is a close friend of Thomas Lamont and that J. P. Morgan owns a large block of stock in Time, Inc., in his capacity as a trustee for the Davison family. To that Howe replies that actually Time, Inc., "owes less to Morgan money, brains and influence than it does to the ability of its own executives." Moreover, financial reports show that the Davison family owns only 5,000 shares of stock, while editors (including Luce himself) and employees of Time, Inc., and their families own 145,309 shares—some 60 per cent of the total shares of stock outstanding.

Howe says: "The unbroken success of Time, Inc., shows that it has always reacted spontaneously to new situations, and because Henry Luce is a great editor his publications have always reacted in the same way their readers have reacted." In the spring of 1936, for instance, it seemed to many commentators that Luce's publications were taking a pro-Landon, anti-labor slant; after the *Fortune* poll they became more friendly to Roosevelt and the CIO. And although it was an article by Willkie in *Fortune* and subsequent build-ups by *Time* and *Life* that brought the Republican candidate before the public eye in 1940, in June of that year Luce returned from a trip to Europe to announce that he would support Roosevelt's foreign policy vigorously.

After his return he contributed to the Committee to Defend America by Aiding the Allies; Clare Boothe Luce stayed in Europe, writing articles for *Life*, and later published a book, *Europe in the Spring* (1940). The première of a "full-length propaganda movie" about Americans in the First World War, *The Ramparts We Watch* (scheduled long before Luce left for Europe), a nationwide broadcast on the international situation by Luce and a new *Time* department, "National Defense," followed. Finally, in the spring of 1941, Luce's *American Century*, a short tract reprinted from his editorial in *Life* and containing his views on America's role in the Second World War, was published in book-form together with comments and criticism by men representing almost all shades of opinion.

"America is in the War," Luce announced, boldly. "We got in via defense." But "we are *not* in a war to defend American territory. We are in a war to defend and even to promote, encourage and incite so-called democratic principles throughout the world." He was confident that, as the senior partner of the British Empire, America would win this war; he saw "America as the dynamic center of ever-widening spheres of enterprise, America as the training center of the skillful servants of mankind, America as the Good Samaritan, really believing again that it is more blessed to give than to receive, and America as the powerhouse of the ideals of Freedom and Justice." But we must learn to think in larger terms. "For example, we think of Asia as being worth only a few hundred millions a year to us. Actually, in the decades to come Asia will be worth to us exactly zero —or else it will be worth to us four, five, ten billions of dollars a year. . ."

Returning in June 1941 from a six weeks' visit in China, where he has been a frequent traveler since his childhood there, he announced that Chiang Kai-shek is confident of ultimate victory if aid is received from the United States. Luce himself has contributed much to Chinese aid.

Henry Luce himself has no difficulty in thinking in large terms. His present income has been estimated by some outsiders at a million a year, although Mr. Luce's associates say it is large, but far less. He owns a 7,000-acre plantation outside of Charleston, South Carolina, and keeps a house in Greenwich, Connecticut. He has traveled extensively in Europe and Asia, has "observed many Great and Near Great," is listed in *Who's Who in America* and the *Social Register*.

He believes society must derive its leadership from men of ability, talent and capacity, and that a sense of obligation to society should accompany position and power: "Without the aristocratic principle no society can endure."

"Hard-working, puritanical," America's most famous editor wears conservatively undistinguished suits, white shirts, violent hued striped ties. One writer finds that "there is still something faintly Presbyterian about his shyness and his long, grave silences, in spite of the mildly satanic slant of his eyes under their wild and shaggy brows." Another confides: "The Luces have been called humorless, and it is true that in company their laughter is a fraction of a second slower than other people's and sometimes a little forced." Their conversation is sometimes strange; after long exposure to *Timestyle,* sentences like "No nitwit he" are likely to pop out. Luce smokes too much, disapproves of heavy drinking, plays a hard game of tennis, once announced: "I have no use for a man who lies in bed after 9 o'clock in the morning," and before the 1940 Presidential election informed the world that he considers anybody who fails to vote a traitor and would never "knowingly sit down to a meal with such a person." He has "no fund of small social chatter . . . is fluent only when he can talk about a subject, preferably a big one," and his only hobby is "conversing with somebody who knows something." He says: "We, meaning Time, Inc., must keep our viewpoint national; I would rather talk to a man from Texas, for instance, than to a roomful of the brightest people in New York."

LUNT, ALFRED Aug. 19, 1893- Actor

FONTANNE, LYNN (fôn'tăn') Dec. 6, 1887(?)- Actress

Address: c/o Theatre Guild, 245 W. 52nd St, New York City; h. Genesee Depot, Wis.

When in May 1941 the Pulitzer Prize for the best play of 1940 went to Robert Sherwood (see sketch 1940 Annual) for *There Shall Be No Night*, the play's principals were taking a well-deserved vacation from a strenuous season. Since the play's Broadway opening in May 1940 Alfred Lunt and Lynn Fontanne had appeared as the Finnish scientist and his wife in half a hundred cities, nineteen states and two Canadian provinces, and had traveled some 12,000 miles with the rest of the cast. The 1940 to 1941 road tour was so successful that in November 1941 it was still on tour in the South and Southwest, even though by that time it might have been assumed that audiences had lost their first flush of sympathy for "little Finland," now an Axis satellite. It didn't close until the end of December of that year, when Robert Sherwood, its author, asked its recall since its plot, he felt, was opposed to America's war interests.

Vandamm

ALFRED LUNT

The Lunts almost didn't appear in this highly emotional play of the Russo-Finnish War. They were planning to take a 1940 vacation when Sherwood gave it to them to read while en route to their home in Genesee Depot, Wisconsin, a whistle stop in the beautiful lake country where Lunt spent his boyhood. As their train pulled into Harrisburg, Pennsylvania, Lynn Fontanne, who had read the script first, wired Sherwood: "This half of the combination returns in two weeks for rehearsals." Lunt thumbed through the typewritten pages, then settled down for a serious reading. At Chicago he, too, wired the playwright, saying: "So does this half."

Three weeks after a brilliant opening *Variety* reported: "*Night* is topping all straight shows on Broadway, grosses since opening bettering some musicals and almost reaching the marks on the leaders in that division. Takings last week were $23,000, despite the continued slump, only variance being in standees." Usually sparing in curtain speeches, Lunt made more than a few for this play, and in July 1940 the Lunts broke a long-standing rule and made a radio broadcast for the first time—an excerpt from the play for a Red Cross benefit. "I wish you'd say for me," Lunt remarked of their part in it, "that giving these performances isn't just a generous gesture. It's something that we can't help doing." He, at least, was rewarded when the New York run extended into the summer and he shared with Barry Fitzgerald the New York drama critics' award for the best male performance of the 1939 to 1940 season.

Although Lunt could comment of their roles in *There Shall Be No Night*: "It's the first time in years that we've been respectably married," Alfred Lunt and Lynn Fontanne are in real life probably the most famous respectably married couple in the theatre. Miss Fontanne was born in the County of Essex, England, the daughter of Jules Pierre Antoine and Frances Ellen (Thornley) Fontanne. Her father was a brass type founder. The date of her birth is often given as December 6, 1887 (Mr. Lunt calls it "obviously ridiculous"), her given name as Lillie Louise. (*Time* and other sources agree with this—Miss Fontanne does not.) The only other clue to her age consists in the fact that she went to study under Ellen Terry at the age of 12, some say; at 15, according to others—and two years later (1905) played her first part on the road with Dame Terry in *Alice-Sit-by-the-Fire*.

Ellen Terry listened to the young actress recite, promised to coach her in Shakespearean and other roles for a year. Actually, she kept her for two, sending her off with a letter that read: "That's all I'm going to do for you, my dear. You must make your own career. The race is run by one and if I helped you any more it wouldn't be good for you. So run along now and don't ask me for any more letters or any more puffs. They'd hurt you more than they'd help you."

Lynn Fontanne got her first London part in 1909, in the Drury Lane Pantomime. She came to the United States for the first time in 1910, making her first New York appearance on November 7th of that year at Nazimova's 39th Street Theatre. The play in which she made her American debut failed so promptly that she was able to return to London the same year. There, in 1914, she was given her first important role, that of Gertrude in *Milestones*. In between plays the young actress volunteered for special war service and drove a military motor car through Devonshire. In 1916 she was back in London on the stage, where her work came to the attention of

Laurette Taylor and induced the latter to bring her back to America with her repertory company.

Besides working with Miss Taylor she had the experience, that first year of her second visit, of a short period in vaudeville. The company with which she appeared produced *The Minstrel Review of 1916*, and a critic remarked: "The interlocutor is a tall beauty with a beautiful face." Her work with Miss Taylor also brought her good notices. "A most aggressive and self-assertive young woman," the New York *Times* critic decided in 1916, the year when her work in *The Harp of Life* also "stood out as one of the bright spots." Said the New York *Sun*; "She was greeted with spontaneous applause in the middle of a scene in which she appeared."

She hadn't yet met Alfred Lunt, though. Born in Milwaukee, Wisconsin in 1893, he was the son of Alfred and Harriet Washborn (Briggs) Lunt. At the age of 12 he won an elocution contest but didn't think of acting as a career until long afterward. When he entered Carroll College at Waukesha, Wisconsin he was still intending to study architecture, and in 1913 he trekked to Harvard to continue his studies. He was sidetracked only by an offer to work with a repertory company at Castle Square Theatre, Boston at $5 weekly. At that theatre he made his stage debut in *The Gingerbread Man* and for a few years led a trouper's life, his work gaining the attention of critics more or less at the same time as that of his future wife. He toured with Margaret Anglin from 1914 to 1915, did a vaudeville turn with Mrs. Langtry (the "Jersey Lily"), appeared with Laura Hope Crews, and by 1916 was again with Miss Anglin's company. His first important New York role was as Claude Estabrook in *Romance and Arabella* (October 1917).

There, when Lynn Fontanne appeared in *The Wooing of Eve*, Alfred Lunt saw her for the first time. They met again in 1919 when both were trying out at New York's Hudson Theatre for summer stock in *A Young Man's Fancy*, Miss Fontanne fresh from a season of Shakespearean roles. When they were introduced Lunt was standing on a rickety staircase, and as he bent to take her hand his foot slipped and he toppled down the short flight of steps. They appeared in plays together that summer, after which Lynn Fontanne was given a part in O'Neill's unsuccessful *Chris* and Lunt appeared in the title role of *Clarence*, which opened to "rave" notices. In May 1920, when Lynn Fontanne went to England, his play was still running; road tours carried *Clarence* through 1921, when Lunt's future wife returned to star in *Dulcy*, a comedy about a talkative young woman.

Dulcy established Lynn Fontanne as one of the most capable actresses on the American stage and as one of the most attractive. A critic rhapsodized: "Starry-eyed, dark-haired, her features well defined, all luminous with a smile, which plays over them like sheet lightning across a summer sky." When she married the star of *Clarence* on May 26, 1922 they were already one of the theatre's famous couples, and photographers followed them to a picture-book honeymoon in the Wisconsin lake country.

As a theatre team, the careers of the Lunts coincided with their membership in the Theatre Guild. In 1924 they joined the Guild and on October 13, 1924, opened in *The Guardsman.* A critic wrote enthusiastically: "They have youth and great gifts and the unmistakable attitude of ascent, and those who saw them on opening night, bowing hand in hand for the first time, may well have been witnessing a moment in theatrical history. It is among the possibilities that we were seeing the first chapter in a partnership destined to be as distinguished as that of Henry Irving and Ellen Terry, and Sothern and Marlowe."

Vandamm

LYNN FONTANNE

The critic was also a prophet. Except for a short interval in the 1920's, when Lynn Fontanne appeared in O'Neill's *Strange Interlude* and her husband in *Marco's Millions*, they have appeared together since that time, starring in a long cavalcade of successes: *Arms and the Man* (1925); *The Goat Song* (1926); *Pygmalion* (1926); *The Brothers Karamazov* (1927); *The Doctor's Dilemma* (1927); *Caprice* (London—Lunt's first appearance there, 1929); *Elizabeth the Queen* (1930); *Reunion in Vienna* (1931-32); *Design for Living* (1933); *Reunion in Vienna* (London 1934); *Point Valaine* (1935); *Taming of the Shrew* (1935); *Idiot's Delight* (1936); *The Sea Gull* (1938); *Amphitryon 38* (London 1938); *Amphitryon 38* (United States 1938-39); *Taming of the Shrew* (1940); and finally *There Shall Be No Night* (1940-41). Later in 1941 Alfred Lunt directed *Candle in the Wind*, with Helen Hayes.

LUNT, ALFRED and FONTANNE, LYNN—*Continued*

To those who have not witnessed the sophisticated acting of the Lunts it might be difficult to describe. The pacing is always extraordinarily effective and in the staging there is no superfluous action. But even more germane is the inflection of voice, a nuance of tone here, a sudden harshness there, and everyone in the audience waiting breathlessly on the next line.

Typical of critical comment on the Lunts is the statement that "they have carried on magnificently the great traditions of the theatre." What critical barbs have come their way have accused them of emphasizing style and *theatre* to the detriment of the play as such. When Miss Fontanne did *Pygmalion,* for example, George Jean Nathan remarked on "her habit of listening lovingly to the sound of her own voice."

Tall, dark, imperious, Lynn Fontanne insinuates herself into a part disarmingly, living it in her own mind. Once she found herself talking like "Dulcy" off stage, and in an interview during *Amphitryon 38* she was once found to be wearing the translucent nail polish that went with her part in that comedy. She recalled that Lunt had, on occasion, lived his parts too. "A long time ago," she said, "Alfred was considering a number of plays. He took the scripts to bed with him every night. And every morning I had breakfast, not with my actor-husband, but with his character of the moment."

Of her husband Alexander Woollcott (see sketch this issue) once said: "You can tell Alfred from the other actors. He's the one who works." Michel Mok describes him on one occasion: "With his pale, egg-shaped face, his weary brooding dark eyes, his light-brown hair meticulously brushed and parted in the center, he looked almost exactly as he did in the role of Harry Van, the hoofer, in Robert E. Sherwood's *Idiot's Delight.* From time to time there was in his voice that peculiar, boyish catch on a high note which you have heard so often from the stage." And, according to Lucius Beebe: "He gestures wildly with his hands, makes more faces than he does on stage, deprecates himself, his ability, his last performance. . . He has enormous pride in his success. His experienced eye can tell how good a house he is playing to, almost to a seat, and a few vacancies in the fifteenth row will drive him frantic." He worries, frets, despairs before every performance—"does much of the worrying for everyone in the cast."

Writing of them both, Charlotte Hughes had this to say: "There is more to their magnificent teamwork than a psychic ability to sense each other's moods and to time, to a split second, each other's reactions. When they get a new script, they start memorizing a set number of lines a day. They retire to their rooms and mumble, and their manager, Lawrence Farrell, sits in the living room between and dashes back and forth to each of them, hearing sections. They rehearse their own scenes over and over and over, argue about every gesture, every intonation."

The Lunts have long had an arrangement with the Theatre Guild whereby they get a percentage of the gross. They also have a company formed with Noel Coward (see sketch this issue), Transatlantic Productions, Incorporated, that came into being with *Design for Living* (1933). Percentage of the gross is good business for the Lunts, who have always been good box office, on the road as well as in New York. In fact, the Lunts—along with Katharine Cornell (see sketch this issue) and a few others—may be credited with giving the road what is asked for—good acting, good plays, good casts. On tour they have almost always grossed above $20,000 weekly, sometimes coming close to $40,000.

Generally shy of pictures, they have done only two: the seldom-mentioned *Second Youth* (1922) and *The Guardsman* (1932). For their work in the latter they were paid $75,000, but Alfred Lunt was reluctant to see it on the screen for fear it hadn't come off quite right. He let his wife see it first and bring back a report. Both were shocked when they first heard what their voices sounded like on a film track, but although they have since got over that to the extent of appearing on the radio and phonograph records, most informants believe they would refuse to consider another Hollywood offer unless it could be pretty much on their own terms. Turning down one fabulous proposition because the film story was uninteresting, Lunt remarked: "We can be bought but we can't be bored."

He doesn't think audiences should be bored, either, even in a Good Cause. For the Lunts' work in *Idiot's Delight* the Chicago Conference of Club Presidents (May 1937) gave them an award for their contribution and "effective service to peace." "The point to me," Lunt said of the famous Sherwood anti-war play, "is that it's enormously entertaining, and I think propaganda must be entertaining to be effective."

Away from the theatre, the Lunts have a Swedish-type farmhouse (gaily painted, with blue predominating) at Genesee Depot in Wisconsin. They both helped to make it over, just as they helped decorate their attractive New York apartment, with its sand-colored furniture, crystal chandeliers and cobalt-blue walls. It is in Wisconsin that they loaf between seasons, puttering about the garden and trying out their favorite recipes (both are gourmets and expert cooks). Before the War they enjoyed spending vacations abroad. In 1933 they had a firsthand glimpse at the progress of the theatre in the U. S. S. R., came home with glowing reports. Visits to Finland in 1934 and 1937 gave them a particular interest in *There Shall Be No Night.* In 1938 a clue to their itinerary lay in the miscellaneous packages that accompanied their extensive luggage. These included English marmalade, books on simplified French, and—on leash—four dachshunds.

The partnership of Lynn Fontanne and Alfred Lunt is taken for granted as much by the principals as by their public. Said Mr. Lunt: "I just love to play opposite Lynn, that's all. There's nobody else I want to play with." And Miss Fontanne echoed with: "I can't even give an explanation. Playing without Alfred is so fantastic I can't even think of it." Ring Lardner once wrote a humorous poem based on the idea that a certain play failed because Lynn Fontanne and Alfred Lunt were missing from the cast. Typical was this couplet:

It lacked two things, observed the man,
Just Alfred Lunt and Lynn Fontanne.

LYDENBERG, HARRY MILLER Nov. 18, 1874- Director of The Biblioteca Benjamin Franklin

Address: b. Biblioteca Benjamin Franklin, Mexico City, Mexico; h. 23 Park Rd, Scarsdale, N. Y.

Bulletin: Dr. Lydenberg, former director of the New York Public Library, in late 1941 became the director of The Biblioteca Benjamin Franklin. This library, similar to the former American Library in Paris, is not a government library but is sponsored by the Nelson Rockefeller (see sketch this issue) organization for better relations between the Americas, the American Library Association and other organizations.

From September 1941 issue:

The resignation of Dr. Harry Miller Lydenberg, director of The New York Public Library, to take effect on October 1, 1941, was announced July 21 by Mr. Frank L. Polk, president of the Library's Board of Trustees. Dr. Lydenberg had been on the staff of the Library since July 1, 1896, and had been director since November 1934.

The New York Public Library
HARRY MILLER LYDENBERG

"It is with profound regret," Mr. Polk said, "that the Board of Trustees makes this announcement. Dr. Lydenberg first indicated his wish to retire more than a year and a half ago, on his sixty-fifth birthday, but until now we have been able to persuade him to remain. However, he has persisted in his determination, and the Board has most reluctantly bowed to his decision. His great knowledge, administrative ability and close association with his peers among the distinguished men of letters and book men of the world have been of tremendous advantage to the Library and, through it, to scholarship and research everywhere.

"Under his administration, in spite of the difficulties imposed by depression and war, the Library has grown in strength and influence. Although compelled to practice strict economy in the administration of the Circulation Department, he has kept the branches alive and the greatest needs of their readers have been cared for. Additions have been made to a number of the branch library buildings, and three new buildings, two in The Bronx and one for children and young people in Manhattan, have been added to the system. He was quick to meet the call for aid in the national defense program, and the Library is now giving special help to hundreds of young men in the several trade classes organized by the Board of Education.

"In addition to fostering the steady growth of the Reference Department collection in all the fields the Library attempts to cover, Dr. Lydenberg has been largely instrumental in securing, by gift or purchase, many single items and collections of outstanding importance.

"For his contribution to the world of letters as librarian, historian, bibliographer, editor, translator and author he has been honored by many professional and learned societies and by three universities. We, too, have appreciated his real ability as an administrator

LYDENBERG, HARRY MILLER—*Cont.*

and his professional and scholarly achievements, but, outstanding as they are, they are overshadowed by the man himself; kind, generous, self-effacing and wise. He has won the affection of all those who have had the privilege of association with him."

Harry Miller Lydenberg, the son of Wesley Braxton and Marianna (Miller) Lydenberg, was born in Dayton, Ohio, where he was educated in the public schools. He was graduated from Harvard University in 1897 and has received the degrees of Doctor of Letters from Tufts College and Columbia University and Doctor of Humane Letters from Union College. He was president of the American Library Association (1932-33), president of the Bibliographical Society of America (1929-31), and has for many years been secretary-treasurer of the American Council of Learned Societies. He is also a member of the American Philosophical Society and of the American Antiquarian Society.

In addition to his numerous articles for professional journals he is the author of the *History of The New York Public Library* (1923), *John Shaw Billings* (1924), *Paper or Sawdust, a Plea for Good Paper for Good Books* (1924), *The Care and Repair of Books* (with John Archer, 1931); editor of *Archibald Robertson, Lieutenant-General Royal Engineers, His Diaries and Sketches in America, 1762-1780* (1930). He is the translator, from the French of André Blum, of *On the Origin of Paper* (1934) and *The Origins of Printing and Engraving* (1940). The forthcoming volume of the proceedings of the American Antiquarian Society will carry his study of the Berkshire Republican Library at Stockbridge, Massachusetts.

Dr. Lydenberg has been an active member of the Committee on Conservation of Cultural Resources of the United States National Resources Planning Board since its formation.

Dr. Lydenberg's career with The New York Public Library began soon after the consolidation, in 1895, of the Lenox and Astor libraries and the Tilden Trust. He had completed his Harvard course in three years, so in 1896, although he was of the class of 1897, he joined the staff as a cataloger in the Lenox Branch. From 1896 to 1899 he was in charge of manuscripts and from 1899 to 1908 was assistant to the director. He was appointed chief reference librarian in 1908 and served in that position through 1927, after which he was, until 1934, assistant director. Since November 1934 he has been director.

Dr. Lydenberg, a short, slender, soft-spoken, shy scholar with an aversion to personal publicity, has little to say about his plans for the future except that he is going to do various pieces of writing, "nothing of any world-beating importance." One study will be of the life of George Philip Philes, a New York bookseller from 1857 until about 1890. "A very amusing, profane old cuss, who had to leave the state in the early '90s because—well, just because it was the best thing to do . . . he was very much of a character." The second study will be of blind impressions, blank spaces in fifteenth century books where there are type impressions without any ink.

When Dr. Lydenberg retires to his Scarsdale home he and Mrs. Lydenberg (he married Madeliene Rogers Day of the Periodicals Division in 1912 and they have a son and a daughter) will have time to indulge in their many hobbies: everything pertaining to books —paper, printing, binding, gardening and walking. Dr. Lydenberg is a good walker and likes to tramp along country roads or through the woods.

LYTTELTON, OLIVER 1893- British Minister of State in the Middle East

Address: 4 Connaught Pl, W. 2., London, England

In 1941, for the first time in Britain's history, a full ranking Cabinet Minister was assigned to an overseas headquarters. The Minister was Captain Right Honorable Oliver Lyttelton; the post the Middle East; his duties the carrying out on the War Cabinet's behalf of "measures necessary for the prosecution of the War in that theatre other than the conduct of military operations." He was to administer conquered territories and unravel the political snarls that have before burdened the Army there. This appointment, the Press Association of Great Britain commented in July 1941, might well "be the prelude to further strengthening the British position there and countering swiftly and effectively any pro-German influences." One of his first acts there was to try to lay the foundation for a federation of Arab states.

Captain Lyttelton has been associated with the Churchill Government since the fall of 1940, as president of the Board of Trade, and his activities there undoubtedly recommended him for his Middle Eastern post. When in January 1941 Prime Minister Churchill set up three new and small committees—the Import Executive, the Production Executive and an over-all executive committee—to obtain "more rapid and decisive action in the War," Lyttelton was made a member of the first two. As such, and as president of the Board of Trade, he broadcasted to the United States and Canada an appeal to "buy British," and announced to Commons Britain's need for more and more supplies of every kind from the United States. From time to time, too, he announced the Government's war industry plans. In March 1941 he said that the Government would concentrate the production of consumer goods in a few full-time "nucleus" factories, freeing other factories for war production or storage; a month later he presented in Commons a measure to impose a wider and more inflexible price control on consumer goods and a more thorough control of middleman profits. This, Lyttelton explained, was part of "a large design and extends over all the financial, industrial, commercial and social activities of the country."

It was probably for his activities in rationing clothes, however, that Lyttelton got the most publicity in his own country and this. He, one of the handsomest, wealthiest and, at that moment, best-dressed men in England, created the plan limiting the amount of clothes Englishmen and Englishwomen could buy and announced it to the public. He asked his countrymen to accept it with good grace. "Our sacrifice," he reminded them, "is little enough when others risk their lives for us."

Oliver Lyttelton was the only son of the late Alfred Lyttelton, who was Colonial Secretary under A. J. Balfour and famous as a cricketeer. At Eton and Cambridge he captained his teams and was one of the English eleven which played against Australia. His first wife was Laura Tennant, which made him a brother-in-law of the Countess of Oxford. Oliver followed his father to Eton and then went up to Trinity College, Cambridge. He also played cricket, though never in his father's class, and was on his university's golf team.

He was in the middle of his university career when the First World War began. Immediately he left his studies to enter the Army and in December 1914 was gazetted to the Guards. Early in 1915 he went out to France and from then until 1919 was continuously on active service, seeing heavy fighting but escaping wounds. Lyttelton was mentioned in dispatches three times and won both the M. C. and the D. S. O. From October 15, 1915 to 1918 he was adjutant to the 3rd Guards Battalion; in February 1918 he became brigade major to the 4th Guards Brigade and in September to the 2nd Brigade. He was a captain when demobilized.

He left the Army to enter business in the City of London as manager of the huge and powerful British Metal Corporation, Limited, and to begin a career which eventually brought him directorships in countless other corporations as well, plus a salary estimated at $80,000 a year. He became an expert in understanding and organizing the complicated economic ramifications of the non-ferrous metals, and it was this expert knowledge that led to his appointment, early in September 1939, as controller of non-ferrous metals. This was the first time that Lyttelton, a power in industry, emerged as a public figure.

OLIVER LYTTELTON

Lyttelton did well in that post. He entered the purchasing ring early and bought up enough non-ferrous metals for a three years' war before the prices began to skyrocket, saving British taxpayers many millions. Churchill must have been watching this youngish man carefully, for when Sir Andrew Rae Duncan (see sketch this issue) was moved from the Board of Trade to the Ministry of Supply on October 3, 1940, Lyttelton was appointed to succeed him. He plunged into work with what has been reported as a bold slashing of red tape. Later, under a wide extension of his powers, he was enabled to take over industry for defense purposes and to shift and re-allocate labor to any task he felt necessary. Some papers called him "the Czar of Industry" for this.

It was necessary to find a seat in Parliament for Lyttelton when he was elevated to the presidency of the Board of Trade. This was easily managed, for Viscount Wolmer had been granted a peerage in his own right, and Lyttelton was put up for the vacant seat at the military town of Aldershot. He was returned unopposed as a Conservative on November 26, 1940, and before the end of the year was sworn to the Privy Council (the King's advisory committee). He signalized his assumption of office by warning industry in general that it would have to submit to discipline as rigorous as that borne by the rest of the community.

Eight months after his appointment, when Britain was being stirred by the news that General Sir Claude John Eyre Auchinleck was replacing General Sir Archibald Percival Wavell (see sketch this issue) as commander in chief in the Middle East, the official

LYTTELTON, OLIVER—*Continued*

notice was also given out that a special service to deal with political and social problems on the spot there had been created. Its head was to be Captain Lyttelton, made a Minister of State and representative of the War Cabinet.

Captain Lyttelton was married in 1920 to Lady Moira Godolphin Osborne, fourth daughter of the tenth Duke of Leeds. They have three sons and one daughter.

MACARTHUR, DOUGLAS Jan. 26, 1880- Commanding general of the United States Armed Forces in the Far East

Address: b. c/o War Dept, Washington, D. C.

General Douglas MacArthur, who in July 1941 was recalled to active duty as commander of the United States Army in the Far East, a command which became one of the most important in the world when the Japanese attacked five months later, is a tall, slender, erect man with a brisk manner who comes of a celebrated Army family. He was born in Little Rock, Arkansas on January 26, 1880, the son of Lieutenant General Arthur and Mary P. (Hardy) MacArthur. His father helped to drive the Spaniards out of the Philippine Islands and himself served two years there as Governor General.

It was natural that young MacArthur should attend West Point. There he starred in baseball, playing right field and batting from the south side of the plate, and only sickness kept him from winning his letter four years in succession. When graduated in 1903, the No. 1 honor man of this class, he was commissioned a second lieutenant of engineers and sent to the Philippines. Promoted the following year to the rank of first lieutenant, he returned to the United States in October 1904 and spent several months (January to October 1905) with the California Debris Commission, also serving as chief engineering officer of the Pacific Division. Then followed a year in Japan as aide to his father, another year as Theodore Roosevelt's aide in Washington, and in 1908, after having been graduated from the Engineering School of Application, he joined Company K, 3rd Battalion of Engineers, at Fort Leavenworth, Kansas. He served at that station, at San Antonio, Texas and on detached service in the Canal Zone until August 1912 and until November 1912 was an instructor of engineering at Army Service Schools, Fort Leavenworth. In February 1911 he acquired the rank of captain.

It was 1912 when Captain MacArthur was ordered to Washington. There he was appointed to the General Staff Corps, and from April to September 1914 served with the Engineering Corps in the Vera Cruz Expedition. In December 1915 he was raised to the rank of major; finally, in September 1917, after the United States had entered the First World War, he was appointed chief of staff of the 42nd (Rainbow) Division with the rank of colonel of infantry.

In France the 37-year-old colonel participated in the Champagne-Marne and Aisne-Marne defensives; he was given the temporary rank of brigadier general in June 1918, placed in command of the 84th Infantry Brigade a few weeks later, and led it in the St. Mihiel, Essey, Pannes, Meuse-Argonne and Sedan offensives. He was twice wounded in action and he created a sensation by his insistence on going into battle with his men. The citation for "extraordinary heroism against an armed enemy" accompanying his Distinguished Service Cross read: "When Company D, 168th Infantry was under severe attack in the salient du Fays, France, he voluntarily joined it upon finding that he could do so without interfering with his normal duties, and by his coolness and conspicuous courage added materially to its success."

The Armistice in November 1918 found MacArthur temporarily commanding the 42nd Division once more before being put in command of the 84th Infantry Brigade, stationed with the Army of Occupation in Germany until April of the following year. Returning to the United States Military Academy (he was the youngest officer ever to head West Point), he immediately began to work toward the mechanization of the "horse and saber department." In January 1920 he was made a brigadier general in the regular army, and in 1922, before leaving for the Philippines again to serve for three years as commander of the District of Manila, the 23rd Infantry Brigade and Philippine Division, he married the former Mrs. Louise Cromwell Brooks in the Palm Beach home of her mother.

Promoted to the rank of major general in January 1925, MacArthur spent the next five years commanding the Fourth Corps Area in Atlanta, the Third Corps Area in Baltimore and, from 1928 to 1930, the Philippine Department. Finally, in November 1930, President Hoover made him chief of staff of the United States Army—the only chief of staff in United States history whose father had held the same post, and the youngest man to hold it since the First World War. At the same time the four-star insignia of a general was bestowed upon him (making him the youngest general since Grant), and the President announced: "It gives me great pleasure to promote so brilliant a soldier. He is the only one of the major generals having a sufficient period to serve in the Army before retirement to serve the full four-year term of chief of staff. There are several very eminent generals who rank above General MacArthur, but none of them could serve more than a year and a half of the full term."

The next few years, however, found the 52-year-old general the target of many shafts. In August 1932 he had directed the soldiers who "torched, bayonetted and bombed" the "Bonus Expeditionary Force" out of Anacostia Flats in the nation's capital, and the tender-hearted, while admitting that he had done, "technically, a swell job," criticized the action as both cruel and unnecessary. Friends said that MacArthur was only obeying orders, and MacArthur himself was quoted as having said that if Hoover had not given such orders "another week might have meant that the Government was in peril." Drew Pearson and Robert Allen (see sketch this issue), who had been among the most biting critics of his role in the "Bonus Battle," nevertheless continued blasting at him on other grounds. And the Senate munitions inquiry in 1934 brought forth charges that he had intervened in behalf of American plane builders seeking foreign contracts.

In 1935 General MacArthur, due to retire as chief of staff of the United States Army, became director of the organization of national defense of the Philippine Commonwealth. In May 1936 a bill made him military adviser to the Commonwealth at his regular salary, reputedly the highest paid to any military adviser in the world; and in August of that same year President Quezon (see sketch this issue) commissioned him field marshal of the Philippine Army. Mrs. Quezon handed him a golden baton.

U. S. Army Signal Corps.

DOUGLAS MACARTHUR

Once more there was criticism from a few sources as well as praise. A writer in *The Nation* found it unsuitable that MacArthur should actually hold more power in the Philippines than any other representative of the United States, confessing fear that his military program (the Philippine Island Defense Act subjected Filipinos to military training from childhood up) would make economic independence from the United States impossible by 1946 and would help to maintain the present ruling clique in power by force. He wrote, bitterly: "General MacArthur now makes his contribution to our foreign relations by this unauthorized move to militarize the Filipino people."

General MacArthur, confident not only that the defenses of the Islands could in a few years be built up so effectively that conquest would cost an invader some half million men and between five and ten billion dollars but also that Japanese militarism would be a very real threat in the near future, nevertheless continued energetically with his program. On December 31, 1937 he retired from the Army at his own request but remained with the Philippine Army as field marshal, undiscouraged by hints in 1940 from Commissioner Francis B. Sayre and Quezon himself that the Islands were practically indefensible.

By 1941 relations between the United States and Japan were growing so tense that even former critics expressed little but gratification when, in July, President Roosevelt placed the land and sea forces of the Philippine Commonwealth under United States military and naval command for the duration of the emergency and appointed General MacArthur commander of the United States Army

MACARTHUR, DOUGLAS—*Continued*

in the Far East. Back in harness, MacArthur announced: "I am glad to be able to serve my country in this crucial time." Francis B. Sayre praised his appointment, saying. "General MacArthur is ideally equipped to integrate and to direct the joint defense measures of the United States and the Philippines." And his old friend President Quezon was the first to congratulate him.

After that there were frequent conferences with Quezon over the incorporation of the Philippine Army reservists into the United States Army, conferences with Sir Robert Brooke-Popham (see sketch this issue) over Anglo-United States military plans—and MacArthur's program of preparedness for any contingency reportedly began moving swiftly ahead. When the Japanese attack occurred, commentators praised the work he had done in the Philippines over a number of years and also the quality of the resistance which the Japanese met. On December 19, 1941 he became a full general in the Army of the United States for the second time.

The impeccably attired General has long been an outstanding advocate of preparedness for the United States as well as for the Philippines. He is also one of the United States' most thoroughly decorated commanders, having been honored for heroism or distinguished service not only by his own country and by Mexico, Ecuador and Italy but by the once-free nations of France, Belgium, Poland, Hungary, Czechoslovakia, Yugoslavia and Romania. Divorced from his first wife in 1929, he married the former Jean Faircloth in 1938, and has one son, Arthur.

MCBRIDE, MARY MARGARET Nov. 16, 1899- Radio commentator; journalist

Address: National Broadcasting Co, 30 Rockefeller Plaza, New York City

In October of 1940, Mary Margaret McBride switched from a regional to a national hookup, from a 45 to a 15 minute broadcast, from 13 sponsors to an exclusive singleton, and from the pseudonym "Martha Deane" to her own name. Allowing for the increased circulation, the total area of her message-spread probably remained constant. Certainly her popularity suffered no decline, for shortly after the change she was voted the most popular woman on the air. Meanwhile a new and harried Martha Deane struggles to fill the voluminous mantle discarded by her predecessor.

Mary Margaret McBride became the most listened-to woman on the air by daily projecting over the microphone 45 minutes' worth of wide-eyed wonder at the universe. In a homey voice with a folksy twang she exclaimed to a host of invisible ladies over practically everything—from the way a musk deer sneezes to tablecloths at $9,000 apiece. Bobbing about in this geyser of human interest were pertinent items from the releases of her sponsors. It was whispered that important manufacturers stood in line waiting hopefully to be among those honored by mention—at a tidy figure. She has never tried to pass off advertising as self-started enthusiasm. At the same time, she has steadily refused to utter "even the teeniest white lie," or to recommend a product she could not genuinely believe in; and has gone to considerable lengths to test each one. The result is a ring of conviction that has a wonderfully tonic effect on sales.

Her facts also must come up to specification. Mere information is not enough; it must be unique, astounding, exciting, useful, or at any rate appealing. For example, just any tortoise, no matter how old he is, would not qualify for discussion on her program; but the tortoise of St. Helena who was alive when Napoleon was there rates as a tortoise with human interest. As Martha Deane she kept at least one reporter busy scouting and verifying for her, but she has always been her own best nose for news.

She was early celebrated as the only regular broadcaster who regularly spoke "ad lib," depending on a scant page of scribbled notes, the inspiration of the moment and the stimulus of the wares she nibbled so convincingly before the mike. She also depended, of course, upon Dick, the accomplished stooge who reminded her quite audibly which products she still had to mention, helped her draw the best out of her many interviewees, and generally contributed to the atmosphere of human warmth which helped her establish a new high in radio presentation.

The "sunbeam of CBS" began professional life as a sob sister. Private life she began somewhat earlier, in Paris, Missouri, on November 16, 1899. Her father, Thomas Walker McBride, had an unfortunate habit of moving on to a new farm just when the last one was really well broken in. On moving day her mother, Elizabeth (Craig) McBride, might sigh, "It's hardly worth while to have anything nice," but once they reached the new place she would settle down to her business as champion housekeeper and homemaker to a troupe of unbridled McBrides. She is the real heroine of Mary Margaret's warmly nostalgic *How Dear to My Heart,* published in 1940. The chief hero is Mama's kitchen stove. Her magnificent cooking, described with gusto and detail—not to mention recipes—seems to have conditioned her little daughter's future taste, career and silhouette.

A great-aunt who believed in higher education offered to put Mary Margaret through college, provided she would train herself to be a dean of women. But Mary Margaret had decided to be a newspaperwoman in New York, so she worked her way through the University of Missouri's School of Journalism. Later she was the first woman and the first radio commentator to be awarded her Alma Mater's medal for outstanding journalism.

She supported herself in college partly by looking after faculty children, but chiefly by working as reporter, part-time editor, advertising salesman and typesetter on a local newspaper. Her method of scooping rival society reporters was characteristic: she would telephone the local dairies, and if anyone had ordered extra ice cream she knew that a party was imminent. In spite of the extracurricular whirl in 1919 she completed the four-year course in three and a half years, and with the ink hardly dry on her diploma headed for Cleveland, where she forthwith became cub reporter on the *Cleveland Press.*

Her talent for highlighting the human values in any story soon won her feature assignments, and later a year as special correspondent in Washington. But New York was her goal, and before long her dream of being a newspaperwoman in the metropolis came true. When her first job in the big city petered out she took to heart the report that Frank A. Munsey of the *Evening Mail* melted at a woman's tears: she made straight for his office and wept her way onto his pay roll.

After the *Mail* was sold she turned to magazine writing, and eventually was contributing articles to a number of leading periodicals. Her writing has continued, even since the radio claimed her chief energies. In 1934 and 1935 she was woman's page editor for Newspaper Enterprise Association of New York City, and she has been joint author of several books. She collaborated with Prince Christopher of Greece on the history of his family and with Paul Whiteman on the story of his life, published under the title of *Jazz* (1926); with Alexander Williams on *Charm* (1927); and with Helen Josephy on four books: *Paris Is a Woman's Town* (1929); *London Is a Man's Town* (1930); *New York Is Everybody's Town* (1931); *Beer and Skittles* (a Friendly Modern Guide to Germany) (1932). As solo author she has had published, in addition to the recent autobiography, *The Story of Dwight W. Morrow* (1930) and *Here's Martha Deane* (1936).

The jittery market of 1929 did such uncomfortable things to her savings and the literary market, both at the same time, that she again turned to job-hunting. Radio was not one of her chief thoughts but, hearing that a local station wanted a woman for a mid-afternoon spot, she casually auditioned along with 39 other applicants. Conscious of her Missouri twang and vast inexperience, she shrugged that attempt off without a second thought and proceeded to Washington on the trail of another job. The next morning a telegram informed her that her natural manner of voice had won the day.

The opening was for household-hinting, and she was to impersonate a helpful Grandmother. After three venerable days she unceremoniously amputated a couple of generations and came out under her true colors. The household hints soon went the way of Grandmother. Fascinated by the antics of a trained flea on Forty-Second Street, Mary Margaret told her audience about him the next day. Demands for more such tales came pouring in, and presently she was simply rattling on about whatever struck her fancy. For a while she gave three broadcasts weekly under her own name and five as Martha Deane.

MARY MARGARET MCBRIDE

Whatever the name and whatever the aegis, the technique remains the same: a simple, human, warm approach, a smile that carries right over the air. As Martha Deane she often interviewed people she felt her listeners would like to "meet"; and so cozy was the atmosphere of her broadcast, with appetizing samples to be nibbled, Mary Margaret and Dick at their respective mikes, and the stream of guess-whats rippling on and on, that even a novice soon forgot stage fright and the listening millions.

MCBRIDE, MARY MARGARET—*Cont.*

There is something babylike in the sweetness of Miss McBride's smile that fits well with the baby-smooth skin and the round, close-cropped head. The rest of her looks matronly enough, large and ample and soft—food is one of her hobbies as well as a professional interest. Other interests are books, the theatre and gardens. She loves flying, motoring and a great many people, including the 1,800 that write to her each week and the donors of the gifts that deluge the studio when her birthday comes around (an assortment that rivals her own topics for oddity and abundance).

In 1936 she was awarded a medal by the Woman's National Exposition of Arts and Industries for the year's greatest contribution to radio. The following year the Wall Paper Institute presented her with a medal for contributing to the stimulation of interest in the home. Her imitators are far more numerous than her medals, and at least as convincing a tribute to the *éclat* with which small-town girl brings Main Street to New York.

Who's Who in America

MCCARTHY, CLEM Sports commentator
Address: National Broadcasting Co, RCA Bldg, Radio City, New York City; h. 162 W. 56th St, New York City

Clem McCarthy, turf expert and sports commentator for the National Broadcasting Company, was born near Rochester, New York some 60 years ago, the son of an Irish horse dealer and auctioneer. The elder McCarthy's turf activities kept the family on the move all over the country, and Clem received his schooling in a dozen different cities.

It was natural that he should be interested in racing and just as natural that his first ambition should be to become a jockey. But the great Tod Sloan discouraged him—he pointed out that Clem was hardly streamlined enough for such a career. Clem resigned himself to his size and decided to try his luck as a handicapper. He did well enough to be hired as handicapper and reporter by a San Diego paper which had been looking for a long time for a man with McCarthy's knowledge of horses and wide acquaintance in the turf world. For many years McCarthy continued at this work, writing for both dailies and turf publications and occasionally contributing an article to popular magazines.

It was in 1928 that he made his debut before the microphone. He was in Chicago at the time a public address system was installed at Arlington Park to call the running of the races. Clem's experience as an auctioneer and extensive knowledge of racing made him an obvious choice for the announcer. As a result of his work here he was selected to handle the first broadcast of a Kentucky Derby, in 1928. Since that time he has handled all the Kentucky Derbies and many headline sports events, including several world championship bouts, for NBC.

During almost half a century's connection with turf events, McCarthy has acquired a wealth of memoirs. He has seen every Kentucky Derby since his first in 1896 and remembers sharply events like the famous "Jockeys' duel" there in 1933, when the boys on Brokers' Tip and Head Play fouled each other in the stretch and were striking each other with their bats when they thundered across the finish line. He remembers, too, that famous delay at the starting post of the $50,000 World's Fair Derby in Chicago in 1893 when 15 colts were an hour and one-half at the barrier. All these years of seeing and reporting have convinced him that Man o' War was the greatest of all American race horses and that the jockeys of today would be eating dust if the incomparable Sloan were still booting them down the stretch.

One of the theories Clem has developed over the years is that a horse may be able to do the Derby distance easily even though his sire lacked the stamina to negotiate a mile and three-sixteenths. For proof he cites McGee, a sprinter whose absolute limit in fast company was a mile; four of his sons were distance runners and two of them won the Derby. From his years' experience, too, Clem believes firmly in the efficacy of the photo-finish type of race judging—the camera, he feels, is much less likely to err than the human eye when two horses come down the stretch neck and neck.

McCarthy's command of words, the speed with which he follows the rapid developments of a race or prize fight, the years of training he has had handling sports events—all make him tops among those who work before the microphone at sports events. He has his opinions about contests away from the turf, too: Babe Ruth, to him, is still the most colorful baseball player of all time; Bob Fitzsimmons, the greatest heavyweight; Walter Johnson, 'way up in front among the pitching "great's" of history.

When McCarthy broadcasts, his voice has a vibrant quality which shares with the listener the color and thrills of the event he is reporting. He would like to use this talent (and this is one of his chief ambitions) in broadcasting the Grand National Steeplechase. Meanwhile he keeps energetically at the radio work he has now, at a lot of newsreel work, and at his sports column, which is syndicated in a number of papers.

He looks as energetic as he is. His small frame—Clem weighs 145 pounds and is five

CLEM MCCARTHY

feet nine—his iron-gray hair and light blue eyes all almost seem to give off sparks. His hobbies are good food, good music and good friends—among them many sports celebrities and many headliners in the show world. He is married and has no children.

MCGEE, FIBBER Nov. 16, 1896- Radio actor

MCGEE, MOLLY Apr. 15, 1898- Radio actress

Address: b. National Broadcasting Co, Hollywood, Calif; h. 17121 Rancho, Encino, Calif.

Millions of Americans tune their radios each week to listen to one of the most consistently popular comic teams on the networks, that amiable braggart, Fibber McGee, and down-to-earth Molly. Ever since the Fibber McGee & Molly series was inaugurated in April 1935 it has ranked as one of the nation's top attractions, sometimes taking first place in the Crossley radio ratings and almost always among the first four favorites.

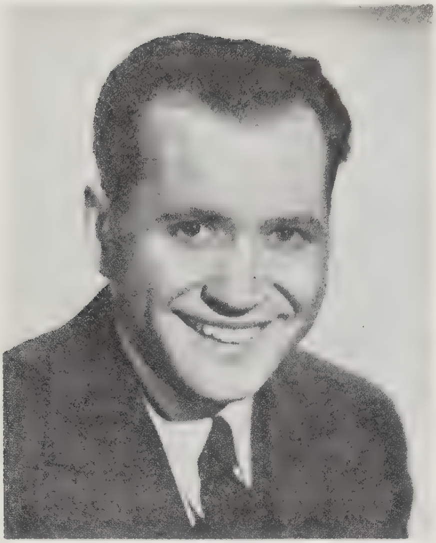
In real life James Edward Jordan and Marian (Driscoll) Jordan, they don't resemble their radio characters, but in many ways their story constitutes a saga equally interesting. "Fibber" was born on a farm five miles west of Peoria, the son of James W. and Mary (Tighe) Jordan. His youth was marked by two things that helped mold his career: an inordinate wanderlust and a love of singing. In Peoria he attended St. Mark's Grade School and later the Spaulding Institute, but in his spare time he studied voice and eagerly took every chance to display his talent. It was while he was singing in the choir of St. John's Church that he first met his future wife, the "Molly" of the duo.

The future Fibber studied singing for four years while engaged at various jobs. He was a wholesale drug clerk, a mail carrier, a washing-machine salesman and an insurance agent; but the desire for a stage career eventually proved irresistible. He was in love with Marian, but decided to realize his ambition before considering matrimony and went to Chicago, where he secured his first stage job. After that he returned to Peoria and Marian.

She was a native Peorian, the daughter of Daniel and Anna (Carroll) Driscoll, and had been drawn by the stage almost from infancy, despite strenuous parental objections. She studied at parochial schools and the Academy of Our Lady, Peoria, where she appeared in many amateur theatricals and concerts and dreamed of a career before the footlights. Later she studied voice, violin and piano at Runnell's School of Music in Peoria.

Marian's parents' distaste for things theatrical extended to her choice of a husband. They relented, however, when Jordan was called to the Army, and the marriage was planned for his return to civilian life. After serving at a Georgia training camp Jim was sent overseas to serve with the 122nd Engineers. He became violently ill at St. Nazaire. Refusing to leave France, he contributed his talents to the morale division of the overseas army, organizing a troupe of entertainers and touring the lines.

Once back in Peoria, Jordan got a job in a machine shop and married Marian, but the lure of the entertainment world haunted their domesticity. Finally it was Marian whose plans ripened to realization. As a musical couple, the Jordans embarked on a vaudeville



Maurice Seymour

FIBBER MCGEE

tour; then, on Marian's initiative, they organized a concert company. This lasted four years and brought the Jordans to hundreds of tank towns, opera houses and churches throughout the Middle West.

At the conclusion of their tours the company was disbanded and the Jordans drearily contemplated their next move. A cheerless odyssey of Middle Western mediocrity confronted them and they had little hope of breaking into the big time. In their discouragement the Jordans at this time even considered going to China. This was the result of a letter from Jordan's sister and brother-in-law, who were impresarios in China, urging them to revive the concert company and bring it across the seas, assuring them that it would prove a great hit. Just as the Jordans were on the verge of taking the advice, they received a second letter. It read: "Don't bring the kids. You'll be traveling in a land where it will be difficult to secure fresh milk." The Jordans looked at their two children. The Chinese tour was off.

Just when it seemed that the Jordans would have to seek another opening in vaudeville, radio came along. They were visiting friends at Rogers Park in Chicago and someone turned on the radio. Jordan listened thoughtfully for a while, then said: "Marian and I can do better than that." One of their friends challenged them to go on the radio, and Jordan, who has always been susceptible to a dare, accepted on the spot.

An audition over WIBO, Chicago, in 1925 proved satisfactory and the Jordans were hired for a song program over the air. After their initial performance they were engaged for one of the first sponsored programs in the Middle West. For this they received $10 a week. A portly, genial cartoonist, whose ability to think up gags rivaled his pen-and-ink artistry, was the first to recognize the Jordans' potentialities as a radio dramatic team. He is Don Quinn, who still writes the Jordan shows and with whom the couple split three ways their weekly income of $6,000. Quinn's first sketch was called *Smack Out* and concerned a folksy grocery store proprietor who was always "smack out" of everything except gargantuan whoppers. The sketch proved a success and developed into a popular series. The Jordans played in this and other sketches over the National Broadcasting Company and also appeared on children's programs.

Not until the creation of *Fibber McGee & Molly*, however, did the Jordans reach radio heights. This was given its original network airing in April 1935 and has continued ever since, except during part of 1938 and 1939 when Mrs. Jordan's health caused its interruption for two seasons. The Fibber series was only moderately successful as a daytime feature, but when it was changed to one of the choicest night spots in the air, the 9:30 hour on Tuesday evenings, its popularity soared sensationally. Meanwhile the Jordan fortunes rose correspondingly; they built a home in Chicago which was the exact copy of one they had rented before their success.

In 1938 Marian, who plays not only Molly but several other characters, including Grandma, the dolorous Mrs. Wearybottom and the exasperating Teeny, a neighbor's child, suffered a nervous breakdown, and the Jordans moved to California. There they still live, in a modest, green-shuttered bungalow with a spacious workroom for Jim and rooms for the children. In 1937 they worked on their first motion picture, *This Way Please*. In December 1941 they are starred with their radio rivals Edgar Bergen and Charlie McCarthy in *Look Who's Laughing*.

MOLLY MCGEE

Fibber McGee & Molly is sponsored by S. C. Johnson and Son, Inc. Jordan seems to have been successful in augmenting his radio salary. he owns a factory which manufactures sandblasting machinery and a Hires' Root Beer bottling plant in Kansas City.

In real life five-foot-six, one hundred seventy-three pound, shrewd, energetic Jim Jordan is the antithesis of the inept and braggadocio-loving Fibber. He runs a farm on his California property and spends much time in his tool shop. He likes to play ping-pong with the children, James Carroll and Kathryn. Marian, who is five-foot-four, spends her spare time reading mystery and love stories and collecting Chinese prints, of which she has already accumulated hundreds.

The popularity of the Fibber programs probably is explained by the fact that they combine bright, chuckle-invoking dialogue with sharply-delineated characterization etched by voice variations which range all the way from a faltering lisp to a deep growl. What's more, the programs have a distinctly American small-town tang. These are sure-fire radio ingredients and readily account for the almost astronomical weekly audience of the ex-vaudeville troupers from Peoria.

MCGEE, MOLLY See McGee, F. and McGee, M.

MCGINLEY, PHYLLIS 1905- Author

Address: b. c/o Duell, Sloane & Pearce, 270 Madison Ave, New York City; h. 12 Hazel Lane, Larchmont, N. Y.

Her two latest books of light verse, *A Pocketful of Wry* (1940) and *Husbands Are Difficult* (1941), establish Phyllis McGinley among the elect in a field that includes such notable rhyme-twisters as Ogden Nash and Margaret Fishback (see sketches this issue). The New York *Herald Tribune* says that Miss McGinley "tops the estimable number of our light versifiers from the point of view of both substance and craftsmanship," and the New York *Times* says that her "mastery of intricately cascading forms of light verse is pretty wonderful." Her poems have appeared in almost every type of periodical.

She has been praised in particular for her expert satire, including her "Complaint to the American Medical Association" concerning their members' unfair monopoly of best-selling autobiographies. She has a neat way of building poems from learned newspaper items. When the New York *Times* reports that scientists have discovered a rich source of vitamins in grass, she writes of poor Nebuchadnezzar, born too soon, lamenting:

PHYLLIS MCGINLEY

I ranged the meadows beside the cattle
I fed on the fields to atone my sins
And no one knew I had found a subtle
Method of getting my vitamins.

Or, observing Mortimer Adler's dictum that "solitary reading is like drinking alone," considers the after-dinner book indulger who

A drunken fool, a literary sot,
Creeps to his lonely cot,
There to swig down and out of public view
Immoderate tankards of the Pierian brew.

There is an occasional poem that goes beyond light verse into another category, serious verse, such as the excellent psychological portrait, *The Old Woman With Four Sons.*

"I was born in Ontario, Oregon, in 1905," Miss McGinley writes us, "but since I left there at the tender age of three months I can scarcely lay claim to being a Native Daughter. I lived on a ranch in Eastern Colorado through my childhood, where the vanishing West had not quite vanished. I remember watching bronco-busting instead of baseball games on Sundays, for instance; and riding a buckskin pony three miles to school where my brother and I were the only pupils. And I remember blizzards and antelopes and coyotes and cattle being branded, although we shortly started raising wheat and sugar beets on our own place.

"After my father's death when I was 12 or 13 we went 'back home' to Ogden, Utah where my mother had been born and brought up and where her family had been pioneers. (But never Mormons.) Her name was Julia Kiesel, and her father and numerous brothers came from Germany—part of the exodus of Germans who left the country after Prussian-

MCGINLEY, PHYLLIS—*Continued*

ism first enveloped it. In fact, I like to boast to my husband, whose Connecticut Yankee ancestors have been hanging around these parts since the 1600's, that I am pure third-generation immigrant—German on one side and Irish on the other.

"After being graduated from college at the University of Utah, I taught a year at home and then reversed Horace Greeley by coming to New York. Found I wasn't suited to doing much of anything except teaching school or writing poetry, so I did both, one full time and the latter whenever I could. I'd always written verse, by the way, since at the age of six I went introspective and turned out this little stunner:

Sometimes in the evening
When the sky is red and pink
I love to lie in a hammock
And think and think and think.

Which must be the beginning of my lifelong preference for composing my stuff in a horizontal position.

"I quit teaching after four or five years of it, to free-lance for a short time and then (in a fit of free-lance jitters) to write copy in an advertising agency for five months and to help edit *Town and Country* for two. I was married then to Charles Hayden (1937) and have been pretty busy ever since with buying and furnishing and remodeling a house here in Larchmont Manor (an elderly house rather than an old one, since it was built around Civil War time); having a baby, Julie; and writing more verse than I ever had time for before."

Miss McGinley says that her interests are "old furniture, learning something about gardening, cooking on occasion and collecting recipes, which I wheedle the cook into experimenting with, and sticking pins into the smugger aspects of the social scene." Among her dislikes she lists: "getting up early, double-feature movies, most writers (and *all* literary parties), parsnips, people who froth at the mouth when you mention the New Deal, subways, advice and having my hair waved. I am passionately devoted, on the other hand, to breakfast in bed, the Cavalier poets, auctions, Utah scenery, kidneys-in-wine-sauce and Walt Disney.

"My eccentricities are few—putting sugar in my soup is the only one I can think of at the moment—and I'm what is known in the trade as a 'good, reliable worker.' That is, I always make a deadline. I am not very prolific and labor painstakingly over every piece I do. My burning ambition is to write a musical comedy in the Gilbert and Sullivan tradition but until some producer gets around to asking me directly to get to work, I'll probably be too busy to start it."

MCGUIRE, DOROTHY June 14, 1918- Actress

Address: b. c/o Actors Equity Assn, 45 W. 47th St, New York City; h. 5 E. 54th St, New York City

"To put *Claudia* on Broadway," John Golden, the producer, told its author, Rose Franken (see sketch this issue), "it will be necessary to find an actress in her early 20's who can look 19, who has about 25 years' experience in show business, who is up to her knees in sawdust. She must be able to play comedy and tragedy. She must be able to play one of the longest parts ever written to my knowledge, 140 odd sides, and play the hell out of it. The odds are a thousand to one that there is no such actress."

There was. And her name is Dorothy McGuire. Two hundred and nine aspirants for the part of the sprightly young wife in the play had been interviewed when Miss McGuire, making the weary rounds, dropped into Golden's office. Rose Franken looked at her "almost childishly young face and figure, her soft, home-washed blondish hair and her large gray eyes," and approved. She listened to her read the part, and the search for Claudia was over. Dorothy McGuire had her first real Broadway part, and Broadway had a new actress.

It had taken Broadway four years to find it out. Miss McGuire had suspected it would be known someday ever since she was 12 and played the lead in *A Kiss for Cinderella* at the Omaha Little Theatre. She was born in Omaha, Nebraska and went to school there until her father, Thomas Johnson McGuire, died. Then her mother, Isabelle (Flaherty) McGuire, sent her to a convent in Indianapolis. Even here she managed to get theatre training by playing the role of the Virgin Mary in a religious play. After two years she went on to Pine Manor Junior College in Wellesley, Massachusetts.

With this preparation, Dorothy McGuire, at the age of 19, prepared to storm the citadels of Broadway. She heard that a man named Jed Harris was casting a play and went to see him. Her experience, she assured him, was good: directing plays at school with all-girl casts, acting in the Omaha Little Theatre. She didn't get the job. And she didn't get a lot of other jobs. She dined on tuna fish every night and spent lots of time living a generally gay life. It wasn't doing her much good: "You can't eat everything out of cans, forget to sleep and expect to be as healthy as Tarzan's Jane, now can you?" she asks. But she was getting around, asking for jobs and incidentally, she recalls, learning "how not to get along with agents. Every one of them thought I was a snip."

The general run of bad luck that had Dorothy McGuire calling herself a "failure" was stopped somewhat when she got a few radio jobs and even more when she became understudy to Martha Scott in *Our Town* in 1938. Then came what seemed like a real break: Martha Scott went to Hollywood and Dorothy McGuire took over the role. But it was toward the end of the play's run, the critics and the professional people who count had all seen the play, and she went pretty much unnoticed.

Sessions in summer stock followed this appearance and they in turn were followed by a part in the road company of *My Dear Children,* John Barrymore's vehicle. Things were picking up, and a part in *Swingin' the Dream* seemed to prove it. But *Swingin' the Dream* was a tremendous flop, and *Medicine Show* which followed it wasn't exactly a smash hit. The revival of *Kind Lady* was better, but not perfect. A really good role, in the Theatre Guild's *Liberty Jones,* was "practically promised" her, one for which she knew she was just made. Someone else got it. Miss McGuire had another egg in the basket, though, and when *The Time of Your Life* went on tour in 1940 she went along with it as Julie Haydon's understudy.

She came back to New York jobless, ready for the rounds, and she found Rose Franken and John Golden waiting for her (though they hadn't known it before she stepped into the office). Miss Franken immediately snatched her away for week-end coachings and general pepping up. Dorothy needed it. She was not, in fact, doing well at all during the first week of rehearsals, and she knew she wasn't. But then Miss Franken kindly said to her: "Don't worry if you hear talk about other people being tried out for your part. I still think you can do it," and she sailed right into it.

When the play opened in New York in February 1941, every critic in New York hailed Rose Franken's find. Dorothy McGuire's portrayal of the girlish young wife, given to introspection and eavesdropping, who outgrows in the three acts an exaggerated attachment for her mother, was called "enchanting", "beautifully played." Brooks Atkinson praised her for playing with "simplicity, casual frankness and personal charm" a part which he felt might easily have become "annoying or pixie," and he commented: "Although a little inexperienced as an actress, she is personally genuine; the charm she radiates across the play is not merely a theatre mannerism."

Dorothy McGuire herself will never forget the opening and her first solo curtain call after it: "It was out of this world, it was so wonderful. I couldn't see a person, the lights were so bright and so hazy at the same time. . . I was really beside myself. Nothing like that can ever happen again." Even the special award given her by the Drama League for the best performance by a young actor, much as it meant, was a pale thing after that first night's triumph.

Dorothy McGuire hugs closely all the praise and understanding she's getting these days, but despite new clothes, new furniture for her apartment on 54th Street, flying lessons, a coming tour of major cities and even the chance of acting Claudia in the Selznick film version, she keeps her feet right on the ground. "It's funny," she says. "You knock around for months, years sometimes, and all of a sudden you wind up in a hit and everybody makes a fuss over you. You keep reminding yourself that maybe next year you'll have to start all over again, or perhaps get into a flop or two. That's what keeps you balanced." She hasn't changed much. Her favorite costume is still a skirt and oversized sweater; one of her most prized possessions is still the old melodeon in her living-room; her friends still call her names like "McGoo" and "Frou"; and she's still embarrassed about the size of her feet.

Alfredo Valente

DOROTHY MCGUIRE

This "pug-nosed, slightly blonde version of Greta Garbo" lives less riotously now than when she first came to New York. She still goes out a lot, but not with people who expect her to act like Claudia off stage. "I'm not that funny and snappy myself, and after the theatre I'm usually a little tired and like to sit back quietly and not make too much bright conversation." And that, she adds, "probably disappoints people."

MACKAY, SIR IVEN GIFFARD Apr. 7, 1882- Commander in chief of the Australian Army; educator

Commander in chief of the Australian Imperial Forces since August 1941, Major General Mackay's name became known to Americans in December 1940 as one of the commanders of the triumphant British Army of the Nile, which rolled up the Fascist forces in Egypt and Libya, Sidi Barrani, Bardia and Tobruk. For his work here he was knighted.

Australian Associated Press

SIR IVEN GIFFARD MACKAY

Tall, slim, and mild-mannered, Mackay's appearance belies the nickname "Ivan the Terrible" given him by Australian troops during the First World War, when, after serving as captain adjutant of the 4th Battalion at Gallipoli, he rose to the position of general officer commanding the 1st Infantry Brigade in France. In the process he collected at least one wound, several mentions in dispatches, the Distinguished Service Order and Bar, the Companion of St. Michael and St. George and the Croix de Guerre.

Son of a Presbyterian minister, the Rev. Isaac Mackay of Armadale, Scotland, and Emily Frances (King) Mackay of Lake Erie, Canada, he was born in Grafton, New South Wales and educated at Newington College, Sydney, and at St. Andrew's College, University of Sydney. In 1904, shortly after receiving his B. A., he became junior demonstrator in physics at the University of Sydney and later resident master and sportsmaster at Sydney Church of England Grammar School. In 1910 he returned to the University of Sydney as assistant demonstrator in physics; he remained there until the First World War broke out. After the War he returned to teaching, putting in a year's study at Emmanuel College, Cambridge, before returning to the University of Sydney. In 1933 he became headmaster of Cranbrook School, one of the fashionable schools in the suburbs of Sydney.

For eight years before the Second World War he had combined with his teaching duties the position of Commonwealth Film Appeal Censor, to whom producers dissatisfied with the rulings of film censorship boards carried their objections. In this position he reviewed thousands of feet of disputed American film.

A University "blue" in rugby and rowing, Major General Mackay has in later life confined his recreation to shooting, horseback riding and ocean surf bathing. In younger years he was expert at racing, tennis, football, cricket and rowing. He was married to Marjorie Eveline Meredith in 1914 and is the father of one son and two daughters.

Convinced, as were many Australian war veterans, that the First World War was only "Round 1," Mackay maintained his military connections and served as peace-time officer in the Commonwealth Military Forces, 2nd Division, from 1937 until the day the call came for what he characterized as "Round 2" in 1940. He then entered the conflict as Commander of the 6th Division.

Who's Who

MCKENNEY, EILEEN *See* West, N.

MCMEIN, NEYSA (măc-mēn' nē'sȧ) Jan. 25, 1890- Artist

Address: h. 131 E. 66th St, New York City

"Just as the full quality of Heifetz's playing might not focus attention completely if he were eight feet tall, so there are plenty of folk in this country who can hardly keep their eyes on the mere work of so glamorous and eventful a lady as Neysa McMein. . . Because she has often allowed her pastels to be reproduced by thrifty processes that drain them of half their color and character; because she will cheerfully draw for a department store or a soapmaker; because of the newspaper reports of her judging beauties at Coney Island, or playing tunes or singing for wounded soldiers, or opening a new movie house in Toronto, or swimming impromptu in the Marne, she arouses suspicions either that she lacks the apocryphal virtue called dignity (which is quite true) or is a schemer for publicity (which is not true at all)—because of these things it is sometimes too hastily assumed that she can't be a serious and important artist."

Her good friend, Alexander Woollcott (see sketch this issue), has written this about Neysa McMein, whose soft-colored, glowing pastel portraits of women and children are familiar to and loved by many readers of leading women's magazines in this country. As a matter of fact, Miss McMein is one of the highest paid woman artists in America today. During 1937, while she was under exclusive contract to *McCall's*, she received, for instance, $2,500 per cover drawing. But, as Mr. Woollcott notes, she is generous to a degree, and readers of the New York *Times* will recall her vivid drawings of suffering, poverty-stricken women and babies donated for that paper's annual "One Hundred Neediest Cases" feature at Christmas time.

Neysa McMein was born in Quincy, Illinois, the daughter of Harry Moran and Isabelle Lee (Parker) McMein, January 25, 1890; and after her graduation from the local high school went to study at the Chicago Art Institute. She began her career by trying her hand at fashion drawings. During the First World War she made war posters, staged entertainments for the American soldiers and lectured in France. She came to New York as Marjorie Moran McMein, of Quincy, Illinois, but "docilely changed her name because some seeress had assured her in sibylline accents that it would bring her luck." During the First World War she was commissioned to make 14 war posters for France and the United States. She was a Y. M. C. A. entertainment lecturer in France in 1918.

In 1923 she married John Gordon Baragwanath, noted mining engineer and writer of adventure stories. The couple have one daughter, one English sheep dog and several cats—Miss McMein adores cats—one of which has seven toes on each foot.

The artist early in her career became well-known for her covers for the *Woman's Home Companion, Saturday Evening Post, McClure's* and other magazines. She was the first artist invited to the White House to paint portraits of President Harding and President Hoover. She has done portraits, in oil, of Ralph Barton, Janet Flanner, Dorothy Parker and other well-known personages, as well as a series of paintings of America's famous women, including Anne Lindbergh, Katharine Cornell (see sketch this issue), Edna St. Vincent Millay, Dorothy Thompson and Helen Hayes. She has never, however, been able to make a self-portrait.

But other artists have found her as lovely to look at as many of her own pastel drawings. The chief characteristics of her work, vitality and honesty, derive from her own personality. Her gifts of natural charm and sympathy draw to her studio in New York men and women prominent in the literary, artistic and social worlds. "She has made a small town of New York," one has said; and, "if you loiter in Neysa McMein's studio, the world will drift in and out."

It is a big, happy-go-lucky place, that studio, according to all descriptions. "The spot itself is a bleak, high-ceilinged room furnished by the processes of haphazard accumulation. Its decorations range from a Briggs strip, torn out of the morning paper and pinned askew on the wall, to a famous original, respectfully framed." There may be a vivid shawl, a gift from the late David Belasco; or a stretch of gay tapestry bought in Paris. The "population" may consist of F. P. Adams, Bob Benchley (see sketches this issue), Irving Berlin, Marc Connelly, Edna Ferber or Charlie Chaplin, among others. Miss McMein works at her easel while they drift in and out, or play her piano, or hold heated discussions.

Hal Phyfe

NEYSA MCMEIN

"She is beautiful, grave and slightly soiled. Her apron is a shabby, streaked remnant of a once neat garment. Her fair hair, all awry, is discolored from an endless drizzle of pastel dust. Her face is smooched with it. She itches to edge one of the pianists to the floor and join the concert herself. The poker game tempts her. But it is not until the daylight has dwindled to dusk that she comes wandering around the easel and drops into a chair, dog-tired but sociable. Indeed, she brings to a party the kind of wholehearted laughter for which your true comedian will work till he drops. Few persons can tell a story better, but unlike so many who have that gift, she can listen, too. She listens with all her might . . . which is half the art of acting, and almost the whole secret of good manners." Because of her hobbies, cats—and people—Miss McMein doesn't have much time, hard-working artist that she is, to do much with active games or sports. She is said, however, to be an expert croquet player, and has recently taken up bowling. In politics she is a Republican. She is one of those persons "to whom the most bizarre and nightmarish things are always happening." This is because, as Mr. Woollcott says of her, she has one secret: "an insatiable, childlike appetite for life."

MACVEAGH, LINCOLN (măk-vā') Oct. 1, 1890- Diplomat; author

Address: b. American Legation, Reykjavik, Iceland; h. New Canaan, Conn.

When in August 1941 the nomination of lean, gray-haired, scholarly Lincoln MacVeagh as the first United States Minister to Iceland (the United States had been previously represented only by a consul) was approved by the Senate, someone commented that since Iceland was rich in sagas a scholar should be welcomed in Reykjavik. Mr. MacVeagh, who from 1933 to 1941 served as Envoy Extraordinary and Minister Plenipotentiary to Greece, is in any case likely to make himself welcome wherever he goes.

A member of the Society of Mayflower Descendants, he was born on October 1, 1890 in Narragansett Pier, Rhode Island, the son of the onetime Ambassador to Japan, Charles MacVeagh, and Fanny Davenport (Rogers) MacVeagh. When he was 13 he went to Groton, from which he was graduated in 1909, taking the Greek prize in his graduating year, and then went on to Harvard. There he first became acquainted with members of the Roosevelt family, was elected to Phi Beta Kappa, and in 1913 was graduated *magna cum laude* in philosophy. For the next year he studied languages at the Sorbonne in Paris.

LINCOLN MACVEAGH

Young MacVeagh's first position had been as secretary to the director of the Boston Art Museum while he was still in college. Now, when he returned to the United States, he spent a year with the United States Steel Products Company before finding a job in publishing, the field in which he was interested. From 1915 to 1917, until America's entrance into the First World War interrupted his career, he was with Henry Holt and Company; then he enlisted in the Army, marrying Margaret Charlton Lewis of New York City in August 1917 before being sent to France. There he saw active service as a first lieutenant, later as a captain and major, and was cited by General Pershing "for exceptionally meritorious and conspicuous services." He returned to his position with Henry Holt and was with that firm until, in 1923, he set up his own publishing house, the Dial Press, Incorporated.

From 1923 to 1933, as president of the Dial Press, MacVeagh kept as his hobby the study of ancient and modern Greece. He was often seen commuting to his office from his Connecticut home, carrying a volume of Homer in the original Greek. No more suitable appointment could have been made than President Roosevelt's in 1933. When the United States' new Minister to Greece presented his credentials he immediately made himself *persona grata* to the Greek Government by speaking out informally in Greek.

Leaving his white legation office across the street from the cypress trees of the Royal Gardens in Athens, MacVeagh made frequent exploratory trips through the country during his eight years in Greece. It is reported that he gained knowledge of more parts of the country than any one of its inhabitants, covering mountain trails by donkey-back and on foot, passing at least one night in nearly every town. He also conducted archeological excavations beneath the eastern face of Acropolis Hill in Athens itself, discovering many missing fragments of pottery which he contributed to the Athens National Museum. He was made an honorary fellow of the Archeological Society of Athens.

A talented writer (his dispatches to Washington were classics in the State Department files because of their humor), the United States Minister to Greece eventually collaborated with his wife in writing a book. *Greek Journey* (1937) was a story for children telling about a trip through modern Greece in a Ford, with old Greek legends recounted all along the way. The New York *Times* reviewer commented: "This is a pleasant odyssey, lacking, perhaps, a certain spark in the narration, yet full of the color and beauty that is Greece."

When in 1940 war broke through the borders of his adopted country, it put an end to archeological expeditions and odysseys. Instead MacVeagh worked night and day to protect American lives and property. In April 1941 he followed the Greek Government to

Crete, but was called home by the State Department for "consultation" not long afterward. For five weeks he was forced by the Germans to stay in Athens while the attack on Crete was being prepared; then, on June 5, he, his wife and his daughter, Margaret Ewen, were finally permitted to leave Greece by way of Berlin. It was August before they stepped off a ship onto United States soil.

Interviewed immediately after landing, MacVeagh reported that the spirit of Greece was "magnificent." "I'm proud of that country," he said. "They are not whimpering a bit. They are defeated but unconquered." He told of a food situation verging on famine because of looting by the Germans, of remnants of the Greek Army wandering the country in beggary, of a total disruption of communications, but also of an anti-Nazi feeling so strong that the Greeks openly cheered the R. A. F. from streets and rooftops.

He is a man of average build, with a large, strong face, wavy hair and a cultivated New England voice. Lincoln MacVeagh is a Democrat and an Episcopalian, a member of the Stewart Society of Edinburgh and of the 80th Division Veterans Association, and a member of the Harvard, Century, University and P. E. N. Clubs.

MAISKY, IVAN (MIKHAILOVICH) (mĭs'kê) Jan. 19, 1884- Soviet Ambassador to Great Britain

Address: Embassy of the U. S. S. R., 13 Kensington Palace Gardens, London, W. 8, England

Soviet Ambassador to Great Britain since 1933, Ivan Mikhailovich Maisky is used to being a barometer for Anglo-Russian relations. Often a look around the ballroom of the Soviet Embassy during one of his receptions at which caviar and champagne are lavishly served has been sufficient to show how British officialdom feels toward his country. There have been times when the reception room was almost empty—and one knew that harsh words were being spoken elsewhere; there was the amazing occasion in 1939, with the possibility of an Anglo-Russian pact looming large in many minds and a British mission on its leisurely way to Moscow, when Prime Minister Neville Chamberlain himself came to partake graciously of the caviar. But perhaps never has the Soviet Embassy's stock stood so high as after June 22, 1941, and never has Maisky's role as the chief link "between these two great powers as they combine their military efforts against the common foe of Nazism" been so significant.

Sovfoto

IVAN MAISKY

Comforting to the British as indicative of the Soviet Union's resolution to fight to the last was its Ambassador's pronouncement, shortly after the Nazis invaded his country: "Should Moscow fall, a catastrophe which I do not believe will occur, we will fight on, supplied by these factories and growing industries hidden in the Urals. The British have a song *It's a Long Way to Tipperary.* Well, it's a long way to the industries which will maintain the Red Army against Germany, a long hard way by air or land."

Quiet, soft-spoken Ambassador Maisky, with his grizzled Vandyke beard and smiling blue eyes, shows no external evidence of his revolutionary background. He was born in Kiriloff, Novgorod Province, Siberia, January 19, 1884, the son of an army doctor. His name at that time was Ivan Mikhailovich Lyakhovetsky; the one he now bears is assumed—a common practice among men engaged in revolutionary activities. Young Maisky became involved in these activities when he went to the University of St. Petersburg which, like many other universities of that time, was fertile ground for advanced ideas. They brought him jail and exile. In 1908, after having been expelled

MAISKY, IVAN—*Continued*

from the University and arrested, he left Russia and went to Germany. There he attended Munich University, specializing in economics.

It was while he was in Germany that he joined the Social Democratic movement. In 1912 he came to England. The story is current that he gained admission only with great difficulty. According to the immigration regulations of that time, he, as a third-class passenger, was supposed to have at least five pounds. Young Maisky had only three pounds, nineteen shillings and sixpence, and got by only because of a letter from George Tchicherin, later Russia's foreign commissar, which established him as a bona fide political refugee. For the next five years he made his living as a free-lance journalist in Fleet Street.

Came the Russian Revolution—and he went back to Russia, shed his Menshevik affiliations and became a Communist. His first post exploited his knowledge of the East—in 1919 he was made head of an expedition to explore Mongolia, and he was instrumental in helping to set up the Mongolian Republic. In 1921 he was made president of the State Planning Commission of his native Siberia. But by that time the Soviet regime was beginning to pay more attention to the impression it made abroad. It needed men like Maisky in key positions—men whose political reliability was supplemented by expert knowledge of foreign affairs and understanding of foreign mentality. In 1925, therefore, he was sent to London as counselor of the Soviet Embassy, staying there for two years. During the diplomatic career that ensued, Maisky also wrote several important books, among them *Contemporary Mongolia, Foreign Policy of RSFSR, 1917-1922* and *Trade Union Movement in the West.*

From 1927 to 1929 he was with the Soviet Embassy in Tokyo and from 1929 to 1932 Minister to Finland. Then he was sent back to England as Ambassador—a post that he has kept ever since. In that post he has lived through many difficult—and some disagreeable—moments, and even those who are opposed to him politically have admitted that he has handled them well. He was in Britain when the arrest of the Metro-Vickers engineers took place, precipitating an open breach between the Soviet and British Governments. He was there at the time of the Moscow trials, when a deputation sent by the General Council of the Trades Union Congress and the Executive Committee of the Labor Party visited him to register a protest. The Soviet Ambassador, while expressing his surprise at the unusual step, received the deputation with scrupulous politeness and gave explanations. And he was there throughout the period of icy coolness that descended after the signing of the Nazi-Soviet Non-Aggression Pact. During that period, devoted mainly to discussion of repatriation of some 400 Baltic seamen by the British Government, he allegedly sighed to his friends that he had adopted as his philosophy the Mongolian axiom: "This too shall pass."

Maisky has been called an "Anglophile" and has been described as belonging to the same "Western" group of leaders as Litvinov (see sketch this issue). He wholeheartedly supported Litvinov's dream of collective security and indivisible peace and in 1936 denounced the "modern philosophy of the mailed fist"; in March 1941, when Litvinov was dropped from the Central Committee, people were surprised to find Maisky one of the alternate appointees to his post. Between that time and the German invasion of Russia he also caused some mild speculation by his dickering for an Anglo-Russian trade agreement and his talks with Anthony Eden, and even before that he toured East End air raid shelters and received a hearty round of applause from the occupants. Now, with Russia in the War, he has had the pleasant but unusual experience of hearing his country toasted at a National Defense Committee luncheon.

Maisky's long stay in England has given him a profound knowledge of the British mentality, a knowledge which he has used to good advantage. He is "a good mixer," and manages to talk to people in their own language without modifying his own political attitudes. His personal relations with the Foreign Office have always been good. The Soviet Embassy in Kensington Palace Gardens, with its five-pointed star of red geraniums blazing in the center of the lawn, is efficiently run by his wife, the small, slim, fair-haired former Agnes Alexandrovna Skippin, who is a native of the village where he was born, and who gracefully performs her role of Doyenne of the Diplomatic Corps.

Who's Who

MAKEMSON, MAUD W(ORCESTER) (māk'm-sŭn) Sept. 16, 1891- Astronomer
Address: b. Vassar College, Poughkeepsie, N. Y.

One of the Guggenheim fellowships in science for 1941 went to Maud Worcester Makemson, astronomer and chairman of the department of astronomy at Vassar College. Dr. Makemson's achievements in her particular field (culminating in a book, *The Morning Star Rises,* on Polynesian astronomy, to be published by the Yale University Press) are the more remarkable because she had little academic training and no knowledge of astronomy whatsoever prior to 1923. Before then her career had been that of a busy mother on a ranch in the Southwest who took whatever odd jobs she could find in order to help support her three growing children.

Maud Worcester was born at Center Harbor, New Hampshire on September 16, 1891, the daughter of Ira Eugene and Fannie Malvina (Davisson) Worcester. Her first introduction to astronomy, she tells us, actually came when she was a student at the Boston Girls' Latin School, but left little impression. "This was because I was extremely nearsighted and could see only the moon and half a dozen or so bright stars and planets. My parents had consulted an oculist when I was eight and had been advised to postpone putting glasses on me for as long as possible. That same winter, however, I was sent to an oculist and the world was transformed. On the first clear evening after the glasses were fitted my mother took me out to look at the sky. I never look at the starlit sky now without recapturing in a degree at least the awe and wonder of that first glimpse of the Milky Way glittering across the sky brilliant with innumerable stars."

But at the Latin School, from which she was graduated in 1908, and during her year following at Radcliffe College, she took a classical course. "My mother wanted me to become a novelist, and my own secret ambition, never expressed of course, was to be married and have children. If I had been a boy I should have wanted to go to sea and follow in the line of my Maine sea-faring ancestors on the Worcester side of the family."

After her year at Radcliffe she taught in a rural one-room school at Sharon, Connecticut. Also, before leaving the East, she took an extension course in English composition at Boston University under Dallas Lore Sharpe, but "experienced difficulty in finding something interesting enough to write about." Then, in the fall of 1911, she went with her family to Pasadena, California.

She married Thomas Emmet Makemson of Pasadena in 1912 (the couple are now divorced) "and commenced a career of raising cows, chickens and children." A drought in Southern California drove the young couple first to the Imperial Valley, then to the Salt River Valley of Arizona. There were no books available to her during these first five years except a copy of *The Winning of Barbara Worth* loaned by a neighbor; but Mrs. Makemson managed to write two stories, which were published in the *Arizona Magazine*.

In 1917 they moved to Tombstone Canyon in Bisbee, an Arizona mining town. There the necessity to augment the family income, and the "urge to do something constructive in the world," led Mrs. Makemson to find small jobs she could do at home, such as tutoring in Latin, making bread, crocheting lace and hemming sheets for neighbors. "By the time my third child was born in September 1917 I had determined to get a regular job. My mother had come to stay with me so that I could leave the children. I was fortunate enough to find something at once in the office of the Bisbee *Review*. My duties were to read proof, answer the telephone and look after the office from 6 p. m. to 2 a. m.; but in addition I was to take 'society' news over the telephone and write up fashions one day a week. For this I was to be paid space rates, but the editor found it advisable to pay me a straight salary when he saw the extent of my first page."

When her husband joined the Marine Corps in 1918 she began a regular reporting job on the Arizona *Gazette* at Phoenix. Then, while trying to find some way of earning a living and yet being with the children, "an event occurred which had a profound influence on my life." This was in 1921, when she chanced to see a remarkable display of the aurora borealis in the desert north of Phoenix, coincidentally with a news report of a group of large spots on the sun. Her scientific curiosity aroused, she began reading popular books on astronomy. Next, ambitious to take an extension course in astronomy at the University of California, she gave up her job in Phoenix and joined her parents in Southern California. There she taught fourth grade for a while; and the following year she taught also at Palmdale near her father's ranch, taking a correspondence course in trigonometry.

Margaret DeM. Brown
MAUD W. MAKEMSON

In the summer of 1923, following a trip with a Los Angeles astronomy class to Mt. Wilson Observatory, her course was set. She arrived at Berkeley the moment morning classes started, and plunged into work. In 1925 (at the age of 34) she received her B. A. degree at the University of California; and in 1930 she acquired her Ph. D., becoming an instructor in astronomy. After teaching mathematics and astronomy at Rollins College, Florida (1931-32), she became a professor of astronomy at Vassar, where she now holds her position as chairman of the department.

During the summer of 1935 Dr. Makemson worked at the Bishop Museum in Honolulu, investigating Polynesian astronomy. She has also written a number of research articles that have appeared in the *Astronomical Journal, Popular Astronomy, Sky, The American Anthropologist,* etc. And in 1936 she and her children excavated at the Pueblo of Kinishba on the Apache Reservation with the

MAKEMSON, MAUD W.—*Continued*

expedition from the University of Arizona under Dr. Byron Cummings.

Her daughter Lavon, educated in archeology at the University of Arizona, is married and the mother of two children. Her son Donald teaches history at the University of California, is the author of several articles on the Apaches of the Southwest and an ensign in the Naval Reserve. Harris, the younger son, is now a California undergraduate and also interested in writing.

Tall, energetic, blue-eyed, proud of the work of her children, whose interests she shares, Dr. Makemson says her hobbies are American Indians and exploring out-of-the-way places in the Southwest and Mexico. In politics she is a Socialist. She plans to spend the year of her Guggenheim fellowship working at the Peabody Museum at Harvard University, "where all needed materials are close at hand."

MALINOWSKI, BRONISLAW (măl″ĭ-nô′skê brô-nê′slȧv) Apr. 7, 1884- Anthropologist

Address: b. Yale University, New Haven, Conn; h. 6 Oppidans Rd, London, N. W. 3, England; 261 Canner St, New Haven, Conn.

"Culture is nothing but the organized behavior of man." That is the central thesis of the work of Dr. Bronislaw Malinowski, universally regarded as the father of the Functional School of anthropology. Malinowski, who since 1927 has been professor of anthropology at the University of London, was in 1941 a visiting professor at Yale. He is a popular lecturer. Famous for his wit, "brilliant, convincing and interesting even to a lay person," he puts particular emphasis on the application of the most archaic experience of mankind to the analysis of modern world problems. He explores primitive magic to throw light on modern totalitarian propaganda. He explores savage society in order better to explain everything from nationalism and the persecution of minorities to modern marriage, family and sex relationships.

"Cultural anthropology can and must provide the foundations of the social sciences," he says, and at the same time "scientific anthropology . . . must work on the foundations laid down by biology and physiology; it must work hand in hand with the psychologist; and it must learn as much as it can learn from the student of environment, the geographer." It must "approach primitive culture from the angle of politics and economics, theory of religion and jurisprudence." These things may be less "amusing to speak about or even to listen to" than "head-hunting, juicy stories about orgiastic ritual, somewhat shocking forms of primitive marriage, obscene mutilations and mysterious masked dances," but they are scientifically more relevant.

In short, Malinowski regards as his real contribution to anthropology and other social and humanistic studies the attempt to develop a scientific theory of culture. This he bases on such principles: Science must study first and foremost *what is* and later only concern itself with *what might have been.* Science is the cross-fertilization of experience and theory; the extraction from experiment, observation and experience of general rules with a predictive value. In the science of man, more particularly, it is necessary to realize that human beings act either under the impulse of animal drives or else strive for culturally determined values guided by reason, ambition and belief. Implements, customs and ideas survive or diffuse only because they are in some way directly or indirectly useful, because they satisfy some needs, physiological, social or integrative. History is a sieve through which only that which is vital and functioning, that is, need-satisfying, passes and remains. What is relevant in history can always be found surviving in memory, in legends, in traditional values and in mythologies. Malinowski thus tries to build up an anthropology of live men and women and not of marionettes playing about with useless antiquities or non-functionally diffused "traits" and "trait complexes" for the benefit of the reconstructing antiquarian. He does not deny either evolution or diffusion. He fully accepts the concept of survival and of borrowing. He maintains only that first and foremost we must understand why certain objects, customs, and ideas survive or diffuse, while others do not. Survival and diffusion alike, he would argue, run always on lines of functional vitality.

The scientific principles, their application to modern life, and the understanding of "the savagery of modern civilization in the light of the civilizations of savages," Malinowski has embodied in his own field work and has also tried to stimulate in the work of his numerous pupils. The practical application of anthropology to colonial affairs he was able to implement through his association with the International Institute for the Study of African Languages and Culture, established in London in 1928. This institute organized extensive field work in Africa, and developed a collaboration between administrators, missionaries, agricultural and medical experts and students of native African education, jurisprudence, economics and religion.

Born in Poland on April 7, 1884, the parents of Bronislaw Malinowski were *szlachta*—landed gentry and nobility. (He has dropped the use of his title of Count.) He attended King Jan Sobieski Public School, then the University at Kraków, where he took his Ph. D. in physics and mathematics in 1908 with the highest honors in the Austrian Empire. He went then for two years to Leipsig, where he engaged in original research in Wilhelm Ostwald's laboratory of physical chemistry, but also came under the influence of the veteran psychologist Wundt, who at that time was mostly interested in folk-psychology, that is, anthropology. After having read

Frazer's *Golden Bough,* Malinowski decided to go to England. In 1914 he moved to London and worked at the British Museum and also at the London School of Economics, where he moved within the orbit of such famous scholars and thinkers as J. G. Frazer, Prince Kropotkin, Havelock Ellis, Hobhouse, E. Westermarck and Graham Wallas. In 1914 he set out on his first field expedition—with the Robert Mond Anthropological Expedition to New Guinea and North West Melanesia.

He didn't return to Europe until 1920. But when he returned to England it was with a wife—Elsie Rosaline Masson, daughter of the well known chemist and university professor Sir David Masson—whom he had married in 1919. (She died in 1935, leaving him three daughters. In June 1940 he married Anna Valetta Hayman-Joyce, sister of Brigadier Hayman-Joyce of the British General Staff. Mrs. A. V. Malinowska paints and exhibits—Paris, London, New York—under the nom de plume Valetta Swann.)

Studies which were published during these years of research in the field include *Primitive Religion and Social Differentiation* (in Polish, 1915); "The Natives of Mailu," in *Transactions of the Royal Society of South Australia* (1915); and "Baloma: the Spirits of the Dead in the Trobriand Islands," in the *Journal of the Royal Anthropological Institute* (1916). Since that time the Boston *Evening Transcript* has said of Dr. Malinowski: "His inquiry into the Kula system and his studies of the Trobrianders led to most that is significant in the modern development of social anthropology." For one thing, his experiences with primitive religion and magic convinced him that they both have highly useful psychological and social functions and that magic, particularly, is carried out on the principle that it "helps those who help themselves." As for religion, it is "the main integrative system of every civilization, primitive and developed alike; it constitutes the very foundation of culture."

It was 1924 when Dr. Malinowski became a Reader (a title which corresponds to that of associate professor in America) in social anthropology at the University of London; 1927 when he took the chair of anthropology, tenable at the London School of Economics. In the meanwhile, in 1926, he came for the first time to the United States as a guest of the Laura Spelman Memorial, traveled around the continent, visited Mexico, the Pueblo Indians of Arizona, and worked at the summer school of the University of California at Berkeley. In 1934 he made a trip to South and East Africa, doing survey work among the Bantu tribes with exotically colorful names—the Swazi, the Bemba, the Chagga, the Bantu Kavirondo. By the time he revisited the United States as Messenger lecturer at Cornell University in 1933 he was known not only as the author of books that have been translated into such diverse languages as Chinese, French, Spanish, Polish, Italian and German, the author of the *Encyclopaedia Britannica's* section on marriage, kinship and social anthropology and of innumerable scientific monographs and articles, but as one of the greatest minds in the scientific world.

At the Harvard Tercentenary in 1936 delegates from 42 countries were present. It was Bronislaw Malinowski who represented the University of London and the Polish Academy, and President Conant (see sketch this issue) conferred an honorary D. Sc. degree upon him, citing him as "an anthropological explorer who initiated a new movement for the study of the gregarious habits of the human race." Malinowski himself read a paper on culture in which he incidentally took his listeners on a world tour of primitive peoples—from the Masai to the Eskimos. He tried to show that there *can* be a genuine "science of culture"—that the chief task of anthropology is to search for determinism in the broadest and most fundamental principles of human behavior by reducing even the strangest customs and institutions to universally human and familiar elements. He heaped particular scorn on the concept of culture "as the self-revelation of an immanent Genius or Deity," a concept which, he said, reached its peak in Hegel's Historical Idealism and achieved its full practical application with the coming of "the latest incarnation of the Absolute"—Adolf Hitler. He felt that such distinguished anthropologists as Ruth Benedict (see sketch this issue), Franz Boas and Margaret Mead (see sketches 1940 Annual) exhibited certain dangerous tendencies toward mysticism or a concept of the "tribal genius," leaving no room for scientific analysis.

Esther Henderson

BRONISLAW MALINOWSKI

On that occasion Malinowski also delivered the oration at the Tercentenary Exercises of the Harvard Chapter of the Phi Beta Kappa Society. His oration, whose subject was war,

MALINOWSKI, BRONISLAW—*Cont.*

was later published in the *Atlantic Monthly* (December 1936), and some of the statements made in it are important even today when the Second World War is ravaging the world. Large audiences were attracted to his public lectures at the Symposium, and the press proclaimed him "one of the four greatest minds today."

The United States is only one of the many countries which have so honored him, however. In 1930 he became a corresponding member of the Polish Academy of Science (promoted in 1938 to full membership); in 1932 correspondent of the Italian Committee for the Study of Population Problems; in 1933 a member of the Royal Academy of Science of The Netherlands; in 1936 an honorary member of the Royal Society of New Zealand. In 1936, too, he lectured at the Oslo Institute for the Comparative Study of Cultures.

Malinowski crossed the Atlantic in the autumn of 1938 for the last time, not as an émigré, but by free choice, to spend his sabbatical year in this country. He insists, "I came here of my free volition not to teach but to learn, not to earn but to enjoy the climate, physical and spiritual, of this country which I had liked from my first visit in 1926." He naturally went to Arizona and spent the winter months of 1938-39 at Tucson, where he was studying incidentally the uprooted community of Yaqui Indians, whose larger settlements he visited on a trip to Sonora, Mexico. He spent part of the summer of 1939 and the two summer vacations of 1940 and 1941 in Mexico, where, late in 1941, he is engaged in systematic community studies in the state of Oaxaca. He also visited the Republic of Cuba several times, and he has a great many personal friends among the outstanding members of the Latin-American intelligentsia. His Spanish is good enough for lecturing and writing, several of his articles having appeared in Latin-American scientific journals and magazines.

When, in August 1939, Dr. Malinowski was preparing to return and resume his teaching duties in London, the War broke out, and he was advised from England to remain in the United States "for the duration." "I had already booked my cabin on the *Normandie* for September 13, an unlucky date (I have always been afraid of the number 13, and of sailing on a Friday). Since then the *Normandie* has been chained to her dock, and I have remained chaired at Yale, a place which I greatly enjoy and maybe shall not leave for the rest of my natural existence. This is the reason why I have taken up my half-ethnographic, half-sociological study in Mexico, so as not to be a specialist in all ethnographies except that of the New World."

People who have never read *The Family Among Australian Aborigines* (1913); *Argonauts of the Western Pacific* (1922); *Crime and Custom in Savage Society* (1926); or *Coral Gardens and Their Magic* (1935) nevertheless regard Dr. Malinowski as an oracle after listening to him for an hour. One of the most frequent questions they ask is: "Is primitive man an individualist or a communist?" Malinowski, who says that anthropology can give opinions as to the workings of institutions of property but not as to "that vague entity, human nature," is probably a little tired of answering that one. Other things he cannot repeat too often, however, particularly in these days: that it is "fallacious to regard war as a necessary result of man's biological nature"; yet that "peace is not a negative state, a mere absence of fighting." He says: "If we want to prevent war we must replace the part which it plays by a powerful and effective machinery which would take over some of its functions . . . an international superstate."

There are two distinctions which Malinowski values above all others. The first is a reference in the *New Yorker*—the phrase, "the great Malinowski." "This," says Malinowski, "is one of the *New Yorker's* best jokes." The other highly appreciated distinction is the extensive attack launched against him by the official Gauleiters of German ethnology. (Incidentally, Dr Malinowski has also been frontally attacked in a book published in the U. S. S. R., *The Intelligentsia of Great Britain.*)

A slender, scholarly-looking man, with an impressive dome of a forehead, Dr. Malinowski confesses that there are some customs and institutions he still can't understand. Although he has lived among semi-savage Carpathian mountaineers and among Baltic barons, has moved from Poland to North Africa and from the Canary Islands to North Germany and France, and is a sophisticate who finds nothing really mysterious about cannibalism, he is still both puzzled and repelled by golf, hara-kiri, the collecting of pickled heads and football.

MARGE *See* Damerel, D.

MARGESSON, DAVID (mär′jĕ-sŭn) 1890- British Secretary of State for War

Address: h. Boddington Manor, Byfield, Northants, England

DAVID MARGESSON

The announcement (December 23, 1940) that tall, dark-skinned Captain David Margesson would occupy the post in the British War Office formerly filled by Anthony Eden came as a surprise to many, in spite of the fact that ambitious Captain Margesson had been mentioned for Cabinet posts before. Since 1931 he had been chief Government whip, the martinet of the Conservative Party. It was he who took new Tory members of the House of Commons aside and gave them lectures on Party regularity, who always advised on and often vetoed appointments, who was supposed to have kept a black book of Conservative "rebels" who swerved even a little from the Party line. Churchill's name as well as Eden's must have occupied space in Captain Margesson's black book at times (even though since the spring of 1940 Margesson has been Churchill's "top sergeant," responsible for the discipline of the entire House of Commons), and it seemed probable that his appointment would be severely criticized by other members who still rated an entry there. One of them had attacked him openly in the House not so long before. It was also true, however, that Margesson's reputation for "reaction and autocracy" had never hurt his popularity with the rank and file of Conservatives in the House, who still held an overwhelming majority.

Born in 1890, Captain Margesson is the son of Sir Mortimer and the Lady Isabel Margesson, was educated at Harrow and at Cambridge, and then went to the United States. He was contemplating a business career there when the First World War broke out. Returning to England, he served from 1915 to 1918 as an adjutant with the 11th Hussars and earned the Military Cross. Years later he replied to a lady who wanted to know how he managed the supporters of the Government: "You must remember I was once adjutant of a cavalry regiment." It was 1922 when he was first elected to the House of Commons from the Upton Division of West Ham and until 1923 he also served as parliamentary private secretary to the Right Honorable Sir C. A. Montague Barlow, then Minister of Labor.

MARGESSON, DAVID—*Continued*

The following year Margesson was returned from Rugby, and in November of that year he became Conservative and assistant Government whip. From 1926 to 1929 and for a short period during 1931 he was junior lord of the Treasury; since 1931, when the first National Government was formed, he has been not only Government chief whip but parliamentary secretary to the Treasury; and in 1933 he became a Privy Councillor.

During Chamberlain's term as Prime Minister, Captain Margesson was known as his closest confidant, with all junior appointments under his control. The appointments were so widespread that critics claimed half the Tories in Parliament held Government positions! In March 1940 the London *Evening Standard* joined the *Manchester Guardian* in criticizing Margesson's control over the House: "Arguments are cut short by the crack of a whip. Like Disraeli, Captain Margesson believes that a majority is always the best repartee. . . It is intolerable that members should spend long hours debating the merits of, say, the appointment of an Economics Minister, only to discover at the end that the issue has been settled before the debate even began." The *Standard* also rejoiced over the fact that during wartime Captain Margesson could no longer create voting constituency trouble. "That weapon is now broken in Captain Margesson's hand. He is a Himmler [see sketch this issue] without his castor oil. This is the moment for revenge," it gloated, not many months before Captain Margesson received his present high Cabinet post.

As Secretary of State for War Captain Margesson received much favorable publicity when he cracked down on an Army officer for saying lower and middle class boys failed to make good officers. After the German invasion of the Soviet Union, however, some Laborites began to agitate for his removal on the grounds that he represented the forces of appeasement—or, at least, of anti-Soviet feeling—in the Government.

In 1916 Captain Margesson married Frances Leggett of New York; there are two daughters and a son. He is a member of London's swank Carlton and Turf Clubs. One of his daughters, Janet, of totally different political sympathies, was to have represented a British youth organization at the American Youth Congress in June 1941, but was unable to attend.

Who's Who

MARSH, REGINALD Mar. 14, 1898- American artist

Address: b. 1 Union Sq, New York City; h. 4 E. 12th St, New York City

Reginald Marsh likes the people on the wrong side of the track—burlesque girls, whom he paints with "sensual tenderness and deep appreciation"; Bowery bums; the crowds that throng Coney Island beaches; New York's working girls, swinging their husky legs, charging down the street in droves to the movies, pressing into the subways, togged out in 14th Street finery. Frequently critics call him "the Hogarth of Manhattan" and praise his observations of the thousands of typical metropolitan sights and sounds in which "you can hear the people jabber, hear the scuffling feet on the sidewalk, the clatter of passing vehicles." As Harry Salpeter says: "I venture the belief that should New York be razed to the ground at some future date and become a vast sheep meadow, the crowded tumultuous pictures of Marsh would tell our descendants more about the way in which their ancestor city dwellers lived, worked and played than lies in the power of any set of documents and newsprint that might be cracked open out of the ruined cornerstone of the Empire State Building."

In the summer heat, when the artists move en masse out to Connecticut or Maine, Marsh wanders around the city, sketchbook in hand, jotting down the materials for hundreds of pictures. Or he stands at the window of his studio on Union Square and looks down on its crowds through binoculars. There are some who say he looks through lenses distorted for satirical purposes and the result is caricature; others, that his feeling for Manhattan is neither over-sentimental nor over-sophisticated; still others, that there is "astonishing tenderness and understanding" in his depictions of the humbler class of New York shop girls. Marsh himself doesn't join the discussions, for he is the kind of man who doesn't talk much about his art or about anything else. "A quiet and self-contained monomaniac," his only concern is getting down what he sees and feels.

He sets it down mainly in large water colors and tempera because he likes to work rapidly. Once a sketch has been made, it is put into a projector and projected onto a large sheet of paper. With pencil Marsh then draws over the image the few guide lines desired as a layout for his painting. Sometimes the figure is modeled in Chinese ink or ivory black and the colors assembled over this underpainting. But whether Marsh is doing an etching, an oil, a water color or a tempera, the result comes out fast. There are some critics who feel that if he did half as much work he would do twice as well.

This artist who is said to look like a Swede not long off the boat and to talk, in his talkative moments, like a Hemingway character, actually is a product of some of America's better schools and the son of Fred Dana Marsh, exhibitor in the French Salon, painter of lovely ladies and associate member of the National Academy at 31. His mother, Alice (Randall) Marsh, was an artist, too, who studied under Frank Vincent Dumond in the early '90s and painted miniatures.

She and her husband were living in Paris when Reginald was born in an apartment house where the Café du Dôme now stands. Two years later, however, the family moved to Nutley, New Jersey, and it was there that Reginald, not yet three, produced his first drawing—a picture of a locomotive influenced, it is said, by his father's academic style. He kept drawing while attending various schools, including Lawrenceville, and he continued to draw after he entered Yale in the class of 1920. It was there that he painted his first, and last, still life. It was there, too, that he decided on a career.

His father had tried to discourage him from becoming an artist, but Reginald compromised on drawings for the Yale *Record.* Their reception encouraged him to take up illustrating as a profession, and he left Yale for New York and the magazines. Bit by bit he got a foothold in newspaper and magazine illustrating and cartooning (some people still scornfully call him an "illustrator"), and by 1921 he was doing work for *Vanity Fair* and soon after for *Harper's Bazaar.* Some of the people at *Harper's Bazaar* steered him to John Murray Anderson, producer of the *Greenwich Village Follies,* who hired him to design theatre curtains for several productions. Later he collaborated with Robert Edmond Jones and Cleon Throckmorton in designing curtains and settings for the hit *Fashion,* which the Provincetown Players presented in 1923 and 1924. He also did a curtain for Otis Skinner's *Sancho Panza,* another for John Murray Anderson's *Almanac,* and a number of curtains and settings for Paramount-Publix productions and Gluck-Sandor's Dance Center.

Meanwhile he had a steady position as well. In 1922 the New York *Daily News* gave him a three years' contract under the impression that they would be able to make him into another W. E. Hill. After four months in which they got nowhere with this ambition and couldn't find much for him to do, they set him to work reporting music halls and night clubs in cartoons. Marsh loved the work: he got around New York; he was drawing; and he even had time to try painting.

He had been studying art off and on at the Art Students League, for a while under John Sloan. It was there that he met his first wife, Betty Burroughs, a sculptor and daughter of the late Bryson Burroughs, painter and curator of painting at the Metropolitan Museum. (His present wife, Felicia Meyer, had a famous father, too: Herbert Meyer, the landscape painter.) In 1925 he continued his studies in Europe, where he concentrated on the Old Masters. He returned to the United States to take up sketching again, much of it for the *New Yorker.* At the same time, though, he did start painting the landscape around Flushing, Long Island and water colors of much of New York State. Some of the hundreds of pictures that resulted were shown at the Weyhe, Valentine and Marie Sterner Galleries.

In 1927 Kenneth Hayes Miller, who admired his water colors and drawings while at the same time deploring the fact that Marsh had never painted a picture, took him into his class at the Art Students League for four or five months to study the principles of painting. With this as a basis Marsh in 1928 again went to Europe and spent months making copies of Rubens, Delacroix, Rembrandt, Titian and the other Masters. These are the ones that count, he feels, and impressionism, post-impressionism, abstractionism and modern streamlined experimentation have brought confusion into contemporary art.

REGINALD MARSH

Back in the United States again in 1929, Marsh rented a studio on Union Square and began to paint the New York scene. He experimented with various media, frequently under Miller's tutelage, and discovered that tempera was best suited to his painting temperament. In eight months he had prepared enough paintings to give his first full-sized exhibition at the Rehn Galleries, which included his first oils. The next year, in 1931, there was another exhibition of his work, and many others have been held at the Rehn Galleries since then.

During these years critical comment has, of course, been varied. In 1933 Henry McBride of the *Sun* ecstatically commented that he should be voted a Pulitzer Prize for "the best exhibition of the year," while of the same showing another critic said that his drawing, though skillful and spontaneous, was at times confused and negligent, and his color very often designed without intelligent organization. One year later the critics were praising Marsh's progress and Edward Alden Jewell commenting that "a previous tendency toward muddiness has largely disappeared. . . The colors appear cleaner; move with more ease in the rhythms they orchestrate." The adjectives "exciting", "turbulent", "dramatic" were frequently used.

Four years later, in 1938, the same adjectives were being used, but Jewell was disappointed and sharply critical. "Mr. Marsh," he

MARSH, REGINALD—*Continued*

said, "ought to do something drastic and at once in the way of cleaning up his palette and sharpening his draughtsmanship." In February 1939 the criticism shifted, however, when there was a large showing of nearly 50 of Marsh's etchings, engravings and drawings. Criticism then focused itself on the problem of presenting many figures in one scene, and the consensus was that in the early etchings there was frequently a confusion of values, a bewildering complexity which was absent in the later ones. *Girl Reading a Newspaper*, for instance, has "a rugged strength and simple incisiveness."

In 1940 the critics were discussing his "rhythmic power," his "freedom and galvanic sweep," the "vulgarity" or "life" of pictures like *The People's Follies No. 3* or *Grand Tier Box* or *Memories of the Stork Club* or of his drawings, most of which, according to Howard Devree, reveal Marsh's amazing mastery of technique free from the satirical touch of caricature which permeates with exaggeration his comment on social vulgarities. And in 1941 they were commenting that he had reached "the high-water mark of his career in easel painting," that he was painting, with more vigor, "single compositions and broader areas." According to critics, in this exhibition Marsh showed the results of his experimentation with a new oil technique; he showed, too, in *Easter on the I. R. T.* and *Coney Island Beach No. 3*, the influence of the technique of Jacques Maroger, former head of the laboratory of the Louvre and now teaching in New York, with whom he had recently studied. But the subjects remained the same as in his previous shows—everything from burlesque to the Bowery, from Coney Island to river-front scenes with a salty flavor. In addition to his painting Marsh has been making etchings and line engravings on copper.

For his work Reginald Marsh has received the Kohnstamm Prize from the Chicago Art Institute (1931), the first Wanamaker department store regional purchase prize (1934), the Thomas B. Clarke Prize from the National Academy of Design (1937) and the Watson F. Blair Prize from the Chicago Art Institute (1940). He is represented in the Metropolitan Museum of Art, in the Whitney Museum of American Art and elsewhere throughout the country, and there are murals by him in the Washington, D. C. Post Office and the New York City Custom House which have been called "some of the finest decorations that have been produced under Federal auspices."

Who's Who in American Art

MARSHALL, VERNE Aug. 30, 1889-

Chairman of defunct No Foreign War Committee; former publisher

Address: h. 532 Knollwood Dr, Cedar Rapids, Iowa

> Bulletin: On April 29, 1941 Verne Marshall announced that the No Foreign War Committee would dissolve. It was organized, he said, "to provoke increased public discussion" of the danger of the United States going to war overseas. "These purposes have been served and all obligations of the committee met." In the annual election of officers on the Cedar Rapids (Iowa) *Gazette* in June 1941 he was supplanted as secretary, and since the termination of the No Foreign War Committee he has neither returned to the paper nor been conspicuous in public life.

From February 1941 issue:

On January 8, 1941 Verne Marshall resigned his active editorship (although still co-owner) of the Cedar Rapids *Gazette* in order to devote his full time to the direction of his month-old No Foreign War Committee, formed to counteract the "propaganda of the William Allen White Committee," which, according to Mr. Marshall, had developed "the same public psychology as that which was carefully created during the War period preceding our declaration of hostilities in April 1917."

After the first full-page advertisement of the Committee appeared in December 1940 in 52 newspapers all over the country (including Mr. White's Emporia *Gazette*), Mr. Marshall began getting himself, in many other newspapers, a barrage of publicity. His sensational story of peace "agenda" flown from Germany to the United States State Department in October 1939 by William Rhodes Davis (see sketch this issue), a New York oil operator —an "agenda" which, Marshall asserted, offered the opportunity for a just and honorable negotiated peace at that time—set people on both sides of the aid-to-the-Allies issue to questioning both Mr. Davis' and Mr. Marshall's connections and motives. Mr. Marshall claims that such a peace could be negotiated between Germany and Great Britain even now.

In spite of Mr. Marshall's warning, "Let no man accuse us of the No Foreign War Committee of being appeasers, Fifth Columnists, pro-Nazi, pro-British, pro-Fascist or of being anything save a group of determined pro-Americans," many individuals and groups have chosen to do just that. Among them was a sizable portion of the audience at a debate on, "Is a Hitler Defeat Essential to the United States?" sponsored by *America's Town Meeting of the Air*. Mr. Marshall took the negative, and met hostile response from many of his listeners.

L. M. Birkhead, national director of the Friends of Democracy, sent Marshall a telegram in which he charged: "Your organization can be properly classed with the haters of England, the defeatists and the anti-Semites. Your organization is no such bona fide keep-us-out-of-war movement as are the Quakers and similar high-minded and loyal American groups." Some of this controversy was due to the fact that "former leaders in the Christian Front movement and associates of Father Coughlin" were said to be sponsoring a meeting at which Mr. Marshall was planning to speak on January 12. By January 14 the field organizer of the Committee, O. K. Armstrong, had resigned, and some others whose names had been linked with the Committee seemed to be dropping away.

Mr. Marshall says: "We have built this campaign of ours from the grassroots upward." *The Nation* denies this, saying: "For all its homespun, small-town look, the financial and political roots of the new Committee strike into the same soil that nourishes the America First outfit; they may even be intertwined."

There is no doubt that Verne Marshall comes from the "grassroots" country. He was born in Cedar Rapids, Iowa on August 30, 1889, the son of Harry Lincoln and Emily (Kirkland) Marshall, and got his start in the newspaper business early—as a reporter on the Cedar Rapids *Republican* at the age of 19. The next year found him reporter and then city editor for the Sioux City *Journal;* in 1911 he was in Great Britain, doing special writing for the London *Chronicle;* and he came back to the United States to spend a year at Coe College in his home town and to become a reporter for the Minneapolis *Tribune* in 1913. It was 1914 when he became managing editor of the Cedar Rapids *Gazette,* after his father bought a part interest in the paper, and from then on his career was interrupted only by the First World War. That sent him to France in 1916 to drive an ambulance for the French Army, then to devote his time to Red Cross work, and when the United States entered the conflict he immediately enlisted as a private (he was later promoted to sergeant) in a machine gun battery. He was sent on a tour to sell Liberty Loan Bonds. Commissioned a second lieutenant, he "never was permitted to return to his division but was kept on special duty until the end of the War."

Marshall succeeded to the editorship of the *Gazette* after his father's death in 1932. He has been known not only as an old-line Republican but also as a "muckraker," although sometimes the results of his muckraking have been nebulous. In 1935 he made researches into a Woodbury County (Sioux City) illegal slot-machine ring which jogged a grand jury into indictments and convictions of 31 state officials for graft. For this exposure he was awarded the gold Pulitzer Plaque for the most meritorious public service by a newspaper in that year, but within 24 hours after the award the Iowa Supreme Court dissented, ruling that the special prosecutor had received a $700 special fee from the *Gazette* and that the convictions of the defendants were thereby invalidated. Marshall denied this, saying that "the court was misled by defense counsel," but the officials were nevertheless released. (There are still slot machines in Sioux City, too.) At another time Mr. Marshall campaigned for the elimination of prison labor in manufacturing; it is also still being used in Iowa.

VERNE MARSHALL

Nevertheless Marshall remains a bumptious and energetic crusader. Most successful has been his campaign against the use in public schools of textbooks which he calls "subversive"—notably those of Harold Rugg (see sketch this issue). He has been hammering at this for a number of years, and the books are being gradually eliminated in Cedar Rapids itself.

The Second World War found him ready for another crusade. In June 1940 he wrote an article for *Scribner's Commentator,* a magazine which, he says, "fights for American independence and integrity." His article began: "There has never been a just war nor an honorable peace." Not until the middle of December 1940 did the No Foreign War Committee make its appearance, however. On October 20, 1940 a long distance telephone call summoned Marshall to New York; on November 4 a 2,500-word editorial in the *Gazette* said that there he was shown "secret documents" which made him "mentally drunk." He told of Mr. Davis' role in the Nazi peace plan without mentioning Davis by name, and also denounced President Roosevelt and asked for his defeat. Finally on December 17 the wires of the Associated Press, the United Press and Hearst's International News Service carried the story of the Committee's birth.

When on December 30 the "secret documents" mentioned in the editorial were revealed to 60 Washington correspondents dur-

MARSHALL, VERNE—*Continued*

ing a press conference arranged for by the *Gazette's* Washington correspondent the wires hummed even more loudly. Everyone wanted to know what Davis' connections with Germany have been (he is known to have sold oil to both Germany and Italy) and what his connections with the No Foreign War Committee might be (he denied being its "angel," as Marshall had intimated); everyone wondered who Marshall's financial backers were. Rumor connected Henry Ford as well as the heads of *Scribner's Commentator* with the formation of Marshall's Committee—and other names were discussed. In the meanwhile Marshall was speaking over the radio and into the newsreel microphone and holding daily press conferences that were always good for a headline. He said that his appeals for public support had been answered not only by a campaign of name-calling but by money, by thousands of signatures to telegrams to be sent to President Roosevelt, by promises of Congressional support.

The objectives of his committee, according to Mr. Marshall, are "few and simple. Our purpose is to prevent the United States from being sucked into the current chapter of Europe's interminable economic, political and ideological war. . . Also we intend to fight to the bitter end against any conspiracy or plan to eliminate the silly, fool dollar sign from consideration of aid to Britain." He doesn't want President Roosevelt to "give away our national defense" if the peril is "one-third as grave as you and Bill Knudsen say it is." But "there is absolutely nothing in the program or objectives of the No Foreign War Committee which would in the slightest degree hamper or seek withdrawal of full and legal help to our sister English-speaking nation."

It seems to be true, however, that his informal statements make more exciting reading. According to *PM,* he says things like: "I don't care who wins the War" and, "If Hitler comes to the U. S. A., I'll get myself back to Iowa, get on a piece of land and stay there." He has called radio commentators "idiots" and United States Senators "insane." He has announced a codicil to his will authorizing the use of any part of his estate needed for an investigation into the causes of death, injury or disappearance of any member of his family or household or any of his associates, special information that would facilitate such an investigation being in a strong box in Cedar Rapids.

In 1919 Mr. Marshall married Frances Durand Fiske of Cedar Rapids, and after her death married Clementine Robichaux of New Orleans, in 1932. There are four daughters by his first marriage and a daughter and son by his second. (One can hardly blame him if he once wrote the announcement of his fifth daughter's birth and misspelled her name!) He is a Presbyterian and a Mason and belongs to the Cedar Rapids Country Club and the National Press Club in Washington, D. C. Swarthy Mr. Marshall wears rimless spectacles, chews cigars, punctuates his conversation with manly "damns" and "hells," and is fond of such words as "red-blooded" and "two-fisted." He can become belligerent. At *America's Town Meeting of the Air* he announced scowlingly, after provocation: "If anyone here says, I am not a true and loyal American, let him come up here and say it on this platform. I am 20 pounds underweight and I don't care how much he weighs."

MATSUOKA, YÔSUKE (mät-sōō-ō'kȧ yō-sōō-kĕ) Mar. 1880- Former Foreign Minister of Japan

Address: Tokyo, 385 Nichome Sendaga, Shibuya-ku, Japan

Bulletin: In March 1941, at the invitation of Hitler, Yôsuke Matsuoka set out for Europe on a "grand tour of the Axis." He conferred with Stalin, Hitler and Mussolini; he was received by the Pope; and on his way back to Tokyo through Russia the Russo-Japanese pact, signed in April 1941, was born. It was only a few months later, however, in July 1941, when Matsuoka ceased to be Foreign Minister of Japan. Premier Konoye's new Cabinet, formed then, didn't include him, for his policies, based on the supposition that relations between Germany and Russia would continue peaceful, proved impractical once the invasion of Russia had begun.

From March 1941 issue:

"What is Japan fighting for?" once inquired Yôsuke Matsuoka, Japan's Foreign Minister. "For the fulfillment of her mission in Asia. That is the whole answer." This war which Japan is waging in China now, he says, is not "an imperialist war of greed and aggression. We are engaged in a moral crusade." The real reason for the present strained relations between the United States and Japan is "American misapprehension of Japan's aims and aspirations," he says.

Very often this self-confident, positive Foreign Minister is less urbane. In August 1940, irked by United States' embargoes, he warned us: "The Japanese Government is through with toadying. From now on Japan will not make vain efforts to shake hands with countries who cannot be turned into friends." Three months later, after the trade agreement had not been renewed and United States' aid had been given to China, he was even more definite: "The United States is taking step after step in the wrong direction which might precipitate it into the vortex of armed conflict." And in the meantime he had "renovated" Japan's foreign policy in general.

Japanese American News
YÔSUKE MATSUOKA

"The most Westernized of Japanese leaders and the most dangerous to the West," Matsuoka's first move as Foreign Minister was to declare his intention of forging "a greater East Asia." An anti-American and anti-British campaign was inaugurated; mildly liberal Japanese diplomats in key positions all over the world were fired and replaced with reliable "positivists." Shortly after came the closing of the Burma Road and the signing of a new pact with Germany and Italy. For this pact Matsuoka has been called a thoroughgoing totalitarian; but there still are some commentators who feel he is "a levelheaded intellectual, not a hairbrained Fascist."

Whatever his label, Matsuoka has to be levelheaded, for his is "one of the toughest political assignments in the world," an assignment which involves staying on the right side of the Axis partners, conciliating the Russians, keeping the Americans from the actual boiling-over point and directing a country which has been fighting for four years and may have to fight a good many more.

Matsuoka has the qualifications for his job—diplomatic experience, the ability to get along with most foreigners, a thorough knowledge of the West and 17 years spent in the service of the South Manchurian Rail-

MATSUOKA, YÔSUKE—*Continued*

way. He was born in Yamaguchi-ken prefecture, the son of Sanjuro Matsuoka, into a family which had belonged to the Samurai class but had become poor. When he was 13 a cousin suggested that he come with him to America. In 1893 he arrived in Portland, Oregon.

In Portland, Matsuoka lived for a while at a Methodist Mission and attended the Atkinson Grammar School in Portland. Then the Pastor of the Mission found a home for him with William Dunbar and his sister Mrs. Isabelle Dunbar Beveridge, who treated him like a son and brought him up in the Christian religion. (Years later he stated: "While I am a Christian I am a Matsuoka Christian. I don't believe in a lot of things that they have attached to the regular sects in America and Europe.") After two and one-half years in high school in Oakland, California, Matsuoka returned to Portland to attend the law school of the University of Oregon. To pay his way through he sold coffee from door to door, worked as a bus boy, acted as an interpreter for a Japanese railroad labor contractor—and incidentally is supposed to have developed into a fine poker player—and was graduated in 1900.

Back in Japan, Matsuoka studied political science, read the classics and finally, in 1902, took the stiff foreign service examinations. By 1904 he was a vice-consul in Shanghai, and from then on his rise in the foreign service was fast. For 15 years he served as chief of the foreign section of the Kwantung Leased Territory, consul general at Mukden, secretary of the Embassy at Washington and secretary to the Foreign Minister. His command of English and his American manners made him a natural contact man between Japanese and Western officials, and it was he who was largely responsible for organizing the vital Information Bureau of the Foreign Office.

In 1919 Matsuoka became secretary to Japan's Premier and attended the Versailles Peace Conference as interpreter for Prince Saionji, becoming friends there with Prince Konoye, Japan's present Premier. Shortly after, in 1920, Matsuoka resigned from the Foreign Office. He was tired of diplomacy and believed that a man couldn't get anywhere by staying in one place.

Five months later Matsuoka was a director of the South Manchurian Railway, "Japan's spearhead on the Asian continent." He remained in that position until 1926, when he retired "to meditate." One year later he was back, as vice-president. It was in 1929 that he first appeared as a political figure. In that year he attended the Pan-Pacific conference in Kyoto. When a Chinese delegate rose to attack Japan's Manchurian policy, Matsuoka delivered a fiery, unprepared speech which pointed the way toward Japan's later moves and created a furor.

Matsuoka was now definitely interested in politics. In 1930 he resigned his position with the South Manchurian Railway to run for a seat in the lower house and to win the election as a member of the Seiyukai Party. At the time of the Manchurian "incident" he was sent to Shanghai as the special envoy of the Foreign Minister and "played an important role behind the scenes in concluding a truce." Then, in 1932, Matsuoka was chosen to represent Japan in Geneva in connection with the League of Nations' recognition of conquered Manchuria (now Manchukuo). He put up a brilliant case for Japan's acting to insure her "lifeline" in speeches that were "unrehearsed, unconventional and eloquent" and, when the vote was forty-two to one against Japan, led the Japanese delegation out. He returned home a hero.

Immediately he resigned from Parliament and his position in the Seiyukai Party and announced that he no longer believed in political parties—"to wait for political parties to improve is like waiting for pigs to fly." He set up the League for the Dissolution of Political Parties, which aimed to abolish the parliamentary system and to establish an "imperialistic militarism sanctified by fanatical devotion to the Emperor as the Son of Heaven." By 1935, although he had declared only a year before that "in Japan dictatorship, Fascism or any similar system in which one man imposes a despotic will on the nation has absolutely no chance to thrive," *Time* was calling him an "arch-Fascist and patrioteer."

Matsuoka's "Showa Restoration" group made little headway but Matsuoka himself in 1935 was rewarded for his devotion to his country by the presidency of the South Manchurian Railway. This was more than just the leadership of a railroad. The South Manchurian Railway not only controls railroads, but also operates steamships, harbors, coal mines, oil plants, iron works, fertilizer plants, electric and gas plants, hotels and public works. The Japanese Government owns more than half its capital and entirely directs its policies. Matsuoka, as its head, was in charge of the economic reorganization of the area his country was "colonizing." He personally supervised the execution of the Railway's 10-year plan, which entailed the broadening of its rail net by 3,000 miles and the enlargement of the net of water-borne traffic. Under him 200 public schools and scores of libraries were founded; many hospitals were built. Even more important, Matsuoka was of great value as a liaison man between his company and the Army, although eventually it was because of Army interference that he resigned in 1939. "If they would just let a businessman run the country," he said regretfully, "I would put it on a paying basis in 10 years."

In 1937, when Konoye was Premier for the first time, Matsuoka had acted as his Cabinet advisory councilor. He was a logical Japanese choice for Foreign Minister when Konoye became Premier again in 1940, for it was felt that he had "gained the confidence of both civilians and soldiers, of big businessmen and gold-braided generals"; that his "quick understanding and salty wit" would make it difficult for even those who disagreed with his policies to dislike him. Americans like Roy Howard warned, however: "Matsuoka shows every sign of becoming the Japanese Führer."

In appearance Matsuoka is "urbane, roly poly," with a bristling cropped head. Personally he is supposed to be very affable and accessible, and Americans find his English, flavored with a Scotch accent which he inherited from the Dunbars with whom he lived in Portland, quite engaging. He loves to talk, whether to small or large groups. He will make an extemporaneous speech at the drop of a hat or talk along for hours on any subject. His enemies, in retaliation, once called him "the delegate from Oregon"

A typical Matsuoka day begins at five a. m., when he reads the papers and goes over documents. Then comes breakfast at seven followed by two or three hours receiving visitors. At ten Matsuoka goes to the office, where he stays until five or six before returning home with stuffed brief cases to spend part of the night working. He doesn't go out much socially but does entertain occasionally in the large European style house where he lives with his wife, Ryoku Shin, and his seven children. Mrs. Matsuoka is completely retiring. There was one foreigner who knew Matsuoka, who visited his house for 20 years and yet wasn't sure whether or not he had ever met her.

MAY, ANDREW JACKSON June 24, 1875- Chairman of House Military Affairs Committee

Address: b. House Office Bldg, Washington, D. C.; h. Prestonsburg, Kentucky; The Roosevelt Hotel, Washington, D. C.

"The Administration leader in whose hands are the new plans to strengthen the Army" is 170-pound Andrew Jackson May, chairman of the Military Affairs Committee of the United States House of Representatives, who has been known as a "millions-for-defense" man ever since his appearance on the Washington scene in 1931.

Harris & Ewing

ANDREW JACKSON MAY

The Congressman from Kentucky was born in Langley, Kentucky on June 24, 1875, the son of John and Dorcus (Conley) May. He entered local politics rather early. For five years he taught in country schools in Floyd and Magoffin Counties in the Beaver Creek section of Kentucky; in 1896 he made his first political speech on behalf of the Presidential candidacy of William Jennings Bryan; two years later he acquired his degree from the Southern University Law School in Tennessee and was admitted to the Kentucky Bar. After 1900 he was in practice at Prestonburg, where he still makes his home.

It was in 1901 that Andrew Jackson May was appointed attorney for Floyd County. He held this office for eight years, and later became special judge in the Circuit Court for Johnson and Martin Counties. Law was only one side of his career, however. For two decades he had what he calls "an active and successful business career," and eventually he became president of the Beaver Valley Coal Corporation. But his political ambitions remained. In 1928 he finally ran for the United States House of Representatives on the Democratic ticket. He was completely flattened out, for the 10th (now the 7th) Congressional District of Kentucky was at that time a Republican stronghold. Two years changed that situation, however, and in 1931 Mr. May went to Washington as a member of the 72nd Congress. He has been there ever since, with one term as Congressman-at-Large from 1933 to 1935.

After his election Mr. May sold out his coal interests, but apparently maintained his concern for the coal industry. He has been a member of the House Military Affairs Committee ever since he first came to Congress, and it was while he was a member that the act creating the Tennessee Valley Authority was written and framed. At that time, Mr. May says, it was planned that the

MAY, ANDREW JACKSON—*Continued*

activities of TVA be limited to the development of interstate streams for navigation purposes. Since then he has found it competing with private industry, most particularly the Kentucky coal business, and has fought it tooth and nail. His Military Affairs Committee has charge of TVA requests for money, and in May 1939 Representative May sponsored a bill which drastically curbed its powers and which, he said, "would go a long way in restoring confidence of the public in the future of the electric-utility industry."

All in all, Mr. May has shown himself one of the staunchest Congressional defenders of private enterprise, a Democratic admirer of John Nance Garner rather than of Franklin Delano Roosevelt. In 1938 he stated: "In the last five years, there has been such wide expansion of Government agencies and activities both in and out of Washington that the Government now occupies in the states outside of Washington more office space than would be provided by 53 buildings of the size and capacity of the Empire State Building in New York."

Only since the War, then, has Mr. May found himself seeing eye to eye with the Administration in many respects. He has always been an enthusiastic advocate of army expansion, of "the strongest possible fortifications" for the coast, of a strong and highly centralized government authority in preparation for war. He has said: "I strictly adhere to the principles of George Washington, believing that national defense is the surest guarantee of peace."

Mr. May was a vociferous opponent of the Ludlow war referendum proposals. He asked for military training for the CCC boys. He was the author of the M-Day Bills passed in February 1938 providing for complete civilian and industrial mobilization in case of war, and he "sharply denied reports that his bills would forbid war profits." (According to Mr. May, the freeing of private enterprise is the most dependable stimulus to preparedness and victory in war, and he personally urged a $50,000,000 subsidy for American munitions makers rather than any legislative encroachments on their business.) As early as May 1940 he also proposed relaxing the cash-and-carry policy of sending war materials to the Allies and lifting the money ban against debt-defaulting nations, and it was the May bill passed in the summer of 1941 that permitted President Roosevelt to keep drafted men in the Army for the duration. May also sponsored an amendment to the bill which would have made "interference" with workers in defense a crime.

Andrew Jackson May is a Baptist, a Mason, and a member of the Rotary International. In July 1901 he was married to Julia Grace Mayo, and their three children (Olga May, Andrew Jackson, Jr., and Robert V.) are themselves all married now. The Kentucky Congressman likes eating and keeps his weight down to 170 pounds only by walking a mile every day. His is still president of the Greenbrier Mining Company, but when in January 1940 he learned that the firm had sold $500,000 worth of manganese to the United State Government he quickly called the deal off. His Congressional activities on behalf of national defense are entirely apart from his personal concerns, he says.

MAYO, CHARLES W(ILLIAM) July 28, 1898- Surgeon

Address: b. Mayo Clinic, Rochester, Minn; h. Ivy Cottage, Mayowood, Rochester, Minn.

A great tradition and the great responsibility which goes with it are the heritage of Dr. Charles W. Mayo, now the only surgeon left to carry on the family name at the world-famous Mayo Clinic. He is the son of the late Charles Horace Mayo and the nephew of the late William James Mayo, the two "country doctors" who made the little town of Rochester, Minnesota one of the world's most important medical centers. Rochester has been called America's "scientific Lourdes," not only because of the tremendous number of cures effected in the Mayo Clinic, but also because it is there that sufferers go whose health or lives have been despaired of by physicians elsewhere.

Charles William Mayo was born in Rochester, July 28, 1898, the son of Charles Horace Mayo, one of the directors of the then St. Mary's Clinic, and Edith (Graham) Mayo, a nurse graduated by the Woman's Hospital in Chicago. When his mother was chosen American Mother for 1940 by the American Mothers' Committee of the Golden Rule Foundation, she was described as "representative of the best there is in womanhood." Besides successfully raising ten children, eight of her own and two foster children, Edith Mayo was active in community affairs. She promoted the organization of the Civic League in Rochester, acting as its first president. She helped organize the local Y. W. C. A. to which she donated her town house in 1910. She was one of the founders of the Rochester Magazine Club and of the Mayo Clinic Women's Club.

Charles attended the Hill School, a preparatory school for boys at Pottstown, Pennsylvania, from 1912 to 1917, when he was admitted to Princeton University. During the first World War he served in the Students Army Training Corps and, in 1921, he was graduated with the degree of B. A. He received his M. D. from the University of Pennsylvania in 1926 and his M. S. in Surgery from the University of Minnesota in 1931. From 1926 to 1927 he was an interne at the Robert Packer Hospital at Sayre, Pennsylvania.

He married Alice Varney Plank in 1927, and they have five children. This next generation of Mayos includes two girls, Mildred and Edith, and three boys, Charles H., II, Edward and Joseph.

From 1927 to 1931 Charles W. Mayo was a Fellow in Surgery at the Mayo Clinic. Appointed an instructor in surgery at the Mayo Foundation Graduate School, now part of the University of Minnesota, in 1933, he was elevated to the rank of assistant professor in 1935.

As a member of the board of directors of the Mayo Clinic, Charles W. Mayo represents a family brilliant in science since the seventeenth century and unique in medicine since the middle of the nineteenth. The Mayo Clinic itself was founded after the cyclone of 1883, when the need for a hospital in Rochester inspired Dr. William Worral Mayo, Charles William's grandfather, in collaboration with the Mother Superior of the Sisters of the Order of St. Francis, to found a hospital. The Clinic of St. Mary's opened in 1889, modestly equipped with 45 beds. Continued by W. W. Mayo's two sons, William J. and Charles H., the Mayo Clinic grew in size and variety of its services until its reputation became international.

Doctors from all over the world gather at the clinic to observe the surgical procedures developed by the Mayos and their associates. "The history of the Mayo Clinic," says one eminent physician, "is the history of the development of modern surgery in medical practice." Not that the Mayos were daring innovators; sometimes they were criticized for their conservatism. The "secret of their success" lay rather in "doing the ordinary thing in the extraordinary way." They performed the "cleanest surgical work on record," and had "that transcendent capacity for taking trouble that Carlyle believed to be the distinguishing mark of a genius."

There are no streetcars in Rochester, because the whole town is a hospital quiet zone. The dominating structure is the main clinic building, known to local inhabitants as a "skyscraper," of 13 stories topped by a tower which houses the first set of carillon chimes heard west of Chicago. Rich and poor mix in the floating population and are equally well received at the clinic. No case is ever turned away. Fees are based on ability to pay. No "chiseling" is allowed, however, and the business department is famous for the accuracy of its estimates of patients' finances.

DR. CHARLES W. MAYO

When his brother Joseph was killed in a train auto collision in 1936, Charles W. was left to carry on the tradition of the Mayo family alone. He is known as an especially capable surgeon in his own right and has contributed many articles to medical and scientific journals. He is a Fellow of the American College of Surgeons and a member of many medical associations. He was created a Commander in the Order of the Crown by the Italian Government in 1939 and holds honorary membership in the Societa Italiana di Chirurgia of Rome, Italy.

Dr. Mayo's fraternities are Sigma Xi and Nu Sigma Nu. He is an active Rotarian, having served as president from 1934 to 1935, a Mason (Knight Templar), a member of the American Legion, a member of the Izaak Walton League and a member and former president of the Riders' and Drivers' Club of Southern Minnesota. His hobbies are farming and riding; when he has the time for it, he enjoys fishing.

Charles W. Mayo is neither handsome nor homely. He has the high forehead, heavy eyebrows and dark eyes of his clan, but did not inherit the Mayo thin-lipped mouth. His expression is serious and so intent as to seem almost belligerent.

MELCHIOR, LAURITZ (LEBRECHT HOMMEL) (měl'kĭ-ŏr) Mar. 20, 1890- Metropolitan Opera tenor; concert and radio star

Address: h. Hotel Ansonia, New York City; The Viking, Beverly Hills, Calif.

For the sixteenth (1941-42) consecutive season the Metropolitan Opera has as its leading Wagnerian tenor Danish-born Lauritz Melchior, who has sung more performances of *Tristan, Siegfried* and *Tannhäuser* than any other artist alive or dead. By the beginning of the 1940-41 opera season he had rolled up this amazing Wagnerian record: 215 Siegfrieds, 171 Tristans, 146 Siegmunds, 109 Tannhäusers, 73 Lohengrins, 57 Parsifals; and he followed up this record with concert appearances all over the United States and in Hawaii.

Melchior, who with his massive tenor voice is known as a true Wagnerian *Heldentenor* —that is, heroic tenor—began his operatic career as a baritone. He was born in Copenhagen, Denmark, March 20, 1890, the son of Jörgen Conradt and Julie (Möller) Melchior. There, from 1896 to 1905, he attended the Melchior School, directed by his father and his grandfather. As a boy soprano in the English church in Copenhagen he attracted the attention of Queen Alexandra, the Danish princess who had married Edward VII. He liked to sing and in 1908 he began to take singing lessons in earnest. When, four years later, he applied for admission to the Royal School of the Opera in Copenhagen, he was given an audition and his voice classified as a baritone.

Among the people who influenced the artist's career was his blind sister, Agnes, now teaching at the Royal School for the Blind in Copenhagen. As a girl she attended that school and with the other children was permitted to go to the Royal Opera, where there were boxes under the stage for the blind. She interested her brother in the performances, and after a while he became eyes for the blind children—he would sneak up and hide in the wings so that he could report what was taking place on the stage.

Another person whose influence was important was a housekeeper, Froeken Jensen, who came to take care of the Melchior children after Lauritz's mother died (he was only a month old). She encouraged the boy to become a singer and went every Sunday to the English church to hear him sing. Later she helped to pay for his singing lessons with proceeds from cookbooks that she began to publish after coming to the Melchior home.

He made his debut as a baritone April 2, 1913, at the Royal Opera House in Copenhagen, as Silvio in *Pagliacci*. Before he made his debut as a tenor five years later (October 8, 1918) he had sung thirty-five baritone roles. It was Mme. Charles Cahier, who had been in a traveling opera company with him, who convinced him that he was not a baritone. A "tenor with the lid on" is what she called him, and she urged the director to let him try a tenor role.

Hugh Walpole, the English novelist, had a great deal to do with Melchior's success. In 1919 the young singer had been invited to appear at a concert at Queen's Hall, London, with Sir Henry Wood conducting. Walpole chanced by and decided to go in. He was so impressed by the tenor's voice that he became immediately interested in him, and thereafter helped him with advice, encouragement and funds. The two men came to be very good friends, a friendship that has lasted until Walpole's death. Walpole dedicated several of his novels to Melchior and usually sent him the manuscript of a new book for criticism.

At Walpole's suggestion Melchior went to Germany to study Wagnerian roles under Frau Anna Bahr-Mildenburg. Later he studied with Siegfried and Cosima Wagner in Bayreuth, and in 1924 made his debut there, as Parsifal, also singing Siegmund that same year. His Metropolitan debut was in 1926, as Tannhäuser. Since then he has sung every important Wagnerian tenor role. Ten years after his debut Olin Downes in a review of his then current Siegfried wrote: "There is little new to be said of Melchior's singing of Siegfried's music, in which he seems to grow each season."

On the hundredth singing of Siegfried (1935) Melchior was presented with a hand-forged sword, made according to medieval tradition by Kenneth Lynch, metal craftsman of Long Island, New York, the presentation being made by Georg Bech, Danish Consul General to New York. This sword has been carried in subsequent performances of *Siegfried*. On the hundredth singing of Tristan (1936), the tenor received a wreath and a cup from the Metropolitan Opera Company. Up to that time he had sung Tristan in sixteen different opera houses all over the world and under twenty-two different conductors, including thirty-five times under Bodanzky, seventeen under Fürtwangler, five under Sir Thomas Beecham (see sketch this issue), four under Toscanini. When he reached his hundredth Tannhäuser it was recalled that the only other singer who had any record at all was Jean de Reszke, and during his whole lifetime he had sung the role less than 50 times.

Melchior's singing is not confined to the Metropolitan. He has appeared in many other opera houses, including Chicago and San Francisco, Covent Garden (London), the Paris Grand Opera, Copenhagen, Berlin State Opera, Teatro Colon in Buenos Aires, as well as at the Bayreuth and other festivals. As a concert and radio artist he has won wide recognition, during the course of a season making many appearances in addition to his opera performances. For the 1940-41 season 40 concerts were scheduled for before and during the Metropolitan season.

The six-foot-three tenor's manager is his blond, five-foot wife—whom he calls "Kleinchen" (Little One)—the former Maria Hacker, once a famous motion picture star of Germany, who met her husband by landing literally almost at his feet. She was rehearsing for a film role which required her to bail out of an airplane with a parachute. A kind wind blew her into Melchior's garden at Chossewitz, where he has a hunting estate. Since her marriage in 1925 Mrs. Melchior has been content to manage her husband's career. She goes with him on all his tours, makes his contracts, supervises his correspondence, relieves him of all business details, helps him entertain his guests and is on hand to wish him luck before each of his performances.

For young singers Melchior has this advice: "Don't be just a singer and nothing more, because if you are a one-track person you won't be a good singer! It is not enough to sing with technical skill. There must be feeling as well, and that can be expressed only if one has lived intensely and experienced joys and sorrows. That is why I tell younger singers to reach as many phases of life as they can."

Following his own advice, Lauritz Melchior is tremendously interested in life, in living. He is heroic not only in voice and stature, but also in his approach to life. His interests are many: he is famous for his cooking, especially his oxtail soup and his smörgåsbord; he spends much of his free time hunting, bringing home a deerskin for a Siegfried costume for himself or a panther for a coat for his wife; he collects antique art objects, arranging them meticulously and harmoniously in his home; he is interested in people, and has many friends; he is not above a practical joke; he is capable of singing at a morning musicale in Washington, hopping a plane to make a *Siegfried* performance at the Metropolitan in New York and then singing a midnight broadcast the same evening. Perhaps one of the most unexpected phases of his career is his engagement by Columbia University's Teachers College, as a special lecturer on the therapeutic value of music to the handicapped. It was through his blind sister that he acquired his interest in the physically handicapped, and before he lectured at Teachers College he had already done work at the New School for the Blind in New York.

LAURITZ MELCHIOR

On Melchior's Manhattan apartment door appears the sign, "Singer to the Royal Court of Denmark," a title which has been given to him by the Danish King. Denmark has also conferred upon him the Knighthood and Silver Cross of Dannebrog and the gold medal of "Ingenio et Arti." He is the only male singer who has received this latter decoration, which had previously been given only to women. France has conferred upon him the rosette of the Légion d'Honneur, Officier de l'Instruction Publique; Bulgaria the Cross for Service to Art; and Germany-Sachen-Coburg-Gotha the Carl Eduard Medal, First Class, for his services at the Bayreuth Festivals. He has also a Saxonian knighthood, and from Vassar College has received a gold medal for his services to art in the United States.

MENUHIN, YEHUDI (mĕn'ü-ĭn yĕ-ho͞o'dê) Apr. 22, 1916- Violinist

Address: b. c/o Evans and Salter, Steinway Building, 113 W. 57th St, New York City; h. Alma, Calif.

"It is easy to write the simple and final word 'perfection' against the performance of Yehudi Menuhin," once wrote the London *Times,* and critics and audiences all over the world have unanimously hailed the magnificent technique, the enchanting tone, the unerring taste of this great violinist.

Yehudi Menuhin was a child prodigy; he is now a genius. The growth of his musicianship has been steady since that day in 1923 when he first appeared as soloist in San Francisco. His parents, Moshe and Marutha Menuhin, weren't musicians, though relatives on both sides were lovers of music. Moshe Menuhin, who was born in Russia and reared in Palestine, was a Hebrew teacher in New York when Yehudi was born; Mrs. Menuhin was a teacher, too. When their son was nine months old the Menuhins moved to San Francisco, where Yehudi's father became superintendent of the Jewish Educational Society.

It was in San Francisco that Yehudi heard his first concert. He was less than a year old, and he heard it because his parents were too poor to afford to have someone take care of him at home. He stayed quiet all through, even seemed to be listening, and was taken to others. When he was three he was given a toy violin. Immediately he raised it to his chin, drew the bow, and then threw it on the floor when he heard the squeaky sound it made. Instead of scolding him for breaking the toy, his family bought him a real one. On it he began taking lessons at the age of four from Sigmund Anker. Later he was taught by Louis Persinger, concertmaster of the San Francisco Symphony Orchestra.

Three years from the time he took his first lesson, pudgy little Yehudi appeared as soloist with the San Francisco Orchestra, playing the Mendelssohn violin concerto. One year later he gave a recital at the Manhattan Opera House in New York City and when he was ten made his Carnegie Hall debut, playing the Beethoven concerto with the New York Symphony Orchestra. The critics looked at the blue-eyed, pink-cheeked little boy in velvet knee breeches and a white shirt and prepared to listen with resignation. They left to write paeans like that of Chotzinoff: "From the fingers of this child of 10 the Beethoven concerto flowed in all its nobility, its repose, its thoughtful and subjective beauty."

It was clear from the beginning of his career that Menuhin was "a profound artist, with integrity, taste and a high artistic standard to which he clung tenaciously." He never played the usual fireworks pieces that show off technical ability, often at the expense of meaning; his encores were usually the solo sonatas of Bach and his main pieces the more profound in violin literature. At 11, for instance, he played in one concert with the Berlin Philharmonic Orchestra concerti by Beethoven, Brahms and Bach. After this concert a little man with bushy hair came backstage, lifted him up and kissed him. "Today, Yehudi," he said, "you have once again proved to me that there is a God in Heaven." The man was Albert Einstein (see sketch this issue).

It was shortly after this concert that Menuhin began studying with Georges Enesco. He went to him and said simply: "I want to study with you." A great friendship was started. Enesco advised his pupil to study harmony and counterpoint, to read the biographies of great musicians and to learn the history of music. He also advised Yehudi's family to let their son appear in public only 15 or 20 times a year and to devote the rest of his time to quiet study and a quiet way of life. His advice was accepted, and the development of Menuhin "was achieved in a perfect harmony of the various elements concerned and without the feverish rush for immediate maximum returns which has often ruined youthful talents."

Yehudi and his two sisters, Hepzibah and Yaltah, both enormously gifted pianists, never went to school. Mrs. Menuhin taught her children herself and had tutors for them from time to time. They were never punished; they never went to the movies or listened to the radio. They learned to speak five languages fluently and grew up healthy and well-informed, as well as extraordinarily talented.

While he was growing up, Menuhin regularly appeared with the world's great symphony orchestras and in concerts. In December 1935 he completed his first around-the-world concert tour, in which he appeared in 63 cities in 13 countries, playing 110 engagements. Critics praised his tone—"one of the most enchanting sounds in violin history"; they talked and wrote of his magnificent technique, "capable of inexhaustible variations and unflagging in intrepid execution of trills, double stops and contrapuntal figurations"; they praised his understanding of the music, his ability to achieve what he believes is the meaning of violin playing: "to effect the most perfect realization humanly possible of one's own conception of the composer's message."

At the height of his success Menuhin retired for two years to his estate in the Santa Cruz mountains, near Los Gatos, California—two years which his mother had asked him to give her: "I wanted him to be a boy like other boys." Yehudi spent these years swimming, basking in the sun, driving, practicing, and emerged from them in 1937 a man, safely over that step from childhood to maturity so often fatal for prodigies.

Then he returned to the concert stage booked up for years to come. In 1940 he gave war-relief benefit concerts in Australia and one for the Palestine Conservatory of Music in New York; in 1941 he gave concerts in the United States and South America and gave many benefit performances for war victims. Since his return to the concert stage he has steadfastly refused to appear more than fifty times a season, though offered hundreds of engagements, for he believes that four or five months of concert work a year are enough: the rest of the time should be for study, rest and a quiet family life. With his Australian wife, Nola Ruby Nicholas, whom he married in May 1938, and his two children, Zamira and Krov, Menuhin spends long happy hours in California swimming, hiking or just relaxing in the sunshine. He was exempted from the first draft because of the family's dependency on him. Because of time spent this way he is broad-shouldered and well-built, muscular and robust, alive with health and vitality. He has also achieved throughout the years a "level calm and high poise."

This he applies to his study and to his playing. "I am always calm," he says. When he approaches a work for the first time, he goes over the score carefully before touching his violin. Then he plays and re-plays it and, as he says: "Each time I go over a piece of music I try to penetrate deeper into its meaning than I did the last time, and to bring up some new shade of sentiment, of color, of emphasis—or even of fingering—which never had occurred to me before." Always he uses the first edition of works (he has no use for arrangements), and he possesses an immense collection of original editions of violin literature. From his study he has made important restorations in performance of the original intentions of Mozart, Paganini and other composers, and it was he who performed for the first time the *Adelaide Concerto* of Mozart and the lost concerto of Schumann.

YEHUDI MENUHIN

Menuhin still continues to study with Enesco and to spend part of every year with him. Enesco denies that he actually teaches Menuhin. "When he plays," he says, "I sit in a big chair in a corner of the room and listen attentively. Sometimes Yehudi stops. He has caught in my eyes a glimpse of disapproval. I nod. I smile. I say, 'Ah there.' But I let him find out what, to my mind, is wrong. And he always finds out and makes the correction himself." Enesco and Menuhin's other teachers all feel they can teach him little or nothing: they feel he has an instinctive sixth sense which guides him in performing passages and interpreting phrases. Toscanini, for instance, listens to Menuhin frequently. Yehudi once complained: "You never correct me when I play. Why don't you tell me when I play badly?" "There's never anything wrong with your playing," Toscanini replied. "It's always perfect."

MENZIES, ROBERT G(ORDON) (mĕn'-zĭs) Dec. 20, 1894- Former Prime Minister of Australia

Address: h. 10 Howard St, Kew, E. 4, Victoria, Australia

Bulletin: On August 29, 1941 Robert Gordon Menzies resigned as Prime Minister of Australia. His resignation was prompted by the Labor Party's rejection of his plea for a coalition government and this Party's indication that he ought to resign. In a public statement Menzies said that many colleagues felt he was unpopular with a large section of the press and people, and that this unpopularity had handicapped the effectiveness of his government. There had, for instance, been loud complaints when in February he went to England to sit in on meetings of the War Cabinet—a visit followed by a fact-seeking swing around the world which brought him to the United States in May.

Australian Associated Press

ROBERT G. MENZIES

From February 1941 issue:

Youngest Prime Minister ever to head Governmental administration in Australia, Robert Gordon Menzies was elected to that office, as head of the United Australia Party, in April 1939. Strongly opposed by members of the more conservative Country Party, particularly by Sir Earle Page, he achieved office by a narrow margin. The rift between the two parties has been an upsetting element in Australian politics for some years. Because of the seriousness of the War situation for the British Empire, however, Prime Minister Menzies realized the necessity of healing the breach as soon as possible.

In October 1940 his Cabinet had slightly more unity than before, owing to the inclusion of Sir Earle Page as Minister of Commerce. Currently Menzies heads a coalition government which, however, has only one vote more than the Labor Party, which has consistently refused to join it.

Yet although real unity behind Menzies is lacking, under him Australia's war production began to show results, and Labor completely approved of this effort. By the middle of 1941 Australia will have a munitions-making organization staffed by 80,000 workers. There has been steady expansion of stocks of raw materials such as jute, cotton, tinplate and industrial chemicals. The Government has guaranteed that no loss will be suffered through price swings in raw materials, but has ruled that "profits shall go to the State." It has also pledged to continue import control and price fixing for a "sufficient period" after the War to protect all parties.

Although some political observers say that Menzies "is not clever enough to hide his own cleverness," others are convinced that he is no man's fool. But his talents are not of a sort that necessarily make for popularity. He is said to be uncompromising in his adherence to a principle, and has more than once resigned office rather than yield ground. Moreover, he has a gift of repartee that often gives him an air of superiority and alienates mass sympathy. Even more important in a "country that was New Dealish long before the New Deal and where the labor movement is so tough that . . . Harry Bridges is just a pale expatriate compared to the kind they grow at home" is the fact that Menzies is a conservative who, Labor feels, represents Flinders Lane, Melbourne's Wall Street. It is nevertheless true that in his first broadcast after his election as Prime Minister Menzies himself said: "I am a singularly plain Australian, born in a little Victorian country town. I wasn't born to the purple. I've made my own way, such as it is. I hold the Prime Ministership not as an occasion for foolish vanity, but as a responsibility so great it might well deter a much better man than I can ever hope to be." It is said that, to those who best know Menzies, this self-portraiture is perfectly sincere.

The son of James Menzies, a storekeeper, he was educated in the state schools of Victoria, at Grenville College, Ballarat, and at Wesley College, Melbourne, from which he received his LL. M. He had gone through college on scholarships, consistently at the head of his class, and he left it with the Supreme Court Judges' Prize. He was called to the Bar May 2, 1918; was made K. C. in 1929. In 1927 he became arbitrator on salaries and conditions among the metropolitan daily papers of the Australian Journalists Association. By then he had built up a lucrative practice in which he earned as much as $100,000 a year. In 1929, with S. Kent Hughes, he founded the Young Nationalist Organization. He held his first important political position from 1928 to 1929: Minister without Portfolio in the McPherson Government. From 1932 to 1934 he was Attorney General, Minister of Railways and Deputy Premier. Since 1934 he has been Federal Attorney General and Minister for Industry; since 1936 deputy leader of the United Australia Party. He was so ambitious to become Prime Minister in the 1939 elections that (it is reported) he sprained his arm in his hurry to get to Parliament House in Canberra, and appeared at the meeting with his arm in a sling. When Sir Earle Page resigned in a huff, he accused Menzies of being "a stubborn mule, a back-stepper, a coward," and charged that he had resigned from the Army during the War instead of going overseas. The Laborites were incensed at this charge, and when Menzies rose in defense, the House cheered.

This son of an obscure country storekeeper who became Prime Minister is said to tower intellectually above most of his political contemporaries. He is one of the most able debaters and impressive public speakers Australia has ever produced, yet he says he has never made a big speech without suffering acute nervousness. He has been accused of personal ambition, yet in his early 30's surrendered one of Australia's richest legal practices for the much smaller financial rewards of political life. When elected leader of the United Australia Party he refused to solicit votes, saying that he would be elected on his merits or not at all.

Menzies is a formidable six-footer who weighs two hundred pounds. Cropped hair, stippled gray at the wide temples, curls in front over a well padded but fine featured face from which eyes look with an expression of detached, amused scrutiny. He is a voracious reader. Until the Second World War he read four or five books weekly, supplemented by detective yarns for train traveling. As an undergraduate he had something of a reputation as a versemaker. He dislikes bridge, dancing, golf; likes tennis, squash rackets, and watching cricket matches. A witty and entertaining conversationalist, he prefers, above all things, good talk, and sometimes sharp talk. His quips, delivered in flat-toned, Australian-accented speech, are well known. Once, after he had been elected Prime Minister, a Left-winger baited him in public. "In your new office," he said, "I take it that you will consult the powerful interests who control you before you choose your Cabinet."

"Yes," said Menzies, "but, please, keep my wife's name out of this."

MERMAN, ETHEL Jan. 16, 1909- Musical comedy star

Address: b. c/o B. G. De Sylva, 551 Fifth Ave, New York City

When Ethel Merman was asked how she got to be a success, she thought it over for a while and then said: "I don't know. Except that I always gave 'em everything I had. It's pretty tough living up to that one rule—always giving them the old fire even when you feel like a squashed cake of ice. I mean, you know how it would be with any girl. There are plenty of headaches—and maybe heartaches too."

"A dynamic baggage with syncopation in every breath and gesture and a voice with the hard clarion forthrightness of a jazz trumpet," Ethel Merman has always succeeded in singing every song that comes her way so that it seems good. In every Broadway show she has graced since *Girl Crazy* in 1930, despite headaches or heartaches, she has shown "the kind of high spirits that suggest she is personally having the time of her life." And besides these she has "a sound knockabout comedy technique, the ability to stay on pitch while shouting at the top of her lungs, and above all, the air of being a hell of a nice girl, though possibly a bit on the violent side."

This singer whose "voice can hold a note as long as the Chase National Bank" admits, however, that she's lucky as well as good. "Why, I'm the gal that makes Cinderella a sob story," she says. She was born in Astoria, New York, the daughter of Edward Zimmerman, accountant, and Agnes Zimmerman, who used to be a choir singer, and brought up in a middle class home there. She went to Public School 4 in Long Island City and then to Bryant High School there.

She left high school trained to be a competent secretary and had little trouble getting herself a position as secretary to Caleb Bragg, president of the B. K. Vacuum Booster-Brake Company in Long Island City. But Ethel had been an ambitious girl ever since she was a youngster singing *How You Goin' To Keep 'Em Down on the Farm?* for the soldiers during the War. Now, when she wasn't taking dictation or typing, she sang at Astoria social affairs and office get-togethers. She never studied singing, though, and she never practiced. The way she did it was all right just as it was, she felt.

It was her secretarial position, strangely enough, that got Ethel Merman her start. She discovered one day that her boss knew George White, producer of the *Scandals*, and persuaded him to give her a note to him. Armed with it, she asked White for a spot in his next show. All she got was an offer of a part in the chorus. She turned it down, and went back to her typewriter. Neverthe-

ETHEL MERMAN

less, the interview had given her enough courage to persuade the owner of the Little Russia Restaurant on 57th Street in Manhattan to put her on the program for two weeks singing torch songs.

Lou Irwin, the theatrical agent, heard her there and began getting her other bookings. He even got her a movie contract with Warner Brothers for six months at $200 a week. Ethel Merman (she left the *zim* part of her name in Astoria with her typewriter) quit her job and sat around waiting for a chance to perform before the camera. All that happened was a weekly check, which looked good after $23 a week in Long Island City but did nothing to satisfy her ambitions. Ethel talked her agent into getting her released from the contract and booking her for less money in places where she could really sing.

After stopovers in small night clubs in New York and a larger one in Miami Beach, Florida, Ethel Merman finally landed in 1929 at Broadway's Les Ambassadeurs night club with the team of Jimmy Durante, Clayton and Jackson, and with this team she made the circuit of the theatres. It was while they were at the Paramount in Brooklyn in 1930 that an important producer, Vinton Freedley, saw her and immediately signed her for *Girl Crazy,* with music by George Gershwin. It opened in October 1930, and overnight Ethel Merman was a smash hit. She got the customers and the rest of the country with her rendition of *I Got Rhythm,* and the critics were soon saying that not since Marilyn Miller had there been a musical star of such unquestioned authority.

When *Girl Crazy* ended its run, George White dashed to get Ethel Merman into his *Scandals,* and not in the chorus either. From this play, after a tour of the Loew theatres in 1932, she went into *Take a Chance,* which opened in November of that year. That was the musical comedy in which she sang *Eadie Was a Lady* and also the one that made the critics start talking about her "elemental magnificence," her "style," her "irresistible sense of humor."

Two years later, when she appeared in *Anything Goes,* they were still repeating these phrases, and one critic went so far as to rave that "to hear Miss Merman sing the word 'terrifically' in the show's best song, *I Get a Kick Out of You,* is to capture the most exciting esthetic experience in the theatre this season." It was after the opening of this play that its leading lady exclaimed: "I'm having a grand time. I'm just crazy about the kind of time I'm having. My life is full of clothes and interviews and posing for ads and radio offers and benefit performances and night club opportunities and marvelous things."

One of the radio offers was from Lysol, to do a 30-minute series over WABC during the summer of 1935. It was called *Rhythm at Eight,* and in it Ethel Merman picked out one of her past hit songs, built a slight story about it and then steamed off. In October 1936 she was back on Broadway in another hit, *Red, Hot, and Blue,* which John Mason Brown called an "inferior musical comedy" which would have been nothing without Ethel Merman and Jimmy Durante. These two were back together again in February 1939 in *Stars in Your Eyes,* with Ethel Merman "at the top of her form," playing her part with "enormous relish."

December 1939 brought *Dubarry Was a Lady,* which opened in time to catch the World's Fair crowds and delight them with Ethel Merman's ability to sing "high-brow lyrics with low-brow heartiness." And in October 1940 another comedy, *Panama Hattie,* started drawing in the people. Its scene a "canvas Canal Zone where morals are so loose as to be virtually detached," Miss Merman's part there was to save the canal locks and her boy friend from a fifth columnist's dynamiting attempt. It was after this show opened that Ethel Merman confessed what a lot of people had long suspected: "I guess I'm just typed for parts with across-the-railroad-tracks overtones, but I must admit they sit easily on me at that."

Long before *Panama Hattie,* which she left at the end of December 1941 because of ill health, motion picture audiences had been given a chance to judge for themselves. In 1934 Ethel Merman appeared in *We're Not Dressing* and *Kid Millions,* this last with Eddie Cantor (see sketch this issue); in 1935 she was seen in *The Big Broadcast*; in 1936, in *Strike Me Pink* (with Eddie Cantor again) and in the film version of *Anything Goes,* with Bing Crosby (see sketch this issue); in 1938 she was singing again before the camera in *Happy Landing* (with Sonja Henie and Don Ameche), in *Alexander's Ragtime Band,* in *Straight, Place and Show.*

In motion pictures this singer who Lucius Beebe thinks probably "takes vitamin B injections in quantities that would service a locomotive boiler," never made quite the hit she made on the stage. Though it was as easy to appreciate her pert, vivacious appearance, the big, round, dark eyes in her oval face, her dark flowing hair, some of the "bounce" was missing, perhaps due to Hays' Office regulations, perhaps due to the fact that most of the films she was in just didn't give her enough singing opportunities. Ethel Merman liked Hollywood all right but found it an "awful grind" and not very profitable. "You go out there and work your head off," she once said, "and then you find at the end of your picture that you'd have ended up with more money working for a smaller salary in New York."

Besides, Ethel Merman likes living in New York. Before she was married on November 16, 1940 to William B. Smith, a theatrical agent (she roared at the time: "Kid, love is wonderful," but was sued for divorce the following August for "cruelty" and divorced on October 2, 1941) she used to live with her family in a small, comfortable apartment on Central Park West. But she didn't stay at home much. Either she was going to prize fights, football and baseball games or making the rounds every night of the "breezier mantraps of the island." "Really, you know," she explains, "a girl's got to have some rest and relaxation and if she doesn't get it at El Morocco or Monte Carlo where can she find it?"

Despite the fact that jazz (she's an "unrivaled projector" of it, according to John Mason Brown) brought her to the place where she could relax this way, Ethel Merman, who is now married to Robert D. Levitt, a Hearst promotion man in Manhattan, occasionally has yearnings for a legitimate role, "not exactly Lady Macbeth, you know," but something straight and dramatic. Whether she ever gets one or not she is determined, in her own words, to "make all the money I can, save what I can, and when I'm through I'll quit."

MEYER, EUGENE Oct. 31, 1875- Member of the National Defense Mediation Board; editor and publisher of the Washington Post
Address: b. Washington Post Bldg, Washington, D. C.; h. Mt. Kisco, N. Y.

EUGENE MEYER

Of Eugene Meyer, editor and publisher of the Washington *Post*, it has been said: "The world is directed by individuals and he is that directing individual wherever he happens to take an interest."

His career seems to have borne out that rather startling statement. Born in Los Angeles on October 31, 1875, Eugene Meyer is the son of an almost equally remarkable father: a Jewish merchant, Eugene Meyer, who emigrated from France by himself when he was 16, came to California "via the Isthmus and a mule's back," settled in Los Angeles when it was little more than a village, mar-

MEYER, EUGENE—*Continued*

ried Harriet Newmark, and finally engaged in commercial banking in San Francisco and New York as a representative of the French firm of Lazard Frères.

Young Eugene was educated in the public schools of San Francisco, spent a year (1892-93) at the University of California and then went on to Yale to take his B. A. in 1895. After Yale there were two years spent in the counting houses of his father's relatives in Paris, London, Berlin, Frankfurt, studying foreign banking, international finance and languages, learning the fundamentals of economics, learning, according to one writer, "to think, to analyze and to uncover the roots of the problems at hand. He developed a keen sense of self-reliance and a pragmatic philosophy of life."

None of this education was wasted. Upon his return he immediately entered his father's banking firm and worked for four years in the New York office of Lazard Frères as a clerk. By 1901 he felt that he was ready to open his own investment banking house, Eugene Meyer, Jr., and Company. Its success was amazingly prompt. By the promotion and distribution of securities "in enterprises which largely lay in new fields of business expansion" Meyer was able within a very few years to buy a seat on the Stock Exchange and to become director of an increasing number of corporations. "He was quite as hard and ruthless as any of his neighbors," said one critic. At least one of the Morgan partners was his associate in transactions from time to time, and Bernard Baruch (see sketch this issue), who had taken him under his financial wing when he first started out, gave him more than one helpful tip.

It was in 1917 that Meyer's career in the Government service began, a career which was to continue until 1933 with few interruptions. When the United States entered the First World War, Baruch brought him down to Washington to take charge of the division of non-ferrous metals of the War Industries Board. Meyer "dissolved his firm without having to worry about the size of his salary." Afterward he told the late Gutzon Borglum: "If you want to get ahead in politics, keep out until you have made your pile. That's what I did. Once you have money, everything opens to you."

He soon showed his talents as a dollar-a-year man. His first metals purchase saved the Government some $7,000,000, and while continuing to make such economies he also served as a member of the National War Savings Committee. In 1918 he was appointed a special assistant to the Secretary of War in connection with aircraft production, which was then causing great disappointment, and reorganization of the Department of Production followed his examination and report.

"Basically in temperament and in experience a deviser of ideas and an initiator and manager of projects," Meyer was so effective in all these jobs that in May 1918 President Wilson named him director of the War Finance Corporation of the United States, established to give financial support to industries whose operations were "necessary or contributory to the prosecution of the War" and to banking institutions that helped finance such industries. A few months later he became managing director, and remained such throughout the life of the Corporation.

After the War, until its activities were suspended in May 1920, the Corporation continued to function under new powers recommended by Meyer with the approval of the Secretary of the Treasury. Meyer, resigning as managing director that month, warned that reflation and falling prices would come on the heels of the War, and after the predicted collapse of commodity prices and markets actually began he urged the revival of the Corporation's activities before committees of Congress and others.

It was not long before a Congressional resolution, adopted in January 1921 over the veto of President Wilson, directed the Secretary of the Treasury to resume operations, and in March 1921 Meyer was recalled by newly-elected President Harding to serve again as managing director of the Corporation. By August its authority was extended to include work in the field of agricultural finance, and *Mirrors of Wall Street* recalls that he displayed as much political as financial acumen by "pegging up" weak spots in certain states which showed signs of going Democratic.

While pumping credit into agriculture, Meyer proved himself "as hard-boiled in Government service as he was in private business." Unprecedentedly, he insisted that borrowers should repay the money lent them by the Government, and when in 1925 the authority of the War Finance Corporation to make loans ceased forever, all its capital and a substantial profit were returned to the United States Treasury. A Congressional committee charged that Meyer had permitted his brokerage friends to make money out of the Corporation's transactions in government bonds, but the unproved charges did not prevent his appointment in 1926 as chairman of an emergency cotton commission of four. That year his commission was successful in preventing surplus cotton from the recent bumper crop from being dumped on the market, even if the basic problem of crop diversification in the South still remained.

One governmental attempt after another at stimulating production by extending increased credit to private industry or agriculture found Eugene Meyer at the helm. In 1927, at the request of President Coolidge, he undertook the task of reorganizing the Federal Farm Loan Board, the governmental agency which then regulated more than 70 banks engaged in making loans to or for the benefit of farmers. Meyer put them on a sound basis before he was through, but gained many enemies by his methods; before he resigned as Federal Farm Loan Commissioner in 1929 the late Huey Long was calling him "an ordinary tin-pot bucket-shop operator up in Wall Street . . . not even a legitimate banker."

For a while, then, Meyer waited, idle, for President Hoover to give him another job. But he was never idle long. In September 1930 he was recalled to public service as governor of the Federal Reserve Board. His appointment was fought by Iowa's Senator Brookhart, who called him "the Judas Iscariot to cooperation throughout the United States", "one who has worked the Shylock game for the interests of big business"; but Mark Sullivan of the New York *Herald Tribune* wrote: "There is not in the country a man better equipped to stand in the position which constitutes a bridge between the country's banking and currency system and, on the other hand, the country's structure of active business." And *Mirrors of Wall Street* phrased it: "His was the best financial mind in Washington, which had not seen his equal since Paul Warburg served on the Board." According to most reports, the Board, "previously belittled as a debating body and criticized for indecision, soon developed cohesion, independence, and a definite purpose."

In 1931, with the depression at its worst, Meyer prepared the bill creating the Reconstruction Finance Corporation, of which the War Finance Corporation had been the predecessor and prototype, and urged its enactment before committees of Congress in order to bring back prosperity to the United States. ("Virtually every financial emergency law proposed by President Hoover was suggested, in whole or in part, by Mr. Meyer.") It was February 1932 when the RFC was actually organized, trusted with the placing of a capital of $500,000,000 provided by the Government and with a large borrowing capacity, and no one was surprised to find Meyer, "enjoying the confidence of New York bankers and appointed chiefly for that reason," as its first chairman.

Promptly after the passage of the bill, Meyer began the task of setting up the necessary organization and machinery for the handling of its activities. Almost immediately the Corporation began making loans to railways, insurance companies, banks. After six months, however, Meyer resigned from the chairmanship, ostensibly to give full time to his duties as governor of the Federal Reserve Board, actually, according to Pearson and Allen (see sketch this issue), because of friction over the policies of Ogden Mills, Hoover's Secretary of the Treasury.

In May 1933, shortly after Roosevelt became President, Meyer resigned as governor of the Federal Reserve Board, too. But this did not mean retirement from public life. In June 1933 he bought the Washington *Post*, one of the five Washington dailies, for $825,000. For some time the paper had been losing $1,000,000 a year under unimaginative ownership. Rumors that Meyer's real interest was less in reviving Washington journalism than in the Republican Party brought a swift reply: "It will be my aim to improve the *Post*, and to make it an even better paper than it has been in the past. It will be conducted as an independent paper. . . I think I should . . . make it clear that, in purchasing the *Post*, I acted entirely on my own behalf, without suggestions from or discussion with any person, group, or organization."

Meyer realized that the best way to gain circulation in competition with Washington's four other dailies was to concentrate on his editorial page and special columns. The correctness of his instincts can be measured by the fact that in eight years the *Post's* circulation went up 173 per cent, its advertising lineage 111 per cent, while its annual losses were reduced to $300,000. As for political slant, *Post* editorials forgot worries over the liberal turn in the New Deal to laud Roosevelt's foreign policy, particularly as expressed in the "quarantine the aggressor" speech at Chicago in 1937. Roosevelt returned the compliment by announcing publicly that one *Post* editorial perfectly expressed his own views—was very good, very clear, very honest. And in March 1941 he appointed Meyer to the National Defense Mediation Board.

"Butch" to his workers, a "tremendous hobnobber" who prowls around the *Post* building asking them every conceivable question, Meyer is a daily visitor to Washington's National Press Club—found lounging around there more often than at any of the eight swank New York and Washington clubs of which he is a member. With a fortune conservatively estimated at $30,000,000 in 1938, "the *Post* is for him—in a luxury sense—what steam yachts and strings of race horses may be for some other wealthy men." It is also true that "what he loses on the *Post* he can deduct from his income tax."

The happiness of the Meyer family is said to be something of a tradition in Washington society. Mrs. Eugene Meyer is the former Agnes Elizabeth Ernst, known at the time of her marriage in 1910 as one of the most beautiful women in New York, and there are five children: Florence (Mrs. Oscar Homolka), Elizabeth, Eugene III, Katharine (Mrs. Philip L. Graham) and Ruth. At their country seat in Mount Kisco, New York, everyone in the family can indulge in a fanatical devotion to riding, and Meyer himself can enjoy unusually good tennis with his son or daughters. Five feet eight, this Washington publisher's powerful shoulders and "opaque and glittering" dark eyes belie the impression given by receding hair and old-fashioned nose glasses. He smokes Corona-Coronas, reads avariciously, is fond of giving large dinner parties and occasional music recitals in his Washington home (he likes modern composers, too—some of them), and has an odd passion for dominoes, at which he is an expert. Felix Frankfurter (see sketch this issue) is one of his good friends. In conferences he likes to wisecrack, taking an "optimistic view of life and finance," but he wouldn't give an interview for publication even when in 1920 he witnessed the famous Wall Street bombing which killed 20 people. He is energetic, argumentative and at the same time secretive, "loves to answer questions by asking others in return," and once

MEYER, EUGENE—*Continued*

said: "Well, my father taught me to take care of myself. He hired Jim Corbett to teach me boxing. I haven't kept up that training but I retain a give-and-take attitude toward life."

MILHAUD, DARIUS (mêl-ō') Sept. 4, 1892- Composer

Address: c/o Mills College, Oakland, Calif.

In the spring of 1940 music-loving Paris gathered at the Théâtre Nationale de l'Opéra to listen to the première of Darius Milhaud's opera *Medée*. It was something of an event, since it was the first opera shown since the War began and since it combined the talents of France's "most original and prolific composer" and of well known artists like Charles Dullin and André Masson. It was also the last opera to be produced by free France. By July the opera had been stopped, Paris had been taken and the composer had fled to the United States to teach composition at Mills College in Oakland, California.

On December 27, 1940 the corpulent, black-haired composer came to Manhattan to perform and to conduct at a one-day "festival" of his compositions (given by the League of Composers) which included excerpts from his operas, some symphonic poems, a string quartet and a cantata. Needless to say, this represented but a minute fraction of Milhaud's works. His output is enormous. Throughout his musical career, he has translated his experiences into music as naturally as thoughts into speech. He is interested in all the noises that human voices or instruments can make. He has set everything to music, from poetry by Francis Jammes to descriptions of agricultural machines and florists' catalogs. It has even been said that "he has composed too much music, relying on the prodigality of his genius rather than upon his sense of criticism." But his latest compositions, particularly the fateful militant *Cortège Funèbre,* a dirge for the fallen Netherlands, show that Darius Milhaud can "still turn expertly a phrase of hard-bitten counterpoint."

Darius Milhaud was born in Aix-en-Provence, France, on September 4, 1892. In 1910 he went to the Paris Conservatoire, where he studied violin under Berthélier, harmony under Xavier Leroux, counterpoint with Gédalge, and composition with Widor. During his years of study he won several prizes, among them the coveted *Prix de Composition Lepaulle* (in 1915), with his first work, a sonata for two violins and piano. He was preparing for the *Prix de Rome* when the War came, but in 1917 gave up music for a brief diplomatic career with the French legation at Rio de Janeiro.

Paradoxically this proved of considerable value to him in his musical career. His superior was Ambassador Paul Claudel, a well known poet, and there began a long collaboration from which came some of Milhaud's best works for the stage. Claudel wrote the librettos for Milhaud's *Protée* (1913-1919); *L'Homme et son Désir* (1918); and *Christophe Colomb* (1930), the last being the best known of his works. "Poet and composer were in thorough agreement on all points in their fondness for mingling the trite and the singular, the subtle and the coarse, realism and fantasy." In 1919 when Milhaud came back to Paris he brought with him a few experiments in South American rhythms, among them the well known *Saudades de Brazil* (1921).

Milhaud took up his musical career where the War had interrupted it and became the leader of the famous *Groupe des Six,* a group of young composers, fostered by Erik Satie and Jean Cocteau. The other five were Arthur Honegger (see sketch this issue), Francis Poulenc, Georges Auric, Louis Durey and Germaine Tailleferre. These gifted young enthusiasts, no longer satisfied with the esthetic theories of Debussy and Ravel, were mainly interested in breaking down the reign of impressionism in music. "Their inspiration was largely derived from the American jazz rhythms and popular music, which they parodied in a witty and sophisticated way." Undeniably, however, much of their work was motivated by the desire to *épater le bourgeois.*

Like the exponents of all the arts in the talky '20s, *Les Six* talked music as much as they composed it. One work they composed together was music for Cocteau's ballet *Les Mariés de la Tour Eiffel* (1921). Milhaud, however, soon freed himself from the group and began to compose music in his own unique style with his own personal vocabulary. His growth proved so rapid that in less than three years he was regarded as one of the most important musicians since Debussy. He was well known for his Wagnerophobia, his anti-impressionism, his interest in ragtime and jazz, his versatility and as a steadfast exponent of polytonality. To that period belong some of his sensational innovations, such as the use of cinema in grand opera (in *Christophe Colomb*) and the introduction of declamation performed in rhythm with accompaniment of percussion (*Les Choëphores,* 1919). His *Chris-*

tophe Colomb was hailed as the most sensational musical work of its time. The resurgence of ballet offered new possibilities for his music: his *La Création du Monde* (1923) for the Swedish ballet was the first jazz ballet to be performed, and later he wrote *Le Train Bleu* (1924) for Diaghilev.

Yet then, as now, it was hard to place Milhaud in any specific category. His versatility in music is Protean. His predilection for dissonance is undeniable; yet Aaron Copland could write of him: "Milhaud's gift is clearly that of lyricist. His musical nature impels him toward one end: a spontaneous outpouring of the emotion in terms of pure music. His music always sings." It is the dissonance used as a background to his ever-present melody that gives it its "modern" *cachet*. The truth is that Milhaud is a composer who strives for varied and original effects and gets them by various means, violent and poetic by turns, sometimes resorting to satire, even buffoonery.

Milhaud first came to the United States in the winter of 1923 to appear as soloist in his *Ballade* for the piano and orchestra and as conductor of his serenade with Dirk Foch's City Symphony Orchestra. He came back in the fall of 1926 to play his works under the direction of Damrosch and Willem Mengelberg, and on both occasions he made extensive lecture tours. (In France he has made his mark as a music critic, and he was awarded the Légion d'Honneur in 1934.)

Milhaud has written in practically every field of music. He has to his credit a symphony which was performed in New York on February 5, 1941 under the direction of Leopold Stokowski (see sketch this issue); 10 quartets; a great number of symphonic works; 12 theatrical pieces, most of them in one act (the best known are *La Brebis Egarée* [1923]; *Le Pauvre Matelot* [1927]; *Christophe Colomb* [1930]). He has written many ballets, among them *Le Boeuf sur le Toit* (1919) and *L'Homme et son Désir* (1921). The latest, *The Men from Midiam,* is expected to be performed by the Ballet Theatre of New York in 1942. Another important part of his creative activity is music for the films: his music for Jean Renoir's *Madame Bovary* has been played as a suite of short pieces. He has written numerous cantatas and accompaniments to poetry, too—best known are the *Voyage d'Été* and the *Cantate de la Mere et d'Enfant* to the text of Maurice Carême.

Darius Milhaud has retained from the old days his love for talking and theorizing. He was accompanied to the United States by his pretty, doe-eyed wife, Madeleine Milhaud, whom he had married in 1925. She is a well known actress and *diseuse* in her own right and has collaborated with Milhaud in his concerts. He has not been overly distressed by being uprooted from his native land. For one thing he finds the climate of California much like his native Provence. Then, too, he finds considerable "stimulus and invigoration in the dynamism and many challenges" of the American scene. Creative musicians, he says, are not silenced by political changes, however drastic, and recalls that Verdi composed even under foreign domination.

DARIUS MILHAUD

MILLER, ALICE DUER July 28, 1874-
American poet, novelist and dramatist
Address: 450 E. 52nd St, New York City

"If only I'm not too muddle-headed . . ." sighed Mrs. Miller while planning a narrative poem based on American history.

Few self-criticisms could be wider of the mark. "Muddle-headed" is probably the last thing anyone who knows Mrs. Miller would accuse her of being. The usual critical estimate of her novels is that they are "light and expert." Her plays are first-class comedies. Her sensational 1940 success, *The White Cliffs*, which begins:

I have loved England, dearly and deeply
Since that first morning, shining and pure,
The white cliffs of Dover I saw rising steeply
Out of the sea that once made her secure

is undoubtedly one of the few poems which sold 125,000 copies in its first ten months. This is only the United States sale; it sold 25,000 in England and thousands more in Central and South America during the same period. It was abridged in *Life*, it was read more than once over the radio by Lynn Fontanne (see sketch this issue), Mrs. Miller herself read it many times for the benefit of the British War Relief, and it was sold as a film short.

Its author said modestly: "The success it has had is due to British heroism rather than to its own merits." But the National Poetry Center, disagreeing with her, named her as 1941 winner of the Golden Scroll and Medal of Honor it awards annually to the nation's foremost poet, and Noel Coward (see sketch this issue) wrote: "I should imagine that even a Hottentot, providing he had a reasonable knowledge of the English language, could not fail to be impressed and touched by the sincerity, quality and charm of this book, but I am an Englishman and as such obviously prejudiced, very prejudiced, indeed, and very grateful." Even *Time*, which called it doggerel, called it "grade-A doggerel."

ALICE DUER MILLER

This short novel in verse, the story of an American girl married to an upper-class Englishman, who gives first her husband and then her son to die for England, was Mrs. Miller's second venture into narrative verse. The first was *Forsaking All Others* (1931), a novel in verse about divorce. Her most recent book is *I Have Loved England* (1941), an historical and literary text illustrated with 100 photographs of English scenes.

She is best known, however—or was, before *The White Cliffs*—as a novelist. Among her novels are *The Modern Obstacle* (1903); *Calderon's Prisoner* (1903); *Less Than Kin* (1909); *The Blue Arch* (1910); *Come Out of the Kitchen* (1916) (a starring vehicle for Ruth Chatterton and afterward a popular film); *The Charm School* (made into a play with Robert Milton in 1919); *The Beauty and the Bolshevist* (1920); *Manslaughter* (1921); *The Priceless Pearl* (1924); *The Reluctant Duchess* (1925); *Gowns by Roberta* (as *Roberta*, a highly successful musical comedy, 1933); *Come Out of the Pantry* (1934); *Death Sentence* (1935); *Five Little Heiresses* (1936); *The Rising Star* (1937); *Not For Love* (1937); *And One Was Beautiful* (1938).

Besides this, she has written one play, *The Springboard* (1928), and has collaborated in the dramatization of three of her novels. There have also been two non-fiction books, *Are Women People?* (1915) and *Are Parents People?* (1924). Her novels are usually serialized before book publication in the *Saturday Evening Post*, the *Ladies' Home Journal* or the *Woman's Home Companion*. Her short stories have been collected into a volume under the title of *Taxi* (1931).

Mrs. Miller says that she started out in life with the idea of becoming a "high brow" novelist—Henry James was her model. She had financed herself in college (she was graduated from Barnard in 1899) by writing stories for *Harper's* and *Scribner's* and short essays for these and other literary magazines. "After a time," she says, "I decided that I was too ambitious in my writing attempts and turned to lighter material." When she married Henry Wise Miller the fall after her graduation from college, the young couple was pretty hard up. Mrs. Miller decided to help out by her writing. The *Saturday Evening Post* accepted *Come Out of the Kitchen* "at almost precisely the same time" that Mr. Miller obtained a good position in Wall Street. Neither of them has had to worry about finances since.

Mrs. Miller is a native New Yorker, born July 28, 1874. Her parents were James G. K. and Elizabeth (Meads) Duer—pronounced "due-er." Her grandfather was Rufus King, American Minister to England in 1844. In her apartment on the East River, which is largely furnished with eighteenth century furniture, she has a console table that belonged to him, together with one that belonged to Edward Everett. The only sign of literary activity apparent to the visitor is the portable typewriter on an antique kneehole desk by the window. "I like to have lots of quiet when I work," she says.

She also still needs lots of encouragement. After every book she is sure it is her last, and that she will never be able to write another. After *And One Was Beautiful* she announced to her husband and son that she had reached the age of retirement and meant to stop writing, since all she could do in the future would be a mere rehash of the past. "Mother," said her son, "you've told me that in just the same way three times that I can remember. Why don't you stop it? You didn't mean it before and you don't mean it now." So instead of retiring she wrote *The White Cliffs*.

Though she has spent most of her life in New York, Mrs. Miller has lived for long periods in Costa Rica, on the French Riviera, in Scotland, and of course in London. She has visited Hollywood several times to help in filming her novels, but has never stayed there long. She is too attached to her family and to the beautiful apartment on the East River in which she has lived for the past 10 or 12 years.

In the teen years of the twentieth century, she was an active suffragist—as her book *Are Women People?* might suggest. She has always been rather socially minded. In 1916 she was one of the founders of the Women's City Club in New York, and was its first president. The anti-suffragists and feminine reactionaries in general shied away from the club—its sponsors advocated not only votes for women, but also such "radical" ideas as city planning, health education and crime prevention. Today the club has a membership of 1,067, including leaders among women in professional, business and social life.

Rather unexpectedly for so gentle and seemingly fragile a person, Mrs. Miller's favorite recreation is baseball. She is a long-time Giants fan, seldom misses a game and knows all the points and all the players. She is quite capable of conducting a technical discussion on a sport which interests few women of her generation.

Seen under less unconventional circumstances, Mrs. Miller is a slender, graceful woman, once blonde but now gray, with deep-set blue eyes and a "feminine" taste in dress. She is thoroughly enjoying the excitement over *The White Cliffs*; though she has never cared for formal "society," she is entirely a woman of the world, one who likes to be in the forefront, doing things. No one to see her or hear her speak would think that she is in her late 60's. She has been indefatigable about flying out to Cleveland or Washington or Boston to autograph her books in the stores there. "I enjoy every minute of it," she told Robert Van Gelder, who interviewed her between trips. "All the cities seem so lively." The one thing Mrs. Miller does wish people would stop saying is that *The White Cliffs*, which grew out of her admiration for England in this hour of crisis, is in any way autobiographical. It is not; her husband is an American, and her son is alive and has never been a British soldier. Many of the minor incidents in the poem, however, are taken from real life. The only letter of complaint Mrs. Miller has received came from a man with a German name who accused her of "kowtowing to the British." "I certainly don't feel that that accusation is just," she says. "It is not wholly favorable, you know." As her poem ends:

I am an American bred,
I have seen much to hate here—
much to forgive
But in a world where England is
finished and dead
I do not wish to live.

MILLER, DOUGLAS (PHILLIPS) May 22, 1892- Economist; author; diplomat; assistant to William J. Donovan, United States coordinator of defense information

Address: c/o Little, Brown & Co, 34 Beacon St, Boston, Mass.

In 1941 one of the steady best sellers on non-fiction lists was Douglas Miller's *You*

DOUGLAS MILLER

Can't Do Business With Hitler (1941). There was nothing newsworthy about the book's title; the point was that Miller, who for 15 years had been in the service of businessmen at the United States Embassy in Berlin, was in a position to prove the case. President Roosevelt publicly praised the book, and William Shirer (see sketch this issue) of *Berlin Diary* fame announced: "It's a book that ought to be on the desk of every businessman in this country."

Reviewers found certain quotations particularly worth repeating. For instance: "There is no such thing as having purely economic relations with the totalitarian State. Every business deal carries with it political, military, social, propaganda implications." Or: "The Nazis believe in 100 per cent or nothing—and 100 per cent for them and nothing for us would be the usual arrangement." Or, again: "What the Nazis really would like: to unify Europe and divide America." Chapter headings were equally revealing: Hitler Is Our Enemy; Rule of Force Not Law; Leadership Principle; Militarism; Racial Superiority; Economic Sterility; Falsehood and Treaty Breaking.

Conservative, unsentimental, far from idealistic, Miller indicts Nazism not for its moral crimes but for the danger it holds to American business enterprise. He says: "I believe that what we do *now* will determine our economic history for years to come. And I believe that what affects the American businessman cannot help but affect every American." He also believes, though, that even if Hitler is defeated the world will never return to its old system of private trading and laissez-faire economy, an opinion which caused the New York *Herald Tribune* reviewer to call his own book "Nazi-minded."

"I make these statements," says Miller, "on the basis of my long residence in Berlin, my close association with Nazi leaders and their party, a detailed study of National Socialist books, pamphlets and newspapers from the very beginning of their movement when they were less cautious about discussing ultimate objectives. These convictions I formed slowly under the pressure of overwhelming evidence."

Born at Fayette, Iowa on May 22, 1892, Douglas Miller cast off his provincialism early. He was brought up in Minnesota, Vermont and Colorado and, after having been graduated from the East Denver High School in 1908 and from the University of Denver in 1913, earned his M. A. at the University and in 1915 was chosen from Colorado's scholars for a Rhodes Scholarship at Oxford University. In 1916 he went to Oxford. During vacations he did relief work with the British Army. In the spring of 1917 he went to India and became manager of the British Army canteens for Mesopotamia, and the period after the Armistice found him in Siberia, shipping relief supplies over the Trans-Siberian railroad. It was not until the fall of 1919 that he returned to Oxford. He obtained a degree in jurisprudence there in June 1920 and then was stationed in Stettin, Germany, in work consisting of the repatriation of Russian and German prisoners of war.

After he joined the United States Department of Commerce in October 1921 his rise was rapid. He became assistant chief of the Western European Division of the Bureau of Foreign and Domestic Commerce, also teaching in the Foreign Service School of Georgetown University. In May 1924 he began his 15 years' service with the American Embassy in Berlin, sent there as trade commissioner. In 1925 he became assistant commercial attaché, later commercial attaché.

From 1925 on, in his reports, he frequently noted the upward trend of German trade, growing business prosperity. This did not make him close his eyes to what was going on. As early as October 1931 he prepared a report to Washington on how the coming National Socialist State in Germany would operate, an account which "still stands substantially correct." But few others were worried; the next year Miller was attending a still-cheerful dinner in his honor given by the Board of Trade for German-American Commerce. An entry in Ambassador Dodd's diary in August 1933, not long after Hitler had come to power, is revealing: "Conferred with our commercial attaché here, Douglas Miller, who speaks German fluently and is married to a German wife. My first acquaintance with his work came only a day ago when his admirable survey of German conditions under the Hitler regime came to my desk, exceedingly well done." William Shirer wrote later: "Mr. Miller is not only a very able economist, but a student of history as well. In fact, in my time in Berlin he was undoubtedly the best informed man in our Embassy on all aspects of life under the Nazis."

The attitude of the commercial attaché toward most aspects of that life, after repeated visits to the Foreign Office to protest against the treatment of Americans attempting to do business in or with Germany, became so cynical that he framed on the wall of his office a motto taken from Hitler's newspaper: "Justice and good nature should be limited to one's own people." To one businessman, on the verge of ruin because of an arbitrary ruling by one Nazi official, he advised: (1) close up and clear out; (2) find out how much it would cost to persuade the official to change the ruling; (3) "a Nazi firm in similar circumstances might consider having the official assassinated."

Several years before the Second World War Douglas Miller was quite certain that it would come and that commercial relations between the United States and Germany would end; therefore in September 1938 he cabled a request to return to the United States, predicting war in the summer of 1939. In November of 1938 he was recalled, and in May 1939 he resigned his position as commercial attaché, planning to stay in the United States indefinitely.

In September 1939 Douglas Miller accepted a position as assistant professor of economics in the School of Commerce of the University of Denver. In June 1941, after having completed *You Can't Do Business With Hitler,* he was granted a year's leave of absence from the University to undertake a study of National Socialist economy under the auspices of the Rockefeller Foundation in New York City. Soon after that he was appointed assistant to Colonel William J. Donovan (see sketch this issue), coordinator of defense information. He was already the author of numerous published articles in Department of Commerce reports and trade information bulletins as well as the author of unpublished government reports, and since the publication of his book he has been much in demand as a writer of articles and as a speaker.

All of Miller's diplomatic experience has not been in Berlin. He has represented the United States in many international gatherings, having been on the staff of the American delegation to the Limitation of Armaments Conference in Washington in 1921, on the staff of the American delegation to the World Economic Conference in Geneva six years later and a delegate to a commission of the League of Nations for drawing up a draft for customs regulations in Geneva in 1935. He was also American delegate to the International Chamber of Commerce Convention in Berlin in 1937.

A balding, agreeable, full-faced man who looks like a successful American businessman himself and who smokes a pipe "big enough to 'bean' Hitler with," Douglas Miller is a member of the National Press Club in Washington, D. C. He has one son.

MINOR, ROBERT July 15, 1884- Acting general secretary of the Communist Party
Address: Communist Party of the United States of America, 35 E. 12th St, New York City

On February 24, 1941, after the Supreme Court had upheld the four-year prison sentence against Earl Browder for passport fraud, it was announced that Robert Minor had been appointed acting general secretary of the Communist Party of the United States. For 20 years Minor, once a well known newspaper cartoonist, had been a member of the National Committee of the Party.

He was born on July 15, 1884 in San Antonio, Texas, the son of Robert Berkeley and Routez (Houston) Minor. His father was a schoolteacher and lawyer who later became a district judge—the great-grandson of General John Minor, who was active in the American Revolution. His mother was a member of General Sam Houston's family. Young Minor, however, attended public school for only four years: in his middle teens he "hit the road." His first job was as a messenger for the Western Union Telegraph Company, his second as a sign painter's apprentice. By the time he was 18 he was a working carpenter, and not long afterward he joined the Carpenters' Union of the American Federation of Labor.

After an unsuccessful carpenters' strike Minor found himself jobless once more, and once more began touring the country via freight train. He found a chance job as cartoonist for the San Antonio *Gazette,* contributed occasional drawings and cartoons to country weeklies and labor journals, and after a year or so of working at odd jobs in St. Louis he was rewarded with a job as sketch artist for the St. Louis *Post-Dispatch.* That was in 1906. Of these early drawings and cartoons Art Young says that they "looked as if they had been done with a blunt marking crayon on any kind of paper that was handy, and were never cluttered with detail—only an eyeful, and just a glance would give you the idea. His work was the forerunner of the crayon cartoons in the daily press of today."

Until 1913 Minor remained in St. Louis, dividing his time between cartooning and political activity. He had joined the Socialist Party in 1907, during the struggle for the

ROBERT MINOR

freedom of Bill Haywood, and became a member of the City Central Committee of St. Louis. Then, when he was 29, Joseph Pulitzer summoned him to New York to work for the old *World*—at a salary of $100 a week and a substantial bonus. (That same year Minor spent a short time in Paris, planning to study art, but instead interested himself in the French trade-union movement.) He drew anti-war cartoons for the *World* until the spring of 1915, when that newspaper changed its attitude toward the War; then he quit and went to work for the Socialist newspaper, the New York *Call*. He was sent to Europe to do sketches for the *Call* and for the Newspaper Enterprise Association, a syndicate of the Scripps newspapers, and soon was sending back dispatches, too, from France and from Italy. They pictured such discontent in those countries that eventually only the *Call* was printing them, however.

Back in the United States the next year, Minor was sent by the *Call* and by the NEA to the Mexican border, where war was expected to break out at any moment. The threat failed to materialize, though, and he went to Los Angeles. There he got a telegram telling him that five trade unionists had been arrested in connection with the Preparedness Day parade in San Francisco and urging him to help. For a year and a half he dropped everything else to become organizer for the International Workers' Defense League at a salary of $35 a week, managing publicity for the defense of Tom Mooney, who had been convicted and condemned to death.

In 1918 the *Liberator*, a Left-wing magazine endorsing the War aims set forth both by the Russians and by President Wilson, and somewhat less outspoken than the old *Masses*, was established. Minor was a contributing editor, and its first issue carried a cartoon by him showing "the rope still around Mooney's neck." Mooney's sentence was commuted to life imprisonment, however, and by the spring of 1918 Minor was once more in Europe, this time as war correspondent for the Philadelphia *Daily Ledger*. While there he visited Russia, and sent articles back which were written from the viewpoint of an anarchist. Art Young says: "This was the philosophy that interested him most at the time: the doctrine that the individual should be free to live his own life unhampered by government restraints imposed against his will."

After the Armistice, Minor visited Germany and France. While in France he made a speech asking the workers not to ship munitions intended for use against Soviet Russia; he was arrested the next day and shipped to Coblenz, the headquarters of the American Army. He spent a month in an army prison, but the charges were finally dropped, and not long after his return to the United States Minor was elected to the Central Executive Committee (now the National Committee) of the Communist Party. At about the same time he began editing the *Liberator*, after Max Eastman resigned as its editor, and he remained at its helm until 1924, when it was submerged into the *Workers' Monthly*. He also drew for Art Young's *Good Morning*.

From 1924 to 1926 Minor lectured for the Communist Party, and in 1928 he became editor of the Communist organ, the *Daily Worker*. His editorship was interrupted when, on March 6, 1930, he was arrested with other Communist leaders for participating in an unemployed demonstration in Union Square. He was given an indeterminate sentence, and served six months in prison on Welfare Island and with a bridge-building gang on Riker's Island until released from prison in October 1930 to undergo an appendicitis operation.

In 1933 Minor polled 26,000 votes as Communist candidate for Mayor of New York City. He directed the work of the Communist Party on the behalf of the Scottsboro Boys and then, in 1935, went to New Mexico to organize the defense of 10 coal miners who were held on murder charges. While there he was kidnapped and seriously beaten up by vigilantes. The year 1936 found him once more running for political office, this time as Governor of New York State. The Communist Party supported Lehman against Dewey, however; Minor polled less than the required 50,000 votes and as a result the Communist Party was ruled off the ballot.

There followed two years in Spain as chief war correspondent of the *Daily Worker* and other associated American and Canadian daily newspapers. By the fall of 1939 Earl Browder was on trial for passport fraud and Minor became chairman of the Committee on Civil Rights for Communists. In November 1940 he was also a member of the committee of five that drew up the amendment to the Party's constitution dissociating the organization from the Communist International. As secretary of the Party, in June 1941 he led the "about-face" that made the European War, once condemned as "imperialist," the "business of the United States."

Minor is described as genial, a "tall, rugged man with a sharp nose and a bald pate fringed in white hair." Art Young once said of him in *Good Morning*: "When he talks, it is as if he thought a reporter for posterity were listening in, and his words and sentences are formed with precision, and are grammatical enough to suggest that a good college professor was lost to the world when Bob joined the proletarian movement." He has been married three times: in 1915 to Pearl Bazarie (they were divorced in 1919); in 1920 to Mary Heaton Vorse, the writer (divorced in 1922); later to ex-socialite Lydia Gibson, his present wife.

Young, A. H. Art Young: His Life and Times 1939

MINTON, SHERMAN Oct. 20, 1890-
Judge of the Seventh Circuit Court of Appeals

Address: h. New Albany, Ind.

Bulletin: On May 7, 1941 President Roosevelt nominated Sherman Minton to be a judge of the Seventh Circuit Court of Appeals, which includes the states of Indiana, Illinois and Wisconsin. The nomination was approved unanimously on May 15.

From March 1941 issue:

In January 1941 President Roosevelt announced that he had appointed Sherman Minton as one of his six White House administrative assistants: to be his legs, eyes and ears, especially on matters of defense. The ex-Senator, the President pointed out, has the requisite "passion for anonymity" for the job. He also has, it is agreed, the requisite sympathy with the President's aims.

Ever since he entered the Senate in 1935 Sherman Minton has been a firm supporter of the Administration. He was "one of the Administration's aces" in the Supreme Court fight; he fought against the Hatch Bill; he has repeatedly defended the New Deal spending and public debt policy; he has been strongly in favor of Roosevelt's defense measures. In fact, there have been only two times—when he voted for the soldiers' bonus and voted to override the Presidential veto on the measure to continue low interest rates to farmers—when he has publicly disagreed with the President.

To a good many people Sherman Minton's early New Deal stand in the Senate was somewhat unexpected, in the light of his conservative legal background. He was born in Georgetown, Indiana, the son of John Evan and Emma (Lyvers) Minton. His family moved away from there when he was quite young, and Sherman was reared and educated in New Albany, Indiana. After being graduated from the New Albany high school in 1910 he went to Indiana University, received his letter in football and baseball, and left with an LL. B. in 1915. A year of graduate law work at Yale University followed, and Minton left New Haven with an LL. M. in 1916.

He went back to New Albany and started to practice law in his home town. Soon after he was in the swing of legal work there he married Gertrude Gurtz in 1917 (the Mintons now have three children) and soon after that found himself fighting in the First World War. From 1917 to 1919 he served as a captain in the United States Infantry, returning to his law practice when demobilized. At that time he was working for the firm of Stotsenburg and Weathers, which in 1922 became Stotsenburg, Weathers and Minton; he left it in 1925 to go to Miami, Florida to practice with the firm of Shutts and Bowen.

Harris & Ewing

SHERMAN MINTON

After three years in Florida, Minton returned to New Albany and his law practice there. When Paul V. McNutt became Governor of Minton's home state he appointed Minton public counselor of Indiana, his main job being to argue utility rates for the Indiana Public Service Commission. He was successful at this, and his efficiency in beating down the rates won him a reputation that extended even beyond his own state.

In 1934 Minton announced his candidacy for the Senate. McNutt gave him his backing; the Young Democrats put up posters saying "Sherman Minton's character and vision hold appeal to the Young Voter, likewise to both the Progressive and Conservative elements

MINTON, SHERMAN—*Continued*

of our citizenship. Conservatives know his principles are soundly founded. Progressives know he has foresight and stands for justice." Minton swept into office with the Democratic tide.

He first announced his arrival in the Senate when he called together a group of his colleagues for joint action to break a Huey Long filibuster. They broke it. Then he proceeded to make very clear his sympathies with the New Deal, despite his years of practice with law firms with large corporation accounts. Soon considered "one of the Administration's most capable men," he was offered the Senate's assistant Democratic leadership after the death of Joe Robinson, and there were many who kept bringing up his name for Supreme Court vacancies.

Senator Minton was most active on the Lobby Committee of the Senate, set up to investigate the whole business of lobbying in Washington. He was a member of the Committee in 1935 and its chairman in 1937, the subject of an infinite amount of controversy. It was also a position that gave rise to occasional humor. There was the time when a crate of celery was sent from Florida to each Senator who voted against the project to build a canal across the state's northern part. Minton got one, too. But he sent his back. In 1938 he received wide publicity when he introduced a bill, later defeated, making it a felony to publish a "known untruth," and also when he brought charges against *Rural Progress,* the farm journal edited by the late Glenn Frank of the Republican Committee.

The heavy-set Senator had a hard time when he ran for election in 1941 on the Democratic ticket in Willkie's home state. The Republican sweep sent Raymond E. Willis to the Senate and Sherman Minton to the "anonymity" he prizes. But it was short-lived. Two months later President Roosevelt had appointed him to his $10,000-a-year White House position.

Who's Who in America
Who's Who in Law
Who's Who in the Nation's Capital

MIRANDA, CARMEN (mê-rän'dä) 1913-

Singer; film actress

Address: c/o 20th Century-Fox Studios, Hollywood, Calif; h. Westwood, Hollywood, Calif.

Upon her arrival in the United States in the spring of 1939, Brazil's Carmen Miranda was hailed as "the best ambassador of good will that's come from those tropical shores." Since then Miss Miranda has gone before Technicolor cameras to sing and *samba* (a swing dance, according to *Time*) for American movie fans who understand no Portuguese and would be surprised to learn that the songs were refined for their special benefit.

She is here to stay, according to news reports, and is already almost as well known here as in South America. In March 1941 the Roxy Theatre presented her in a stage show in conjunction with the New York première of *That Night in Rio,* in which she sings, dances and acts. It was the signal for more "ambassadorial" comments in the press, and, as usual, Miss Miranda was almost unreservedly praised by critics.

To Americans, Miss Miranda's style of dress is as intriguing as her presentation of songs *con moviemento.* Soon after her opening in New York in *The Streets of Paris,* the 1939 musical revue that took the New York World's Fair jinx off Broadway, her flamboyant costumes—suggesting the brash colors of tropical birds—attracted the attention of designers. Fashion pictures of Carmen Miranda appeared in profusion, featuring the heavy costume jewelry, the bold color contrasts of her flaring skirts and jaunty jackets, and modifications of the famous Miranda turban decorated with bananas, peaches, pears and other fruit.

Costumes and camera lend the illusion of height to Miss Miranda in her picture work. Flaring skirts and high turbans make it hard to believe that she is a mere five feet two inches tall, petite and vivacious. Similarly, the brilliant colors she wears have led critics to describe her eyes as gray, green or brown—in reality they are light brown flecked with gray and green. Set wide apart, below slanting brows, they add to the exotic note conveyed by the singer's halting but picturesque English. She has a large curly mouth and smiles often. She has a high, rounded forehead and dark reddish-brown hair, and her skin is dark enough to have been described as *café au lait.*

Born in Lisbon, Portugal in 1913, Miss Miranda's given name was Maria do Carmo da Cunha. Her parents were José Pinto Cunha and Maria Emilia (Miranda) da Cunha, and they took her at the age of three months to Rio de Janeiro, Brazil, where her father was in the wholesale produce business until his death a few years ago. Her parents were well off and disapproved of her wish to go on the stage. Well-brought up Brazilian girls didn't, ordinarily, grow up to sing in night clubs! At the age of 15, however, Carmen was set on a singing career and began making the rounds of local radio studios. After a number of unsuccessful auditions she finally had her radio debut over a Rio de Janeiro station.

By 1931 Carmen Miranda's talents were beginning to be recognized, and within a few years her fame in South America rivaled that of Raquel Meller. Her fame in the United States is inescapably bound up with her method of presenting songs, the dynamics of eyes, hands and hips that she sums up in the term *con moviemento,* but the keystone of her early success came from recordings. She had made more than 300 discs, nearly all of them best sellers in the South American market before the singer was known at all north of the equator. The success of these records was what led to night club and theatre engagements in her home city, sophisticated Rio de Janeiro, and elsewhere. She made three films and she toured the South American continent nine times, playing to packed houses.

With such a background, it is misleading to speak of her as a "discovery," as some writers have done. What happened was that Claiborne Foster, former actress and wife of Maxwell J. Rice, a Pan American Airways official stationed at Rio, saw Carmen Miranda at Rio's Casino Urca. This was a fashionable night club where she sang, it is said, for the equivalent of around $100 nightly. Miss Foster promptly wrote about her to Claude Greneker, Lee Shubert's press agent; on a South American cruise the veteran Broadway producer visited Rio, heard Miss Miranda and signed her to a three-year contract. Not everyone was made happy by his visit. When the singer's boat was about to sail, 500 woebegone swains were on hand to sing a favorite song, *Boneca de Pixe* (Tar Doll).

Brief notices heralded the impending arrival in New York of the Brazilian singing star, a situation that changed abruptly on her arrival. For with 20 words of English and something "different" about her that gave photographers a field day, she proved her own best press agent. "I say money, money, money!" she exclaimed. "I say money, money, money, and I say hot dog! I say yes, no, and I say money, money, money, and I say turkey sandwich and I say grape juice." Through her interpreter she added soberly: "This is the golden dream of my life to come here."

On her journey to America, Carmen brought her own *Bando da Lua* to play the rhythmic native tunes she sings, and its leader, Aloysio Oliveira, to act as her interpreter. The slack season had hit Broadway early in the spring of 1939, and critics went to the opening of *The Streets of Paris* curious to know what gave Lee Shubert the courage to compete with Grover Whalen and his wonder-world out at Flushing Meadows. The reviews were, to put it simply, raves. Critics were uncertain about her nationality, though enchanted with her personality. Brooks Atkinson wrote of her "Spanish singing"; a fellow critic spoke of "smothered dynamics and cool Spanish décor." Such technical errors were corrected hastily the next day and were, in any event, important only as indicating the kind of impression made.

In Miss Miranda's singing there is noticeable a subtle displacement of rhythmic accent, perhaps more often anticipatory than delayed in character, that gives her songs tremendous drive and that reminds one of the *swing* in jazz: Brazilian native music has African, as well as Indian, roots. None of her three songs was listed in the program. One told of a Madrid bullfight, another described her costume, and a third was "jost fast song." "She sings them mezza-voce," a critic observed, "with a quality that resembles the plunking, plangent tone of a guitar."

"Her face is too heavy to be beautiful," read one of her first press notices in New York, "her figure is nothing to write home about, and she sings in a foreign language. Yet she is the biggest theatrical sensation of the year." A reporter from the *New Yorker* was entranced by "slanting green eyes, brilliant, gently insinuating smile, the slow sinuous wiggling of her hips, the fluttering gestures of her hands." And an interviewer spoke of "volatile hands that flew together like a pair of lovebirds as she talked."

CARMEN MIRANDA

A few months after her arrival the South American star was doing night club shows as well as theatre work. In the fall of 1939 she appeared at the Waldorf-Astoria. Then came a role in *Down Argentine Way*, for which she was paid $20,000 minus the Shubert cut. This film was made while she was in New York, contractual obligations preventing her from making the trip to the Coast. 20th Century-Fox sent a director and a Technicolor crew to New York and the scenes featuring Miss Miranda were filmed at the Movietone Studio on Tenth Avenue.

For her second film, *That Night in Rio* (RKO 1941), the studio supplied Carmen with an English instructor. Her speech gradually became more intelligible but without loss of its charming inflections. The songs in this second film were disappointing, some of them a little too close to the more mundane products of our own Tin Pan Alley, and they failed to convey the full impact of Carmen Miranda's talents. Again, to some observers the dance sequences were not all they might have been. After the dance director Hermes Pan got through with the *samba*, it was a typical Hollywood production number. Her third film, *Weekend in Havana*, was well received. In December 1941 she made a fine

MIRANDA, CARMEN—*Continued*

impression in a leading role in *Sons O' Fun* with Olsen and Johnson.

Miss Miranda doesn't drink or smoke. She loves life, big cities, crowds and good food. For recreation she enjoys swimming, speed boating and motoring. She has been on the radio, and on "guest" spots her "torrid" charms are usually emphasized. Unmarried, she has made many tactful and complimentary remarks about American men.

She has four younger brothers and sisters, all of whom live in Brazil with her mother. One of the sisters, Aurora, is a singer who has been successful in New York night clubs. When Carmen went home for vacation in the summer of 1940, her family were at the boat to meet her, along with an estimated crowd of 35,000, and in honor of her visit President Vargas declared a legal holiday.

Her portrait was painted by Paul Meltzner, a fact that gave the artist much more publicity than his numerous paintings of the American scene. But by this time Carmen Miranda might be said to be part of it, in what she herself used naively to refer to as "that Souse American way."

MITROPOULOS, DIMITRI (mē-trō′-po͞o-lŏs) Feb. 18, 1896(?)- Orchestra conductor

Address: c/o Minneapolis Symphony Orchestra, Minneapolis, Minn.

A Greek came bearing gifts to the 99-year-old Philharmonic-Symphony Society of New York in Carnegie Hall on Thursday evening, December 19, 1940. He came in the person of Dimitri Mitropoulos, conductor of the Minneapolis Symphony, who directed the Philharmonic-Symphony Orchestra in the first of 14 concerts. Ascetic in appearance, tall, bald, dynamic in action, and conducting without desk, baton or score, the newcomer stirred the audience to wild enthusiasm.

Mitropoulos was conducting the orchestra during John Barbirolli's winter vacation. It sounded "like an entirely different body from the one we have been listening to in late months," according to Olin Downes, music critic of the New York *Times*. "This is not said in malice, but as plain fact. The orchestra did not lead the conductor. The conductor led the orchestra, and there was pleasure in the adjusted relation." After Richard Strauss' *Symphonia Domestica*, which Mitropoulos made incredibly exciting, "the subscribers became so enthusiastic they did everything except steal the goalposts." Sometimes he gave the impression of being in the midst of the orchestra, pulling up an inner voice here, punching out an accent there, as the *New Yorker* music critic expressed it.

The other compositions played that evening included Beethoven's second *Leonore* overture and his Symphony Number 4 in B-flat major. The Strauss symphony reappeared on his second program, though not as well played, and was accompanied by three fugues from Bach's *Art of Fugue* and the first local performance of *The Coliseum at Night*. (This last composition is from *Two Impressions of Rome*, by Frederick Woltmann of Flushing, Long Island, who dedicated the score to the conductor and who was present to make his bow.) Mitropoulos returned to Minneapolis after his triumphant New York engagement, and has since been busy denying that he has been asked by the directors of the Philharmonic to become its permanent conductor. For one thing, John Barbirolli's contract has another year to run, as has his own. But he did return to New York to open the 1941-42 symphony season, conducting the NBC symphony orchestra at Radio City on October 7, 1941 and conducting the New York Philharmonic again in December of that year.

Dimitri Mitropoulos, who is the only Greek to have held a baton over the Philharmonic Orchestra in its long existence, was born in Athens, the son of Jean and Anagnostopoulou Mitropoulos. His father was the son of a priest; two of his father's brothers were monks; and the boy often visited his uncles at Mount Athos, where "he was inspired by the beauty and the unworldiness of the monasteries on the cliffs above the sea." At 14 he entered the Conservatory of Athens and studied there for six years, still intending to become a monk himself. But the Greek Orthodox religion forbids the use of any musical instruments in religious services, and Mitropoulos could not bear to be deprived of them.

"The reason I didn't become a monk," he explained to a New York *Times* interviewer, Ross Parmenter, "was because they didn't permit me to have a little harmonium." Relinquishing the religious life, he entered the Army, Greece then being at war with Bulgaria. Since he had played the percussion instruments in the conservatory orchestra, he was made a drummer in an army band. His carriage is still one of military erectness.

After the War and graduation from the University of Athens in 1919, the young musician went to study in Western Europe on scholarships, one of them arranged by Camille Saint-Saëns, the famous French composer. Saint-Saëns had heard and approved an opera which Mitropoulos had composed to the French text of Maurice Maeterlinck's *Soeur Béatrice* while still a student at the Athens Conservatory. The composer of *Samson et Delilah* not only wrote a newspaper article praising the opera, but arranged for Mitropoulos to study in Berlin under the eminent pianist-composer Ferruccio Busoni. (He spent 1920 in Brussels.)

It was in Berlin that Mitropoulos had his first experience in conducting an orchestra: he became assistant conductor at the German state opera house, the Berlin Staatsoper. In 1926 the Athens Conservatory called him back to make him permanent conductor of the

Symphony Orchestra in the place where he had once studied. In 1930 he appeared as guest conductor of the Berlin Philharmonic, and two years later he made his debut in Paris, conducting the Orchestre Symphonique de Paris. At this concert Mitropoulos played the solo part of Prokofiev's (see sketch this issue) Third Piano Sonata while conducting the orchestra. A fortnight later he was heard in England, and he then made a tour of the principal Italian cities. He visited Italy again in 1934, 1935 and 1939, and from 1934 through 1937 conducted an annual three months' orchestral season at Monte Carlo—all this while maintaining his connections with the Athens Conservatory.

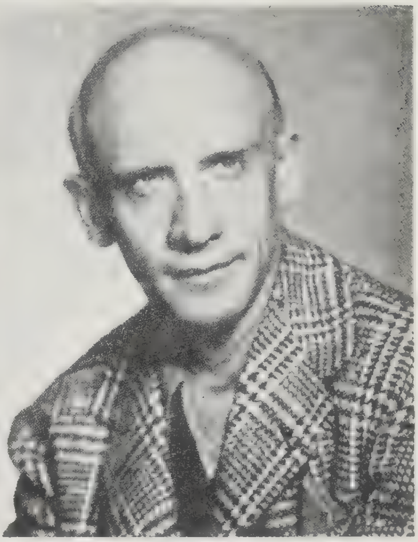
Mitropoulos' American debut in 1936 was made as guest conductor of the Boston Symphony Orchestra, where he had come at the personal invitation of Serge Koussevitzky. Here also he played Strauss' *Symphonia Domestica* to great applause. His success was so outstanding that he was invited to return in a similar capacity the following year. That season he was invited to go to Minneapolis, where he has been ever since.

Minneapolis hostesses leave him in peace, since Mitropoulos asked them point blank whether they wanted a perfect musician or a society man, "if they wanted an agreeable entertaining conductor and bad music. They agreed with me and they never bother me." In the summers of 1938 and 1939 he went home to direct open-air concerts in ancient Greek theatres, but when another war seemed inevitable he hastened to return to the United States. He sailed from Athens on September 1, 1939, the day Hitler invaded Poland.

The question of nationalism does not trouble Mitropoulos when he is making up his programs. "I don't believe in making Russian music, in making German music," he told Parmenter. "I don't think Beethoven thought of German music. Music is almost universal. French, Italians, Germans never tried to take national themes. They composed as they did because they had French, Italian and German mentalities. Rachmaninoff still composes Russian music because it is in his blood. So why not compose here with an American mentality?"

A conductor's hardest task, Mitropoulos said, is deciding which kind of authority to use. "You can be a dictator or a president of a republic, and you can get good results both ways. I treat my musicians like colleagues." (At the first rehearsal he delighted the 101 members of the Philharmonic by naming most of them from memory.) It was plain from his intensity, however, remarked Parmenter, "that for all his gentleness, humor and democratic ideas, he could transfix an offending instrumentalist with a chilling and terrifying gaze."

"There is no conductor just like him," according to Olin Downes. "His scale of sonorities is a very wide one, from a barely audible pianissimo to a fortissimo next to deafening." Mitropoulos is obviously a great orchestral technician, remarked Virgil Thomson, the music critic of the New York *Herald Tribune,* who had begun his season with a bluntly unfavorable review of the Philharmonic's opening concert under the direction of John Barbirolli. "Mr. Mitropoulos conducts the wrong pieces magnificently, shows them a whale of a time. Maybe that is the right way to conduct second-class works. It will be interesting to hear what he does *with* or *to* Mozart, Schubert, Debussy." The *Christian Science Monitor* entered an exception to the "continual overstatement or understatement, whether of dynamics or of pace, that characterized his reading of the Beethoven numbers and impeded their natural flow."



DIMITRI MITROPOULOS

A *New Yorker* interviewer found Mitropoulos "slender, peaceful-looking and bald. He has the solemnity of a monk." He allows himself practically no social life and never goes out after a concert. "His vigorous style, which involves great arm-waving and body action, so exhausts him that he merely staggers to his bed and falls into it. He violates an old occupational tradition by eating before his performances rather than afterward; he's almost a total vegetarian. He *is* a total vegetarian for fourteen days and then varies things on the fifteenth by adding chicken to his diet."

Mitropoulos knows the precise number and the contents of each measure in every piece he plays. "In rehearsals, he fascinates the orchestra by stopping it at a phrase and counting back rapidly to some earlier measure, sounding, in the process, a good deal like a professional American tobacco auctioneer." Besides his opera, Mitropoulos has composed various orchestral works and a *Concerto Grosso.* He is a Knight of Public Instruction in France.

MOËN, LARS (mō'ĕn) Mar. 9, 1901- Author; specialist on color photography

Address: b. Gevaert Co. of America, Inc, Williamstown, Mass.

Under the Iron Heel is a book described as "the first window through which daily life in conquered Europe can be clearly glimpsed." Its author, Lars Moën, was in conquered Belgium from the time the Nazis first captured Antwerp until five months later, in October 1940, when he was told to "leave now or remain until the end of the War." He left—and returned to the United States to write this, "the first full-length eyewitness account of conditions within that country." *Under the Iron Heel* also provides an invaluable insight into what is probably going on in other countries under Nazi domination, particularly occupied France and Holland.

In Belgium "the verb 'to eat' is conjugated in every possible way whenever two people meet." A whole population is near starvation. Yet the Belgians, for the most part, do not approve of humanitarian plans to feed Europe: they do not see any way by which the food could be prevented from reaching Germany. Some of them, particularly the Flemings, were pro-German at the beginning of the War; conditions in Belgium since the Nazis have taken over have changed that attitude. Apparently there has even been some change in the attitude of the Nazi armies of occupation, far from their homes and families, a little bored, and disappointed in their faith that the War would be over in the summer of 1940.

But as yet disaffection is slight: Hitler is still a god, a hero, although the men around him are openly criticized; and even the greater part of those Germans who disapprove of the Nazi regime is afraid not to win this War. As for the Belgians, they seem to feel that it will end not earlier than the spring of 1942, not later than the spring of 1944, with a German collapse—though not with a decisive British military victory. Even in 1940, they believed that the United States would send men, that Russia, too, would enter the War when she felt that Germany was ready to collapse or revolt—and it is around the United States and Russia, rather than Great Britain, that are centered all of their hopes "of ultimate freedom and a new world order."

Some of the facts which Moën reports are particularly interesting: that to the Belgians King Leopold is neither a coward nor a traitor, but a hero who has not played the Germans' game and who has stayed with his people at a time when London is filled with royal refugees; that strong evidence exists to back up the theory of an abortive invasion attempt by the Nazis on England in September 1940.

Lars Moën has lived not only in Belgium, but in France, England, Germany, Italy, French Africa and the Soviet Union. As he says, in most of these countries his work brought him into direct contact with political and military figures of importance, and he was often in an advantageous position to observe what was going on behind the scenes. He is an American, however. The son of Adolph L. and Catherine M. Moën, he was born in Bushnell, South Dakota, on March 9, 1901. Since his father's mercantile business entailed frequent changes of address, his early life was spent in the North and South Dakotas, in Minnesota, Iowa and Wisconsin. He attended grade and high schools in three states and was adopted by a tribe of Sioux Indians.

Moën was 16 when he completed high school. During the next three years in Minneapolis his activities were varied. He worked briefly as an actor; he worked on the Minneapolis *Journal*, for a photo finishing company, for the Illinois Glass Company; he became the editor of *Greater Amusements;* he joined an advertising agency; he wrote scenarios for a St. Paul industrial film company; he became instructor in "an extremely dubious school of motion picture acting." He was publicity director of the St. Paul Community Chest, entertainer for the War Camp Entertainment Service, conductor of dramatic activities at a settlement house. In 1920 he spent a year in Fargo, North Dakota, where he became motion picture editor and feature writer on the Fargo *Forum,* wrote advertising copy for local picture theatres, contributed to fan magazines and "ran a short-lived newspaper syndicate aimed at newspapers too large for boiler-plate but not big enough for the regular syndicates." (He still thinks it was a good idea.)

All this experience on the fringe of motion pictures finally brought young Moën the offer of a position as head of a motion picture division of Babson's Statistical Organization in 1921. He went to Massachusetts to take it. In the East he arranged a publicity tie-up with Pathe News, arranged for an economic survey of the motion picture industry in collaboration with Columbia University and the *Motion Picture News,* and as a result became a member of the editorial staff of *Motion Picture News.* He remained with that publication for six years, also writing feature articles for magazines and New York Sunday newspapers and occasionally editing films. He was co-author and director of a series of Technicolor films, too, and for several years was a member of the publicity committee of the Society of Motion Picture Engineers.

It was 1925 when Moën first visited all the principal European countries—on a survey of foreign motion picture production, distribution and exhibition. Two years later he moved to Paris. There he worked for some time as a fashion correspondent, then became technical adviser of the Cineromans studios, at that time the largest in Europe. When they were sold he was instrumental in forming the Gaumont-Franco Film-Aubert, a powerful rival group. Borrowed by Rex Ingram studios, he spent a year in Nice and then in Algiers and Morocco as technical director and scenarist.

While Moën was in London buying sound equipment his company inconveniently folded up, so he proceeded to become production editor of the first French-language talkie, then being produced at Elstree. He was briefly associated with an Elinor Glyn production, made four films with Monty Banks for Pathe, and was next engaged by the Asfi-Tobis studios as production editor of the first European out-of-door sound film. He remained with this studio until 1932, although farmed out for three MGM British productions, on one of which, *Diamond Cut Diamond,* he was co-author and editor.

In 1932 Moën was invited to work in the Soviet film industry, one of the few non-Russian and non-Communist engineers to hold an executive position there. He "went for three months out of curiosity," he says, and "stayed for nearly six years because I liked it." (He is now writing a book, *My Moscow Neighbors,* telling why.) It was in Russia that Moën suddenly became a scientist. He had expected to edit sound films, but found that a clerical error had resulted in his being invited to Russia instead of a scientist. He rectified the error by heading the physics division of the Scientific Research Institute of Motion Pictures and Photography, also becoming adviser to the State Gramophone Trust and consultant to the State X-ray Institute. He introduced standards into the manufacture of motion picture apparatus; he introduced dubbing of foreign language films into Russian, himself doing the Russian versions of *The Invisible Man* and *The Last Milliardaire*; he wrote feature articles and motion picture criticism for the Moscow *Daily News,* sometimes unmercifully panning the productions of his own studio; he was adviser on many Soviet productions, and made a few; and he was selected for the special brigade which made a film around Stalin's speech on the new constitution.

Finally, in 1937, Moën returned to England to concentrate solely on color reproduction, which had engaged a considerable amount of his attention since his first contact with Prizmacolor in 1916. There he became the research director of Truecolour Film, Limited, and spent at least half of each month in Paris. But it became increasingly difficult for him to carry on his experiments with a new color film process in London, and in the spring of 1939 he arranged the transfer of the laboratories to Antwerp, Belgium, although continuing to work in Paris during part of each month. There were also frequent visits to England and Germany until war was declared.

Philip Halsman

LARS MOËN

Moën was in Paris when the general mobilization was ordered, and he left for Belgium at once, crossing the border just after Great Britain declared war on Germany. He arrived in Antwerp to learn that France had just followed suit. In Antwerp he lived in a small hotel, doing his research in a factory in the suburbs, and returned to Paris only once—in November 1939. Even after the German Army entered Belgium on May 18, 1940, he continued to work at his laboratory, sometimes spending most of the night there. He made efforts to get out of the country and back to America, but the Germans laughed at him. "What are you worrying about?" they asked. "The War will be over in 15 days."

The War was hardly over in 15 days. Around September, Moën moved into a working-class neighborhood near the factory, boarding with a baker's family. Six weeks later he was told he might leave (the Germans didn't know he was a former newspaperman), and on October 22 he left Belgium, paying 2,800 francs for a "conducted tour Brussels-Lisbon." After a journey across France and Spain and a stay in Lisbon under German auspices, he crossed to New York in a boat carrying 180 passengers, "chiefly refugees from all parts of Europe." In the United States he is engaged in photographic research with the Gevaert Company of America, Incorporated, at Williamstown, Massachusetts, and in independent research on color reproduction in New York.

Moën is described as "a slender man of medium height and with gray hair but a young face." Besides *Under the Iron Heel,*

MOËN, LARS—*Continued*

he has published "several million words for various newspapers and a vast amount of hack writing best forgotten." He is the author of *Are You Going to Russia?* (London 1934), *Looking Glass Land* and *Back from Looking Glass Land,* two series which appeared in *Passing Show* in 1933 and 1937, books in French and Russian on technical cinema questions, and is the co-author of the English libretto of the opera, *The Quiet Don* (Moscow 1937).

MONSKY, HENRY (môn'skĭ) Feb. 4, 1890- President of B'nai B'rith; lawyer

Address: b. 737 Omaha National Bank Bldg, Omaha, Neb; h. 90th and Dodge Sts, Omaha, Neb.

The oldest and largest national Jewish service and fraternal organization is B'nai B'rith. Its more than 150,000 members support youth work, carry out domestic and foreign relief, carry on activities for democracy, maintain hospitals and vocational service bureaus and issue frequent publications. At their head since 1938 has been Henry Monsky, lawyer and leader in civic and Jewish affairs.

HENRY MONSKY

A native son of Nebraska and Omaha, he is the first cornhusker to attain national stature in Jewish affairs and one of the very few Jewish leaders in America who live west of the Mississippi. He was born there on February 4, 1890, the son of Abraham and Betsy (Perisnev) Monsky, and went to school there, first to public schools and then to Creighton University, a Jesuit school. Monsky's father had wanted his son to become a rabbi, but Henry knew that law was what interested him, and it was with an LL. B. that he was graduated *cum laude* in 1912. He immediately began to practice law, rose rapidly in his profession, and for many years has been associated with the firm of Monsky, Grodinsky, Marer and Cohen in Omaha.

Almost all his life, social work and B'nai B'rith have been Monsky's chief interests, and to them in many years he has devoted more time than to the practice of law. He became interested in B'nai B'rith when he was very young, and in 1913, when he was but 23, he was elected president of the Omaha Lodge of B'nai B'rith. When he was 31 he was chosen president of District Grand Lodge No. 6 of B'nai B'rith, which includes the states of Nebraska, Iowa, Wisconsin, Minnesota, Michigan, Illinois and North and South Dakota, the largest of the seven districts. From this office he climbed to membership on the national executive committee, the organization's policy-making body between national conventions.

Two of B'nai B'rith's greatest achievements, the Hillel Foundations, which today serve nearly 15,000 Jewish students on 30 American campuses, and the Aleph Zadik Aleph junior order, which offers young boys a five-point program of religious, social service and cultural activities, originated in District No. 6, in which Monsky remained the principal figure for a decade and one-half. A. Z. A. was born right in Omaha, and Monsky was for long prominently identified with its development as a member of the supreme advisory council. His name is also inseparably associated with the organization of the Hillel Foundation and the expansion of the Anti-Defamation League, whose speakers' bureaus, discussion groups and publications aim to spread democracy.

His connection with all three of these B'nai B'rith agencies grew out of his leadership in the Wider Scope Campaign, for he was the chairman of a committee which recommended the establishment of this fund-raising plan which to this day is used to support all the major activities of the order. From 1927 to 1929 he served as national chairman of the Wider Scope Campaign which raised $2,000,000 for the establishment of the first group of Hillel Foundations and for the furtherance of the work of the Anti-Defamation League and the A. Z. A. His importance in B'nai B'rith was demonstrated, too, by his activities as the organization's representative on the Committee on Cooperation, which included the B'nai B'rith, the American Jewish Committee, the Jewish War Veterans and the American Jewish Congress.

In May 1938 Monsky, already hailed as "one of American Jewry's most forceful leaders," was elected president of B'nai B'rith, and in the spring of 1941 he was re-elected. Since he has taken office B'nai B'rith's working structure has been streamlined, membership has nearly doubled, and the organization's prestige has been greatly increased. He is working constantly on its affairs, giving enormous amounts of time to the Anti-Defamation League, the Hillel Foundations, the A. Z. A., the *National Jewish Monthly* of which he is editor, the Vocational Service Bureau, emergency relief appeals, women's auxiliaries, membership drives and philanthropy. District secretaries, local leaders and other organization heads constantly consult him. He flies to all parts of the country to make speeches, attend conventions, confer with smaller groups. His correspondence is staggering.

Edward E. Grusd explains how he is able to do all this, in the *National Jewish Monthly* of March 1940. It is, he thinks, because Monsky "has the kind of a brain he has. It clicks! A problem that another would mull over for days before reaching a decision, Henry Monsky decides in a few minutes. His mistakes are amazingly few—and are mainly caused by his sentimental heart, not his head." And what he does is always well done. Few men in Jewish life, for instance, are able to match him in a conference or negotiations. "Again and again he has gone into important conferences where heated argument over policy or program has apparently wrecked all hope for agreement. Monsky's calm, dispassionate appraisal of relevant factors, his clear view of alternatives, his suaveness in moving over rough spots have often rescued a settlement."

Monsky's devotion to his people has not been demonstrated only in B'nai B'rith; he is prominently identified with most national Jewish organizations, including the United Jewish Appeal, the National Refugee Service, the National Conference of Christians and Jews and the Jewish Welfare Board. He has also been long active in many constructive civic causes. Founder of the Omaha Community Chest, he served as its first vice-president and later as president and chairman of the budget committee. He has been president of the Nebraska Conference of Social Work, a member of the Omaha Welfare Board, president of the Omaha Council of the Boy Scouts of America, member of the National Board of the Family Welfare Association of America, member of the National Board of Community Chests and Councils. He is now a member of the National Advisory Board of the American Forum for Democracy and for many years he has been a trustee of Father Flanagan's (see sketch this issue) famous Boys Town in Omaha. In July 1941 President Roosevelt appointed him to the National Volunteer Participation Committee which acts as an advisory and planning body in the organization of the Office of Civilian Defense headed by Mayor Fiorello LaGuardia of New York City.

Monsky is of medium height and weight, dark complected, with a thin, lined face. He speaks very well, but not as an orator who must rely on spellbinding for his effectiveness. He has no hobbies. Uninterested in golf or sailing or big game hunting, B'nai B'rith and social work are hobby and life enough for him. In 1915 he was married to Sadie Lesser, and he has three children from this marriage: Joy, Hubert and Barbara. In 1937 he was married for the second time, to Mrs. Albert (Daisy) Rothschild, and he now has, besides his own children, a stepdaughter, Babette Rothschild.

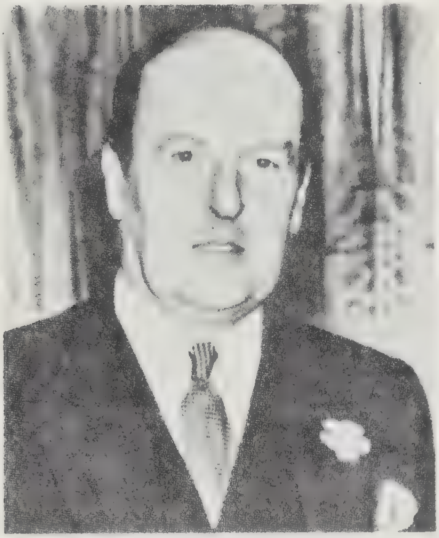
MOORE-BRABAZON, J(OHN) C(UTHBERT) T(HEODORE) (mo͝or-brăʹbä-zŭn) Feb. 8, 1884- British Minister of Aircraft Production

Address: b. Ministry of Aircraft, London, England; h. 38 Eaton Sq, London, S. W. 1, England

> Bulletin: On May 2, 1941 J. C. T. Moore-Brabazon was appointed to succeed Lord Beaverbrook as Minister of Aircraft Production. In July, answering criticism in the House of Commons, he promised that with the aid of American planes British raids on Berlin would soon make those on London look like "child's play." Not long afterward, critics, puzzled as to why England had not opened a second front, were wondering, in the words of *Time*, "about Arch-Tory Aircraft Production Minister Lieutenant Colonel J. C. T. Moore-Brabazon, who had been accused of expressing the wish that the Germans and the Russians would exterminate each other."

From May 1941 issue:

When Moore-Brabazon (his friends call him "Brab") was made Minister of Transport in May 1940, Prime Minister Churchill told him: "I am giving you a front-line job." Maintaining communications in spite of bombings is a difficult task that requires a level head and unusual organizing ability, and Moore-



J. C. T. MOORE-BRABAZON

Brabazon has done particularly well in keeping traffic moving in London. At the beginning of the War bus service was heavily reduced, and there was much crowding and waiting. "Brab" imported a large number of provincial buses, which still surprise London's little boys ("Daddy, I saw a Glasgow bus today!") He also introduced the "free lifts" system by which motorists receive an extra allowance of gasoline if they carry a label on their windshield offering rides to pedestrians at their own risk. Besides these, Moore-Brabazon is finding time and thought to devote to the improvement of railway meals and, even more important, he is responsible for the country's whole electrical system.

He is doing less well, however, in stopping road casualties. Unsympathetic pedestrians might point out that to put at the head of transportation a well known motorist who was once fined for dangerous driving and had his license suspended is like putting a burglar in charge of the police station. Auto accidents have been getting worse and worse since the days of Hore-Belisha (see sketch this issue), who was the only Transport Minister to do anything to stop them. By March 1941, 11,424 people had been killed on the roads since the War started—more than half as many as those killed by enemy bombing. Moore-Brabazon has admitted that these are "shaming figures," but has actually done little to change them.

He is the son of Lieutenant Colonel J. A. H. Moore-Brabazon of Tara Hall ("The Harp that once Through Tara's Halls"), County Meath, Eire and Emma Sophia, daughter of Alfred Richards of Forest Hill, London. Educated at Harrow and Trinity College, Cambridge, "Brab" became interested in automobiles in the days when to drive at all was an adventure. He was a personal friend of the late Honorable C. S. Rolls (the brains behind the Rolls-Royce engine) and raced with him as his amateur mechanic. He raced a good deal by himself, too, in the early years of this century, and in 1907 won the Circuit des Ardennes by 27 seconds' margin in a thrilling contest, driving a Minerva under the Kaiserpreis formula. At the same meeting he ran second to Porliet in the Leiderkirke Cup.

By this time he had already begun to experiment with airplanes. Two models he constructed in 1907 did not amount to much, but in December 1908 he actually flew 450 yards in his own Voisin biplane at Issy-les-Moulineaux, France, the first Englishman to make such a flight. He intended to be, too, the first Englishman to fly the Channel, but Blériot beat him to it, largely because Moore-Brabazon was waiting for a British machine to fly. However, on the Isle of Sheppey in 1909 he won a prize of £1,000 offered by the London *Daily Mail* for flying a circular mile in an all-English plane. Later in that same year, at Eastchurch, he made the first flight ever accomplished by an Englishman in Great Britain proper. For this he was awarded the very first pilot's certificate ever issued by the Royal Aero Club and in commemoration he still uses FLY 1 for his car registration.

During the whole of the First World War, Moore-Brabazon served with the Royal Flying Corps (later R. A. F.) in France as equipment officer, winning the Military Cross and rising to the rank of lieutenant colonel. His main job was looking after aerial photography, but he did more than just look after it: he invented an air camera capable of many more exposures than any which had been made.

The War over, Moore-Brabazon stood for Parliament in the general election of 1918 and was returned as Conservative member for the Chatham Naval Station. He served on the first civil aviation committee and became chairman of the Air Mails Committee and of the Royal Aero Club. From 1923 until the defeat of the Conservative Government in 1924, he acted as parliamentary secretary to the Ministry of Transport. He returned to this same position when Labor rule ended after a few months and held it until 1927.

It was in this year that he resigned to enter business in London as chairman of a firm called Sensible Heat Distillation, Limited, which was set up to eliminate waste in coal. Fuel problems in general always occupied a good deal of his attention, and he has always strongly advocated a non-inflammable aviation fuel. Further business activities included directorships of Kodaks and of the Amalgamated Equipment Company, the firm that makes the London buses.

At the 1929 general election Moore-Brabazon, like many other Conservatives, lost his parliamentary seat to Labor, but with the formation of the National Government in 1931 he came back for Wallasey, Cheshire, a residential town known as "Liverpool's bedroom." He also served on the London County Council in 1931 and 1932. In the years that followed Moore-Brabazon was persistent on the subject of national defense, sharing the views of Churchill and Duff Cooper that all attempts at compromise with the dictatorships were in vain. "The snores of the Front Bench reverberate throughout the land," he warned in the days of the Baldwin administration. He got some chance to carry out his views during Sir Samuel Hoare's brief period as Secretary of State for Air early in 1940, when he was his parliamentary private secretary. He got even more when in May 1940 he attained Cabinet rank as Minister of Transport and a place on the Privy Council.

Moore-Brabazon is an all-round sportsman, particularly enthusiastic about bob-sleigh running. Until the War began he was known as one of the first dozen on the Cresta Run at St. Moritz, where in 1920, 1922 and 1927 he carried off the Curzon Cup. He plays a first-class game of golf and was president of the English Golf Union in 1938. His other interests include yachting and amateur cinematography and his first love, motoring—he is a founder-member of the Royal Automobile Club. "A sturdy, slow-moving man with an air of indolence that is very misleading," he showed a queer vein of humor in his early flying days by taking a pig up in a plane to show that "pigs could fly." In 1906 he married Hilda, daughter of the late Charles H. Krabbé of Buenos Aires, and they have two sons.

MOTT, FRANK LUTHER Apr. 4, 1886- Author; educator

Address: b. School of Journalism, University of Iowa, Iowa City, Iowa; h. Coralville, Route 1, Iowa City, Iowa

Of special interest at a time when world news is so important, and when that news

FRANK LUTHER MOTT

is suppressed or distorted in totalitarian nations, is the vital part newspapers can play in shaping and maintaining democracy in this country. The history of American journalism is largely the story of the establishment and growth of interdependent liberties: a free press and a democratic way of life. That is why most critics attached great importance to the appearance in 1941 of Frank Luther Mott's *American Journalism: A History of Newspapers in the United States Through 250 Years, 1690-1940.* Director of the School of Journalism at the University of Iowa, Dr. Mott won in 1939 the Pulitzer Prize in American history for his three-volume *History of American Magazines.* A worthy companion piece to this scholarly, highly praised survey, the later volume on the history of American journalism was likewise commended by critics as "easily the best in its field" and "a sure contender for another Pulitzer Prize."

A prodigious work of 750 pages, it covers, in nine divisions, everything from the appearance of *Publick Occurrences* in 1690 to the death of the Boston *Transcript* in 1941. In his review of Dr. Mott's book Ralph Thompson (New York *Times*) wrote: "He touches upon practically every conceivable phase of his subject: the colonial press, the contemporary press, yellow journalism, pink journalism, foreign-language newspapers, sporting and racing papers, Sunday editions, weekly editions, make-up, typography, circulation, advertising, paper stock, printing and ink, relations with the public and the State, comics, cartoons, consolidations and chains, reportorial techniques, editorial attitudes, syndicates, news associations, labor organizations and the principle of freedom of the press. The result, moreover, is not simply an informal hodgepodge of more or less relevant data, as this catalogue may suggest. It is an astutely arranged and carefully balanced survey, documented, illustrated, chronological in order and narrative in form."

The volume in particular is said to be "notable for its excellent treatment of the growth of American newspapers in the West and Midwest." Here firsthand experience underlies Dr. Mott's research authority. Born the son of an Iowa country editor, his earliest memory of newspapering was of standing knee-deep in water in his father's *Patriot* print shop when it was flooded by an overflowing creek. That was in What Cheer, Iowa. Frank Luther Mott was born on a nearby farm on April 4, 1886, the son of David Charles and Mary E. (Tipton) Mott. His parents were Quakers, and every Sunday the boy, after a week of hard work on his father's farm, trudged to the Quaker Church in the small Keokuk County community. Soon his father gave up farming and "audaciously set himself up as editor of the What Cheer *Patriot.*" When he became editor of the Tipton, Iowa *Advertiser* young Frank, at 10, learned to set type by hand in his father's shop, thus beginning his career as a practical printer.

By the time he was 16 and in high school, his father had moved his editorial chair to Audubon, Iowa, to the office of the Audubon *Republican.* In those days magazine publishers made it a practice to give local editors free subscriptions in return for publicity concerning a magazine article and, because Editor Mott was also an avid reader, there was an amazing collection of magazines on the bookshelves in the *Republican* office. Young Frank Luther set about arranging and indexing these magazines. Naturally he found himself reading them as he worked. This was the beginning of his lifelong interest in the magazines of America as they mirrored the growth of the nation—an interest culminating in the publication of his Pulitzer Prize-winning study.

From high school Mott entered Simpson College at Indianola, Iowa. After three years there he went to the University of Chicago, where he received his Ph. B. in 1907. In order to help earn his way through college he worked as a reporter on the El Reno (Oklahoma) *Daily American,* and assisted his father in editing the Marengo (Iowa) *Republican.* Soon Mott was editing by himself a weekly paper, the Grand Junction (Iowa) *Globe.*

In 1910 he married Vera H. Ingram, a Simpson College classmate. The couple have a daughter, Mildred Ingram, who is now carrying on the scholarly traditions of the family. Interested in archeology, she was recently awarded her Doctor's Degree at the University of Chicago.

After a few years of newspaper publishing, Mott decided to continue his education, so in 1918 he came East to study at Columbia University. He got a position teaching at a school for boys in Brooklyn and rode the subway back and forth to the Columbia campus, reading a pocket volume of Emerson as he rode. (His interest in Emerson still continues: he wants someday to write a study of Emerson's New England transcendentalism in imaginative literature.) In 1919 he received his M. A. degree at Columbia and that same year became professor of English at Simpson College.

It was in 1921 that he began his teaching career at the University of Iowa, when he became an assistant professor of English there. He went on with his studies toward his Doctor's Degree—his thesis was a magazine survey, a continuation of the work he had begun as a boy studying the magazines in his father's newspaper office. In 1927, when he had received an offer to become head of the Journalism Department at the University of Washington, the University of Iowa authorities decided that they needed Frank Luther Mott as director of their own growing School of Journalism. This position he currently holds at Iowa; and under his direction the University's Department of Journalism ranks among the best in the country.

During his years of teaching Dr. Mott had continued to write. His first publication, in 1917, was a critical work, *Six Prophets Out of the Middle West.* He also wrote short stories; and his story, *The Man with the Good Face,* originally published in *The Midland* (1921), was reprinted in O'Brien's *Best Short Stories* and attracted so much attention that it later appeared in various anthologies. It has been translated into several foreign languages, including Spanish for South American publication; and, as a classic of its kind, has been used in high school English classes throughout the United States. Always interested in creative writing, in poetry as well as fiction, Dr. Mott in 1925 became joint editor, with John T. Frederick (see sketch this issue), of *The Midland,* a national literary magazine founded by the latter. His *Rewards of Reading* appeared in 1926. Dr. Mott has edited special studies of the short story, and is co-editor of two collections for journalism students: *News Stories of 1933-1934,* two volumes (1934-35); and *Headlining America,* two volumes (1937-40).

The first volume of his *History of American Magazines* was published in 1930, covering the period from 1741 to 1850. It was for the second and third volumes (1938), covering the years between 1850 and 1885, that he received the Pulitzer Award in 1939. Critics concurred in praising the survey. One critic called it "a history which puts and will for decades continue to put all students of American history and literature greatly in his debt. But he has done more than that. In the processes of research, tabulation and analysis he has never forgotten that magazines, like books, are—if you will allow the syncopation—men." Two further volumes of this magazine history remain to be written; there should be five volumes when the work is completed.

An excellent teacher who wins the respect and friendship of his students, and who is held in high regard by editors and publishers throughout the country, Dr. Mott was honored with a banquet at the University of Iowa on the occasion of his Pulitzer Prize award. To this dinner came many of his former students, who make up a long list of active newspapermen in the United States. (The What Cheer, Iowa paper, where Dr. Mott had his own first experience in journalism, was by that time being edited by one of his former students.)

In the years since he was editor of the Grand Junction *Globe* genial Dr. Mott has grown stouter (he now weighs 190 pounds), and he admits to a coloring "moderately ruddy." He "wears bow ties, gardens in the back yard of his comfortable suburban home at Coralville, jams a cigar in his mouth and works at a typewriter for long hours in his book-lined study. He mixes freely with his fellow professors on the campus and with businessmen in Iowa City. . . He belongs to the Chamber of Commerce, reads detective novels for relaxation; he recites Negro poetry in dialect on occasion, and knows his quota of funny stories to tell at luncheon club meetings."

MOWRER, EDGAR ANSEL Mar. 8, 1892- Journalist

Address: b. Chicago Daily News Bureau, Washington, D. C.

Edgar Ansel Mowrer, in 1941 Washington correspondent for the Chicago *Daily News* Foreign Service, has been called by Quincy Howe "a brilliant talker with a gift for exaggeration, a fanatical Hitler hater and a born crusader." But he has also been called one of the most able and well-informed journalists of his day. For a quarter of a century foreign correspondent for the Chicago *Daily News* in Paris, in Rome, in Berlin, he has covered two World Wars, he has had leisure to study the pattern of dictatorship as it gradually revealed itself in one European coun-

Harcourt

EDGAR ANSEL MOWRER

try after another, and he has numbered among his personal acquaintances Benito Mussolini and Hjalmar Schacht, Léon Blum and Chiang Kai-shek.

Born in Bloomington, Illinois on March 8, 1892, the son of Rufus and Nellie (Scott) Mowrer, as a young student at the University of Chicago he interrupted his university work in America in order to take special courses at the Sorbonne. It was during a brief visit to England during that period that he met his wife, Lilian Thomson (see sketch 1940 Annual), who in her book *Journalist's Wife* (1937) describes their first meeting in a railway carriage "without benefit of introduction." Before he began talking to her enthusiastically about Bergson and the *élan vital* she had thought that the man "with deep-set blue eyes behind very long lashes" was a Pole.

That same day young Mowrer wrote to his brother Paul, then Paris correspondent of the Chicago *Daily News*, to say that he had seen the girl he intended to marry. Actually the marriage did not take place until five years later. First he returned to the University of Michigan to take his B. A. in 1913, then returned to Paris that same year and settled on the Left Bank to study and to write. Philosophy and literature were his chief interests; he had no thought of becoming a newspaperman like his brother. His critical studies and essays were soon being published in the "more emancipated English reviews," and famous literary figures of the Latin Quarter gave him both criticism and encouragement.

It was in Paris that Mowrer watched a man post the first mobilization order of the First World War. A matter of a few months, he thought, along with the rest of the Parisians—and made comfortable plans to skate with Lilian through Holland the following January. Suddenly his brother Paul was sent to the Western Front as foreign correspondent. Edgar found himself pressed into the service of the *News*, in charge of the Paris office. For three weeks, until the victory of the Marne, he filed dispatches with the help of Paul's colleagues. Then Paul returned, read the carbons, doubled his younger brother's salary and sent him off on a bicycle to visit the battlefields around Meaux. From that time on his career was decided.

It was an adventurous career, right from the start. Mowrer's determination got him into trouble more than once. He scooped the world for a while, in Western Flanders, where he first saw action; in Ypres, where he was arrested on charges of espionage, he watched a bombardment from a prison; finally deported to England, he filed his dispatches, then set out for Belgium, where he was arrested once more before being allowed to proceed on his way.

As he traveled through Belgium a line from the poet Verhaeren began to haunt him: "Ruin installs itself and whistles at the four corners." He saw starvation, desolation, cruelty. He found out a great deal about conditions there—so much that one day he was suddenly asked to leave. Returning to Paris, he received an offer from the *News*: would he like a permanent position on the staff or his choice of Vienna or Rome as a resident post? He chose Rome, and departed at the beginning of May 1915, just a month before Italy was due to enter the War. It was while in Italy during this period that he made the acquaintance of one Benito Mussolini, a Socialist who had changed his position on the War and was making public speeches advocating Italy's entrance on the side of the Allies. Mowrer was told: "Come and see me whenever you are in Milan."

Not long afterward Mowrer wrote to Lilian to say that the War was going to last a long time and that they might as well get married immediately; in February 1916 he went to London to get her and bring her back to Rome. He himself was to be in Rome with her during most of the rest of the War, leaving for the Italian front only for short trips from time to time. He participated in the Italian defeat at Caporetto in 1917, watched and was amazed at the subsequent rallying of Italian martial spirit; he nearly died of Spanish influenza and, delirious in three languages, held long discussions on the origins of the War and its ultimate outcome; recuperating, while the Powers remade the map of Europe in Paris, he planned a series of articles on the "new society."

In 1939 Mowrer could comment that the Treaty of Versailles, with all its faults, had, after all, "created a far juster world" than before; that the real mistake on the part of the Allies was their failure to found and to establish a workable collective organization. In 1939 he could interpret the First World War as less a war for trade and empire than a crusade against the Germans, who "worshiped other gods than the children of liberalism." But whatever his views on the justice of that War and its settlement, he could not have remained very hopeful very long about his "new society" in Rome during those first post-War years, as Mussolini's young Fascists began rioting with increasing violence under the protection of the police. The march on Rome terminated the Mowrers' stay in the country he had celebrated in *Immortal Italy* (1922); there was no working under Fascist censorship, and in December 1923, seven months after the birth of a daughter, Diana Jane, he left for Berlin. His family followed a little later.

With the exception of short visits to Poland, Italy, France, London, Vienna and the United States, the Mowrers were to spend the next nine years in Germany. They were eventful, exciting, ominous years, as glimpsed in Mowrer's *Germany Puts the Clock Back* (1933; revised edition 1939). "These people are riding for a fall," he would say, looking up from the financial reports of Schacht and Gilbert during the period of greatest German prosperity. He saw that the Weimar Republic was committing suicide long before the day in January 1933 when he watched Hitler become Chancellor.

Yet the events of the next few months, in their full horror, could not have been anticipated by any newspaperman. When the foreign press learned what was actually taking place they accepted the common task of telling the world, putting aside all thoughts of personal competition; Mowrer, particularly, defied Nazi wrath and Nazi censorship. And although Germans who turned to foreign publications for information were informed by Goebbels (see sketch this issue) that they were reading lies, the people themselves continued to risk their lives in order to inform the "lying foreigners" about what was going on in Germany even beneath outward calm.

In November 1932 *Germany Puts the Clock Back*, tracing the disintegration of the Weimar Republic, was finished. It appeared in early January 1933, just a month before Hitler became Chancellor; and sales of the American edition were large in Germany until it was banned. During the first days of 1933 its author was elected president of the Foreign Press Association, and from the beginning he took an energetic attitude toward members threatened with expulsion from Germany. Soon the Nazis, who liked neither his book, his attitude, nor his press dispatches, suggested that he resign; the FPA refused to accept his resignation.

There followed a battle of nerves. After Mowrer received the Pulitzer Prize of $500 for the "best correspondence from abroad" during 1932 the Nazis changed their tactics from veiled threats of physical violence to friendly overtures, but hostilities were resumed when they discovered that he was not susceptible to flattery. In the meanwhile, although Nazi authorities were unaware of this, the *News* had decided that their Berlin correspondent was hardly working under the most favorable conditions, and had sent him word of a Tokyo assignment. Knowing that he was due to leave Germany in any case, when Mowrer heard that an Austrian newspaperman had been arrested he was shrewd enough to offer to resign from the presidency of the FPA in exchange for his friend's immediate release. His departure was hastened six days by the outwitted Nazis: a German Foreign Police official warned the American Government that unless he left Germany immediately they could not guarantee his physical safety. But British and American colleagues, as a farewell gift, presented him with a silver rose bowl inscribed to a "gallant fighter for the liberty of the Press."

After Germany, the Mowrers, still planning to go to Tokyo, had a brief vacation in the United States. The first "expelled" journalist to reach America, Mowrer gave a number of lectures there in an attempt to inform his countrymen about conditions in Germany. He found audiences rather incredulous—and so was Ambassador Dodd at first. Then, late in 1933, Mowrer and his family sailed once more—not for Tokyo but for Paris. Paul had just been made editor of his paper, and Edgar was replacing him as chief of the Paris bureau. They arrived on January 8, 1934, in the midst of the Stavisky riots, the Fascist demonstrations.

During the next years the European tragedy moved on relentlessly. In France it seemed that Fascism would triumph once more. "But Germans aren't Italians!" Mowrer had heard before; now he heard: "But Frenchmen aren't Germans!" In the field of international affairs the Nazis were also having everything their own way. In Saarbrücken in January 1935, Mowrer came to the conclusion that the plebiscite was a farce; at the Stresa Conference he heard Laval speaking tactfully about Italy's invasion of Abyssinia; in London in 1936 he listened to the English applauding like mad as the newsreels showed Hitler's march into the Rhineland.

Shortly after the Popular Front victory in France temporarily renewed hope for that country, Mowrer went as a war correspondent to Spain, where civil war had just broken out. There was also a brief visit to the United States and two months spent in the Soviet Union covering the adoption of the new Soviet Constitution before he returned to Paris to see his friend Blum's Government fall. He remained there until 1938, when he spent a few months in China gathering material for what is perhaps his most optimistic book, *The Dragon Wakes* (1939), also published as *Mowrer in China* in 1938; this time he returned to watch from France the events leading to Munich and finally culminating in the Second World War. With only a two months' visit to the United States in December 1939, he was in France all during the War until its fall in June 1940. His dispatches during that period may have erred in their optimism toward political conditions in France and French morale, but there were few newspapermen who did not make the same mistakes.

Edgar Ansel Mowrer returned to the United States in August 1940, filed his first story as Washington correspondent for the Chicago *Daily News* a few days later, and that same year published a series of articles on fifth-column activities in Europe, written in collaboration with William J. Donovan (see sketch this issue). In September 1941 he left for Singapore to report on conditions in this strategic naval base. A firm believer in the way of life in an America from which he has been largely absent during the past 30 years, the author of *This American World* (1928) (in which he argued that "Americanism is on the way to world empire") is convinced that unless smashing action is soon taken against Hitler the future of that way of life is very dark indeed.

John Gunther (see sketch this issue) describes Mowrer as "the most persistently engaging conversationalist I know . . . passionate, gloomy, explosive with biases (the right kind), overwrought, and very sweet when relaxed . . . the best educated American I ever met, Vincent Sheean [see sketch this issue] excepted. He is, unlike Sheean, a severe moralist. . . There is a touch of Lincoln in Edgar; and of Shelley; and of Mohammed. He believes in free speech so much that he would cheerfully slay any man who opposed it."

MURRAY, PHILIP May 25, 1886- President of the Congress of Industrial Organizations

Address: b. CIO, 1106 Connecticut Ave, N.W., Washington, D. C.; h. 752 Berkshire Ave, Pittsburgh, Pa.

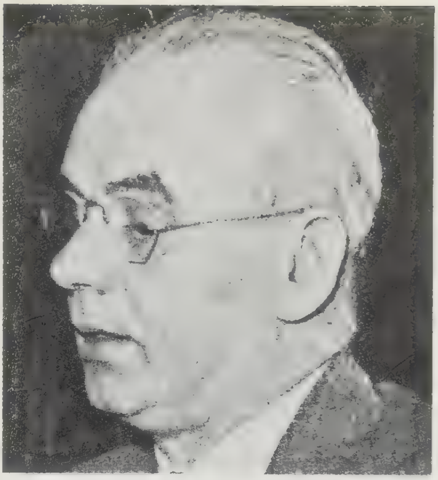
To both Capital and Labor the election of Philip Murray to the presidency of the CIO in November 1940 seemed the fitting climax, as the conservative New York *Herald Tribune* put it, to "36 years of progressive conciliatory activity among organized workers." Capital knows Philip Murray to be trust-worthy; it knows him to be cautious and diplomatic, to have a thorough understanding of industrial detail; it knows that Philip Murray firmly believes that labor organizations should be stable and their contracts scrupulously observed. Labor knows that despite his soft-spoken manner and generous tact he is a hard-hitting fighter and a militant general in labor's fight for organization.

This man who has been recognized as "perhaps the most gifted triple-threat technician in the labor movement, as organizer, administrator and negotiator," was born in Blantyre, Lanarkshire, Scotland, the son of William and Rose Ann (Layden) Murray. His father was a coal miner, president of a large local of Scottish miners, who took his son to his first union meeting when he was six. When he was 10, Philip went to work in the mines after only a few years of school. Six years later, in 1902, his family emigrated to America and settled in Western Pennsylvania, where Philip immediately got himself a job in the coal mines.

His first labor dispute came two years later, when he was working for a mine in Westmoreland County near Irwin, Pennsylvania. He complained to the weighmaster that he was being short-weighted. The weighmaster denied it, and then, as Murray tells it, "a fight ensued. The weight boss took a shot at me with a balance weight from the scale. I hit him with a stool over the head. I happened to get the best of the argument, but I was discharged. Some 550 men went out in support of me. Mine guards were thrown around the place; my family was evicted from the company house. That was the beginning of these things that I am interested in." The strike was beaten, but in the meantime Murray had been elected president of his local union and had resolved to spend the rest of his life improving conditions for his fellow workers—as proof of his determination he was later to turn down good positions in private industry.

After his discharge from the coal mine, Murray began educating himself through correspondence courses; he became a United States citizen; he began to be more and more active in his union. In 1912 he was elected to the executive board of the United Mine Workers; in 1916 he was elected president of District No. 5 (the Pittsburgh area) of the Mine Workers; and in 1919 he was elected vice-president of the International Union of the Mine Workers, an office to which he was re-elected regularly every two years, until in 1940 he became president of the CIO.

During the First World War his ability as negotiator and pacifier was recognized by President Wilson, who made him a member of his War Labor Board. Harding, too, recognized this ability, when in 1921 he appointed him to sidetrack a civil war in the West Virginia mine fields, where 10,000 miners were in revolt. In 1935 Roosevelt, whom Murray has consistently if sometimes critically supported despite John L. Lewis, made him a member of the Labor and Industry Advisory Board of the NRA. During the first Roosevelt Administration Murray was also active in assisting in the preparation of various bills on bituminous coal mining, bills which eventually became the Guffy-Snyder Coal Act of 1934.



PHILIP MURRAY

In 1935 Murray helped lead the movement of the CIO out of the A F of L, and in 1936 it was he who was put in charge of the CIO's Steel Workers' Organizing Committee, set up to organize steel. Directly or indirectly he is responsible for "carrying out one of the most elaborate, comprehensive and successful organizing campaigns in the history of unionism."

Murray continued as head of the SWOC (he remained its head while leading the CIO too), yet he was able to help outline the campaign to organize the automobile field in 1936, to settle the inter-union mess that arose in the Auto Workers' Union a few years later and to take on the duties of membership in the Petroleum Workers' Organizing Committee when it was formed in 1937. He also found time to become co-author of the book *Organized Labor and Production* (1940).

Philip Murray took office as president of the CIO in November 1940 at a time when his union was confronted by serious problems and important projects. John L. Lewis, leader of the CIO from its inception, had just resigned in a huff; a split in the union's ranks between the Left-wing group which had ardently followed Lewis and the more conservative group headed by the Amalgamated Clothing Workers of America seemed imminent. But Murray made clear his position and intentions from the beginning. First of all, he refused to accept the presidency except on his own terms—which meant a resolution passed by the CIO condemning Communism, Nazism and Fascism, and a clear understanding that he was to be nobody's yes-man. His terms were met.

It was immediately apparent that he wasn't Lewis' man Friday. It was immediately ap-

MURRAY, PHILIP—*Continued*

parent that he had his own methods of handling any threatened split. There was no "purge" of the Communists, though for years he had denied that a person "whose first allegiance is to a foreign government can be a good trade-union member, as he can't be a good citizen." And there was to be none, he said again and again, scotching in June 1941 "the great many speculative and often highly fantastic stories in the public press about splits, purges, Red-hunts . . . taking place in the CIO." There were, however, tactful dismissals here and there, until the issue became less urgent with the German invasion of Russia.

Murray scotched too, insinuations that the militant organizing plans laid down at the Convention at which he was elected president would mean a slowing-up of national defense. However, he insisted then and insisted later that Labor's rights were not to be revoked or destroyed, that "industry get on with the job by getting on with Labor." As head of the CIO he strongly opposed all anti-strike legislation and gave leadership to the organizing activities at Bethlehem Steel, at the Ford Motor Company and at United States Steel (as well as at non-defense spots, including the Transport Workers Union in New York City), but he did not support the unauthorized strike at North American Aviation, and he cleared up the big logger strike in Puget Sound.

He also supported national defense in a positive way. In December 1940 Murray presented to President Roosevelt a proposal to solve Labor problems and strengthen defense. There should be set up, he said, "industry councils" made up of an equal number of representatives from management and union labor, with a representative of the Government to act as chairman. The immediate objective of these councils would be to coordinate industries and Labor; the ultimate to coordinate the whole United States' economy. Murray backed, too, the Reuther (see sketch this issue) plan to increase plane production and himself made public a plan to achieve total steel output. He had made a survey of the steel industry, he said, and could, as a result, show steelmen how to increase production 30 per cent without expanding present facilities. As another step toward cooperation Murray agreed in March 1941 to serve as one of Labor's representatives on the new National Defense Mediation Board, though he had at first opposed the creation of such a Governmental agency.

Because of Murray's successful leadership in organization in 1940 and in 1941 (despite two months of illness), because of his interest in national defense, his determination to see that Labor maintained and furthered benefits it had won and his success in conciliating the warring factions in the CIO, he was unanimously supported by all sections of his union for reelection in November 1941. The large and enthusiastic following that had been his at the 1940 election was still his. Labor had continued to respond to his abilities as well as to a certain basic warmth and humanity of temperament which his predecessor never had.

At the CIO convention that month, in a strong speech, he emphasized the importance of maintaining production of war materials at its highest peak in order to defeat Hitler and assured President Roosevelt of labor's unqualified support for his foreign policies. At the same time, though, he supported the United Mine Workers' short-lived strike in protest at the NDMB decision refusing the union shop for the captive miners. He had been one of the CIO representatives who resigned from the Board after the decision, and he was also one of the most vociferous opponents of the Smith Bill which passed the House only a few days before the Japanese attack on Pearl Harbor. Murray and most friends of Labor urged, instead of repressive legislation, a conference of industry-labor representatives to work out plans to prevent stoppages and vastly increase production in defense industries.

The United States' declaration of war brought renewed assurances from Murray of Labor's patriotism and anxiety to participate more fully and directly in the war effort. It was not long before President Roosevelt called a conference similar to the one urged upon him. When it met in Washington in December 1941 Philip Murray was one of the CIO representatives present, empowered by his union to try to come to some agreement with representatives of industry.

In his middle 50's, Philip Murray's bearing is quiet and dignified, his manner of speech deliberate, sharpened by a droll humor and a soft Scottish accent. He is fairly tall and well set up (height five-feet-ten and one-half inches; weight, 178 pounds), with thin gray hair and a general resemblance to a small-town bank president. At home in Pittsburgh he lives in a square, plain, seven-room brick house which he built years ago, its rooms hung with pictures. ("The missus has a very good eye for such things.") He attends church regularly (he is a devout Catholic), is active as a member of the Knights of Columbus and the Elks, goes to the movies or prize fights very occasionally, and occasionally gets away from the hurly burly of Capital versus Labor to spend a quiet evening with his wife, Elizabeth Lavery, whom he married in 1910, and his son Joseph, a photographer. If he has a book on his lap, it's very likely to be a volume of O. Henry's short stories. Murray says he enjoys O. Henry "better than any fellow who ever wrote—he knew more about human beings."

NASH, OGDEN Aug. 19, 1902- Author
Address: b. c/o Little, Brown & Co, Boston, Mass; h. 4300 Rugby Rd, Baltimore, Md.

Master of *bouffe rime,* adroit user of Americana as spoken in subway and cocktail conversation, Ogden Nash's most recent best seller is *The Face Is Familiar* (October 1940). It is a selection of what he considers the best of his light verse output to date: among his seven previous books are *The Primrose Path* (1935); the *Bad Parents' Garden of Verse* (1936); *I'm a Stranger Here Myself* (1938). Mr. Nash has become well known also through his guest appearances on radio programs such as *Information Please* and the Bing Crosby and Rudy Vallee hours. Following each such appearance, it is said, there has been a "healthy number" of reorders for his books.

Nash's work has been described as "a mixed grill of fine pieces that have become part of the folk sayings of the decade, as well as some of those lamentably overblown ventures in corded prose." The collected Nash contains, for instance, along with succinct lines on the Phoenix and the Panther, an exceptionally bad poem on Blake. He does better with other literary observations:

Let those who will read Alice B. Toklas
And I'll take the complete works of Shakespeare and a box of choclas

and best, perhaps, on affairs of the heart:

Affection leads to breach of promise
If you go around lavishing it on red hot momise.

OGDEN NASH

His work in general lacks the core of substance, the truly biting satire commanded by other good light versifiers, and is best when taken in small doses. Occasionally he produces a nutshell classic, such as his reflections on the English:

I think the English people are sweet
And we might as well get used to them because when they slip and fall they always land on their own or somebody else's feet.

The English, as a matter of fact, find Nash's work quite incomprehensible. Said the London *Times*: "He writes humorous verse which would be improved if the author took more care with his rhymes. There are too many false rhymes here, which give an impression of laziness rather than smartness." At which the *New Yorker* quipped a Nashian reply:

Don't make a fetish
Of annoying the Bretish!

Much of his wide popularity is due to the fact that he "comes out against." As one reviewer of *The Face Is Familiar* has said: "Nash is no flash in the pan, no panderer to the topical and transitory. His crusade is ageless; his oriflamme beats in the winds of

NASH, OGDEN—*Continued*

every season; for he fights for every man the fight which every man is afraid to fight for himself. He comes right out against parsley, little boys, banquets, women's hats, salads, debt, bankers and the recent frightening epidemic of girl babies. He also comes out against time, athletics, people who are industrious, practical jokers, cocktail gadgets, the had-I-but-known type of detective story, the menace of the strange force of growing hair, rich people who let you buy them drinks while they tell you how poor they are."

Ogden Nash was born August 19, 1902 in Rye, New York. He comes from "a distinguished Southern ancestry including a revolutionary Governor of North Carolina and a revolutionary general who gave his name to Nashville, Tennessee." Nash has said further: "I have no private life and no personality." He grew up in various places up and down the East coast from Georgia to New England; and he admits that he is "a quarter-bred Harvard alumnus," having left Cambridge at the end of his freshman year. He has documents, he says, to prove that he left of his own free will.

For a year Nash taught at St. George's School, Newport, Rhode Island, where he lost his "entire nervous system carving lamb for a table of fourteen-year-olds." In the late '20s he came to New York City and got a job as a bond salesman; then one in advertising, writing car-cards. In 1925 he worked in the advertising department of Doubleday, Page & Company, after which he became a manuscript reader for another publishing company. Later he joined the staff of the *New Yorker* Magazine.

He likes good eating (what he doesn't like may be found listed *ad infinitum* as well as *ad absurdum* in his verses), he is married to Frances Rider Leonard, lives in Baltimore and has two children, "both of them she'ses."

Nash says that his reading of other people's illiterate manuscripts gave him the idea of writing his own. He did them in verse, because he believes you can say things in verse which if said in prose would result in tar and feathers. This is probably because nobody reads verse. Except perhaps Mr. Nash's kind, which, treading gently on all toes, individually on none, always makes the best-seller grade.

America's Young Men
Who's Who in America

NATHAN, ROBERT R(OY) Dec. 25, 1908- Economist

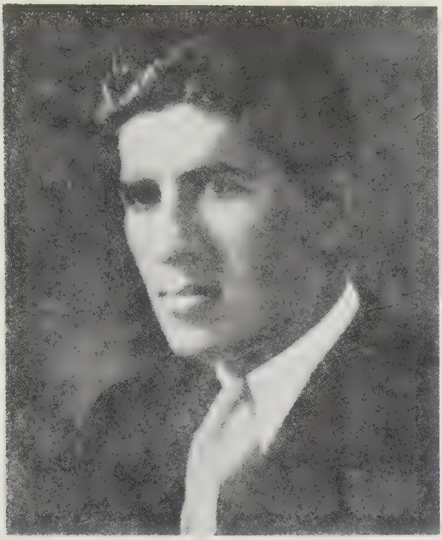
Address: National Defense Commission, Washington, D. C.

Robert R. Nathan, who was chosen one of the ten outstanding young men of 1940 by the United States Junior Chamber of Commerce, is the man responsible for surveying the defense requirements of both the United States and Great Britain. To do this, he has discovered, "one must vary from being an expert statistician and economist at one moment to being a commodity expert or industrial authority the next."

His position, he says, "entails the responsibility of determining what the military and non-military requirements of the nation and the British are going to be under the defense program, what is our capacity to meet these needs and, finally, pointing out the areas in which shortages will appear." This is a complicated task, since "the raw material data for these studies depend in a large measure on the data in the military services and in other government agencies. . . The work of bringing together the statistics is particularly difficult because so many of the items have no counterpart in peace time and specifications for raw material content are difficult to determine."

Robert Roy Nathan is eminently qualified to do this work—he has been doing important economic research since he was a college undergraduate. Born in Dayton, Ohio (one of a pair of twins, the other of whom, Lawrence M. Nathan, is now in the merchandising field), Robert attended grammar and high school in Dayton before he went on to the University of Pennsylvania's Wharton School of Commerce and Finance. He worked hard there—"selling and writing for newspapers and many other odd jobs: summer employment in factories, selling Real Silk hosiery, lots of retail selling, tutoring in several courses, part-time work with the Industrial Research Department of the University of Pennsylvania and many other types of work." Despite all these jobs and hard studying, Nathan was able to join the century-old Zelosophic Literary Society and take part in intramural boxing and wrestling. Looking at his six feet and one and one-half inches and two hundred pounds today, it is easy to surmise how effective he must have been in the ring and on the mat.

In June 1931 the Wharton School gave Nathan a B. S. degree in economics. He continued to study there and two years later received his M. A. He had already started working on a rather more permanent basis than that given him by his many jobs while an undergraduate—as research assistant at the University of Pennsylvania on Unemployment Surveys at Philadelphia—and in September 1933 he accepted the first of his government positions. For a year and one-half he worked on the original National Income Study of the United States Department of Commerce. He resigned in June 1934 to become assistant director of research of the Pennsylvania State Emergency Relief Board in Harrisburg, and after two months full time in that position spent the next three months "splitting a seven-day week between the Harrisburg position and the position as consultant on unemployment statistics for the President's



Harris & Ewing

ROBERT R. NATHAN

Committee on Economic Security, which established the background for the Social Security Act."

In December 1934 Nathan returned to the Department of Commerce and in June 1935 was made chief of the National Income Section in the Division of Economic Research. When that section was expanded into a division in 1939, he was made chief of the division. During much of this period he acted as state consultant on income for the National Resources Planning Board, made frequent field trips, working particularly with the State Planning Board of Wisconsin and the University of Wisconsin and with the State Resources Commission of Minnesota and the University of Minnesota. At the Department of Commerce, too, Nathan contributed a number of bulletins and articles on the subject of national income, the most ambitious of which was a report of some 300 pages published by the Government Printing Office titled *National Income in the United States 1929-1935*. Outside of his department he prepared a number of articles on income for the *Survey of Current Business*; contributed many articles to the *Encyclopedia Britannica* Year Book, to the *National Encyclopedia*, to the *International Labor Review*, to the volumes published by the National Bureau of Economic Research. All of these have been used widely.

Shortly after the Advisory Commission to the Council of National Defense was appointed in 1940, Nathan was given a leave of absence from the Department of Commerce, his first assignment the determination of military requirements. "At present," he said then, "I am responsible for coordinating studies on requirements and capacity," with "no particular formal title."

Mr. Nathan is a member of the American Statistical Association, the American Economic Association, the American Marketing Association, Pi Gamma Mu, the Executive Committee of the Conference on Research in National Income of Work. He is a past president of the Washington chapter of the American Statistical Association and nominee for vice-president of the Association for 1941. His main interest, it is easy to see, is economic research, but he does get away from charts, tables and statistical trends now and then for some deep-sea fishing.

NEGHELLI, MARCHESE DI *See* Graziani, R.

NEHRU, JAWAHARLAL, PANDIT (nā'ro͞o yä'wä-här-läl) Nov. 14, 1889- Indian Nationalist leader

Address: Anand Bhawan, Allahabad, India

Under the Defense of India Act "preaching pacifism" is forbidden. In the autumn of 1940 Gandhi, in seeking some method to campaign for Indian independence without embarrassing the British war effort, hit on the method of "token civil disobedience." Selected leaders in the Indian Nationalist movement were to brave arrest so that the people of India might remain aware that the movement had not been abandoned. Jawaharlal Nehru was one of the two men selected to start the campaign; both were immediately arrested and sentenced to prison. Nehru (known in India as "Jawaharlal," sometimes as "Pandit" or "wise man") received a jail term of four years, having refused to testify at his own trial. This sentence one British Laborite called "harsh in the extreme," and predicted it would have serious repercussions in India, Great Britain and the Americas. Parliamentary debates indicated that England was concerned with growing Indian unrest, and the *New Republic* announced: "British policy toward India seems without a spark of enlightenment, understanding or justice... Men like Mr. Churchill and Lord Halifax can apparently imagine no alternative to terrorization." In December 1941, however, the Pandit and 500 other members of the All-India Congress Party were released.

Prison is no novelty to Jawaharlal Nehru. According to John Gunther (see sketch this issue), he has spent seven terms in prison and has been previously sentenced to an aggregate of ten and one-half years, although he served only five and one-half years of them. His previous sentence was in 1934, after a "seditious" speech in Calcutta. It was in prison that political study led him to merge socialism with his nationalism; it was in prison that he wrote a history of the world in the form of letters to his daughter; and it was while serving a prison sentence that he wrote his autobiography, which was published in England in 1936 and hailed as the Indian "Education of Henry Adams." An American edition appeared early

PANDIT JAWAHARLAL NEHRU

in 1941 under the title *Toward Freedom,* with two new chapters added.

He was born in Allahabad November 14, 1889, the son of Motilal Nehru, a Kashmiri Brahman (equivalent to a Cabot or Lowell in the United States), a millionaire and one of India's most distinguished lawyers, yet a liberal who used to discuss with his son the conduct of the white man in India. In 1905 he took young Jawaharlal to England and put him in Harrow. There he stayed for three years, then went on to Cambridge, took his degree in 1910 and remained in London for two more years, studying law and passing his Bar examinations. At that time Nehru called himself a "Cyrenaic," read Pater and Wilde and tried, he said, "to ape the prosperous but somewhat empty-headed Englishman who is called a 'man about town.'"

It was 1912 before Jawaharlal returned to India with a vague desire to enter politics. His father was already active; it was at his house that in 1916 the coalition was made between the Moslem League and the Indian National Congress, a political mass organization of Indians at that time seeking Dominion status, later complete independence. Jawaharlal joined the Nationalist movement. During the First World War, he says, "there was little sympathy with the British in spite of loud professions of loyalty," and when the end of the War brought "intense repression, martial law in the Punjab and the famous Amritsar massacre" in place of the promised independence, Gandhi's doctrine of non-violent resistance found followers everywhere. During the non-cooperation campaign hundreds actually fought for the privilege of being arrested; in the month of December 1921, thirty thousand persons were imprisoned. Jawaharlal, who had become interested in the peasant movement, who was beginning to feel "shame at my own easy-going and comfortable life and our petty politics of the city . . . sorrow at the degradation and overwhelming poverty of India," followed Gandhi in spite of his father's disapproval. And within a year Motilal joined him, to work and fight with his son for nine years, devoting his fortune to the cause of India's independence, losing his health in British prisons. Even Jawaharlal's mother was to be beaten in demonstrations; his wife, Kamala, who died in 1936, was to follow her husband to jail; and in December 1940 his sister was arrested.

Making speeches, traveling all over the country and even to Ceylon investigating conditions, taking part in protest processions, agitating against the salt tax or other repressive measures, entering forbidden territory in defiance of the British, periodically imprisoned and released, Jawaharlal finally gave up his law practice to devote himself entirely to politics. He was elected to the headship of the Allahabad municipality and to Congress. Loyal to Gandhi and one of Gandhi's staunchest defenders, nevertheless Jawaharlal was by this time beginning to wonder if the "diapered saint" went far enough. He did not approve of Gandhi's glorification of poverty and renunciation; he himself was becoming convinced that India's problem was as much economic as political, that the land system must be changed and that the "vested interests"—brown as well as white—must be removed before this could come about.

In 1929 Gandhi pushed Jawaharlal forward for the presidency of Congress, and he was elected. His popularity with the masses and with Indian youth as well as with the intelligentsia reached such disturbing heights that after 1930 his playfully iconoclastic wife and daughter Indira began to address him: "Oh Jewel of India, what time is it?" "Oh Embodiment of Sacrifice, please pass the bread." For ten years Jawaharlal was either secretary or president of Congress; he was president three times. It was he who made Gandhi come out for complete independence; it was he who, in 1931, persuaded the Working Committee of Congress to accept a few planks that smacked a little of socialism. For a long time many of those in the Nationalist movement had been more radical than their leaders; Gandhi was accepted as a saint, but they did not all share the saint's patience. Now Jawaharlal, generally conceded to be Gandhi's successor, aroused India's 350 millions in a way that Gandhi never had. In the spring of 1936 he openly preached socialism to follow complete independence, and urged that his followers organize into workers' and peasants' unions. Reports that Gandhi had proclaimed his lifework ruined by this deviation were denied, and the two continued to work in close collaboration.

Before the elections to the Federal Legislature in February 1937 Jawaharlal, then chairman of the Congress Party executive committee, traveled 110,000 miles in 22 months, in one week made 150 speeches and brought 33,000,000 persons to the polls. The fighting slogan was one of political independence, of resistance to Sir Samuel Hoare's new Federal

Constitution of 1935, which Jawaharlal called a "charter of bondage" because it handed most of the control of the Chambers to Indian princes and landlords ("Britain's Fifth Column in India") and in addition gave Britain the power to veto any measures passed by the Indians. The Nationalists received an absolute majority in six key provinces and the largest single-party representation in the five remaining provinces, but in protest against the Constitution six Congress members refused to become cabinet ministers in their provinces. And although they came to terms within a few months, they pledged themselves to continue their opposition.

Early in 1939 Jawaharlal was faced with a dilemma. Bose, the Bengal Leftist leader, was elected to the presidency of Congress in spite of Gandhi's opposition. At that time Jawaharlal was a member of its Working Committee, and, although probably sympathetic to many of Bose's avowed aims his loyalty to Gandhi made him withdraw his support from the organization. The resignations of many others followed. Bose was out and Jawaharlal back on the Committee before the the year was out, however, and when in September 1939 Britain declared India belligerent without any formal reference or intimation to Indian representatives and rushed the Indian Constitution Amending Bill through Parliament, he was the author of a protest by the Working Committee. It asserted that war or peace was an issue that the Indians should be allowed to settle, that India's resources were not to be exploited for "imperialist ends," and that Britain must state her war and peace aims before she could expect cooperation. The answer to this protest, he said, "indicated sufficiently clearly that there was no intention and, so far as that government was concerned, no possibility of the ending of the imperialist structure in India." Therefore as intensely as the Indians detested Fascism and Nazism, they were not convinced that Britain was really fighting for any "new world order." And in the meanwhile the Congress governments in the provinces had resigned, parliamentary government had been suspended, and in India there was "full-blooded dictatorship and authoritarianism."

Jawaharlal concluded sadly: "The way of cooperation does not lie for us; the hundred-year-old hostility will remain and grow in future conflicts, and the breach, when it comes, as come it must, will also not be in friendship but in hostility." He would hope for a British victory in the present conflict, but he would not cooperate actively with India's rulers.

Nehru's release from prison found his position somewhat changed. "India," he said, "is prepared to go for an all-in aid in the war, if her political aspirations are satisfied." He told a group of students that India's warm regard for China, Russia and America justified war with Japan. But he also tried to make Britain aware that as long as the democratic aspirations of the Indian people remain unrealized ("the four freedoms" do not apply to India, Churchill has said), they cannot play their proper role in bringing about an Axis defeat.

John Gunther describes Jawaharlal as "an Indian who became a westerner; an aristocrat who became a socialist; an individualist who became a great mass leader." Unlike Gandhi, he emphasizes economics, believes in the industrialization and urbanization of India, advocates normal marriage and sex relationships, is a "devout rationalist" and, while not anti-religious, has said "the spectacle of what is called religion, or at any rate organized religion, in India and elsewhere has filled me with horror." He is not concerned with Indian problems alone. During the Spanish War he visited and spoke for Loyalist Spain, and he has also visited and organized aid for China. He not only favors a classless, planned society but is convinced that anything that comes in its way "will have to be removed, gently if possible, forcibly if necessary." "Socialism is for me not merely an economic doctrine which I favor; it is a vital creed which I hold with all my head and heart." He is not a Communist chiefly because he resists "the Communist tendency to treat Communism as holy doctrine." He was in Moscow only once, with his father in 1927, to see the tenth anniversary festivities. Nor is he a member of the Congress Socialist Party. In Congress his position would probably be described as Left center, just as Gandhi's is Right center. The relationship between the two men is a very close one, if strange. Gandhi has said: "There is a heart-union between us which no intellectual differences can break," and Jawaharlal calls him "Bapu" (father). He has never underestimated what Gandhi has done for India: "Reactionary or revolutionary, he has changed the face of India, given pride and character to a cringing and demoralized people, built up strength and consciousness in the masses and made the Indian problem a world problem." Yet Nehru can also say of Gandhi: "What a problem and puzzle he has been!"

Jawaharlal is strikingly handsome: about five-feet-ten, with somber eyes, "adamant features" and a courtly, impressive bearing. Although moody and sometimes temperamental, both his writings and his speeches show all the understatement and the emotional restraint of "an Oxford lecturer." He is lonely: he speaks of being "at home nowhere," of "retreating into his shell," of an "inner hunger unsatisfied." Perhaps prison and solitary confinement have made him so. By nature he hates the "hurly-burly" of politics, loves winter sports, swimming, English poetry. Yet he has said: "I have not consciously renounced anything that I really valued." He is "more-or-less" a vegetarian, but no ascetic: sometimes smokes, and outside of India will take a little light wine. He hates British imperialism, but not the British: often has spent his holidays in England. He likes most "mountains, running water, children, glaciers, good conversation, all animals except bats and centipedes"; dislikes most "exploitation, cruelty and people who, in the

NEHRU, JAWAHARLAL—*Continued*

name of God, truth and the public good, are busy feathering their nests." John Gunther describes his autobiography as "subtle, complex, discriminating, infinitely cultivated, steeped in doubt, suffused with intellectual passion." He says: "Nehru the agnostic, Nehru the modern man, faces the colossal medievalism of India. He fights the British, but he fights the entrenched ritualism of his own people, too."

NELSON, DONALD M(ARR) Nov. 17, 1888- Executive director of the United States Supply, Priorities and Allocation Board

Address: b. Office of Production Management, Washington, D. C.; h. 595 Longwood Ave, Glencoe, Ill.

At the beginning of September 1941 the Supply, Priorities and Allocation Board was set up by the President as a possible solution to some of the troubles that had beset OPM and the defense effort. At its head was placed Donald Marr Nelson, who became simultaneously director of priorities for the Office of Production Management.

Nelson has had important responsibilities in the defense setup since June 1940, when he was made coordinating agent for all purchases under the old National Defense Advisory Board. "United States Shopper Number One," he immediately began to arrange for airplanes, tanks, battleships, foodstuffs, clothing, shoes. His approach to his problem was simple: "The housewife wants to buy to the best advantage. We have the same objective," he said. By December 1940 Mr. Nelson had allotted almost all of the 10 billion dollars given him to spend, "constantly alert to the impact of the purchasing upon our whole social and economic system." He utilized the off-season productions of plants, split up the areas to manufacture commodities, spread out the production of woolen and cotton clothes. He thwarted profiteering—after the whole market of a certain kind of cotton had been cornered by one man, he had the specifications changed and saved the Government from paying prohibitive prices.

From this position Nelson, in 1941, was shifted to the head of the Division of Purchases in the Office of Production Management, his job still to plan purchasing, to assist in deliveries and to get the necessary materials at the lowest prices, at the right time and with the least possible effect on the consumer.

Always, under the Defense Commission, under the OPM and, later, in the SPAB, his policy has been to "unravel the kinks" before peak production and the delivery of defense material began, rather than to emphasize swift production at the expense of accuracy and and steadiness. I. F. Stone has called him "one of the ablest and most public-spirited of the dollar-a-year men," "the one leading businessman usually prepared to uphold the rights of Labor in the making of contracts" and "prepared to bargain as firmly in buying for his country as he would have in buying for his own company."

There is no doubt that Donald Nelson's efficiency in buying for the Government derives from his long years with Sears, Roebuck and Company. Today its executive vice-president and chairman of the executive committee, he has been connected with this mail-order house ever since he was graduated from college. He was born in Hannibal, Missouri, the son of Quincy Marr Nelson, a railroad man, and Mary Ann (MacDonald) Nelson, and he attended grade and high school in Hannibal. From high school he went to the University of Missouri, working his way through by the usual jobs of tending furnaces and waiting on tables, and the less usual ones of grading chemistry papers and even, in his last year, teaching chemistry to freshmen. In 1911 he was graduated with a Bachelor of Science degree and began to look ahead to a life spent teaching chemistry.

His first start was as an assistant at the University's Agricultural Experiment Station, but it lasted less than a year. The head of Sears, Roebuck's chemical laboratory had asked the chairman of the Missouri chemistry department to recommend a young man for an assistant's position. Nelson was picked and on April 1, 1912 started working for Sears, Roebuck and Company. He stayed in this and similar jobs until 1921, with time out for training at the Lowell Textile School and an apprenticeship at the American Woolen Mills, both arranged by the company. By the time of his next job he was also going over the catalog copy to see that all its advertisements were accurate as well as catchy.

This next job, as manager of the men's and boys' clothing department, was his first big step up. It lasted for five years, at the end of which Nelson became an assistant in the general merchandising office. This was in 1926, the year he married Helen Wishart of Chicago. After a year's experience as merchandising assistant, Nelson was promoted to general merchandise manager. Then, in 1930, he was made vice-president in charge of merchandising, a position he kept until his further promotion in 1939 to executive vice-president and chairman of the executive committee.

At Sears, Roebuck, Nelson was the kind of man you could set your watch by, according to his associates. He was at his desk every morning at 7:50 and most of his movements from then on were just as regular. He built up a reputation, too, for going after information "like a dentist after an ailing tooth," for catching trains to distant points on short notice, for settling problems on the spot whenever he could. And although a perfectionist about his work, he was still easy to get along with. His subordinates, as quoted in *Business Week,* used to say: "He may not agree with you in what you think ought to be done. But he can see why you think as you do. And he never puts you on the defensive."

During these years Nelson was always of the opinion that government and business should get along well together, even in the period when other businessmen were bitterly complaining of government interference. "Many businessmen think of the government as a place where men sit around a table and devise plans for obstructing and harassing businessmen," he once said, "and many in Washington think of business as a closely-knit conspiracy intent only on profit and amassing wealth." Both points of view are wrong, he feels. When he took a leave of absence from his company to work with the NRA, government, business and labor all learned to respect him.

It was because of Nelson's successful NRA activity and his reputation as a businessman that rumors were current in 1938 that he would be chosen to administer the Fair Labor Standards Act. He didn't get this position, but he was made chairman of the wage committee of the textile industry, the first to tackle the problem of raising wages above the 25 cent minimum. Two years later rumors about him were again current—that he would be appointed head of the National Defense Commission. This didn't come true either, but in June 1940 he was given the full-time job of Treasury procurement chief, in charge of the Government's ordinary purchasing and chairman of the interdepartmental committee coordinating foreign and domestic purchases.

Nelson's Treasury position lasted only a month. His next was as coordinator of purchases for the Defense Commission. He said of it: "Confusion must be eliminated, procurement and delivery must be expedited... The strength of the Army and Navy will depend upon having the required material at the place where it is needed at the proper time." To this task Nelson added responsibilities as head of small business activities for the Defense Commission and, in October 1940, the job of administrator of the priorities board, set up within the Commission.

DONALD M. NELSON

When the new over-all defense agency, the Office of Production Management, was created in January 1941, Nelson headed its Division of Purchases. At the beginning of February there were reports that he had handed in his resignation, after a memorandum concerning what he considered his duties had been severely edited by the War and Navy Departments. At this point President Roosevelt stepped in and gave Nelson the authority he felt he should have—which meant the centralization, under him, of all defense buying, although he was still left without authority to pass on questions of expansion and priorities. Nevertheless, he was again rumored on the verge of resigning in May because of the slow pace at which contracts were being let. He himself pointed out that when he started working for the Government in the spring of 1940, it was to be only "for two months." But he did stay, and in September of the same year he went on to even greater responsibilities. In November 1941 he announced that the present rate of defense expenditure was $3,500,000,000 a month.

Donald Nelson is a big, broad-shouldered man, "about six feet, gray, with eyes sharp as a fox's and a jaw that shuts like a breechbolt." He has "an appetite for hard work, long hours, and a pipe that smells like an unfrequented sulphur sink in Yellowstone Park"; his public manner is "patient,

NELSON, DONALD M.—*Continued*

kindly, something like that of a railway information clerk." Away from the office he sometimes likes to play golf at the half dozen or so clubs he belongs to ("he is said to have the longest, most exasperating hook outside a Wodehouse story"), to fish, or, even more, just to sit quietly at the movies. That is better than exercise any time, he thinks. "The only exercise I take now," as quoted in *Time*, "is walking in the funeral processions of friends who died from too much of it."

NICHOLS, DUDLEY Apr. 6, 1895- Screen writer

Address: Long Mountain Road, New Milford, Conn.

Dudley Nichols was born into an electrical age at a time when Edison was devising ways of getting electricity from dynamos into people's lives and homes. Though his father was bent on making him a surgeon, his first thoughts were of watts, ohms and amperes. His proudest achievement as a boy was the biggest Tesla coil anyone of his age had ever tried to construct, with millions of high frequency volts streaming out of its top electrode. For many years he paid annual birthday visits to Edison's New Jersey laboratory. And from the challenge of high voltages in the field of electrical engineering he went on to meet an analogous challenge in newspaper and magazine work and, later, in Hollywood.

Dudley Nichols was born in Wapakoneta, Ohio, on April 6, 1895, the son of Dr. Grant Byron and Mary (Means) Nichols. William McFee said of Dudley's father: "I have never forgotten that old chap, who resembled Henry Ford, saying he had 'brought over a thousand children into the world and never lost a mother.' "

Between periods of schooling Dudley worked at various jobs, including months with a line gang repairing high tension power lines. Boss of the gang was an Irishman named Cronin whose passion it was to "work the lines hot"—that is, to replace poles and insulators without shutting off the 33,000 volt current. This passion for voltage was shared by young Nichols, and he soon took up radio, which was then still being called "wireless."

In 1913, at the age of 18, he worked as a radio operator on ships plying the travel lanes of the Great Lakes. His first assignment was on the old wooden *S. S. Saronic*. One nightmare memory he has from that period is having to send out an SOS an hour after he had said "good night" to the lone operator on the *Huronic*, sister ship they had passed in mid-lake. Engine trouble had stalled the *Saronic*, and she was drifting on Point au Barques. Nichols had reason to be concerned, for there was no chance of "raising" the *Huronic* until his friend awakened next morning, nor would his transmitter reach anyone else. Fortunately a shift in wind saved them from being driven further inshore, and around daylight a shore station was contacted and help received.

While at the University of Michigan, which he entered in the fall of 1915, he was a paid student assistant in charge of the radio laboratory, and developed a new type of rotary discharger that was adapted by commercial wireless companies. Upon entry of the United States into the First World War, Mr. Nichols enlisted in the Navy. At the Great Lakes Training Station he set up a school of radio operators and by late summer, 1917, was in charge of a school of 900 men. He was too young to be promoted in rank and was offered the alternative of remaining as second in command or going overseas, joining Admiral Simms in London. Without hesitation, he chose London.

After a few months of staff work and contacts with leading Britishers, Nichols was transferred at his own request to mine laying work in the North Sea. At the close of the War he volunteered for mine sweeping and devised a method of electrical protection for mine sweepers, for which he was later awarded the Distinguished Service Medal (November 11, 1920). A newspaper colleague who interviewed him upon his return to America in 1919 wrote: "It was with the Nichols gadget that 50,000 mines were swept up in the North Sea by the Yankee Suicide Fleet without the loss of a man or ship. Before that the United States Suicide Squadron lost 18 trawlers—some of which the British generously rented us at slightly above the usual trawler rate."

Buxbaum

DUDLEY NICHOLS

On his twenty-fourth birthday Nichols was promoted to junior lieutenant, No. 1 of that day, the highest rank that could be held by one of his age. But Nichols had had a brief experience in journalism when the New York *Times* published material on his North Sea experience, and he wanted to try his hand in this field. He turned down an offer by Managing Editor Van Anda of the *Times*, since Van Anda was a friend of the family and Nichols wanted to assure himself that he was getting a position on his own merits. He then tried every city room in New York, and at the last one, the old *Evening Post*, he was given a position. There, and on the New York *World*, Nichols worked for 10 years, covering important events in every field of that decade that began with the close of a war and ended with the beginning of a depression.

In his spare time he studied Latin and Greek in the Washington Square College of New York University, making a metrical translation of Ovid's *Metamorphoses*. During one vacation he worked his way through Central and South American waters, as wireless operator on the United Fruit boat *Turrialba*, of which William McFee was chief engineer. In 1924 he married Esta Varez Gooch-Collings, and in 1927 he went abroad, sending back items for the "opposite editorial" page. It was 1929 when he began to feel journalism a constraining influence. At three o'clock one afternoon he closed his desk and never went back.

His first intention was to go to Spain to write a book. A publisher offered an advance on it, and Nichols went to Winfield Sheehan, an old *World* man who was running the Fox Studio in Hollywood and who had many friends in Spain. Sheehan promised letters

NICHOLS, DUDLEY—*Continued*

for him to take along, and the next day, when Nichols called for them, his friend asked casually what his salary had been on the *World*. Nichols named his salary—it had been quite a good one, for newspaper work—and Sheehan offered him twice the money and a year's contract. But Nichols knew nothing about films. The theatre, yes. He had reviewed plays and had been a loyal friend of the old Provincetown Players group. To clinch the deal Mr. Sheehan blithely intimated that hardly anyone knew anything about motion pictures, anyway.

From the beginning of his Hollywood stay Dudley Nichols brought to his work a fresh and often iconoclastic point of view. Describing life as a choice of escape or pursuit, he found most of Hollywood's films escapist and compared filmdom's hacking to a farmer who works his field until it's sterile. "In the same way," said Mr. Nichols, "picture producers keep on fertilizing their fallow crops heavily with money and they are frightened when a shopworn product no longer will sell. They have revamped old stories and reproduced old pictures until the public is sated. Yet there is no limit to story material. They haven't begun to skim the surface of great stories already written, or waiting to be written."

He was given the Academy Award for the best adaptation of 1935 for his work on *The Informer* (1935), but refused it because of his connection with the Screen Writers' Guild, of which he was a member of the Board of Governors. "As one of the founders of the Screen Writers' Guild," he wrote in refusing the Award, "which was conceived in revolt against the Academy and was born out of disappointment with the way it functioned against the employed talent in any emergency, I deeply regret I am unable to accept the award. . . To accept it would be to turn my back on nearly a thousand members of the Screen Writers' Guild."

Among his best adaptations are those on which he did the scenario and John Ford (see sketch this issue) acted as director. Many of their films were low-budget jobs, like *The Informer*, which cost $218,000. (In Hollywood, John Ford joked, that would be about the price of a good cigar.) *Stage Coach* (1939) cost only slightly more. Their pictures presented real characters in real life situations, avoided stilted formulas both in continuity and in casting. The firm structural unity of *The Long Voyage Home* (1940), which is made up of four plays by Eugene O'Neill, is as typical of Nichols' film writing as it is of Ford's direction.

Nichols wrote the script for Sean O'Casey's *The Plough And The Stars* in 1936, while cruising in Mexican waters aboard Ford's yacht. As Nichols recalled it, working on a yacht was no holiday, especially when his contract required that he turn in a completed script in a matter of a few weeks. Strict discipline was in order; so for three days he glared at the typewriter, meditating on throwing it overboard. He had trouble in beginning each draft. At the third draft he found himself hating the script, the typewriter and the whole world. But he got over his hate in time to produce an excellent script and get in some fishing on the side.

In addition to his regular work, which includes more film successes than he can remember, Nichols did the narrative commentary for Joris Ivens' impressive documentary film on modern China, *The 400,000,000*. Then, in the spring of 1941, Nichols started out on a new venture with as much potential voltage for him as anything he has tackled in his long and colorful career. For he retired from screen writing to devote his whole time to free-lance work. One of his first jobs was revising *Somewhere in France*, a play by Carl Zuckmayer, for the Theatre Guild.

Tall, lean, with aquiline nose, brown eyes, and prematurely gray hair, Dudley Nichols is deliberate in speech and manner and, as one writer described him, "gives the impression of a man who would think his way through engineering or poetry, and all between." Quite unconscious of the significance of his metaphor, a colleague referred to him as "a dynamo of energy." He is six feet one and one-half inches tall, weighs one hundred ninety pounds.

When he lives on his Connecticut farm Dudley Nichols' favorite hobby is planting trees. For recreation he swims and plays croquet in summer, shovels snow in winter, and takes long walks the year round. Sometimes on summer nights, watching the cosmic voltage weave shimmering folds of aurora borealis across the sky, he is reminded of Jerry Cronin, whose passion it was to work the lines hot. And then, more likely than not, he looks ahead to what he will write the next day. "You extremists," William McFee once told him, "have all the fun."

NIEBUHR, REINHOLD, REV. (nē′bo͞or) June 21, 1892- Clergyman

Address: b. Union Theological Seminary, New York City; h. 99 Claremont Ave, New York City

For many years now Reverend Reinhold Niebuhr has been "a contradictory, conspicuous figure in the two worlds of religion and radical politics." In 1941, before the United States entered the War, he was, even more than usual, a center of controversy as leader of a group of eminent churchmen who believed that war could be a lesser evil than unchristian tyranny. He and his supporters had met and debated the issue; they had issued statements to the press denouncing pacifist isolation; and on February 7, 1941 they presented the first issue of *Christianity and Crisis,* an eight-page biweekly.

This magazine, intended mainly to oppose the staunchly pacifist tone of the existing interdenominational religious periodicals and particularly that of the *Christian Century,* was dedicated to the principle that "the halting of totalitarian aggression is a prerequisite to world peace and order." Backed by a number of influential sponsors, including Bishop Ivan Lee Holt, Bishop Francis J. McConnell, President Dodds of Princeton and William Allan Neilson, former president of Smith College, its editorial policy, guided by Reverend Niebuhr, was to be devoted to giving anti-pacifist churchmen a voice.

Niebuhr himself had said of his aims: "We think it dangerous to allow religious sensitivity to obscure the fact that Nazi tyranny intends to annihilate the Jewish race, to subject the nations of Europe to the domination of a 'master' race, to extirpate the Christian religion, to annul the liberties and legal standards which are the priceless heritage of ages of Christian and humanistic culture. . . The immediate task is the defeat of Nazi tyranny." This was not a new thesis for Reverend Niebuhr; it was one he had been preaching ever since 1933 in sermons, articles and even in one of his latest books, *Christianity and Power Politics* (1940). Those churchmen who remained pacifist, were, he felt, guilty of a "sentimentalized Christianity" which says that slavery is better than war.

Reinhold Niebuhr was born in Wright City, Missouri on June 21, 1892. His father, Gustave Niebuhr, was a scholarly German preacher who died when his children were young, and it was no easy task for his mother, Lydia (Hosto) Niebuhr, to bring them up. Both Reinhold and his brother Helmut Richard (now a professor in the Yale Divinity School) attended Elmhurst College in Illinois. Reinhold left in 1910 without a degree to enroll in the Eden Theological Seminary in St. Louis, Missouri. He stayed there until 1913 and then transferred to the Yale Divinity School, which gave him his Bachelor of Divinity degree in 1914 and his Master of Arts degree in 1915.

In 1915 Niebuhr was ordained in the ministry of the Evangelical Synod of North America and then took up pastoral duties in Detroit. His charge was the Bethel Evangelical Church, a "little working-class" congregation which consisted for the most part of auto workers. Under him the congregation grew; it acquired a new building and many new members. Forums were conducted, "sprightly, and occasionally distinguished by spectacular episodes"; intellectuals, radicals and liberals came to swell the original working-class membership.

It was in Detroit that Reverend Niebuhr gained his sympathies for the working people of this country. He began to champion their cause—he even went so far as to say at one time: "The lowliest peasant of the Dark Ages had more opportunity for self-expression than the highest paid employee in the Ford factory." It was inevitable that more conservative church circles should consider him dangerous; it was inevitable that there should be flare-ups between him and Detroit employers. In 1928 Niebuhr left Detroit for the "comparative calm of the Union Theological Seminary" in New York.

THE REV. REINHOLD NIEBUHR

Reverend Niebuhr was no less of a radical there. His teachings as associate professor of the philosophy of religion and as professor of applied Christianity (since 1930) were based not only on the conservative traditions of the Lutheran and reformed churches but also on the political philosophy of John Dewey, the economic approach of Karl Marx, the everyday intricacies of the American labor movement. During the depression of the 1930's Niebuhr "rose to a position of commanding influence in the theological world." Americans had begun to wonder whether there might not be something wrong with the world, and Niebuhr tried to point out to them his views on its cure.

In *Moral Man and Immoral Society* (1932) he pointed out the impossibility of achieving any real social change except by some sort of force—a position, incidentally, far removed from the pacifism he ardently expressed in the 1920's. In *Reflections on the End of an Era* (1934) he stated that capitalistic civilization as it then existed was doomed. Others of his books and many articles presented similar theses. And Niebuhr visited strikers, talked to unions and was an active member of the Socialist Party and an editor of its paper, *The World Tomorrow.* In June 1940 he resigned from the Socialist Party, however, over the issue of the War and our relationship to it. In all these years Niebuhr was not only radical; he was also deeply religious. After listening to him talk, a fellow clergyman once said: "He can skin civilization, hang the hide up to dry and offer prayer over the carcass."

(Continued next page)

NIEBUHR, REINHOLD, REV.—*Cont.*

All Niebuhr's lectures—at the Union Theological Seminary and on the lecture platform—seem to affect his hearers in much the same way. This is particularly true of the Gifford Lectures, which he delivered at Edinburgh University in 1939 as the fifth American to be honored with this famous lectureship (his predecessors were William James, Josiah Royce, John Dewey and William E. Hocking). In these lectures, published in book form in 1941 under the title *The Nature and Destiny of Man,* as in almost all his lectures and writing, it is impossible not to be impressed by his sharp logic, his theological brilliance, the fresh quality of his mind. More often than not it is impossible not to be stirred to rebuttal and controversy by them. To some of his colleagues this is, perhaps, a shortcoming. As one put it: "He is almost too clever intellectually. A little more tenderness or downright compassion would help to balance his brilliance." There are others, however, particularly his students, who respond to the stimulation he gives them and find it almost without peer in the theological world.

Reverend Niebuhr is lecturing a good deal these days, especially on his viewpoint on the War. He heads the Union for Democractic Action, is chairman of the American Friends of German freedom and also continues to contribute articles to many journals. (He has been editor of the quarterly *Christianity and Society,* a contributing editor to the *Christian Century,* and now, of course, edits *Christianity and Crisis.*) Together with his teaching this gives the tall, bald, sharp-eyed professor little time for anything else but work and occasional afternoon walks along Riverside Drive with his English wife, Ursula Kellep-Compton, whom he married in 1931, and their two children.

GLADWYN KINGSLEY NOBLE

NOMURA, KICHISABURO (nō-mōō-rä′ kĭ-chĭ-sä′bōō-rō) Dec. 1877- Former Japanese Ambassador to the United States

Address: c/o Homestead Hotel, Hot Springs, Va.

When Admiral Kichisaburo Nomura, Japan's Ambassador to the United States, presented his credentials to President Roosevelt on February 14, 1941, the President's reply to the diplomatic courtesies was: "There are developments in the relations between the United States and Japan which cause concern."

In less tactful terms the President might well have said that Japanese-American relations at this time were worse than they had ever been. Japan's "New Order" in Asia had been a source of concern for this Government and, in turn, Japan resented American embargoes on Japanese exports and American aid to China. Japan's alliance with Italy and Germany, and problems arising from the Sino-Japanese War (including claims for damages to American interests, exclusion of shipping from the Yangtze River and disputes over policing the International Settlement in Shanghai) had already led to an unprecedented state of tension between these two countries.

It was felt in many places in November 1940, when Nomura was appointed Ambassador, that he was the logical Japanese statesman to bring about a less delicate situation between his country and the United States. "I personally know of no issue impossible of peaceable solution," he said when appointed. Before leaving Japan he visited around and held conferences to win promises from the Army and Navy that their extremists would do nothing to embarrass him in his efforts. "In so far as he can control events, Admiral Nomura means that his assurances to the

United States Government can be accepted fully," was Hugh Byas' interpretation of this in the New York *Times*.

The optimism of American and Japanese commentators over Nomura's appointment was not entirely consistent, however. *Hochi*, the Japanese newspaper, warned that "sending an Ambassador to Washington is like ordering a man on horseback to charge a wall." American writers reminded the public that although Nomura knew the United States well and was "one of the United States' staunchest supporters in Japanese officialdom," he was still an important member of this officialdom, with aims substantially, if less radically, those of former Premier Matsuoka (see sketch this issue), who appointed him. His words on his appointment were evasive. "Let us in Japan and America guard the peace of the Pacific, the only bright light of hope now left to mankind."

Arrived in the United States—on a day of "strange stirrings in the Far East"—Admiral Nomura admitted that he found the "atmosphere" in the United States worse than he had expected. Uncertainty over Japanese intentions in the Far East and the United States freezing of Japanese credits here kept tension high, and the Admiral refused to give any concrete proposals for improving Japanese-American relations. By November war between the two countries seemed almost inevitable, but conversations continued, and on November 26 Secretary of State Hull (see sketch 1940 Annual) presented a memorandum for a general settlement of the Pacific's problems.

At 2:20 p.m. on December 7, 1941 Secretary of State Hull received Admiral Nomura and Japan's "peace" envoy, Saburo Kurusu. He read the Japanese answer to his memorandum rejecting American proposals a moment after news of the Japanese attack on Pearl Harbor had been received, and told the Japanese envoys: "In all my 50 years of public service I have never seen a document that was more crowded with infamous falsehoods and distortion. . ." They walked out, "pale and quiet," having done their job. Until the American diplomatic corps could be returned to the United States Nomura was kept a virtual prisoner first in the Japanese Embassy and then at Hot Springs, Virginia.

Admiral Nomura has figured prominently in Japanese political life for many years. He started out as a humble cadet, however. Born in Wakayama-ken, the third son of Kisaburo Masuda, he was left fatherless and poor when still very young. He had to support himself through school by various jobs, one of them delivering fish for a peddler. About this time he was adopted by Masatane Nomura, whose name he took and with whom he lived while attending the Middle School.

In 1896 Nomura entered the Japanese Naval Academy and in 1898 was graduated with the Imperial Prize for scholarship. As a naval cadet he embarked on a training cruise in 1899 that took him over a good part of the world, and in 1901 followed this up with a commission to go with a number of other cadets to England to bring back the battleship *Mikasa*, which was built there. Shortly afterward the Russo-Japanese War broke out, and Nomura saw service on several ships before the end of the fighting. He was navigating officer on the *Saiyen* when she hit a mine. Nomura says of this: "Ship she go down; me I come up."

Japanese American News

KICHISABURO NOMURA

It was when this War ended that Nomura received his first diplomatic mission: in 1908 he was sent to Russia (next to Vienna) as naval attaché. Two years later he spent a year in Berlin, then returning to Japan to serve in the Bureau of Naval Affairs in the Japanese Naval Office. He was soon made an adjutant and given the position of secretary to the Navy Minister. The first World War found him in Washington, after the birth of his only son, Tadafhi—he had married Hideko Yamaguchi. Here he was "the popular card-playing naval attaché of a friendly second-rate power" and a student at Annapolis, as some point out rather sadly now. In 1918 he returned home to become captain of the cruiser *Yakumo*.

He was presently sent as part of the Japanese delegation to the signing of the Versailles Treaty. He later attended the 1921-to-1922 Washington Disarmament Conference, where he played an important part as technical adviser to the Japanese delegation in framing the treaty which suspended naval competition between the United States and Japan for 15 years. Then, back in Japan, he was appointed commander of the First Overseas fleet which patrolled the Yangtze River and the waters about Shanghai, and in 1926 he was made an admiral.

In 1929 Nomura was once again in the United States, this time as commander of a training squadron. His next important position was that of commander in chief of the Kuré Admiralty Port, followed by a position

NOMURA, KICHISABURO—*Continued*

as Supreme Commander of the Yokosuka Naval Base. It was while he was here that the "Shanghai Incident" of 1932 occurred, and he was ordered to proceed to the hostilities as the commander of the 3rd Fleet. He came through the fighting unscathed, but some weeks later, while on a reviewing stand in Shanghai, lost an eye when a Korean terrorist threw a bomb.

In 1937 Admiral Nomura resigned from active service, but he continued to serve his country as a member of the Supreme War Council, as adviser to many organizations and as president of the Peers' School. In September 1939, when Premier Nobuyuki Abe selected him for the post of Foreign Minister, he gave up his position at the Peers' School (despite entreaties such as that of one pupil: "Please remain and train us so that we may become worthy pillars of our country").

Nomura was chosen for this position for the same reasons that he was chosen for his Ambassador's position in 1940. It was believed that he would be able to improve relations with the United States, strained by the Panay incident and the abrogation of the 23-year-old commercial treaty. He made a sincere effort to do so. At the end of December 1939 he announced that Japan was going to open the Yangtze River to foreign trade. He tried, too, to establish a general policy for dealing with the United States—to settle all outstanding questions that had arisen during the Japanese Army's operations and so create an atmosphere that might make some sort of peace terms, probably with Wang Ching-wei, acceptable to Americans. But the cabinet of Premier Abe was short-lived, and Nomura's proposals possibly contributed to its downfall. After its crash Japan became a member of the Axis alliance and more totalitarian than ever.

The man whom Matsuoka sent to America in 1941 to have "heart-to-heart talks with President Roosevelt on means for improving the situation between our two countries" had the advantages of speaking English perfectly and of having known Roosevelt from the days when the President was in the Navy Department. Before this six-foot, 200-pound Japanese left for America he went around to see his doctor to get a new glass eye fitted. Then he decided to play safe and bought himself five extra ones. "I've a hunch my stay in the United States this time will be long," he explained.

NUFFIELD, WILLIAM RICHARD MORRIS, 1ST VISCOUNT Oct. 10, 1877- Director general of maintenance at British Air Ministry; automobile manufacturer

Address: Nuffield Place, Huntercombe, Henley-on-Thames, England

"I take off my hat to Morris," wrote a British journalist in *The Autocar*. "He is the only man who has ever got away with the assembled car proposition in this country." A multimillionaire who has been called "the British Ford," Morris' success is largely due to the fact that he designed a cheap family car of good and economical performance which was comfortable, roomy and had attractive lines. Before his day the Britisher of moderate means bought the old high-axle Ford.

Since he has become rich and a peer, Morris has made lavish gifts to good causes, which at the end of 1940 totaled more than $66,000,000. His chief beneficiaries have been his own employees, the medical profession, the University of Oxford, the unemployed in the Special Areas and the sports funds of the armed services. Typical of his attitude toward his money was the remark made when giving $4,000,000 to Oxford in 1936: "Giving is pleasant, but the worry which comes from giving is very great. In my own case, I have found this worry during the past few years beyond understanding. The idea that it is easy to give money away is the biggest fallacy in the world."

Morris was born at Worcester, the son of Frederick Morris, who had been a "public school" man, and of Emily Ann Pether, the daughter of a farmer. At the age of three he was taken to Wood Farm, Headington, just outside of Oxford, and since that time has always manifested a strong local patriotism for the city of Oxford and its great university which poverty prevented him from attending. After primary schooling at the village school in Cowley—there were six scholars in his class—he was apprenticed in a bicycle shop at the age of 16.

Young Morris wanted to study medicine, but that was out of the question, and after nine months as an assistant he borrowed $20 and opened his own bicycle shop in Oxford. From hiring and repairing he progressed to selling and thence to manufacturing motorcycles. He proved to have real talent in design: his "Morris machine" went well, and by 1911 he had increased his capital to something around $16,000. (He had also acquired innumerable championships for bicycle racing, which he gave up in 1900.) Next he turned to designing and manufacturing cars. In 1912 he set up a small factory at Cowley, a village just outside Oxford, and inside of a year his first cars were on the road. They were named the "Morris Oxford."

The First World War came along just as Morris was getting into his stride, but he turned his works over to war production and acted as supervisor at a nominal salary. In 1919 he began again on cars. There were two models—the "Morris Cowley" and the slightly more expensive "Morris Oxford"—and it wasn't long before they swept the market. Morris believed in high wages and low prices; when in 1921 there was general talk of raising automobile prices he reduced his. They called it business suicide, but in 1922 his sales were just under 7,000; in 1923 over 20,000; in 1925 more than 60,000. By 1926 he was employing 4,000 men and turning out 1,000 cars a week. By this time he had also reconstituted E. G. Wrigley, Limited, of Birmingham, as Morris Commercial Cars, Limited; had taken over the Léon Bollée concern of Le Mans, France; had combined with the Budd Manufacturing Company of Philadelphia to make bodies; had started a radiator factory. From the Morris Garages, Limited, he began to turn out the M. G. sports model, a smart little roadster. Morris' days of poverty and struggle were over; and he heralded his accession to the ranks of big capital by a gift of $40,000 to complete the endowment of the Department of Spanish at the University of Oxford in 1926.

In 1927 the Wolseley motor company was in a bad way financially, in spite of turning out a high-class product. Morris bid for it against American competition, bought it for $2,920,000, and so went in for the luxury car trade. Next came airplane work, with Wolseley Aero Engines, which he started in 1929; and in that year he was made Sir William (as a baronet, the rank higher than knight). In 1930 he refused an American offer of $44,000,000 for his total holdings. He was raised to the peerage as Baron Nuffield in 1934 and advanced a grade to Viscount in 1938.

Nuffield is what is generally known as a "rugged individualist." Although taking no active part in politics, he is a conservative in that he believes in private enterprise. He says: "When a man talks trade-unionism to me I ask him to think again and talk to me as a man. Everyone gets a square deal here. I pay high wages and get good work. . . No, my methods of production aren't anything like Mr. Ford's. They are my own." He doesn't like Governmental "interference" with his business, either. In 1936 he disagreed with the Air Council on the question of "shadow factories," by which specific factories could be turned over in wartime to the manufacture of one specific machine part. He did not think this the best or safest scheme, said so and flatly refused to participate. Air Minister Lord Swinton took more than three months to make an appointment to discuss matters, and Nuffield then announced: "This is the first time in my life that I have been turned down by a Cabinet Minister."

VISCOUNT NUFFIELD

Early in 1937, however, Nuffield yielded and established an armaments firm called Nuffield Mechanisations, Limited, following this up in June 1938 with an aircraft factory. He figured in a court case in that same month. Two men were arrested in a charge of attempting to kidnap him for a ransom of $400,000, and one of them was sent to seven years' penal servitude. In September 1938 he acquired Riley Motors. In May 1939 a luncheon was held at Grosvenor House, a big London hotel, to celebrate the completion and dispatch of the millionth Morris vehicle. In November 1939 Nuffield was appointed director general of maintenance at the Air Ministry, his job to look after the repair of aircraft and their equipment. (He is doing it without any salary.) In May 1940 Lord Beaverbrook ordered him to submit to a merger of his vast new aircraft works with the firm of Vickers-Armstrong, Limited.

To summarize Nuffield's larger philanthropies: on six occasions he has given away

NUFFIELD, WILLIAM RICHARD MORRIS, 1ST VISCOUNT—*Continued*

$4,000,000 or more at one flick of the checkbook. The first was in 1936, when he presented the University of Oxford with $8,000,000 for the establishment of a postgraduate medical school. In the same year he gave $8,500,000 in shares to his own employees, excepting those who were earning $4,000 a year or more, and established a fund of $8,000,000 for the Special Areas—that is, districts like South Wales and Northumberland in which large-scale unemployment had become chronic. In 1937 he actually founded a new college, Nuffield College, in the University of Oxford, with an endowment of $4,000,000; in 1939 he gave $6,000,000 to the improvement of recreational facilities for the armed forces and $5,000,000 for the coordination of hospital services in the provinces. Numerous specific hospitals have drawn enormous sums from him, and by his large-scale endowment plans for the linking up of clinical medicine and theoretical research he has given a tremendous push to the study of medicine in England. In 1938 he gave $2,000,000 to provide "iron lungs" for every hospital in the British Empire that could use one. And although medicine has been among his chief beneficiaries, many other causes have received great financial assistance from him: the Boy Scouts, the blind, numerous churches and educational institutions.

Nuffield once told an interviewer: "We have too many 'half time' directors in industry. Personally, I begin work at eight and don't leave until half-past seven." He is a very hard worker, and expects his men to be the same. For a long time he took no exercise or relaxation to speak of, but under medical advice he finally took up and now enjoys golf, squash and tennis. He has been described as "a small but very active man, strong and highly strung, with well-shaped hands." Another observer says that he is "so dark-complexioned that you might take him for one of Southern blood." He has hazel eyes, a large jaw and a strong chin, and is often given the adjective "bull-necked."

"Despite his wealth, his tastes remain simple. 'Shilling for twenty' cigarets are his favorite smoke. He waves away plutocratic cigars, and often finds a few shillings a day sufficient for pocket money." He doesn't like the legends of his "rising from the gutter," however, and in 1938 the London *Sunday Express* published an approved story saying "not a quarter of one per cent of the population can trace their ancestry back" as far as Nuffield. In 1904 he married Elizabeth Maud Anstey, daughter of an Oxford businessman. They live an unostentatious home life at Nuffield Place, Huntercombe, near Henley-on-Thames, and have no children.

NYE, GERALD P(RENTICE) Dec. 19, 1892- United States Senator from North Dakota

Address: b. Senate Office Bldg, Washington, D. C.; h. Cooperstown, N. D.; 3802 Gramercy St, Washington, D. C.

> Bulletin: When Senator Nye heard the news of the Japanese attack on Pearl Harbor, he was scheduled to address an America First meeting in Pittsburgh. He gave his anti-war speech, and that evening declared that this was "just what Britain planned for us"; "we have been maneuvered into this by the President." The next day, however (December 8, 1941), he voted with the rest of the Senate for a declaration of war.

From November 1941 issue:

Since 1925, when a naïve country editor from North Dakota wearing "bulbous yellow shoes and an Old Oaken Bucket haircut" came to Washington to take his place in the Senate, Gerald P. Nye has been a center of controversy of one kind or another, but never of such nationwide scope as in 1941. At some times in his career he has been called a liberal, reformer and idealist, at others a reactionary and an opportunist, and at all times there have been some to call him a publicity seeker. Perhaps the only entirely consistent thread running through his career is the thread of isolationism. Since the Second World War began he has been damned as a dangerous appeaser and anti-Semite with personal ambitions, praised as an honest leader in the fight for peace, and apologized for as a misguided former liberal.

Gerald Prentice Nye was born in Hortonville, Wisconsin on December 19, 1892, the son of Irwin R. Nye, the crusading editor of country weeklies in that state and one of the original La Follette men, and of Phoebe Ella (Prentice) Nye. He spent most of his boyhood in Wittenberg, Wisconsin, where his family moved when he was two, but after having been graduated from high school he returned to Hortonville in 1911 to take over one of his father's papers, *The Review.* Thereafter, except for a few months spent on the Des Moines *Register,* he was to make his career in country journalism until 1925. He went first from Wisconsin to Iowa, and then, during the boom days of the First World War, journeyed to Fryburg, North Dakota.

In Fryburg, Nye started *The Pioneer,* a paper that was in those days the only privately-owned journal in the United States to support the rising Non-Partisan League. He was county food administrator and headed a couple of Liberty Loan drives but heard himself called "traitor" more than once. And he did a little name-calling himself. One of his wartime editorials on the late Senator La Follette announced that that gentleman had "made himself the most thorough anti-American on American shores and the most thorough ass of his time, Kaiser Wilhelm excluded perhaps." (Yet at a memorial service in 1925 for La Follette, Sr., Senator Gronna and William Jennings Bryan, he was to say: "Never once did their records permit successful attack. Their sincerity of purpose was never denied.")

In the year 1919 he and his wife, the former Anna Margaret Munch, whom he had married in 1916, settled down in Cooperstown, North Dakota. There Nye became editor and manager of the Griggs County *Sentinel Courier,* drafted for the job by a group of Non-Partisan farmers who had bought the paper. This "radical" activity caused him at first to be blackballed by the Masons and the Knights of Pythias. He has for many years now, however, been a member of both organizations. And it was not long before the despised Non-Partisan League had won control of the state, set it to building grain elevators and flour mills in an effort to defeat the "interests," and attained for itself a certain respectability.

Nye's backing helped La Follette and the Progressive Republican ticket in North Dakota in 1924. He was not a figure of any political importance himself, however, unless his presence on the Cooperstown school board made him that. After Senator Ladd died and Nye brought pressure through his paper to have the seat filled at once by gubernatorial appointment so that the many voters favoring measures to dispose of surplus farm products could be represented in the coming session, he was genuinely surprised when he received the appointment himself.

Haynes Inc.

GERALD P. NYE

In December 1925 the "village Greeley" arrived in Washington. He waited outside the Capitol for a month while the Senate debated whether or not a Governor had the power to fill a Senatorial vacancy and while his daughter, Marjorie, hoped that sometime they would "give Papa a place to sit down." His friends finally sent him a milking stool. But Borah and Norris battled for the La Follette Republican; Nye himself rounded up laws and precedents; and a two-vote majority was finally convinced that he deserved his seat. "A bad day's work," scolded the New York *Times.* Nevertheless, when a few months later Nye ran for the balance of his term as an independent against a conservative Republican, he won, and was re-elected for a full term of six years.

With the shift of chairmanships following the elections, Nye had become head of the obscure Public Lands Committee. Soon he was presiding over his first investigation, the inquiry into the Continental Trading Company oil scandal which produced such sensational revelations concerning Harry F. Sinclair, Andrew Mellon and the Republican National Committee, finally forcing the revision of a government lease of a $100,000,000 oil field and the recovery of more than $7,000,000 in taxes and penalties. To Nye this whole affair demonstrated the "frightful influence of money upon our political and economic life as a nation."

(Continued next page)

NYE, GERALD P.—*Continued*

He soon became known as a stubborn fighter, whether it was for farm relief legislation or against the World Court ("no internationalist, he"), and that same year he proceeded to enhance his reputation by battling with President Coolidge over North Dakota patronage, Nye winning. The Baltimore *Sun* called him "Gerald, the Giant-Killer," and the name persisted. So did Nye. He criticized Coolidge-Mellon taxation policies, attacked the war-debt settlement (the farmer's debts should be scaled down, too, he thought), accused the Coolidge Administration of domination by bankers and industrialists who didn't want to see agriculture on "an even footing with protected industries," supported all moves for higher inheritance and income taxes, spoke against monopoly, chain stores, branch banking. And although he finally swung over to Hoover, at the 1928 Republican Convention he opposed his nomination on the grounds that he didn't care about the farmer any more than Coolidge. Nye's was, in other words, the outlook of the old-fashioned agrarian rebel.

In April 1930 the voluble North Dakotan was appointed chairman of another investigating committee—to pry into Senate campaign expenditures. Once more the investigation was rich in revelations: the conspiracy against Nebraska's Senator Norris, the enormous expenditures in the Illinois and Pennsylvania campaigns, the Klan operations of the Republican Senatorial candidate in Kentucky. But there were even larger headlines when it was discovered that Ruth Hanna McCormick, whose affairs had been thoroughly publicized by the committee, was having her revenge by setting private detectives on Senator Nye's trail. His private life proved singularly uninteresting from her point of view.

In 1932 Nye was re-elected by a 3-1 majority despite the Democratic landslide. Now there was a "New Deal" President; but that wasn't what he wanted, either. To him the Blue Eagle was "a bird of prey on the masses"—fostering monopoly and price-fixing, suspending the antitrust laws; and in December 1933 he declined Hugh Johnson's invitation to become a member of the NRA Board and "guard the interests of the small businessman." In 1934 he teamed up with Borah in vehement attacks on the NRA, although that same year he joined with the Democrats to elect a Democratic Governor in North Dakota.

By this time keeping the United States out of war at all costs had already begun to supplant agricultural reform as the main topic of Nye's speeches. In 1934 he slipped a rider into a revenue bill calling for tremendously increased wartime income taxes, volunteering to withdraw it only if the Senate would vote an investigation into the munitions industry. The Arms Inquiry began that year, with Nye presiding once more, and once more the facts brought out created a nationwide sensation, especially when J. P. Morgan was put on the carpet. Most liberals agreed that it "revealed the arms industry as a definite menace to world peace," and although some cast doubt on the importance of Nye's role in the investigation (according to Kenneth Crawford it was thanks to the intelligence and industry of a staff headed by Stephen Raushenbush, Nye's counsel, that it was so fruitful) and others called him a headline hunter because of the "numerous and profitable" lecture engagements that followed, there were probably many more who felt, with Oswald Garrison Villard, that he was a "great leader in the fight for peace." In 1935 he won the Cardinal Newman Award.

In 1936 there was passed a permanent neutrality law drafted by Senators Nye, Clark (see sketch this issue) and Norris which forbade the shipment of arms to all belligerent countries. Since it contained no provision concerning civil wars, when Franco revolted in Spain an embargo on shipments of war materials to Spain was brought about by a special resolution. Nye did not vote against the resolution in the Senate in January 1937, and he favored the provision in the General Neutrality Act of May 1937 which added civil war to the conditions in a foreign country under which the President must establish an embargo. But it was soon evident that the effect of the embargo in this particular case was to prevent any help to one side while the other side was being aided by Germany and Italy, countries to which United States' arm shipments continued. In September 1935 Nye had spoken at a Detroit mass meeting of Father Coughlin's followers. Army Day in 1937 found him speaking at a dinner of the American League Against War and Fascism; and the next month the American Federation of Teachers charged that Yale had barred him from talking at the University because of his "liberal views." Finally, in May 1938, he introduced a Senate resolution proposing to end the embargo on Loyalist Spain. (It was shelved.)

To Nye, however, this was not a serious departure from isolationist principles. Nor did he court the favor of the Left for long. In July 1937, at a time when the National Labor Relations Board was considering a case against Tom Girdler and Little Steel, he came out with a blast against the NLRB which, according to Kenneth Crawford, had emanated from the office of Girdler's press agent. Later, in January 1939, he was to back the WPA fund cut.

Nevertheless in 1938 Nye's campaign for the Senate was endorsed by Senators Borah, Norris, Wheeler, Capper and Shipstead; by William Green; by the National Non-Partisan Committee for the Re-election of Senator Nye, headed by Charles A. Beard and the *New Republic's* Bruce Bliven (see sketches this issue). The pacifist-minded Oswald Garrison Villard praised him for having "refused to allow himself to be bamboozled by the militarists or by the diplomats whose statesmanship has broken down," adding: "He votes not as he is told to vote but as his conscience dictates." Some Non-Partisan Leaguers in North Dakota were not so enthusiastic; one called him "a superficial liberal who has always flirted with the reactionaries and whose chief backers in the forthcoming election are the reactionary forces of the state." But not too many felt that way about him, and he was re-elected.

At this time Nazi propaganda in the United States was treated by Senator Nye as a danger at least as great as British propaganda. In May 1939 he asked public support for the film *Confessions of a Nazi Spy* (which he was later to list among films designed to bring the United States into war), calling it "a courageous effort to inform the American people about this great danger." His attitude toward the refugee problem created by Hitler, however, was that the United States should bar the entrance of Reich Jews, and in February 1939 he was cheered at a German-American Bund rally because of his attacks on Roosevelt's foreign policy. In July 1939 he was one of the group in Congress that defeated Roosevelt's attempt at repeal of the embargo. One of his first proposals after the final outbreak of the Second World War was that Roosevelt act as its mediator, and he continued to oppose any and all changes in neutrality legislation.

In February 1940, appointed to the Senate Foreign Relations Committee, Nye soon made himself one of Roosevelt's more powerful foes in the Senate. In speeches on the floor, before America First audiences and over the radio, he predicted the defeat in 1940 of Roosevelt. He opposed aid to Britain ("the greatest aggressor in modern history," whose impending doom "ought not to alarm us"), the draft bill, the sale of destroyers, the Lend-Lease Bill, the Great Lakes-St. Lawrence River development project, the occupation of Iceland, national daylight-saving time, the selective service extension plan and aid to Russia (populated by "thieves, human butchers and murderers of religion"). If Hitler should be victorious, there was no reason to think he would contemplate "retaliatory actions"; in any case, Nazism and Communism would destroy one another. When the *Robin Moor* was sunk, his first reaction was to suggest that the British might have done it—he "would be very much surprised if Germany had." He urged Charles Lindbergh's (see sketch this issue) candidacy for Congress.

But it was after an America First meeting on July 31, 1941, when Nye lashed out against anti-Hitler films, intoning the names of film producers who were predominantly Jewish, that a torrent of criticism of him began. As co-author of a resolution to investigate films and member of the Senate subcommittee appointed shortly afterward by Senator Wheeler to determine whether the investigation should actually be held, he made such statements as: "My objection to them [the film producers] is that they are foreign born and are in a position of power to control what 81,000,000 people a week see in our theatres." He listed such films as *The Great Dictator* and *Mortal Storm* as deliberate and dangerous war propaganda. He confirmed Lindbergh's statement that people of the Jewish faith were leaders in the movement toward war.

As a result, opponents accused him of anti-Semitism, intimidation and attempted censorship; they asked how truthful movies could be otherwise than anti-Hitler, wondered why the investigation remained unconcerned about Fascist propaganda, pointed out that the movies are controlled by the banks rather than by the producers, anyway. Nye, in turn, accused the interventionists of having dragged in race prejudice to smear the non-interventionist cause and, in a speech at the annual dinner of the Steuben Society of America, called it "about the meanest thing that I have ever experienced in American politics." In the meanwhile a counter-investigation of the "Chinese control of laundries" was jokingly proposed.

Senator Nye long ago discarded his yellow shoes and high-water haircut, now wears, for the most part, "dark suits, white shirts, slightly flamboyant ties." His eyes have been variously described as pale blue and as hazel. He has a sharp nose, a strong, stubborn chin, a serious expression. His voice is low-pitched and quiet; he seldom makes frivolous remarks; he seldom laughs. But not all of his activities are as grim as his speeches in the Senate: he enjoys baseball (he was second baseman on his high school ball team), bass-fishing, rowing, reading Lincoln biographies and, according to *Newsweek* several years ago, the works of his favorite author, the late Harold Bell Wright. Nye is a Presbyterian. In March 1940 his first wife divorced him, and in December of that year he married Marguerite Johnson, an Illinois high school teacher whom he met in Estes Park, Colorado when he stepped out of his car to help her repair a tire. There are three children by his first wife: Marjorie Elleanor, Robert Gerald and James Prentice.

OBERON, MERLE Feb. 19, 1911- Motion-picture actress

Address: b. Alexander Korda Films, Inc, 1040 N. Las Palmas Ave, Hollywood, Calif.

From a cafe dance hostess who took her first job because she was hungry to a member of the histrionic aristocracy of Denham and Hollywood, Miss Oberon's career is a record of per-

MERLE OBERON

sistence, ingenuity, hard work and luck. A self-confessed poor business woman, Merle Oberon has succeeded in placing her name among those of the top-flight cinema actresses of today.

In Tasmania, a South Pacific island near Australia, the actress was born of Irish, French and Dutch descent and christened Estelle Merle O'Brien Thompson. Major Thompson, her father, had died before her birth, and the baby and her mother were left moderately well provided for, though not well enough for complete independence. When Merle was seven, therefore, her mother accepted the invitation of Lady Monteith, the child's godmother, to visit her in Bombay.

Soon after they were settled in Bombay, Mrs. Thompson, seeking to enlarge her small income, allowed herself to be persuaded to invest her small capital in a so-called American automobile agency. The agency did not exist except in the imagination of its promoter, who, having worked as much of Bombay as he could with safety, absconded with the entire Thompson fortune.

Now penniless, Merle and her mother moved to Calcutta to live with an uncle who accepted his new dependents with kindness and generosity. In Calcutta, in the Kiplingesque English colony of army officers and government officials, Merle grew up to be, at 16, a local beauty of whom all who met her said: "She ought to be in the movies." Gay and talented, she studied French and Hindustani as well as the regular curriculum at La Martinere College in Calcutta, and danced in the productions of the Calcutta Amateur Theatrical Society.

It was her uncle's leave of absence to go to England when his niece was 16 that turned the course of Merle's career. She might have continued to be one of the most beautiful girls in Calcutta and married a rising official who would one day make his name felt in the Colonial Office. London, however, to which she persuaded her uncle to let her accompany him, opened new vistas of opportunity, and when her uncle was ready to return to India, Merle was not at all willing to go with him. She had enrolled in a dancing school and the course was not yet completed. With his customary indulgence, her uncle let her remain for two months without him. She had £20, or $100, and a return ticket. When she had finished her dancing course she was to leave for Calcutta.

Merle had no intention whatsoever of returning. To burn her bridges most effectively, she cashed her return ticket voucher for $80 and bought a coat for $140. The $40 which remained dwindled away rapidly, and the ambitious girl, repeatedly turned away in her applications for screen tests, accepted a job as dance hostess at the Café de Paris. She felt that the position was beneath her. Army life in India made a great point of social distinctions, and Merle was too much inhibited by her early training to compromise without reluctance. The position paid two pounds ten a week and dinners. It was the dinners which constituted the deciding factor.

Her first screen test was ill-fated. Harry Lachman, to whom the would-be actress had applied time and again for a test, finally decided to test her for the role of a siren in a forthcoming picture. He neglected, however, to inform her that their interview was a test, so that when the actor began to hug and kiss her Merle struggled and screamed, arousing much amusement in bystanders, but unquestionably getting herself disqualified for the role of a vamp.

Mrs. Thompson, who was the only one in Calcutta who knew that Merle was not an outstanding success, came to London with the intention of persuading her daughter to return to India. It was the daughter, however, whose persuasion was successful, and the mother consented to remain. A later screen test proved luckier than the first, and Merle found herself playing bit parts at Wimbley for two pounds a day.

In 1932 London Film Productions offered her a five-year contract which she accepted. She played in *The Wedding Rehearsal*, *Men of Tomorrow*, *Dance of Witches* and *The Battle*, released in 1933 in America as *Thunder in the East*. It was not until she played the role of the luckless Anne Boleyn in Alexander Korda's *The Private Life of Henry VIII* that Merle Oberon's name became familiar to American audiences, however. The screen name which Merle had chosen for herself was O'Brien. Korda, who felt that O'Brien was too common, had promptly changed it to Auberon. This became Oberon only after his original choice had aroused the vehement protest of a prominent Bond Street hairdresser of the same name.

Since her first success, Miss Oberon has appeared in the following United Artists productions: *The Private Life of Don Juan*, with the late Douglas Fairbanks (1934); *The Scarlet Pimpernel*, with Leslie Howard (1934); *The Dark Angel*, "the first modern dress picture of its decade in which a feminine star has dared to appear in her own home-grown eyebrows" (1935); *These Three,* cinema dramatization of Lillian Hellman's (see sketch this issue) play, *The Children's Hour* (1936); *Beloved Enemy* (1936); *The Divorce of Lady X* (1938); and *The Cowboy and the Lady* (1938). She starred in *Broken Melody* for Olympic Pictures (1934); in *Folies Bergère* for Twentieth Century (1935); and in *I, Claudius* for London Films (1937).

In 1939 she elicited considerable critical acclaim with her portrayal of Cathy in Samuel Goldwyn's *Wuthering Heights.* As the passionate young Victorian in love with the brooding stableboy, Heathcliffe, but tempted by the love of worldly possessions and luxury to marry another, Miss Oberon's performance was generally conceded to be "mature", "fine," and "brilliant." According to the New York *Herald Tribune* her fine performance "seldom falters emotionally." *The Nation* found her interpretation of the role contained "legitimate modern overtones which stress the eternity of the conflict."

In 1940 she made two pictures for Warner Brothers, *Affectionately Yours* with Dennis Morgan, and *Till We Meet Again* with George Brent. In 1941 she starred in *That Certain Feeling,* a Lubitsch production.

Her latest vehicle, *Lydia,* was produced by her husband, Alexander Korda. This was the first production in which she had been interested financially, and her associates were treated to the unusual spectacle of a star's trying to avoid delays and cut down production costs. Her role in this picture, an American adaptation of the French film, *Carnet du Bal,* called for make-up and characterization stretching from that of a 16-year-old girl to that of an aged woman. Miss Oberon accepted unhesitatingly the realistic role which demanded a genuine aging and loss of glamor rather than the usual Hollywood characterizations which have been known to carry stars practically from the cradle to the grave without the semblance of a wrinkle, the loss of a tooth or the addition of more than a streak of gray hair.

Miss Oberon has been the featured actress in a number of radio plays. She performed in *I Love Thee* for the Columbia Broadcasting Company's Silver Theatre, and in *The Cowboy and the Lady* and *Till We Meet Again* for the Lux Radio Theatre. To the various patriotic organizations to which she has given freely of her time and effort, the use of her personality and reputation on the radio has brought considerable financial returns.

Although it is her present husband to whom, as her director, Miss Oberon gives full credit for teaching her to act, it was Samuel Goldwyn who saw her possibilities for roles other than that of an Eurasian siren. In any case, it must have been her knowledge of Hindustani, her life in India, or her birth in Tasmania which inspired those who applied the crayon to her eyes to make her appearance exotic. Certainly her appearance off the screen did little to suggest her background. At a party where he first met her, Goldwyn decided to cast her in the chief role of *The Dark Angel.* Referring to her previous performance with Maurice Chevalier in *Folies Bergère,* Goldwyn's friends told him he had cut himself off "a nice slice of ham there." *The Dark Angel,* however, was a hit, and it was followed by *Wuthering Heights,* another success artistically as well as financially. The oriental vamp has become history, but Miss Oberon has become exceptionally good box office.

Rumor has linked Miss Oberon's name with almost every eligible celebrity in Europe and America. In the summer of 1939, however, Miss Oberon quietly married Alexander Korda, the director who discovered her possibilities and molded her career. Except for the time when she is traveling over the continent, broadcasting for the United Service Organizations and the British War Relief, or flying to England to make pictures with her husband, Miss Oberon enjoys a tranquil domesticity with her husband and her two young nephews, Michael and David Korda.

Among her associates in the screen world, as well as among her friends, Miss Oberon is noted for her friendly good nature, her radiant vitality and her capacity for enjoying herself. Hollywood is full of legends attesting to her impulsive generosity and her popularity. Miss Oberon is five feet two inches tall and weighs one hundred and twelve pounds. Her hair and eyes are brown without a suggestion of the oriental which used to be her trade-mark. At home in two hemispheres, Miss Oberon is as cool and competent with her knitting and portable radio during air raid alarms as on her Hollywood set between scenes.

O'CONNELL, WILLIAM (HENRY), CARDINAL Dec. 8, 1859- Archbishop of the See of Boston

Address: h. 2101 Commonwealth Ave, Brighton, Mass.

William Henry Cardinal O'Connell, Archbishop of the See of Boston, is dean of the Roman Catholic hierarchy in America. More than once he has been mentioned as a candidate for the Papacy. His pronouncements and sermons, delivered in a "slightly high-pitched Back Bay voice, reminiscent of Boston's famous novelist, Henry James," have for at least three decades made frequent headlines in the press. In his 80's now, he continues to make them. In March 1941 His Eminence was one of the three Archbishops of the Roman Catholic Church to sign a statement supporting Herbert Hoover's plan to send food to the small conquered nations of Europe. A few days later he announced that he sensed a feeling among people that secret maneuvers behind the scene of the Government were drawing the United States nearer to war—a state of affairs that "does not tally with democracy." And in April he was quoted as demanding that "strikes be outlawed for the preservation of the United States."

One of 11 sons of John and Bridget (Farley) O'Connell, poor Irish immigrants, William Henry O'Connell was born in Lowell, Massachusetts on the feast day of the Immaculate Conception, December 8, 1859. After attending public schools he entered St. Charles College in Maryland, and when illness caused him to return to Lowell he completed his baccalaureate course at Boston College. In 1881 Boston College gave him his B. A., *summa cum laude*.

Even aside from his scholarship young O'Connell left behind him a glittering reputation: he had composed hymns, taken a prominent part in debates and college plays, and in addition had been known as the best-dressed man and the owner of the most luxuriant crop of side whiskers on the campus. But from the first his intended vocation had been the Church. Archbishop Williams of Boston quite naturally took an interest in the brilliant young man, procured for him a scholarship to the American College at Rome, and in 1884 he was ordained a priest in Rome. Not long after his ordination he had to return to the United States, however, without having obtained his D. D. degree, and his prospects for advancement did not seem too good when he was appointed one of five curates of Saint Joseph's, in the West End of Boston.

Nevertheless in 1895, "without prior indication," Father O'Connell was made rector of the American College at Rome. In Rome he proved that the appointment had not been an error. He had a great gift for organization. He built up the College, interested Americans in it. Pope Leo XII, pleased, made him Chamberlain (with the title of Monsignor) and gave him ready access to the papal chambers. In 1897 he was named domestic prelate. And on April 22, 1901 he was appointed Bishop of Portland, Maine.

It was May when the "Bishop without a white hair on his head" was consecrated in Rome—July when he was installed in the Cathedral of Portland. There he strengthened the parishes, reduced the church debt, had the Cathedral remodeled by an excellent architect, and altogether put his diocese in the public eye to such an extent that the newspapers were soon asking for full transcripts of his sermons. Soon, too, Rome offered him the Archbishopric of Manila. He gave good reasons for not accepting that particular appointment. But he was not to remain in Portland long. In 1905, after the ending of the Russo-Japanese War, Pope Pius X named him assistant at the Pontifical Throne and selected him as Papal Envoy to Emperor Mutsuhito of Japan. It was an excellent choice, for Bishop O'Connell was a linguist who could speak Japanese as well as Latin, French, Italian, German, Spanish, Russian and Syrian. Upon his arrival in Japan he was immediately received by the Mikado and his Empress, and was so successful in his mission of restoring relations with that country that the Mikado decorated him with the Grand Cordon of the Sacred Treasure.

Only a year after having been sent to Japan, in March 1906, Bishop O'Connell was named Titular Archbishop of Constance and Coadjutor Archbishop of Boston, direct in line to the aged Archbishop Williams. The next year Williams died, and on August 30, 1907 O'Connell succeeded to the See of Boston, "second only in the American hierarchy to New York." The youngest Archbishop in the country, he was nevertheless already accustomed to wielding authority, and immediately told his parishioners: "When I ask you to do anything, trust me and do it." At the same time he was socially popular. That same year the Boston *Herald* announced: "He belongs to a leading Boston social club, one of the local golf clubs, and owns an automobile. He is reputed to be the best-dressed ecclesiastic in Boston."

In 1908 Archbishop O'Connell's name was put forward for the first time as a candidate for Cardinal, and although he was the youngest of all the candidates in years and service, he was elevated to the Cardinalate at Rome on November 27, 1911. When he returned to Boston in a driving snowstorm, the people lined the streets to welcome him and struggled to kiss his ring. "The desire to succeed is natural to the human heart," he said, that same year.

Since that time Cardinal O'Connell's reputation and authority have been even further enhanced. A familiar figure on the streets of Rome as well as of Boston, in 1913 Cardinal Rampolla spoke of him: "If the time ever comes to have an American Pope . . . I see nobody in the American hierarchy who can take the position except Cardinal O'Connell. He is a strong man. He is most popular at the Vatican. He has brought, as Peter's Pence, an enormous sum of money to Rome—more than any other Cardinal—in fact, almost more than any other state." In 1929 a journalist wrote: "His primacy is as well-organized and disciplined, even as prosperous, relatively, as a first class corporation."

A special law passed by the Massachusetts Legislature made Cardinal O'Connell the corporation sole of the Catholic Church of Boston: its president, its officers, its board of directors. Under his rule the Catholics of Irish blood have gained in power so tremendously that he himself has spoken of the change as a bloodless social and political revolution. Already existing Catholic societies were strengthened, new ones established; older charitable institutions were restaffed, new ones built; new parishes were created; Catholics were urged to enter public life.

At the same time the Cardinal's sermons became material for the front-page. Theological modernism, new scientific theories and changing moralities horrified him almost as much as Bolshevism, anarchism and atheism. He spoke bitterly of "apostles of modern thought" who class men "psychically as well as physically with the apes." In 1926 he called the New York American Museum of Natural History "an exhibition of what might justly be called the grotesque gullibility of the so-called scientists." In 1929 he derided Einstein (see sketch this issue) as one of a group of "petty, befogged professors . . . who have to set up some new standard to attract attention to themselves."

Although not participating in politics, Cardinal O'Connell also spoke out freely on issues of the day which he considered within the spiritual or moral domain of the Church. After the First World War he called on President Wilson to demand self-determination for Ireland at the Peace Conference, and later he praised President Harding for keeping the United States out of the League of Nations. In 1924 he publicly denounced the Child Labor Amendment (although he would have favored it if the word "gainful" had been inserted before the word "labor"); in 1926 he announced that "compulsory prohibition is flatly opposed to Holy Scripture and to Catholic tradition"; and in 1932 he denounced Father Coughlin's "demagogic utterances to the poor."

Many Bostonians, moreover, suspect that the banning of books, plays, etc., in Boston is based very often on the Cardinal's judgment. Although there is no evidence to connect him directly with the censor, it is true that a few days after he spoke against J. P. Marquand's *H. M. Pulham, Esquire* the City Council called upon the police to ban the book for assailing "the character of Boston womanhood," and less recent examples could be listed. However, as the editor of one Boston newspaper once said: "If we have tried once we have tried a dozen times to identify the source of this censorship. Each time the search has ended in a dark alley. . . We have been compelled to call it 'the system' and, because it is mysteriously powered, to bow to it."

Harris & Ewing

WILLIAM CARDINAL O'CONNELL

Cardinal O'Connell has not only been honored by the Vatican but by the governments of many lands. He possesses the Lebanese Grand Medal of Merit, the Grand Crosses of the Order of Malta, of the Crown of Italy, of the Constantinian Order of St. George, of the Holy Sepulchre, and of the Légion d'Honneur. And in 1934, at his golden jubilee celebrating the fiftieth anniversary of his ordination to the priesthood, he was presented with a golden chalice by American bishops and honored by letters of praise from both Pope Pius XI and President Roosevelt. The President praised him particularly for his "consecrated service with a real and practical interest in good citizenship and inspiring patriotism." In that same year there appeared the Cardinal's autobiography, *Recollections of Seventy Years*, written in his usual "vigorous, sincere and richly virile style."

In 1918 A. Paul Keith bequeathed $4,000,000 to be divided equally between Harvard and Cardinal O'Connell as Archbishop of Boston.

(Continued next page)

O'CONNELL, WILLIAM, CARDINAL
—Continued

The Keith estate has been used to found schools and academies in Lowell, to erect added structures on the campus of St. John's Ecclesiastical Seminary and to build and equip modern additions to Saint Elizabeth's Hospital. In 1915 the Cardinal had announced that "the present age is an age of luxury, and luxury ought to have no place in any life"; but by 1926 he was confident that "the rich man and woman of the United States need have no fear of failing to enter the Heavenly Kingdom." His own Brighton home on the Seminary campus has an excellent private golf course, and although he spends many of his vacations in Florida he also owns a summer home at Marblehead, Massachusetts. There he built a fence to keep young lovers off the rocks, causing some irreverent wit to put up a sign: "The earth is the Lord's and the fullness thereof, but the rocks belong to the Cardinal."

ODETS, CLIFFORD (ō-dĕts') July 18, 1906- Playwright

Address: b. c/o Actors Equity, 45 W. 47th St, New York City; h. 327 E. 47th St, New York City

"In every Odets play, regardless of its theme or its worth," the drama critic of *Time* wrote some time ago, "at least once during the evening every spectator feels that a fire hose has been turned on his body, that a fist has connected with his chin." Ever since the day in 1935 when New York audiences saw his first drama and hailed him as "the foremost discovery of the '30s," audiences and critics have reacted that way. Many of them have not shared the frankly Leftish views of his earlier plays, many of them have even found his themes dull, his plotting inept, his structure uneven, but they have not been able to keep themselves from going along again and again with his "rich compassionate angry feeling for people, his tremendous dramatic punch, his dialogue, bracing as ozone."

In his youth no one ever expected Clifford Odets to become "the white hope of the American theatre." "This boy," he says in the third person in which he usually discusses himself, "was a very ordinary middle-class boy. . . He did typical things, for everything about him was typical, typical, so typical." His father, Louis J. Odets, worked in a print shop in Philadelphia, where his son was born on July 18, 1906. "I was a worker's son until the age of 12," the onetime idol of the proletariat recalls. But not long after. Odets Senior moved with his wife, Pearl (Geisinger) Odets, to New York in 1908 and there rose in the world. He acquired a print shop of his own, later became a direct mail advertising agent and by 1927, when he became vice-president and general sales manager of a Philadelphia boiler company, was a prosperous merchandising counselor.

Clifford grew up in The Bronx, a not too industrious student at Public School 52, and at Morris High School, which he attended from 1921 to 1923. He quit high school before graduation because it was a "waste of time," and took to writing poetry. His father, who had foreseen a prosperous career for his son as an advertising copywriter, smashed his typewriter, told him he was a good-for-nothing. Clifford stormed back. "You can't harness me to a truck—can't you see I'm not a truck horse?" "Believe me," he says now, "there were some very gloomy evenings."

Clifford's father believed that anything was better than having a poet for a son, and so there was little fuss made when Clifford announced that he was going to become an actor. He started out with a group of ardent amateurs known as the Drawing Room Players who put on one-act plays at the Heckscher Theatre, and then joined Harry Kemp's Poet's Theatre, a cooperative venture with headquarters in the basement of a church. From this Odets branched out with a group of his own, made up of former members of the Drawing Room Players. He offered it to various radio stations and from 1925 to 1927 there were performances off and on as a sustaining program. One of the performances was of an original play, *At the Waterline*, a "welter of coincidences" in which Odets starred.

At the same time that his group was shuffling along, Odets was functioning independently on the radio as the Roving Reciter, relying heavily on Robert W. Service and Rudyard Kipling for his stirring declamations. On the strength of these he was able to get a few weeks' work with stock companies around New York and finally found fairly regular employment with Mae Desmond's Stock Company which played around Philadelphia and Camden, New Jersey, with a tremendously varied repertoire. Hardly fit for juvenile roles because of his bushy hair and prominent features, Odets appeared as old men, middle-aged men, "characters." "A wig a day was my motto," he remembers. And it was good experience, too, he says. "It's possible to absorb a great deal of the playwright's method playing 32 different scripts in one stock season."

Clifford's family didn't realize their son was getting valuable training for playwriting. When Clifford wired home for money after the company broke up and then arrived penniless and jobless, they wondered seriously whether he would ever support himself. Clifford wondered, too. "Their son," he says, "was not industrious. He had temperament; he was moody. In a word he was artistic."

Nevertheless, their son was able not long afterward to get a job with the Theatre Guild, in 1928, and he appeared with the Guild in small parts now and again. He appeared, too, in *Roar China*, a production of the Guild Studio, a subsidiary of the Theatre Guild, made up of people interested in producing unusual plays, from which the Group Theatre eventually evolved. While the Group was being organized Odets sat in on the meetings and after them went home to a lonely furnished room on West 82nd Street and wrestled with his soul. But there was romance, too, in his life. There was a girl in Philadelphia who said: "Every girl should have one Clifford Odets in her life." In Springfield, Massachusetts there was a "horrible, exquisite love affair with something of the *Sorrows of Werther* about it."

In 1931 Odets went with the Group Theatre to Brookfield Center, Connecticut to rehearse his bit in *The House of Connelly*, the Group's first production; in 1932 he understudied Luther Adler in John Howard Lawson's *Success Story*. This was a period of Dostoevskian melancholy. Odets shaved off his hair, grew a beard, adopted turtle neck sweaters. He was oppressed by his belief that nobody thought very much of his acting and more oppressed by his own belief that it wasn't much good. "I was too tense. I just couldn't relax," he confesses.

He had begun, too, to work on a play, writing it in a cold-water flat on 57th Street, where he lived with some other Group members after the disastrous failure of Dawn Powell's *Big Night* in 1933. He finished the play in Warrensburg, New York, while rehearsing in *Men in White* which the Group put on in 1933, and called it *Awake and Sing*.

The Group Theatre was interested, but not interested enough to risk a production. Frank Merlin, the producer, took an option on it but dropped it after a year. Odets was in Boston at the time, acting with the Group company. He heard of a New Theatre League one-act play contest, locked himself in a hotel room for three days and came out with *Waiting for Lefty*. It won the prize and was presented at the New Theatre League Sunday nights. Everybody was excited about it; the Left acclaimed Odets as a revolutionary oracle, the critics hailed him as an infinitely promising playwright.

Alfredo Valente

CLIFFORD ODETS

Based on the 1934 New York cab strike, this play was fiery, vigorous, compact, arousing soap-box propaganda in its portrayal of the hardships of the men on strike, in its indication of a way out for them. While the enthusiasm was strong, the Group decided to take a chance on *Awake and Sing*, and it was presented on February 19, 1935. Shortly after its opening the Group presented, too, *Waiting for Lefty* and *Till the Day I Die*. Within 35 days Odets had three plays running on Broadway and was "arousing more discussion in theatrical circles than any man since Eugene O'Neill." Nobody in New York could talk to even a subway guard without getting into a discussion about Odets.

Waiting for Lefty was a tremendous success and during the course of the year was acted all over the country by small theatre groups, was suppressed by local authorities more often than any other play in the history of the American Theatre, was awarded the Yale Drama Prize for 1935. Only George Jean Nathan was supercilious. He talked of "the short labor yell, *Waiting for Lefty*, and the short sis-boom-ah follow-up, *Till the Day I Die*." The critics fought him on his opinion of the first, but many of them were willing to agree about *Till the Day I Die*, a story of young Communists just after the beginning of the Hitler regime. It was based on a letter from Germany Odets had read in the *New Masses* and according to one critic, at least, it "sounded like it."

Awake and Sing was something else. Odets said he wrote it because "I was sore at my

ODETS, CLIFFORD—*Continued*

whole life. Getting nothing done." Because "I saw girls and boys were not getting a chance. . . I went over my boyhood and tabulated the people's lives which touched mine. . . I saw where my own experience was richest, where it hurt me most." The result was a study of a bewildered, frustrated, dreaming, rebellious Bronx family "caught in economic toils like wet fish in a net." In Odets' hands the language of The Bronx was turned into effective theatre speech and occasionally lifted into sheer poetry by the intensity of its emotion. The dialogue was pungent and evocative, the character creation sharp and sad and real. It has been, most critics agree, his best play, written, according to *Time,* before Odets "went honeymooning with the cosmos or confused himself with *Le Penseur* of Rodin."

During the long run of this play Odets was the darling of the Left, called by the Right, in the form of the London *Times,* "a fiery young Communist." He denied this. "A man making $1,000 a week," he said, "has no reason to be a Communist. I'm doing pretty well by myself and my fellow men. Everything that I've got I'll share with people who are not so fortunate. If that is Communism, then I'm a Communist." He tried to share with others in 1935, when he led a delegation of 15 liberals to Cuba to investigate conditions there. He was deported the day after his arrival and since then "his support of the proletariat has been mostly moral." He remains an active member of the League of American Writers.

The public waited in suspense for Odets' next play after *Awake and Sing* and was rewarded with *Paradise Lost* in December 1935. It was, most critics agreed, irrespective of their political opinions, a "muddy" play about the confused middle class. ("My interest is not in the presentation of an individual's problems but in those of a whole class.") A "pretentious, empty" play to others, to Clifford Odets it was, even years later, "my best and most mature play. By far! And without reservation." But nobody bought tickets to it, and Odets hopped off to Hollywood to the tune of $2,500 a week in order to keep it going.

Odets was in Hollywood for a year and one-half. The result of his labors there were two unproduced pictures, *Gettysburg* and *The River Is Blue,* and one produced by Paramount, *The General Died at Dawn.* Odets is felt to have spent his time writing dramatic fireworks into this film, and the critics sadly asked when they saw it on the screen: "Odets, where is thy sting?" Odets was busy in Hollywood, too, courting the actress and Academy winner, Luise Rainer, whom he married on January 8, 1937 after a suitable period of holding hands in public. Theirs was never a placid marriage. They were estranged that same year and Luise Rainer filed suit for a divorce; in November 1938 they were reconciled; in May 1940 they were finally divorced. Odets believed in a one-career marriage, Miss Rainer said by way of explanation.

Odets returned from Hollywood with the script of *Golden Boy* and some sage observations on life there. *Life* felt though, after *Golden Boy* was presented on November 4, 1937, that Hollywood had "matured his art, disciplined his style, taught him to tell a story." The story told of Joe Bonaparte who wanted to be on top, who was a good violinist and became a prize fighter. The first play that didn't depend for its appeal on Odets' economic opinions, it was admired for its mastery of stage technique and command of pungent dialogue; it was decried for the falseness of its ending, for its occasional strident melodrama, for its unevenness. "If every line in *Golden Boy* were as good as every third line is," one critic said, "it would be an unusual play." New York came to see it in droves; London admired it greatly; Hollywood bought it and produced it in 1939.

In 1938 Odets announced he was working on *The Silent Partner* and announced, too: "It will be the best labor play ever produced in this country or in any other country." But it was never produced and Broadway saw, instead, in December 1938, *Rocket to the Moon,* a play, according to Odets, about middle-class love. Joseph Wood Krutch thought it made "most other recent plays seem pallid indeed," but his confreres found it a "banal triangle whose originality goes no farther than a water cooler in a dentist's office," full of "pretentious earnestness."

Rocket to the Moon was no great success, and George Jean Nathan felt his lack of enthusiasm for Odets even more justified by *Night Music* (1940). "It shows once again," he said, "the dangers of critical overexuberance in the acceptance of early promise for full-fledged merit."

Odets' latest play, *Clash by Night,* with Tallulah Bankhead (see sketch this issue) opened on Broadway in December 1941. The New York *Times* said Odets "writes the first half of *Clash by Night* like a mature man of the theatre. Put that much of it down not only as his best work, but as some of the best literary work any one has done in the modern drama." *Time's* critic, however, found the play "the season's biggest disappointment."

"I am the most talented young playwright in the business," Odets once said. But he hastened to explain it was "because playwriting has reached a sad state." That's why he never goes to the theatre—"I have nothing to learn from American plays any more." He used to once, and in the first flush of his success he used to gad about with celebrities like Beatrice Lillie, Helen Hayes, Tallulah Bankhead. Today his companions are members of the Group Theatre, his favorite recreations going to concerts or listening to music in his New York apartment. His house is seldom empty of the music of Bach, Mozart, Beethoven coming from the phonograph or the sound of Odets' improvisations on his Hammond organ or lusty singing of an aria. "His love for music is ebullient, a little showy." "A good composer was lost when I took up writing," he says.

"At once shrewd and naïve, lusty and bookish, youthful and pompous," Clifford Odets used to be famous in the early days of his success for his sayings. "Mozart was a young genius, too," he once remarked to a friend who was listening to the phonograph. He still talks sometimes like one of the more lyrical characters in his own plays. According to John McCarten, it's not unusual for him to break into something like: "How sweet and nice to get up in the morning to see the glitter of the day—like when you were a kid." He never does get up in the morning, though, and does most of his work at night.

He is fairly tall and husky and proud of his looks, though it has been said that "in profile he vaguely resembles a pickerel." Bushy-haired, brown-eyed, dressed in diligently informal and sloppy clothes, in his abstracted moments "he could easily be mistaken for one of the more earnest students of New York University." He has these moments often. Sometimes he stands listening to the talk of people on the street, jotting down all they say. Sometimes he spends hours clipping everything interesting to him in the papers. Sometimes, any time, he has ideas and writes them down right away. All these jottings, clippings and ideas are carefully filed away by his secretary in huge filing cabinets in his apartment. With them, too, are duplicates of practically every letter he has ever written in his life. Altogether, he feels, he should have enough material to last him for at least the next 10 years of playwriting.

ODLUM, FLOYD B(OSTWICK)

(ŏd'lŭm) Mar. 30, 1892- Financier

Address: b. Office for Emergency Management, Washington, D. C.; h. Stamford, Conn.

On September 4, 1941 the slender, sandy-haired president of the Atlas Corporation, possibly the only man in the United States who made a great fortune out of the depression, was selected by President Roosevelt to head the new Defense Contracts Distribution Division of the Office of Production Management. The following day he announced that he was taking a leave of absence from Atlas in order to accept the position: "The President's request that I organize this division and get its work moving forward left me no choice as a matter of duty." The candidate of Leon Henderson and other New Dealers for the job of keeping small industries functioning by bringing them into the defense effort, Floyd B. Odlum was praised by that stern critic of "Knudsenism," I. F. Stone. "His resourcefulness, ingenuity and hospitality to new ideas in the operation of his own diverse business," wrote Stone at that time in *PM*, "promise success in his new assignment."

Underwood & Underwood

FLOYD B. ODLUM

A few months later, however, disappointment in what had been actually accomplished was being expressed by more than one source. Odlum had been given a difficult job—one at which several men before him had failed—for the big defense plants, with three-fourths of all national defense contracts, were far from eager to pass on business to small manufacturers in the form of subcontracts.

Fortune once cataloged Odlum's various occupations, from the age of six on up. He has been all of these things in precisely this order, and still is a good many of them: "Methodist minister's son, berrypicker, vegetable sprayer, ditchdigger, celery tender, lumber piler, haberdasher's clerk, house-to-house canvasser, ostrich jockey, map salesman, assistant librarian, manager of dramatics and college periodicals, debater, boardinghouse entrepreneur, law clerk, utilities lawyer, first-class negotiator, amateur of investment companies, accumulator of same, underwriter, Utah enthusiast and Depression Phenomenon Class A."

He was born on March 30, 1892 in a Methodist parsonage at Union City, Michigan, the youngest of the five children of the Reverend George A. and Ellen (Anderson) Odlum. His father was a Canadian-born country preacher of Irish descent who kept moving around Michigan without ever reaching a parish that paid him much more than $800 a year. Floyd, like his brothers, did odd jobs. Graduated

ODLUM, FLOYD B.—*Continued*

from high school in Hillsdale at the age of 16, he went soon afterward with his mother and brothers to Boulder, Colorado, where she sought recovery from tuberculosis. The boys enrolled at the University there, Floyd planning to be an engineer but changing his mind at the moment of registration.

At college he studied journalism, working part time on Colorado newspapers, then prepared for the law. And, as the text under his graduation picture suggested, "Little Odd" managed "to get the running of everything to which there [was] a stipend attached." He ran a student laundry, managed the dramatic club, the Women's League Opera, the annual; he received a salary as student assistant librarian; in the summer he operated four fraternity houses as tourists' lodges. He was also four years on the debating team, won an oratorical prize, starred at pole-vaulting one year, was a member of the junior-prom committee and in 1915, when he was graduated with the degree of Bachelor of Laws, passed the State Bar examination at the top.

Once admitted to the Bar, young Odlum went to Salt Lake City (chosen because of a bargain offer in a train ticket!) to hang out his shingle. There he found a $50-a-month job in the legal department of Utah Power and Light, a subsidiary of the giant New York utility holding company, the Electric Bond and Share Corporation, and in 1915 married Hortense McQuarrie, daughter of a Mormon elder. A year later he was making $75 a month, and in 1917 there came the offer of a $100-a-month position as law clerk in Electric Bond and Share's Manhattan law shop, Simpson, Thacher & Bartlett. Mr. and Mrs. Odlum and their young son promptly packed up and arrived in New York City one June day, exhausted from three days of travel by coach and completely bewildered. For months they barely existed on his salary in a shabby apartment in Brooklyn. But Odlum's work on utilities contracts for Electric Bond and Share soon attracted the attention of Sidney Z. Mitchell, chairman of the company. When Mitchell grew tired of not having Odlum easily available he got him transferred to the offices of Electric Bond and Share, and in 1920 he was made a vice-president.

The "legal backbone of the company," Odlum also made himself an expert in accounting and electric power and worked so hard at domestic utilities consolidations that he developed nervous indigestion. It was 1926 when he became vice-chairman of Electric Bond and Share's foreign subsidiary, American and Foreign Power, and, with power of attorney from Mitchell, began buying up foreign electric and water-power companies—several hundred million dollars worth by 1931. During this period he made a record-breaking telephone call from London which lasted 95 minutes and cost $1,425.

In the meanwhile, in 1923, Odlum and a friend and their wives had started a private pool with a net capital of $39,600 for speculation in utilities and general securities. It was grandiosely named the United States Company, and paid a 65-per-cent dividend its very first year. By the end of 1925 net assets per common share were seventeen times what they had been two years before, and others were being rapidly admitted to the pool, which in 1928 became the Atlas Utilities and Investors Company, Ltd., of Montreal and the following year had its entire common stock taken over by the Atlas Utilities Company, newly incorporated in Delaware.

At that time total assets were about $6,000,000. In the summer of 1929 Odlum sniffed the breeze, disposed of about half of Atlas' holdings, and, selling investors some $9,000,000 in new securities, kept the entire amount in cash and short-term notes. In the spring of 1930 Atlas, with $14,000,000 in assets, was therefore in a position to adopt Odlum's plan of buying up the less fortunate investment companies which were by that time lying all over Wall Street. The tactic was to buy enough stock to get control of a company at a price less than the asset value behind its stocks, preferably by an exchange of Atlas stocks; to sell the liquid items over which the company carried control; and then, with the part of the profits not going to minority stockholders (many of whom could be persuaded to exchange their stocks for Atlas stocks), to buy control of another investment company. Sometimes the process took three weeks, sometimes three years. But Wall Street's song became: "Little investment company, don't you cry: Atlas will get you by and by."

Just before Roosevelt's nomination, however, the Atlas Utilities Corporation became the plain Atlas Corporation, and soon after Roosevelt took office Odlum began selling utilities as fast as he could. Atlas was already managing many portfolio items that had not lent themselves to liquidation, and now Odlum began to specialize in large-scale financing rather than in buying up investment companies. He helped to reorganize the Greyhound Bus Lines, to put Madison Square Garden on a paying basis, to rebuild Bonwit Teller, New York's department store (he turned it over to his wife, who divorced him in 1935); and manufacturing companies, banks, real estate, motion picture and aviation companies all over the United States began to be more and more affected by Atlas. In February 1940 the corporation was split into two parts, one to stay in the financing business, the other to go to the United States Curtiss-Wright Corporation in a merger.

Odlum is still the largest holder in Atlas, with its assets of more than $100,000,000, as well as a director of American and Foreign Power, the United Fruit Company, the Italian Superpower Corporation and Madison Square Garden. As early as 1935 Arthur D. Howden Smith included him in a list of 30 men and families who "run America," and Congressman Adolph J. Sabath of Chicago once foresaw him and J. P. Morgan dividing control of all American industry. He himself, however, insists that he isn't really a Wall Street man. He says he doesn't know the symbols on a ticker ("I can't keep my balance if I watch prices"), wouldn't even know how to organize a stock-market pool, and that his business methods could be summed up by the slogan: "You buy when the other fellow sells, and sell when it looks rosiest." Convinced that capitalism and the "plutocratic demagogy" have a long lease on life, he nevertheless thinks of himself as a liberal and a "mild New Dealer." Roosevelt's Presidential campaign got $10,000 of his money in 1936, and he has never fought the Securities and Exchange Commission, although once in testimony before the Commission he said he thought Government regulation should not make "all companies conform to the same pattern simply because they invest in securities."

Sometimes pictured as ruthless but tactful, sometimes as warm-hearted but perspicacious, Odlum has acquired from his opponents the nickname "The Farmer" because of the rather careless Western look about him. The guilelessness of his features encourages the impression; but his smile can be complacent, and his blue eyes cold and sharp behind his horn-rimmed glasses. He "invariably moves fast, and as though he knew exactly where he was going"; his talk is orderly; and when he removes his glasses the "long, contained, confident face of an excellent trading strategist" is seen.

Odlum, who has two sons, Stanley Arnold and Bruce Wendell, by his first marriage, married Jacqueline Cochran (see sketch 1940 Annual), aviatrix and head of her own cosmetics company, on May 10, 1936. Just to make the record complete: he enjoys bad puns, squash, informal parties; he is a chain smoker but never touches alcohol, red meat or raw fruits; he lives unpretentiously, and bought his first boat—a houseboat—in 1936. He owns a small collection of nineteenth-century paintings, mainly of landscapes and beautiful women, and he himself is something of an artist. He relaxes by making copies of small bronzes in clay, but, with no illusions of immortal genius, invariably squeezes them back into lumps before going to bed!

O'DWYER, WILLIAM July 11, 1890- District Attorney of Brooklyn Borough, New York City

Address: b. Municipal Building, Brooklyn, New York

> Bulletin: On November 4, 1941, after a campaign marked by name-calling, by President Roosevelt's support of La Guardia and Governor Lehman's support of O'Dwyer, William O'Dwyer lost the New York City Mayoralty campaign by 133,841 votes. He sent a congratulatory wire to La Guardia and then announced to reporters, with a grin: "I've still got a job. That's a great advantage."

From September 1941 issue:

William O'Dwyer, Democratic candidate for Mayor of New York City in 1941 running against Fiorello La Guardia (see sketch 1940 Annual), is a "shrewd, scrappy" Irishman from County Mayo who just missed taking holy orders. He was born on July 11, 1890, the son of Patrick and Bridget O'Dwyer, who both taught in the local school where his sisters teach today. They sent him to the Jesuit University of Salamanca in Spain, and he might have stayed there if he had not been deficient in everything but languages. As it was, he was three years short of graduation when he picked up his things and shipped off to America. He landed in New York City in 1910. He had only $25.35 in his pocket, but after paying a month's rent in advance at a West Side boardinghouse he went right out and found a $20-a-week job as a laborer. He has lived in New York City ever since, even though he has traveled a long way from that boardinghouse.

At that time Bill O'Dwyer wanted to study medicine. "The best thing in the world I could think of doing was fixing up people's bodies. But I couldn't support myself for eight years in medical school. So I decided the next best thing would be fixing up people's legal troubles. I could study law and still draw my twenty bucks a week." That was how, while working as a longshoreman and later as a plasterer's helper (he helped build the Hotel McAlpin), he decided to start at the law school of Fordham University.

He was going to school evenings when he met Catherine ("Kitty") Lenihan, a telephone operator and a first-rate pianist. He married her in 1916, that same year became an American citizen, and in July 1917 joined New York City's police force at a salary of $1,000 a year as a patrolman on the toughest water-front beat in Brooklyn. Once he had to shoot a man—it wasn't a pleasant experience—and he still hates firearms. Finally, in 1923, he was admitted to the New York Bar. He quit the police force, and the next year opened an office on Court Street, with his first client a truckman accused of having stolen a hogshead of olives. A reporter friend had his headline all set—EX-COP WINS FIRST CASE—but it didn't work out quite that way.

(Continued next page)

The New York Public Library

WILLIAM O'DWYER

Nevertheless, in 1932 O'Dwyer's experience and legal ability brought him an appointment as New York City magistrate, and as a judge he became noted for his common sense as much as for his knowledge of law. Once he offered a habitual drunk the choice between jail and spending three hours alone with an unopened bottle of whiskey! Later designated to sit in Brooklyn's new experimental adolescent court, where all youths between the ages of 16 and 19 arrested in the borough were tried, he made a practice of consulting clergymen, welfare workers and probation officials before passing judgment. "You can always do something with the simple, misguided youngster," he said. "Very often you can make him a model man again just by threatening to send him away." He insisted, however, that some of the most confirmed criminals were young criminals, and that there were cases in which leniency was a mistake. That was a mistake which he didn't make, but it didn't mean that he was less interested in probation and crime prevention.

In 1938 O'Dwyer was appointed a County Court judge in Brooklyn by Governor Lehman, who had to fill a vacancy, and he was later elected to that post for a full 14-year term at a salary of $25,000 a year. When in 1939 he was elected District Attorney for Brooklyn Borough, he accepted a $5,000 cut in salary. He took office on January 1, 1940, and promptly began cleaning house and getting new men. Less than three months afterward, in his bleak office, reporters heard him announce the solution of fifty-six murders of the kind that are practically never solved—underworld murders, nearly all of them linked together. The trials, which began not long after that, were a press sensation. "Murder, Inc.," was the title popularly given to the ring of criminals involved, but O'Dwyer pointed out that the appellation was really accurate only if it were read to mean "Murder, Incidental"—"incidental" to the various rackets in which the men were engaged.

There are difficulties unsuspected by the public in the way of getting convictions even for notorious gangsters and racketeers, O'Dwyer tells us. Men are always having to be released for lack of legal evidence. There was no more evidence than usual in the case of the "partners" in Murder, Inc., but "applied psychology" resulted in a chain of confessions. In April 1941 O'Dwyer declared that although crime was on the increase from coast to coast, there had been a reduction of 20 to 32 per cent in the number of crimes such as murder, manslaughter, robbery, burglary and felonious assault in Brooklyn in 1940. One of the reasons he is so eager to wage war on criminals may be that in 1924 his own brother was shot and killed by holdup men.

Ever since his election as District Attorney O'Dwyer had been mentioned as a possibility as Democratic candidate for Mayor. He, however, maintained that what he really wanted to do was go back on the County Court bench and stay there, and his friends said that he didn't know anything about being Mayor and wouldn't care to fulfill the obligations Tammany expects of any Mayor it puts in office, anyway. After he spoke at the annual Jefferson Day dinner in 1941 with the Democratic National Chairman acting as toastmaster his nomination was more seriously considered, though, and on July 16 New York Democratic leaders announced their agreement on the Mayoralty slate. According to the Brooklyn Democratic chief, O'Dwyer's distinguished public record would "make a strong appeal to the voters regardless of politics"—and some commentators insisted that he was not a "Tammany man," although owing allegiance to the Kelly organization in Brooklyn. Anti-Tammanyites, on the other hand, saw an attempt to use O'Dwyer's reputation for honesty and his respectability to bring back the "good old days" of Tammany rule.

"Bill-o" to his friends, Brooklyn's District Attorney is somewhere between five feet eight and five feet nine, and weighs around one hundred ninety pounds. "Quick to smile, ramrod-straight, with silky dark hair that keeps flopping over the forehead, he looks a young 45." His brogue becomes very apparent when he gets excited, and he does that often. He and his wife, both devout Catholics, live in the five-room half of an unpretentious two-family red-brick house in Brooklyn's Bay Ridge, a house distinguished by a substantial mortgage. Commissioner Valentine lent him two bodyguards and a 1930 Cadillac. O'Dwyer is "indifferent to liquor, friendly to pipes and cigars, ecstatic about stew, and flies into a mock rage over pistachio ice cream ('It's not Irish green!')"

He likes Dickens, especially *Dombey and Son,* likes Wagner's "noisier operas," Irish ballads, Irish history. His favorite radio programs—"Nothing highbrow, you understand" —are Jack Benny, Fibber McGee, Amos and Andy. He doesn't get much exercise. Of golf he says: "Confidentially, I'm a bum at the game." Of the Dodgers: "They'll cop the bunting this year sure." As for football, he once brought an Irish soccer team from his home county to prove that the game is tougher than American football.

Although O'Dwyer publicly proclaimed his support of Franco in the Spanish War early in 1939, in a speech in May 1941 he announced that when the time came to "count heads" the Irish would be found "side by side with those lined up against tyranny and aggression." Hints from Tammany that he would run on a platform of "peace" as well as opposition to administration, and the endorsement of his candidacy by the Hearst papers, did not prevent him from announcing later in the campaign that he supported President Roosevelt's foreign policies.

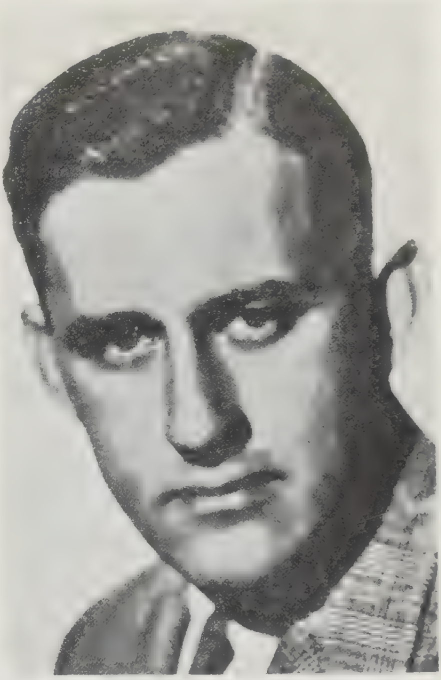
O'HARA, JOHN (HENRY) Jan. 31, 1905-
Author; playwright

Address: b. c/o Duell, Sloan & Pearce, 270 Madison Ave, New York City; h. 1115 Fifth Ave, New York City

On Christmas Night 1940, a new musical comedy that became an instant Broadway hit, *Pal Joey*, opened at the Barrymore Theatre. Its producer was George Abbott; Rodgers and Hart were the creators of its music and lyrics; and the author was none other than young novelist John O'Hara, who put Pal Joey originally into a book (published in October 1940) made up from pieces about the night club crooner and hoofer he had "ben wreiting in the *New Yorkers* mag." The printed-page personality of this "poor man's Bing Crosby" expanded in popularity until O'Hara felt the urge to make him three-dimensional.

O'Hara, who is said to have "spent more time in night clubs than many men have in bed," was advised over a couple of highballs by his friend Dick Rodgers to make Joey the hero of a musical comedy. "He's a heel already; we'll make him the first hero of his kind," said Rodgers. So, with George Abbott immediately interested, the team got to work and wrote a play about Joey and his "mice" (pretty girls) and "moola" (money).

The musical comedy follows pretty much the fictional version, with some variations and several hit songs by Rodgers, and with Gene Kelly (later replaced by George Tapps) as Joey and Vivienne Segal playing the feminine lead. "For those who can park their morals in the lobby," says *Time's* theatre critic, "Pal Joey is a wow." Of Joey in the original book about him, Milton Rugoff (New York *Herald Tribune Books*) wrote: "He's as authentic as a radio commercial, a hot swing band or a tabloid headline . . . a hot-spot song plugger, a Broadway trooper knocking around in the sticks, stuck with jobs m. c. ing [acting as master of ceremonies] in Windy City cribs for just enough 'moola' (dough to you) to keep him off the cake line. Down on his luck, Pal Joey pours out his petty larceny soul in 'missles' to his dear pal Ted who is doing all right by himself as a No. 1 band leader back on the main stem in good old N. Y. C."



JOHN O'HARA

O'Hara has often been called a second Ring Lardner; he has also been compared to Sinclair Lewis, and to Conrad and Hemingway. His first novel, *Appointment in Samarra* (1934), the story of three days in a man's life that ended in his suicide, was praised by critics for the hard, and hard-boiled, brilliance of his writing, and although some seemed to feel that he was "sliding over surfaces," they found him more than merely "promising." The material of *Butterfield 8* (1935) may not have been worthy of his talents, but it created a sensation. Said one critic of this story of a young girl who lived a fast life in New York City during the latter end of the speakeasy era: "Here is a cruel and ugly story that will make you sick and bitter, yet hold you till its last venomous line." That same year *The Doctor's Son and Other Stories*, many of which had been previously published in the *New Yorker*, showed O'Hara a "maestro of the literary cartoon" as well.

Hope of Heaven, his third novel, appeared in 1938. It concerned itself with the unhappy love affair of a Hollywood scenario writer

O'HARA, JOHN—*Continued*

and a bookshop clerk, was another "slick, tough, readable" piece of writing that most critics felt showed the brilliance but also the same limitations found in his earlier work. His most recent collection of short stories, *Files on Parade* (1939), was praised more highly. One critic, at least, rated him tops, writing: "No one, with the possible exception of Ring Lardner and Ernest Hemingway, has so well succeeded in summing up a lifetime in an instant, within the narrow frame of the classical unities."

Skeptical, ironical, with a kind of "inverted sentimentality," O'Hara's work has been called "degenerately morbid", "insufferably vulgar" —even "trash." Others find that the same qualities amount to honest realism. But no one denies the skill of his craftsmanship, nor the gift of his large, sensitive, canny ears for picking up the nuances of colloquial speech—the "New Yawkese" of night club, bar, theatre; the transcribed ideographic slang of *Variety*. Few writers can take such thoroughly worthless characters and make them not only shockingly recognizable but, many times, oddly sympathetic.

Pal Joey's creator was born in Pottsville, Pennsylvania January 31, 1905, the eldest of the seven children of a physician, Patrick Henry O'Hara, and Katharine Elizabeth (Delaney) O'Hara. The family is still puzzled by the Broadway slang he writes with such facility. O'Hara's environment as a boy has been described by him in *The Doctor's Son and Other Stories*. He says he "went through the motions" of getting an education at the Fordham Preparatory School, the Niagara Preparatory School, from which he was graduated in 1924, and the Keystone State Normal School. He then held jobs variously as reporter, engineer, boat steward, secretary in a briqueting plant, gas meter reader, freight clerk on the Pennsylvania Railroad, soda clerk and picture press agent. His break into the literary world came when Heywood Broun hired him as his secretary. He began writing criticism and features for newspapers (New York *Herald Tribune*, New York *Daily Mirror*, New York *Morning Telegraph*) and magazines (*Time* and *New Yorker*), and for a short time was editor in chief of the Pittsburgh *Bulletin-Index*. He also did some writing for Paramount Pictures (1924), Samuel Goldwyn (1937), RKO-Radio (1939) and Twentieth Century-Fox (1940), and even played a minor part in one picture, *The General Died at Dawn*. When his first novel, *Appointment in Samarra*, became a sensational success, he settled down solely to fiction production for a while, until, in July 1940, he also took over the authorship of a column, "Entertainment Week," in *Newsweek*.

Using the jargon of Joey and his pals, H. Allen Smith writes: "This John O. Hara is a big guy six foot over that writes books all the time he is not hitting the sauce in the 52nd st traps. . . I have always hear that this John O. Hara has got large ears and I find this true when I walk in his apt where he is bending over a small typewriter and the dog Ceser near bye, Joey, he has got a Pair of ears that Tommy and Bunny could use for mutes with enough left over to make a conga drumb other wise he is a handsome guy being big.

"Joey you have hear this guy on the radio that lisens to a party speak and says where they come from even the town some time. Well, this John O. Hara bens one of his big ears at me and after I have spoke a mear few wds he says, you come from a small town to and I says yes and he says Illinois, and I says I was born in Illinois and how the hell did he know it. Well Joey he is like this guy on the radio, he can lisen to a party and tell where they come from.

"This John O. Hara is a great guy for hitting the sauce and when he gets ready to write a book he goes out of town to some other city and locks himself up in a hotel room so he will not be bother with phones and vareous slugs that bother a man. So two years ago he goes to Philly to write a book and locks himself in this hotel room but dont stay there but gets to hitting the sauce and has his load on from morning to night and cant write even the word cat and rat. Then it comes time he should return back to NY and he has got no wk. done and he is afraid his ever loving wife will pelt him with the elektric clock when he comes back empty hand it. So he sets down and writes a little article about you, Pal Joey, that he remembers from Waylin, and that is the first one.

"This John O. Hara is a very pleasant guy, Joey, and gets around and speaks of many big shots inametly . . . you wd be surprise to know that he is a student of le hotte jazz as the French say and has many hot contacts around, which is some thing you wd never be let to suspect when you first incounter him."

America's Young Men
Who's Who in America

O'KEEFFE, GEORGIA (ō-kēf') Nov. 15, 1887- Artist

Address: h. Lake George, N. Y.

The New York Tomorrow Committee of the now wrecked and dismantled New York World's Fair showed excellent judgment in designating Georgia O'Keeffe, painter of beautiful flower studies and stark but original landscapes, as one of the 12 most outstanding women in the past 50 years. So did the judges who chose one of her paintings, *Easthampton Dunes*, to represent New York State in the International Business Machines exhibition held there and later taken on tour. Her annual one-man exhibitions held since 1921 at the Intimate Gallery, which became "An American Place" in 1929, are attended by crowded groups of admirers. She has ceased to be the exclusive object of adoration of a cult which tried to read strange meanings into her beautiful and usually straightforward work. "An American Place," at 509 Madison Avenue, New York is presided over by her husband, Alfred Stieglitz, the eminent photographer (see sketch 1940 Annual), whom she married December 11, 1924. She has often served as his model.

"The reserve and controlled emotional intensity which are basic elements of Georgia O'Keeffe's character, together with her choice of subject, have led her critics to indulge in a flood of heavily ornate words, embellished with personal opinion and psychological conjectures, in evaluating her work. This has led to a confused impression of a painter whose art is singularly devoid of confusion," says the *Index of Twentieth Century Artists.* Her best-known and most highly regarded studies are studies of flowers, greatly enlarged, with startling use of contrasts and relationships—jack-in-the-pulpits, calla lilies and roses painted on narrow panels with beautiful feeling for design. When Miss O'Keeffe went to Taos, New Mexico to visit Mabel Dodge Luhan, she returned with bare unadorned landscapes of desert country, fine studies of twisted trees and bones of animals bleached white by the blazing sun. She has also painted many abstractions, attempting to express emotion in terms of paint.

Georgia O'Keeffe was born on November 15, 1887 at Sun Prairie, Wisconsin, not far from Madison, of Irish and Hungarian ancestry; her parents were Francis and Ida (Totto) O'Keeffe. Both her grandmothers, Isabel Dunham Wyckoff and Mary Catherine O'Keeffe, were artists, and two of her sisters, Catherine Kleinert O'Keeffe and Ida Ten Eyck O'Keeffe, exhibit today.

Georgia O'Keeffe attended the Chatham (Virginia) Episcopal Institute, and was graduated in 1904 after two years' study; her first school was the Sacred Heart Academy at Madison, which she attended from 1900 to 1901. She also spent a year (1901-02) at the Madison High School. She studied with Vanderpoel at the Art Institute of Chicago from 1904 to 1905 and later, from 1907 to 1908, at the Art Students League in New York City with Chase, Mora and Cox. Chase awarded her the prize for still life in his class. She worked in Chicago the rest of the year and also in 1909, making drawings for advertisements. Going to the summer school at the University of Virginia in 1912, O'Keeffe studied with Alon Bement, and at Teachers College, Columbia University, she studied with Bement and Dow from 1914 to 1916. In the latter year she became supervisor of public schools at Amarillo, Texas, and a year later taught at the West Texas State Normal College.

While in Texas she sent some drawings to a friend in New York to take the place of a letter; words did not come easily to her, and she preferred painting to writing. Without her permission, the friend showed the drawings to Alfred Stieglitz, who is said to have ejaculated: "Finally a woman on paper!" So much impressed was he by their quality that he exhibited the drawings at "291," his famous gallery on Fifth Avenue. As a result, O'Keeffe abandoned teaching, came to New York again and rented a small room on 59th Street.

GEORGIA O'KEEFFE

On January 29, 1923 the first big exhibition of Georgia O'Keeffe's work was held at the Anderson Galleries, by courtesy of Mitchell Kennerley. Called "One Hundred Pictures," the exhibition had no catalog, and the pictures had no titles. In an announcement O'Keeffe stated that she had found first that though she was restrained from living where she wanted to, saying what she wanted to, doing what she wanted to, she could at least paint as she wanted to, and as she did so she found she could "say things with color and shapes that I couldn't say in any other way—things that I had no words for." The paintings were not signed because she believes that if there is any personal quality in a painting that will be signature enough. An O'Keeffe piece is usually quite unmistakable. Marsden Hartley calls them full of "utterly embedded femininity." "Her song is direct and affirmative, free of introspective agonies, devoid of feminine cringe and giggle," says Louis Kalonyme in *Creative Art,* January 1928. "An elemental freshness animates her painting. She lives openly in that feminine world furtively hidden by the Marie Laurencins."

Georgia O'Keeffe is forthright and simple, like her paintings, states Kalonyme. "A free smile curves on thin, large lips. Her face is colorless, the formation almost Chinese, painted by quietness and experience of life. Her white face is set off by the black garments she almost always wears." Dorothy Brett, one of D. H. Lawrence's disciples, describes

O'KEEFFE, GEORGIA—*Continued*

O'Keeffe as "sitting quietly, a half smile on her lips, a quizzical friendly look in her eyes, her beautiful long white hands folded in her lap, calm and quiet in her black-and-whiteness."

Georgia O'Keeffe spends much of the summer in New Mexico, though she spends part of it with her husband on a farm at Lake George, New York, where all the windows are usually uncurtained to afford an unobstructed view of the landscape. At first they lived on the lake shore, but the stench from the pigpens on the farm at the top of the hill obliged them to buy the place. This became the family home, and at one time Siteglitz and O'Keeffe lived there for months alone, she painting, he photographing.

The College of William and Mary awarded Georgia O'Keeffe an honorary doctorate in Fine Arts in 1938. She is represented by paintings in the Phillips Memorial Gallery, Washington, D. C.; the Museum of Art, Brooklyn, New York; the Cleveland Museum of Art; the Whitney Museum of American Art, the Museum of Modern Art and the Metropolitan Museum in New York City; the Tannahill Collection, in the Detroit Institute of Art; the Museum of Fine Arts, Springfield, Massachusetts; the Museum of the University of Minnesota at Minneapolis; and the Tate Gallery, London.

ORMANDY, EUGENE Nov. 18, 1899- Orchestra conductor

Address: b. Philadelphia Orchestra Assn, Girard Trust Co. Bldg, Philadelphia, Pa.

Since 1936 Eugene Ormandy has been a conductor of the Philadelphia Orchestra, one of the world's greatest orchestras, and since 1938 its musical director. To this orchestra he has brought his vital musicianship, his care for program making, his long years of musical experience.

Eugene Ormandy has been a musician all his life. Even before he was born in Budapest, Hungary his dentist father, Benjamin Ormandy, resolved that if he ever had a son he would be named after Jeno (Hungarian for Eugene) Hubay, the great violinist. His mother was Rosalie (Berger) Ormandy. At two Eugene could easily identify symphonies; almost before he could stand, he was playing on an eighth-size fiddle made especially for him. At four he interrupted a violin recital to announce loudly: "You played an F-sharp instead of an F," and at five he was admitted to the Royal Academy of Music. its youngest pupil.

Two years later Ormandy made his first public appearance and at eight entered the composition class of the well known composer, Leo Weiner, who shouted when he saw him: "Get out! This is a class for adults, not a kindergarten." Kodály, however, was not dismayed by Ormandy's youth and took him as a pupil, as did Jeno Hubay when he was 10. "My lessons with the great Hubay," he remembers, "filled my days with work and with dreams. My fingers were numb from the exercises of Kreutzer and Cramer, the showpieces of Vieuxtemps and Sarasate. I had tasted the intoxicating wine of being a 'Wunderkind,' and my whole ambition was to be a 'Wundermann' as well." At 14 he was awarded a Master's Degree from the Academy and an Artist's Diploma at 16. One year later he was made professor of music.

By this time Ormandy had already undertaken a series of tours in Germany and Austria as violin virtuoso and had studied composition, counterpoint and conducting with the outstanding Hungarian masters, Kodály, Weiner and Béla Bartók. Then came the First World War, and music was a precarious livelihood. Ormandy set out for the United States at the age of 21, lured by the promises of a too-persuasive manager who turned out to be completely untrustworthy. Ormandy found himself without a job, without money.

What he calls "difficult years" followed. Ormandy found himself a obscure violinist in a movie theatre, the Capitol, in New York

City. "It seemed," he says, "a bitter end to my young drama, but I know now that it was training of the most valuable kind." It wasn't long before he became concertmaster of this orchestra and a little later fourth assistant conductor. In a sudden emergency he was asked to conduct three movements of the Tschaikovsky *Fourth Symphony* with 15 minutes' notice. His wife, Steffy Goldner, harpist for many years with the New York Philharmonic and its only female member, heard the performance. She said later that the shock of seeing him conduct an orchestra of 85 men in a great masterpiece almost gave her heart failure. As for Ormandy himself, he says firmly that the performance "changed the course of my life." He had discovered a new instrument, "richer and more responsive than the violin."

For seven and one-half years, until 1929 when he was already a naturalized citizen, Ormandy remained at the Capitol Theatre, and during that period conducted a tremendous part of the symphonic repertoire, four or five performances a day. Conducting the same work 20 times a week was wonderful experience, he says. "It gives one opportunity to think, think, think, and to imagine new ways of bringing out the beauty of the work."

Ormandy began, too, to conduct many radio hours, work that he enjoyed, for, as he cautions musicians: "Don't be superior about the radio. Be thankful down on your knees that it has brought a whole new audience to music. People who might never have been touched by music through their whole lives, know now how much they need it, and they get it." Because of his success at the Capitol Theatre and over the radio, Ormandy was asked to conduct a New York Philharmonic Concert at the Lewisohn Stadium and in 1930 was engaged for two concerts at the Robin Hood Dell in Philadelphia. The following season he was engaged for a whole week.

In 1931 Ormandy had the honor of substituting with the Philadelphia Orchestra for Toscanini, who was ill. "The experience was unforgettable," Ormandy says. "It seemed even then like the climax of my career to lead (if only for two weeks) such an aggregation of musicians as the Philadelphia Orchestra, in the place of so distinguished a conductor as Stokowski [see sketch this issue] and as substitute for the great Toscanini."

After the Philadelphia engagement Ormandy was called to the Minneapolis Symphony Orchestra to take the place of its conductor, Willem Verbrughen (who was ill), and when it was known that Verbrughen would not be able to conduct again, Ormandy was given a four-year contract. In Minneapolis he "developed steadily and proved himself a serious, painstaking musician, a good judge of programs, with a simple, direct way of presenting them." Under him a "run-down orchestra" was made to sound "fresh and vital."

During his years in Minneapolis, Ormandy was guest conductor each year of the Philadelphia Orchestra. When Leopold Stokowski announced, in the spring of 1936, his intention of devoting a greater part of his time to research, Ormandy was appointed co-conductor with Stokowski for a three-year period. In 1938 the board of directors of the orchestra made him music director, which means that he is in charge of the orchestra's personnel, the content of the programs and the selection of guest artists and guest conductors.

Emil Rhodes

EUGENE ORMANDY

It wasn't an easy job to take over from Stokowski, to hold audiences long accustomed to the excitement which Stokowski invariably provides, but Ormandy was able to do it, with his lyric gift and "meticulous care for detail and phrasing," with his ability as a program maker. Ormandy, who has presented many new composers on his programs and has done much to popularize Bruckner's works, firmly believes that "a program must be made up of important and significant music. . . But there has to be in every program something an audience can hum on its way home."

The meticulousness Ormandy always achieves is the result of long rehearsals, in which he is "as demanding as a drill-sergeant." He seems almost to look like one, too, when he conducts. Stiffly he marches up to the stand, clicks his heels with precision and plunges the orchestra into its performance. His rather pale face may register emotion and his blond hair may wave wildly, but his stance is rigid and his bow to the audience is a brisk bending at the waist. Almost always Ormandy conducts without a score, but deprecates this ability: "I don't think it makes any difference at all. It just happens to be very easy for me to memorize and so I do it. If it were any effort I should not bother with it at all, because I do not think it affects the performance in the slightest."

Off the podium Ormandy is just as energetic as he is on it. He plays a furious game of ping pong, at which Heifetz is the only musician who can beat him, and drives his car like a demon. He is energetic even in his photography, which he loves, and dashes all over as fast as he can to get as many pictures as possible of scenery and of people.

(Continued next page)

ORR, H(IRAM) WINNETT (ôr) Mar. 17, 1877- Orthopedic surgeon

Address: b. 308 Sharp Bldg, Lincoln, Neb; h. 2701 Sheridan Blvd, Lincoln, Neb.

Anyone who ever has had a broken leg, or thinks he might some day have one, has reason to bless the name of Dr. H. Winnett Orr. His plaster-cast technique means that instead of weeks or even months of immobility, the injured person is walking a few hours after the bone is set. The first steps in this revolutionary technique were taken by Dr. Orr when he was a military surgeon in France during the First World War.

Hiram Winnett Orr was born in West Newton, Pennsylvania, the son of Andrew Wilson and Frances Josephine (Winnett) Orr, but he was reared in Nebraska and may be considered practically a Middle Westerner. He attended the University of Nebraska from 1892 to 1895, but left after his junior year and went to the medical school of the University of Michigan, where he received his M. D. degree in 1899. He immediately began practice in his home city of Lincoln, and except for absence on war duty has been there ever since.

Very early he began forging to the front of his profession. Hardly out of medical college, he became editor of the *Western Medical Review*, and remained its editor until 1906. Since 1903 he has been lecturer on the history of medicine at the medical school of the University of Nebraska. In 1908 he was chief medical inspector of the Lincoln public schools, and in 1911 he became superintendent of the Nebraska Orthopedic Hospital, holding that post until 1917. When he returned to Lincoln after the War it was as chief surgeon of the hospital, a position he still holds. He is also chief surgeon of the orthopedic department of the Lincoln General Hospital, on the orthopedic staff of Bryan Memorial Hospital (Lincoln was William Jennings Bryan's home city), and consultant in orthopedic surgery to the Veterans' Administration in Lincoln. He was editor of the *Journal of Orthopedic Surgery* from 1919 to 1921.

It was therefore not as a narrowly experienced or unknown surgeon that he went to France in 1918 as a major in the Medical Corps of the A. E. F. He was not inexperienced as an officer, either, since he was a captain in the Medical Reserve Corps in 1917. He was relieved from duty in 1919 with the rank of lieutenant colonel. He is now a colonel in the Medical Corps of the Reserve, and may be called back to active duty at any time, despite his age; meanwhile he has a special assignment as consultant in orthopedic surgery. Before being sent to France he was for more than a year on duty at the Welsh Metropolitan War Hospital, near Cardiff.

It was in Wales, and later in France, that Dr. Orr started his "revolution in surgery." Perhaps the best known name in war surgery at the time was that of Dr. Alexis Carrel (see sketch 1940 Annual). Carrel's technique in treating war wounds was based on the expectation that they would all be infected; he treated them by frequent dressing, drainage and irrigation with antiseptics, chiefly the so-called Carrel-Dakin solution. Dr. Orr, whose primary concern was with broken bones (so frequently involved in war injuries), horrified his colleagues by giving one thorough cleaning to the wound, then packing it with gauze (soaked in petroleum to avoid sticking) and immobilizing it, together with the fracture, in a plaster cast. The odor arising from the pus-soaked casts was not reassuring. But in nearly every case, when the casts were changed after three or four weeks, infection had been eliminated and healing had begun. During the Spanish Civil War, 1,073 wounded in Barcelona were treated by the Orr technique, and only six died. Since the First World War, Dr. Orr has been practicing and demonstrating his method in Lincoln, and if the United States enters the Second World War, there is no doubt that the Orr technique will be widely applied. Even in osteomyelitis, which involves infection of the bone, he scrapes the infected bone and then immobilizes it. In simple fractures he insures use of the limb by the employment of traction pins to hold the fracture set.

As a crusader for his technique, Dr. Orr has written hundreds of articles and pamphlets. He has written books on the subject, too: *The Treatment of Osteomyelitis and Other Infected Wounds by Drainage and Rest* (1927); *Osteomyelitis and Compound Fractures* (1928), originally lectures given at the Mayo Brothers' Clinic; *Osteomyelitis and Compound Fractures and Other Infected Wounds* (1929); *A New Era in the Treatment of Osteomyelitis and Other Infections* (1930), first given as the Beaumont Lecture in Detroit. He contributed the section on osteomyelitis to the *Sajous Cyclopaedia* in 1931, and addressed the British Medical Association on the same subject in Dublin in 1933.

Where Dr. Orr finds the energy for all his activities is a mystery, for he is one of the busiest of surgeons. He is also a "joiner," and has held office in numerous professional societies. He was librarian of the Nebraska State Medical Association from 1900 to 1912,

DR. H. WINNETT ORR

its secretary in 1907 and its president in 1919; secretary of the American Orthopedic Association from 1915 to 1917 and its president in 1936; secretary of the Central States Orthopedic Society 1913 to 1917; chairman of the Orthopedic Section of the American Medical Association in 1921. He belongs to five other medical societies and three clubs. He has also written *History of the Nebraska State Medical Society* (1903); *The Rights of the Patient* (1920); and *A Civilian Surgeon's Story of the Great War* (1921).

On September 7, 1904, Dr. Orr married Grace Douglas, of Grinnell, Iowa, and they have two sons and three daughters. A slender, bespectacled man, now almost entirely bald, with a smooth-shaven, serious face, he lives very quietly, with little leisure for interests outside his profession. His hobby is the collecting of rare medical books, and he has one of the finest collections of these in existence. They fill the library of his Sheridan Boulevard home. Regularly, to the Nebraska Orthopedic Hospital, come visiting surgeons from all over the country (before the outbreak of the present War, from all over the world), to have Dr. Orr demonstrate to them his plaster-cast technique. Once confined to his own practice, it is now in wide use, and its proponents acclaim its simplicity and its prevention of dangerous complications. It is conceivable that thousands of American ex-soldiers may some day owe their normal health and lives, instead of long years of a crippled existence, to the theories and experiments of a modest yet far-seeing and aggressive surgeon from a small city in the Midwest.

ORTON, HELEN FULLER Nov. 1, 1872-
Author

Address: 37-05 88th St, Jackson Heights, Long Island, New York City

Helen Fuller Orton is the author of more than 20 books for children. Her two latest books are *Mystery at the Little Red Schoolhouse* (1941) and *The Brave Frontier* (1940) which is an "historical novel of Revolutionary times for younger readers, describing the defense of the Schoharie farmers in the New York Colony."

Many of Mrs Orton's books are founded on her memories of the farm 12 miles from Niagara Falls, New York, where she spent her childhood. She writes: "Our rambling farmhouse stood at the end of a long lane and was surrounded by apple orchards on three sides. In the village of Sanborn, a mile south, the family got the mail and the groceries, had the horses shod and took the train for the city. In the village of Pekin, a mile north, we went to church and to school." She was such a frail child that she was taught at home in her early years. Her favorite studies were Latin, literature and history. She also loved music. The family were not able to have many books, but those they had she read and reread—a few of poetry, Shakespeare in one volume, American history, some of the standard novels, volumes of old *Atlantic Monthly's* and *Ladies' Repository's* and the Bible. There were few children's books in the house, but there was fine reading in the *Youth's Companion* and *St. Nicholas*.

Both her father, Merritt Bond Fuller, and her mother, Lucy (Taylor) Fuller, had taught school before their marriage. Her father farmed in the summer and taught in winter. He was a firm believer in Latin as an essential part in education. Mrs. Orton had two brothers, younger than herself, and one older sister. Her ancestors, all English, were pioneers who stayed a generation or two in one locality and then moved westward, mostly by way of the Mohawk Valley. One, her great-great-grandfather, settled in the Wyoming Valley of Pennsylvania just in time to be caught in the Wyoming Massacre.

After her graduation from high school, Mrs. Orton taught for two years. She married Jesse F. Orton in 1895—he was at that time both teaching and studying at the University of Michigan. They lived in Ann Arbor for two years while he finished his law course. After living in Grand Rapids for several years they moved to New York in 1908. They have four sons: Malcolm, Lawrence, Douglas, Robert. Mrs. Orton is a Protestant, a member of several clubs and associations, is particularly interested in the early history of New York State, and gives occasional lectures on that subject and on the writing of children's books. It was at the suggestion of a young son, who loved to listen to her bedtime stories, that she wrote out her first stories and submitted them to a publisher. These stories were published in 1921 under the title *Prince and Rover of Cloverfield Farm*. Children at once took to the book. Since then she has been writing constantly, at the rate of about one book a

HELEN FULLER ORTON

year. Animal stories followed the Cloverfield Farm series; then came two whimsical tales. Since 1930 Mrs. Orton has written mostly stories with an historical background, such as *The Secret of the Rosewood Box* (1937); *The Treasure in the Little Trunk* (1932); *The Gold-Laced Coat* (1934); *Hoof-Beats of Freedom* (1936); and *A Lad of Old Williamsburg* (1938). Her first "modern" story was *Knights of the Snowstorm* (1939).

OSBORN, FREDERICK (HENRY) Mar. 21, 1889- Chief of the Morale Branch, United States Army

Address: b. War Department, Washington, D. C.; h. Garrison, N. Y.

The tallest general in the Army (six feet, eight inches) is Frederick Osborn, appointed chief of the Morale Branch of the War Department by President Roosevelt in September 1941 to meet the criticism that "Army morale has been impaired." He is also probably the general with the least fighting experience. A civilian who never actually served in the Army itself, Brigadier General (the rank is temporary) Osborn is the first to admit that he's no "military" man. There are a number of both military and non-military men who think that is a positive recommendation for the morale director of a largely drafted army.

Like President Roosevelt, to whom he has long been friend and neighbor, Frederick Henry Osborn is a Hudson River squire whose family of lawyers, railroad magnates and philanthropists have lived on the Hudson for a hundred years. "If I have never been in the Army before," he says, "at least I was born in plain sight of West Point." As a matter of fact, Osborn was born in New York City on March 21, 1889, but the estate of his parents, William Church and Alice C. H. (Dodge) Osborn, on which his own house is now built, overlooks the Hudson just above Garrison.

His father, lawyer and president of the Metropolitan Museum of Art, has always been a champion of worthy causes, among them the valiant defense of Hudson River scenery from stoneblasting corporations. His uncle, the late Henry Fairfield Osborn, paleontologist, was noted in the scientific world, and Frederick as a boy often discussed problems of heredity with him. The nephew, however, in his book, *Preface to Eugenics* (1940), was to refute his uncle's belief that Anglo-Saxons are "God's special gift to earth" and that the "unfit" should be weeded out of society.

After attending the Browning School in New York City, Frederick Osborn entered Princeton, where he was graduated in 1910 with a Phi Beta Kappa key. A year with mining outfits in Alaska and Arizona followed, and then, during the college year 1911 to 1912 he did post-graduate work at Trinity College, Cambridge. In the fall of that same year his career in business management started, and in 1914, the year in which he was married to Margaret L. Schieffelin of New York City, he was made treasurer and vice-president in charge of traffic of the Detroit, Toledo and Ironton Railroad.

During the First World War, Osborn got some training for his present task, setting up field hospitals with the Red Cross. He returned from Europe, sold the railroad with which he had been associated to Henry Ford at a good profit, and busied himself in a number of enterprises. From 1921 until his retirement some 10 years later General Osborn was a partner of G. M. P. Murphy and Company, New York bankers. He has also been president of American Vitamins, Inc., chairman of the board of Colprovia Roads, Inc., and director of the Inter-continental Rubber Company, the Fifth Avenue Bank, the Panama Railroad and Steamship Company and Schieffelin and Company.

Through all his business career Frederick Osborn had been interested in the field of science. For many years—since his undergraduate days, in fact—he had studied the problems of heredity and environment, and after his retirement he began to devote himself to them full time. In 1933 he was editor of *Heredity and Environment*, in 1934 he was joint author with F. Lorimer of *The Dynamics of Population* and in 1940 his *Preface to Eugenics*, "a solid work packed with the results of painstaking inquiry and bristling with statistics," was published. In this book he took up the problem of genetic inheritance and stated his belief that voluntary population control is as much an earmark of sound eugenics as it is of democracy, while genetic plans in the hands of dictatorial power are dangerous and "not eugenic." He believes there should be freedom (with the aid of services to mothers and children by the state) for responsible parents to have children without having them an economic burden. He believes, too, from his studies of population decline, that it is highly necessary for "privileged" individuals to produce more children, and he has practiced what he preaches. The Frederick Osborns have a family of four daughters and two sons: Frederick, Margaret Louisa, John Jay, Alice Dodge, Virginia Sturges and Cynthia.

This eugenist, population expert, conservationist, business researcher, corporation executive, banker, art connoisseur and traffic expert came to Washington in 1940 as a dollar-a-year man: consultant on population with the division of statistical standards in the Bureau of the Budget. The day after he settled down in this job he was called by President Roosevelt to head the newly appointed civilian advisory committee to assist in the Selective Service Program. It then became his task to see to regulations covering deferments for men with dependents, men in vital occupations and conscientious objectors.

His next job came on January 9, 1941 when Secretary of War Stimson made him chairman of the Joint Army and Navy Committee for Welfare and Recreation. He served on it with two other very tall men, Robert E. Sherwood and Clarence A. Dykstra (see sketch this issue). When his present appointment came in September of that same year he simply moved across the hall in the War Department to carry on essentially the same work, this time "with a star on his shoulder."

He said of his appointment: "I am in charge of the Army Morale branch, but that doesn't really control army morale. That is determined primarily by the leadership offered by the officers and by the attitude of the country in general." He added: "My branch is in charge of morale in the sense that we are to provide for the leisure time and recreation of soldiers in camp. We are a policy-making group, to advise commanding officers who are in charge of recreation at posts." This means that General Osborn is in charge of Army post exchanges, "one of the country's largest retail businesses"; of the motion-picture service, Army hostesses, guest houses, athletic offices and recreational facilities; of correspondence courses and lectures. And he will give advice and formulate plans for recreation. As a scientist he is particularly interested in the research and analysis section of his branch and intends to get at "the facts which are basic in morale problems" and extract "from the knowledge thus assembled more effective methods of dealing with these problems as they arise"—the problems of "the individual man and the way his relations with other men in the group affect his behavior."

Osborn is a research associate in anthropology at the Museum of Natural History, New York, of which he is also a trustee. He is chairman of the Council on Population Policy, a director in the American Population Association of the United States, the American Eugenics Society and the Association for Research in Human Heredity. He is, further, a member of the Palisades Interstate Park Commission, a trustee in the Carnegie Corporation, New York, director of the National Health Council and trustee of Lingnan University of Canton, China.

U.S. Army Signal Corps.

FREDERICK OSBORN

The tall, eye-arresting brigadier general is "very lean and dark, with a thatch of iron-gray hair becoming his 52 years and a little over. He wears his inches negligently and his manner is easy and reassuringly unassuming." He has not, as yet, put on his uniform. Mrs. Osborn does not dispute the assertion that it would take a lot of "tailor's fixin's" to turn him out a "complete soldier from tip to toe." But if "morale" begins at home, the six tall sons and daughters of General Osborn, as well as his wife, are willing to testify that, with the Osborn family at least, it is excellent. And Mrs. Osborn is witness to the fact that, although her husband is a mild mannered enough man, he believes firmly in what he is doing. "The other day in Washington," she said, "General Hershey [see sketch this issue] offered to give me a lift home. 'How about your husband,' he asked, 'will he come along?' I answered that my husband said he was going to walk. And General Hershey's reply was: 'If he says he's going to walk, he is going to walk.'"

OTT, MEL(VIN THOMAS) Mar. 2, 1909- Baseball player; manager of New York Giants

Address: b. New York Giants, Polo Grounds, New York City; h. Metairie, La.

Bulletin: On December 2, 1941 Mel Ott signed a 2-year contract as new manager of the New York Giants.

From July 1941 issue:

On May 22, 1941 Mel Ott of the New York Giants hit two home runs in a game at Cincinnati, the ninth and tenth such runs, respectively, of the 1941 baseball season; on June 15, in a game against the Cincinnati Reds, he exploded his sixteenth. These carried his record—a National League record for the most lifetime home runs—onward and upward past the 400 mark. Ott has also led the National League in homers five times. More remarkable still, the "Mighty Mite" has spent his entire career in big-time baseball, with no previous apprenticeship in minor leagues. He reported to Manager John McGraw back in 1925, and has been with the Giants ever since.

Besides being one of the greatest home-run hitters in the history of baseball, Ott has few peers as an outfielder. As a sports writer in *Scholastic* points out: "He is particularly famous for two tricks. On a long fly over his head, he can take one look at the ball, turn his back and run to the exact spot the ball will drop! He owns a buggy whip for an arm and can run a country mile for a fly. The other uncanny gift is for playing rebounds off the Polo Grounds' fences. He judges angles like an Einstein. Where other fielders go crazy playing caroms, Ott picks the hardest smashes off the wall on one or two bounces."

The highlights of Ott's career, as enumerated to sports writer Harold Kaese by the Mighty Mite himself, are: Hitting for the cycle (single, double, triple, homer) in Boston against the Braves on May 16, 1929, one of baseball's rarer feats. Hitting three home runs in a game against the Boston Braves at the Polo Grounds, New York, on August 31, 1930. Scoring six runs in a game on August 4, 1934. Being chosen on every National League All-Star Team except that of 1933 and setting a National League record for double plays (12) by an outfielder in 1929.

Ott was handed another and less desirable record in 1938 when he was hit three times by a pitched ball. He has also drawn more than 1,230 bases-on-balls or about one pass every seven times at bat, another National League record.

Exceptionally small as big-league sluggers go, Mel Ott has been called "the smallest fence buster the game has known." He stands five feet nine inches, and weighs 172 pounds. (Babe Ruth, Jimmy Foxx, Hack Wilson, Hank Greenberg, Rudy York, Johnny Mize and the late Lou Gehrig, other famous home-run kings, stood inches taller or were pounds heavier.) He has brown eyes, a square jaw, an uptilted nose, an equable disposition. He married Mildred Mattigny, a New Orleans girl, in 1930, and has two daughters, Lyn and Barbara Ann.

Like Mrs. Ott, Mel Ott is a product of Louisiana. He was born in Gretna, Louisiana, a small town just across the Mississippi River from New Orleans, on March 2, 1909. His father, Charles Ott, had been working for an oil refinery for some years; he and his brother were both good semi-professional ball players. Melvin Thomas was the second in a family of children which included Marguerite, the eldest, and a younger brother, Charles. He was taken out to the ball park before he could walk. At high school he played a little football and a lot of basketball, and also some semi-professional baseball around home and in Patterson, Louisiana. He toughened his muscles by fishing and hunting.

Finally, when Mel was 15, his boss, Harry P. Williams, a lumber man, sent him to New York to see "Jawn" McGraw, manager of the Giants. "The white-haired, fire-eating manager took one look at Mel squatting behind the plate and shook his head at the idea that Mel was a catcher. But, after watching him at bat, McGraw was sold." He probably wouldn't have been had he known Mel's real age, but the cagey recruit cheerfully lied about that. When Mel left Gretna for the Polo Grounds he weighed one hundred-sixty pounds, stood five feet seven inches, and had just celebrated his sixteenth birthday.

Ott reported to the Giants as a catcher, but it was not long before he was practicing in the outfield. In a few weeks McGraw stated: "Ott is the most natural hitter I ever saw. His style at the plate is perfect." The Giants finished second to the Pittsburgh Pirates in 1925, and Ott had not played in a single game, even to pinch-hit. Next year, when the team finished fifth, Ott had played 35 games and batted .383, but had not made a single home run. He spent the winter with rod and gun in Louisiana, and then McGraw took him to Hot Springs, Arkansas, to teach him to play second base. After a period of preparation McGraw announced that Ott was being carried as a reserve infielder. He got his chance at second base when he replaced Andy Cohen, and proved "steady but not sensational." McGraw decided that from then on Ott should play when right-handed pitchers were working against the Giants.

Ott batted only .282, his lowest average, in 1927, but the next year he drove home 77 runs and batted .322. Eighteen of these runs were homers. Ott says that his best season was in 1929, when he hit 42 home runs, his record total, and drove in 151 runs, also his best. The Giants finished third that season. In 1930 Mel batted .349. He fell under the significant .300 figure in 1931, 1933, 1937 and 1940; but for eight consecutive years, 1929 to 1936, he batted in over 100 runs for the Giants, and in 1937 fell short by only five. "I'd rather be a good hitter in the pinch than a high average hitter," is Ott's philosophy.

Bill Terry succeeded McGraw as manager in 1932. The next year came Ott's greatest thrill, when the Giants won from the Washington Senators. On his first time at bat, Ott "exploded a 400-foot home run into the lower right-field stands at the Polo Grounds with Joe Moore on base to send the Giants away to a 2-0 lead in the first inning." He hit homers on both his first and last times at bat, and the second one, a home run into the left center-field bleachers at Griffith Stadium, won the Series for the Giants (Ott's first World Series). In 1934 he batted in 135 runs to lead the National League. Though he hit home runs in both 1936 and 1937 World Series, his team was smothered by the Yankees. In 1936 Ott played 60 games at third base, where 10 errors brought his fielding average for the position down to .740. With his short, stocky frame he was not sufficiently nimble and agile to be an outstanding third baseman. In 1937, when the Giants won the pennant again, Ott played 113 games at "the hot corner" and brought up his fielding average to .971. In 1938 he was able once again to return to the outfield.

Ott is "probably the most unorthodox batter in baseball." The average slugger takes a low step toward the pitcher and swings right from the shoulder. Mel stands as close to the plate as the rules allow, with his toes no further than six inches away. A left-handed batsman, he gives a peculiar hitch, a sort of goose step, when he steps to meet the pitcher, and lifts his right foot stiffly, lowering his bat before stepping forward to bring the bat back to connect for another home run. For those unlucky wights who can't go to see this peculiar but effective performance, the National League has made a film, *Winning Baseball.* Mel thinks that this particular stance gives him more driving power.

New York Giants

MEL OTT

Ott's "pleasant disposition, fine competitive spirit, stability of character, and inherent versatility" make him popular with his teammates as well as with the fans.

OTTO OF AUSTRIA, ARCHDUKE Nov. 20, 1912- Pretender to Austro-Hungarian throne

Address: Essex House Hotel, 160 Central Park South, New York City

Among the royal exiles who have found a refuge and a welcome in the United States is an unusually good-looking young man, dark-haired, dapper, with a closely-trimmed mustache and a habit of looking over your head when he talks. Neither his memory nor his mother has ever allowed him to forget that he is Franz Joseph Otto Robert Maria Anton Karl Maximilian Heinrich Sixtus Xavier Renatus Ludwig Gaetan Pius Ignatius von Hapsburg-Lorraine, who (if the First World War had never happened) might today be Emperor of Austria and King of Hungary,

Weitzmann

ARCHDUKE OTTO OF AUSTRIA

Bohemia, Dalmatia, Croatia, Slavonia, Galicia, Illyria and other places which exist only on 1918 maps. Although "Archduke Otto" is a little simpler for Americans to remember, and the Nazis have maliciously dubbed him "Otto the Last," since the beginning of the Second World War there have been rumors that a British victory in Europe might mean a Hapsburg restoration. One writer says of this hopeful exile: "Otto is like a handsome young actor awaiting his cue in the wings of the European theatre."

It is true that he has been awaiting that cue for a long time. But it is also true that Otto's mother, Zita de Bourbon-Parma, a cousin of the late Alfonso of Spain, has been faithfully prompting him. It was 1911 when she married Archduke Karl of Hapsburg, nephew of Franz Josef, wartime Emperor of Austria. (Archduke Otto was born in Reichenau the next year.) It was November 21, 1916 when the elderly Franz Josef died and her husband succeeded to the throne as Charles IV. It was the latter part of 1918 when, on a visit to Hungary, the royal family received reports of a revolution in Fiume, following the rout and disintegration of the Austro-Hungarian Armies, and returned hastily to Vienna. The revolution soon spread to Austria, and in 1919 Charles was deposed and exiled with his family. Yet the Empress Zita has never lost hope of a triumphant return to Austria.

At first the royal family took refuge in Switzerland, shortly after a republican government was established in Austria. Charles made two attempts to regain his crown with the aid of monarchist groups, in 1921 reaching the suburbs of Budapest with an army. He was promptly banished with his family to Funchal in the Portuguese island of Madeira, on the west coast of Africa, where they lived in poverty until Charles died. That was April 1, 1922, and on that date Otto became the legitimate ruler of Austria and Hungary.

He was a ruler whom no country would admit but Spain, but that didn't matter. He was offered a villa in the fishing village of Lequeitio on the Bay of Biscay, paid for by 200 Spanish grandees, and Zita brought her family there. There Otto was still addressed as "Your Majesty," and his imperial education continued under private tutors, including two monks. He learned to speak Hungarian, German, French, English, Spanish, Basque, Croation, Czech and "300 words of Finnish," and he prepared for the University.

After several years in Spain, the Hapsburgs finally left their pleasant villa for Castle Steenockerzeel in Belgium so that Otto could attend the University of Louvain in Brussels. There he specialized in political science, economics, financial and budgetary matters. He passed his examination for the degree of Doctor of Political and Social Sciences in 1935, writing a 358-page thesis on Customs and Successoral Rights of the Peasant Class and the Indivision of Rural Estates in Austria. It was full of tactful praise for the peasant class.

In the meanwhile things were looking more hopeful for the Hapsburgs in Austria in spite of the bitter opposition of Czechs, Serbs and Romanians to the mere thought of their restoration. Both before the murder of Dollfuss and after, there was talk of a *coup d'état*. In May 1934 the Austrian Constitution set up Roman Catholicism (the religion of the Hapsburgs) as the privileged church and provided for a President who would have powers as absolute as those Franz Josef had wielded over Austria-Hungary. In 1935 a law was enacted ordering some property returned to Otto and his family, including five Vienna apartment houses, thirteen castles, and estates whose combined rents had aided war cripples after the property was seized in 1919. At about the same time the "anti-Hapsburg" laws were abolished and the monument to the Republic on the Ringstrasse removed. Advocates of a Hapsburg restoration—and Otto himself—insisted that it was the only way to prevent forever an Austro-German *Anschluss*.

The time grew ripe, Otto thought. In June 1936 Otto's Monarchist organization published a letter from him in which he announced: "It is high time for decisive action. I am ready at any hour to return to the Fatherland." It was in 1936, too, that he said in an interview: "There are only two roads which are open: those to Monarchism, or to National Socialism. There is no room in my country for a liberal movement. . . Austria must be kept free of a discontented proletariat and the radical element which makes it so." There were also negotiations going on with foreign governments. A rumor that Otto would marry Princess Maria of Savoy, youngest daughter of the King of Italy, was considered a sign of Mussolini's approval of the restoration;

it was quickly quashed. And a mere unannounced visit by Otto to France would bring about the exchange of "a whole batch of agitated telegrams between Paris and other European capitals."

Nevertheless, as everyone knows, what happened was not a *coup d'état* by Otto, but a *coup d'état* by Hitler. The *Anschluss* of March 1938 entirely changed the picture for the young pretender. His estates were taken away again by the Nazis; a price was on his head throughout the Reich; and Hungary, his last hope, finally joined the Axis.

A mere King might have been disheartened; not an Emperor. In March 1940 when Otto arrived in the United States, traveling as "Otto de Bar," it was with a "tacit French blessing"; and it was reported that he hoped to enlist the support of American Catholics in another campaign for the Austrian throne. During his visit he lunched with Archbishop Francis Spellman, he had tea with the President and Mrs. Roosevelt; he chatted with J. P. Morgan; his retinue spoke of "meetings with Wall Street financiers, industrialists and others"; Alfred Duff Cooper intimated that conservative British opinion wouldn't be averse to a restored Hapsburg throne.

Yet Otto himself professed more enthusiasm for sight-seeing—the Statue of Liberty, New York City's La Guardia, and subway rides. He was here, he said, merely to study democracy, and advocated a federation of central European states after the War for which the Constitution of the United States should serve as a model—"a constitutional monarchy that will have democratic institutions." "I am sure that Austrian sentiment is with me," he said; though suspicious Czechs here remained openly unconvinced of the purity of his intentions and the vigor of his democratic faith. They were probably relieved when he left once more for Belgium in April. He was there until the Nazi invasion, when the imperial family fled to France.

Since the fall of France, Otto and his family have once more taken refuge in the United States. He predicts the present War will end with revolution in Austria, which will then spread to Bohemia-Moravia, Slovakia, Poland and the rest of Greater Germany. "Hitler will be beaten—the question is, when?" He expresses his desire to aid actively in plans for the resettlement of European Catholic refugees in the Dominican Republic. He continues to praise democracy. And he continues to talk of his Danubian Federation. He is popular in Washington, but doesn't stay in any one place very long. In March 1941 he slipped across the Mexican border, reportedly to confer with Austrian refugees there, and proceeded on a lecture tour of the Deep South and the West. (He had already lectured at Johns Hopkins, Fordham, Dartmouth and many other universities.) By June he was in Hollywood.

Otto gives the appearance of being a more than usually Eligible Young Man. He wears dark, conservative clothes, perfectly tailored; he speaks beautiful English; he never goes to night clubs, seldom to hotels and restaurants, attends only parties and receptions given by "persons of whose political and social standing he is sure"; he is a good golfer and tennis player, a "fair skier," refuses to dance simply because he is "out of practice"; he is a painstaking correspondent and reader of newspapers and books on politics; he prefers jazz to classical music, especially Wagner's, which is "too loud to sleep to"; he loves hunting, and was formerly addicted to auto racing and stamp collecting. But appearances are without doubt deceptive in the case of the author of *Letters from Exile*. The Empress Zita may or may not have said: "Even if my son is reduced to having only one servant, that one must call him 'Your Majesty.'" But surely she hopes that some day all the world will call him that.

OUMANSKY, CONSTANTINE (ALEXANDROVITCH) (o͞o-män′skė kŏn-stȧn-tēn′)

May 14, 1902- Former Soviet Ambassador to the United States; director general of Tass, Soviet News Agency

Address: c/o Tass News Agency, Moscow, U. S. S. R.

On November 6, 1941 Constantine Oumansky was replaced by his former patron, Maxim Litvinov (see sketch this issue), as Soviet Ambassador to the United States. The man who had had the difficult job of representing his country in the United States during one of the coldest periods in the history of United States-Soviet relations, Oumansky was eminently qualified for his new position as director general of *Tass*, the Soviet news agency. On November 13 he was also appointed to the collegium of the Foreign Commissariat's governing board, the arm of the Soviet Foreign Office that acts in an advisory capacity on matters of foreign policies.

Few people doubted that the short, chubby, nearsighted Soviet official would continue to carry out efficiently the orders of his Government—as he has carried them out, unpurged, for the major part of his 39 years. Constantine Oumansky was born in Nikolaev, Russia, of obscure parents. While at high school his studies were interrupted by the 1917 Revolution and on its crest he landed in Moscow. There he attended the university and was graduated in 1921.

While still at the University of Moscow, Oumansky was doing journalistic work, and from 1918 on he worked for *Tass*, Soviet new agency, while spending his period of

CONSTANTINE OUMANSKY

military service as a diplomatic courier. In 1922, aided by his gift for languages, he became foreign editor of *Tass* and later its correspondent in Rome. From Rome he went to Paris, where he acted as manager of *Tass'* bureau.

In 1930 Oumansky was promoted to chief of the Press Division of the Commissariat of Foreign Affairs in Moscow, according to an unfriendly writer in the *American Mercury* "the least liked of the censors there," and the kind of ambitious young fellow who knows the right people, says the correct thing and holds correct, up-to-the-minute views. "Short garrulous, dapper he would smile ingratiatingly as he used his blue censor's pencil with abandon." In this position he frequently had the job of greeting distinguished foreigners, especially writers. In it, too, he was often attached to Soviet delegations in international conferences, particularly in Geneva, where he got to know Litvinov well.

In 1933 Oumansky accompanied Litvinov to the United States to help with the consideration of diplomatic relations between the United States and the Soviet Union. Three years later he became attached to the Soviet Embassy in Washington, and when former Ambassador A. A. Troyanovsky returned to Moscow in June 1938 Oumansky was made chargé d'affaires. On May 10, 1939, four days before his thirty-seventh birthday, he became Ambassador, the youngest envoy in Washington from a major power.

Three months later the Nazi-Soviet nonaggression pact complicated his task. Then came the Russo-Finnish War. The attitude of officials of the United States State Department (always free from excessive warmth) dropped below zero in friendliness toward Russia. American public opinion was almost unanimously anti-Soviet. A "moral embargo" was placed on exports to Russia. Reporters kept questioning Oumansky about the late General Krivitsky's picture of him as a member of the Soviet secret police. After the Soviet Union absorbed Estonia, Latvia and Lithuania the United States, refusing to recognize the act, held Baltic ships in American ports. Protests were in vain.

Since the summer of 1940, however, Oumansky and Under-Secretary of State Sumner Welles had been repeatedly though interruptedly engaged in conferences, presumably in an effort to establish more harmonious relations between their countries. The conversations seemed to be bearing some fruit. In January 1941 the "moral embargo" was lifted. In March, Welles expressed his pleasure over assurances given by the Kremlin to Turkey. But the most reliable barometer of United States-Soviet relations had for some time been the quantity of machine tools released for export to Russia, and actually none were released during the first months of 1941. By April *PM's* Leonard Engel was writing: "Moscow and Washington now seem . . . to be on about as bad terms as possible without recall of an envoy." By May, Oumansky had almost given up hope, but was still lodging formal protests.

Only the German invasion of Russia a month later changed this situation, and changed it overnight. Where once the Soviet Ambassador, "tight-lipped and stern," had protested American restrictions and American policy, from June 1941 on he smilingly presented Russian requests on purchasing and aid and found them granted.

Oumansky, it is said, "has a keen mind, is inherently serious and inclined to miss humorous nuances." His favorite sport is horseback riding, and indoors it is contestable whether he prefers reading or playing Russian music over and over on his victrola. He has great confidence in his country. On June 23 his statement on the War read, in part: "Today ours is a nation of a moral and political unity and strength unknown in the past. . . Hitler's attack on my country will be crushed." This "enthusiasm for the Russian ideal" is, however, "blended with genuine admiration for American industry." He speaks excellent English, and during the earlier years of his stay in the United States traveled all over the country, speaking at many universities and in public forums.

During the period in which he was Ambassador, Oumansky's relations with the State Department were always very correct. So was his social life. Ambassador and Mrs. Oumansky (they have a daughter Nina) were well known for the respectable and fashionable entertainments they gave in the Soviet Embassy —badly attended in 1939, 1940 and the early part of 1941, well attended after June 1941. At them Mr. Oumansky's polished manners and his ready wit caused many a surprised guest to exclaim in an undertone: "But he doesn't seem like a Bolshevik."

PACELLI, EUGENIO See Pius XII, Pope

PACKARD, ELEANOR Sept. 4, 1905- War correspondent

Address: b. United Press Assn, 220 E. 42nd St, New York City

The only ace woman war correspondent for the United Press, Eleanor Packard is said to have covered more warfare than any other newspaperwoman. After the outbreak of Italo-Greek hostilities she began cabling her dispatches from Rome. But this was not her first experience of the kind. When Mussolini's troops entered Albania (Good Friday 1939) Mrs. Packard flew to Tirana ahead of the Fascist invaders and watched the entire process of the Italian occupation of the Albanian capital. Her dispatches carried an eyewitness account of developments, and she made an international radio broadcast from the scene.

ELEANOR PACKARD

Concerning this important news event, following her landing at Tirana, she cabled: "I had been in Albania only two days when a messenger from the American Legation knocked on the door of the funny little Moslem hotel where the chambermaids wear harem trousers. It was just dawn. He said I must come to the Legation immediately for safety, as the Italians had just landed. Instead I went to the telegraph office, rounding up en route all the details I could. . . All that day I was busy automobiling everywhere . . . even got down toward Durazzo whence the Italians were marching toward Tirana. I returned to watch the Zog government depart at 5 p. m., as shooting broke out in the capital. During this firing I jumped, grasshopper fashion, down the streets and was nearly mowed down by one volley from an Albanian chimney-pot fortress as I was ducking into the post office to file another story. You get scared about things like that after they're over."

Mrs. Packard's remarkable career as a full-time war correspondent is the more amazing because she did not begin her work in journalism until 1930. In that year she went to Paris, where she met and married Reynolds Packard of the United Press Staff. Their honeymoon included an assignment in Vienna and a voyage to the South Seas. Since then her assignments have carried her around the world and onto four continents.

Although born in New York City, Eleanor Newell Cryan, daughter of A. N. Cryan, was brought up on a ranch near Yakima, Washington. She first attended the University of Washington, then came East to the Columbia School of Journalism, where she received her B. L. degree in 1927. During the early years of her marriage Mrs. Packard accompanied her husband on his round-the-world assignments and

PACKARD, ELEANOR—*Continued*

collaborated with him in getting stories, free-lancing a bit at the same time "on her own." Their "song-and-dance" act in international journalism became famous at the outbreak of the Sino-Japanese War, when the Packards were transferred to Shanghai. China is a big country to cover—far too big for two to do the job hand in hand. So there were several occasions when the Packards were hundreds of miles apart for weeks at a time. Often filing her stories quite independently of her husband, Mrs. Packard became a full-time war correspondent in her own right.

Eleanor Packard herself covered the bitter student riots in Cairo. And she was the only woman correspondent to cover the Ethiopian War. Then came the days of the tragic Spanish Civil War, when she went into the trenches and front lines there for vivid eyewitness copy. "It was a grim journalistic picnic when I covered the attacks on Madrid," she wrote. "I stayed at the hotel Talavera de la Reina and daily drove 90 miles to the front lines. With other correspondents I perched on top of windmills or behind chimneys, in deserted suburban villas surrounded by once-beautiful gardens now filled with the rubble of war, dead bodies, shrapnel-broken furniture and torn clothing. Every time we poked our heads out too far, the Madrid sharpshooters' bullets buzzed over us like wasps. Sometimes we all got together in the basement of some villa and munched Spanish omelets made into sandwiches and drank *vino* squirted into our mouths from goatskin *botas*. The best time of day, of course, was when we left for home. Even then we were afraid our way had been cut [off] or that we would be under fire."

In 1938 the Packards moved to Geneva. But when Hitler began making demands on Czechoslovakia Mrs. Packard was assigned to the Sudetan trouble zone. She filed brilliant exclusive stories on the Czech crisis and an eyewitness account of the German march into that country following the "peace" of Munich. After a brief interlude in Spain, Reynolds Packard became the U. P.'s bureau manager in Rome. Mrs. Packard was thus on the spot when Italy's Albanian invasion began.

Eleanor Packard has been described as "large, inclined toward stoutishness." She is much too busy as a war correspondent, she says, to pay attention to her figure. But she is capable of meeting rigorous physical exigencies on any occasion. If a story demands "shinnying down a drain pipe from a third floor window, Eleanor will shinny down the drain. If the story requires her to set out in a station wagon with bedding, food, water and equipment for a trip into the Egyptian desert, she'll go—even if she has to go alone. . . Eleanor Packard has made a success of a man's business because she asks and accepts no favors for her sex. She meets newsmen on their own ground, and her ability is thoroughly recognized and admired by the male press corps. She can take a beating on a story as well as any man in the business—and get a scoop as well as any man."

PALENCIA, ISABEL DE (pä-lĕnth'-ē-ä) June 12, 1881- Spanish author; lecturer
Address: h. Avenida Mexico 113, Mexico City, Mexico

"No one who has not been an exile, or, worse still, a refugee, can have an adequate idea of what it means. The first strange impression is to find oneself adrift in the world with only one's clothes packed in a box or in a couple of suitcases—that is, if one has been lucky enough to have even them. . . House-owners are, as a rule, suspicious of refugees. . . Now they are considered outlaws of a sort when, as in the case of the Spanish refugees, they had to go into exile because they observed and defended the law of their land."

Those are the words of Isabel de Palencia, "a slight, graying woman with keenly intelligent eyes" who during the days of the Spanish War was her country's Minister Plenipotentiary to Sweden and to Finland. Today she is one of the 10,000 Loyalists who have made their new homes in Mexico City. In March 1941, during her tour of the United States, where she was currently lecturing, she predicted that the exiled members of the Spanish Loyalist Government may form a "free Spanish" force similar to the "free French" forces of De Gaulle. "Spaniards are a people one cannot drive," she says, proudly.

Isabel de Palencia has told her story in *I Must Have Liberty* (1940). The daughter of Juan Oyarzábal and Anne (Guthrie) de Oyarzábal, she was born in Málaga, Spain on June 12, 1881. Her father was a Spanish Catholic of semi-aristocratic family; her mother was a Scotch Protestant who joined the Spanish Church. Isabel, who herself preferred the Catholic services, was educated at the Convent of the Assumption in Málaga, where she found the life dreary and the instruction poor. She was, in fact, a born rebel. She read constantly by herself; when her grandmother died she revolted against wearing full mourning; she refused to wear corsets.

In all these youthful rebellions her rather modern father and mother backed her up, however. When it was time for Isabel Oyarzábal to take her place in society her refusal to do so was more serious. After a stay in London, where she was paid for teaching Spanish and where she met such celebrities as Ellen Terry and Pavlowa, the young Spanish girl decided that she too must have a career. In her world such a decision was almost unheard of ("there are many ways of being enslaved and not the least degrading is the one that prevents us from using our own creative possibilities"). Yet she finally managed to persuade her mother to go with her to Madrid and to let her study for the stage.

ISABEL DE PALENCIA

The theatrical career of Isabel Oyarzábal was neither particularly long nor particularly brilliant—consisting for the most part of amateur acting in the art theatre of Pio Baroja. The main thing she accomplished there was to make the acquaintance of the penniless artist whom she married later, in 1909: Don Ceferino Palencia, the stepson of Madrid's leading actress. Isabel Oyarzábal gave up the theatre not for marriage, however, but in order to edit the first woman's magazine in Spain, *La Dama*. She also began to write, mainly news for the British press bureaus—she served on the staff of *El Sol* in Madrid (the only pro-Ally newspaper during the First World War), she was for six years Madrid correspondent for the London *Daily Mail*, and she did news coverage for the Laffan News Bureau and for the London *Standard*.

At that time Spain was a feudal country, its people 52 per cent illiterate. Only the rare Spanish woman was interested in progressive ideas, but such women existed. Isabel de Palencia was one of them, a pioneer. And, oddly enough, it was her husband's temporary desertion that turned her toward public life, toward the labor and woman suffrage movement. It was at least partially due to an attempt to find solace for her private sorrow that, in addition to her writing, she found herself lecturing for the Socialists; helping to found the first woman's club in Madrid; delivering a lecture before the Athenaeum, the first woman to do so; acting as a delegate to Carrie Chapman Catt's suffrage congresses. And during the '20s her face grew increasingly familiar to Paris and London audiences as she traveled about giving lectures on Spanish costume and folklore. In 1922, at the invitation

PALENCIA, ISABEL DE—*Continued*

of the Institute of International Education, she made the first of her many lecture tours of the United States.

Her husband, Don Ceferino, was working even more directly than she for the birth of the Spanish Republic. The Revolution of 1931 fulfilled their dreams, and under the Republic he became Civil Governor of three provinces. As for Isabel de Palencia, she acted as Spanish delegate to the League of Nations (the first woman to sign the convention for Spain), serving on the Committee of Experts on Slavery; she was the Spanish Government's delegate to the International Labor Conference, in charge of work for women and children; and she worked to help the Republic establish schools, to better the conditions of the peasants, to provide greater opportunities for children. There was a period of reaction from 1933 to 1936, but after the Republican victory in the elections of 1936 Don Ceferino became Minister to Latvia, Isabel de Palencia Plenipotentiary Minister to Sweden and later to Finland. She was the first Spanish woman to hold that rank.

Hers was a difficult job. She didn't know Swedish, although she knew several other languages; she had to dislodge the anti-Loyalist incumbent of her office; she had to learn the manners of the Swedish court. Says Marquis M. Childs: "I shall never forget the impression of this dark, quick-moving figure in the vast Spanish legation which had been the château of Prince Karl. With her ardent spirit, her dramatic intensity, she seemed strangely out of place in the big, cool rooms of a northern palace."

With Franco's rebellion Isabel de Palencia's job became even more difficult. It was a time when most women would have been unable to sleep for worry. She, too, was troubled by thoughts of her son Cefito, who was with the medical corps, of her aviator son-in-law, and of her husband and daughter Marissa, who were both in bombarded Barcelona and Valencia a large part of the time. But it was her duty not to be with them, but to try to win support for Loyalist Spain in other lands. For five weeks during the autumn of 1936 she toured the United States, making speeches; she appeared before the leading members of the British Parliament; she delivered an impassioned address before the British Labor Conference. She won innumerable friends for Spain in Sweden itself. Yet she was bitter against those governments, all of which continued to support the ironically named "non-intervention" pact.

When the Rightists finally marched triumphantly into Madrid, Isabel de Palencia and her family fled from Spain, leaving behind not only the family home outside Madrid but also a ceramics collection, valuables, even clothes. "It is not so terrible," she says. "At least you're free to begin life again as destiny tells you; not forced to live under a yoke." The Swedish Government offered them a permanent home; they chose Mexico. Today Don Ceferino Palencia and Isabel de Palencia, Cefito, Marissa and Marissa's child are all living there.

It was after she left Spain that Isabel de Palencia wrote her autobiographical *I Must Have Liberty,* which was published late in 1940. It was by no means her first book. A member of the Academies of Arts and Letters in Cadiz and in Málaga, a playwright, a translator of Havelock Ellis and of Eugene O'Neill, Isabel de Palencia was also the author of *Study in Child Psychology;* a novel, *Sower Sowed His Seed;* and a novelette, *Hookie,* all written in Spanish; her authoritative *Regional Costumes of Spain* (1926) had already been translated into English; and two charming juveniles illustrated by her husband, *Saint Anthony's Pig* and *Juan, Son of the Fisherman.*

Critics compared *I Must Have Liberty* with books by Constancia de la Mora and by Alvarez del Vayo, books which, like hers, asserted that "the democracies lost their first great battle with the fall of Madrid," and at least one of them decided that the book of Isabel de Palencia was more mature than the former, more personal than the latter. True, many critics suggested that it was her abundant nature which gave "quality and stature" to a book "often commonplace in its writing and sometimes baldly factual in its record"; but Ralph Bates went further and called *I Must Have Liberty* "a book of deep passion and characteristic dignity, quite unmarred by grandiloquence." It is to be followed by a novel, *Masters of Hunger,* the story of a middle class family in Franco's Spain, which will be published in 1942.

Isabel de Palencia wears her "straight black hair streaked with gray" gathered into a simple knot at the back of her head. "Goyaesque in her middle age as in her youth," she "dresses in the deep, plain black that her countrywomen love." When she has time, she says, "I am going back to my hobby of long before the War"—the study of Spanish culture and folk art. (Her enthusiasm about Mexico is due not only to its resemblance to Spain, but also to its Indian influences.) She is continuing to write, too: one of her plays is now under consideration for production in the United States. And she will never stop working for the resurrection of Spain—"for democracy, the only political system under which the people can be happy."

PAPEN, FRANZ VON (pä'pěn fränts fôn) Oct. 29, 1879- German Ambassador to Turkey
Address: German Embassy, Ankara, Turkey

"A diplomatic smoothie, an international intriguer whom British Foreign Office wits call 'the German specialist for political dirty work,'" since April 1939 Franz von Papen has been German Ambassador to Turkey. In Ankara he has been directing the activities of the German colony, frankly calling upon its members to attempt to influence Turkish public opinion, and on important occasions has returned to Germany for consultation. The spring of 1941 found him once more back in Berlin, while the world awaited the results of his return to Ankara. During his absence a new tone had crept into the Turkish press. Turkey, once firmly defiant of the Axis, had become gradually "determinedly non-belligerent, determined not to become an instrument in the hands of others."

Finally, on May 12, Von Papen, traveling with his daughter, was greeted at the Ankara airport by diplomatic representatives of the Axis. "I come as a dove of peace, bearing an olive branch," he announced. "I assure you you can all spend the summer pleasantly at the beaches." The next day he began his talks with the Turkish Government. Official German sources said that Hitler did not intend to make any political demands upon Turkey, but Turkish sources believed that he would try to negotiate an expanded commercial treaty with their country, now largely cut off from trade with Britain, and the British seemed to expect that he would not limit himself to economic demands. In any case, Hitler's envoy's description of himself as "a dove of peace" had certain ironic overtones.

Nevertheless during the next few months no news came out of Turkey of any Nazi diplomatic coup more important than the trade pact between the two countries signed in June 1941. Instead the "dove of peace" apparently was busying himself with proposals, to British officials and middlemen, that Britain stop fighting and join Germany against the Soviet Union.

Franz von Papen should be well remembered in the United States. The descendant of a noble family, he was born in Werl, Germany on October 29, 1879. He attended military schools and later commanded a battalion of Uhlans in Berlin as a lieutenant of cavalry. Then in 1905 he married Martha von Boch, (by whom he has four daughters and a son), the wealthy daughter of the owner of a Saarland ceramics firm, was soon transferred to a better regiment, and at an early age was promoted to the general staff. In 1914 he became German military attaché in the German Embassy in Washington. There, in collaboration with Captain Boy-Ed, the German naval attaché, he directed German espionage and sabotage. On December 28, 1915, after a female British secret-service agent had exposed their plots, he and Boy-Ed were expelled from the country. They returned to Germany through the blockade with a British safeguard; en route Von Papen's luggage was searched and confiscated, and 126 check stubs were found showing payments to his agents.

Acme
FRANZ VON PAPEN

But this was not all that was discovered. In April 1916, a few months later, a Federal Grand Jury indicted Von Papen for a plot to blow up the Welland Canal, an indictment that was not quashed until 1932. It was also revealed that one of his men had tried to cause trouble in Mexico by persuading Pancho Villa and Huerta to buy large quantities of United States munitions; and a German spy was caught bearing a letter from Von Papen to his wife in which he had written, tactlessly: "I always say to these idiotic Yankees that they had better hold their tongues." Altogether, it seemed at that time that Von Papen's practical talents for intrigue were not too impressive.

The German Government was not discouraged by his record. After a short period on the Western Front during the Somme offensive, Von Papen was sent to Palestine as chief of staff of the Fourth Turkish Army. And when Britain's late General Allenby ripped the Turkish Army to pieces, Von Papen managed to get out of Nazareth with his Turks

PAPEN, FRANZ VON—*Continued*

just before the city was occupied by the British, once more leaving telltale papers behind. The British cabled London for instructions; one story says that they received the reply: "Forward papers. If Von Papen is captured, do not intern; send him to a lunatic asylum."

The post-War period found the careless conspirator not in a lunatic asylum, but in politics. Wealthy, a Catholic, a Prussian aristocrat without being a "Junker," an outspoken monarchist, he joined the Centrist (Catholic) Party and from 1921 to 1931 was a member of the Prussian Diet. Yet from the beginning he voted with the extreme Right wing which was opposed to the Christian Trade Unions, and after the Centrist leader Brüning came to power in March 1930 he was not above participating in a conspiracy to unseat him.

The year was 1932. The participants were mainly the "influential reactionary gentlemen" of the Herrenklub, under the leadership of General Kurt von Schleicher—Junkers, industrialists who had their own idea of a "new order." By promising the Nazis some concessions (the Storm Troopers had recently been banned), they thought they could secure Nazi support for a new Cabinet without letting National Socialism really gain power. President Von Hindenburg, re-elected in 1932, was a friend of Von Papen and himself of the Junker class; Von Papen therefore did not find it too difficult to persuade him to dismiss Brüning and name him Chancellor. It was May when the "Barons' Cabinet" thus came to power for the first time, with Von Papen as Chancellor, Von Schleicher as Reichswehr Minister and monocled Herrenklub members predominating. Von Papen had previously resigned from the Centrist Party, and on June 3 the Reichstag was dissolved by decree, after it became evident that the new government could not secure a majority there. New elections were called for July 31, 1932.

The history of the next few months is the history of how National Socialism came to power in Germany. Before the elections Von Papen negotiated the Lausanne Conference for the Abolishment of Reparations; he cut unemployment appropriations, the dole and pensions and introduced new consumers' taxes; in direct violation of the Constitution he got himself appointed Federal Commissioner to Prussia and ousted the unresisting Social Democrats from the Prussian Cabinet. In the July elections, however, the Nazis (who had meanwhile been permitted to wear uniforms, parade and resume their terrorist activities) won 37 per cent of the votes. Hitler threatened to withdraw his support from the Government unless he himself were appointed Chancellor. Von Hindenburg refused; the Nazis promptly launched a violent campaign against Von Papen's Cabinet. Once again Von Papen dissolved the Reichstag before his Government could be voted out of office. He was probably still hopeful of coming to an understanding with the Nazis. If so, his hopes were in vain; and, in any case, in the elections of November 6 the Nazis polled only 32 per cent of the votes. Even Von Schleicher began to demand Von Papen's dismissal, and on November 17 he and his Cabinet finally resigned.

Von Schleicher, who became Chancellor on December 2, altered the Cabinet's personnel little, but planned to close the breach between Left and Right not by seeking Nazi support but by "a government of generals and trade-unionists." Von Papen, nursing his injured pride, began dropping dark hints of his friend's "agrarian Bolshevism" to the president of the Herrenklub, to the Junker Landbund and to the easily alarmed Von Hindenburg. Hugenberg (industrialist chairman of the National People's Party) and others joined him. On January 4, 1933 Von Papen performed the final treachery when he met Hitler, by this time thoroughly discouraged and depressed, at the home of the banker, Baron von Schroeder. The meeting resulted in four million new marks contributed by industrialists to the empty Nazi treasury. Von Schleicher, hearing rumors of a deal with the Nazis, reproached Von Papen, who reassured him. Said Von Schleicher, afterward: "He proved to be the kind of traitor beside whom Judas Iscariot is a saint."

It was January 28 when the aging and suggestible Junker President finally asked Von Schleicher to resign and asked Von Papen to form a new government. In return for their support, this time the Nazis had been promised representation. As the new Cabinet emerged on January 30, Hitler was Chancellor, Von Papen, Vice-Chancellor; but in it were nine non-Nazis, only three Nazis. Von Papen, Hugenberg & Company felt safe. But not for long. After Hindenburg had been persuaded to dissolve the Reichstag and call new elections for March 5, the Nazis, who had control of the police through Goering's (see sketch this issue) Cabinet position, struck out against rival parties, particularly the Communist Party. The Reichstag fire on February 27 was followed by fresh suppressions, terrorism, arrests. Fear of other alleged "Communist plots" brought new Nazi converts; and unlimited funds helped. Finally, when the March elections still did not give the Nazis a clear majority in the Reichstag, Hitler excluded the Communist deputies. The Enabling Act followed; the destruction of the trade unions and of all other political parties, agencies and institutions proceeded at a rapid pace. On April 11 Von Papen was forced to resign as Federal Commissioner to Prussia, Goering became Prussian Premier. Soon there were eight Nazis in the Cabinet, only six nervous non-Nazis, and Hindenburg had become completely dominated by Hitler.

Once more the master of intrigue had been overconfident of his own cleverness. Germany paid heavily for his mistake. But Von Papen himself, as Vice-Chancellor, hung on. In July 1933, even while Goering was suppressing all non-religious Catholic organizations in Prussia, Von Papen, who for years had been the Pope's German voice and who up to that year had gone to Rome as Papal Chamberlain, negotiated the Concordat with the Vatican. And shortly after the overwhelming *Ja* vote in November 1933 he became plenipotentiary of the Reich Government in questions relating to the Saar.

Still, criticism of the non-Nazi "reactionaries" in the Cabinet grew. Von Papen became increasingly uncomfortable. In June 1934, in an address at the University of Marburg ("a bit of courageous stupidity," F. L. Schuman called it), he criticized the lack of freedom of speech in the Third Reich, "in scarcely veiled terms" called for a restoration of the monarchy, an end to the one-party dictatorship, and attacked the party "radicals" who talked of a "Second Revolution" and of collectivization. The speech was suppressed in the press, the campaign against the "reactionaries" intensified. It was mainly the "radicals" who were purged on the Bloody Saturday that followed, but Von Papen was "assaulted, ejected from his office, closely questioned by Hitler's Élite Guard, and at last saved from death only by the intervention of Hindenburg and the Reichswehr." It was July 3 when he tendered his resignation as Vice-Chancellor. At that time Hitler refused to accept it, but in August, Von Papen was relieved of his post, sent as a "special envoy" to restore "friendly relations" with Austria. His appointment was one of the last documents signed by the dying Hindenburg, and before leaving he delivered Hindenburg's will to Hitler.

His work done in Germany, Von Papen now proceeded comfortably to the betrayal of Austria, where Dollfuss had just been murdered by the Nazis. In Vienna he was unwelcome, and the whole diplomatic corps practically ignored him. But he did his job. In 1936 he was made Ambassador to Austria ("with a special mission"); he negotiated the Austro-German agreement of July 1936; and two years later, with the help of Seyss-Inquart (see sketch this issue), he arranged the Hitler-Schuschnigg conference at Berchtesgaden at which the fate of Austrian independence was sealed. Two months after the *Anschluss* the body of his secretary was found floating in the Danube, but by that time Von Papen had returned to his estate in the Saar, where he could ride, fish and play tennis. In the winter of 1938 he went to Sweden to deliver "several innocuous lectures."

In mid-April 1939 Franz von Papen was made German Ambassador to Ankara. There, as "an inveterate intriguer who enjoys conspiracy as a pleasurable recreation" (Schuman), it can be assumed that he has spent delightful years. Socially, at least, he has all the equipment. A "fray-haired, thin-faced, thin-lipped man" who "dresses like a Bond Street manikin" and sports the decorations of Lazarus, Maritius and the Great Maltese Cross, he is known as the best ballroom dancer in Europe.

PATTERSON, ROBERT P(ORTER) Feb. 12, 1891- United States Under-Secretary of War

Address: b. War Department, Washington, D. C.; h. Garrison, N. Y.; 1545 35th St, N. W., Washington, D. C.

One day, near the end of July 1940, a square-shouldered, upright, slender buck private was doing kitchen police duty at the Business and Professional Men's Training Camp in Plattsburg, New York. But he was interrupted; told to lay down his paring knife and assume the duties of Assistant Secretary of War. Five months later, on December 19, 1940, the Senate approved his promotion to Under-Secretary of War.

It was hardly a Cinderella story, however. Judge and Captain Patterson had become a rookie at Plattsburg only because he felt he was "out of date and wanted to get up-to-date information on army service." "My hope," he said, "was that I might be useful in case of emergency." This military service was just part of a distinguished military and judicial career. Robert Porter Patterson was born and brought up in Glens Falls, New York, the son of Charles R. and Lodice E. (Porter) Patterson. He received his education at Union College in Schenectady, New York, which gave him a B. A. degree in 1912, and at Harvard Law School, from which he received his Bachelor of Laws degree in 1915, after having served as chairman of the *Harvard Law Review* and marshal of his class in his third year.

Right after graduation Patterson was admitted to the New York Bar and, except for service in the Army, he practiced law in New York for the next 15 years. His first position was with the firm of Root, Clark, Buckner and Howland, but it lasted only until 1916, when Patterson resigned to go to the Mexican border with the 7th Infantry. On May 15, 1917 he was commissioned a second lieutenant, Infantry Section, Officers' Reserve Corps, and was placed on active duty at the Reserve Officers' Training Camp, Plattsburg Barracks, New York. Three months later he was commissioned a captain of infantry and assigned to the 152nd Depot Brigade at Camp Upton, New York.

On April 13, 1918 Captain Patterson left the United States for service in France with the 306th Infantry. Abroad he served in the Baccarat, Vesle and Forêt-d'Argonne defensive sectors and in the Oise-Aisne and Meuse-Argonne offensives. For gallant and meritorious action on the night of August 11, 1918 he was cited in General Orders; for "extraordinary heroism in action" on August 14 he was awarded the Distinguished Service Cross. Two days later he was wounded in action, and he was again cited in General Orders for gallantry on September 26. On March 26, 1919 Patterson was promoted to major of infantry and assigned to command the 2nd Battalion, 306th Infantry. A month later he returned to the United States and on May 27, 1919 was honorably discharged from the military service.

The War over, Captain Patterson returned to the practice of law as a member of the firm of Murray, Aldrich and Webb and continued with this firm until in 1930 President Hoover appointed him Judge of the United States District Court, Southern New York District. In his years on this court he established a record for non-reversals in the higher courts. At the same time he managed to make a success of raising chickens and flowers on his farm at Garrison on the Hudson, from which he commuted daily to New York City. And he managed to find time to spend with his wife, the former Margaret T. Winchester, whom he had married in 1920, and their four children, Robert P., Aileen W., Susan H. and Virginia.

Although Judge Patterson was a Republican, in March 1939 President Roosevelt elevated him to the position of Judge of the Circuit Court of Appeals for the Second Circuit, the second highest court in the land. One of his more prominent decisions here was the upholding of the conviction of Earl Browder for passport fraud. It was this life-time position, at $12,000 a year, that he gave up in July 1941 for a temporary post as Assistant Secretary of War at $10,000 a year. According to some commentators his appointment was requested by Secretary of War Stimson, whom Patterson had known slightly during the War, when they served in the same division, and had grown to know well when both were distinguished attorneys in New York; according to others, Patterson was President Roosevelt's choice, a selection in which Secretary Stimson concurred.

One of Judge Patterson's first actions after his nomination as Assistant Secretary of War was to urge the adoption of a system of compulsory military training. This, said he, was the only democratic way to raise an army for the United States—an Army which, he estimated, should stand at 1,300,000 men. Less than a year later, before a Senate committee, he was insisting that to demobilize any part of the Army at that time would be to "court disaster." At the same time he was urging that the Secretary of War be given authority "to vitalize the active list of the Army, removing therefrom those officers who are unable to stand up under the strain to which they must be subjected if we are to build up a modern army capable of meeting the demands of modern combat."

Frequently the spokesman for the War Department, more than once Patterson addressed industry, which he felt had "been doing its full share in the defense program." To assure industry that certification of new plant facilities requested by contractors to qualify for five-year tax amortization would be "impartially administered," he appointed in April 1941 a civilian board of review. And he continually reassured industry to "feel no anxiety whatever" over industrial conscription amendments. One of these he presented in June 1941 to the Military Affairs Committee of the Senate; when a Congressional uprising threatened he presented a substitute, which, however, was rejected by the Administration as "too tame." A third property seizure bill was presented by Wayne Coy in its place.

Frequently, too, Captain Patterson addressed labor, appealing for full cooperation: "The War Department will never ask of labor any sacrifice which it does not at the same time ask of management and of invested capital," he once said. He urged, particularly in the strike of building trades workers at Wright Field, that union members be "patriotic Americans," working hard in the defense effort. To his pleas labor leaders listened, although some of them objected to his statement in October 1940 that "disputes with the Labor Board" would not be "the determining element in the award of contracts" and to a later statement that trivial labor cases would not be permitted to stop work on a defense contract or prevent the award of one. Probably most discussion on his attitude toward the labor problem, however, centered about his proposal in March 1941 for a revival of the National War Labor Board which functioned in 1918. Such a board, he felt, was more important than the setting up of "cooling off" legislation or punitive measures. "We need every man hour of production, and there should be no strikes or stoppages," he said.

U. S. Army Signal Corps.

ROBERT P. PATTERSON

The main job that Patterson was given in the War Department was that of taking charge of the Army's procurement division, the asking branch of the Army, responsible for about 7,000 different items. In this position and as a member of the Army and Navy Munitions Board he requested a reduction in auto production of as much as 50 per cent in order to release men, materials and management for turning out planes and tanks; he appealed to industry to extend its in-plant training and increase the number of shifts and refrain from "pirating" labor; he awarded contracts with "reasonable" profits in mind; he pleaded for more technicians. A while ago someone described Secretary Patterson as "fast-moving, concise, with the habit of command." These are qualities needed in an Under-Secretary of War of a nation arming for defense and victory.

PAUL, PRINCE OF YUGOSLAVIA

1893- Former First Regent of Yugoslavia

Under normal conditions the coronation ceremony of Peter II of Yugoslavia would have taken place in September 1941. Prince Paul, who since Alexander's assassination had ruled the country as First Regent, would have formally handed over the kingdom to Alexander's son on his eighteenth birthday. (Assuming, of course, that certain rumors as to Paul's own attachment to the crown had no basis in fact.) When in March 1941 Prince Paul's Ministers signified his Government's adherence to the Nazi three-power pact, however, conditions in Yugoslavia were no longer normal even for the eternally troubled Balkans. It was March 27, two days later, when a *coup d'état* by anti-Axis Yugoslavian Army leaders caused Peter II to come into his Balkan inheritance a little prematurely. Prince Paul fled the country, seeking refuge in Greece, where he remained as the guest of King George during the short-lived Yugoslavian resistance to the Nazis. Then in April, according to one report, he was caught sending a cable in code to the Croat leader Matchek, and asked to leave.

Prince Paul, who was always a bit ill at ease as a Balkan ruler, was born in 1893. His mother was Russian, a member of the House of Demidoff; his cousin, Alexander, was the Crown Prince of Yugoslavia. He was educated in Switzerland, at the Lycée at Belgrade, where he was the high-ranking student, and in 1910 he went to England to take his degree at Oxford. Three separate Balkan wars, and finally the First World War, interrupted his studies. Each time he came home to take an officer's commission; each time he returned to Oxford to study philosophy and literature. He did not take his degree until 1921, however, and his long residence in England has since led Serbs to call him "too English"—probably more because of his tailoring and tastes than his politics.

By this time Alexander was on the throne. Prince Paul's life was perhaps more enviable than that of his royal cousin, however: a scholar and an esthete, he spent much of his time traveling about among European art centers, and he built for himself a home of snow-white marble several miles south of Belgrade. Alexander had other problems. It was true that post-War treaties and plebiscites had doubled Serbian territory and tripled its population, but there was little unity among its peoples. The new kingdom of Serbs, Croats and Slovenes, called Yugoslavia, had been formed partly in order to weaken the new Austria and the new Hungary, partly in order to keep Italy off the Dalmatian coast which was to have been its reward for participation in the War on the side of the Allies. Woodrow Wilson's vaunted liberation and unity of the South Slav peoples existed more in word than in deed, for in Yugoslavia it was the Serbs who ruled, and a nominally democratic constitution appeased the Croatian autonomists hardly at all. After 1929 threats of revolution led Alexander to dispose almost entirely of parliamentary rule.

It was 1934 when Alexander was assassinated. His will provided that Prince Paul, as his nearest competent adult relative, should rule as First Regent until Alexander's young son, Peter, a shy, rather neglected boy, came into his majority. (Peter II's eighteenth birthday was in September 1941). Two other regents were also named. Prince Paul, who had previously no greater responsibility than that of pacifying the Croats as Viceroy of Croatia, was probably not too happy. Gossips say that he could not sleep without sedatives during the first months of his regency. Nevertheless he had ambitious plans. He promised to be a more liberal ruler than Alexander—during his first year, at least. He fought the old Serbs when they tried to hush up Alexander's testament. He conferred scrupulously with the Croatian leaders. He persuaded his first Premier to release the chief of the Croat opposition from jail. He made himself easily accessible, and people weren't afraid to tell him the truth.

This phase was soon over, however. Paul's consort was Princess Olga of Greece, a niece of the last Czar of Russia and the sister of the British Duchess of Kent. "The Duchess of Kent brought Balkan fashions to London, and Princess Olga brought Hitler's emissaries to the White Palace." Paul, after entering into secret negotiations with the Nazis, ousted his Prime Minister. Milan Stoyadinovitch, the Premier and Foreign Minister appointed in June 1935, was far from being either a democrat or a liberal. Soon the typical election was once more the kind in which the opposition gets the votes and the government the seats in Parliament. Although Yugoslavia had formerly been in the French political orbit, Prince Paul himself had no love at all for Bolshevism or anything which he considered kindred to it, such as the Popular Front Government in France; in 1936 the pact of mutual assistance offered by French Foreign Minister Delbos was rejected by the Little Entente (Czechoslovakia, Romania, Yugoslavia).

At the same time the shadow of Germany and Italy grew longer in Yugoslavia. Germany was an excellent potential customer for grain, and Stoyadinovitch argued for the restoration of the trade with Italy which had been lost when sanctions were imposed at the time of Ethiopia. There were friendly conferences with Hitler and other Nazi leaders, who had for some time been wooing the Yugoslavians passionately. In March 1937 a five-year political and economic pact with Italy was signed, and Count Ciano received from Prince Paul the Grand Cross of the Order of the White Eagle. At the same time Italy promised that she wouldn't occupy Albania (a promise kept for nearly all of two years, and in March 1939 it became known that Paul had agreed to the Italian invasion). That the Yugoslav Army and peoples are almost without exception opposed to this pro-Axis orientation seemed to make little difference.

Then came Munich. It destroyed the Little Entente, built up by France after the War in order to curb Germany, and it alarmed Prince Paul. In December 1938 he spent a week in London discussing foreign affairs with British statesmen and attempting to increase British trade with Yugoslavia, whose main exports are corn, fruit, iron and bauxite. Early in 1939 Premier Cvetkovitch and Foreign Minister Cincar-Markovitch took the place of Stoyadinovitch. In August 1939 it seemed even that Prince Paul might contrive a Balkan coalition to obstruct Germany's apparent drive toward the southeast. But he was hesitant. Careful neutrality, a policy of remaining friends with everyone, was his aim and that of his ministers. He had no wish to antagonize Germany. If he seemed pro-Axis, he had once explained, it was because "I bow to necessity. I am a realist."

The Moscow-Berlin non-aggression pact in August 1939 had immediate joyous repercussions in Yugoslavia, if not everywhere. Prospects for Balkan peace seemed better. An enlarged Croatia was suddenly given wide local autonomy and its own Parliament. A new government was formed which included six Croats. "Democratization" decrees paved the way for parliaments in seven other provinces, and freedom of the press and of assembly was restored. But little of this was permanent. And Yugoslavia moved further and further into the Axis orbit. In October 1940 Premier Cvetkovitch signed a new trade pact with Germany by which 60 per cent of Yugoslavia's exports would go to the Reich. "Our collaboration is not only economic but political," he said. By 1941 the Government's position was extremely delicate, the fact that popular sentiment was far from being pro-German being only a complicating factor. When Prince Paul said farewell to the United States' Colonel Donovan (see sketch this issue) with a "Good luck, until we meet again," the Yugoslav magazine that printed the remark was at first suppressed, although later permitted distribution.

By February 1941, with Germany pouring troops into Bulgaria, apparently in preparation for a Nazi *coup* in Greece, Premier Cvetkovitch and Foreign Minister Cincar-Markovitch sped to Austria to hold conversations with Hitler and Von Ribbentrop (see sketch this issue). Conversations between Prince Paul and the German Minister to Belgrade followed, and it was predicted that Yugoslavia would sign the three-power pact. Nothing happened immediately, however, except mobilization orders on March 4; and when the Soviet statement condemning Bulgaria's surrender to Hitler's demands was published, the public reaction was one of hopefulness.

There were also rumors of growing Croat, Bosnian and Herzegovinian separatist sentiments; rumors that during the delay Yugoslavia was attempting to break down Greece's refusal to submit to a German-dictated peace; rumors that the Yugoslavian Government would sign a "compromise" treaty of non-aggression and friendship with the Reich, plus a friendship pact with the Soviet Union as a sop to public sentiment. Yet by mid-March, many observers believed that diplomatic pressure by Britain, Turkey (and even the United States), as well as threats of revolution in the provinces and in the Army, had brought about a reversal in official policy. It seemed that, aided by Britain and Turkey, Yugoslavia might possibly resist both diplomatic and military aggression by Germany. For some reason the British trusted Paul, and Anthony Eden thought of him as his friend.

Yugoslav Consulate General

PRINCE PAUL OF YUGOSLAVIA

This last hope temporarily vanished when, on March 25, 1941, in Vienna, representatives of the Belgrade Government signed a protocol of adherence to the three-power pact identical to those signed previously by Hungary, Romania, Slovakia and Bulgaria. (Nazi troops were pledged not to cross the nation, however.) In the meanwhile angry demonstrations and mass resignations from the Cvetkovitch Cabinet continued at home, while Prince Paul attempted to soothe the inflamed anti-German peasantry. He was unsuccessful. On March 27 Yugoslav Army leaders overthrew the Regency and Cabinet and made Peter II monarch in his own right. It was only a month later, however, that Peter followed Paul to Greece. Later Peter went to London, where he hoped to become an RAF pilot. Paul was reported to be in the Near East. His exact whereabouts remains a secret.

The unfortunate Prince Paul is tall and good-looking, with a "lofty forehead" and a "self-willed chin." He is said to have a pleasant personality. He loves books, music, pictures (he collects paintings), and the life of a

PAUL, PRINCE OF YUGOSLAVIA—*Continued*

country gentleman, but apparently has a taste for authority and pomp and ceremony as well. His French and English are perfect. His one son was born in 1924. He is the founder of Prince Paul's Museum, a president of the Red Cross, and a General in the Royal Yugoslav Horse Guards. He would like to die in bed, but it doesn't seem likely: only one Karageorgeovitch ruler has succeeded in doing it. He, poor man, was insane.

PEARSON, DREW (ANDREW RUSSELL) Dec. 13, 1896- Newspaper and radio columnist

Address: b. 1265 National Press Bldg, Washington, D. C.; h. 2820 Dumbarton Ave, Washington, D. C.

ALLEN, ROBERT (SHARON) July 14, 1900- Newspaper and radio columnist

Address: b. 1265 National Press Bldg, Washington, D. C.; h. 1525 28th St, N. W., Washington, D. C.

The *Washington Merry-Go-Round* is the most successful of the columns that come out of the nation's capital, read by more than 20 million people. It is also heard by millions over NBC. Its authors, Drew Pearson and Robert Allen, keep it popular by "sheer journalistic competence," by turning up "more exclusive stories than any other column." They get their information everywhere—from Cabinet members, friendly newspapermen who can't use in their own papers the juicy tidbits they discover, Senators, hired legmen, clerks, the President himself.

Pearson, generally, scours the State Department, the Army, Navy, the Department of Justice, the Treasury and the diplomatic corps; Allen concentrates on "The Hill"—on the Senate, House—on labor, the Supreme Court, agriculture. Pearson gets much of his material by going to the "right" places, giving parties where Administration high lights gather, conducting delicate telephone conversations. Allen, unlike him, bursts into offices, beats news "out of his victim with a club. He shouts, roars, blusters at Government officials, is profane and disrespectful until someone lets out something exclusive."

These two men, whose teamwork has made them "minor political powers around the capital" before whom bold Congressmen tremble, have been conducting their column since 1932 when they both were fired from their jobs for writing the book *Washington Merry-Go-Round.* Both are newspapermen of long experience. Drew Pearson was born in Evanston, Illinois, the son of Paul Martin Pearson, a Quaker professor who became Governor of the Virgin Islands and was unseated after a Senate investigation, and Edna (Wolfe) Pearson. He went to Phillips Exeter Academy in Exeter, New Hampshire, from which he was graduated in 1915, and then on to Swarthmore College, which he left in 1919 with a Bachelor of Arts degree and a Phi Beta Kappa key.

He set out for Europe to learn about diplomacy, but wound up as a director of post-War relief in the Balkans for the British Red Cross—there's a town in the Balkans now named Pearsonavatz in his honor. Back in the United States in 1921 Pearson became an instructor of industrial geography at the University of Pennsylvania. This lasted only a year; then he signed on the *S. S. President Madison* out of Seattle as a seaman and headed for the East.

DREW PEARSON

The ship landed in Yokohama and Pearson left it to wander north to Saghalien and Nikolaevsk and back again to Vladivostok. He arrived there broke, but was able to persuade a girl in the passport office to give him a passport in return for a bar of chocolate. With it he went on to Japan and from there along the China coast to the Philippines. Pearson finally landed in Australia, where he talked a lecture bureau into taking him under its wing, and he proceeded to lecture for six months in that country and in New Zealand. From there he went on to England, after a stopover in India to talk to Gandhi. He was writing up what he saw and did for Australian newspapers by this time and for the next 10 years continued to supply papers there, in India and in South Africa with news.

ROBERT ALLEN

Europe opened up for Pearson as Asia had. With a newspaper syndicate contract he traveled up and down its length, stopping at intervals to interview "Europe's Twelve Greatest Men." And then, in an anti-climactic sort of way, he returned in 1924 to academic life—this time to Columbia University, where he taught commercial geography. A year of teaching was enough this time, too, and by 1925 Pearson was off again to the East, to Japan, to China (where he reported the anti-foreign strikes), to the Tibetan border.

In 1926 Pearson seemed to settle down for a bit. The year before, he had married the Countess Felicia Gizycka, daughter of Eleanor (Cissy) Patterson of Washington newspaper fame, and he now obtained a position on the staff of the *United States Daily.* But his was a job that kept him hopping around. In 1927 he was in Geneva covering the Naval Conference for the Tokyo *Jiji* and Japan *Advertiser;* in 1928 he accompanied Secretary of State Kellogg on trips to Paris and Dublin, and President Coolidge to Havana. Then in 1929 (he was concurrently employed by the *United States Daily*) Pearson joined the staff of the Baltimore *Sun* and shortly afterward went abroad to cover the London Naval Conference. A year later he was in Cuba, re-

PEARSON, DREW and ALLEN, ROBERT—*Continued*

porting the Revolution there, writing stories good enough to win honorable mention for the Pugsley Award for the best journalistic work of the year. He was also kept busy in Washington as head of the *Sun's* bureau there. He described himself anonymously in *Washington Merry-Go-Round* as follows: "Drew Pearson, the *Sun's* expert on foreign affairs, has the reputation of knowing more about the State Department than most of the people who run it, and to a considerable extent this is true."

It was in Washington that Pearson came to know Robert Allen well enough to collaborate with him. At that time Allen was head of the Washington Bureau of the *Christian Science Monitor,* a young man with a long newspaper history behind him. Born in Latonia, Kentucky, the son of Harry and Elizabeth (Sharon) Allen, "Bob" had been reporting local events while still in grade school. He gave this up at the age of 16 to enlist in the Pershing expedition to Mexico. After chasing Villa down by the border, he entered the University of Wisconsin.

Pearson's college career was far from a simple academic one. It was interrupted by the War, during which he went overseas with the cavalry, served with the Army of Occupation and returned home a second lieutenant. It was more or less interrupted by a job as cub police reporter on the Madison, Wisconsin *Capital Times.* Nevertheless he won his degree in 1922 and a year later, after a period of political reporting on the Wisconsin *State Journal* and the Milwaukee *Journal,* he went abroad on a scholarship from his university.

He spent the year from 1923 to 1924 at the University of Munich. How much he actually studied is still unknown; what is known is that while he was in Munich the Ludendorf-Hitler *putsch* took place, and he reported it for the *Christian Science Monitor.* This did little to further his academic career; it did set him well on the way to his newspaper one. Impressed by his coverage of the *putsch,* the *Monitor* gave him a roving assignment which took him through Central Europe and Italy.

Back in the United States, Allen worked for the United Press Association in New York for a while and then went to Washington as head of the *Monitor's* Washington bureau. Here he covered the 1928 and 1932 Presidential campaigns, went with Hoover on his good-will tour of Latin America, published a book called *Why Hoover Faces Defeat* (1932), wrote a series of articles on the political situation of every European capital. In Washington, too, in 1929, he married Ruth Finney, ace Scripps-Howard Washington correspondent and an authority on Federal power projects. They have no children.

In those days when Allen worked for the *Monitor* and Pearson for the *Sun* the two men used to get together and plot how they could use all the inside material on the Hoover Administration that they both had gathered. Time and again they would make discoveries that their own papers refused to publish—and Pearson was convinced "that even the so-called liberal papers in the United States are increasingly controlled by their cash registers and that one of the few outlets to free journalism is through the medium of books." Allen agreed with him, and the result was the anonymous publication in 1931 of *Washington Merry-Go-Round,* full of "the gossip which the Capital loves to whisper but hates to see in print."

Both this book and its successor, *More Merry-Go-Round* (1932) (they sold 190,000 copies), were called "irreverent", "amusing", "stimulating", "shrewd," as well as "petty, malicious, inaccurate, biased" and dull. Speculation was wide and open as to its author—every Washington correspondent was mentioned for the honor and at one point there was an almost confirmed rumor that it had actually been written by a dozen different men. Enlightenment came to Washington and the public in 1932 and with it came dismissal notices to Pearson and Allen.

They weren't without friends, however. When they decided to keep on with the spadework they had started in their books with a column by the same name, United Features took them on. It was far from a success at first—only a few newspapers would buy it when they started off at the end of 1932. By January 1933, though, 18 papers were taking it; by May 1934, 270 subscribed, and the number of papers which buy it stands at almost 350 in 1941. In February of that year Pearson and Allen branched out into a side line, a comic strip called "Hap Hazard," with a Washington correspondent of that name as its hero, and the unusual feature of using the names and pictures of real persons for background individuals. They also spent 13 weeks at the beginning of the year broadcasting *News for the Americas* over NBC.

Since 1932 Pearson and Allen have been amusing some people, surprising others and getting even more just plain mad. And the people who get most angry at them aren't always the victims of their disclosures; very often they are the other newspaper correspondents who have been soundly scooped, despite the fact that the *Washington Merry-Go-Round* column is written five days before publication and mailed to the subscribing papers. This means that for many years, and occasionally even now, its authors worked 19 hours a day and took no vacations. Pearson would go to bed at 1 and be up at 6; Allen would start sleeping at 3 and be up at 8.

Nevertheless they managed to do another book together, the *Nine Old Men* (1936) (its short sequel was *Nine Old Men at the Crossroads* [1937]), in which they "rip off the Supreme Court Justices' black robes and, with triumphant cynicism, find living, breathing mortals." To do this book, "buzzing with tittle tattle," they scouted all over for information and then settled down to the actual writing, with Pearson starting work at midnight and keeping on as long as he could and Allen jumping in at 6 in the morning and lasting until noon. To insure uniformity they traded the completed sections and partly rewrote them.

Their success together didn't keep these two men from writing apart from each other once in a while: there have been articles for important magazines and also a book called *The American Diplomatic Game* (1935), by Pearson in collaboration with Constantine Brown. Nor did it do anything to make "lithe, well-groomed," polished Pearson and "stubby, red-headed, carelessly dressed" Allen any more alike.

Pearson is one of the few columnists in Washington who receive society invitations and one of the few whose invitations are prized. The parties which he and his second wife, Luvie Moore (he was divorced from his first wife), give in their charming old colonial house in Georgetown are made bright by the presence of important and interesting people. Pearson enjoys himself at them and he also enjoys himself in the house's garden, one of the best in Washington, after the guests have gone. There are a cat, two black French poodles, a pond full of goldfish with names like Harry Hopkins and Harold Ickes, two children (a daughter of Pearson's by his first wife and a son of Mrs. Pearson's by her first husband). Pearson has a clipped mustache, brown hair that is growing less every day, and a slight tendency toward "Anthony Edenism."

Allen lives in Georgetown, too, and likes gardening as much as his collaborator does—he is said to get up early in summers to scrub the stalks of his dahlias with soap and water. Unlike Pearson, he rides horseback with the officers at Fort Myers, gives few parties and goes to few. He fumes, swears, chews gum incessantly. "An emotional, hard-boiled little man," he is so angry with Hitler now, according to Quincy Howe, "that he has his wife drilling with a gun." *Time* calls him "the Neanderthal type of liberal"; his partner "the parlor mauve type."

PEIRSE, SIR R(ICHARD) E(DMUND) C(HARLES) (pûrs) 1892- Air Chief Marshal of Britain's R. A. F., in charge of the Bomber Command

Address: b. Air Ministry, Berkeley Square House, London, W. 1; h. 29 The Vale, Chelsea, London, S. W. 3, England

As 1941 sped on, day by day, night by night, the British bombing offensive against Germany and German-occupied territory grew greater and greater. There had been a time when Britain's defensive action called for fighter planes that could vanquish enemy raids. But today operations were different. Britain's policy had become one of defending England along the French coast and in any part of Germany that bombers could reach effectively, a policy which called for long range bombers of heavy striking power.

British Press Service
SIR R. E. C. PEIRSE

The head of the men in Stirlings, Hampdens, Whitleys, Halifaxes and American-made Boeing Flying Fortresses is Sir R. E. C. Peirse, commanding Britain's bombing organization on the well built foundations of Sir Charles Portal (see sketch this issue). He is the son of an admiral, the late Sir Richard Peirse, K. C. B. Born at Croydon, he went to Monkton Combe School and then went on to the famous training ship *Conway*, moored in the Mersey in normal times, which as a rule prepares boys for officers' posts in the merchant service rather than for the Navy.

Peirse then spent a short time at King's College, London, and when in the early flying days the Admiralty called for air volunteers, he at once put his name down. He took his pilot's certificate (No. 460) at Brooklands in

PEIRSE, SIR R. E. C.—*Continued*

February 1913 when airplanes were really "crates." And when the First World War came, he was ready.

Early in 1914 he went to France with the famous squadron commanded by Commander Samson, and all through the War he saw distinguished service. In January 1915 he won the D. S. O. for a sustained and gallant series of attacks on U-boat bases at Zeebrugge, carried out in the teeth of heavy anti-aircraft fire, and successful even though his machine was hit. Later he served in Gallipoli and Italy and won the Air Force Cross.

During the War, in 1915, Peirse married Joyce, daughter of Armitage Ledgard of Thorner, Yorkshire. The War over, he remained in the R. A. F. as a professional officer and between 1929 and 1930 served in the Middle East. It was in 1930 that he first found himself in a post of great responsibility, becoming deputy director of Operations and Intelligence at the Air Ministry. In 1933 he was sent to Palestine and there formed for the first time a combined staff coordinating land, sea and air services. He stayed there for three years.

In 1939 Peirse became a member of the Air Council and in April 1940 vice-chief of the Air Staff. At this time he was knighted as K. C. B. (he had been made a Companion of the Bath in 1936). The position of vice-chief was a newly created one, inaugurated by Prime Minister Chamberlain in response to pressure from the British High Command for "stand-ins" for the heads of each of the fighting services. Actually, however, Peirse's promotion was a rise in title only, for he was already deputy chief of the Air Staff. In October of that same year, when Portal succeeded Newall as supreme chief of the R. A. F., Peirse took over the Bomber Command from Portal, his job the scientific planning of a campaign to wear down German industry. It was a job complicated by many problems: the enormous size of Germany, the variety of targets, the shortage of machines—but observers agreed that Peirse would be able to handle it.

He is proud of the length of time he himself has been flying. "I am still as good a pilot as I ever was, thank goodness!" he says. He gets a kick out of speeding his auto along, too, when the road is clear. Outside of this, he has a mild private interest in archeology. He is tall, broad-shouldered, efficient in a way that dates back to his nautical training days. And he believes in his work. "Those Elizabethans," he once said, "were men after my own heart, but I feel that to be part of the Royal Air Force in this century is the next best thing. I believe in the Service not only as a unit of defense, but as a school for character out of which the future will be built."

PEPPER, CLAUDE (DENSON) Sept. 8, 1900- United States Senator from Florida
Address: b. United States Senate, Washington, D. C.; h. Tallahassee, Fla.

CLAUDE PEPPER

Claude Pepper, United States Senator from Florida, is probably the most articulate and vociferous exponent in Congress of the urgency for aid to the Allies. An early assignment to the Senate Foreign Relations Committee, a trip to Europe and one look at Hitler gave birth in him to undying hatred of Nazism and an unconquerable belief that unless England is victorious America is doomed.

As early as May 1940 he was urging "aid short of war" to a more or less apathetic Senate. To them he said: "We can turn the scale of battle by goods and by money and by airplanes, and perhaps even more—by a straightforward manly declaration that we have enough self respect and enough affection for the institutions of democracy to tell Hitler and Hitlerism that we are his eternal and mortal enemy and that it is our will that as a political power he shall be destroyed from the face of the earth." By June he had evolved a definite program for America, a seven-point program which involved conscription of industry and labor and giving the President power to suspend any law he felt might interfere with national defense. Later, it was Senator Pepper who presented the question of the transfer of over-age destroyers to England in the Senate and pioneered the compulsory military training bill.

Hardly a day went by in the summer and fall of 1940 in which Senator Pepper didn't tell the Senate that the United States must do everything possible to destroy Hitler. "If we are not willing to make up our minds that we are facing a new kind of a war and a new kind of a world, then I venture to predict, sadly, that we are going to lose that kind of a war and our kind of a world," was the gist of his message.

With the growth of pro-British sentiment in the nation Senator Pepper found that most of his program was being translated into action. He found, too, that some were vociferously opposed to his interventionist sentiments. At the end of August a group of women ("Mothers of the United States of America" and the "Congress of American Mothers") surrounded him in the Senate reception room, denounced his stand on conscription and strung up an effigy of him labeled "Claude (Benedict Arnold) Pepper" on Capitol Hill. The Senator was unperturbed. He told reporters that "their hanging of me in effigy is a splendid demonstration of what we all desire—freedom of speech and freedom of action." But the next day he warned the Senate: "Sometimes we do not know when we are being made the instrument of sinister forces, designed to accomplish not good but evil."

In 1941 he remained a firm supporter of President Roosevelt's foreign policy. He continued to urge America to "get tough"; he backed aid to Russia; he branded the film inquiry, a "witch hunt" and himself appeared

PEPPER, CLAUDE—*Continued*

in a propaganda motion picture short, *Victory From the West,* dealing with the question of whether the United States can produce enough military materials to help defeat Hitler. Attacks on him continued to be made, however, by those opposing intervention.

It has been generally believed that Senator Pepper, an ardent New Dealer and zealous supporter of the President, acts not only from personal conviction, but on the suggestion of the President. Senator Pepper's campaign in the spring of 1940 for the sale of war materials to the Allies came right after a long, confidential talk at the White House, and the New York *Herald Tribune* commented: "It has long been suspected that when the White House has an important balloon to send up it invites Senator Pepper to supply the necessary oratorical helium for the ascension."

Despite this impression, Senator Pepper is "generally credited with being earnest, sincere and honest," and has had that reputation ever since he started to practice law in 1925. He is one of those statesmen who have come up the hard, American way. His father, Joseph Wheeler Pepper, was a farmer near Dudleyville, Alabama, where he was born (his mother was Lena [Talbot] Pepper); and Claude, "probably the ugliest little squirt" around, had to start work when he was a boy. But he was ambitious, and it is told that the words, "Claude Pepper, United States Senator," were inscribed by him in the bark of a tree at Camp Hill, Alabama when he was 10.

After school in Alabama, young Pepper taught grammar and high school, emptied coal and ashes in a power plant and worked in a steel mill to support himself during his first semester at Alabama State University. Then came comparative comfort with a job running a dining hall, and though it took a good deal of time, he was able to make the track team and be graduated with honors and a Phi Beta Kappa key in 1921. Three years at Harvard Law School followed, with an LL. B. acquired in 1924.

After Harvard, Pepper taught law at the University of Arkansas for a year. Then he was admitted to the Florida Bar in 1925 and went into practice for himself at Perry. It wasn't long before he entered politics. In 1928 he became a member of the State Democratic Committee and stumped for Al Smith, and one year later he became a House member of the Florida State Legislature. After his term there he moved his practice to Tallahassee, became a member of the State Board of Public Welfare in 1931, and in 1933 of the State Board of Law Examiners.

In 1934 Pepper decided to capitalize on the name he had made for himself throughout the State and ran for United States Senator. He was defeated by 4,050 votes. In 1936, the year he was married to pretty Irene Mildred Webster, he ran without opposition for the unexpired term of Florida's Senator Duncan Fletcher and in 1938 he campaigned for a full six-year term. Endorsed by President Roosevelt through his son James, who said: "It is our sincere hope that he will be returned to the Senate," his platform was a simple one. Pepper was for fair wages and reasonable hours, the old-age revolving-pension plan, for relief and WPA, and for the New Deal. He himself stated it even more simply: "It is time somebody in authority got in to do some fighting for the poor white man in the South. I have been up in Washington fighting and I will continue to do so."

Returned to the Senate, Pepper continued to support the New Deal, its borrowing and spending policy, its foreign policy, its relief policy. In 1938 the *New Republic* wrote of "his record of having gone down the line with the Administration on every issue," and stated that "his utterances in the Senate are for the most part simply the voice of Hyde Park in the drawling accents of northwest Florida."

In 1938 and 1939 Senator Pepper won a lot of attention and aroused much violent controversy with his bill (sponsored in the House by Representative Pepper) designed to incorporate all competent persons employed by the Federal Arts Project of the WPA into a permanent Federal Fine Arts Bureau. Immediately it won A F of L and CIO support and endorsement from the American Artists Congress, the Juilliard Graduate School, Actors Equity and other groups. Burgess Meredith, acting president of Equity, said of it: "Its fundamental purpose . . . is to establish a democratic art. . . No painter ever was helped by an empty stomach." It was opposed by people like Gutzon Borglum and Walter Damrosch, who summed up the objections by calling the bill "a relief measure on a huge scale instead of an effort to further art in its highest form," and by Otis Skinner who cried: "Good God, you can't legislate genius!" Reported favorably out of committee, the Pepper-Coffee bill was never passed. Pepper won cheers from liberals again in March 1941 when he introduced the Geyer anti-poll-tax bill in the Senate.

Whether he is supporting a fine arts bill or the sending of supplies abroad, Senator Pepper is "a most articulate person and a rough and ready debater," whose speeches are frequently punctuated by passionate passages. Mussolini, he warned, "will feel the sting of America's lash upon his body and he will crawl like a scourged slave to an ignoble dungeon" if Italy entered the European War. When he delivers his orations, his stocky figure and pock-marked face are full of energy, his black hair tosses about. According to *Time* he is "not well-liked in the Senate," yet there is no doubt of his influence on the voters back home in Florida, nor of the importance of his position as an exponent of President Roosevelt's policies, nor of the strength and honesty and effectiveness of his convictions.

PEW, JOSEPH N(EWTON), JR. Nov. 12, 1886- Vice-president of the Sun Oil Company

Address: b. 1608 Walnut St, Philadelphia, Pa; h. Mill Creek Rd. & Dodd's Lane, Ardmore, Pa.

Joseph N. Pew, Jr., one of the angels of the Republican Party, has been called "the latest model of political boss," with headquarters in Philadelphia. According to *Time*, "all he wants is a Republican United States Government." This hope flickered and went out like a candle when Roosevelt was re-elected for the third term, but Republican Governor James (see sketch 1940 Annual) of Pennsylvania is still there. According to *Fortune*, Pew has put more than $2,000,000 into the Republican Party. The money came from the oil wells of the Sun Oil Company (Sunoco), of which he is vice-president, and from the shipyards of its affiliate, the Sun Shipbuilding & Dry Dock Company, on whose board he serves as a chairman.

Joseph Newton Pew, Jr., was born on November 12, 1886, in Pittsburgh, the second son of Joseph Newton and Mary Catherine (Anderson) Pew. The Pews had always had something to do with oil; his mother's family pioneered in the oil fields, and in 1859 the Pews were in Pennsylvania's first oil boom. Joseph Pew, Sr., bought up properties right and left and in 1901 founded the Sun Oil Company with the idea of refining and distributing along the Eastern seaboard. In 1908 Joseph Pew, Jr., who had been educated at Shadyside Academy and Cornell, came home with the degree of mechanical engineer, and began learning the oil business by laying pipes, watching wells, building roads when necessary. In 1912 Joseph Pew, Sr., died, leaving the company to his sons, John Howard and Joseph, and to his daughters.

The boys did well with the company their father started. Brother John Howard piloted it through the War. The founding of the shipyard (Sun Shipbuilding & Dry Dock Company) belonged to that period when oil tankers had to be built to ship lubricants to Europe. Under the shrewd Pew management the company grew rich; by 1920 Sunoco grossed $53,000,000 and netted $8,000,000, and the Pews were able to get sole control of their company, which they had up to then shared with the United Gas Improvement Company. Since then Sun Oil has been tightly held by the family because of its policy of little outside financing. In 1941, out of 2,435,000 shares of common stock, the Pews own about 1,770,000; Joseph Pew, as vice-president, owns 272,000. With the company comfortably launched, he married a pretty Philadelphia girl, Alberta C. Hensel, settled down in fashionable Ardmore and began leading a quietly social life along the Main Line.

Acme
JOSEPH N. PEW, JR.

The Sun Oil Company continued expanding during the '20s. They improved the quality of their product by erecting the first mercury vapor plant in the United States at Marcus Hook. During that time, too, they initiated their policy of putting only one grade of gasoline on the market—a policy that meant not only a far more effective advertising appeal but also considerable saving in labor and equipment.

Of even more far-reaching importance was their decision to construct a series of gasoline pipe lines from their refinery at Marcus Hook to Newark, Cleveland, Syracuse. This decision was made during the depression, and it took considerable courage to make it. It was Joseph Pew who was responsible for persuading the company to take this step, which gave Sunoco a low-cost distribution in the East and Midwest. The profits made by the company in later years stemming back to this step have caused Howard Pew to remark that "the depression was in many ways the best period we ever had." It was Joseph Pew who was entrusted with the task of laying the pipes—a task which necessitated considerable tact and finesse. He had to secure over 1,000 permits to cross highways, 183 to cross railroads, 34 to cross rivers and canals and about 1,000 easements on property from landholders. Joseph proved himself a skillful diplomat and obtained a training which later proved useful in his political career.

Today the earning emphasis of Sunoco has shifted from refineries to pipe lines and shipping. The Sun Shipbuilding & Dry Dock Company earned for the Pews $3,500,000 during 1939 and 1940, and in 1941 the boom was mounting. The labor problem, incidentally, is much more acute in shipping than in the oil enterprise, and in the summer of that year there was a labor violation claim outstanding. The four gasoline lines earn $1,000,000 yearly

PEW, JOSEPH N., JR.—*Continued*

for the Pews, as does a Texas line of crude oil. And in 1941 Sunoco is the fifteenth largest oil enterprise in the United States, a highly integrated company used to adjusting itself swiftly to economic conditions. An example of this is its financing in 1936 of the Houdry process. It became party, however, to a general suit against most integrated companies in the oil industry charging monopolistic practices, and in 1941 it seemed possible that Thurman Arnold would bring those charges after the Elkins Act suits were cleared away—although it also seemed possible that defense pressure would prevent that. As a highly individual enterprise Sunoco has been intransigent toward the Government—an attitude reflected in Joseph Pew's political convictions—and independent in its dealings with the rest of the industry.

In 1932 Joseph Pew, although a staunch Republican all his life, was not inimical toward Franklin Roosevelt. This attitude lasted until the New Deal tried to insert a price-fixing clause in the NRA Code. Joseph Pew, who holds that "price-fixing is an evil, wicked thing," was outraged. He sought recourse in the Republican headquarters in Washington and was horrified by the atmosphere of ruin and desolation that prevailed there: "The office was deserted except for underlings and one minor official who had dropped in to answer his social correspondence." A disgruntled Republican in search of a party, Joseph Pew, who had by this time become convinced that "the Government has become dangerously personalized" and that Roosevelt was bent on stifling private enterprise, went back to Pennsylvania. There, with a state machine perfected by men like Penrose and Vare, he expected to find some activity. There, too, he was disappointed.

Pew decided that this sort of thing would not do. "Democracy cannot attain its desired end unless there is political opposition—cohesive, even if scattered; vocal, even if small; active, even if not powerful," he claimed. He put his convictions and his money to work. As *Time* states: "He became Pennsylvania's G. O. P. boss by the simple but tremendous expedient of putting up the money." He worked inconspicuously but with phenomenal success. In 1935 he bought the *Farm Journal,* a rural publication with more than 1,000,000 circulation, to be used to swing the rural vote into the Republican fold. He later merged it with *The Farmer's Wife,* and together with other members of the Pew family got control of the Chilton Press, which publishes *The Iron Age* and a string of other trade magazines. And he preached to businessmen and joined forces with men like Colonel Estes of Texas, whom he knew from the oil business.

In 1935 Pew suffered a setback when a Democratic candidate won the race for the Mayoralty in Philadelphia while Pew was "salmon fishing off Anacostia Island." Another setback followed when Alfred Landon lost the Presidential election in 1936. But in 1938, with spirits lifted by rumors of the G. O. P.'s resuscitation, he set about electing Arthur H. James, with more success. The State party spent close to $1,200,000 in the James campaign, and, according to *Fortune* (August 1939), the Pews had contributed 20 per cent of that sum.

A few days after the election Joseph Pew sailed for Europe after making a statement to the effect that he wanted no voice in Cabinet making. Nevertheless his practice of shoveling the money out to heelers and henchmen ("You can't get votes by advertising for them," he has remarked urbanely) has since brought on his head many a charge of corrupt politics. Mentioned as being behind James' anti-New Deal legislation, perhaps he misjudged the effect of his backing, for in the 1940 election Pennsylvania went Democratic; but whatever he failed to do, Pew helped to bring to the forefront of the State party many new faces: among them Jay Cooke, IV, Philadelphia's Republican city chairman, whom Pew headed toward the Senate; another of them Moe Annenberg, the racing sheet publisher, later put in prison, who had once ranged his Philadelphia *Inquirer* behind Pew. In 1941 the Republicans once more emerged triumphant in the Philadelphia municipal elections.

Pew, of course, has contributed heavily to the national reorganization of the Republican Party, working hand in hand with Old Guard magnates like Ernest Weir (see sketch this issue), Joe Grundy, etc. He contributed to the vigorous shaking up all down the line, and in 1940 went to the Republican Convention to cast his own vote and, as *Time* had it, to dictate 71 others. It was only with reluctance that on the last ballot he released the Pennsylvania votes to Willkie, who had earlier declared that he was "100 per cent against his policy of turning the Republican Party back to the days of Harding and Coolidge."

Joseph N. Pew's main interest is in politics rather than in business. But he likes to spend his spare time in his country estate in upper Chester County, where he keeps a superb stable of Percherons and a herd of cows. The house is a broad, yellow stone, spacious Pennsylvania farmhouse surrounded by rolling green acres. Six feet tall, with black, bushy eyebrows, a shrewd long upper lip and "a quick humorless smile," Pew is, unlike his brother John Howard, an expansive spender. Together with his salary as vice-president he gets about $300,000 yearly from the Sun Oil Company. He has a son still in college and three daughters.

PHILOFF, BOGDAN (DIMITROV) (fēl-ŏf′ bŏg-dän′) Apr. 10, 1883- Prime Minister of Bulgaria
Address: Sofia, Bulgaria

Every mouthful of the Balkan pie that Hitler has swallowed has been watched with horrified fascination by the rest of the world. During much of 1941 this unflattering attention was focused on little Bulgaria, which for the second time in 25 years cast her lot with Germany. Her decision was particularly important because, besides being a buffer between Greece and Germany, Bulgaria had also long been considered the spearhead of a possible Pan-Slav movement in the Balkans.

The Bulgarian *Anschluss* took place when Bogdan Philoff, the scholarly, corpulent Premier of Bulgaria, went to Vienna to sign up with the Axis—a ceremony that had been performed by many statesmen before him. Bulgaria was the seventh nation to adhere to the Axis pact, which provides, mainly, that the signatories pledge mutual support to each other in the event any one of them is attacked.

Considerable diplomatic spadework was done around Premier Philoff in the months preceding Bulgaria's capitulation to the Nazi advance in the Balkans. During that time his itinerary was watched with great interest and anxiety. On January 1, 1941 Professor Philoff and his wife went to Vienna, ostensibly to consult Dr. Hans Eppinger, a Viennese specialist, about the Premier's stomach ulcers. But at the same time (although the Premier denied it) it is probable that another specialist was consulted—the German Foreign Minister Joachim von Ribbentrop (see sketch this issue). After Professor Philoff's return to Sofia, it was noticed that German military "experts and technicians" in civilian uniforms began to filter into Bulgaria.

The legitimate anxiety aroused by these ominous symptoms was somewhat assuaged by a speech Professor Philoff made on January 12, 1941, at Ruschuk. He stated uncompromisingly that Bulgaria stood for peace in the Balkans and he reaffirmed this statement of policy after Churchill's warning speech on February 9. On February 14, Turkey and Bulgaria signed a non-aggression pact which was deprecated by the British in view of the Bulgarians' growing Axis-ward tendency.

On March 3, after having finally signed his name to the pact with the Axis, Professor Philoff came back to his country to submit it to the Bulgarian single-chamber Parliament. Ironically enough he found Bulgaria celebrating its national Independence Day, and as thanks were being given in the domed Sofia cathedral for the deliverance from Turkish rule 63 years ago, the echoes of religious music mingled with the roar of German Army motorcycles streaming across Bulgaria to the Greek frontier. Professor Philoff explained to his Parliament the situation into which Bulgaria had been forced by the pressure of events, touched on Germany's aiming "temporarily . . . at safeguarding the peace of the Balkans." He also "warmly" thanked Germany for "the important place in the new order accorded little Bulgaria." As he spoke another piece of the Balkan jigsaw puzzle was added to the New Order.

Bulgarian Legation

BOGDAN PHILOFF

Through all these months the harassed Professor Philoff has been brought to increasing prominence, unhappily riding the crest of the tidal wave of Nazi aggression in the Balkans. Right now he is the man whom history will hold responsible for Bulgarian adhesion to the German fortunes. This has been brought home to him in many ways—in Churchill's warning, in Ambassador George Rendel's chilly leave-taking. Yet this man, who must from now on watch the future with great anxiety, most of his life has been concerned solely with the past. Before he headed the Bulgarian Government he was best known as an archeologist, an authority on ancient Greece.

Bogdan Philoff was born on April 10, 1883, the son of Lieutenant Colonel Dimitri Philoff and his wife Elisabeth. His birthplace was Stara Zagora, a town in central Bulgaria. He studied in Germany, at the universities of Leipzig, Freiburg and Bonn. Soon he became an important name in archeology. In 1906 he was made conservator of the National Museum in Sofia and in 1910 its director. He taught archeology and the history of art in the University of Sofia. An outstanding personality in the educational field, he belonged to a number of archeological and scientific institutions in

PHILOFF, BOGDAN—*Continued*

Europe (among them the Greco-Bulgarian Society). His chief interest is in ancient Greece, a subject with which he deals in many monographs and books. He has also written a great deal about the history of Bulgarian art. His scientific works have brought him a post of honor: presidency of the Bulgarian Academy of Sciences. Among his published works are: *Die Altbulgarische Kunst* (1919); *Die Archaische Nekropole von Trebenischte* (1927); *Les Miniatures de la Chronique de Manassès* (1927); *Geschichte der Bulgarischen Kunst,* two volumes (1932, 1933); *Die Grabhügel Nekropole bei Duvanlij in Südbulgarien* (1934).

In November of 1938, during one of Premier Kiosseivanoff's periodical reshufflings of the Cabinet, Professor Philoff was given the portfolio of Public Instruction which he has kept to date, in conjunction with his other duties. Another member of that Cabinet was Ivan Bagryanoff, Minister of Agriculture, whose constant clashes with the Premier brought about another change of the Cabinet. On February 15, 1940 George Kiosseivanoff tendered to King Boris (see sketch this issue) the resignation of the eighth Cabinet he had formed. The cause of his resignation was supposed to be the King's refusal to drop the reputedly pro-German Minister of Agriculture. Professor Philoff was asked to take Kiosseivanoff's place as Premier and to choose his Cabinet.

Shrewd observers guessed that Philoff's Premiership was a temporary measure to save Kiosseivanoff's face, and that he would be soon replaced by the latter's enemy Bagryanoff. The plump, sedate professor, seemingly unaware of being the center of complicated political intrigues, in his acceptance speech promised to follow the policy of his predecessor in internal and foreign aspects. But this assurance failed to impress informed circles, who claimed that it was King Boris who ultimately dictated the policy of Bulgaria. And on the first anniversary of forming his Cabinet, Premier Philoff filled the Ministry of Agriculture with a notorious pro-German, Dimitri Kuscheff.

Professor Bogdan Philoff is a corpulent man, with a fat beak of a nose and scanty hair. His wife is the tall intellectual Eudoxie Petéva, whom he married in 1932. There are no children. The Premier does not greatly relish his present post. The usual expression on his good-natured face is one of sadness and foreboding. Probably he appreciates only too well the irony inherent in the fact that Greece was brought to her knees through the offices of a man whose life's work had been the study of her antiquity.

PIERSON, WARREN LEE Aug. 29, 1896- President of the United States Export-Import Bank

Address: Export-Import Bank, Washington, D. C.

Warren Lee Pierson, "a California lawyer with a sense of humor and a vast love of travel," is one of the key men today in Latin-American affairs, "official guardian of our enormous export trade." The Export-Import Bank which he heads lends money to exporters who wish to sell capital goods to foreigners who lack cash or are hampered by foreign exchange restrictions. It also lends money to foreign governments. In 1941 it is particularly active in making loans to help Latin America recover from the loss of European markets, in an attempt to thwart Germany and Italy, whose credit bureaus are particularly lenient.

Of the $700,000,000 provided by Congress to the Bank, almost $232,000,000 had been lent to Latin America by February 1941, Pierson announced. Brazil had received $20,000,000 for a steel plant; the Dominican Republic had got $3,000,000 to build a slaughterhouse, community refrigerators and finish a large hotel; Venezuela received $3,000,000 for oil drilling machinery; Cuba was given a sum to develop its sugar industry; and other South American countries received similar loans. Pierson himself was active in the making of these loans: in the fall of 1940 he spent six months traveling through Latin America, straightening out details of the various credits, building up good will. And in March 1941 he sailed for Brazil on the first leg of a "general inspection tour," to "keep abreast of things in Central and South America," as Jesse Jones, Secretary of Commerce and Federal Loan Administrator, put it. He returned there again in August to look into new sources of war material and speed up production of material already contracted for, as well as to discuss credit operations.

These trips south are characteristic. Warren Lee Pierson has always been a man to solve problems in a practical way, by direct negotiations whenever possible. If he can't board a plane to where trouble exists, he finds out all about it by overseas telephone and gives advice over the wires. And in the same direct way diplomats, the heads of important national banks abroad, special representatives and industrialists coming to the United States to do business almost always call on Pierson after their more formal calls to the State Department.

This banker to much of the world was born in Princeton, Minnesota, the son of Louis W. and Hilda (Pearson) Pierson, but he was brought up and educated in California where his family moved when he was a boy. Here he attended the University of California and was graduated from it in 1917. He went right from college to France as an ambulance driver in the French Army and later enlisted in the A. E. F., which put him through an intensive course of training at the Saumur Artillery School. He served in the 101st

Regiment of Field Artillery and left the War a lieutenant.

Back in the United States, Pierson finished his interrupted education at Harvard Law School, which gave him an LL. B. in 1922. He immediately recrossed the country, passed his California Bar examination and settled down in Los Angeles as a lawyer, practicing successfully until 1933, when he was asked to come to Washington as counsel for the Reconstruction Finance Corporation. He arrived there with his wife, Eleanor Shelton Mehnert, whom he had married in 1927, and has stayed there ever since. Since their marriage Mrs. Pierson has won independent fame as author of a mystery novel, *The Good Neighbor Murder*, (*The Defense Rests* is to be published in 1942) and as Mrs. Roosevelt's assistant at the Office of Civilian Defense.

Underwood & Underwood

WARREN LEE PIERSON

In 1934 the Export-Import Bank was created to fill the need of providing credits for Russia. Pending the debt settlements between this country and the Soviet Union, the bank did nothing, and a second Export-Import Bank was set up to handle credits for Cuba. When the negotiations with Russia finally broke down, the two banks were merged with the power to lend to all nations. The new Export-Import Bank filled a longfelt need, for with almost every foreign nation in debt to the United States none had had money to buy United States products, and the country's banking system had possessed no machinery for providing foreign buyers with long-term credits.

When it was set up Pierson was made its general counsel and trustee. Two years later, in 1936, he became its president. Since then he has been active in financial negotiations all over the world, and particularly in the fertile field of South America. Today, more than ever, his twinkling eyes and direct manner, his knowledge of South America and banking, are doing much to cement the Good Neighbor Policy.

PINZA, EZIO (pĕn'tsä ĕts'ē-ō) May 18, 1892- Metropolitan basso and concert singer

Address: b. c/o Constance Hope Associates, Inc, 29 W. 57th St, New York City; h. 55 Central Park West, New York City

Ezio Pinza, one of the most popular bassos ever to appear in opera, began two entirely different careers before he became a singer. He was born in Rome, Italy, the son of Cesare and Clelia (Bulgarelli) Pinza. They hoped to make a civil engineer of him and for this purpose sent him to the University of Ravenna. But after a year he left, with some idea of studying singing. He did not, however, begin his musical career at once; first he made a try at professional bicycle riding to earn some quick money. For a year he took part in races, often riding for 12 hours at a stretch, a bag of food tied to his handle bars. "He covered a lot of ground, achieved a muscular figure and never won a race." His father then complained: "You must do something useful, you must go back to engineering."

By this time, however, Pinza had other plans. And it was his coming in second in a race that helped him to crystallize those plans. While taking a shower after the race he sang exuberantly over his near-victory. The other bicycle riders suggested that Pinza would make a better opera singer than bicycle rider. Though he listened to their advice he tried riding for a while longer, until his father decided to let him study singing instead of en-

EZIO PINZA

gineering and sent him to the Bologna Conservatory of Music. There he studied under Maestro Vezzani, and completed his studies in two years. Of this accomplishment he merely comments: "If you have money you study 10 years. If not, two. I study two."

"I was ready for my opera debut," the basso said, "when the War [the First World War] broke out. But that changed every plan again. I joined the Italian artillery, and kept my voice on ice for four years—four years of War in the Italian Alps, where the lowest altitude I got down to (except when on leave) was 6,000 feet above sea level."

Fortunately he came out of the War without even a scratch. His long postponed debut was made at the Teatro Reale dell' Opera, in Rome, as King Mark in Wagner's *Tristan und Isolde.* Two years later he was at La Scala in Milan, where for three years he sang under Toscanini. It was there that he was heard by Giulio Gatti-Casazza of the Metropolitan, and engaged.

His first New York role was in a revival of Spontini's *La Vestale,* during the 1926 season. His acting, as well as his singing, brought enthusiastic response from the audience, and from that time he has been one of the favorites of the Metropolitan Opera. Perhaps the role that he enjoys best is that of Figaro in *The Marriage of Figaro,* which was revived for him in 1940, the first time in 22 years that the Metropolitan had produced it. Other operas in which he has been particularly successful are *La Sonnambula, Louise, Nerone, Faust, Simon Boccanegra, Don Giovanni, The Barber of Seville* and *Boris Godunoff.* In Italy he sang all the Wagnerian operas and he hopes to sing them all in German in the United States. His voice and his style are adaptable to German, French and Italian singing. He appears not only with the Metropolitan Opera but also with the Chicago, the San Francisco and the St. Louis Opera Companies, and in Covent Garden, London. The 1941 season was his fourteenth with the Metropolitan.

In addition to his opera success Pinza has had a notable career on the concert stage, usually singing about 60 concerts a year, covering 50 cities in 25 states.

Pinza feels that a singer must study more than singing. "I study much harder now than when I was at the Conservatory," he has confessed. "I study not only singing, but acting, make-up, and background as well. In opera one must remember he is more than a singer. I feel that I must know all about the characters I am portraying—and as much about their times as I can find out."

Pinza has about 50 roles in his repertoire, and since he seeks out the smallest detail that will help him to interpret these rôles he has by now acquired a rich background of history and folklore. He considers it important to study not only his own part but his part in relation to the others, for only thus, he feels, can he give an adequate portrayal of his own role. Also he thinks the dramatic interpretation of a role as important as the musical. "Formerly," he has said, "artists gave thought to little else except singing. They just stood and sang, or at most made exaggerated and stereotyped gestures with their arms. Today this is not sufficient. After all, even if one sings beautifully, why be on the opera stage if that is all one does? No matter how marvelous the voice, an artist who fails through lack of acting ability to convey the character that the composer had in mind fails to give a good performance."

In make-up Pinza is an expert. He became interested in this art through frequent visits to the Pastel Room in the Louvre, Paris, where he noticed that in pastel drawings a single line could change facial features and character. Though he is one of the most handsome singers of the Metropolitan, six-feet-one with the athletic figure he acquired bicycling, his good looks are usually disguised under his clever make-up. For Mephistopheles he uses pointed effects—a pointed nose, chin, eyebrows, beard, and a peaked cap and feathers. As King Dodon in *Le Coq d'Or,* on the contrary, he looks a foot shorter than he is, by emphasizing roundness—with whiskers, hair, a broad putty nose and a pot belly. Basilio, in the *Barber of Seville,* he conceives as a "comic strip buffoon" and gets the effect he desires by a "long, downturned putty nose and lean, mask-like features, topped by a rectangular hat of grotesque proportions." As Don Giovanni, however, he retains his natural tall, stalwart, athletic figure.

Through his "leonine grace and magnificent voice"—a voice that ranges from bass to baritone—his skillful and imaginative make-up and his dramatic portrayals, Ezio Pinza has frequently stolen the spotlight from the tenor, though the latter is always the hero in the performance. His first singing (in 1938) of Boris Godunoff, a role in which he is considered the famous Chaliapin's successor, brought the audience to its feet. When he sang the role with the Chicago Opera Company the next year one critic wrote: "Ezio Pinza's Boris follows the tradition set by the great Chaliapin in action. Vocally, the Italian baritone put to shade memories of other Borises who have appeared on our lyric stage besides the Russian baritone." Some of his other portrayals have been acclaimed almost as enthusiastically.

It is reported, though, that the basso is indifferent to the opinions of the critics and that he never reads his press notices. He has said, "I do not mind what the critics say—so long as they sit in their chairs. If they learn to sing and come up on the stage, then maybe I listen to them. But the artistic conscience, that only the singer can trust."

Pinza married the former Doris Leak, of Larchmont, New York, a talented soloist of the Metropolitan ballet, in 1940. There are traces of his sporting past in his devotion to his 20-foot speed boat and his auto, rivaled only by his devotion to his young daughter, Clelia, born in August 1941.

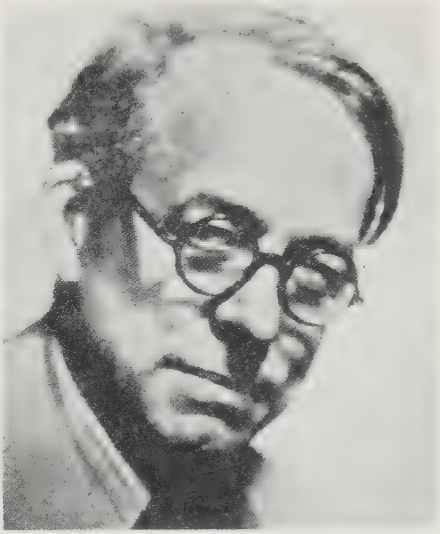
PITKIN, WALTER B(OUGHTON) Feb. 6, 1878- Author; psychologist; teacher

Address: b. 2960 Broadway, New York City; h. R. F. D. 1, Dover, N. J.

As the man who has made popular psychology pay to the tune of some 50 books of the career-uplift variety, including the 1932 best-selling *Life Begins at Forty* (second only to *Babbitt* as a household phrase book title), in 1940 Professor Walter B. Pitkin added *Art of Useful Writing* and *Escape From Fear* to his phenomenal list. With the latter title the energetically versatile, "omni-opinionated" Pitkin turned from careers to culture and world politics: "I aim at a cultural revolution about 10 times more profound than the petty political revolutions about which soapbox orators and old style campaigners chatter," he writes in *Escape From Fear*. "Most of the institutions and people to be destroyed must die off. We cannot shoot them at sunrise."

Revolutionist Pitkin is convinced that "Chaos engulfs all things human," that "everything is going to pieces." Nevertheless, as the author of *Careers After Forty* (1937), *Careers for Youth* (1936) and *Capitalism Carries On* (1935) has always assured us, there is still hope. Today man "can shape his destiny." How? "Impose your will on Chaos or perish. Like Cleopatra, be alive every minute. Don't live for somebody but for something."

Most critics dismissed this particular opus of Pitkin's with a brief, good-natured shrug; but a reviewer in the Springfield (Massachusetts) *Republican* took it more seriously: "It is difficult to reconcile the various views expressed in this book. The many advantages of the totalitarian state are listed along with pronouncement of doom upon the democracies of the world. Among the things he seems to favor are restrictions of labor unions, suppression of 'squatting women' of the women's club variety, less freedom, more fighting, and the extermination of human beings of the type that psychologists and psychiatrists strive to save and reshape to useful citizenry."



WALTER B. PITKIN

Various interests and activities apart from teaching and book-writing have highlighted the career, before and after 40, of Columbia University's volatile professor. He was born in Ypsilanti, Michigan on February 6, 1878, the son of Caleb S. and Lucy T. (Boughton) Pitkin. After his graduation from the University of Michigan in 1900 he studied for five years at the Hartford (Connecticut) Theological Seminary. Some years of graduate study abroad followed: at the Sorbonne, Paris; at the University of Berlin, and at the University of Munich. In 1903 he married Mary B. Gray, of Hartford. The Pitkins have five sons: Richard, John, David, Robert and Walter.

From 1905 to 1909 Pitkin lectured on psychology at Columbia University, where he has been professor of journalism since 1912. He has also been on the editorial staff of the New York *Tribune* (1907-08) and of the *Evening Post* (1909-10); since 1927 he has been an editor of *Parents' Magazine* and from 1935 to 1938 an editorial director of the *Farm Journal*; he found time further to be, from 1927 to 1928, the American managing editor of the *Encyclopaedia Britannica* and, in 1929, story supervisor of Universal Pictures. In 1932 he founded the Institute of Life Planning, and he is in 1941 partner in a large-scale

PITKIN, WALTER B.—*Continued*

experimental farm in Centerville, Maryland. Among the Pitkiniana dashed off in more relaxed moments, besides the titles already mentioned, are *Art of Rapid Reading* (1929); *Take It Easy* (1935); *Making Good Before Forty* (1939); and *Seeing Our Country* (co-author) (1939).

One of Professor Pitkin's most unique extra-curricular activities was in June 1939 when, with the encouragement of Cleveland businessmen, he launched a new organization at Elyria, Ohio. This was called American Majority—a movement for the "betterment of America." It was also called by Pitkin a "League of the Middle Class in revolt against the predatory rich and the predatory poor." Elyria (a town in solidly Republican, prosperous territory) was chosen as headquarters because it "so thoroughly typifies the solidity, energy and patriotism of American life." Pitkin represented himself to the town as "an average American—farmer, city dweller, businessman, educator, sociologist, champion of the rights of the everyday citizen." Membership dues in the organization (whose exact aims seem to have been clothed in cloudy mystery) ranged from $100 for charter members to $1 for all young people under 25. Pitkin himself made a dynamic speech at the opening meeting. "Get up on your hind legs and bark," said he. "If you don't get results by barking, bite somebody."

Of Pitkin's part in this venture (which seems to have died after its initial flourish) Motier Harris Fisher (the *New Republic*, October 4, 1939) wrote, belligerently: "Pitkin has repeatedly warned industrialists that 'if capital doesn't speak up it is going to be defeated.' He is fond of saying: 'Heaven send us a Rabble Rouser of the Right.' . . His philosophy as set down in his books, his record of antagonism for the Newspaper Guild and labor organizations in general, and his condescending attitude toward democracy . . . leaves no doubt as to where his sympathies lie and which blind spots are largest. Convinced that men are too stupid to govern themselves, he has demonstrated his willingness to serve as a piper for big businessmen who have been humming a long time the tune to which he has found the words."

But Professor Pitkin, whose *Life Begins at Forty* had sold more than 350,000 copies, apparently did not feel overly in need of the backing of Big Business. A romanticist at heart, adventure in other forms beckoned him. For some years he had been carrying out the idea of a boat: one "with keels set on the principle of a catamaran, and with a square-rigged type of sail modernized by a welded steel mast and electric motors to operate the rig." This unique craft Pitkin called the *Experimenter*. Some $100,000 went into its construction. It was designed primarily to withstand typhoons in tropical waters. And it was toward the tropical waters of the Caribbean that the modern Ulysses headed his ship from Newburgh, New York on New Year's Eve 1940.

The freeze-up in the Hudson River made the adventure-bound Professor rush his plans: the *Experimenter*, pushed by her twin Diesel engines, buzzed off amid the gathering ice cakes. A few hours out of Newburgh, ice cut a large gash in her planking, and in rushed the non-tropical Hudson. The captain and his crew of two hastily took to a row boat—only to find that the builders had forgotten to put in seats and oarlocks. Pitkin likewise abandoned the leaking row boat; and, like Eliza, jumped onto an ice cake floating downstream. He and his crew welcomed in the New Year atop their ice floe, munching sandwiches someone had thoughtfully brought along. His uninsured *Experimenter* a hopeless wreck, Pitkin the next day caught a plane to Florida. From there he wired friends in Manhattan: "Florida has chance of a lifetime and knows it. America faces south for next 50 years and the Caribbean must become American lake. Florida sits on the front steps of tomorrow's big business. That is why I am here."

As enthusiastic and irrepressible in his 60's as at 40, Professor Pitkin has set forth in the *Reader's Digest*, December 1940, some of the many things he wants to experience "Before I'm Eighty." His next two decades are to be brimful of things to do and places to go. He wants to "sit in an igloo of unbreakable glass on some West Indies peak to see hurricanes"; he wants to hear "a first class volcano in eruption; the drum concert of 500 baboons." He begs: "Let me whiff, many a time between the end and now, the lilacs of a New England spring, a still night of blossoms in a Florida orange grove. Let me breathe, over and over again, the lifting cleanliness of salt ocean air. For my palate, give me a thousand more dessert melons, picked as they fall from the stems and eaten before sunrise so that they are filled with the coolness of the night." Professor Pitkin would also like to be given the moon (astronomically speaking), the secrets of the ant and bee, and of the "creatures of the deep." But most of all he would like to "witness a thousand experiments with the chemicals that control character and help find the substances that clear befuddled minds."

Who's Who in America

PIUS XII, POPE Mar. 2, 1876- The Pope

Address: The Vatican, Rome, Italy

The sixty-fifth birthday of Pius XII on March 2, 1941 was also the second anniversary of the swiftest election in papal history. Ten days later the second anniversary of his coronation was celebrated with solemn Masses and a public holiday for Vatican City. It had been two years since 200,000 people outside St. Peter's Cathedral had seen him receive the triple tiara, while 500,000,000 more, through the first broadcast of such a ceremony, had been able to hear the solemn words: "Receive the tiara adorned with three crowns, and know that thou art Father of princes and kings, Rector of the world, Vicar of our Saviour Jesus Christ."

The election of Cardinal Eugenio Pacelli on March 2, 1939 meant continuance of his predecessor's policy which, as Papal Secretary of State, he had helped to effect: a policy of opposition to race prejudice, religious persecution, wars of aggression. Cannons roared, the bells of Rome rang out, congratulations poured in. But there was small rejoicing in Germany, for the Reich had made it clear that of all candidates the "pro-Ally" Pacelli would be least acceptable.

His first message was a plea for peace, his chosen motto *Opus Justitiae Pax,* the coat of arms he selected showed a dove bearing an olive branch. And shortly after he was crowned, talk was heard of his efforts to convene a five-power conference for peaceful settlement of Europe's problems. These rumors the Vatican alternately fanned and smothered, for it stood committed by policy and also by Article 24 of the Lateran Treaty to remain outside all temporal disputes unless its services as peacemaker were requested. To be so pledged and to be at the same time champion of peace, foe of oppression and spiritual leader of 331,500,000 Catholics divided among contending nations, as well as the native of a fatherland which has become a dictatorship, is a position that easily gives rise to contradiction and speculation. Small wonder that Vatican diplomacy is more often guessed at than known.

It was known, however, that the Vatican would be available for a conference of powers, not including Russia. And no secret was made of His Holiness' great dread that Bolshevism and atheism might gain a foothold in Europe, of his brief hope that Franco's "desired Catholic victory" in Spain would end this threat, of his opposition to any alliance between Britain, Russia and France before the First World War. (Later, however, after Germany troops had invaded Russia, he refused to direct Catholics to take a pro-German stand. This war was not a religious crusade, in his view.)

As the War has gone on, pained but not daunted when his proposals are politely eluded, Pius has repeatedly renewed his peace efforts. Mundane diplomacy, offers of mediation and appeals to the dictators have been reinforced with orders for public Masses and Crusades of Prayer, for special appeals to the Blessed Virgin by little children bearing flowers. The Pope himself has been deluged by appeals, private and public, from statesmen, churchmen and laymen, to take more active steps against war; he has been alternately and simultaneously applauded for vigor and denounced for weakness.

POPE PIUS XII

His relations with the Axis leaders have varied between friction and something resembling reconciliation. Rumors of accord with the Reich have been repeatedly smashed by new outbursts against Nazi persecutions from the Vatican radio or the semi-official Vatican newspaper, *Osservatore Romano.* In March of 1940, shortly after President Roosevelt broke a 70-year precedent and caused renewed talk of collaboration between the Holy See and the United States by sending Myron Taylor to the Vatican as his representative, an emissary from Hitler was also granted audience. Yet Foreign Minister Von Ribbentrop (see sketch this issue), it was said, took home nothing but "a delicate snubbing" and a nervous breakdown.

Ties with the Fascist government have similarly snapped and mended. After the papal rebuke called forth by Albania, the old breach between Vatican and Quirinal seemed on the way to healing. The King and the Pope actually exchanged visits for the first time since 1870, and it was informally hinted that the Papal Secretary of State and the new Italian Ambassador to the Holy See had reached a "gentleman's agreement" providing for parallel action against Communism, "the new menace of the West." When Belgium and Holland were invaded, however, the *Osservatore Romano* protested openly, sales were suppressed outside Vatican City, copies of the paper burned, readers of it thrown into the Trevi Fountain. After Italy entered the War, Fascists were forbidden to read it; Professor Gonella, its pro-Ally news columnist, mysteriously disappeared for two days; its editor

PIUS XII, POPE—*Continued*

went about with two bodyguards; war news was banned, and it became "as good as suppressed."

Rumor said that the columnist's return was due to the Pope's threat to broadcast the whole story; that the Nazis were going to force his resignation; that the Vatican was being held practically incommunicado; that haven had been offered in the United States. Then Pius announced his resolve to stay in the Vatican, and rumor subsided. A papal edict forbade political discussion in public places of Vatican City. Blackout was arranged, although the Allies had promised not to bomb Rome for fear of accidental injury to the Holy See. The Pope spent hours, possibly whole nights, on his knees in private prayer and from time to time there came reports of his ill health, caused by long prayers for peace and deep concern.

"Trimming his sails to the wind" was an unpleasant phrase bandied about during the next months, and uglier ones were shouted in England. From the distance of America, however, it was easier to appreciate the dilemma of a choice between "sharing the spoils of a Fascist-Nazi triumph" and alienating the countries to which two-thirds of the Pope's spiritual dependents owed temporal allegiance. Again in December the *Osservatore Romano* lashed out against Nazism, to the comfort of the Allies, who had "feared that silence meant tacit approval." They, however, soon were worrying again over the Pope's apparent sympathy for "quasi-Fascist France."

Both sides found some comfort in the Pope's outline for a post-War world, given in June 1941. In it he defended private property, asked for a more equitable distribution of the world's goods, for respect for the rights of workers, for respect for the integrity of the family and for less restrictions on immigration by large nations. And since then the Vatican has persisted in its attitude of strict neutrality. When Myron Taylor had audiences with the Pope again in the fall of 1941, reportedly to get him to declare the war against Germany a "just" war, nothing came of them.

If it were possible to speak of a Pope as a career man, the term would apply to Pius XII, whose whole training has shaped and equipped him for his present office despite his own wish to be a mere curate. His parents, Filippo and Virginia (Graziosi) Pacelli, had assumed that their second son, Eugenio, born on March 2, 1876, would follow the law like all the men of the aristocratic Pacelli family. Marcantonio Pacelli had served as the Papal State's Under-Secretary of the Interior from 1851 to 1870, and his son Filippo had been dean of the College of Consistorial Advocates (secular lawyers for the papacy). Filippo's first son, Francisco, did become an ecclesiastical lawyer, but Eugenio proved less interested in the family tradition than in the glory of God.

His religious inclination was evident even as a little boy attending a school conducted by nuns. The class cartoonist invariably represented Eugenio in prayer. Later he was sent to the Visconti Grammar School, a State rather than a parochial institution, where he headed his class, winning an Italy-wide essay contest on "Universal History" and distinguishing himself as a linguist. He delivered his first halting sermon to a Catholic boys' club of which he was a member. Later he was to preach fluently in Spanish, German, Hungarian, Portuguese, French, Italian and English, in great cathedrals throughout the world.

At Capranica College in Rome he earned his doctorate in theology, philosophy and law, and in 1899 was ordained a priest. His brilliant scholastic record attracted the attention of Monsignor Gasparri, Secretary of the Congregation for Extraordinary Ecclesiastical Affairs, and after a short term as professor of law at the Roman Seminary the quiet young man was transferred to Gasparri's department: first as junior clerk, later as principal copyist, and presently as Under-Secretary. He never again left the shadow of the Vatican. Twice he accepted professorships in Catholic institutions, but each time Monsignor Gasparri persuaded him to change his mind.

The first of his many trips abroad as papal emissary was in 1901, when he carried to London a personal letter of condolence from Pope Leo XIII to Edward VII on the death of Queen Victoria. In 1908 he returned for the London Eucharistic Congress. On his third visit, in 1911, for the coronation of King George V, he received the Coronation Medal, so that now he is the only Pope in history with a British decoration.

On the outbreak of the First World War, Pope Pius X died—of a broken heart, it was said. His successor, Benedict XV, promoted Gasparri to be his Secretary of State, while Pacelli took the latter's position in the Congregation for Extraordinary Ecclesiastical Affairs. Pope Benedict was highly pleased with his work in arranging the exchange of prisoners, the moving of the wounded, the relaying of information about the missing, and also with the codification of Canon Law which he completed in 1916. In May 1917, with a new title, Archbishop of Sardis, he was sent as papal nuncio to Munich, to initiate a peace movement.

He was still in Munich 15 months later when the War ended without benefit of clergy, and he remained there during the revolutionary outbreaks that followed. When armed looters broke into his home he received them in his ecclesiastical robes, reminded them that they were on extraterritorial soil and that it was never wise to kill a diplomat. With their revolvers leveled at his breast he lucidly and kindly analyzed their problem, while one by one the weapons dropped and the men silently made for the door. During his six years in Munich another future potentate named Adolf Hitler was in the city, at the head of a Nazi party numbering seven men; but apparently the two did not meet.

In 1925, after the Concordat between the Vatican and Bavaria had been signed, Pacelli was transferred to Berlin. There for four years he was "the doyen of the diplomatic corps, the first accredited diplomat to the Weimar Republic, and a spokesman for the chiefs of all foreign missions." When he left in 1929 President Hindenburg, deeply moved, assured him of Germany's undying gratitude, while thousands "Hoched" and "Heiled" him along the torchlit route to the railway station.

He had been recalled to succeed the aging Gasparri as Papal Secretary of State, an officer who "must know everything, understand everything, and say nothing." His has been called the best informed of all foreign offices, and the canniest. With the reports of 60 papal legates and 1,300 bishops pouring in from all over the world, and the bishops through their priests in touch with the people, in his new office "Pacelli probably had a better idea of what was going on in the world than anybody else in it."

The State of which he now became in effect Foreign Minister had changed character since his brother Francisco helped to draw up the Lateran Treaty of 1929 restoring to the Papal See the status of a temporal domain, whose ruler—the Pope—commands absolute sovereignty. It has 108 acres and in 1939 exchanged diplomatic representatives with 37 countries. And as Secretary of State, Pacelli put the Lateran Treaty into working order and did much toward making Vatican City as modern as New York, with its own electric power station, telephone and telegraph service, fleet of motorcars and radio designed by Marconi himself. (The Pope's own telephone is of solid gold and only the Secretary of State is privileged to call him on his private wire.)

Secretary Pacelli, in addition to being made a Cardinal, was appointed Archpriest of Saint Peter's, and in 1932 received the highest Order of the Italian Crown, conferring on the holder the right to address the King as "Cousin." In 1935 he succeeded Gasparri as Camerlengo (Chamberlain), who rules the Church during the period between the death of one Pope and the election of the next.

By employing Pacelli frequently as emissary abroad, Pope Pius XI carried on the education Gasparri had begun. When Pacelli first crossed the Atlantic in 1934 to attend the Eucharistic Congress in Buenos Aires, tens of thousands of pilgrims welcomed him. A much quoted instance of his self-discipline is that during a procession lasting over two hours he was drawn through Buenos Aires in a float, the whole time kneeling erect with hands pressed together in prayer before the exposed Host in the monstrance.

In 1936 he made an 8,000-mile tour of the United States by plane, swerving from his course to admire Niagara Falls, the Grand Canyon, Boulder Dam. During the flights he wrote letters on a portable typewriter and prepared countless speeches. The speed of the plane was all to his taste—both he and Pius XI were suspected of starting late for appointments in order to make their chauffeurs drive really fast. His untiring readiness to meet the crowds that clamored for him was the marvel of hosts, as was his finesse with reporters. Asked to comment after lunching with President Roosevelt at Hyde Park, he answered cheerily, "I enjoyed lunching with a typical American family."

Nazi policy toward the Church brought repeated protests from Vatican City, which evoked answering protests from the Reich, so that this was a period of growing strain. The Vatican was by no means easy to gag. When Hitler banned Catholic literature, Pacelli had it flown in by plane. When Mussolini ordered the Italian Catholic Action group and the Catholic Boy Scouts disbanded, Pacelli realized that the Pope's answering encyclical would be suppressed in Rome. Therefore two priests flew with it to Paris and released it there; Mussolini learned its contents when the telegraph brought it to Rome and all the rest of the world.

On February 10, 1939, Cardinal Pacelli, as Camerlengo, announced to his fellow Cardinals: "The Pope is truly dead." Three weeks later he phoned his sisters Elisabetta and Giuseppina to tell them of his own election and to give them his blessing over the wire. Since that time his life has become increasingly strenuous. By December he was so worn with ceaseless activity and nightlong prayers for peace, by constant worry about persecutions and the menace of Communism, that for a week he had to cancel all engagements. Although still carrying his more than six-foot frame erect, he had become so emaciated that a visitor wrote: "The figure of the Pope in his simple white cassock and skullcap seems ascetic almost to the point of frailty." Surrounded by pomp and color—the crimson-damasked walls of the throne room, clerics in purple, the Swiss Guard in the vivid costumes designed for them by Michelangelo—he remained gentle yet austere, approachable yet remote. Those who were favored with an interview came away impressed with his patience, his voice and his eyes.

Today Pius XII keeps up his strenuous solitary walks in the Vatican Gardens, continues to rise early, to go through morning exercises in the completely equipped gymnasium adjoining his bedroom, to shave himself with an electric razor, to breakfast on black coffee and "dunked" bread. Most mornings he listens to radio news in eight languages; often he lunches lightly on nothing but an eggnog. Like St. Francis he greatly loves birds; and he keeps a flock of canaries that fly about him while he dines.

The smallest kingdom in the world, under his rule, is today a sanctuary-prison for diplomats of countries at war with Italy. Pius XII himself is neither pro-Ally nor pro-Axis. He is the Father of princes and kings, Rector of the World, Vicar of his Church, whose welfare he must place before all temporal matters. Yet, declares the *Osservatore Romano,* neither is he a neutral: "He should be considered a com-

PIUS XII, POPE—*Continued*

batant fighting for a just peace, based on the five points he has repeated twice."

PONCINS, GONTRAN (JEAN-PIERRE DE MONTAIGNE), VICOMTE DE (pôN-săN′ gôN-träN′ zhäN pyâr′ dẽ môN-tȧn′y′) Aug. 19, 1900- French author

Address: c/o Reynal & Hitchcock, 386 Fourth Ave, New York City

In the language of the Eskimo *Kabloona* means "white man." And when in 1940 Gontran de Poncins returned from 15 months in the Arctic wastes he brought back with him a diary and photographs which formed the basis of a best-selling book by that title—an April 1941 selection of the Book-of-the-Month Club. *Kabloona* is, according to Rockwell Kent, himself no stranger to the Eskimo, "a sensitive, an understanding and a loving record. It is a peaceful, beautiful and moving book. . . It is a book that possibly no Englishman, and no American of the English colonial and exploratory tradition, could have written." Irwin Edman calls it "a fascinating and sophisticated travel book . . . engrossing, simply as narrative . . . an essay in comparative morals . . . a collection of field notes . . . of an anthropologist without academic apparatus but with the alert sensibilities of a poetic man of the world . . . above all, the meditative journal of a highly bred Frenchman driven to re-examine himself and all the civilized values he had taken for granted."

Richard Finnie, reviewing the book for *Natural History*, struck a discordant note in this symphony of praise. Although admiring *Kabloona's* "high literary quality," its excellent "introspective and analytical writing," he announced that "it contains too many exaggerations, half-truths and misleading statements to be taken seriously for its Arctic lore" and that De Poncins' descriptions of Eskimo folkways, "although fascinating, are often shockingly distorted." He says, moreover, that the author was quite unjustified in fancying himself "as very nearly the first white man to hobnob with most of the Eskimos of that area."

Whatever the scientific accuracy of the book, there have been few stories stranger or more romantic than the life of its author—a Frenchman of aristocratic birth, a "child of civilization" who "wandered in the course of a few weeks into the stone age" and found himself oddly "relaxed, content, happy" there, completely at peace with himself for the first time in his life. Viscount Gontran Jean-Pierre de Montaigne de Poncins, born on an estate in southeast France on August 19, 1900, is a descendant of the famous French essayist whose name he bears. Until the age of 14 he remained at home, living with nature more closely than with his parents, and then prepared for a military academy. But the First World War was over by the time he finished his examinations. He joined the compulsory service as a private, and in 1920, after three months in the "Blue Devils," began serving as an interpreter with the French mission attached to the American Army of Occupation in the Rhineland. There a "mule-driving American sergeant" gave him the name "Mike," a name which he still enjoys hearing.

The next years account for the fact that today De Poncins speaks fluent and idiomatic German, English, Italian and Spanish. Interested in human psychology, in human adventure above all else, he left his *milieu* to mix with other people and try to understand them. He wanted to find out things by himself, without preconceived ideas. He wanted to know what people lived by, what helped them through life. He joined the cosmopolitan French Beaux Arts School and painted there for six years. He entered an Italian silk concern, as an apprentice in an Italian factory, eventually became director and in 1927 chairman of its London branch. It was 1929 when he quit: "His bones rejected the fat they were accumulating." He traveled restlessly everywhere between New Guinea and the Arctic Circle. He wrote about native life wherever he went, both for magazines and for the French newspapers for which he was correspondent, without ever thinking of writing a book. He gathered a variety of acquaintances ranging from royal families to Indian Brahmans, from workmen in factories to missionaries and natives in the South Pacific islands, from doctors to circus clowns.

Says Lewis Galantière, describing these years: "First he tried Cloudcuckooland, sailing a boat alone through the South Seas. Then he went into the sterner worlds of India, China and Arabia. In St. Jerome's time he would have gone into a cenoby; in our time, it turned out, he could go only to the Eskimos."

But it was not until one spring day in 1938 that De Poncins decided to go to the Eskimos. There was no particular reason for his decision—only "some time before that spring day the word 'Eskimo' had rung inside me and . . . the sound had begun to swell like the vibrations of a great bell and had eventually filled the whole of my subconscious being." He knew by hearsay of "a little handful of men calling themselves the Netsilikmiut (the Seal Eskimos)" who, "cut off from the surrounding world by ice-filled seas and trackless wastes . . . have been suffered to live their own life entirely untrammeled by outside influence, up to the present time." Without equipment, without much more money than baggage, without even plans, he made arrangements with Canada's "Bishop of the Wind" to fly with him from Fort McMurray, Canada part of the way to their land. It was June 11, 1938 when De Poncins left Paris, and not quite a month later when he climbed into the Bishop's plane. Sometime in the summer he reached the Hudson's Bay post on King William Land, an island north of the Arctic Circle, 10,000 miles square, with a population of 25 Eskimos. He had traveled by ship, railroad, airplane and Eskimo boat.

Thus began a year spent living the primitive life of the people of the Arctic, accompanying them on whaling trips, eating their food, following their customs, sometimes not seeing another white man for months on end. (At the same time scientific studies were made for the French Geographic Society and for the Museum of Natural History of France.) Says De Poncins, in *Kabloona*: "Hardest of all was not the severity of the climate, not the intensity of the cold, not the physical anguish which, often, I endured. The cold was a problem; but a very much more difficult problem was the Eskimo mentality. There was no getting on with the Eskimo except on his own terms; and I had to get on with him if I was to live with him. A good part of this book, therefore, is the story of the encounter of two mentalities, and of the gradual substitution of the Eskimo mentality for the European mentality within myself." The tale he has to tell is not an idyllic one, but gradually this Frenchman made the discovery "that the culture of the Stone Age could be as elaborate and often more satisfying than our own"—that the "arrogance of the white man who thinks himself master wherever he goes" is an amusing but altogether stupid phenomenon.

Yet "for a Frenchman of our time the trail leads back to France." It was the War that brought De Poncins back—the War that would have been quite incomprehensible to his Stone Age friends. He came back in a boat alone with two other men on a trip around Alaska and through Bering Strait, covering the 4,000 miles from the North Magnetic Pole to Vancouver in 57 days. In the Aleutian Islands he stopped to join the whalers in their whale hunt. Then, after a stay in Connecticut and in New York long enough to see the thousands of pages of his Arctic diary whipped into book-shape (Lewis Galantière was his collaborator, but the photographs and illustrations are entirely his own), De Poncins sailed from New York on the last eastbound voyage of the *Champlain*. He arrived in France three days before the fall of Paris.

VICOMTE DE PONCINS

Early in 1941 it was reported that he was living in occupied France and replenishing the larder on his family's country estate by using the primitive Eskimo tricks to trap pheasants. But on April 25, after patient efforts to facilitate his return to the United States, his publishers (Reynal & Hitchcock) received a cable from Lisbon: "Sailing today on *Excalibur,* Gontran de Poncins." When he arrived it was with permission to make another expedition into the Arctic, although he does not plan to go right away. "I like this writing," he says: "the excitement of it, the way for a little while the words spurt out, surprising me... I am having a wonderful time."

Galantière's description of the author is a vivid one: ". . . two features in his bony, aristocratic face are in perpetual contradiction with each other, so that, looking at him, you

PONCINS, GONTRAN, VICOMTE DE
—Continued

never can tell what he thinks of you. His eyes are alert, intelligent, and suspicious—what the French call *sauvage* when they mean untamed, unsociable; but his smile is so friendly and confiding that it belies the disquiet in his eyes."

POPHAM, SIR ROBERT (MOORE) BROOKE- *See* Brooke-Popham, Sir R. M.

PORTAL, SIR CHARLES (FREDERICK ALGERNON) (pôr'tăl) 1893- Chief of the British air staff

When Sir Charles Portal succeeded Sir Cyril Newall as chief of the air staff in October 1940, the British press in general hailed the new appointment as a sign that, having proved she could "take it," England was ready to show she could also "give it." In the months before his new appointment, during which Portal had been in charge of the Bomber Command, he had already shown a highly energetic and combative spirit. The British air offensive on German military objectives was pressed by him with the utmost vigor. Night after night heavy blows were delivered on oil storage tanks, docks, aircraft factories, munition works, canals, railways. Targets as distant as the Skoda works in Bohemia and the factories at Milan and Turin had been bombed. And while the night raids on England remained serious, the day raiders had been mastered by the Fighter Command. With the growing strength of the R. A. F. the time had come to plan ahead for the 1941 campaign; and Portal was evidently the man for the job. Portal's own words on hearing of his appointment were: "Good, now I'll bomb hell out of them."

A member of the War Cabinet is reported to have said once: "The War has produced only one man of genius. I mean Portal of the Bombers." Although his full stature is yet to be determined, Portal's past record promises well for it. He won his spurs in the First World War, where he gained a reputation for daring and courage. He has shown more than daring, however. He has the ability to plan. The targets selected by the R. A. F. in Germany and elsewhere are not chosen at random. They form part of a considered plan directed against German industry and communications, and that plan has been largely Portal's creation. No wonder the Nazi organization said: "The *Luftwaffe* will take notice of the new appointment."

There is a strain of Huguenot blood in the Portal family, which first came from France to England in 1695. Charles was born in Hungerford, Berkshire, the son of E. R. Portal, and lived during his youth in the Thames-side village of Pangbourne. He went to Winchester College, played cricket for his school and began to cultivate an antiquarian interest in falconry. By the time he was 16 he was writing about falconry in learned journals. At Christ Church, Oxford, he made no special impression as a scholar but became known as a young man who zoomed around the old city on a high-powered motorcycle. On it he won an important amateur race.

Portal was still an undergraduate when the First World War broke out. His first problem was how to get to the front—he solved it by riding his motorcycle. Immediately he enlisted as a dispatch rider in the Royal Engineers, was soon made a corporal, was in France during September and was named in Sir John French's very first dispatch from the field. A shellburst nearly put an end to his career before the year was out, but though five of his mates were killed by it Portal was only blown through the doorway. He pulled himself together quickly and was able to give first aid to some of the wounded before the ambulance arrived.

Early in 1915 Portal went home to England to train for a commission in the Royal Flying Corps (as the land air force was then called). After four months he got his single wing, as an observer. One of his first exploits was an almost successful pot shot with a Winchester automatic at Immelman, the German air ace who was flying low over the British lines. Portal hit his plane, but didn't down it. As an observer officer Portal worked carefully and methodically on "spotting" for the artillery, often ranging the guns himself and afterward flying over the target to note the results.

Eventually Portal passed from observing to piloting, and some of his fighting and bombing achievements are still remembered by those who were with him in France. One night he was over the enemy lines five times on bombing raids. Another time he tackled five German planes singlehanded, shot down three of them and returned safely to his base. During 1917 he won the D. S. O. and bar, and the M. C. He was a 25-year-old colonel when the War ended in 1918.

By this time the army and naval air services had been amalgamated as the Royal Air Force, and with the coming of peace Portal was granted a permanent commission in this arm of the service as squadron leader with the No. 59 Wing at Cranwell, Lincolnshire. In 1923 he was put through a course at the R. A. F. staff college and then went to the Air Ministry to serve on the air staff. In 1926 he took a senior officers' course at the Royal Naval College, and the year after took command of the No. 7 (Bomber) Squadron. It was here that he began that serious study of accurate bombing for which he has since become noted. In both the first and second

British Press Service

SIR CHARLES PORTAL

years of his new command he won the Laurence Minot Bombing Trophy, releasing the bombs himself each time.

After taking a course at the Imperial Defence College in 1928, Portal again went to the Air Ministry, doing staff work there from 1930 to 1934, when he was sent out to Aden, the youngest man ever entrusted with this command. From Aden he went to India for a time and from late 1935 until July 1937 acted as an instructor in the Imperial Defence College at home. It was in July 1937 that he was promoted to senior rank, as air vice-marshal, and in August he took over the important Air Ministry post of director of organization. In February 1939 he was made air member for personnel on the Air Council, and during that year became Companion of the Bath and rose to air marshal. The New Year's honors of 1940 created him a knight, as K. C. B. In March he took over the Bomber Command; on October 25 he became acting air chief marshal and chief of the air staff.

Charles Frederick Algernon Portal, more commonly known as Peter, is an inch short of six feet tall, "big-boned but slight, with a beakish nose and balding black hair." Two British army officers, seeing him for the first time when he arrived at Buckingham Palace to be knighted, gasped in one breath, according to Julian Bach, Jr., "Good God, he's fantastically ugly!" He is said to eat "with the parsimony of a sparrow and the regularity of a metronome."

Besides shooting, Portal's favorite recreations are sailing, fishing, taking photographs and, of course, flying. In 1909 he married Joan Margaret, youngest daughter of Sir Charles Glynn Welby, Baronet, and they have two daughters, Rosemary and Mavis. The Portals are living "for the duration" in a London hotel bedroom, with suitcases piled in one corner, yachting manuals and a heavily thumbed copy of the *Oxford Book of English Verse* on a bedside shelf. Lady Portal says her husband is so busy that "once in a while he gets home—for breakfast."

PORTER, S(YLVIA) F(IELD) June 18, 1913- Financial columnist

Address: b. New York Post, 75 West St, New York City; h. 33 Fifth Ave, New York City

"My dear Mr. Porter." To the New York *Post's* financial column, "S. F. Porter Says," hundreds of letters have thus been addressed. It might amaze most of these letter writers—Wall Street operators, stock market speculators, or just plain subscribers bewildered by high finance—to learn that "Mr. Porter" is no dignified gray-beard, but an attractive, slim, dark-haired young woman who was born as recently as 1913.

Called "the girl wonder of Wall Street," Sylvia Porter holds the unique distinction of being the only woman writing a column on financial and allied subjects for a major city newspaper. She is the author of two books, *How To Make Money in Government Bonds* (1939), and *If War Comes to the American Home* (1941), besides numerous articles for national and financial magazines. Since July 1941 she has been the featured speaker on a weekly radio program over the National Broadcasting Company's network, talking to millions of women on the defense program and on financial and economic devolpements affecting the American family. It was the same "Mr. Porter" who in 1936, through an article in *Scribner's*, was instrumental in causing the Treasury Department to modify its policy in the matter of allotting oversubscribed issues of government bonds. This exposure of a neat little system of profiteering earned the high

Von Behr

S. F. PORTER

respect of a good many financial experts, including the Secretary of the Treasury. And it was S. F. Porter who, in a column in *The American Banker,* dared to call Secretary Morgenthau "obstinate and stupid" because of one of his early financial policies.

Sylvia Porter says that she deliberately signed the name S. F. Porter to her column because "I wanted to prevent any readers of the *Post* from knowing a girl was writing finance. I wanted the stuff to stand on its own and figured that unless someone happened to know me, the columns would stand or fall on their merits." The columns have stood. Now, even when it is generally known in Wall Street that the *Post's* financial columnist is a woman, there is "remarkably little prejudice."

Born in Patchogue, Long Island, New York on June 18, 1913, the daughter of Dr. Louis and Rose (Maisel) Feldman, young Sylvia Field Feldman started to be a writer at the tender age of six. Then, she says: "I wrote my first novel. (So help me. I discovered it in a cellar years ago.) It was about a girl who went over Niagara Falls in a barrel because her lover deserted her and it was written with the aid of *Saturday Evening Post* pictures pasted into a five-cent notebook. Quite an attractive job! And dedicated, if you please, to 'My Public.'"

After her graduation from high school she entered Hunter College, where she received a Phi Beta Kappa Key and her B. A. *magna cum laude* in 1932. In her junior year she switched from English literature to economics and finance. Reason: Mr. Reed Porter, "a tall blond who worked in a bank [they were married in 1931] and an overwhelming curiosity to know *why* everything was crashing around me and why people were losing their jobs." The depression was at its height when she left college. "I knew I couldn't get a position in a newspaper office, so I went to Wall Street for my first real job. I got one—assistant to the president of an investment counsel house specializing in United States government bonds. He and I worked ten, twelve hours a day, learning about the government's bond market, about gold movements, about currency fluctuations." Meanwhile she took graduate work in her field at New York University's School of Business Administration.

During 1934 Miss Porter held odd jobs in various organizations specializing in different aspects of finance. She created and published in 1934 and 1935 the first service devoted exclusively to United States government bonds; and she began writing magazine articles. "In early spring 1935 I walked into the *Post* and suggested I write three columns a week on financial news. I got my chance." Soon she became that newspaper's regular finance writer covering a routine beat in Wall Street. It was in 1938 that she started a daily column, "Financial Post Marks," which subsequently became "S. F. Porter Says."

Miss Porter's book, *How To Make Money in Government Bonds,* was the first to be published covering all phases of government finance and the United States securities market. *If War Comes to the American Home* describes in simple language and by means of anecdotes the meaning of war and national defense to every American. The New York *Times* reviewer sums it up: "Facts, figures, broad word-pictures and succinct arguments are all presented with conversational ease. The book should be widely useful."

Besides her *Post* column, Sylvia Porter is also author of a weekly column on United States Government bond market trends, published in the *Commercial and Financial Chronicle.* Among the general magazines which have published her articles on financial subjects are the *American, Scribner's, Reader's Digest, Current History* and *Woman's Home Companion.* Her most noteworthy articles include "New Bait for Suckers," a story of investment counsel rackets; "A Woman and Her Money," investment hints for women; "Uncle Sam's Silver Scandal," on the United States silver policy; "The Tax Payer on the War Path"; "The Banker Takes Off His Top Hat." Her radio program, entitled *What Can I Do?* and done with June Hynd, assistant director of women's activities at NBC, is heard over station WJZ. She also makes occasional radio talks on her subject at other times and over other stations.

This formidable statistician and financial racket buster confesses that her one bona fide hobby is swimming. "I can go for a mile or so without stopping and without becoming fatigued. I also like to dance; like late parties with amusing, talkative people. (Dislike strong, 'silent' people known to have character and little else.) I like the theatre and am pretty partial to Scotch and soda as an aid to a party or an evening of talk. . . I like to eat oysters and chocolate cake, too; to read anything and everything. I go on detective story jags every few months, bring home three or four over a weekend and devour them at one sitting." Apparently her original ambition at the age of six to be a novelist still holds with Miss Porter. She is currently reported to be working hard on a novel, as yet unnamed.

"I'm a monumentally normal person," Miss Porter adds, "which, my mother says, just goes to show you. . ." Normal enough also to take her work seriously, Sylvia Porter is thoroughly convinced that there are "wonderful opportunities in this field. Women control more than 70 per cent of the wealth of this country, you know; 65 per cent of the savings accounts are in their names; women are the beneficiaries of most insurance policies. . . A woman financial writer can perform a real public service, I believe. In fact, if you are interested, that's my private crusade."

Shuler, M. and others. Lady Editor p34-6 1941

POST, EMILY Oct. 3, 1873- Author; radio commentator; arbiter of etiquette

Address: c/o Funk & Wagnalls Co, 354 Fourth Ave, New York City

It seems incredible that as late as 1921 Emily Post was not part of our national vocabulary. What did people do, 20 years ago, when they wanted to talk about—or against—etiquette? She still is not in the dictionary, but she has already been compounded into "Emily-Posting." It is perhaps ironic that in this sense her name usually stands for an attitude she vigorously condemns.

Before she was elected by popular acclaim the American dictator of correct behavior, Emily Price Post indulged in a few gestures which were far from conventional. They followed a childhood and youth that were in every detail *comme il faut.* She was born in Baltimore, Maryland, on October 3, 1873—born to wealth, social position and a distinguished tradition. Her mother was Josephine (Lee) Price; her father Bruce Price, the architect who designed Quebec's Chateau Frontenac and many of the buildings in Tuxedo Park, New York. He was in addition a singularly handsome man of great charm and popularity, an intimate friend of the Duke of Connaught, who twitted him for looking every inch a peer. Bruce Price was also the sort of father whose only child loved to go with him to inspect the buildings he had under construction. Thus she became familiar with the skeletons of houses and with dizzy heights.

When Emily was five years old the family moved to New York City, where her life followed the approved pattern for childhood *à la mode*: summers in Bar Harbor, winters in the brownstone house on Tenth Street, with lessons in the morning from her German governess, and a walk in the park every afternoon. Her later education naturally included gay trips abroad, where she became as intimate with titles as with joists and beams—inside information which later was to prove even more profitable.

EMILY POST

When she made her debut in 1892 her loveliness created something of a furor. The Gibson girl formula might have been invented for her tall, willowy grace, dazzling complexion and rich crown of light brown hair. Sometimes after a ball it took four men to carry her cotillion favors to the carriage. (We may be sure none of them escorted her home, or dared to dream that she might "ask him in.") At the end of her first season she was married to the dashing Edwin M. Post, a banker who belonged to one of New York's pre-Vanderbilt families. Soon there were two sons, Edwin M. and Bruce, continuing the pleasant family custom of personal beauty and *savoir faire.*

The first sharp break in the smooth regularity of her life came when her husband lost his fortune after the panic of 1901. The second was her divorce, which left her with two young sons and no adequate means of support. She was the first divorcée, it is said, to combine her maiden name with that of her ex-husband. Mrs. Price Post, falling back on what she considered her chief talent, began to make little cardboard houses with windows of glazed paper, through which one might peer at tasteful furnishings and decorations of papier-mâché, sealing wax and paint. In those days, before the era of interior decoration, people were charmed—but this was hardly a substantial source of income.

Then someone said to her: "Why don't you write? Your letters are so marvelous!" Accordingly she exhumed some of her sprightly accounts of house parties in England, France

POST, EMILY—*Continued*

and Germany, worked into them a few fictional characters, and the result was *The Flight of a Moth,* published in 1904. To write for money was not quite "the thing" in her set, but she managed to accept about $3,000 without losing caste. From then on she rounded out a scanty income by writing, and her sprightly, frivolous novels, "confessions" and stories were remunerative enough to send her sons through Harvard. Her fiction always presented a European background, aswarm with titles and liveries, against which characters from the New World showed up to piquant—though always elegant—advantage.

She was living in a New York hotel when Richard Duffy, of Funk & Wagnalls, began to badger her about writing a book on etiquette. She scoffed. Etiquette was stupid and stuffy; she despised it and the people who took it seriously. Besides, she knew nothing about it. "But," he protested, "your books are full of nothing else!" Being to the manner born, she had never noticed that her novels were crammed with manners. Even so, it was too silly, and there were more than enough of such books. He said no more, but left with her the latest etiquette manual, published by a rival firm.

Coming home late one night after a dinner party, she dipped into it. When she came up for the third time, at two in the morning, she phoned him. "The woman doesn't know what she's writing about! It's a scandal!" Rather than see the great American public so gulled, she began work next morning at seven o'clock. She wrote 250,000 words in 10 months. Then, in 1922, the book was published—the first etiquette manual by a woman of high social position since Mrs. Sherwood (grandmother of the author Robert Sherwood) published hers in the '80s.

It was a best seller, and still is. Perhaps because of the author's own position, perhaps because it was so readable, perhaps because the increased mobility of our society had created a public already eager for this dose, if only it could be made palatable, her "blue book of social usage" went through edition after edition, each year increasing its sale. By early 1941 it had sold over half a million copies, at $4 each. None of her works has ever gone into a popular priced edition, although the newest has come down to $2.50.

Meanwhile, since 1931 she has been making radio broadcasts during the winter, and her columns, syndicated in about 135 newspapers with a circulation of some 6,500,000, bring in an average of over 250,000 letters each year. What she means to her correspondents is suggested by the response to Walter Winchell's announcement in his column that she was ill. Within an hour a hundred telegrams had arrived, and her room was overflowing with flowers from people she had never seen.

All the etiquette in America could not restrict its energetic autocrat to a single activity. She has found time to write testimonials at $3,000 for ginger ale, pamphlets at $5,000 for linen, silverware, glassware, even to say a golden word for one of the cigarets nothing could induce her to smoke. After her architect son died in 1927, she sought consolation in remodeling old farmhouses into delightful country homes. House decoration she considers her true calling, and her *Personality of a House* (1930) is used as a textbook in many schools and colleges. People who want their homes designed by Emily Post are willing to pay handsomely for her services, or even for long-distance advice from New York.

Her own home is also her own product. With her son Bruce, who was just beginning to be a successful architect, she remodeled a building leased by herself and 17 friends in a cooperative revolt against the prevailing lack of closet space, large windows, and servants' dining rooms in New York. On the ground floor of this building her local secretaries cope with the daily avalanche of mail, while higher up where the view begins she inhabits a roomy apartment bright with her favorite chintzes and twittering with caged birds.

Until recently, when doctors' orders postponed her rising hour to six, she began each day at five-thirty, switching on the coffee percolator that stood ready by her bed and nibbling a bit of zwieback from the tray. Then she worked in bed, amid a flurry of pencils, papers and galley proofs, until half-past seven, when her servants began to stir. By eight the day was in full swing, and swung on steadily till bedtime, with mornings devoted to letters and the daily column, afternoons to appointments and talks. Most of the column mail is now handled by secretaries here and throughout the country; but special cases always receive special handling—the most special ones by Mrs. Post herself. She usually lunches at home, sometimes with her son Ned, her "beautiful black swan" who repays her careful teachings by giving her invaluable advice about what the correct gentleman will wear. Often she invites business associates for lunch; and when strong men lunch with Emily Post for the first time, they sometimes also wince. But they soon learn that the perfect lady is able to put a mutton chop at ease, even though it skid most greasily from its plate onto her daintiest doily.

Her first radio audition was in 1929. "I'm sure my voice isn't very good, so I really don't know why you bother," she fluted into the microphone while a group of potential sponsors listened in the next room. She was mistaken, however, and they all rushed in clamoring for her to name her price. A lady is never caught off guard. "How much do Amos and Andy get?" she inquired serenely. Being a true lady, she consented to close for $500 a broadcast—as a starter.

Neither radio nor any other engagement can keep her in town through the hot months which she regularly spends in Edgartown, Massachusetts, where she has converted a former farmhouse into an airy—though definitely not a streamlined—summer home. In the city her activity is professional rather than social, for she prefers a life of comparative retirement. Before her eyes began to trouble her she went frequently to the movies, often accompanied by her housekeeper. She likes to sew and on occasion has made her own clothes, which are of the feminine type, tending to the fluttery even in tailor-made hours.

That Mrs. Post's own views on etiquette have changed considerably was evident in the 1937 revision of her first book, and even more clear in her 1940 volume, *Children Are People*. The form she more and more minimizes, declaring, "nothing is less important than which fork you use." The spirit is all. Today, far from her first scornful attitude toward etiquette, she can proclaim: "Etiquette is the science of living. It embraces everything. It is honor. It is ethics."

Who's Who in America

POUND, SIR (ALFRED) DUDLEY (PICKMAN ROGERS) Aug. 29, 1877- British Admiral of the Fleet; First Sea Lord

Address: Ravenswood, Gresham Rd, Staines, England

The administrative, political head of the British Admiralty is A. V. Alexander, its First Lord. Since 1939 Sir Dudley Pound, a practical sailor, has been his righthand man as First Sea Lord, bringing to the position varied experience both in big ships and in high executive posts ashore. Sir Dudley has the complete confidence of Winston Churchill, for during the First World War the two men worked together in the Admiralty, and Pound then and now shares the Churchillian pugnacity, is all for hitting the enemy when you can get at him.

Pound, whose book on the sea offensive is used as a text by the staff colleges of many countries, is an "all-arounder," a man "whose thoroughness is not pedantic, whose energy succumbs to neither red tape nor his chronic arthritis." For nearly 50 years he has served in the Navy—in a half-century which has seen great advances in the size, speed and armament of ships, substantial increases in the rapidity and range of gunfire, and the introduction of countless new mechanical devices. His alternating periods of service afloat and ashore have given him exceptional opportunities to coordinate strategy and tactics, and today, when many critics doubt the efficacy of capital ships, he remains deeply convinced that they are the backbone of a fleet. He is convinced, too, that the convoy system, organized during the First World War, continues and will successfully continue to keep losses from submarine action within bounds in the present War and to ensure the arrival of the food, oil and munitions on which the survival of Great Britain depends.

International

SIR DUDLEY POUND

Like Sir Archibald Sinclair, Sir Dudley Pound is half American, for his father, Alfred John Pound, a barrister, married Elizabeth Pickman Rogers of Boston, Massachusetts. Dudley was born on the sea-lapped Isle of Wight and attended school at Fonthill at East Grinstead, Surrey and at The Limes, Greenwich, both rather small schools. Then, in 1891, at the usual age of 14, he entered the Navy as a cadet. Two years later he went out as a midshipman to the China Station in the *Royal Sovereign* and in 1896 received his first promotion, to sub-lieutenant. In these days he specialized in torpedo work and took a course qualifying him for torpedo lieutenant.

By 1909 Pound had risen to the rank of commander and seemed well set for advancement, though he had no special "pull." He was then transferred to the Torpedo Department at the Admiralty and remained there until 1911, when he went to sea again as second in command of the cruiser *Superb*, a crack ship. In it, writes Keble Chatterton, "not only did he acquit himself as a gifted organizer and overseer of men, but as an officer willing at any moment to lay down his life for them." He showed this when he made a gallant attempt to save three men from suffocation in a gas-filled hold, an act of courage for which he received the Royal Humane Society's Medal.

In January 1913 Pound was sent to the Naval War College at Portsmouth "for higher

POUND, SIR DUDLEY—*Continued*

studies as one marked out for staff work." He remained there for one year and a half, when he joined the cruiser *St. Vincent* as second in command. At the end of 1914 he was made a captain (a much higher rank than the army captaincy and roughly equivalent to colonel) and recalled to the Admiralty to be naval assistant to Lord Fisher, then First Sea Lord. He was only 37 years old.

His combination of sea experience and administrative work made Pound eminently qualified for this position, yet he was moved out of it for political reasons in the autumn of 1915 when Fisher and Churchill resigned. Immediately he took command of the 20,000 ton battleship *Colossus* and it wasn't long after that when he saw action in the Battle of Jutland (May 31, 1916). In this fight the *Colossus* sank a three funneled cruiser and beat off two destroyers, after which she really got into the thick of the danger. Then she sank the cruiser *Lutzow*, sustained considerable damage to her superstructure and narrowly averted disaster by turning away from five torpedoes traveling toward her. For his share in this battle Pound was mentioned in dispatches.

July 1917 found him captain in the Admiralty once more, this time as director of operations. In 1918 he was created a Companion of the Bath and received the American D. S. M. Two years later he was in the battleship *Hood* with Sir Roger Keyes and later in that year commanded the *Repulse*. Then back to the Admiralty again, as director of plans and a naval A. D. C. to the King. He left the Admiralty in 1925 and became chief of staff to Keyes on the Mediterranean Station after having been promoted to rear admiral. Then came two years as chief of the naval staff at the Admiralty, followed by two years as commander of the battle cruiser squadron. In 1930 he had been raised to vice-admiral and in 1932 he became Second Sea Lord and chief of naval personnel.

The years 1935 and 1936 must have been among the most tense and anxious in Pound's career, for he was promoted to admiral in January 1935 and sent to fish in the very troubled waters of the Mediterranean. He was there all through the Abyssinian and Spanish Wars, first as chief of staff to Sir William Fisher and from March 1936 as commander in chief of the Mediterranean Fleet. His tactful and wary handling of a most delicate naval and political situation earned him a knighthood in 1937 as G. C. V. O. The G. C. B. followed later.

On July 31, 1939 Sir Dudley Pound reached the summit of his profession as First Sea Lord and chief of the naval staff, with promotion to the rank of admiral of the fleet. Under his general direction the Navy keeps its watch over thousands of miles of sea, and though depleted by losses, as the late Lord Lothian announced in December 1940, still guards Britain and British interests with quiet efficiency.

The man who directs its movements with A. V. Alexander is not a picturesque figure. He is rarely in the news; his portrait is not seen about in schools or clubs; he rarely makes a public statement. Toward the navy he is "a keen disciplinarian" whose "bark is said to be worse than his bite." Solicitous for the comfort of the lower deck, he started at every home port an organization to look after sailors' welfare and marriage allowances, "but the last thing that ever entered his mind would be to become what is known as a 'Popularity Jack.'"

In the troubled days of the Second World War Pound takes only four or five hours' sleep and has a bed in an office off his chart-hung war room, in and out of which he goes many times a night to confer with the operations staff. He tries to keep fit, though, by walking and shooting—he is "a first class shot, and has been responsible for a catalog showing the many kinds of game to be found along the shores of the Mediterranean." What with working and keeping fit for his job Sir Dudley hasn't much time to spend with Lady Pound, who runs the Knitted-Garments-for-the-Navy. The War itself keeps him from spending time with his two sons, the elder a captain of the marines; the younger a Royal Navy lieutenant.

PROKOFIEV, SERGE (SERGEYEVICH) (prô-kô'fê-ĕf) Apr. 23, 1891- Composer; pianist; conductor

Address: Moscow, U. S. S. R.

The talent of Serge Prokofiev, prominent modern composer, has not always been understood or accepted. In his student days Prokofiev brought his first symphony to the composer Taneyev. The latter remarked that most of it was unoriginal, "tonic, dominant and subdominant." Deeply distressed to learn that his first important work contained nothing particularly his own, Prokofiev determined to study all the more seriously. This he did, under such instructors as Rimsky-Korsakoff and Liadov, meanwhile absorbing a less conventional musical viewpoint from Scriabin and Max Reger. A full decade passed before he again brought a score to Taneyev. "But, my dear boy," the old man exclaimed, "this is terrible!"

SERGE PROKOFIEV

"Master," Prokofiev is said to have replied, "please remember what you said to me when I brought my G Major symphony."

Taneyev looked dazedly from the young composer to the score. "Good Lord," he asked, "am I responsible for this?"

Prokofiev weathered this shock, as he was to survive many another mishap in his career. He takes life in his stride, with indefatigable creative vigor and robust, if quiet, humor, and claims that he has no time for hobbies; though he wouldn't be completely groomed if there weren't a miniature chess set in his pocket. His new opera, *Semyon Kotko,* had its première in Moscow in June 1940. Meanwhile he was at work on a new score, a musical setting for Sheridan's *The Duenna,* and was converting themes from the opera into a symphonic suite that was scheduled for an early American production. "I burn my candle at three ends," he explained, "composing, conducting, and playing piano."

Born in Sontsovka, in the Ekaterinoslav district of South Russia on April 23, 1891, young Serge began his musical career at the age of five, composing *Le Galop Hindou,* which ignored the black keys of the piano. He first learned music from his mother, an excellent pianist who taught him to understand Beethoven and other composers. At the age of six he composed a march, a waltz and a rondo. At seven he was taken to Moscow

PROKOFIEV, SERGE—*Continued*

to hear *Prince Igor* and *Faust*. But his own opera, *The Giant,* written promptly upon his return home, had no libretto, having been modeled after the scores in his mother's library, which were for piano only. The libretto was coaxed along, however, and a grand première arranged at the home of an uncle, with Serge's cousins in the cast. "When your operas are played at the Imperial Theatre," his uncle said, "don't forget that the first performance of your first opera was given at my house." His second opera, *Desert Islands,* was left unfinished.

In 1901, at the age of ten, he studied with Glière, on the advice of Taneyev, and during three years managed to compose a symphony, two short operas and two piano sonatas. From Glière he went to the St. Petersburg Conservatory, where he remained for 10 years and was graduated in 1914. Besides his studies with Rimsky-Korsakoff and Liadov, he took conducting with Tcherepnin and piano lessons from Annette Essipova. He was awarded the Rubinstein Prize as pianist but failed to get the first award in composition. Aside from gaining a sound technical foundation at the Conservatory, he composed the *Symphony in E Minor,* two operas, six sonatas and about one hundred piano pieces. It was also during this period that he wrote *First Piano Concerto,* featuring the simultaneous use of two different tonalities, of which Boris de Schloezer wrote: "The form is always limpid, logical and perfectly natural."

Through all its various stages Prokofiev's music is characterized by firm structural qualities that De Schloezer had in mind when he described it as "a uniform terseness, continuous and almost mechanical. . . No shadows, no vagueness, but definite lines, sharp contours, clearly defined planes. The rhythms are always well-marked. . . He uses polytonality systematically. His form is clear and logical. In many respects his musical temperament comes near to that of the classics—especially of Scarlatti."

While Prokofiev was at the Conservatory, Glazounov, who could not approve the student's daring ways, nevertheless arranged a test performance of his symphony. Prokofiev found enthusiastic support from a society of contemporary music in St. Petersburg. Exempted from military service during the World War years as the only son of a widow, he composed the *Scythian Suite,* generally described as both *"primitivist"* and daring, but its story material was not thought by Diaghilev suitable for ballet. The composer then began work on *The Chout,* production of which was delayed until 1921, when Diaghilev put it on in Paris. (Diaghilev also produced his later ballets, *L'Enfant Prodigue* [1929] and *Surle Borysthène* [1930].) Another musical creation on which the young composer was at this time hard at work was an opera based on Dostoevsky's *The Gambler* (later produced by Meyerhold at the Leningrad Opera).

Granted a passport by the Russian Government in 1918, Prokofiev came to America, where he was promptly hailed by the *Musical Courier* as a "musical Bolshevik." His *Classical Symphony* had its American debut at Carnegie Hall in December 1918. One critic found it not distinguished and not classical. Another decided that the young Russian's music was "cold and cerebral." But although Olin Downes didn't feel that it quite out-Mozarted Mozart, he did agree that it was "witty and spirited." As a matter of fact, humor is often a component in Prokofiev's writing, though it has not always been recognized as such.

Considered almost since the beginning of his career a pianist of note, Prokofiev has toured the world several times, occasionally taking the baton to conduct one of his works or the work of other composers. In December 1921 something of a sensation was created by the world première of his opera, *The Love of Three Oranges,* at the Chicago Opera House. This, too, was a subject for controversy, but those who found it musically sound and effective burlesque were the confident majority. One critic wrote glowingly: "He strips grand opera of its glamor and makes it no longer grand. He makes opera safe for democracy, and that is the justification of all great burlesque—to humanize the object of its ridicule." A minority voice called it "a color marvel but enigmatic noise."

Prokofiev's ballet, *The Age of Steel* (*Le Pas d' Acier*), produced in Paris in 1927 and in America in 1931, was based upon the growing vigor of Soviet industry. It was unfavorably received in Paris by many critics and in America, strangely enough, it was produced as a satire on the machine age. Under these circumstances it was not strange that Gilman found it a "choregraphical what-not." Prokofiev's *Fourth Symphony* was composed for the fiftieth anniversary of the Boston Symphony Orchestra in 1930. It had a mixed reception, some listeners finding it difficult.

Among his numerous works are: the popular ballet, *Romeo and Juliet,* written for the Bolshoi Theatre in Moscow (1935), and the *Second Violin Concerto,* composed that same year. On his seventh visit to the United States in 1937 he conducted *Romeo and Juliet,* says *Time,* "with precise beat and knees that wobbled curiously but in accurate rhythm." As for the music, it was "a sly elusive projection of its subject, more lyric than early works but with less emphasis on 'new curves' than expected."

It may be arguable whether or not *Peter and the Wolf* takes a few program composers "for a ride" as one critic intimates, but there can be no doubt that the first American performance of this ballet was unlike its Russian première. *Peter and the Wolf* was created for the children's concert in Moscow on May 2, 1936. During the course of the ballet a voice declaimed the text, instructively and humorously assigning to each character its instrument of the appropriate timbre. In its entire artistic concept it was written for children. The first American performance, however, left out the voice of the narrator, which was properly restored for American listeners only when Koussevitzky recorded it with the Boston Symphony.

"Once a musical bad boy," reported *Time* in 1938, "he has today forsworn his 'smart' past, moved back to the Soviet Union and embarked on an expedition into what he describes as the 'deeper realms of music.'" Critics have found his recent works strikingly different from those of the early 1920's when Prokofiev lived in Paris. According to A. A. Fraser, "his style becomes much less fantastic and more intense, but this does not imply that it was formerly superficial. The discord used formerly rather as a sonority complete in itself now occurs logically at the meeting of different strands of melody and lines of thought, but polyphony is not a new feature of this composer."

Along somewhat similar lines, Prokofiev himself says: "There has been too much dissonance. Bach used dissonance as good salt for his music. Others applied pepper, seasoned the dishes more and more highly, till all healthy appetites were sick and until finally the music was nothing but pepper. Well, I think society has had enough of that." He also hints that changing audiences have affected his work. Today, he explains, there are many more people in the U. S. S. R. who like music, but a great deal of difficult music is inaccessible to them. Thus, while music should reach this new and larger audience it should not, in his opinion, sacrifice value. "I assure you," he concludes, "it is very difficult to find the language which will convey the new musical thought to the people, in terms they will understand, but I find the problem an inspiring one." Early in 1941 the composer was reported at work on a new opera based on Sheridan's play, *The Duenna,* and the music for a Russian film, *Ivan the Terrible.*

In appearance Prokofiev is above average height, thickly put together, with thin blond hair retreating from a bulging brow. His clothes "quietly praise a good tailor." His two sons have shown some talent for music but, says their father, "I have not encouraged them too much—with their mother a singer and me a pianist two more music-makers in the house would result in intolerable noise." His wife, Lina Llubera, the concert singer, has accompanied him during his visits to the United States and has often given concerts there. Both have always taken a keen, lively interest in things American and they have many American friends, among them Benny Goodman. Prokofiev's interest in jazz music is typical: "If one chooses what is best in rhythm, melody and instrumentation, one may come across great riches."

Prokofiev's special compositions for the Pushkin centenary (1936) included incidental music for Pushkin's drama *Eugene Onegin* and *Boris Godunov.* He also wrote a "grandiose" cantata for the twentieth anniversary of the October Revolution, using authentic texts from speeches of Marx, Lenin and Stalin. It calls for four instrumental and two choral groups—about five hundred performers in all. Among the films for which Prokofiev has written music are *The Czar Wants To Sleep,* 1934 (from which came the orchestral suite *Lieutenant Kije*), and Eisenstein's *Alexander Nevsky,* shown in America in 1939. Prokofiev's most recent work, a sixth piano sonata, was introduced in America, in the winter of 1941, by the eminent pianist, Vladimir Horowitz.

PYLE, ERNIE Aug. 3, 1900- Columnist; reporter

Address: b. Scripps-Howard Newspaper Alliance, Washington, D. C.; h. Albuquerque, N. Mex.

A roving reporter, "an inconspicuous little man with thinning reddish hair and a shy, pixy face," for the past few years has written so sensitively about small places, things and people that his itinerant column, *Ernie Pyle in London,* ran in 18 Scripps-Howard newspapers and 46 others. Ernie Pyle, who has covered some 200,000 miles in the Western Hemisphere, has written about almost everything—about the rain, old men with wooden legs, a Nebraska town on relief, zipper-pants difficulties. "In six years I've written on every subject from Mrs. Roosevelt to sore feet," he says. As his fellow-columnist Westbrook Pegler once commented: "Ernie Pyle writes his way along, keeps out of New York and other big cities that are overcovered by other reporters and writers, knows more small-town and dirt-road Americans than Jim Farley, and is better informed on the condition—or anyway the feeling—of the small people than Mrs. Roosevelt herself." And, as

ERNIE PYLE

a writer in *Time* puts it: "Whenever Ernie takes a vacation, editors are apt to reprint it."

In November 1940 Ernie Pyle flew via Lisbon to London and editors were more than glad to print and reprint what he saw there during the grim holiday season and after. His vivid, dramatic piece of January 1, 1941 on the London air bombardment excited so much attention that readers and critics have already made it their nomination as the "best column of the year." The "little fellow" hitherto content to write about little things has found himself almost over night topping the best that seasoned war correspondents in big cities have to offer.

"Some day when peace has returned again to this odd world," he wrote, "I want to come to London again and look down upon the peaceful silver curve of the Thames with its dark bridges. And I want to tell somebody who has never seen it how London looked on a certain night in the holiday season of the year 1940. It was a night when London was ringed and stabbed with fire. . . The closest fires were near enough for us to hear the crackling flames and the yells of firemen. Little fires grew into big ones even as we watched. . . The sky was red and angry, and overhead, making a ceiling in the vast heavens, there was a cloud of smoke. . . And now and then, through a hole in that pink shroud, there twinkled incongruously a permanent, genuine star—the old-fashioned kind that has always been there. . . These things all went together to make the most hateful, most beautiful single scene I have ever known."

Several of Ernie Pyle's cabled reports during February concerned London's public air-raid shelters. They remind him, he wrote, of nothing so much as "our own makeshift depression camps at home." But, like our camps, they are gradually getting better, though "God knows there is plenty of room for better conditions in some of the shelters. The body heat of thousands of packed people makes some shelters stifling. In others, deep beneath stone arches and with concrete floors, the chill dampness is deadly. At one church in Stepney people were actually sleeping until recently in stone coffins that once held corpses." But the emptied crypts of St. Martin's Church have been fixed up "more like a club house. . . When you see a church with a bomb hole in its side and 500 pretty safe and happy people in its basement, and girls smoking cigarets inside the sacred walls without anybody yelling at them, then I say the church has found a real religion." A few months later his book, *Ernie Pyle in England*, was published, telling of all these things.

Since early boyhood Ernest Taylor (shortened to Ernie) Pyle has never been in one place long enough to have a home address. Not until 1940 did he finally buy a lot and build himself a house in Albuquerque, New Mexico ("I don't know what he'll use it for," remarked Scripps-Howard's Lee Miller), where he made his first brief visit in March 1941 after returning from London. He was born August 3, 1900 on a farm near Dana, Indiana; his father, William C. Pyle, still lives there. His mother, Maria Pyle, died early in 1941.

"I wasn't born in a log cabin," he wrote in one of his columns, "but I did start driving a team in the fields when I was nine years old, if that helps any." He attended Indiana University for three and a half years but quit without being graduated. Thereafter he worked for 12 years on various newspapers in Indiana, Washington, D. C., and New York.

While working for the Washington *Daily News* he met Geraldine Siebolds of Minnesota, who had a government job; in 1926 they were married. Fed up temporarily with the newspaper business, he drew out his savings, bought a Model-T Ford roadster. He and Mrs. Pyle then took the first of their many trips together, driving leisurely around the rim of the United States. "Jerry" Pyle, always referred to in her husband's column as "that girl who rides with me," has shared his highway adventures. Bob Fredericks in the Miami *Herald* writes of her: "To Ernie she is an inseparable part of a life venture and very much a partner in the business at hand of covering the world. . . It's always 'our column' and 'we' when the Pyles discuss things. And the Pyles don't talk for display purposes. They don't engage in little niceties [between] themselves to impress others. As said before, the Pyles have learned to report and describe facts and let the facts speak for themselves."

Ending this first trip in New York, Pyle went to work as a copyreader, then was called back to the Washington *News* again, where he was successively telegraph editor, aviation columnist and managing editor. He became the latter against his better judgment; and after he had "distinguished" himself by burying the arrest of Hauptmann, kidnapper of the Lindbergh baby, at the bottom of page one, he persuaded Scripps-Howard into letting him give up the managing editor's desk to experiment with a roving-reporter assignment. That was in 1935, and Ernie Pyle has been at it ever since.

"We have travelled by practically all forms of locomotion, including piggyback," he writes. "We have been in every country in the Western Hemisphere but two. We have stayed in more than eight hundred hotels, have crossed the continent exactly twenty-four times, flown in sixty-six different airplanes, ridden on twenty-nine different boats, walked two hundred miles, gone through five sets of tires and put out approximately $2,500 in tips. In the past six years, these columns have stretched out to the horrifying equivalent of twenty-two full-length books. Set in seven-point type they would make a newspaper column three-quarters of a mile long. The mere thought of it makes me sick at my stomach.

"Of all the places we've been, we'd rather pay another visit to Hawaii. In the States we are partial to New Mexico. My most interesting long trip was through Alaska, although I wasn't crazy about it at the time. . . We have worn out two cars, three typewriters, and pretty soon I'm going to have to have a new pair of shoes. I love to drive and never get tired of it, but on long days I do get to hurting on the bottom.

"The most serious predicament we've ever been in was when an airplane motor went dead as we were 10,000 feet over the Andes in northern Peru. But we flew for an hour on one motor, and it turned out just like all good short stories. Sure, we were scared. . . For four years straight we have got our last Christmas presents in April."

Ernie Pyle has visited the famous leper colony on Molokai Island in Hawaii; he has gone up the Yukon River by boat and flown to the Bering shore of Alaska; he drove from Texas to Mexico City before the new highway was finished; he has gone 2,800 feet down in a mine and 16,000 feet up in a Pan-American plane. "I weigh 108 pounds, eat left-handed, am 28 inches around the waist, and still have a little hair left," he says. Although Jerry, "that girl," didn't go with him on his London trip (from which he returned on March 22), she was still a contributing factor to "our" column while she waited for the husband's return to take the "vacation" that always makes news.

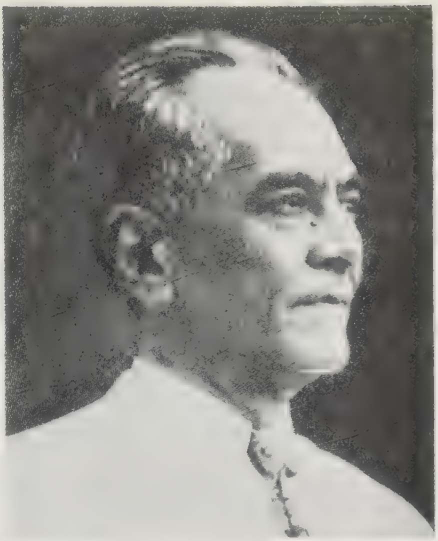
QUEZON, MANUEL L(UIS) (kâ'sōn) Aug. 19, 1878- President of the Philippine Islands

Bulletin: On December 19, 1941 in an address broadcast from Manila, President Quezon announced: "We are fully prepared to defend the cause of liberty and democracy to the last drop of our blood." A week later Manila was formally declared an open city by General MacArthur (see sketch this issue) and Quezon fled with the armed forces and other heads of the Philippine Government. The capital was murderously bombed by the Japanese 30 hours later.



Office of the President of the Philippines
MANUEL L. QUEZON

From August 1941 issue (revised):

"We owe our loyalty to America and we are bound to her by bonds of everlasting gratitude," said President Manuel L. Quezon on Loyalty Day (late in June 1941), a new holiday in the Philippine Islands. To the 100,000 demonstrating in Manila and to a curious world, he placed himself on record for the first time about where he stands on the Second World War. "Should the United States enter the War, she will find all of the people of this country, to the last man, on her side. Our stake in this War is our own future independence, and assurance that independence may endure."

This statement marked a radical and realistic change from an earlier attitude on the part of the Filipinos, inclined to appease Japan so as to avoid affronting a powerful neighbor whom they might one day be forced to face alone. In 1940 Quezon was openly expressing doubts about the country's ability to defend itself, and a slackening in the Philippine defense effort appeared in subsequent cuts in appropriations for munitions and equipment. But in April 1941, $50,000,000 was appropriated from funds owed to the Island Government, to be spent by the War, Navy and Interior Departments for defense of the Philippine Islands.

Now the 7,083 islands of the Philippine Archipelago, whose armed forces were incorporated into those of the United States

QUEZON, MANUEL L.—*Continued*

by President Roosevelt's order of July 26, 1941, are rapidly being transformed into the United States' first line of defense in the Orient. Key cities are being fortified and preparations have been made to evacuate the civilian populations of cities most exposed to attack. In a message to the National Assembly on February 1, President Quezon had maintained that it was up to the United States to provide air shelters and other civilian defense measures for the Islands until their independence became effective—in opposition to High Commissioner Francis B. Sayre, who held that the extent of the autonomy of the Philippine Government made it necessary for Philippine authorities to assume civilian defense responsibilities. However, on March 22, after the issue had been tossed back and forth, Quezon appointed a Civilian Emergency Administration.

Until 1941, President Quezon's most important problem was his attitude on the independence promised for July 4, 1946. Some people believe that he would like to see independence postponed indefinitely, perhaps in the form of a Dominion government. But reversing the political doctrine upon which he has based his whole meteoric career is no easy task, even for the supple President. He once told a graduating class at the normal school that he "prefers a government run like hell by Filipinos to one run like heaven by Americans." Strong factions in Manila, it is reported, particularly rich sugar men, have started a movement to request the United States to maintain some sort of tie with the Islands. Prime factors in this movement are the realization that the United States' withdrawal will smash up the Islands economically, open them wide to Japanese domination. The Philippine Government has offered to shut down exports of strategic materials—copra, iron ore, hemp—to all countries except the United States in the interest of American armament.

This political leader who has "more power than Franklin D. Roosevelt has yet dreamed of" was born Manuel Luis Quezon Antonio y Molina, in Baler, a desolate village on the eastern coast of the Island of Luzon, on August 19, 1878. His father, Lucio Quezon, was a Filipino and his mother, Maria (Molina) Quezon, was partly Spanish. Both schoolteachers, they taught Manuel his ABC's. The parish priest then carried on his education until he was 11. At school in Manila he was "bright but lazy" and nicknamed *gulerato*—"bluffer"—by his classmates. After having finished his work at the junior college at San Juan de Letran, he was appointed a lecturer at the University of Santo Tomas so that he could receive free board, lodging and tuition while studying law. His law studies were interrupted by the Spanish-American War.

"A fearless, quick-tempered, obstinate fighter," Manuel, who enlisted as Manuel Kison, was rapidly promoted from private to major, fighting first against the Spanish rulers and later against the American invaders. After the insurrection collapsed in 1899 he surrendered his sword, spent six months in jail, then returned to Manila. There he studied theology at the University until the Catholic fathers advised him to give up any idea of the priesthood and sent him to oversee one of their farms. He did not stay long: he returned to Manila to work in a Catholic savings bank. At the same time he resumed the study of law at the University of Santo Tomas and in 1903 passed the Bar examination. Sergio Osmeña, who was alternately to be his political ally and rival and who is now regarded as likely to succeed Quezon, was graduated at the same time.

At the death of his father Manuel Quezon returned to Baler and set up a law practice in Tayabas Province. In a few months he had more clients than he could handle. In answer to a call to public service, however, he gave up a lucrative private practice to take the post of provincial *fiscal*—prosecuting attorney—of Mindoro and later of Tayabas. He earned a national reputation almost at once for his prosecution of an American lawyer for fraud. In 1906 he resigned to start his political career. He was elected provincial Governor. "Demonstrating in the early elections characteristics of jumping from one side of an issue to another [he considers consistency a weakness], always picking the popular one," he showed that "he was obviously the potential Nationalist leader of the Islands." The following year he resigned from the Governorship to become a candidate for the Philippine Assembly on the Nacionalista Party platform. In the Assembly, Osmeña was elected Speaker of the House and Quezon floor leader.

As a reward for his ability to win over malcontents by his persuasive powers, in 1908 Quezon was sent as Philippine representative to an International Navigation Congress in St. Petersburg. The appointment was not made in time for him to attend the conference, but he visited and enjoyed Paris. Returning to the Islands, he decided that Washington, D.C., would be the best place to work for Philippine independence and next had himself appointed to the post of Resident Commissioner (with a voice in Congress, but no vote), a post which he held from 1909 to 1916. A Beau Brummell in Washington, "one of the world's best ballroom dancers" (among the best pupils Arthur Murray ever had, one night he took out 16 Murray instructresses all at once), he was rapidly becoming also one of the "world's supplest and hardest-boiled politicians." An effective lobbyist, he had the law revised so that Filipinos would form a majority on the Philippine Commission; in 1913 he helped arrange the appointment of pro-Filipino Francis Burton Harrison as Governor General; in 1916 he was the spiritual author of the Jones Bill.

In 1916 Quezon returned to the Islands, "the hero of his country," bringing with him the Jones Act, which gave the Filipinos power to legislate for themselves subject to a veto by the American Governor General, and which abolished the Philippine Commission. He was promptly elected to the Senate. At that time Osmeña and Quezon were almost of equal strength; but in the elections Quezon attacked Osmeña on the strength of the Wood-Forbes investigation and became President of the Nacionalista Party. In the Senate he was elected President.

There followed years of passionate struggle with General Wood, the Governor who had succeeded Harrison and reversed his pro-Filipino policy. Once, feeling slighted when he was made to wait in the Governor's office for an interview, Quezon stormed out, shouting: "Tell General Wood to go to hell!" As Senate President, Quezon fought to reduce the Governor Generalship position to a mere figurehead, "because we want a government of Filipinos, by the Filipinos and for the Filipinos." With other Governors "he ingratiated himself, cajoling, bluffing, threatening." He dodged back and forth to Washington; he had the 1925 Fairfield Law (for independence) shelved by insisting on instant, not eventual, complete independence for the Islands. In 1927, when he returned again to Washington to resume the struggle, he became ill. In his absence he was nevertheless elected Senator (1928) and re-elected President of the Senate. In 1931, after the Hawes-Cutting-Hare Law had been passed by the United States Senate, vetoed by President Hoover, and the veto overridden, Quezon opposed it. In Quezon's words, "America would still hold military and naval bases in the Philippines even after the latter's independence, and, moreover, export duties regulated in the law would destroy both industry and trade." Some say his opposition was based on a fear that Osmeña, who had accompanied him to Washington, might return to the Islands a national hero. In any case, the legislature supported Quezon and voted against the bill.

Quezon returned to the United States to lobby for a better law. In 1934 he secured the passage of the Tydings-McDuffie Bill, which, tentatively at least, won the fight. Complete independence was promised for 1946, and the bill also provided for duty-free importation of the principal Philippine products, sugar, coconut oil and cordage (Manila hemp) to the United States.

With the passage of this bill, Quezon's leadership was assured. In the election of 1935 he formed a Coalition Party (he believes in a one-party system, since "political parties are good only for evil things") reuniting the Nacionalistas, who had split over the Hawes Act, and with Osmeña as Vice-Presidential candidate he defeated General Aguinaldo for President by an overwhelming majority. His first act as chief executive, alarmed by aggressions in the Far East and in Europe, was to railroad a national defense bill through the rubber-stamp unicameral legislature. This made him chairman of the Council for National Defense, with the chief of staff directly subordinate to the President.

Some observers see in this national defense plan, which makes it almost impossible for any military clique to overthrow or dominate the President, "a strong Quezon personal defense plan." When he divested the speaker of the Philippine Assembly of his most important prerogative—the leadership of his party in that body—Quezon said: "The speaker of the legislative assembly presides over the deliberations of that body. That is his main and most important function. That is his only function." As for the President's functions: the purse strings of the nation are in his hands; he approves all bills before they are introduced into the legislature; and in 1940 the Constitution was amended so that he could run for re-election.

Another important step in the assumption of what his opponents call dictatorial powers was taken on August 10, 1940, when Quezon won "one of the hardest fights" of his colorful political career by jamming through the National Assembly the Emergency Powers Bill, which may change the social and economic structure of his country drastically. By a vote of 62 to 1 he was given authority to require civilians to give service to the Government, to outlaw strikes, to commandeer shipping and other transportation, to control food resources and to revise the educational system. President Quezon insisted that the measures, particularly the anti-spy restrictions, were necessary for the safety of the Islands, which contain large Japanese colonies and are almost surrounded by the expanding Japanese Empire. He also requested the extension of these powers until the new Assembly was elected in November. At that time he was re-elected President, for on August 16, 1941 his Nacionalista Party, taking advantage of the 1940 ruling although Quezon's health was reportedly "impaired from overwork," had nominated him as its candidate. At the time of nomination he said: "If the people elect me, I will serve."

Quezon can ordinarily count on about 75 or 85 per cent of the vote on any issue he puts up to the Filipinos. "By masterly handling of the patronage (he even appoints the village schoolteachers), by a passionate love of all things Filipino (except the opposition), and by a colorful personality that keeps him bounding into the limelight, he has kept first place among Island politicians." Perhaps John Gunther (see sketch this issue) revealed the secret of Quezon's phenomenal rise and his hold over his people when he wrote: "He is indisputably the best orator in the Islands, in any of the three languages, English [which he learned in six months], Spanish or Tagalog. His considerable charm, his patriotism, his executive capacity, his curious combination of American characteristics, like aggressive practicality, with a Latin heritage of suppleness and adroit facility in negotiation, all contributed to his career. But his knack of getting along well with both rich and poor, with the miserably fed peasants of the countryside as well as the Spanish millionaires in Manila, is probably his single most valuable characteristic. The masses adore him, because he gives them something. The rich eat out of his hand—when he isn't eating out of theirs—because he guarantees their survival. By using both he has built up an irresistible machine." Though according to Quezon any such report is "nonsensical,"

QUEZON, MANUEL L.—*Continued*

a movement is reported to be afoot to change the name of the Islands to Quezon; already there is a Quezon City; and students of the state-supported University of the Philippines have supposedly organized a "Quezon for King" Club.

On his way to the United States in 1918, when he was 40 years old, Quezon married his cousin, Aurora Aragon, then 29. They now have two daughters—Maria Aurora, "Baby"; Maria Zeneida, "Nini"; and a son, Manuel, Jr., "Nonong." Quezon's flair for living is both proverbial and prodigious. His Malacañan Palace outclasses the White House, and he, too, has a birthday ball, the proceeds of which go to a charity for the disease from which he once suffered—tuberculosis. His private office is large and richly furnished, and as he talks to visitors he teeters back and forth in a brocaded swivel chair. He makes frequent trips through the Islands on his swank white yacht, the *Casiana;* he still likes to dance and has lost none of his love for gaiety; his clothes are the wonder of the Islands. Short, slim, swarthy Don Manuel, as he is affectionately called by his people, looks much younger than his 63 years. Above his handsome face his hair is graying; bushy black eyebrows top penetrating eyes that even with pince-nez are sharp and bright. "Today, with a burnt-out look," says one commentator, "he still has the knack of charming, cajoling, trading or bullying his way to victory."

QUILL, MICHAEL J(OSEPH) (kwĭl) Sept. 18, 1905- Labor leader; national president of the Transport Workers' Union

Address: b. 153 W. 64th St, New York City

In September 1941, at the third biennial convention of the Transport Workers' Union, Michael J. Quill was unanimously re-elected international president, and praise was given for the achievements of the union and its officers during the previous two years. They had engaged in more than one battle and made a rather phenomenal number of enemies in other quarters, however, for Michael Joseph Quill, labor's stormy petrel, feels right at home in the middle of a scrap. This thickset vehement Irishman was born and bred a rebel. He was born on September 18, 1905 "in the little mountain townland of Courtloughera, three miles from the village of Kilgarvan in County Kerry, Ireland." He went to National School there. His parents, John Daniel and Margaret (Lynch) Quill, were poor farmers. Like Kevin Barry, Mike Quill's entire family, including his three sisters and five brothers, "fought to free Ireland," and by the early '20s a large part of his family was in jail. Quill himself carried a rifle at 14, and when he landed in the United States in 1926 (appropriately enough he arrived in New York on St. Patrick's Day) he is reported to have carried a Black and Tan bullet in his hip.

Since his arrival Quill has handled pick and shovel in the Eighth Avenue subway construction and shoveled coal in the boiler room of the McAlpin Hotel. He went for a time to Pennsylvania, where he eked out a living by selling Roman Catholic religious art. At another time he worked as a handy man in a country club. In 1930 he returned to a gateman's job with a New York subway, the IRT, where he stayed for the next five years. In 1932 he became an American citizen.

In 1934 Quill and other IRT employees began to meet quietly in cafeterias, parks, saloons and furnished rooms to make plans to organize the IRT, then commonly considered a stronghold of company unionism. There was dissatisfaction because of long hours, bad conditions of work and exaggerated disciplinary measures. As a result something like 70 groups were formed after 17 months of furtive but steady organizing work.

In 1935 it was decided that Michael Quill would be more useful to his fellow employees as a full-time organizer than as a gateman, since the embryo union required most of his time. The immediate problem was to affiliate with a larger group, and the next two years were spent looking for a parent union. Quill's union was spurned by the Amalgamated Association of Street Electric, Railway and Motor Coach employees of America, and formed a brief and unsatisfactory association with the International Association of Machinists. In April 1937 the Transport Workers' Union became a part of the CIO, and in the next six months signed up 44,000 men and got closed-shop contracts with the major transit companies. Michael Quill claims that the following benefits have been won for most of the transit workers in New York within the past six years: a five- to six-day work week; two weeks' paid vacations and four paid holidays a year; restoration of all wage cuts made between 1930 and 1937 and some increases; and machinery for collective bargaining and for settling grievances. The union also possesses a voluntary health insurance program which was called "model" by *PM*.

In 1938 Michael Quill was elected to the City Council as a city councilman from The Bronx. That same year he went to Ireland with his bride, pretty, blond Maria Theresa O'Neill, who married him in December 1937 after seven years' courtship. (They now have a two-year-old son called John Daniel after Quill's father.) When Quill came back he was faced with an effort on the part of the Council's Tammany members to unseat him on a technicality. The attempt failed, and for the next two years Mike enlivened the proceedings with his vehement brogue. Among his pet subjects were the battle against the slums and for the institution of modern low-cost housing and public distribution of milk. In 1939, however, when Quill refused to endorse a resolution by the official committee of the American Labor Party in favor of the President's foreign policy and condemning the Russo-German Pact, he was repudiated by the Party. He ran for the Council on an independent ticket and was defeated.

In 1940 Quill was in the headlines because of a threatened city-wide tie up as a result of the Transportation Board's repudiation of the contract existing between the subway managements and the TWU. John L. Lewis' intervention averted the strike, and the city assumed the contracts until June 30, 1941. In March 1941 Michael Quill was again brought to the public eye when 3,500 Manhattan and Queens bus drivers walked out on a strike that lasted 11 days, disrupted the normal traveling habits of comfort-loving New Yorkers and brought about a great deal of angry recrimination. Not a single disorderly incident, nevertheless, took place. Arbitration was finally agreed upon when the arbitration issues were narrowed down to that of increased wages, and the Fifth Avenue Coach Company and the New York Omnibus Corporation abandoned their demands for reduction of wages and personnel.

MICHAEL J. QUILL

Next, on June 30, 1941, Transit Workers' Union's contracts with New York City, governing wages and conditions of work on the subway lines (which the city had taken over from the original managements in 1940 after the subway unification), expired. The Board of Transportation, backed by Mayor La Guardia, refused to renew them; Quill swore that no member of his union would work "one hour in the month of July without a signed contract." Notices were posted all over the subway system quoting the state's penal law on sabotage of railroad property with the Wicks Amendment providing stiff penalties for leaving any transit facility unattended. The tense situation was the culmination of weeks of furious campaigning on both sides, as two of the fiercest tempers in New York clashed. Quill called the Mayor a double-crosser and a swindler; the Mayor, who earlier had called Quill "pig-headed" and "obstinate," now countered with calling him a "dues collector" and an irresponsible labor leader. The Citizens Council deplored Quill's "provocative gestures" and chided the Board of Transportation for imitating them; and the Communist issue was brought up with considerable effect.

The issues, however, remained clearly defined: the city's stand was that it could not bargain collectively with any union or recognize a closed shop; the union claimed that the position of the city as an employer of labor was no different from that of any other employer and that it must therefore bargain collectively with the employees. It was a great relief to all sides when, 56 hours before the strike deadline and a few hours after the TWU voted to support Quill in a walkout, a temporary agreement was reached. The city agreed to continue the contracts pending final determination by the courts of its rights under the law and in the meanwhile to deal with the

QUILL, MICHAEL J.—*Continued*

TWU and provide an impartial grievance board to settle complaints. With both sides claiming victory, it was generally admitted that the atmosphere was considerably cleared, although TWU officials pronounced the raises voted in August unsatisfactory, and at the September convention Quill promised to continue his fight for a collective bargaining agreement.

Quill has often been accused of being a Communist. During the bus drivers' strike, the New York *Daily News* wrote: "One orthodox Red tactic is to hit a large community's key points in the hope of paralyzing the place and creating chaos so that a well-organized knot of Reds can then step in and take over." And during the preparations for the subway strike the *World-Telegram* in a series of articles accused the entire leadership of the TWU of Communist activities, as have, indirectly, the Mayor and David Dubinsky. Congressman Dies makes the same charge in his book *The Trojan Horse in America.* Michael Quill has often heatedly denied this, although he has remarked upon occasion that "he would rather be called a Red by rats than a rat by Reds." He had to be forcibly ejected from a turbulent but inconclusive session with the Dies Committee after having offered to show that the Committee was bent on sabotaging his union. His supporters have claimed that charges of Communism stem from a desire to "brand and remove from useful public life a militant and uncompromising trade-union leader," and a predominantly Irish Catholic membership is loyal to him. In September 1941 they were also overwhelming in their approval of a report calling for support of Roosevelt's foreign policy and the nation's fighting Hitlerism.

In his middle 30's, Michael Quill is one of the important labor leaders in the country. The Transport Workers' Union commands his services for $50 a week—a low among union leaders' salaries. For that salary he works hard, taking only a few days' vacation every year. He is a thickset shortish man, rather dapperly dressed. His Irish antecedents have survived in a brogue that in a moment of stress grows almost incomprehensible and in a blackbriar stick that he has had for the last 23 years. As a veteran of the Irish fight for freedom, he hates the British Empire and keeps the portrait of James Connolly, Irish revolutionary fighter, together with those of Abraham Lincoln and John L. Lewis, on the walls of his office.

Quill is a spellbinder of the old school, vehement and fiery; his speeches, no accomplished orations, delight his followers and irritate his opponents to the boiling point. He is somewhat careless about his adjectives—one of the reasons for his quarrel with Mayor La Guardia; but occasionally his utterances assume an almost Biblical flavor and have a "history-is-being-made-tonight" ring. Such was his statement to the Board of Transportation before the agreement was reached: "We have, sir, broken negotiations. We will come back under different conditions and will negotiate for our members." His hobbies are collecting union buttons, and mountain climbing—it is safe to assume that he finds it easier to indulge in the former than in the latter.

RAEDER, ERICH (rā'dēr) Mar. 24, 1876(?)- Commander in chief of the German Navy

Address: Berlin, W. 35, Tirpitzufer, Germany

In February 1941 German Grand Admiral Erich Raeder and Italian Admiral Arturo Riccardi had a conference (or rather "an exchange of opinions in a comradely spirit") which, according to reports, resulted in "complete agreement for waging a common sea war against England." The Nazi Grand Admiral has ever since the First World War been vehement in his insistence that the "fiction of British naval supremacy" must be dislodged by a resounding defeat. On January 28, 1941 he announced that "until the hour of decision" Britain would be reduced by a combination of blockade by sea and bombing attacks by air. After the War, he promised Bremen naval shipyard workers, Germany will build a huge fleet, maintaining "large overseas naval bases," which will "take the protection of German interests in the world into its strong hands and will carry the German flag and the German name, together with the German merchant fleet, over the space of the globe."

This "vest-pocket Admiral" was born in Wandsbek, Germany, the son of a minor government official. It was 1894 when he entered the Navy, but at first he was overlooked because of his small stature and put on the editorial staff of a German naval journal. He nevertheless rose from the rank of sub-lieutenant in 1897 to captain in 1905, and five years later was made a navigating officer on the imperial yacht *Hohenzollern*. He was an ardent monarchist then, and his personal flag still has the colors and emblems of the old Germany upon it rather than the swastika.

In 1911 Raeder acquired the rank of commander, and the following year became Vice-Admiral Hipper's chief of staff. He was on the German cruisers that shelled the British coast in 1914, and in May 1916 he was in the navigating room of the flagship *Liutzow* when the battle of Jutland began. The ship was battered to pieces, but the men were transferred by destroyer to a battle cruiser, and Raeder somehow escaped. In 1918, made captain of a vessel and commander of the *S. M. S. Cöln*, he was still discussing with other leaders the possibility of a naval replacement program when the Armistice came. A few months later, in June 1919, the remainder of the German High Seas Fleet was scuttled in fear of British confiscation. And although that same year Raeder became head of the Central Department of the Reich Naval Office, no post-War German Navy really existed.

After the War, Raeder wrote a book warning the Germans "never to take on the British fleet in a broadside battle." In 1922 he became rear admiral and inspector of Naval Education; in 1925 vice-admiral and commander of the Eastern Naval Station; and at last, in 1928, admiral and head of the Naval Command. He had long preached "raiding, hit-and-run harrying strategy." Now he began to build pocket battleships—ships that could "outrun anything that could defeat it and defeat anything that could overtake it." When Hitler came into power he obeyed him implicitly and was rewarded by being allowed to obtain steel for his warships in the face of the "greedy Goering-general staff combination."

He was rewarded by more than that. In 1935 Raeder became commander in chief of the Navy. In 1936 Hitler celebrated his own forty-seventh birthday anniversary by making Raeder an "admiral general," an invented title, and handing him a marshal's baton. In 1937 Raeder became an honorary member of the Nazi Party; in February 1938 he joined the Secret Cabinet Council. And in 1939 he became a grand admiral, the first since Von Tirpitz.

Long before this, at the Anglo-German Naval Agreement, Raeder had secured the exception of submarines and naval planes from tonnage quotas. He had been planning to build fast cruisers and submarines almost entirely. Hitler, however, insisted on some big ships with long guns, even two airplane carriers—and as a result Grand Admiral Raeder has not been able to employ his high-sea raiding technique in the present War as much as he had planned. Yet the German submarine fleet has been increasing much faster than Britain has been sinking it. Raeder announced in May 1941 that it would be used against United States ships if that country convoyed "contraband"—and proceeded to carry out his threat in spite of protests of violation of international law.

ERICH RAEDER

Grand Admiral Raeder is about five feet six inches tall, "thin-lipped, taciturn," and wears a "wide-lapelled, heavily padded blue uniform" with an ornate gold dagger. He lives in a modest Charlottenburg villa near Berlin, keeps a dachshund, goes to concerts when music by Beethoven or Brahms is being played, is an enthusiastic yachtsman, and goes to every football game he can find. On shipboard, however, he is regarded as "fastidious and fussy . . . a strict disciplinarian who has the discomforting habit of poking about in galley's and crew's quarters of warships, and of making unexpected visits to outlying bases to check up on the tidiness of uniforms and the condition of the flower boxes in the barracks' windows." Once he inspected men just returned from the hardships of a six weeks' submarine cruise; he scolded them for slovenliness! His regulations against officers' and sailors' visiting saloons and bars in uniform, drinking alcohol before going on duty or smoking on an empty stomach don't make him particularly popular with his men, either.

Raeder is the author of many books on naval warfare, among them *Der Kreuzerkrieg in den Ausländischen Gewässern* (1922); *Das Krenzergeschwader* (1922); *Die Tätigkeit der Kleinen Kreuzer Emden und Karlsruhe* (1923); and *Der Krieg zur Zee*. In all of them he tries to explode what he considers the myth of British chivalry in warfare. Yet he himself has been accused by Germans of disgracing the tradition of the Navy—particularly when he sent ships to assist in the Fascist *coup* in Spain and ordered his men to shell defenseless Almeria.

RAUSCHNING, HERMANN (roush'ning) July 8, 1887- Author

Address: b. c/o Alliance Book Corp, 212 Fifth Ave, New York City

"I know Hitler's intentions out of his own mouth," Hermann Rauschning once said. "Years ago he admitted with cynical frankness all those things which are now shaping into reality." In three widely read books, in articles, in personal interviews Dr. Rauschning has told the world what Hitler said, what Hitler plans, and, recently, how a democratic world movement can destroy Hitlerism. In a fourth book he has defended himself for knowing these things.

The first of his books to hit the English-speaking world was *The Revolution of Nihilism,* which appeared in Europe in 1938 and in America in 1939 and went through 17 editions in a year. This analysis of the Hitler regime by a former party member was full of hair-raising revelations and remarkable predictions. It prophesied the Nazi conquest of Czechoslovakia and a coming German-Russian "alliance" (later Rauschning believed the nonaggression pact "only a tactical expedient. In due time [Hitler] will abandon his alliance with Russia just as he dropped his pact with Poland.") The Nazi theories, Rauschning disclosed, are merely window-dressing for befuddling the masses, and Germany's real rulers, a small Nazi inner circle, have one program, power; one plan, plunder; one tactic, terror. "The new [Nazi] social order will consist of . . . blind obedience to an absolute despotism . . . a progressive economic destruction of the middle class, and the all-pervading atmosphere of barracks and prison . . . desolation, impoverishment, regimentation and the collapse of civilized existence."

The Revolution of Nihilism was called "the most searching analysis and truest account of National Socialism in general and of Hitler in particular that has yet been published," though many reviewers felt it was "too high-pitched, shrill and vitriolic now and then." It was followed in 1940 by *The Voice of Destruction,* a "report, most of it in quotation marks, of Rauschning's confidential talks with Hitler in 1932, 1933 and 1934, when democratic Europe still had no conception of what was in store."

In the days when he was important in Nazi circles, Rauschning used to jot down conversations soon after they were held, and from these jottings emerges a "convincing, devastating impression of Der Führer and his movement." There are skeptics, of course, who wonder "how much these conversations can be believed." But even skeptics agree that as one reads along it is hard to preserve a detached attitude, hard not to accept Rauschning's interpretations of Hitler, exaggerated though they seem, hard not to be moved by the book's "terrible warning."

Unlike this book and *The Revolution of Nihilism,* the *Redemption of Democracy* (1941), Rauschning's next book, was an attempt to show that "the nations that have succumbed to Hitler had the germs of destruction already within them," that democracy must be re-evaluated. Rauschning believes that if England and America can produce a democratic world movement equal in vigor and reality to the negative revolution of Hitlerism, the Anglo-Saxon democracies can destroy the very idea of a revolution of nihilism. His book is, according to *Time,* a "groping, fumbling, badly organized, passionately sincere effort to explain what many people say glibly, few understand—that World War II is a social revolution." To many, Rauschning's ideas about "the coming Atlantic Empire" are cogent; to others this book contains, in the words of the *New Yorker,* "high theorizing (some of it brilliant) about the 'revolution of nihilism' and 'the termite state' and 'the anarchy of the masses' but suspiciously little of what committee chairmen call constructive suggestions"; still others have called his whole concept of democracy undemocratic.

Rauschning's latest book, *The Conservative Revolution* (1941), is in part an *apologia,* a defense of his motives in joining the Nazi party, and it is also a statement of the political and social views of a certain German school of thought. In it he states that he would like to see a "Christian" Fourth Reich built on a "conservative", "traditional", "legitimist" base. Malcolm Cowley points out that it "makes a plea for common efforts in fighting Hitler and in planning the new Europe that might follow his defeat," but Franz Hoellering calls the book "an involuntary portrait of the confused mind of persons of a certain type and level," and there have been other critics who have called its author "an anti-Nazi Nazi." He continues to insist that the Nazi movement was at first a great "regenerative force," only guided by the wrong people, in the wrong way. Some light may or may not have been thrown on his conception of the right people by his interpretation of Hess' (see sketch this issue) flight in May 1941. He called it the act of a patriot performed by a "man of good-will" who had broken with his Führer and sincerely sought peace.

The author of these revealing, startling, provocative books was born in East Prussia, in Thorn, which became Torun, Poland. His family was wealthy, military and landowning, and his father an army officer. Young Hermann was brought up in the family tradition. At an early age he was sent to Lichterfelde, a suburb of Berlin, to enroll in the Central Cadet School, and from here he went on to the military school in Potsdam.

Next came periods at the University of Munich, where he was a music student of Ludwig Thuille (in 1931 he published a book on the historical development of music in the Free City of Danzig), and years of study at the University of Berlin. In 1911 this University awarded him a Doctor of Philosophy degree in history. Rauschning returned to his family estates after he received his degree and stayed there until the First World War. During the War he fought and was wounded, and during the War he was married (in 1915) to Anna Schwarte. (They now have five children.)

After the War, Rauschning settled down in what had become the Free City of Danzig and spent much time considering what he felt to be injustices of the Versailles Treaty. Nothing, he felt, could go right in Germany until its terms had been corrected, and the solution, he felt, was a sort of peaceful pan-Germanism patterned along Bismarck's lines—"a sort of informal economic United States of Europe." When the Nazi Party came along he felt that at last some way out for Germany's plight had come. He saw in its program a help for farming problems—he himself had been busy farming and raising cattle on his Danzig estate; he saw in it the only possible way of achieving his own ideals for the future of Germany. Its "vulgar" anti-Semitism he did not take seriously.

Rauschning allied himself with the Nazis in 1931 and because of his position as the principal person in Danzig, one of Europe's crucial spots, soon became one of the leading figures of the Nazi Party. At first he was a little shocked by the excesses of the Party's leaders, but decided that they were the outpourings of a youthful revolutionary group which time and success would temper. In 1932 he was made president of the Landbund and in June 1933 was elected president of the Danzig Senate. During this period he came closer and closer to the inner circle of Hitler and Hitler's associates, his opportunities for learning the Führer's plans unlimited. Frequently he dined at the Chancellery; he was Hitler's go-between in his off-stage talks with Poland's late President Pilsudski; he was present at important Party conferences.

HERMANN RAUSCHNING

This amity didn't last long, however. Early in 1934 Rauschning urged Hitler to make a peaceful and permanent alliance with the Poles. Hitler pointed out to him that such a pact might prevent the Reich from becoming a "great world-conquering entity. Only *one* can rule," he said. Rauschning was disturbed by this reasoning, and further differences of opinion between him and the Party leadership soon developed. When in 1934 he sent a congratulatory telegram to Von Papen (see sketch this issue), the hope of the counter-revolutionists, it was seized and he was placed under suspicion. Shortly after, he was charged with failing to secure a settlement of the Danzig controversy.

Rauschning offered to resign from the presidency of the Danzig Senate and take another post, but he was informed that Hitler didn't like voluntary resignations. "You must shake off all scruples," Hitler told him. "Only then will you understand the Party and the Party understand you." That understanding never came. Rauschning refused to arrest Catholic priests, disenfranchise the Jews and suppress rival parties on Nazi orders. In turn, when Danzig was faced with bankruptcy, the Reichsbank refused to give it money. Rauschning appealed to Hitler, but his communications were unanswered. He resigned his Danzig position. Then, when his active support of constitutionalism in the election of April 1935 got him even deeper into disfavor with the Nazi Party, he disposed of his lands and fled abroad.

Poland was his first place of refuge, and it was here that he wrote *The Revolution of Nihilism.* The activities of the Nazi machine he once ardently supported drove him from

RAUSCHNING, HERMANN—*Continued*

this country a few years later, and Rauschning continued his exile in London. In October 1941 he came to the United States, there to settle and become a citizen. To this country he offered his views on the present conflict and its outcome. "The War can be won," he said, "only by fighting."

RAVER, PAUL J(EROME) (rāv'ĕr) Apr. 27, 1894- Administrator of the Bonneville Power Administration

Address: Route 11, Box 20, Waverly Heights, Portland, Ore.

As the head of the Bonneville Power Administration, in 1941 Paul J. Raver is the director of the greatest integrated hydroelectric power system in the nation. With its two titanic dams, Bonneville and the Grand Coulee, designed ultimately to produce a total capacity of 2,438,400 kilowatts, it bids fair to become the biggest dispenser of electricity in the world.

Dr. Raver, a pioneer in the uncharted course of Federal power administration, hopes eventually to "put every kilowatt in the Northwest under public ownership." But to do this he will have to break down the web of big private systems that covers the Pacific Northwest, whose owners have long and successfully resisted the advance of socialized power. In the meantime, the government-owned hydroelectric power in the Northwest is expected to fulfill an important function within the framework of national defense: as early as August 1940, Dr. Raver, together with Alvin J. Wirtz, Under-Secretary of the Interior, drafted a plan whereby United States power could be used in the manufacture of defense material in the Northwest, doing away with the necessity of crosshauling Eastern supplies to the Pacific coast.

PAUL J. RAVER

Dr. Paul Jerome Raver's whole career as an engineer seems to have been a preparation for the vital post of public power administrator which became his in 1939. He was born on April 27, 1894 in Logansport, Indiana, the son of Edward M. and Agnes R. (Henry) Raver. He attended the University of Nebraska, and was graduated with a B. S. degree in Civil Engineering in 1917. (He was later to take his Master's Degree in Business Administration [1927] and his Ph. D. [1933] at Northwestern University.) Immediately after his graduation during the War he entered the 18th Field Artillery, advancing to the rank of lieutenant.

The War over, Lieutenant Raver took a job as valuation engineer for the Chicago engineering firm of Hagenah and Erickson. He spent four years in charge of field surveys, pricing inventories and preparing valuation reports on various public utilities properties. In 1923 he became an estimating engineer for the Chicago Surface Lines, where he got still more specialized experience in his field. This experience in valuation and utility budget making was to be useful when Raver found himself faced with the preparation of mammoth budgets and construction plans at Bonneville. During that period in Chicago—an era of rugged individualism in business—Dr. Raver gave but little thought to the philosophy of public service, however. He was content with getting to be a top-ranking technician in his field.

In 1927 he was invited to give new vocational courses in public utilities administration at Northwestern University, where he was progressively instructor, assistant professor, associate professor and professor of public utilities. He spent his summers making special field surveys and so had opportunities to examine at first hand, in a region where private operation of utilities was developed to a high degree, the weaknesses and strengths of private and state utility administration.

He taught in the University until 1939, when he took a leave of absence, but in 1933 he also became supervisor of the Section of Rates and Research of the Illinois Commerce Commission. This last job gave him his first opportunity to do creative work in the field of utility regulation; among other things, he supervised the handling of all rural electrification problems for the Commission and, as a member of the Illinois Rural Electrification Committee, took an active part in the development of the rural electric cooperatives throughout the state of Illinois. As a result of his outstanding work for the Illinois Commerce Commission he was appointed executive officer in 1937 and its chairman in 1939. He had hardly warmed the chair in his new office, Dr. Raver says, when he was torn away by the appointment to the post of Bonneville Power Administrator.

Dr. Raver, with his family (his wife, the former Loy Goss, whom he married in Chicago in 1922, and two daughters, Alice June and Phyllis), went West. At Bonneville he found a construction program well developed: Bonneville Dam built and in operation, a project on the way for a $160,000,000-high-voltage transmission grid built to serve a section of the country comprising 13 per cent of the entire nation's land area. Yet no power had been sold. Dr. Raver's plans were somewhat hampered by the original BPA legislation which stipulated that while BPA could buy or build transmission lines and distribution equipment, it could not buy whole companies. Dr. Raver's predecessor, the late James Delmage Ross, had tried to work through Municipal and Public Utility Districts' (PUD's) local public power bodies, which were able to take over entire power companies. But not all of them decided to use Bonneville power, and worse blows came when the cities of Eugene, Portland and later Tacoma and Spokane also turned down Bonneville power.

Upon his appointment Dr. Raver therefore proceeded to streamline his organization: he tackled industrial customers, riding the crest of the defense expansion which found the BPA with plenty of power to spare; he tried to establish satisfactory procedures whereby Northwest farm organizations would get more abundant power service at reasonable rates. And after 19 months in office he was able to report to the Secretary of the Interior that the BPA now had contracts totaling well over $50,000,000 for nearly 300,000 kilowatts of Columbia-River-generated electricity.

With the Grand Coulee Dam adding more resources, Dr. Raver doggedly pursued his dream of total public power. The first large private company he tackled was Puget Sound Power & Light. Ten other Northwest private utilities would have to be bought out before Raver would get his public utility empire. But he is an indomitably patient man who knows his business, and he has the backing of the White House and the resources of the United States Treasury behind him.

A serious, bespectacled man, Dr. Raver probably knows more about the business of regulating public utilities than any other man in the country. He has been a regular contributor to technical magazines and has written numerous valuable monographs and reports on his subject. During his vacation in 1938, as a member of the Joint Committee on the Investigation of the Tennessee Valley Authority, he prepared the report on Appraisal of Rates and Power Policy of TVA. He has always been connected with and active in organizations allied to his field, and when he left Chicago he had to resign membership in such organizations as the Chicago Disciples Union, the Progress Committee of the National Association of Railroad and Utility Commissioners, etc. He has, however, retained his membership in the American Society of Civil Engineers, the National Power Committee, the editorial board of the *Journal of Land and Public Utility Economics* and the American Academy of Political and Social Science, among others.

With all that, he finds time to pamper his passion for fishing in the famous Oregon trout streams and occasionally to play a spectacular game of golf. His other hobbies are book collecting, making amateur films and music. He serves on the governing committee for the Portland Philharmonic Orchestra and, an accomplished pianist himself, he occasionally performs of an evening with Mrs. Raver and their two daughters as audience.

REID, HELEN ROGERS (rēd) Nov. 23, 1882- Advertising manager and vice-president of the New York *Herald Tribune*

Address: New York Herald Tribune Bldg, 230 W. 41st St, New York City; h. 15 E. 84th St, New York City

"Pretty, gray-haired" Mrs. Ogden Mills Reid rules the advertising department of the New York *Herald Tribune,* probably the country's most important Republican newspaper, with a "small, sure hand." To her conferences she brings "all the intensity proclaimed by her thin lips and firm chin," and nobody can hold a job long on the sixth floor of the 41st Street building without learning that her pleasantly voiced "suggestions" are real orders. "Forty-

Alfred A. Knopf

HELEN ROGERS REID

eight hours a day," is what they say she works, and Mrs. Reid explains this by her love for work ("I have always worked") and her belief that "women have to work twice as hard as men to get the same recognition that men do."

Mrs. Reid's husband, Ogden Mills Reid, is the editor of the *Herald Tribune* and president of the New York Tribune, Incorporated. Although the editorial and advertising departments of many newspapers are known to disagree frequently on matters of policy, Mrs. Reid says that doesn't happen at the *Herald Tribune.* "We get along well," she says, "because we have a mutual regard for each other's abilities. I think, you see, that Ogden is a good editor. He seems to feel that I know the advertising and business ends." There was, however, an apocryphal story going the rounds that Mrs. Reid once came into her husband's office when he was reading proof on the next day's editorial leader and made some suggestions about it. "Helen," he is quoted as saying, "will you kindly get the dickens back to your office, attend to your work and let me do mine?" Mrs. Reid then left meekly. When questioned on the story's authenticity, she vigorously denied it. "Mr. Reid wouldn't talk like that," she said. "And besides I wouldn't walk out meekly."

Dynamic Mrs. Reid has come a long way from Appleton, Wisconsin, where she was born. Her parents, Benjamin Talbot Rogers and Sarah Louise (Johnson) Rogers, were well off, and she was their eleventh child. She studied at Grafton Hall in Wisconsin from the time she was 11 until she became 16 and then left Wisconsin to enter Barnard College in New York City. It was important for her to get through college, and when her money ran out at the end of her sophomore year, due to family complications, there was no thought of retreating to Appleton. She got herself jobs and made enough money to be graduated with the class of 1903.

Shortly after commencement Helen Rogers became social secretary to Mrs. Whitelaw Reid and almost immediately after that Mr. Whitelaw Reid was appointed Ambassador to the Court of St. James. The Reids went to England, and Helen Rogers with them. Being secretary to the wife of an Ambassador with the responsibility of directing the work of several assistants was a hard job, she found. Once she had to study Burke's *Peerage* in one day so that she could seat Mrs. Whitelaw Reid's guests correctly.

Mrs. Reid's son, Ogden Mills, came to London on a vacation in 1910 and while there met his mother's pretty social secretary. They were married in March 1911 in Wisconsin, with Mrs. Whitelaw Reid having to cross the ocean to attend the ceremony. Then came six years in which Mrs. Ogden Reid devoted herself to family life—she has two sons, Whitelaw and Ogden Rogers and had a daughter, Elizabeth, who died. She also devoted herself to the suffrage movement, into which she plunged with fervor. In 1917 she collected $500,000 for the campaign in New York and says: "Winning the battle in New York in 1917 was winning the battle nationally two years later."

Her husband, meanwhile, had been working on the *Tribune,* which he joined in 1908 as a reporter and which he began to edit in 1913. In 1912 he had inherited it from his father. At that time it was a newspaper that was "stodgy, conservative," with a small circulation. But he never had time to be interested in the business side of the paper, and his wife persuaded him to let her join him on the paper. In 1918 she came on the staff without pay and began soliciting all kinds of advertisements. Within two years she took control of the advertising department and in 1922 was elected a vice-president.

By the time of the merger of the *Herald* and the *Tribune* in 1924 Mrs. Reid knew all the important and hundreds of unimportant advertising space buyers in New York and with the business she brought in was able to make her paper prosperous. Under her its advertising lineage increased from 4,170,812 lines in 1918 to 14,359,671 lines in 1939.

Today she continues as active as when she first started and for the past three years has directed the annual *Forum on Current Problems,* which the *Herald Tribune* sponsors, as well as a good deal of political (a Republican, Willkie was to her in 1940 "heaven's gift") and social activity. In 1935 the American Women's Association presented her with its annual Award for Eminent Attainment, the recipient of which must be not only a professional success but "successful as a woman." And Mrs. Reid, "as feminine as the scarlet polish on her fingernails," has gone on during these years with her career as a wife and mother. That doesn't mean that she has tied herself down to domestic affairs. She hasn't, for she believes that "the routine of running a home can be safely relegated to people trained and fitted for the task." That is why others manage the Reid's town house in New

York and their summer house in Purchase, New York, where Mrs. Reid gets a chance to satisfy her enthusiasm for flowers and swimming.

REID, MRS. OGDEN MILLS *See* Reid, H. R.

REINER, FRITZ (rī'nẽr) Dec. 19, 1888- Conductor

Address: c/o Pittsburgh Symphony Orchestra, 913 Farmers Bank Bldg, Pittsburgh, Pa; h. Westport, Conn.

"You'd be an awful dope if you couldn't follow Reiner," a musician once said of the musical director of the Pittsburgh Symphony Orchestra. According to Oscar Levant, "he has evolved a personal sign language which leads an orchestra through the most complex scores . . . with the ease and sureness of a tightrope walker who performs a backward somersault blindfolded." Since 1931, as head of the Orchestra and Opera Department of the Curtis Institute in Philadelphia, he has also been imparting this skill to other musicians.

That Reiner himself is "a technician of uncommon adroitness and security," as Lawrence Gilman put it, all critics agree. There are some, however, who feel that he is an opera, rather than a symphony conductor, and that his talents for drilling singers, players and stagehands into a smooth organization are "alchemized into unnecessary nervousness when he concentrates on a symphony orchestra." Audiences refuse to quibble. Wherever Fritz Reiner conducts—Vienna, Rome, Barcelona, London, Milan, Buenos Aires, Stockholm, San Francisco, Rochester, New York, Hollywood, Philadelphia—halls are jammed.

He has been conducting for more than 30 years. Born in Budapest, Hungary on December 19, 1888, his parents, Ignatz and Vilma (Pollak) Reiner, allowed him to study music almost as soon as he could read and write. This was a concession on their part, since Fritz' father had decided to make him a lawyer. In high school he studied piano and composition, and was graduated from music school and public school at the same time. To please his father he enrolled in the University of Budapest as a law student and kept his musical studies for his spare hours. This division of interest ended after a short time, however, with the death of Ignatz Reiner. Fritz enrolled in the Royal Academy of Music in Budapest.

At the Royal Academy he played the timpani in the school orchestra. One day when the conductor was absent he was asked to fill in, and from then on his musical ambitions were crystallized. He knew he wanted to be a conductor. He was graduated in 1908 and after a short apprenticeship he became an assistant conductor at the Opéra Comique in Budapest. From there he went in 1910 to the National Theatre in Laibach, Yugoslavia; from there to Budapest's People's Opera House.

FRITZ REINER

By 1914 Reiner was conductor of the Dresden Royal Opera House and "attracted the attention of the music world by the vitality and freshness of his interpretations." For eight years he conducted Wagner, Strauss and Italian opera until the post-War inflation in Germany played havoc with his post. In 1922 he left for the South to become conductor of the Teatro Costanzi in Rome and from there went on to Barcelona to conduct Wagner. It was while he was in Spain that he received a garbled wire from the second wife, Madame Berta (Gardini-Gerster) Reiner, mentioning something about the Cincinnati Symphony Orchestra. He wired her back telling her to use her own judgment and shortly after discovered that she had accepted the post of conductor in Cincinnati for him.

In September 1922 the Reiners arrived in the United States and headed for Cincinnati, where Fritz Reiner led the city's symphony orchestra through "nine distinguished years," crisscrossing America and Europe, at the same time, to make guest appearances with most of the world's leading musical bodies. After the 1930 to 1931 season Reiner resigned from the Cincinnati Symphony Orchestra to become head of the Orchestra and Opera Department of the Curtis Institute of Music, a position he held until May 3, 1941, when his resignation became effective. Here he told his pupils that the ultimate test of conducting "is the power to reach and convince other people in a harmonious way." Here the

REINER, FRITZ—*Continued*

results of his teaching were so successful that "when students have completed a course under my direction any one of them can stand up before an orchestra they have never seen before and conduct correctly a new piece at first sight, without verbal explanation and by means of only manual technic."

Reiner's next position came in 1934 when he organized a new opera company in Philadelphia under the management of the Philadelphia Orchestra Association. The company experimented in combining opera productions with symphonic concerts and in new presentations of old operas. Reiner believes firmly that "opera is not highbrow. A good opera," he says, "is a good show as well as an inspiring work of music." The public, he feels, will become more and more aware of this, and he sees the time coming "when all opera in America will be sung in English and when the vast majority of the singers will be native Americans."

In 1936 Fritz Reiner conducted more operas —in San Francisco and in Covent Garden, London. When he left San Francisco he left behind "an orchestra warm with his praises, a jubilant press, and an Opera Association beaming unanimously over San Francisco's most momentous season." In that same year he conducted the *Ford Sunday Evening Hour* over the radio in this country for the first time, as well as concerts for the BBC in England. The next year Reiner repeated his successes in San Francisco and London, and since then has won acclaim for his leadership of the New York Philharmonic Orchestra (both in its winter concerts and at Lewisohn Stadium summer concerts), of the Philadelphia Orchestra and of other leading symphonic and radio organizations.

In 1938 Reiner took up another permanent post, this time as conductor of the Pittsburgh Symphony Orchestra. He continues to conduct his programs of the world's great music both in Pittsburgh and in guest appearances. One of these appearances was in November and December 1940, when he conducted opera in Chicago for the first time, and the Chicago *Tribune's* critic hailed his conducting as "the eighth wonder of the world."

Reiner, who received the degree of Doctor of Music from the University of Pennsylvania in June 1940, rather inclines toward Wagner, on whose music he is an expert; he plays a good deal of Richard Strauss, whom he knew intimately in Dresden; he likes Bach; he thinks the moderns, especially American moderns, are fine. His are catholic musical tastes.

Whatever the performance, Fritz Reiner's rehearsals are strictly disciplined affairs. Held in a cold room whenever possible (Reiner hates heat), the conductor, whose ear "is so acute that he can detect a wrong bowing when his back is turned to the section from which it emanates," storms at any imperfections from the players. His command of English is far from perfect, but that doesn't inhibit him from telling any erring musician exactly what he thinks of him and his playing. As sharp-tongued Oscar Levant put it: "The reaction that he induces from the orchestras he has conducted runs the full gamut of all emotions but deep affection."

Otherwise, Fritz Reiner is a "plump, pleasant" man who likes to snap crack photographs and spend as much time as possible at Westport, Connecticut, where he and his present wife, Carlotta Irwin, have an unusually pleasant home. He has two children by his first marriage.

REINHARDT, AURELIA HENRY (rīn'härt) Apr. 1, 1877- President of Mills College; moderator of the Unitarian Association
Address: Mills College, Oakland, Calif.

When the biographical publication *American Women* named her among the 10 outstanding women of 1940, Dr. Aurelia Reinhardt was genuinely surprised. "I've done nothing out of the ordinary," she exclaimed. "The reason I'm not interesting is that everything comes naturally to me."

One of the many honors that "came naturally" in May 1940 was her election as moderator of the Unitarian Association—the first woman to become titular head of this liberal denomination. The unpaid position is "no mere honorary title but a job that comes close to being that of a super-public-relations woman." Before her election Dr. Reinhardt had served the Association as vice-president, had been Western representative of its National Commission of Appraisal from 1935 to 1936, and had for 10 years been a member of the Board of Trustees of the Pacific Unitarian School for the Ministry, in Berkeley, California. Her record of outside activity is in keeping with the Unitarian tradition of outstanding and energetic women, including Susan B. Anthony, Lucy Stone, Julia Ward Howe, Dorothea Dix and Louisa May Alcott.

Dr. Reinhardt has been a Unitarian all her life, though her mother was a Quaker. She is of New England stock on both sides, but was born in San Francisco, to which one of her ancestors came by clipper ship around the Horn while others crossed the prairies in covered wagons. Her father, William Warner Henry of Bennington, Vermont, had sailed out of Boston Harbor in 1858 to seek his fortune in California, where he married Mary Rogers Merritt and on April 1, 1877 became the father of Aurelia Henry.

After preparing for college in a high school still called "The Boys' High" Aurelia Reinhardt received a B. L. degree at the University of California in 1898. Then she went to Yale, one of the first women to study in that University's rapidly developing Graduate School. She had always loved languages and at Yale specialized in them—classical, medieval and modern; her first printed studies were in this field. During 1901 and 1902 she held a scholarship in English at Yale, the following year received a fellowship, and in 1905 was granted her Ph. D. A year of study at Oxford followed, on a foreign fellowship from the American Association of University Women. Since her student days she has received many honorary degrees: from California in 1919, the University of Southern California in 1924, Colorado College in 1931, and from Mount Holyoke, Oberlin and Williams in 1937.

Dr. Reinhardt's teaching career had begun before she went to Yale, with three years of teaching English at the University of Idaho, from 1898 to 1901. After her year abroad she returned to Idaho and became instructor in English at the Lewiston State Normal School. There she remained until 1909, when she resigned to marry Dr. George Frederick Reinhardt, university physician and professor of hygiene at the University of California. In 1914 her husband died, leaving her with two sons to support. One of them, George Frederick, Jr., is in the diplomatic service and was stationed in Estonia; the other, Paul Henry, is a physician, like his father.

After her husband's death Dr. Aurelia Reinhardt returned at once to teaching. She was lecturer in English at the University of California from 1914 to 1916, when she became president of Mills College in Oakland, the second oldest women's college in the United States. It had been founded for the daughters of newly-rich gold miners in 1852, when California was at a frighteningly long distance from the Eastern schools (unless, as Dr. Reinhardt believes, the clipper ship captains were its real founders). Since 1916, under the guidance of the energetic scholar-administrator whom upperclasswomen address as "Pres," Mills has become one of the important women's colleges, especially strong in its departments of art, music, dramatics and literature.

Executive duties have never been allowed to fill all of Dr. Reinhardt's time. From 1923 to 1927 she was president of the American Association of University Women, whose fellowship years ago had helped to broaden her experience with and understanding of college organizations; from 1927 to 1933 she was chairman of its committee on international relations. She is on the council of the National Economic League, the board of trustees of the American Council of the Institute of Pacific Relations, the international relations committee of the National Education Association; is chairman of the department of education of the General Federation of Women's Clubs, and is active in many other organizations, ranging from the Daughters of the American Revolution and the Colonial Dames to the Dante Society, the Concordance Society and Philological Association of the Pacific Coast. She has been since 1933 a member of the National Committee on Mobilization for Human Needs. Keenly interested in politics, she served as an elector for the Republican Party in 1928, and as a member of the Committee on Policies in 1938. Strongly anti-New Deal, she has been active in the organization of Republican women known as Pro-America, devoting much of her time to speaking before branches throughout the country. She is chairman of the education committee of Pro-America for California.

Associated News

AURELIA HENRY REINHARDT

With all this, Dr. Reinhardt has won a solid reputation as a scholar. She translated and edited the *De Monarchia of Dante Alighieri* in 1904; edited Ben Jonson's *Epicoene or The Silent Women* in 1906; was a contributor to *Selected Translations from Old English Poetry* in 1903; and writes occasional articles for the scholarly reviews. She is a member of Phi Beta Kappa. By way of recreation she collects books, and studies the birds and animals of the countryside about Mills College.

Dr. Reinhardt is tall, large-boned and deep-voiced, resembling a level-headed mother of a large family far more than an austere college president. Her energy is boundless; she is as untiring as she is modest. Extensive travels which have brought her into close contact with teachers and students of Europe and the Orient as well as those throughout our country have left her with a profound belief in the interdependence of religious faith and democracy. "As an educator, I find that the amazing objective triumphs of science are felt by the rising generation as not complete in their definition of life's problems and possibilities, and so on our

REINHARDT, AURELIA HENRY—*Cont.*
campuses we find interest in philosophy and religion on the increase. As a citizen I feel that our American democracy is rooted in religion."

REUTHER, WALTER (PHILIP) (rōōth-ẽr) Sept. 1, 1907- Director of General Motors Department of the United Automobile Workers of America

Address: United Automobile Workers of America, 281 W. Grand Blvd, Detroit, Mich.

In February 1941 a statement by the Office of Production Management indicated that the Reuther plan to use the facilities of the automobile industry for mass production of defense planes had been shelved indefinitely because of "technical difficulties." Walter Reuther, one of the founders and national leaders of the United Automobile Workers of America (CIO) and by trade a highly skilled tool and diemaker, had made public his plan in December 1940 under the sponsorship of Philip Murray (see sketch this issue), president of the CIO. At that time he claimed that "if the idle men and the idle machines of the automotive industry were fully mobilized and private interests temporarily subordinated, we could turn out 500 modern fighting planes a day," and that in six months mass production could be a fact. His plan, he said, would also relieve unemployment and under-employment of skilled labor. Many believed that it was thoroughly practical, but it was opposed by most automobile manufacturer and therefore, according to I. F. Stone, never got the hearing it deserved. By the end of 1941, with America at war and thousands of skilled auto workers jobless, all labor was demanding adoption of the plan.

Walter Philip Reuther was born in Wheeling, West Virginia, in the heart of the steel and mining industries, on September 1, 1907. The atmosphere of his home was one of intense interest in unions and labor problems. His father, Valentine Reuther, was, at the age of 23, president of the Ohio Valley Trades & Labor Assembly; his grandfather was for many years international organizer of the United Brewery Workers.

It was at the age of fifteen, after two years of high school, that Reuther went to work for the Wheeling Steel Corporation. There he served as an apprentice tool and diemaker. His connections with his first job were severed, prophetically, when he organized the workers in protest against Sunday and holiday work. Then, in 1927, Reuther went to Detroit, where the automobile industry seemed to beckon to young mechanics. There he worked for the Briggs Manufacturing Company, for General Motors, for the Coleman Tool and Die plant. Most of his shop experience was with the Ford Motor Company, where, after five years' employment at the Highland Park and Dearborn, Michigan plants, Reuther became foreman of some forty men in the tool and die room. His future as a Ford technician seemed assured, and while working nights he completed his education during the day, attending high school for two years and Wayne University for three.

But at the same time his interest in labor unions had grown. He organized and became president of the Social Problems Club at Wayne, specialized in labor and industrial problems, and took students to the picket line when strikes were in progress in Detroit. In the fall of 1932 he was discharged from Ford's, and after completing his school year he embarked with his brother Victor on a three-year trip around the world. They traveled on bicycles in Europe and visited England, Russia, Central Asia, China and Japan. They made a particular point of observing the operation of auto plants and machine shops wherever possible, working in shops and studying the labor movement. (*Time* says he "knows the automobile industry union-side out.")

In 1935 friends in Detroit wrote the Reuther brothers that their long-hoped-for opportunity to organize the auto workers appeared to be at hand; they hastened home. Walter Reuther organized and became president of the United Automobile Workers' West Side Local 174, Detroit, which rose from a membership of 78 to 30,000 in one year. (He is now its honorary president.) In 1936 he was elected to the executive board of the International Union, and he has been re-elected each year since. He was active in the sit-down strikes of 1937 and in every major strike in the automobile industry since that time.

Reuther led the first major strike in the Detroit auto industry, which broke out at Kelsey-Hayes Wheel in December 1936. The 10-day sit-down ended with a 75-cent beginning rate for both men and women, the best rate in

WALTER REUTHER

the industry. During this strike he was appointed international organizer and, soon afterward, West Side organization director. Reuther functioned in the Fisher No. 1 plant in Flint during the sit-down. In April 1937 he played an active part in what was then called the Ford Organization Committee, and he opened the Ford drive by the first broadcast of unionism—from an airplane over the River Rouge plant in Dearborn! He was in charge of the first union leaflet distribution at the Ford Rouge gates on May 26 of that year, when he, Richard T. Frankensteen and other unionists were attacked by Ford servicemen.

With the greater acceptance of unionism by the automobile corporations, Reuther worked on problems of making collective bargaining more efficient. He played a major part in negotiating an agreement with General Motors Corporation in 1937, when for the first time a joint impartial umpire was established to rule on disputes between workers and management. Since 1939 he has been the director of the General Motors Department of the UAW and, with his staff, which includes his wife (he married May Wolf in March 1936), handles the labor problems of some 160,000 workers in 70-odd General Motors plants. He and William Knudsen are therefore old acquaintances. Once, after a bout with a Detroit union committee headed by Reuther, President Knudsen announced: "Young man, I wish you were selling used cars for us." Reuther was puzzled. "*Used* cars!" "Yes," replied Knudsen, "*used* cars. Anybody can sell new cars." In the dispute with General Motors in the spring of 1941 Reuther was again chief union negotiator.

In the stormy internal life of the auto workers' union Reuther has taken what has been called a "middle of the road" position. He fought and helped eliminate from leadership Homer Martin, first president of the UAW, and, on the other hand, has been bitterly opposed to the Communists. He was a supporter of President Roosevelt in 1936 and again in 1940, and advocates a much greater participation of labor in national defense matters. He himself assisted Sidney Hillman on an advisory group dealing with the problem of training skilled workers in industry. Labor in the United States has a vital interest in the battle that Great Britain is fighting, he believes, and he advanced his program "in the belief that the need for planes is immediate and terrifying."

Red-haired, "pint-sized, pale" Reuther is still something of an athlete. In college he won several medals in both swimming and basketball.

REYNOLDS, QUENTIN (JAMES) Apr. 11, 1902- Journalist; author

Address: b. c/o Crowell-Collier Publishing Co, 250 Park Ave, New York City

It was in January 1941 that Quentin Reynolds returned from Europe to stay for a while, and it was also in January 1941 that his book, *The Wounded Don't Cry*, was published. Soon a best seller, his account of his experiences in France and England was hailed as a "swift running eyewitness account, dramatic and enormously vivid." One reviewer went so far as to call it "at once a prose poem of human capacity to endure punishment for an ideal, a savage indictment of brute force and the chronicle of a brilliant reporter's experiences and reactions under fire." Only the *New Yorker* dissented mildly, with the suggestion that "the writing is just a touch on the Rover Boys' side."

The Wounded Don't Cry is a story of bombings and civilians and of a French General who apologized because the champagne wasn't iced. It is also a story of Reynold's personal experiences—his tricking the French into giving him a pass to the battle lines by a wire to "Uncle Franklin," care of the White House, that explained his difficulties and included "love to Aunt Eleanor"; his experiences driving an ambulance, siphoning gasoline from an Ambassador's car, doubletalking his way into England. In these stories, originally sent to *Collier's* Magazine, Quentin Reynolds' terse, racy writing is filled always with an understanding for the people of England. "I learn about England," he once wrote, "by spending my time at a Royal Air Force mess, spending my time on the beach at Dover with the army men, spending my time with the local volunteers in places like Seven Oaks in Kent, or a dozen places like it, spending my time in the pubs of rural England. In these places you hear England talking."

QUENTIN REYNOLDS

Back in America with two broken ribs from falling over a chair in a bombing raid and minus 50 of his usual 260 pounds, Quentin Reynolds proceeded to give in person his reactions to the War. He made a two weeks' personal appearance at the Strand Theatre in New York City and he announced his belief that there was too much talk of defense in America and not enough positive action. At the same time the two motion pictures he wrote and narrated, *London Can Take It* and *Christmas Under Fire,* were shown widely throughout the country. In these films, as Damon Runyon has pointed out, Reynolds' "voice produces an even greater effect than the film. His tones are low pitched. . . He uses few adjectives. He attempts no fancy stuff," and yet is able to make audiences understand what he feels the people of England are up against.

Before Reynolds returned to England in May 1941 the successor to *The Wounded Don't Cry, London Diary,* had been published, "the uncensored and unedited record of some hair-raising and some hilarious experiences in streets and offices and hotels and countrysides that have become the War's main battlefield." In it Reynolds tried simply to put down stories about people he knows, what they are doing, how they are reacting. Once back in England to gather more material and send out more stories, he was soon working on another book, tentatively titled *Convoy.*

There is an impact in whatever Quentin Reynolds reports and talks about, an impact that is partly the result of his own Irish-American temperament, partly the result of his long years of reporting experience. Ever since he left college he has been turning news into readable material. He was born in New York City, the son of James Joseph Reynolds and Katherine (Mahoney) Reynolds. His father was a public school principal in Brooklyn at that time and moved to the borough where he worked in 1905. Quentin went to public school in Brooklyn and then to the Brooklyn Manual Training High School. From there he went to Brown University.

A big lad, six-foot-one, it was almost inevitable that he should play football. He was a star at this and just as good at boxing (college heavyweight champion) and swimming. In 1924 Reynolds was graduated, quite certain that he was going to be a lawyer. He returned to Brooklyn, enrolled in the evening session of Brooklyn Law School and started looking around for daytime work. Most of it turned out to be on newspapers: first on the Brooklyn *Times* and then on the *Evening World.* By the time Reynolds got his Law Degree in 1930 he was a first-rate reporter.

Quentin Reynolds quietly tucked away his Law Degree and settled down on the *Evening World* as a reporter, rewrite man and finally sports writer. When the *World* ceased publication he went over to the *World-Telegram,* mostly as sports writer. It was in 1930 that Joseph V. Connolly started looking around for promising young writers for Hearst's newly taken over International News Service. He saw Reynolds' sports columns and liked them. When he asked Reynolds how he would like to be a general reporter for INS, Reynolds turned him down at first. That was until he heard the salary he would be getting. "Even then," as Damon Runyon puts it, "Reynolds was manifesting the tendency that was later to make him a somewhat celebrated figure around the Stork Club, 21, El Morocco, Club 18 and similar spots, and he had already discovered that a man-about-tables could always use a little more money."

Reynolds did reporting and rewrite for INS for a few years and then, in 1933, went to Germany as foreign correspondent. With H. R. Knickerbocker he saw Hitler and Goebbels (see sketch this issue) and the rest take over, and he didn't like it. He didn't hesitate to say so and as a result was "one of the first reporters tapped by Hitler for his little club, 'Deported Journalists and Exile Turnverein!'" Before he left Germany, however, the editors of *Collier's* had noticed his work and asked him to join their staff. Influenced by the fact that he would be able to do not only articles but fiction as well, Reynolds joined the staff in 1934 and has been with *Collier's* ever since, turning out about five short stories and about twenty-five articles a year on both the United States and Europe. In 1940 and 1941 it was *Collier's* that sent him to Europe—on a roving commission—and it is *Collier's* that the public has to thank for *The Wounded Don't Cry, London Diary* and some up to the minute stories from Russia in 1941.

Reynolds is "good-looking, convivial, a hearty eater, a free-handed spender, a natural born stayer-upper." The opening words of *The Wounded Don't Cry* are characteristic: "Hitler marched into Belgium just as I marched into the Ritz bar. The first thing I did was to order a drink. I don't know what Hitler did first." "A great conversationalist, a bachelor and usually most agreeable to a fight or a frolic, he could not help becoming a notable of New York night life." But despite nights out Reynolds always seems able to do a prodigious amount of work.

This red-headed, burly reporter for *Collier's* always has plans ahead for things to do. Sometime he intends to lecture all over on what he has seen abroad and what he believes the United States should do about it. Probably, he says, he will land in Hollywood, which has made him a number of offers, and stay there for a while. It won't be for long though, for he is most anxious to be in Europe and to report further all that has happened, is happening and seems likely to happen to "my neighbors: the people of London," and all the other people of Europe.

RIBBENTROP, JOACHIM VON (rĭb'*ĕ*n-trŏp yō'ä-kĭm fŏn) Apr. 30, 1893- Foreign Minister of Germany

Address: Ministry of Foreign Affairs, Berlin, Germany

Sir Nevile Henderson, who once called Ribbentrop "a friend of Great Britain," in the spring of 1941 was quoted as saying: "If I were given a gun and told to take two shots, I would shoot Himmler (see sketch this issue), then Ribbentrop, and brain Hitler with the butt of the rifle." Others might let Himmler wait. Joachim von Ribbentrop, Foreign Minister of the Third Reich, known in Germany as "the commercial traveler of National Socialism," is generally conceded to have had more influence on Hitler and on the policies of Nazi Germany than any other man. Says Oswald Dutch: "He knows accurately the market, his wares, and the demand; he has his representatives, scouts and informants everywhere. He knows the strength and the weaknesses of his competitors. And finally he knows, to a split second, the psychological moment for landing his catch." He is one of the few people who can see Hitler at any time, without an appointment. Jealous Nazi higher-ups—among them Goering, Hess, Rosenberg (see sketches this issue)—have nicknamed Von Ribbentrop "Iago." They say he won Hitler's favor by "poisoning his ear." They call him "the Wild Man of the Reich." Von Ribbentrop's $3,165,000 in foreign (including American) securities, in addition to his wealth in Germany itself, make him also one of the Reich's richest Nazi officials.

JOACHIM VON RIBBENTROP

Joachim von Ribbentrop was born plain Joachim Ribbentrop. He was born on April 30, 1893, at Wesel on the Rhine, and was the son of Sophie (Hertwig) Ribbentrop and Richard Ribbentrop, a retired army officer. His travels began early. After attending the Imperial Lyceum in Metz young Joachim was sent by a wealthy aunt by marriage to school in Grenoble, France; to London, where he worked for a while as clerk in a German importing company; and finally to Switzerland. It was 1910 when he set out for America. He spent several months in New York and in Boston, part of the time as a free-lance journalist, and then went to Canada. His jobs there have been variously reported as draftsman, assistant engineer, bank clerk, wine salesman and railroad laborer. Whatever he was doing, he remained there until Germany declared war in August 1914, then managed somehow to get back to his own country—legend says he fled to America, then hid on a Dutch steamer that was searched on the high seas. He reached the German frontier in the autumn of 1914 and joined the 125th Regiment of Hussars.

He wasn't at the front long, although the Iron Cross, awarded for bravery in action, is prominent among his medals. His knowledge of English could be more valuable elsewhere. In 1915 there is some reason to believe that Ribbentrop was given a special position in a military mission at New York, working under Von Papen (see sketch this issue), the

RIBBENTROP, JOACHIM VON—*Cont.*

German military attaché who was finally recalled at the request of the United States after evidence that he had been directing German espionage and sabotage activities. Shortly after Von Papen's recall Ribbentrop, too, returned to Europe, and by early 1918 was with Von Papen once more. This time it was in Turkey, as adjutant to the plenipotentiary of the war office. And once more Von Papen's mission failed. Some say that Ribbentrop actually saved him from capture by the British.

As adjutant of the German delegation, Ribbentrop witnessed the signing of the Versailles "Dictate." (He had spent most of his time in Parisian salons trying to convince French capitalists that a strong Germany would be a bulwark against Bolshevism, an argument he was to use to better effect later.) After that there was no place for him among the officialdom of post-war Germany. But there were still opportunities to make money, and during the early years of the French occupation of the Rhineland, Ribbentrop speculated in inflated marks, imported French wines duty-free with the help of corruptible customs officials, and soon was engaged by the French firm of Pommery and Greno to act as their traveler and representative. His talents as traveling salesman were such that the German champagne firm of Henckel-Trocken offered him a position a few months later; and in 1920 Ribbentrop married Henckel's daughter, Annelies. (There are now two daughters and three sons, the youngest named "Adolf.") Ribbentrop was taken into his father-in-law's firm as a partner.

Up to this time Ribbentrop had been known as a socialist, a pacifist, a supporter of Stresemann. Now he was the joint owner of the Henckel cellars—a rich man with a country house in a suburb of Berlin. He was taken into the Herrenklub, where he kept in daily touch with big industrialists and bankers. He was intimate with prominent Jewish banking families, frequented their salons, and is reported to have become an Anglophile under the influence of Madame Rothschild, at whose house he played the part of an English gentleman in English society comedies. In his travels abroad he made the acquaintance of such figures as Mussolini, Barthou, Doumergue, Laval. In 1926 he added the "von" to his name by getting himself adopted by the same aunt who had been so helpful in his youth. (Some amended the name even further: to "Ribbensnob.") In 1927 he organized the Impegroma Importing Company with capital advanced by a wealthy Jewish banker. And in 1928, reputedly with hopes of putting Jewish competitors out of business, he was converted to National Socialism.

In the autumn of 1929 Von Ribbentrop met Hitler for the first time. One story says he was introduced to Hitler as "the man who gets as big a price for German champagne as others get for French champagne." Obviously such a man could be helpful, particularly if he also had Von Ribbentrop's connections with Von Papen and with the Herrenklub. Although Von Ribbentrop didn't yet break his connections with Jewish high finance, he cooperated with Hitler. In 1933 he helped to bring about the famous meeting between Hitler and Von Papen at the home of the banker Von Schroeder—the meeting by which Von Papen was persuaded that if Hitler came to power he would leave the direction of foreign affairs in his hands, and Hitler acquired the necessary financial backing for his plans.

The plans succeeded—and Von Ribbentrop became sort of an "Anthony Eden of the Reich." He renewed acquaintanceships in foreign capitals. He mixed his blond, blue-eyed glamor with champagne, champagne with politics. He sold wine and ideology. Finally, in April 1934, at Hitler's behest, he was appointed Reichskommissar for Disarmament (in a government pledged to rearmament), and participated in the disarmament discussions at Geneva. More important, he organized the Ribbentrop Bureau, a private department of investigation and espionage with immense sums at its disposal whose services ranged from stirring up unrest in Africa to making Nazism popular among big business and high society circles in the democratic countries. And he continued to act as ambassador at large, "as Hitler's special plenipotentiary in particularly important affairs and also as a control on the ambassadors and envoys not yet entirely acquiescent to the system."

There seems to be little doubt that Von Ribbentrop had charm. In the fall of 1934 the easily impressed Jules Romains saw him as "a fairly tall, slender, spirited man, with amused eyes and thin, ironical lips, well dressed but without studied elegance, who spoke very good French in a clear voice, with a marked accent of the 'distinguished' kind. He liked to move around; he'd get up, sit in another chair, light cigarets. His conversation was animated, with quick shifts from one idea to another." Romains thought of him as "a Talleyrand or a Metternich"—one of those men "who are too subtle, too skeptical, and also too elegant, to have either partiality for the undertakings of imbeciles, madmen, and bloodthirsty rabble, or any wish to encourage them."

Yet Von Ribbentrop may have been able to describe himself to Romains as "a good European first and foremost" because no one as yet had had much opportunity to judge him by his acts. In 1935, after a foreign tour of Brussels, London and Paris for Hitler's information, he produced his first sample: the negotiation of the Anglo-German naval treaty. Soon afterward Belgium avowed her neutrality in the event of war; and in 1936, after the German occupation of the Rhineland, Von Ribbentrop was Germany's delegate at the London conference to decide exactly what to do about it. The answer was, of course, nothing.

After these impressive accomplishments for the Third Reich, Von Ribbentrop's appointment as German Ambassador to London in the summer of 1936 should have surprised no one, alarmed only the British. In London he wasn't as popular with everyone as he was at Cliveden, at Guilford, with the Marquis of Londonderry's set and with King Edward VIII, Mrs. Simpson and some of their friends. The staff of the German Embassy was considered "ridiculously numerous." Von Ribbentrop's ambitious plans for the building's remodeling brought clashes with the English Society for the Protection of National Monuments and with the Commissioner for Parks and Lawns. His son, it was rumored, was turned down by Eton, and contented himself by studying at Westminster in London. And Von Ribbentrop himself couldn't get into the most exclusive London clubs—in spite of his English valet, his English butler, the hint of an English accent in his German. Even his expert bridge and tennis and his accomplished violin playing couldn't sell the Third Reich to everyone. But he was making some powerful friends; and he was observing.

He was also not confining his activities to London. In November 1936 he dashed back to Berlin to sign the original anti-Comintern agreement with Japan, although it was Von Neurath who was German Secretary of State. The late Ambassador Dodd recorded in his diary his suspicion that Von Neurath did not wish to sign it, also that "Von Ribbentrop had worked out the matter long before he was sent to London. It was Hitler's way of popularizing Von Ribbentrop, who is not liked or respected very much here." Furthermore, Dodd suspected Von Ribbentrop of maneuvering the visit to Hitler of the late George Lansbury, British Laborite and No. 1 pacifist.

After the abdication of his friend Edward in December 1936 Von Ribbentrop attended the First Court of George VI, made headlines ("Nazi Insults King") and acquired a new nickname ("Brickendrop") by greeting the astonished and unresponsive King with a Nazi salute and a "Heil Hitler!", repeated three times. After that he spent more time working at the Ribbentrop Bureau in Berlin than in London, and it is claimed that his Anglophilia changed to Anglophobia because of his experience. He was not in England long. On February 4, 1938, Von Neurath was eased out of the German foreign ministry and Von Ribbentrop appointed to his post. "That commoner has always peddled his wares to the highest bidder," mourned Von Neurath, whose "von" was genuine. "May God have mercy on the Reich!"

He might have prayed for Europe, too. A little over a month later, when Von Ribbentrop took his final leave of London, Nazi troops were pouring into Austria. Von Ribbentrop had been closeted with Lord Halifax until the last minute, thereby preventing the Austrian Ambassador from making one last move with the British Government. Back in Berlin, Von Ribbentrop "attached himself firmly" to Heinrich Himmler, head of the Gestapo, built up a huge Foreign Office, and kept assuring Hitler that under no circumstances would the British fight. The Munich Pact of September 1938, followed by the December 1938 declaration of friendship with the French and the occupation of Czechoslovakia in March 1939, was the result and the triumph of his monopoly of information, his diplomacy and his advice. When on August 23, 1939 he signed the non-aggression pact with the U. S. S. R. at Moscow, the names he was called were colorfully varied, but everyone agreed that it was a diplomatic *coup*. Only when Great Britain declared war on Germany a week later, with Nazi bombers darkening Polish skies, could anyone assert confidently that Von Ribbentrop was not infallible.

Since that time Von Ribbentrop has not stopped traveling. It was probably he who prodded Mussolini into entering the War and it was certainly he who sold the Three-Power Pact to Italy and to Japan and to more than one small nation. His already-excellent French and his passable Italian and Russian have improved, and the list of his uncomfortable diplomatic acquaintances has lengthened. His conferences with Mussolini, Matsuoka (see sketch this issue), Molotov, Philoff (see sketch this issue) and others have made millions of people hold their breaths with dread anticipation. As a prophet, however, he has not been completely successful. In March 1940 he expressed the opinion that the War should be over within a year; in March 1941 he expressed the same opinion.

RICE, GRANTLAND Nov. 1, 1880- Sports writer

Address: h. 1158 Fifth Ave, New York City

These are the rhymes from forty years
Of service on a thousand fields,

writes Grantland Rice, one of the best known and most affectionately regarded of American sports writers, in his book, *Only the Brave and Other Poems,* which was published in 1941. They are stirring, melodious, rather old-fashioned verses, an artful blend of *If, Invictus* and the poems of Eugene Field.

Most of the poems had appeared in his widely syndicated column, "The Sportlight," which he has been writing since 1930. Myriads

GRANTLAND RICE

of movie-goers, soothed and refreshed by the outdoor scenes of the Grantland Rice "Sportlights" short features shown at their neighborhood houses, are also familiar with his voice. Many of them are fans of his blonde actress-daughter Florence Rice, her father's pride and joy. She was born in 1910 and named Florence Davenport Rice. Her mother was Katharine Hollis of Americus, Georgia, whom Grantland Rice married on April 11, 1906.

Grantland Rice has seen thousands and thousands of sporting events in his many years of witnessing, participating in or writing about baseball, football, racing, golf, tennis, hunting, polo, rowing, field and track, and yacht racing. Once in 1923 he was called on to travel more than 16,000 miles and send back by telegraph and mail nearly a million words. He has wandered from Montana to Bermuda and all kinds of points in between.

"The drama of sport is a big part of the drama of life, and the scope of this drama is endless," wrote Rice in describing "My Greatest Thrill in Twenty-Two Years of Sport." "Sport has its triumphs and its tragedies, its great joys and its heavy sorrows, with more spectacular effect than most dramas may ever know. My life as a follower of sport has been one thrill after another; big thrills and little thrills—thrills of all descriptions marching by with the seasons. There has been the thrill of the new stars suddenly coming to fame on some great play, and the deeper thrill of the fading veteran coming back for another whack at glory after he was supposed to be down and out. The basis of the big thrill in sport is the uprising against heavy odds, the smaller man beating the larger one, the has-been coming back, the battered and broken rising to heights of glory."

Grantland Rice is a Tennessean, born at Murfreesboro on November 1, 1880, the son of Bolling H. and Beulah (Grantland) Rice. He received his preparatory education at the Nashville Military Academy and Wallace University School, Nashville, Tennessee, and obtained his B. A. degree from Vanderbilt University in 1901. At Vanderbilt he played both baseball and football, spending three years at shortstop and captaining the Vanderbilt baseball team in his senior year.

He is somewhat chary with details of his football career, but if casualties are to be counted Rice is there with a record, as a writer in *Outing* put it. In three years of play he managed to acquire a broken shoulder blade, a broken collarbone and four broken ribs, an average of two broken bones a year. From 1907 to 1911 he umpired and refereed throughout the South, learning something of how the game looks from the standpoint of the man with the official whistle. Rice was introduced to golf in 1910 at Nashville, and really plays, "not a medicinal 100 for the 18, but a scrappy game that will give even a champion his bad quarter hours."

But the role of a professional player was not for Rice. Immediately after graduation he got a job on the Nashville *News,* also writing for the *Forester Magazine* in 1901, and for the next three years (1902-04) he was on the staff of the Atlanta *Journal,* one of the great newspapers of the South. In 1905 Rice was a reporter on the Cleveland *News,* but he returned to his native state the next year to work for the Nashville *Tennessean* from 1906 to 1910. Then he came North. From 1911 to 1914 he worked on the New York *Mail,* whose columnist for two of those years was Franklin P. Adams (see sketch this issue).

In another year he followed "F. P. A." to the New York *Tribune* (now the *Herald Tribune*) and stayed there from 1914 to 1930, with a year off to serve in the First World War as first lieutenant in the 115th Regiment, Field Artillery, of the 30th Division (Tennessee National Guard) of the United States Army. He was in France with the American Expeditionary Forces in 1918 and 1919. "Incidentally, if you want some carefully assorted language with the emphasis properly placed, ask him his opinion of the fighters who wouldn't fight," wrote the *Outing* commentator the following year. "The name of an erstwhile champion is at the head of the list, and it includes all the heroes of the squared circle who preferred to stay at home and argue about the purses while the other fellows went to France and tossed their lives into the great ring over there."

Besides shooting 70 at golf (at Dunwoodie golf course, 72 at Scarsdale in medal play competition), Rice has shot quail, duck and wild turkey, and has caught salmon in New Brunswick, trout in Alberta. The only condition he specifies for enjoyable fishing is that the fish bite.

To swap yarns, Rice can find fellow sportsmen at the Players, Coffee House and Dutch Treat clubs in New York City. His golf clubs include the Englewood Golf Club, the National Golf Links and the Maidstone and

Deepdale Clubs. He is a Democrat and a Presbyterian; his college fraternity was Phi Delta Theta; Vanderbilt University made him an honorary member of Phi Beta Kappa in 1920; and he is a member of the Berzilius Society at Yale. Besides the new book of poems, *Only the Brave,* Rice has published *Songs of the Stalwart* (1917); *Sportlights of 1923* (1924); and *Songs of the Open* (1924).

He is president of Grantland Rice Sportlights, Incorporated, which makes fascinating, exciting and usually beautifully photographed moving-picture short features for which he supplies the vocal commentary. Besides keeping his column going, he is a frequent contributor to *Collier's* and other publications. His writing, it has been said, is for the good everyday sportsman and not for the hair-splitting expert, though he himself knows the techniques and fine points of practically every American sport.

RICE, GREGORY Jan. 3, 1916- Long-distance runner

Address: h. 411 W. 115th St, New York City

Late in September 1941 fleet, wiry "Greg" Rice went into training again at the New York Athletic Club gymnasium, in the hope of surpassing his already extraordinary world-records in tearing off the three-mile run. He set one such record in February 1940, doing the course in the amazing time of 13.55 minutes, and a year later lowered records for both the two-mile and three-mile run, this time in the space of 13.51.

This young Montanan, who has out-streaked such famous European runners as Paavo Nurmi and Taisto Maki, is an accountant when not running his races, and spent several months in 1941 busily engaged in an office-building on lower Fifth Avenue in New York City, accumulating experience toward his final certification as a certified public accountant. Accounting was his major subject at Notre Dame University, where he received the degree of Bachelor of Science in commerce in 1939, and he spent a year and a half working at his new profession in South Bend, Indiana after graduation.

Greg Rice's mother, Mamie Mary (Bergman) Rice, was a native Montanan, and, says her son and only child, a broncho-breaker who could hold her own with any of the men. Joseph Matthew Rice, Greg's father, came from Arkansas, and has been a railroad mechanic all his life, except for doing a little farming. Joseph Gregory Rice was born January 3, 1916, in Deer Lodge, Montana. The family moved to Missoula when the boy was three and a half; and this town was his home until he matriculated at Notre Dame, except for one year spent in Burbank, California.

GREGORY RICE

Greg goes back home to see his family occasionally; the Missoula Chamber of Commerce brought him back by airplane in 1940 for an exhibition match, and the University of Montana, located in Missoula, followed suit the next year.

Greg Rice began running while in grammar school at Missoula, as a member of the local Boy Scout troop. Two newspaper routes also developed his leg muscles. He was a newsboy at 10, getting up at 4:30 a. m. to make his first delivery, and distributing out-of-town papers at noon. He had two separate paper routes and the agency for three out-of-state papers, keeping them all until his departure for Notre Dame in 1935, when he gave them to his three boy-assistants. In high school he competed each year in the Montana State Interscholastic Track and Field Meet. His best performances as a schoolboy were 2:01 in the half mile and 4:26.2 in the mile.

Until reaching the campus of Notre Dame, Rice had never run any farther than a mile and a half, which was part of his training schedule for the mile. At Notre Dame, however, he came under the tutelage of his "great friend and beloved coach," the late John P. Nicholson, who had seen him run in Chicago, and who immediately showed him the cross-country requirements of all his runners from the quarter mile up. At the end of the year's running, "Nick," as he was known to all his boys, told Rice that he could be a great two-miler if he put his heart into the task. This advice wasn't altogether pleasing to the young runner; he wished to be a miler. "I'm not kidding myself," he says, "I still hate cross-country. I've never enjoyed it, and I never will. But Nick taught me too clearly that a runner can't get along without it." "One couldn't be around 'Nick' long before he had you believing firmly in his ideas," and in 1937, Rice's sophomore year at Notre

RICE, GREGORY—*Continued*

Dame, he set a two-mile record (9:14 minutes) at the National Collegiate Athletic Association meet in Berkeley, California, a comeback after having previously placed fourth in the mile. (This setback had convinced him that he was not meant to be a miler.) At Los Angeles, in the 1939 meet, Rice won a two-mile victory in nine minutes, two seconds. He "wasn't satisfied with the time after the race, but coach and I were glad to have won from such a classy field."

In 1938 a European tour of six weeks with the American Athletic Union team under the direction of Peter Waters of Manhattan University gave Greg Rice an international reputation. The team landed at Southampton and went to London for an international meet on a bank holiday, competing with athletes from Poland, France, Esthonia, Sweden and Greece. They also appeared in Glasgow, Berlin, Dresden, Vienna and Budapest, flying from the Hungarian capital to Athens. In Berlin, Rice set a personal record for the 5,000-meter run of 14:54.

Rice amazed even himself during the two-mile run at the Knights of Columbus clubhouse in New York in March 1940. "I never felt that I could run that fast," he says. Undoubtedly his feat had much to do with his winning of the James E. Sullivan memorial trophy, presented him by the A. A. U. as the outstanding amateur athlete for 1940. In May 1941 he set a record for the 3,000-meter run. He won the National Cross Country Collegiate championship in 1938 and in November 1941 won the National A. A. U. Cross-Country championship at Yonkers, New York. Since Coach Nicholson's death on April 2, 1940, the end of some of Rice's longest runs has found him in tears, not from over-exertion but from emotion. "The saddest event in my running career was the loss of my coach, the late John P. Nicholson, to whom I owe all my success on the track. It was his inspiration and teachings, supplemented by my mother's and father's early training, that have enabled me to progress in track," wrote Rice.

At the toughest moments of his races—and Rice has passed out after some of them, notably in the intense heat of a Nebraska summer at Lincoln in 1939—the sense of Nicholson's actual presence seems very vivid, and Greg feels an added incentive to run his hardest. For that matter, "everyone has been extremely good to me, and this has made it much easier." "Gregory, the Great," as Charles Moran called him in the *Saturday Evening Post,* is a modest and unassuming young man. Described as "chunky," he stands only five feet four and a half inches, and weighs usually about 138 pounds. His dark brown hair is curly, and he has clear blue eyes. Accountancy and practice give him little time to himself, but he sees a movie a month and gets through the *Reader's Digest.* He also enjoyed *Panama Hattie.*

In his off-season from running, which lasts two months, Rice keeps in trim when away from his desk by playing tennis, handball and soft ball. He shares an apartment in the Columbia University section of Manhattan with a classmate from Notre Dame, and recently joined the huge New York Athletic Club on Central Park South. His real and original ambition was to be a major-league baseball star. Jimmy Foxx and Lefty Grove are his favorite players, and he states that he "is one of the many pulling for Ted Williams to win the batting championship with a better-than-400 average." So far he has found no time for romance.

"There is about him the simplicity of the Irish peasant and the fire of Brian Boru," comments Charles Moran, who also remarked once that Greg Rice looked like an altar boy without his cassock. And his well-beloved coach, John Patrick Nicholson, said, not long before his death, that Rice "has the confidence, the conviction, and the emotional stability to be the greatest three- and six-miler this country has ever developed."

ROBERTS, OWEN J(OSEPHUS) May 2, 1875- Supreme Court Justice

Address: b. Supreme Court Bldg, Washington, D. C.; h. 1401 31st St., N. W., Washington, D C.; Bryncoed Farm, Kimberton, Pa.

"Are toil and tears and blood itself too much to sacrifice on the altar of freedom in justification of our fathers' faith, in protection of our own free lives, in perpetuation for generations to come of the priceless liberties for which the Stars and Stripes have always stood?"

In these ringing words, spoken in Independence Hall in his native Philadelphia on Flag Day of 1941, Owen J. Roberts, who has been called "the great dissenter", "the hard-working balance wheel" of the Supreme Court, proclaimed his stand in the national crisis. Later, presiding at a national emergency rally in New York's Madison Square Garden sponsored by the Council for Democracy, he took the lead in urging full support of any measures adopted by the United States to "defeat the dictatorships."

Justice Roberts was born into a prosperous, conservative Philadelphia family, the son of Josephus and Emma (Lafferty) Roberts, and went no farther afield than his own city for his education. He received his B. A. at the University of Pennsylvania in 1895, then attended the Law School of the University and was awarded his LL. B. in 1898, immediately being admitted to the Pennsylvania Bar. So brilliant was his scholastic record, both in the College of Liberal Arts and in the Law School, that the year he was graduated he became instructor in law at his Alma Mater. He remained there for 20 years, resigning in 1918 as full professor.

At the same time his was far from a cloistered professorial life. In spite of warnings from the then dominant political machine in Philadelphia that he was a "goo-goo" and a "reformer," the district attorney of Philadelphia County (co-terminus with the city) made him his first assistant in 1901, and he remained in that post until 1904. He engaged actively in law practice as well, becoming attorney for the Pennsylvania Railroad and for other large trusts and corporations. Even so early his economic bent, which may be described as inherently conservative tinged by a slight aristocratic liberalism, became apparent. When, on the entry of the United States into the First World War, he was appointed prosecutor of espionage cases for the Eastern District of Pennsylvania, the *Christian Science Monitor* hailed him as a "vigorous, shrewd, and tenacious" attorney who could be trusted not to show leniency or weakness.

What made Owen J. Roberts a national figure, however, was his appointment by President Coolidge in 1924 as one of the two prosecutors in the notorious Teapot Dome oil case. It was in some ways a curious and yet quite characteristic choice. Mr. Roberts was then a director of several large corporations, including the American Telephone and Telegraph Company; he had openly declared himself against governmental investigation of the Standard Oil Company; he was an avowed enemy of the viewpoint which today we call the New Deal. He was accused of deliberate delay, and it is true that the net result of the impressive case was merely the imprisonment of the wretched Senator Fall of New Mexico. But there seems no reason to doubt the complete integrity of the prosecuting attorneys. Roberts was as thorough and unrelenting as he was slow, and when the case drew to its conclusion his name was familiar to every literate American.

When, in May 1930, President Hoover offered the name of Owen J. Roberts to fill a vacancy in the United States Supreme Court, the confirmation came to him almost by default. Hoover's first choice had been John J. Parker of North Carolina, a judge hated by organized labor because of his judicial approval of "yellow dog" labor contracts. By contrast, Roberts was highly acceptable. His appointment went through without a dissenting vote. But he proved a great disappointment to hopeful liberals. One of his very first acts as Supreme Court Justice was to cast the balance against the Railroad Retirement Act, and later it was his vote which killed the AAA.

At the time of this last decision Justice Roberts was the youngest member of the Court and appropriately energetic, writing more decisions than any other Justice. Before the complexion of the Court was changed by retirements, deaths and new appointments to its present prevailing liberalism, it was he who most often cast the decisive vote in the famous five to four decisions. Usually he was ranked as a conservative—occasionally as a reactionary; but he manifestly was doing his own thinking, and several times he made unexpectedly liberal decisions. The difficulty, as the *New Republic* once remarked, was that Roberts' liberal moments seldom coincided with those of the other occasional liberal, Charles Evans Hughes (see sketch this issue), so that in most cases the final vote was anti-New Deal.

In 1940 Roberts was strongly recommended as a possible Republican candidate for President, especially by opponents of Thomas E. Dewey. The candidacy died a-borning, partly because of the unexpected strength shown by the dark horse, Wendell Willkie, and partly because Justice Roberts gave it no encouragement. His ambitions have never been political, and, besides, he may have remembered what happened to Justice (not then Chief Justice) Hughes when he resigned from the Supreme Court in 1916 to run as Republican candidate for President in a Democratic year. (He did not return to the Court until three months before Roberts himself.)

To a certain extent Justice Roberts still retains his attitude of seesaw liberalism. In general, however, since the retirement of Justice McReynolds in February 1941, he has been considered the "conservative member" of the Court. Yet he is not a man on whom it is easy to pin labels. Perhaps the best estimate of his nature is the statement that he is "groping to preserve a humanitarian detachment." Meanwhile he is personally a most disarming man, whom no dignities or responsibilities can keep from remaining "human and approachable." He is probably the only one of the Supreme Court Justices who goes to work in the morning carrying his own lunch—a thermos bottle full of coffee, and one sandwich. Until the new Supreme Court Building was opened he had his office in the Capitol, and he used to drive himself to work in a not very new La Salle landau.

Quick-thinking, energetic, a facile speaker and writer, Justice Roberts actually enjoys working hard. His appearance when the Court meets has been described by such verbs as "leap and bound"—he hurries in, throws himself into his chair, immediately digs enthusiastically into the work before him.

OWEN J. ROBERTS

Usually a fastidious dresser, there was much surprise when, on the solemn occasion of his induction into the Court, he appeared attired in a bright red tie. When it was called to his attention he merely said carelessly that he had just happened to put it on that day.

Roberts is a large man, tall and upright, weighing 200 pounds, square-jawed and with deep-set eyes and an aggressive nose. He is by no means a formidable personality, however; *Fortune* remarked on his "ingratiating large-mouthed smile and pleasant manner." He is eminently gregarious, though he cares little for formal social events; he loves to tell jokes on himself, and likes to have company about him. One of his closest friends, in spite of their diametrically opposed views, is Secretary of Labor Frances Perkins. Mr. and Mrs. Roberts (the former Elizabeth Caldwell Rogers of Fairfield, Connecticut, whom he married in 1904) call her "Perkie," and see more of her when they are in Washington than of any other friend.

In his youth, studious as he was (he intended originally to be a teacher of Greek, and majored in Greek at college), Owen Roberts was also a good deal of an outdoors man, and he still retains a trace of his athletic past. He no longer hunts moose in Maine, and his riding has to be done on a very gentle horse since, years ago, another horse threw him and fractured his shoulder so badly that he still suffers pain from it; but when he is not in Washington he spends practically all his time on a farm at Kimberton, Pennsylvania, which he calls Bryncoed (Welsh for "wooded hill"). It is a real farm, 650 acres, and he is a practical farmer who raises blooded cattle, pigs, chickens, ducks and geese, grows vegetables for his family's own use, and has an active interest in the flower garden, which specializes in hollyhocks and madonna lilies. At the time when

ROBERTS, OWEN J.—*Continued*

he was most unpopular in labor circles, the rumor used to go about that he supervised his farm attired in plus fours. He does, but they are made of khaki and accompany a khaki shirt, woolen stockings and a battered old straw hat to which he is as attached as he is to his pipe.

As for the house itself, it is partly his own creation: a remodeled Colonial stone farmhouse which is furnished almost entirely with antique furniture belonging to its original period, and which has fifteen rooms and seven fireplaces. Justice Roberts is an enthusiastic remodeler, anyway: when his family lived in Georgetown, D. C., he remodeled the building which had been the slave quarters of the old house into a garage with a studio on its second floor for the use of his artist-daughter, Elizabeth Rogers.

While in college Justice Roberts was elected to Phi Beta Kappa, and he is a member of Psi Upsilon fraternity. In religion he is an Episcopalian, though not particularly active in church affairs. From 1921 to 1924 he was a trustee of Jefferson Medical College in Philadelphia, and an interest in public as well as private housing made him the representative of the United States Housing Corporation in that same city at the time of the First World War. He has received innumerable honors—including honorary doctorates from nine colleges, among them Princeton, Williams and his own University—but nothing yet has been able to make a stuffed shirt out of him.

Nor (though he may have to retire in 1945) is he anything but young and vigorous in mind and body. On December 18, 1941 Justice Roberts was appointed by President Roosevelt as head of a commission to report in early 1942 on the Pearl Harbor disaster of December 7. At 65, when he was mentioned as Republican candidate for President, *Time* Magazine called him "the so-called 'Swing Man' of the Supreme Court, relatively impervious alike to New Dealers or Conservatives, of greater physical and mental stamina than most United States leaders, with vast erudition, a natural oratorical voice trained to express sense rather than emotion, and an impressive presence."

ROBESON, PAUL (BUSTILL) Apr. 9, 1898- Baritone concert singer; actor

Address: 555 Edgecombe Ave, New York City

Paul Robeson says: "I have never been much interested in vocal virtuosity. I have never tried to sing an A-flat while the audience held on to the edge of its collective seat to see if I could make it." The distinguished Negro baritone, who has sung and acted around the world, was in the 1940 to 1941 season making a concert tour of the United States, his first in five years. Among his most popular numbers is the *Ballad for Americans*, which he introduced to the public in November 1939 on a Columbia *Pursuit of Happiness* program. He prefers folk songs to classical music, and his rendition of English, Hebrew, Mexican, Russian and German folk songs, often sung both in the original tongue and in English, shows the same understanding and deep sincerity that make him the most famous male singer of Negro spirituals of his day.

Paul Robeson was born in Princeton, New Jersey, the son of Anna Louisa (Bustill) Robeson, who was two-thirds Indian, and William Drew Robeson, a runaway slave who had put himself through Lincoln University and become a Methodist minister. The minister's son attended Rutgers College on a scholarship and made a remarkable record there: won the freshman prize in oratory and the sophomore and junior prizes in extemporaneous speaking, was a member of the glee club and the debating team, and a speaker at commencement. In addition he was a "four-letter" man—winning, in all, twelve letters in track, football, basketball and baseball—and was chosen All-American end by Walter Camp in 1917 and 1918. His academic record was equally good: one story says that when he received his first year's marks, consisting of seven *A*'s and one *B*, his father wanted him to account for the *B*. In his junior year he was elected to Phi Beta Kappa.

After having received his B. A. from Rutgers in 1919, Paul Robeson went on to Columbia to take his LL. B. He financed his law studies with week-end games of professional football, and even considered becoming a professional heavyweight boxer. It was during his four years at Columbia that he made the acquaintance of Alexander Woollcott (see sketch this issue), who wrote about him later: "I think I felt at the time that I had just crossed the path of someone touched by destiny. He was a young man on his way. He did not know where he was going, but I never in my life saw anyone so quietly sure, by some inner knowledge, that he was going somewhere."

When Robeson left Columbia he was taken into the office of Louis W. Stotesbury, a Rutgers man and a prominent New York lawyer. He hadn't considered becoming an actor. While at Columbia, however, he had taken part in an amateur play at the New York Y. M. C. A.; Eugene O'Neill, who had been in the audience, later wrote *Emperor*

Jones and offered the part to the young amateur who had impressed him so much. Robeson refused this role but soon afterward (1922) consented to play in *Taboo,* appearing with Margaret Wycherly in the United States and with Mrs. Patrick Campbell in London. He then appeared in *Emperor Jones* in New York and in London, and the English performance proved to be such an artistic triumph that he decided to give up law.

It was also in *Emperor Jones* that Robeson first made his reputation as a singer. One scene called for whistling. Robeson couldn't whistle, so he sang. Someone persuaded him to study voice seriously, and while waiting for another play to turn up he decided to give a concert, assisted by Lawrence Brown. A few nights before his debut in 1925 Heywood Broun heard the two men sing at the home of Walter White (Secretary of the National Association for the Advancement of Colored People). He wrote about them in his column with such enthusiasm that the concert—the first program of all-Negro music—was a great success.

Since that time Robeson's rich, communicative baritone voice has made itself heard and felt all over the world. He became even more popular as a singer of Negro spirituals than as an actor, and as well known in London and Moscow as in New York. During the Spanish Civil War he even visited Spain and sang *Water Boy, Ol' Man River* and *Road to Mandalay* to the Loyalist soldiers, for whose cause he continued to work. For a number of years he was completely absent from the legitimate stage in spite of the fact that *All God's Chillun,* the first play in which he appeared after *Emperor Jones,* had gained for him an international reputation, as did his performances in *Porgy, Stevedore* (in London only), *Show Boat, Othello* (in London only) and *The Hairy Ape.*

It was after an absence of eight years, however, that Robeson returned to Broadway early in 1940 in *John Henry.* The play was withdrawn after only five performances, but Brooks Atkinson, critic for the New York *Times,* wrote of it: "It serves chiefly to renew acquaintance with a man of magnificence who ought to be on the stage frequently in plays that suit him. For there is something heroic about this huge man with the deep voice and a great personal dignity. Count as one of the theatre's extravagances the fact that Paul Robeson is not an active figure in it."

Frequent appearances on the radio, more than 300 recordings, and roles in many films have made Robeson's voice and dramatic ability familiar to millions who have never attended his concert or theatre performances. Among the motion pictures in which he has had a starred or featured part are *Emperor Jones, Showboat, Sanders of the River, King Solomon's Mines, Dark Sands, Jericho, Song of Freedom.* He has made films for British as well as American producers, having for a long time made his home in England because he found less race prejudice there than in the United States.

PAUL ROBESON

The racial problem is one that Robeson has studied thoroughly. It was racial discrimination as much as his own acting ability that caused him to give up his career as a lawyer. He sent his son (in 1921 he married Eslanda Cardoza Goode) to school in the U. S. S. R. because he thought the boy could grow up normally there. And in January 1941 Robeson, with four other Negroes and five whites, was suing a San Francisco restaurant because, they asserted, they had been refused admission. Robeson also frequently speaks out on political issues in which he feels his race is deeply involved: in the summer of 1940 he was opposing conscription, speaking for peace—later, urging all Negroes in the industry to join the United Automobile Workers of America in their Ford organizing-drive—even later, speaking and singing at benefits for aid to Britain, China and the Soviet Union. He has been called a radical.

Robeson has been described as "massive, beautiful in physique, muscular, strong and handsome." He is said sometimes to reveal his Indian heritage "by locking himself in his room, the curtains drawn, and for days at a time escaping from all society of friends." For relaxation he studies languages: he knows Chinese, Russian, Spanish, Gaelic. Quite recently he turned to invention. Believing that he sings at his best only when he can hear himself, he began (with Professor Harold Burris-Meyer) to tackle the problem of providing a reflective surface for singers in acoustically imperfect halls. An "acoustical envelope" was evolved, and Robeson used it in October 1940 for the first time.

When the honorary degree of Doctor of Humane Letters was conferred upon Paul Robeson by Hamilton College in 1940, Dr. W. H. Cowley, the president, described him as a "student, athlete, lawyer, actor, singer

ROBESON, PAUL—*Continued*

and great American." He said: "In honoring you today, we do not, however, express our enthusiasm for your histrionic and musical achievements alone. We honor you chiefly as a man—a man of tremendous stature, energy and physical dexterity; a man of brilliant mind, a man whose sensitive spirit makes possible your penetrating interpretations; and a man who, above all else, travels across the world as an example of the humanity and the greatness of our democratic heritage."

ROBEY, RALPH W(EST) (rō'bē) Aug. 29, 1899- Economist; journalist

Address: b. Newsweek, 152 W. 42nd St, New York City; h. 450 Riverside Drive, New York City

Some time in 1940 the National Association of Manufacturers decided to find out whether there was any basis for "the growing apprehension about the contents of school textbooks." About social science textbooks they were particularly curious, and Ralph Robey was appointed to prepare abstracts of 563 textbooks in the fields of history, civics, sociology and economics so that no apprehensive school administrator or parent would have to spend too much energy in determining whether any one textbook gives "a fair and impartial presentation of our form of government and the private enterprise system."

It was February 1941 when the survey was finished. The New York *Times* promptly interviewed Mr. Robey to see what conclusions he had reached. Mr. Robey threw a bombshell. Few of the books he had been so busily abstracting were actually "communistic," he found, but most were poorly written, unscholarly, and many of them belittled the accomplishments of democracy and held the private enterprise system up to ridicule. Discontent and skepticism were thus stirred up in immature pupils. "If you had an out-and-out Leftist slant, it would be much simpler to handle," he said. "What you get is a critical attitude that is destructive in its influence." Among others, the books of Harold Rugg (see sketch this issue) were quoted as examples.

The response was immediate. Twelve thousand delegates at the seventy-first annual convention of the American Association of School Administrators began tossing Mr. Robey's conclusions back and forth. Many decided the report was an attack on democratic education; others thought there should be further investigation. The Council for Democracy, which has for its chairman Raymond Gram Swing and which includes among its directors Colonel William Donovan, William Averell Harriman (see sketches this issue), Robert Sherwood and William Allen White, decided that Mr. Robey "deserves the censure of his colleagues" and that the N. A. M. survey has "given aid and comfort to those only too eager to impose an incompetent censorship on our schools." The American Committee for Democracy and Intellectual Freedom appointed a committee to "combat the censorship threat inherent in the textbook investigation" by testing the accuracy of the N. A. M. abstracts; the School Book Publishers National Association appointed another to "go into the matter of these charges specifically."

Merwin K. Hart (see sketch this issue), however, quickly moved to uphold Mr. Robey's charges, and in *Newsweek* Raymond Moley announced that he had "hoped for a long time that someone would point out the mistakes of fact and justified interpretation" with which some social science textbooks abound. He concluded: "The cleaning up to which both the Robey report and the New York legislative inquiry point must be done in the local communities." At the same time the National Association of Manufacturers itself proclaimed that Mr. Robey's conclusions were purely his own, and that "the abstracts themselves contain no opinions, are completely unprejudiced and can be used to advantage by any person sincerely eager to study the contents of our nation's textbooks." In April 1941 the N. A. M. offered to "co-operate with educators at any time" in order to prevent intolerant use of the abstracts.

Ralph West Robey, a "black-haired, handsome" man with a "lean, nervous face," is the writer of a weekly financial column for *Newsweek*, whose publisher is Malcolm Muir, a director of the National Association of Manufacturers. Since 1938 Mr. Robey has also been an assistant professor at Columbia University, but in 1941 is on a leave of absence: "I've been teaching for 17 years and it seemed to me it's time my students got a break." He was born in Masontown, West Virginia on August 29, 1899, the son of John Calvin and Joan (West) Robey, and took his B. A. from Indiana University in 1920.

Young Robey had also worked as a clerk in New York City's National City Bank during the summers, and he continued in that position after graduation until in 1921 he found a position with the Federal Reserve Board as a statistician. In 1923 he acquired his M. A. from Columbia and also an appointment as instructor at the University of Rochester in New York; two years later he returned to Columbia to lecture on banking. He lectured on banking for 13 years, until in 1938 he received his Ph. D. and an assistant professorship from Columbia; but at the same time he managed to crowd in an active career in journalism.

Fundamentals in Real Estate (1927), written with Blake Snyder, was his first published book. Shortly afterward, however, his writing on financial topics began to appear in the columns of the *Christian Science Monitor;* from 1931 to 1933 he was the New York *Post's* financial editor; and from 1933 to 1935 he was a contributing editor to Eugene Meyer's (see sketch this issue) Washington *Post.* According to *Newsweek* "his articles established his reputation as a clear thinker along time-honored lines," and *Roosevelt vs. Recovery* (1934), full of "prophecies of the dire consequences to follow Roosevelt's monetary and banking maneuvers," added to his reputation. This book was particularly interesting because for a brief period in 1932 Robey had worked with Raymond Moley as a minor member of Roosevelt's Brain Trust, having broken away only after the President announced his plan to let the banks reopen after the bank holiday. (Raymond Moley later called him "the ablest and most likable of the Tories.")

The 1936 Presidential campaign found Robey frankly lined up against Roosevelt—as a member of Alfred Landon's personnel staff, as the Republican candidate's money-and-banking adviser. Not long afterward he came to *Newsweek* to work for a short time as associate editor. Then for a few weeks in 1937 he was editor of the short-lived *Financial Observer,* but quit his job when he learned that his employer was a swindler who had served a term in prison, and in 1938 returned to *Newsweek* to write a weekly financial column. *Newsweek* announced that its new columnist "enjoys the confidence and friendship of business leaders and financiers, as well as critics of the profit system"; it might also have added that he was author of the recently published *Monetary Problems* (1936) and *Purchasing Power* (1938), and since 1936 had been president of the Council for Applied Economics.

Mr. Robey was married early in 1941. His wife is proud of the fact that furnishings in their apartment are nearly all handmade, from the window curtains and lampshades to the sectional bookcases and the pipe rack. She finds her husband's hobby of "fussing around" his elaborate workshop more utilitarian than most. Mr. Robey has other hobbies, however—bridge and tennis. And he "sleeps in a bed about 14 feet long ('the Plantation'), which he likes to show off to visitors."

Who's Who in America

ROBINSON, BILL May 25, 1878- Dancer
Address: b. 1564 Broadway, New York City; h. 2588 Seventh Ave, New York City

"Brown conqueror of a white world" is Bill "Bojangles" Robinson, who, at the age of 62, is still acknowledged the "incomparable leader of all tap-dancers." During his lifetime he has received more recognition from white organizations and societies than any other Negro in the United States, and he is tremendously proud of this triumph over race prejudice.

The dancer was born in Richmond, Virginia May 25, 1878, the son of a machine shop worker, Maxwell Robinson, and a choir singer, Maria Robinson. Both parents died when he was a baby, and he was raised by his grandmother, an emancipated slave. The name "Bill" was taken from his brother after a fight in which the dancer came out on top. Tired of being teased about the name of "Luther," Robinson decided to change names with his brother and persuaded the boy, rather roughly, to comply. This same brother, now known as Percy, is one of the best drummers in the country. At one time he was a Red Cap in New York's Grand Central Terminal.

Bill's formal education ended when he was six years old. At that age he was already dancing to earn nickels and dimes in Richmond beer gardens. When he was only eight

BILL ROBINSON

Robinson begged rides to Washington, D. C., where he got work in racing stables.

His first professional dancing job was with Eddie Leonard, the minstrel man, in a spectacle called *The South Before the War*, for which he received $5 a week and his board. For almost 10 years after this debut, however, he made no efforts to continue his dancing career. Instead he took a job as a waiter in a Richmond restaurant, punctuating his working hours by frequent visits to pool parlors and dance halls. According to one story, Robinson's first introduction to his present manager, Marty Forkins, occurred after he had spilled piping hot oyster stew down the back of Forkins' neck. "Mistah Forkins," as Bill calls him, has been the dancer's manager for nearly 50 years. When they met, Forkins was the "big man of the Western Vaudeville Managers Association."

The year 1906 marked Robinson's real start on the road to fame. Dividing his time between night club entertaining and the stage, he became increasingly popular each year, skyrocketed his salary from $75 to $3,500 a week. But money means nothing to the dancer. It is estimated that he has earned over a million dollars during his career; most of this has been spent or given away. In 1941 he is said to be receiving $6,500 for those weeks he works during a five-year film contract.

It was in 1930 that "the Satrap of Tap" first went to Hollywood, after the closing of the Broadway success, *Brown Buddies*. Between 1930 and 1939 he made 14 motion pictures for major studios, the most popular of which co-starred his favorite actress, Shirley Temple. With the little girl he made such box-office hits as *Little Colonel* (1935); *Littlest Rebel* (1935); and *Rebecca of Sunnybrook Farm* (1937).

The Hot Mikado marked his return to the stage in 1939. The show, a parody on Gilbert and Sullivan, was one of the biggest attractions at the New York World's Fair. Bill's newest offering was *All in Fun*, which opened at the Majestic Theatre in New York City on December 27, 1940 and closed soon after.

Robinson has been married for almost 20 years "and all of it to the same woman," the former Fannie S. Clay. He met Mrs. Robinson while she was a cashier in a Chicago drugstore and claims that he spent $1,000 for sodas while winking at her. Today Bill and his wife live in a seven-room apartment in Harlem, New York, his adopted home. There Bill's popularity is universal and is demonstrated by his election as honorary Mayor of the section. Des Williams, a Harlem friend, is responsible for the famous nickname of "Bojangles."

The stair tap is probably Robinson's outstanding contribution to dancing. There are several versions of how the step originated, but Bill's favorite attributes the idea to a dream. "I was being made a lord by the King of England," he declares, "and he was standing at the head of a flight of stairs. Rather than walk, I danced up to get it." Many dancers have since imitated Robinson's technique. Once he received a note from Fred Stone, accompanied by a check for $1,500, "in part payment for the stair dance I stole from you."

Versatility is the keynote of Robinson's success. His own explanation for it is rather vague. "I hear the music," he says, "and something comes into my head which I just send down to my feet. And that's all there is to it." His favorite story is that he soaks his feet in hot water and two quarts of strong liquor nightly until they are "drunk." Once at a congress of dancing teachers, his intoxicated feet tapped for one hour and fifteen minutes without repeating a step.

Critics shower him with praise. "He expresses as much beauty with his feet as a singer does with his voice," says one. "His dancing is like the laughter of a happy pickaninny, romping in a sunlit watermelon patch," says another. And "Bill Robinson catches as much drama out of dancing on a flight of stairs as Sarah Bernhardt got out of playing Camille."

One of the greatest honors ever bestowed upon Bill was admittance into the organization known as the Grand Street Boys. Only one other man has ever been chosen an honorary member of the club and that man is Cardinal Hayes. On the occasion of Bill's sixtieth birthday in 1938, the Grand Street Boys held a party in his honor at which ex-Mayor Walker referred to him as "probably the greatest dancer in the world today." At that time Robinson declared that he had no intention of quitting. "When I'm 102," he told his friends, "I'm going to stop dancing and start a dancing school. I'm a sort of Rip Van Winkle of dancing."

His vitality is really remarkable. Although he sleeps only four hours nightly, recent physical examinations reveal that he has the heart of a man in his early 30's and the legs of a youth. His diet includes four or five quarts of ice cream a day. His only sicknesses in 40 years have been three attacks of ptomaine poisoning.

In appearance Bill looks much younger than his 62 years. He has no wrinkles and there is only a touch of gray in his short-cropped, kinky hair. One writer says: "Time has walked across his face on soft cat feet. He might be 30 as he taps across the hardwood in a cascade of pure artistry." Robinson dresses showily, his favorite attire a plaid suit, check shirt and figured tie. He always dances in winter underwear.

Bill's conversation is largely "anecdotal" and his mode of verbal communication mostly "laconic." His favorite word is "copesetic," which he coined himself to mean "better than O.K." His singing has been described as "uninspired," and he plays no musical instrument. But his feet he manipulates with "ineffable grace and ease."

His sense of humor is well known. Once he went into a mid-town restaurant and seated himself at a table. The occupant of an adjoining booth objected and the manager advised Robinson that unpleasantness would be avoided by his speedy departure. The Negro dancer smiled. "Have you got a $10 bill?" he asked. "Sure," said the bewildered manager. "Here's one." Robinson took the bill, extracted six $10 notes from his own well-filled wallet and rolled them all in one ball. "Close your eyes for a moment," he directed. The other man complied. "Here," said Bill, extending the seven bills, "let's see you pick out the colored one." He was served.

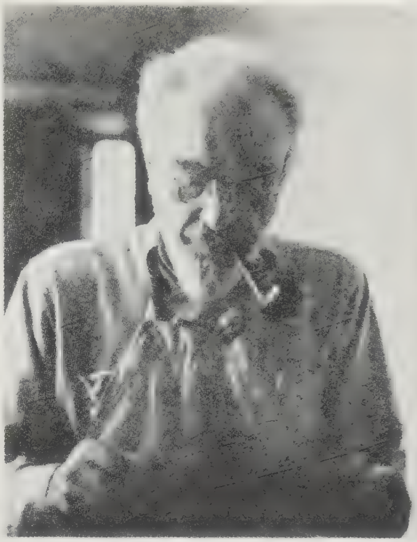
ROBINSON, BOARDMAN Sept. 6, 1876-

Artist; teacher

Address: Colorado Springs Fine Arts Center, Colorado Springs, Colo.

Boardman Robinson is a tremendous, magnetic man. He has a careless gray beard that used to be a flaming red, and the eyes of a kind satyr peering out from under rude eyebrows. He is probably one of the few persons important in the world of art who makes as great a personal impression upon all who meet him as his work does upon critics.

This American artist was born on September 6, 1876, the son of John Henry and Lydia Jane (Parker) Robinson, in Somerset, Nova Scotia. (His father was a sea captain who sailed around the world six times.) After spending some years of his childhood in South Wales, he attended the Massachusetts Normal Art School, then, like nearly all young artists of that particular period, went to Paris. There he attended L'Académie Colarossi and L'École des Beaux-Arts, acquired a great admiration for the work of Jean Louis Forain, failed completely in his effort to get his work exhibited and eventually returned to the United States. He spent a year in Boston, a year in San Francisco; then there were three more years in Paris before, in 1907, he came East and found himself a job in New York as illustrator and cartoonist for the *Morning Telegraph*.



BOARDMAN ROBINSON

Robinson's early drawings immediately attracted attention and admiration because of his ability to say exactly what he wanted to say powerfully yet gracefully, and in as few lines as possible. As one critic put it: "He was an exceptional draftsman even in those days. You always had a feeling that he drew very quickly with very little effort, with the least possible expenditure of time and energy—and there was buoyancy in his technique that seemed to reflect not so much the personality of the subject as his own vivacious delight in his work." By the time Robinson left the *Morning Telegraph* to work for the New York *Tribune* (1910-14) his cartoons were famous all over the country. Reedy of the St. Louis *Mirror* wrote: "Boardman Robinson has the finest, freest, swashing stroke, the greatest daring in massing his black and letting in his white." From the editor of *Cartoons* came a tribute of another kind: "His ideas are refreshing, the spirit of his work being attack on sham and on things, animate or not—customs, habits, individuals, corporations, and so forth—that obstruct the path of progress."

The early days of the First World War found Robinson in the Balkans and in Russia with the late John Reed. Many of his grim sketches of scenes in those war-torn countries appeared in *Metropolitan Magazine* in 1915, ROBINSON, BOARDMAN—*Continued*

and his were the illustrations for Reed's *The War in Eastern Europe* (1916). His own *Cartoons of the War,* a devastating satire, was published the same year. By that time Robinson was on the staff of the old *Masses,* and during the famous *Masses* trial one of his cartoons, *Making the World Safe for Democracy,* was offered as an exhibit of a specific violation of the loosely interpreted Espionage Act. When in 1918 *The Liberator* was established, Robinson became a contributing editor to that publication, too. Soon it was the Peace Conference, rather than the War, that was being boldly satirized. Much later, a critic in the *Magazine of Art* remarked on "with what unerring comprehension he saw through the thin hypocritical shell of things to the essential core. The cartoons are prophetic; their content grows more significant with the years." Among the most famous are *God* and *The System Investigates Itself*—"the system" pictured in a luxurious bed, apparently searching for fleas and scratching like an ape.

In 1921 Charles Henry Meltzer, writing in *Arts and Decoration,* saw in Robinson "another Daumier." But Robinson himself was quoted in that same article: "I want to get back to the primitive. And chiefly to get back to Giotto. Rembrandt, of course, I love, and I love Daumier, but Giotto—" This was toward the end of his very productive cartooning period. There was no doubt that the content of his drawings kept them from as wide an audience as Robinson might otherwise have reached, although he was a staff member of the fairly conservative *Harper's Weekly* as well as of radical journals. One writer in the *Outlook* wanted more of his cartoons published even if the editors had to run them as "Cartoons by Boardman Robinson Which Do Not of Necessity Represent Our Views." In 1923 Robinson left the United States for England, where he drew cartoons for the London *Outlook.*

His stay in England was short. By 1925 he was back in the United States, an instructor at the Art Students League. Though he had said once: "I am esthetic, I suppose, but, though I understand the value of abstractions in my art, I am not satisfied unless I have a truth or an idea to build on," soon he was adding to his compassionate, impressionistic studies of such subjects as tramps, beggars and slum children more purely esthetic studies of dancers, nudes and landscapes.

By 1929 it was difficult to recognize the early Robinson in the mural panels painted for the Kaufman Department Store in Pittsburgh. (In 1921 there had been perhaps two paintings among all his work, which were, for the most part, charcoal or watercolor studies.) For these famous murals, portraying the *History of Commerce,* Robinson used a kind of specially treated automobile paint. One art critic, while acknowledging Robinson as an unequaled master of design, compared his work to that of another master, Pinturicchio, because he "stays picturesquely on the surface and never hits out," is "never fiery." "His art does not yet transcend illustration," he commented. And Henry McBride came, saw, also remained unconquered, and went back to mourn (in the columns of the New York *Sun*) Robinson's desertion of caricature. "He could be, if he wished, the first satirical commentator upon American life."

Since 1930 Robinson has been art director at the Colorado Springs Fine Arts Center and, since 1934, also a teacher in the Fountain Valley School for Boys in Colorado Springs, Colorado. Among his most ambitious projects since then have been frescoes for the Colorado Springs Fine Arts Center; a mural, *Man And His Toys,* for the RCA Building in New York City's Rockefeller Center; 18 panels for the Department of Justice Building in Washington, D. C.; and a post-office mural for Englewood, Colorado. Versatile and tireless, he has done the illustrations for Random House editions of Dostoevsky's *The Brothers Karamazov* and *The Idiot* (powerful black-and-whites admirably keyed to the text) and of Edgar Lee Masters' *Spoon River Anthology.* Late in 1941 he was working on *Moby Dick* for the Limited Editions Club. He has made drawings and delicate water colors ranging in subject from dancers, dude ranches, "superbly sensuous" nudes and rodeos to a sorrowful and hungry Christ.

His landscapes are many, but the Rocky Mountains he finds hard to draw. "I have done perhaps 20 mountain pictures," he said in 1940, "and have destroyed just about all but . . . three. I cannot draw mountains. The minute I look at a mountain it seems to move both upward and toward me, and if I try to paint the thing in detail it gets static, like a post card. And the minute you get a range of mountains, you have something that is really going places. You have to be quick to catch it."

A monograph, *Boardman Robinson: Ninety Three Drawings* (1937), with an introduction by George Biddle, provides an excellent survey of Robinson's work, which is represented in the Harrison Gallery (Los Angeles Museum), the Metropolitan Museum, the Denver Art Museum and the Detroit Institute of Art. Biddle says: "I believe Robinson to be a great draftsman, a great *dessinateur* and consequently a great artist." Other critics, for the most part, seem to be divided between those who believe that as an artist Robinson has developed immeasurably in the past decade and those in whom anything signed "Boardman Robinson" inspires a nostalgia for his cartooning days. One critic, who thinks that it is as a draftsman that Robinson has most completely realized himself, finds his landscape drawing "almost disturbingly simple and complete," with "almost oriental comprehension and restraint." His nudes express "a maximum of force and organic movement with controlled energy." The variety and subtlety of his treatment of line is remarked on by nearly everyone. "In his recent work the more abstract element of design becomes a powerful governing influence on Robinson, especially in the water colors where line weaves a heavy black supporting pattern, like the leading in Gothic stained-glass windows—following and defining abstract form in rhythms that tumble with motion."

Married in 1903 to Sally Senter Whitney of San Francisco, herself a sculptor, Robinson has two sons, John Whitney and Bartlett Whitney. He is a member of the American Institute of Arts and Letters and, in 1941, chairman of the Jury for War Department Murals.

ROCHE, JOSEPHINE (ASPINWALL) (rōsh) Dec. 2, 1886- Director of the National Consumers' League; lecturer; industrialist

Address: b. Flatiron Bldg, Denver, Colo; h. 1615 Grant St, Denver, Colo.

JOSEPHINE ROCHE

For many years now Josephine Roche has received recognition for her accomplishments as a coal mine operator, a government official and a leader in the national movement toward health and social welfare. In 1935 Chi Omega gave her its national Achievement Award; in 1936 *American Women* named her as one of the 10 outstanding women in the United States; and in May 1941 the Federation of Women's Clubs chose her as one of those representing "the great strides made by women in the past 50 years."

Those social ideals for which Josephine Aspinwall Roche has fought long and hard—today she insists that the surest bulwark against encroachment by foreign ideologies lies in the wider application of democratic principles in American industry and life—are something she arrived at by herself. Her father, John J. Roche, was a leading coal operator and a conservative businessman. Her mother, Ella (Aspinwall) Roche, shared his ideas to a large extent. But Josephine, only 12 years after she was born in the town of Neligh, Nebraska, began to question social conditions as she found them. Her father had forbidden her to visit his mines because it was dangerous. Wide-eyed, she asked: "Then why is it safe enough for the miners?"

This questioning attitude persisted, and by the time Josephine Roche left Vassar College with a B. A. in 1908 she was deeply interested in all the problems of crime, child welfare and social advancement. She immediately devoted herself to their solution as a probation officer of the Denver, Colorado Juvenile Court (her family had moved there in 1906), but after a year's work she left Denver to study sociology at Columbia University. That was the year Frances Perkins was there, and the two women became fast friends, united by similar views on social and economic problems.

ROCHE, JOSEPHINE—*Continued*

Josephine Roche did settlement work for the New York Probation Society while studying, and after she received her Master's Degree in 1910 she continued the same sort of activity, branching out now and again to make social and industrial investigations for Columbia and the Russell Sage Foundation. Then in 1912 she returned to Denver to become the city's first policewoman, reported more successful in controlling crime and misdemeanors than the city's toughest male cops. The vice interests didn't like her, and she was ousted. Unperturbed, she devoted herself to the job of executive secretary of the Colorado Progressive Society.

This was interrupted in 1915 by an assignment in Europe and this country as special agent of England and the United States for the Commission for Relief in Belgium, after which she became director of the Girls Department in Denver's Juvenile Court under Judge Ben Lindsay. Before her passed most of the city's delinquent and underprivileged children, and each left an impression on a mind already sensitive to social injustice. Soon after America entered the War she left this court to serve, as an appointee of President Wilson, on the Committee on Public Information and as director of the Foreign Language Education Service.

Her work, which consisted of bringing together editors of foreign language newspapers and through them carrying information about America's aims and activities to the foreign population, was continued until 1923, when she became director of the editorial division of the United States Children's Bureau in Washington. By that time Miss Roche had been married and divorced. Edward Hale Bierstadt, a writer of continuity material for advertising broadcasts, became her husband on July 2, 1920 and her ex-husband two years later. Her work with the Children's Bureau ended in 1925 and was followed by two years as referee of Denver's Juvenile Court.

Then, in 1927, Miss Roche's father died and she inherited his holdings in the Rocky Mountain Fuel Company, the second largest coal mining company in Colorado. Shortly afterward there was a strike at one of the mines, and Miss Roche, who many years before had testified after the bloody Ludlow coal strike, told the State Industrial Commission that the strike was based on unbearable wrongs that were matters of common knowledge. This was a blow to her fellow stockholders, but a mild one compared to her proposal at a meeting that the United Mine Workers of America be asked to unionize the Rocky Mountain employees. Some of the stockholders threatened to sell their shares; immediately she took them up and within a short time had acquired a majority interest.

Her first move was to change the company's personnel: Edward P. Costigan, later Senator from Colorado and before then attorney for the United Mine Workers, was made counsel; John Lawson, former president of the Colorado State Federation of Labor, was made vice-president and director; she herself became a vice-president. Her second move was to announce to the miners that the company was ready to sign a union contract as soon as the miners were organized. By September 1928 the Rocky Mountain Fuel Company was operating under a contract which set a basic day wage of $7, the highest in Colorado, provided for arbitration, improved working conditions.

The other coal companies didn't like this, and they were upset again when Miss Roche, president of the company since 1929, decided that the existence of a "favored customer" class worked havoc with the coal industry and discontinued the practice at her mines. They didn't take it lying down. A price-cutting war was started. Things looked bad for Rocky Mountain, but the employees lent the company half their wages until the war was over, and it came through intact. Although the basic wage was reduced to $5.25 a day, still it was paying 25 cents more than its competitors. And it still was profitable. In 1933 the average daily production per miner in her company was 10.6 tons, while for all the mines in the state it was only 7.68 tons.

As the result of these experiences Miss Roche had much to do with the formation of the National Bituminous Coal Code during NRA days, and as a member of the Bituminous Coal Authority she worked untiringly. "The New Deal is not new to us," she told other coal operators. "We have been practicing it for six years." Her youthful features, softly waving gray hair and pleasant voice were conspicuous at the hearings. Once, during a tough session on the coal industry code, the deputy administrator, impressed by seeing her in an assembly of hard-bitten operators and miners, asked her to come to the platform. "This hearing needs some beauty," he wrote her in a note. But her reply, characteristically, was: "What this hearing needs is not beauty but guts."

It was a little later than this that Josephine Roche first entered politics for herself. She had stumped the West in 1912 for Theodore Roosevelt, but that experience was hardly preparation for the campaign for Colorado's Governorship which she undertook in 1934. The demand for her candidacy was first voiced by the editor of a newspaper in the southwestern part of the state; other editors took it up; and Josephine Roche bowed to the demand. In her ancient Buick she toured the state, her slogan "Roosevelt, Roche and Recovery," her platform an endorsement of the New Deal, the revision of the Colorado constitution along more liberal lines, a change in the state income tax. Liberals all over the country supported her, and Oswald Garrison Villard was voicing their sentiments when he declared: "Every woman in Colorado and every man there who believes in justice, in fair play, in a decent way of life for all who toil, in a square and new deal and in a decent economic world will vote . . . for Josephine Roche." Many of them did, but she lost the bitterly contested race. She had carried the cities but lost the country districts: the ranchers and mountaineers refused to believe that any woman could have as much ability as any man.

Washington believed it, though, and in November 1934 Roosevelt appointed Miss Roche Assistant Secretary of the Treasury in charge of the United States Health Service. As such she made a successful effort to coordinate the Federal Government's varied health work and inaugurated activities like the WPA's study of chronic disease and the nationwide rural sanitation program. She also served as the Treasury's representative on the President's Committee on Economic Security which drafted the recommendations on which the Social Security Act was based; and she served as chairman of the executive committee of the National Youth Administration when it was set up in 1935. Two years later Miss Roche became chairman of the Interdepartmental Committee to Coordinate Health and Welfare Activities which Roosevelt set up after the Social Security Act was passed—it was on the basis of studies by this committee and discussions by the National Health Conference, of which Miss Roche was chairman, that Senator Wagner (see sketch this issue) formulated his bill for a national health program.

In that same year, however, Miss Roche resigned her position as Assistant Secretary of the Treasury, to the regret of much of Washington. Everybody had liked her, respected her tact and efficiency—Senators, hard-boiled business men, workers. Postmaster General Farley's tribute was a heartfelt one. "She's the goods," he said. And Surgeon General Parran praised her "knowledge of public health and social problems," the "splendid and unique service" she had given.

She returned to her company and its active management, for her general manager had died and she was needed. Business was bad, due to competition from natural gas fields and oil; production was falling. Miss Roche asked the bondholders to take an interest cut, but they refused. Two years later, in July 1939, unable to effect a compromise that would keep the Rocky Mountain Fuel Company out of reorganization, she stepped out as its head. Once more she began devoting her time and energy to social problems, active as head of the Interdepartmental Committee, a position she had never resigned; in the National Health Conference; in the White House Conference on Children in a Democracy; in the National Consumers' League, of which she became president in 1939.

People who don't work directly with Miss Roche have come to know her and her ideas through the many lectures she has given all over the country. Dressed in what one commentator calls "what the well-dressed business woman should wear," her movements quick, nervous and feminine, the vitality of her personality quickly appealing, she has addressed audiences on "Our Stake in Industrial Democracy"; "Health Security—For Some or All?"; "Women and Industry"; "Youth on Today's Frontier"; and many other topics relevant to her experience with and feeling for social progress.

Who's Who in Commerce and Industry

ROCKEFELLER, JOHN D(AVISON), JR. Jan. 29, 1874- Industrialist; philanthropist

Address: h. 740 Park Ave, New York City

On April 27, 1941, in a letter to Arthur Hays Sulzberger, publisher of the New York *Times*, John D. Rockefeller, Jr., announced that the United States would have to deliver lend-lease materials safely to Britain in order to combat Hitlerism, and that although he had hated war all his life, "when all peaceful methods have failed and the issue was worth standing for at any price, even if it meant a fight, I have never hesitated to see it through on that basis." On June 9 it was announced that he had contributed $100,000 to the United Service Organizations for the program of Army and Navy recreation, and a month later he opened a house-to-house drive in New York to raise $3,500,000 for the U. S. O.

A man of whom it has been said that his "chief mission in life is giving away money," Mr. Rockefeller will no doubt be as busy fulfilling his mission during the Second World War as he was in the First, although already many of the responsibilities of administering the Rockefeller philanthropies have passed onto the shoulders of his sons, John D., III, Nelson A. (see sketch this issue), Laurance S., Winthrop and David. This is particularly true since Mr. Rockefeller resigned in 1939 as chairman of the Board of the General Education Board, a position which he had held since 1936, and in 1940 retired also as trustee and chairman of the Board of the Rockefeller Foundation. (He had been its president from 1913 to 1917 and its chairman from 1917 until his retirement.)

Born in Cleveland, Ohio on January 29, 1874, he was the only son of the richest man in the world, the late John Davison Rockefeller of Standard Oil fame, and of the late Laura C. (Spelman) Rockefeller. His was the kind of household where there were hymns in the evening, not even schoolwork permitted on Sundays, and Rockefeller, Jr., was "the model boy one reads about in story books," serious, pious and practical. His father believed in teaching his children the value of money and in consequence his heir practiced the violin at five cents an hour, worked on their Cleveland estate for fifteen cents an hour, and listened to his three sisters

Frank Ehrenford

JOHN D. ROCKEFELLER, JR.

mourn over the fact that their cousins were so much better off than the John D. Rockefellers.

When in 1893 it was time to choose a university, Rockefeller, Jr., chose Brown. There he took no business courses, didn't specialize, and saved half of his $100-a-month allowance. According to John K. Winkler, classmates remember him as "a pallid, earnest youth who did not smoke, drink, chew nor gamble, wore shiny suits, was faithful in his studies (particularly the cultivation of Orthodox Baptist Theology), and who sought to reform wilder students." He joined Alpha Delta Phi and in his third year made Phi Beta Kappa. But, Winkler continues, "as he looks back upon it, the chief event of his four years at Brown was his meeting with Abby [Greene] Aldrich [daughter of the late Senator Nelson W. Aldrich, wealthy merchant and public utilities magnate]. The Senator's daughter was a year younger and very like him in point of view. Though she had seen much of society in New York and Washington, she was serious-minded and cared little for frivolity. She and Junior often went buggy riding Sunday afternoons. They wrote chaste letters to each other after his graduation." It was not until four years after his graduation in 1897 that they were married. (Mrs. Rockefeller's brother, Winthrop Aldrich, is today president of the Rockefeller-controlled Chase National Bank.)

Immediately after his graduation John D. Rockefeller, Jr., entered his father's office at 26 Broadway, where he was given a perfectly free hand. ("Never in my business life did my father give me directions.") He studied books of accounts, read books on common law, sat in on conferences, business meetings, interviews—finally began signing various agreements and important papers for his father. His first important connection was as director of the Delaware, Lackawanna and Western Railroad. In the fall of 1899 he performed his first independent financial *coup,* clearing a considerable sum of money on the common stock of the United States Leather Company.

It was also in 1899 that young Rockefeller took over the direction of the men's Bible class of the Fifth Avenue Baptist Church, formerly led by Charles Evans Hughes (see sketch this issue). He was fond of little homilies—preached, for example, that the camel-needle parable no longer applied to the rich man: "Conditions now are different." He explained: "The growth of a large business is merely the survival of the fittest. It does the greatest good to the greatest number, although perhaps at the expense of the few. . . [It is] merely the working out of a law of God and nature." Rockefeller, Sr., came, listened, and pronounced: "I would rather see my son doing this work than see him a monarch on his throne." At that time both Rockefellers were old-fashioned Baptists, but around 1910 the younger Rockefeller began reading the "new" theology and "emerged a most ardent religious progressive and advocate of the Inter-Church Movement."

Before the First World War the philanthropic undertakings of the Rockefellers were not nearly so extensive as they later became. But already Rockefeller, Jr., had been associated with his father in the creation and development of the Rockefeller Institute for Medical Research in 1901 and of the General Education Board in 1902, and was a trustee of both; in 1910 he was made foreman of the Special Grand Jury in New York County which investigated the white slave traffic, and he developed and financed a now-defunct organization, the Bureau of Social Hygiene, which grew out of that investigation; in 1913 he had a role in the formation of the Rockefeller Foundation, serving as a trustee from its inception; both he and his father contributed liberally to the Anti-Saloon League.

In 1915 after the public had been stirred up by the shooting down of miners at the Rockefeller-controlled Colorado Fuel & Iron Company, and the Industrial Relations Commission headed by Senator Walsh began investigating the case, young Rockefeller emerged as the real head of his family, and a very capable one. Standard Oil borrowed the late Ivy Lee, "the most adroit accelerator of public opinion since P. T. Barnum," from the Pennsylvania Railroad. Rockefeller, Jr., made a most favorable impression on the stand. He pleaded ignorance of conditions, announced: "I am going to Colorado as soon as I can to learn for myself." Three days after the hearings, his father handed over to him a large enough block of shares in the company to give him control. Still under Ivy Lee's guidance, he did travel to Colorado, and the result was a plan for arbitration committees called "Republics of Labor" by which the men and the management would henceforward meet to settle disputes over the table, a plan which was later extended to many other Rockefeller properties. Rockefeller, Jr., has said: "In large part the difficulties that exist in our social state are due to nothing but misunderstanding."

Altogether, the entrance of Ivy Lee into the picture marked a turning point in Rockefeller history. In Winkler's words, Rockefeller, Jr., "became the Little Boy Blue of capitalism, the first Modern Money Magnate with Vision and Soul. Without dissipating by one jot the family's fortune or power, he induced the American people to stop attacking his father, and turned the attention of the critics to the great Rockefeller benefactions and to his efforts to bring about industrial rapprochement." His father also began to unload his fortune on him in great blocks; by 1921 he was to own most of the Rockefeller fortune and most of the real estate. Rockefeller philanthropies soon began to outweigh the origins of the Rockefeller fortune in the eyes of the public.

During the First World War, Rockefeller, Jr., served as chairman of the United War Work Campaign in New York City, which raised some $35,000,000, and the Rockefeller Foundation allotted $22,500,000 to war work between 1914 and 1918. In 1918, too, the Laura Spelman Rockefeller Memorial was founded. Between January 1917 and December 1940 an approximate $188,372,706 was actually spent by Rockefeller, Jr., for philanthropic purposes, and all of it carefully, with the utmost forethought. "A scientific Santa Claus," it is his contention that it is more difficult to give money away intelligently than to make it. In 1921 he founded the Institute of Social and Religious Research, contributed to it $3,000,000 until its demise in 1934. Although only about three per cent of his contributions have been devoted to charities, relief or labor, in 1922 he established an organization called Industrial Relations Counselors which at first made surveys of employer-employee relationships in numerous companies in which he had holdings, later for other concerns, and which eventually published many books on such subjects as unemployment insurance, profit sharing, etc.

In matters of religion he has worked consistently for interdenominationalism, among his many contributions to that cause being the building of the large Gothic Riverside Church for Dr. Harry Emerson Fosdick (see sketch 1940 Annual). Large sums of money have also been given to public parks, to the furtherance of better international relations (the International Education Board was founded in 1923), to scientific excavation and exploration, to experiments in private housing, to the restoration of historic monuments devastated in the First World War.

What is more, Mr. Rockefeller's business principles have impressed a suspicious world almost as much as his generosity. In 1928, when Senator Walsh and a Senate committee were investigating the Teapot Dome affair, he urged Colonel Stewart, chairman of the Indiana Company of Standard Oil in which he was a minority stockholder, to assist the committee in every way: "I want no profit derived from compromise with right." When Stewart's testimony was afterward almost completely reversed, Rockefeller moved to oust him, voting against him the proxies of the Rockefeller Foundation, the General Education Board and other Rockefeller endowments as well as those of the Harkness, Pratt and Whitney families, with which the Rockefellers are connected by marriage.

Only such writers as Ferdinand Lundberg, John T. Flynn and the anonymous author of *Mirrors of Wall Street* have remained suspicious of this present-day example of enlightened capitalism. They insist that control has actually been retained over funds "given away," while philanthropies make tax reductions possible; one says that extremely generous contributions to Republican war chests have been counted as philanthropies; the author of *Mirrors of Wall Street* alleges that Rockefeller's ousting of Colonel Stewart was due to the fact that he was competing with Standard Oil companies in which Rockefeller himself had much larger holdings, and that in any case Rockefeller was not too high-minded to vote his proxies in other companies in favor of Harry Sinclair, after that gentleman was released from prison.

As for Rockefeller's present relation to Standard Oil, it has been claimed that although the original Standard Oil combination was long ago dissolved by Supreme Court decree, after many mergers the Standard Oil Companies of New Jersey, of Indiana and of California (as well as Socony-Vacuum) have each become larger than the whole trust at the time of the dissolution order; and that although Rockefeller's individual shares in none of them now amount to 10 per cent of the companies' outstanding stock aggregates, there is little reason to believe that most of his former holdings have gone completely out of Rockefeller control. In the spring of 1941 Mr. Rockefeller felt called upon to deny responsibility for Standard Oil sales to Japan.

Not even the sternest of his critics, however, has ever denied that Mr. Rockefeller is one of the world's foremost exponents of what he calls "clean living," which he practices even more enthusiastically than he preaches. The wartime Ambassador from Austria-Hungary to the United States described him more than 20 years ago: "Short, slight, and very pale, he did not find any pleasure or satisfaction in all his millions. When I asked him whether he ever went to dinners or balls he replied that he had to get up early and that even then he was only able to supervise a small number of the many undertakings dependent upon him. He seldom had time for parties or even entertainments, since he had to go to sleep early. He did, however, often dance at dinnertime to give himself a little exercise."

His are still the old-fashioned virtues. He strongly disapproves of individual charity, being an exponent of "self-help." He told S. J. Woolf years ago that the book which had influenced him more than any other he had ever read was Bruce Barton's *The Man Nobody Knows*. He has never smoked or taken a drink, although in 1932 he decided that prohibition had been a failure. Having learned the value of money early, Mr. Rockefeller sees to it that there are no out-of-season

ROCKEFELLER, JOHN D., JR.—*Cont.*

luxuries on the Rockefeller table, and roves around the house to make sure that lights are turned out when not in use. He wore ready-made clothes for years, and gave his first tip in 1908, after which he began to apply the 10 per cent rule "rigidly." His sons and his one daughter, now Mrs. David M. Milton, were simply brought up, too. Until 1924 or 1925 the younger boys were sent to school in an old-fashioned horse-drawn carriage; they never visited the theatre or even the movies until their mid-teens; and, according to one story, they were kept so unaware of their fabulous wealth that years ago, when a Maine playmate of David's asked why his father didn't buy him a bigger boat, he snapped back: "Who do you think we are, Vanderbilts?"

Among Mr. Rockefeller's recreations are riding and skating; in town he enjoys both squash and the electric horse. His father taught him to swim and to skate, but never taught him to play a passable game of golf. He still plays the violin occasionally, and he loves old architecture, tapestry and painting, although his wife, one of the chief supporters of the Museum of Modern Art, has never succeeded in converting him to Cézanne or Picasso. He also has a "passion for building—roads, houses, anything." Particularly dear to his heart was the restoration of colonial Williamsburg in Virginia—a dramatic contrast to the super-modernity of New York City's Rockefeller Center, in which "you can do almost anything . . . except sleep, worship, send your children to school and avoid paying rent to Mr. Rockefeller."

ROCKEFELLER, NELSON (ALDRICH) July 8, 1908- Coordinator of Inter-American Affairs

Address: Council of National Defense, Commerce Department Bldg, Washington, D. C.

"Welding the Americas" is the Presidential assignment for tall, genial Nelson Aldrich Rockefeller, second son of John D. Rockefeller, Jr. As "Coordinator of Commercial and Cultural Relations between the American Republics," young Rockefeller has been attempting to create better understanding between the two continents since his appointment in August 1940.

In order to devote all his time to his new position, he immediately resigned as director of several South American enterprises and obtained leave of absence as president of Rockefeller Center, Incorporated. In January 1941, it became evident that he would have to remain in Washington much of the time, and Rockefeller also gave up the presidency of the Museum of Modern Art, a position he had held since May 1939.

His background, experience and interests all qualify the young man for his position. Nelson Rockefeller was born in Bar Harbor, Maine, in 1908, one of the six children of Abby Greene (Aldrich) and John Davison Rockefeller, Jr., (see sketch this issue). From his maternal grandfather, Senator Nelson W. Aldrich of Rhode Island, he took his name. From his mother he inherited a genuine interest in all forms of artistic expression, and he is today particularly concerned about getting other people also to appreciate art.

At Dartmouth, which he entered in 1927, Nelson Rockefeller played on the soccer team for two years and edited a magazine called *The Five Lively Arts.* As a student he also distinguished himself sufficiently to get a Phi Beta Kappa key and a special fellowship enabling him to spend his senior year abroad studying music, painting, sculpture, and architecture. Much of his "wanderjahr" he spent in India, "where he had a long chat with Mahatma Gandhi and studied photography."

Upon graduation in 1930 with a B. A. degree, Rockefeller married Mary Todhunter Clark, daughter of a Philadelphia attorney, at the Clark home in Cynwyd, Pennsylvania, and set off on a world cruise that same year. (They have five children, including twins.) Until they left for Washington, the Nelson Rockefellers lived in Pocantico Hills near Tarrytown, New York.

For a year Nelson worked at the Chase National Bank, where his uncle, Winthrop Aldrich, is the president. Following this lesson in finance he became a director of Rockefeller Center in 1931 and in 1937 was elected president. When John D. Rockefeller, Jr., originally leased the land from Columbia University, it had been with the idea of using it for a new Metropolitan Opera House. This plan was suddenly and inexplicably abandoned, however, and the Standard Oil magnate found himself with a twenty-four-year lease and three renewal options to twelve acres of expensive Manhattan real estate. In the face of ridicule and condemnation, he spent $130,000,000 and built the Center.

It was during his early days at Rockefeller Center that Nelson Rockefeller had his first taste of international diplomacy. As president of the project, it became his unpleasant duty to inform the fiery Mexican muralist, Diego Rivera, that his portrait of Lenin did not fit into the scheme of things at the Center and would have to be removed from the murals Rivera was painting for the buildings. That Rockefeller was able to do this neatly and tactfully is much to his credit, for he was obliged to ignore a great deal of "thunder from the Left."

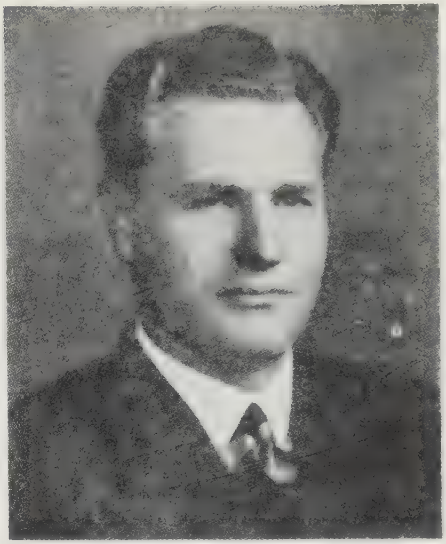
In addition to his New York interests Rockefeller has been director of several South American enterprises, among them the Creole Petroleum Corporation, a subsidiary of the Standard Oil Company of New Jersey, which has large holdings in Venezuela. Before taking a trip to South America in 1937 the young man mastered the Spanish language, a subject which he failed in college. It is his opinion that language is at the threshold of the barriers to good will between the Americas.

With his many business activities Nelson Rockefeller has since his college days combined a careful and diligent trusteeship at the Museum of Modern Art, of which his mother was a founder. As its treasurer in the early days of its organization, the "earnest, active young man" busied himself with the task of getting together the two million-odd dollars needed to pay for the construction and furnishing of a permanent building. In May 1939 he graduated to the Museum's presidency, the task he recently relinquished to John Hay Whitney, chairman of the Museum's Film Library.

Nelson Rockefeller's new position is much to his liking. The salary is not the attractive feature, since he joins the company of "dollar-a-year" men who receive only subsistence and other expense money for their labors. What appeals to Mr. Rockefeller is the chance to strengthen ties between this country and the Latin-American republics. It is a problem on which he has done some pioneering of his own.

To assist in the work ahead the "spark plug" of the committee appointed a board of experts, each with specific duties and responsibilities. With a relatively small initial government appropriation of 10 million dollars ($8,000,000 was appropriated for fiscal 1942) these men began an attempt to correlate governmental and private activities, working with the Office of Production Management. The job has been called "one of the biggest good will campaigns that ever captured the imagination of an advertising writer."

The immediate goal is to counteract the propaganda activities of the dictatorships in neighboring states below the Rio Grande. The program is both commercial and cultural, but "the dominating idea is to establish hemisphere solidarity in fact as well as theory." Necessity for speedy action became acutely apparent recently, when the committee's first survey of the Latin-American scene disclosed the fact that employees in some American firms there were actually "officials of anti-American powers" and were using United States money to spread subversive propaganda in newspapers and over the radio. Some of the difficulties in the committee's task also became apparent when hundreds of these men, fired by their alarmed employers, promptly got jobs with competitors. By August 1941 Rockefeller was able to announce many steps had been taken to counteract Axis influence, however.



NELSON ROCKEFELLER

One of the most important aspects of the commercial program is the work of the Inter-American Development Commission, of which Rockefeller was appointed chairman October 17, 1940. This group was formed by representatives of 21 republics after their conference at Panama in June 1940. They hope to unify various programs and to fill the gap caused by loss of European markets. To put this plan into action, the Coordinator calls for immediate stimulation of imports from Latin America and recommends emergency loans by the United States to create employment and utilize United States machinery and supplies. The long-range commercial program of Rockefeller's committee will work on the development of new industries in Latin America, financed jointly by North and South American capital to absorb the region's surplus materials. With increasing internal prosperity, they will be able to provide an expanding market for American industrial products such as automobiles and machinery. Rockefeller has again and again asked for more ships and supplies for Latin-America.

Coupled with this economic program is a long-range cultural program including promotion of inter-American travel, exchange scholarships, art loans, concerts and hemispheric sports contests. Permanent settlement of United States citizens in Latin America will be encouraged. "Most visible progress" to date has been in the radio field, where

ROCKEFELLER, NELSON—*Continued*

eight American stations sending short waves to Latin America are being coordinated and CBS is completing the installation of more powerful equipment. Less successful was the placing of some $600,000 worth of advertising in Latin-American newspapers to stimulate tourist trade in the United States, for fat contracts were carelessly given to Axis-sympathizing newspapers while others friendly to the United States were ignored.

Rockefeller's committee has encountered many difficulties, and especially at the beginning of its existence was regarded with "chilly reserve" by the State Department for its occasional amateurishness and with astonishment for Mr. Rockefeller's "ability to pop in and out of a dozen committee meetings a day, to write innumerable memorandums, to argue lengthily with Congressmen, to send all over Latin America young men who astonished the natives with their apparent naïvete." And the problems that face it are very real. Long-term research and experimentation must be done and done efficiently. Secondly it must meet powerful and deep-rooted Nazi opposition. To do this, it is obliged to work without authority to overrule any government or private agency. If the staff does its work properly and is adequately backed, however, "Latin Americans and Anglo-Saxon Americans will understand each other well enough so that half the battle for Western Hemisphere defense is won, long before an enemy sets sail across either of the shielding oceans."

ROGERS, GINGER July 16, 1911- Film actress

Address: b. c/o RKO Studios, Hollywood, Calif; h. Beverly Hills, Calif.

After completing *Kitty Foyle* Ginger Rogers' studio gave her a few days off for a trip to New York. Radiantly white-collared, with diamond brooch, gold earrings and mink coat, Miss Rogers was greeted by a group of New York stenographers and presented with a scroll for her characterization of the white-collar girl. "Ginger," *Time* wrote glowingly, "with her shoulder-length tresses, her trim figure, her full lips, her prancing feet and honest-to-goodness manner, is the flesh-and-blood symbol of the United States working girl."

But the great triumph was still to come. In Hollywood the vivacious, red-haired star was given the coveted annual award of the Academy of Motion Picture Arts and Sciences for her performance in *Kitty Foyle.* Lynn Fontanne opened the envelope that contained the name of the winner, and her husband Alfred Lunt made the presentation of the "Oscar." "This," Ginger murmured between tears of excitement, "is the happiest moment of my life."

On July 16, 1911, in Independence, Missouri, a daughter was born to Eddins and Lela Emogene (Owens) McMath, christened Virginia Katherine. An enlarged photograph of mother and daughter, titled *Modern Madonna,* hangs in the State Building at Jefferson City, Missouri. Her parents separated when Ginger was still a baby, and she was twice "kidnapped" by her father, an electrical engineer. After a short period of white-collar typing for a Kansas City mail-order house at $9 weekly, Mrs. McMath worked in many parts of the country, taking her daughter with her. In Fort Worth, Texas, where Mrs. McMath managed the symphony orchestra and was a critic on the *Record,* they settled down. There in 1920, after the death of her first husband, Lela McMath became the wife of John Logan Rogers, and Ginger was formally adopted by her foster father.

By her own admission, competitiveness has always played a part in the career of Ginger Rogers. One of her first ambitions, to be a schoolteacher, may be understood in this light. She also wanted to be a pianist, but at the age of 11 she played MacDowell's *To A Wild Rose* in a local auditorium and her ambition was satisfied. She began acting as a child, playing leads in high school and PTA-sponsored plays. She was also fond of athletics and voted the leading all-round athlete of her class. The nickname "Ginger" dates from childhood and is variously attributed to a baby cousin's attempt to say Virginia, a schoolboy's kidding and a teacher's fraternal spirit.

Her professional career began when the Foys, well known vaudeville dance team, needed a substitute for one performance. Eddie Foy taught Ginger enough steps to fill in and also helped her to learn the Charleston, which was then the rage. With this as a wedge she got her mother's reluctant consent to enter a local Charleston contest in 1925, when she was 14. They stayed up late at night sewing hundreds of rhinestones on

Ginger's dress of white crepe romaine. She danced her way to first place, winning the chance to compete in the state-wide run-off held in Dallas three weeks later. The prize was a four weeks' vaudeville contract, won by Ginger against 120 contestants.

In vaudeville the tour of "Ginger Rogers and Her Red-Heads" was extended to 21 weeks. Mrs. Rogers traveled with her; Ginger got $100 a week but had to play as many as five shows a day. The company broke up in Chicago, and then Ginger was hustled back to Fort Worth and school. But not for long. The following summer she was doing a song-and-dance turn in a Galveston cafe, leaving it for another road tour that began with a show booked for 32 weeks in St. Louis, where Ginger was billed as "The Original John Held Jr. Girl." Playing in vaudeville for the next three years, she came into New York in 1929 to play a theatre date with Paul Ash's Orchestra. That year she was signed for her first musical comedy appearance, in *Top Speed.*

Breaking into musical comedy was a forward step for Ginger. It led to her inauspicious film debut, for one thing. Her first film was *Young Man of Manhattan* (Paramount 1929). This was made on Long Island, as were her next two Paramount films, *Queen High* and *Manhattan Mary,* both starring Ed Wynn. Her progress was rapid, if not yet spectacular from the Hollywood viewpoint. In 1930, at the age of 19, Ginger was being paid $1,000 a week to play the lead in the Gershwin musical comedy *Girl Crazy.*

Her first three Hollywood films were for Pathé, but musicals for other studios got more attention. In *Sitting Pretty* (Paramount 1933) she did a fan dance and in *Gold Diggers of 1933* (Warner) she wore a costume of glittering coins. Both were box-office hits, as was *Forty-Second Street* (Warner 1933). Her unusual singing voice of slightly husky timbre, her dancing ability and the naturalness of her acting all made her a favorite with film goers from the start. In 1933 she also did pictures for Fox, Universal, Monogram and RKO (*Flying Down to Rio*). Even after this latter film, the film that paired Fred Astaire and Ginger Rogers for the first time, her talents were farmed out—to Fox, Warner's and First National in 1934, in which year she also did three pictures for RKO.

Her first marriage, to vaudevillian Edward Culpepper in New Orleans in 1928, was not a success and terminated in divorce in 1931. In 1933, when she began to go out with Lew Ayres, the fan magazines played it up as a high-school girl's dream of a fine romance. On November 14, 1934, for her wedding to Lew Ayres, Ginger wore a gown of green chantilly lace with a short jacket, softly ruffled collar and tiny jeweled buttons. The Ayres separated in 1936, were finally divorced March 14, 1941. Most of Ginger's fans echoed *Time's* comment: "In spite of her two marriages (moderate for Hollywood), she represents the American girl—alert, friendly, energetic, elusive."

GINGER ROGERS

In 1933 Ginger was already making it known around RKO that she wanted dramatic roles as well as musical comedy parts. That the studio was mildly aware of this was shown by a press release asking fans to suggest a new name for "Ginger," since that hoydenish nickname might be undignified for "serious" billing. Partly to blame for this quasi-comedy were critics Alison Smith and Richard Watts, Jr., both of whom had deplored the nickname. The response must have been lukewarm, for Ginger was allowed to remain just that, with her gold-red hair and contrasting eyes of periwinkle blue (sometimes described as green).

A famous dancing team, Fred and Adele Astaire broke up when the latter became Lady Cavendish. His new partner would inevitably be compared to his lovely and talented sister. Ginger Rogers was chosen by the studio. That she proved a worthy successor is now a matter of record. *Flying Down to Rio* was the first of 10 Astaire-Rogers vehicles that grossed $18,000,000 for RKO. Ginger's determination to be known in her own right as well as having a reputation based upon these pictures was nothing more than self-protection. From their first film she and Fred Astaire have been close friends. That the friendship was press agentry, then or later, has been completely disproved in many statements by both.

For dance routines Ginger's weight, normally around one hundred fifteen pounds, went down to one hundred two pounds (she is five feet five inches tall). Routines were first worked out by Astaire and Hermes Pan, RKO dance director, who taught them to Ginger. Then Astaire and Ginger rehearsed together, adding whatever new ideas they got along the way. Of the pictures they made together, *Gay Divorcee, Top Hat* and *Roberta* were among the most successful.

ROGERS, GINGER—*Continued*

In April 1936 Ginger "had to try" something else. She stormed into the front office with demands for better working conditions—four pictures a year, of which one would be an Astaire-Rogers coupling—and a pay increase, which she received. Important dramatic roles came with *Stage Door* (1937); *Having Wonderful Time* (1938); and *Kitty Foyle* (1940). In all of these Ginger Rogers showed that she could act naturally and convincingly.

In 1940 Director Gregory LaCava said rather belatedly: "I have presented a new Ginger Rogers, a glamor-girl dancer turned actress." Not all critics agreed that *The Primrose Path* was the vehicle that turned the trick. Even *Kitty Foyle* has been criticized, though most reviewers agreed with *Time* that Ginger Rogers' part in it was "the prime performance of her new departure into drama." A dissenting voice as to the fitness of the story was John Mosher of the *New Yorker.* He found it a Hollywood view of white-collar girls and thought that Miss Rogers alone made it better than average.

Although critics differed, too, as to the appeal and humor of her next picture, a fantasy, *Tom, Dick and Harry* (1941), there were none who didn't find Ginger Rogers charming in it. She "plays the girl," said Bosley Crowther of the New York *Times,* "as no other actress we know could, with a perfect combination of skepticism and daffiness."

Ginger likes outdoor life, swims, plays tennis and tries her hand at skeet-shooting. Indoor hobbies include stamp-collecting, woodblock carving and dictionaries (words fascinate her). She likes to sketch, occasionally takes up sewing or reading but tires easily of both. She is an Honorary Admiral in the Texas Navy, and proud of it. Her house is on a high hill overlooking the cinema city. Behind mammoth retaining walls is a lavish estate which *Life* called a "high-school girl's dream house." Most amusing installation is a completely equipped soda fountain where she mixes chocolate sodas for guests.

Ginger has one hobby that comes in handy when she goes on shopping tours—a favorite form of relaxation. She browses around shops in disguise, and as a young girl was pleased to have been able to fool such shrewd gentlemen of Hollywood industry as Oscar Levant and director Mark Sandrich. She tried it once at a Hollywood preview, but the younger generation of autograph hunters caught on.

Expressing herself with unaffected naturalness and to the point, Ginger once summed up the benefits accruing from stardom. "You meet celebrities," she said, ". . . all the people you formerly only read about in newspapers. That is a thrill to me." And money brought security, as well as responsibility. A star, she pointed out, "has the finest advice and assistance in the care of her physical health." She even gets better service, as people pay tribute to her position. "I enjoy it," Ginger admitted frankly. And, without egotism: "It's flattering."

As to the excitement of being famous: "We mustn't discount that, though it may wear off in time." And with her last word on the subject every psychologist would be prone to agree: "We might add to the advantages the self-confidence any success gives to the one who wins it."

ROSENBERG, ALFRED (rō'-zĕn-bârg) Jan. 12, 1893- German political leader; Reichsminister for the East

Address: W. 35, Margaretenstr. 17, Berlin, Germany

Paradoxically, the man who has had the greatest influence on the direction of Adolf Hitler's foreign policy is one of the most unpopular men in Germany today. Dr. Alfred Rosenberg is said to have only one friend in the Third Reich, Adolf Hitler. But the Führer is friend enough for any one man. Concurrent with the attempted German "blitz" of Soviet Russia, the good Doctor was reported waiting impatiently to enter as *gauleiter* a new Eastern annex of the Nazi empire, the land of his birth whose destruction he had plotted for so long.

ALFRED ROSENBERG

Called the Führer's "Father Confessor" and the "Grand Inquisitor" of the Third Reich, Rosenberg's main contribution to the Nazi Party has, of course, been his philosophy. The race-individuality of the Nordics, according to Rosenberg, accounts for all great cultures of the past, including the Greek and Roman; all decay and corruption are caused by the infusion through intermarriage of inferior blood strains. Man's full potentialities can be achieved, declares Rosenberg, only by recapturing the full Nordic racial purity of the ancient German tribes whose traditions and religion must once again inspire the German people. As director of the Nordic Faith movement Rosenberg has been the leading force behind the attack on Christianity by Hanns Kerrl, Hitler's administrator of church affairs; and his contribution to anti-Semitism on a world scale has been by no means inconsiderable. He was among the first to spread the notorious "Protocols of the Elders of Zion," long proved to be of Czarist origin, a document which he said was placed on his desk by a spiritual messenger.

Rosenberg has written on hundreds of subjects. His pamphlets and books include attacks on the Catholic Church, the Protestant Church, Free Masonry, Bolshevism, the Jews, Social Democracy and the Versailles Treaty. His *Der Mythos des Zwanzigsten Jahrhunderts* (1930)—"The Myth of the Twentieth Century"—is a fantastic 700-page compendium of the ideas of Houston Stewart Chamberlain, Gobineau, Spengler, Nietzche, Bernhardi, Treitschke and LaGarde. It probably does much to justify the judgment of Dorothy Thompson that its author is a man of great intellect who is also a complete fool. Other books are: *Blood and Honor*; *The Character of National Socialism*; *Immortality in the Talmud.*

In spite of Rosenberg's fanatical Aryanism, some people think he does not look markedly Nordic. He is tall, thin and blond, with sharp features; yet the cast of his face is

ROSENBERG, ALFRED—*Continued*
heavy and Slavonic, betraying racial characteristics that might bar him from his own Aryan Valhalla. Neither rumors of possible Semitic antecedents nor a harsh Baltic accent which makes him an unimpressive speaker on the platform have proved insuperable drawbacks to his career, however.

Because he is both a German and a White Russian, Rosenberg has been Hitler's expert on Baltic and Russian affairs since 1919. On January 12, 1893, the same day his archenemy, Hermann Goering (see sketch this issue), was born in Bavaria, Rosenberg was born in Tallinn, Estonia, then Reval, Russia. Although he has admitted that his mother, Minna (Marcus) Rosenberg, was a Latvian and his father, Johann Rosenberg, an Estonian, his forebears came from the West. His father was an official in a German trading firm. German traditions and German patriotism typical of the *Auslandsdeutscher*, or "outland Germans," dominated the household. Among their Slavic neighbors many of the Baltic Germans regarded themselves as superior mortals, and it is evident that Rosenberg acquired this attitude early. Such convictions were also bolstered by his reading, for he was only 15 years old when he acquired a copy of Chamberlain's racial interpretation of history, *Foundations of the Nineteenth Century*, a book which later formed the basis for his own *Der Mythos des Zwanzigsten Jahrhunderts*.

Having attended Reval schools, from 1911 to 1915 Rosenberg was in Riga and Moscow continuing his studies. In spite of war and revolution he was able to carry on his course with scant interruption, for he was not conscripted for military service, and in 1917 he received from Moscow University his certificate as an engineer and architect. For a while he served as drawing master at Riga University, then, in 1918, made a trip to Paris. Never very communicative about his personal life, Rosenberg hints that he was on a counterrevolutionary mission; some of his enemies insist the trip was made on behalf of the Reds, others that he worked for the French Intelligence and left France only "after he saw no chance for a career." Hermann Goering publicly wondered at a party congress in 1925 "what kind of job that fellow had in Paris in 1918"; Chancellor Brüning accused him of having been "a patriotic Russian as late as 1918."

When Rosenberg returned to Reval later that year, his native city was occupied by German troops. Rosenberg says that he immediately offered his services to General Von Golz, the military authority in charge. The latter refused the offer because of Rosenberg's Russian citizenship. Undeterred, Rosenberg secured a job as a high school teacher and in his spare time blossomed as an anti-Bolshevik and anti-Semitic propagandist. Later, when the Red Army marched into the city, Rosenberg took to his heels. In December 1918 Rosenberg and his young wife, harassed and poverty-stricken, appeared in Munich. His wife, who was gravely ill, died soon after of tuberculosis.

It was a gloomy period for Rosenberg, but at least he was among kindred souls. White Russian émigrés from all parts of Russia gravitated toward the German city, bearing with them a flaming hatred for Bolshevism. Anti-Semitism, a dividing tactic of the Czar, flourished everywhere. A letter from a Baltic noblewoman of his acquaintance gained Rosenberg an interview with Dietrich Eckart, the Nazi poet and journalist. According to Eckart, Rosenberg, despite his poverty, was "dandified" and "perfumed" and marked with the air of the supercilious intelligentsia. On entering Eckart's office, Rosenberg's first words were, "Can you use a fighter against the Jews?"; and Eckart replied coldly, "Certainly, if he can prove his capabilities."

Shortly after, Eckart is reported to have said, "I'd give ten Rosenbergs for one German with a fat wallet." Nevertheless, Eckart was unwillingly impressed by Rosenberg's voluminous writings, his intellectual scope and fanaticism, and in time lost his distaste for the Baltic émigré. Rosenberg was put to work writing pamphlets for the small German Workers Party, the forerunner of the Nazi movement. With Eckart he founded the Thule Society, devoted to the propagation of Aryan racial theories and the formation of a Nordic religion. Frequent tiffs with the Munich Soviet Government which then ruled the city, denunciation of the Versailles Treaty, the Jews and the Communist Party formed the Party's major activity. Rosenberg is also remembered for his 20-minute speech in the Marktplatz on April 8, 1919, when he ran just in time to avoid capture by the Red police.

Rosenberg first met Hitler in a small inn called The German Reich. The frenzied excorporal and the intense-eyed Balt were brought together by Eckart at a meeting that has been dubbed "the meeting between Faust and Mephistopheles." It is certain that this rendezvous was a fateful meeting of minds. Hitler himself was predisposed toward mysticism, and when this "nightmare dreamer" poured forth visions of a triumphant Germany where blond Nordics would practice the rites of their tribal forebears, Hitler listened wide-eyed through the long hours of the night.

In the stormy days which followed, Rosenberg became a solid and unwavering supporter of Hitler. In 1921, when Julius Streicher and his inseparable companion, Hermann Esser, founders of the orgiastic Anti-Semitic Movement, attempted to seize control of the Party and shift its headquarters to Berlin, Rosenberg and Eckart sent word to Hitler to return at once. It was then that Hitler consolidated his power by starting a new party called the National Socialist German Workers Party and proclaiming himself Führer. To Rosenberg he entrusted the writing of a platform, and the Baltic writer complied with a document which contained for the first time the famous definition: "He is a German citizen who is a fellow-countryman. He is a fellow-countryman who is of German blood. Therefore no Jew can be a German."

Rosenberg's luck at sidestepping personal danger was proverbial. He took part in the huge Koburg riot in 1922 when 800 Storm Troopers battled on the streets with radical trade unionists. During the famous beer hall *putsch* on November 8, 1923, he was said to have been at Hitler's side, brandishing a revolver. However, unlike Hitler, Hess (see sketch this issue) and Strasser, he was not arrested, nor was he forced to make tracks over the border like Goering. And during Hitler's imprisonment in Landsberg Fortress his influence increased tremendously. He visited Hitler every day, and their exchange of ideas may account for the Rosenbergian racial dogma in *Mein Kampf*, written at this time. He also served as a link between Hitler and the other members who, because the party had been suppressed, now carried on their activities under cover of the legal Popular Liberty Movement.

By this time his career as a journalist was also well begun. Some time before, the budding anti-Semitic party had acquired title to a provincial weekly called *Völkischer Beobachter*, and when Eckart died in 1923 Rosenberg became sole editor of the paper, which had grown into a daily. Suppressed during Hitler's incarceration, it reappeared in 1925 with a new and more impressive format, and Rosenberg resumed editorship. With unconcealed contempt for the masses he deliberately spurned popular features and circulation-building dramatics and coolly devoted column after column to long-winded dialectics and racialism.

But by this time, too, the facade of harmony maintained by Hitler was beginning to crumble catastrophically. Gregor Strasser's North German following demanded an anti-capitalist program; the Rhineland industrialists and the Prussian nobility were equally insistent on suppressing working-class agitation. The latter bolstered their argument with heavy financial support; the division deepened, and Hitler leaned more and more to the Right Wing. Rosenberg, who also espoused the cause of the classes as opposed to the masses, became a target for the Strasser Leftists, who, among other things, deplored the way he edited the Party newspaper. Finally popular demand forced his retirement to the capacity of advisory editor, and it was not until the historic blood purge of June 1934 that prospects once again looked really bright for Alfred Rosenberg. (He was later restored to the editorship of the Party newspaper, and was also made an editor of the Party organ, the *Monthly Review*.)

The year 1930 found Rosenberg elected to the German Reichstag, however, and from 1931 to 1933, while Hitler was taking over in Germany, he served as a member of the Diplomatic Service with missions to England and Rome. Then, in 1933, came a striking display of the Führer's regard: he was appointed to make a good-will tour of England. The Baltic philosopher was pleased. His trip was commonly believed to be a prelude to the ambassadorship, a post he especially coveted. In Rosenberg's thesis Germany and England were destined to share the world, since the greatness of both countries lay in the Nordic blood flowing in the veins of their people. But Rosenberg's dream of translating political theory into action was frustrated when he committed one of the most monumental blunders in the history of a Nazi statesmanship extraordinarily rich in examples. He placed a swastika wreath on the tomb of the Unknown Soldier. The response was instantaneous. An enraged war veteran removed the swastika and threw the wreath in the Thames, for which he was fined 40 shillings; a series of workers' demonstrations demanded Rosenberg's ouster; the walls of London were covered with "Down with Rosenberg!" In high dudgeon Rosenberg summoned 100 British reporters to his hotel room and for half an hour lambasted them in German, a language none of them could understand. Then Rosenberg left hurriedly for Germany.

By way of sop Hitler appointed his faithful aide that same year to the post of Director of the Foreign Policy of the National Socialist Party, a sort of extra-curricular office. Here Rosenberg had an opportunity to mold many phases of Nazi policy: among other things, he ran a special secret school for Nazi "diplomacy." But his real specialty was the proposed invasion of Russia. His office became the headquarters for White Russian, Slavic, Romanian, Hungarian and Russo-German adventures of all kinds. Here the famous "Rosenberg Plan" was hatched. Its essential doctrine was that Germany would lure Poland into an alliance against Russia by promising to share with her the spoils of the Ukraine after a joint drive to the East. Once the goal was achieved, however, Poland and her newly-won possessions were to be seized by Germany, since Poland was, in Rosenberg's eyes, a "mongrel nation" of the biologically impure, unworthy of survival.

That the subsequent Russo-German Non-Aggression Pact was a stunning blow to Rosenberg was reported by many sources. He was depicted variously as a broken-hearted man, as a victim of nervous breakdown who had to retire to a sanitarium to recuperate and as a still-active propagandist compelled to operate on the sly. On the other hand, it was even more reliably reported that he never curbed his anti-Bolshevist diatribes at the monthly dinners which he gave for diplomats, and that after the fall of France his agents began circulating in that country and in Spain urging the collaboration of Catholicism in the anti-Bolshevist "crusade" to come. In the meanwhile he had acquired the important title of Director of Philosophic Outlook, a position which actually consists of inculcating with the Nazi philosophy all organizations associated with the Party.

Then Germany proceeded to invade Russia, and the dandified, scented "philosopher with the sour stomach" waited fretfully on the side-

ROSENBERG, ALFRED—*Continued*

lines for his triumphal re-entry into the land of his birth. But an unexpected hitch developed: the "inferior" Russians were smashing through Nazi siege lines around Moscow and Leningrad and sending the Rosenbergian "supermen" of the German Army in pell-mell retreat across the Don basin in the Ukraine. Although in November 1941 he had been made Reichsminister for the East, by December it looked as if Rosenberg might be denied realization of his hopes of ruling a Nazified Russia for some time to come.

RUFFING, CHARLES H(ERBERT) May 5, 1905- Big-league baseball pitcher

Address: 8038 Marquette Ave, Chicago, Ill.

"The hotter the game the cooler the guy." This is a typical characterization of a 6-foot-2-inch, 220-pound red head who for over 10 seasons has been one of the main pillars of the New York Yankees, the plodding, iron-nerved Charles H. Ruffing, known variously as "Red" and "Chuck." Ruffing, a former coal miner, is, in 1941, 36 years old, a venerable baseball age. After a less-than-mediocre career in minor and major leagues and at an age when most players seek the sidelines, Ruffing was just beginning to get his second wind.

Charles Herbert Ruffing was born in the soft coal mining community of Granville, Illinois on May 5, 1905. His father was the

Mayor of Coaltown, a company community within the town of Nokomis, owned by the Reliance Coal Company where he was employed as foreman. Young Ruffing followed his father and brothers into the mines.

Almost inevitably baseball consumed his spare time; the miners were fanatical baseball fans and pitted their teams against those of other communities in a home-grown league. Among the natives who went on to big time baseball were Bill Barnes and Jim Bottomley of the St. Louis Cardinals, Andy Bender of the Pirates, the late George Vertol and Ruffing's own brother John, who was a Cardinals pitcher before he retired from baseball in 1924.

A potent fielder and batsman, Ruffing was offered his first baseball job in the old Kitty League when he was 16. His rejoicing was short-lived; six weeks later, in March 1921, while he was serving as a coupler hooking up empty freight cars, a co-worker misunderstood a signal. Brakes jammed agonizingly and as the long string of cars piled up, Ruffing's foot was caught beneath a wheel and was badly crushed. Blood poisoning set in and for weeks it was feared he would have to have his foot amputated. As it was, he had escaped annihilation by a hair's breadth.

Doctors finally succeeded in saving the foot, however, by amputating four toes. Although Ruffing was convinced his baseball days were over, he persisted in idling with a ball in his back yard. Doc Brennan, pool room owner and semi-pro baseball team manager, suggested that Ruffing concentrate on pitching and astounded him by offering him a job as semi-professional moundsman at $25 a week.

Brennan's advice bore fruit, and in the fall of 1922 Ruffing was hired by Danville in the Three-I League at $150 per month. No world-beater, Ruffing lost more games than he won, but scouts from the New York Giants, the Cleveland Indians and the Boston Red Sox evidently discerned certain potentialities. Although the Giants had offered $10,000, Danville manager Rudy Rulswith let Ruffing go to the Red Sox for a mere $4,000 because he thought the Boston manager would do a better job of breaking him in.

For six seasons Ruffing remained with Boston, a rather dubious distinction. During his first year, in 1924, the Red Sox painfully lifted themselves to the second-place-from-the-bottom niche of the American League; but in the succeeding years they languished in the bottom cubicle with monotonous regularity. If Ruffing wasn't responsible for this, at least he did little to improve matters, and once he was thrust back to the minors for a six weeks' period.

From 1924 to 1930 Ruffing lost 93 games to a total of 39 wins. In desperation the Boston manager placed him in the outfield, but here again Ruffing failed to shine. In 1928 he led the American League in defeats by losing 25 games; and he nearly equaled his record in the following year, when he dropped 22.

Part of the reason for Ruffing's retrogression was his admittedly atrocious support. Ruffing lost all incentive for self-improvement, allowed the fat to gather around his midriff. (His wife keeps him from getting that way now by judiciously managing his meals and seeing that he takes exercise in the open air during his off season.)

CHARLES H. RUFFING

In a trade for Cedric Durst, an outfielder, Ruffing was finally acquired by the New York Yankees in 1930. There was an instantaneous change. "Nobody knows what a great team the Yankees are until he has played on a lousy ball club," Ruffing has said. "That first year I won fifteen games and lost three. Just a difference in teams." Incidentally, Jimmie Foxx, the baseball immortal, maintains that the advantage was mutual: "Watch Dickey and Ruffing. When they go the Yanks will collapse."

In 1936, at the age of 31, Ruffing pitched his first 20-game season. In each of the three following years he bettered his previous pitching average, despite the fact that in 1939 a sore arm (he throws and bats righthanded) had kept him benched for an entire month.

Ruffing was a holdout in 1932, when he unaccountably demanded $30,000 for the season instead of accepting the offered $15,000, which was $3,000 more than he had ever received before. Six weeks after the season began the real reason for his stubbornness came to light: he was irked because the Yankee management had failed to offer him a $1,000 bonus for his pinch-hitting prowess of the previous season. (Ruffing is the best hitting pitcher in baseball, possibly one of the best in the history of the game.) Finally, when the matter was straightened out, Ruffing returned to his team and started pitching against the pennant-avid Washington Senators after only 11 days of practice. Later that season, on September 23, he almost singlehandedly smashed the Philadelphia Athletics when he

RUFFING, CHARLES H.—*Continued*
allowed them only three hits in a ten-inning game and then proceeded to score a run in the last half of the tenth, a play which won the game for the Yankees.

This was the year that columnists linked his name with that of a Chicago show girl. The rumor was not scotched until 1934, when Ruffing announced that he was going to marry his childhood sweetheart, Pauline Mulholland, who worked in a Nokomis candy store. At the end of the season he returned to his home town for the ceremony. The entire community turned out in a two-day fiesta, and the Chamber of Commerce placed a sign on the highway designating Nokomis as the home of Ruffing, an act with which it had similarly honored Jim Bottomley.

"I got a burst of ambition the day I got married," Ruffing has said. "I figured I had to put out to get into the big money and I was sore the season was over." That he succeeded is evidenced from his earnings: $18,500 in 1933, $19,500 in 1934 and $20,000 in 1935. And his earnings have been mounting ever since. Once regarded by common consent as the dumbest pitcher in the league, Ruffing today is believed to be the smartest.

According to Bill Dickey, all this can be explained by the fact that Ruffing suddenly began to use his head. But it is also true that simultaneously he picked up a devastating "curve" ball. Credited with having won five World Series games for the Yankees (he pitched for his team through games in 10 successive pennant races), his duel with Brooklyn's Curt Davis in the opener of the 1941 Series at the Yankee Stadium climaxed another brilliant season.

Brown-eyed, sandy-haired Ruffing is taciturn and publicity-shy, which leads many to think he has an unpleasant personality. Others insist, however, that Ruffing "just doesn't talk when there's nothing to say." He has earned the title of the "Coolidge of baseball"—maybe because he is inarticulate, maybe because he is almost always master of every trying situation. He does not bear down hard until the pinches, and he pitches like a cool mechanism. Bowling is his principal hobby, also basketball and golf, but he is fond of watching football games and movies, too. Off season he divides his time between Nokomis and a Chicago apartment house which he owns.

RUGG, HAROLD (ORDWAY) Jan. 17, 1886- Professor of education; author

Address: b. 425 W. 123rd St, New York City; h. 600 West End Ave, New York City

Perhaps no one ever looked less like a dangerous radical than Harold Ordway Rugg, "cherubic, gray-haired, balding." His social science textbooks have sold 2,000,000 copies and have been used in 4,000 schools, mainly in small towns; 10,000 teachers have used them, until quite recently, with little opposition from anyone. This seems surprising in view of the way they are often described today: "subversive"; "un-American"; "they twit the Founding Fathers"; "they have an alien ideology"; "they plan to substitute a new social order for our American Government"; "they debunk our great heroes of the past." At one public hearing a retired captain actually pointed his finger at mild-mannered Dr. Rugg and shouted: "There sits the ringmaster of the Fifth Columnists in America, financed by the Russian Government!"

Rugg himself, in his book, *That Men May Understand* (1941), says that these charges come mainly from people who have not read his books, or from self-interested minorities. John Dewey calls his books "conducive to unfettered thinking"; and teachers and pupils who have studied them have been quoted as saying: "they teach American life as it is actually lived"; "one who has studied under Rugg cannot fail to be impressed by his sincerity and vision of an ever greater and happier United States."

That Men May Understand is Harold Rugg's autobiography, the story of his "22-year battle to bring into the schools a full account of American life—its deficiencies and problems as well as its magnificent achievements." Here he answers his critics, and even presents a sample chapter from one of his volumes for junior high schools, "Citizenship and Civic Affairs." Lewis Gannett is a little peevish: "Mr. Rugg is passionately and profoundly American, but there is one characteristic which we like to think of as American that he seems to lack: a sense of humor." But books have more frequently been burned for the presence than for the absence of that. And in Mr. Gannett's eyes, Harold Rugg has made out an almost watertight case against the would-be book-burners.

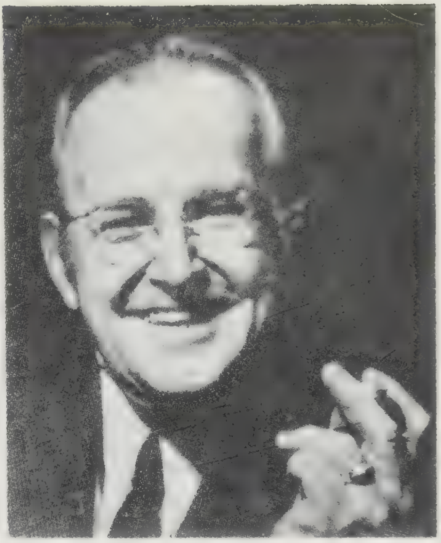
Born in Fitchburg, Massachusetts on January 17, 1886, the author can trace his ancestry back nine generations and still find it rooted in New England soil. A cousin was the chief justice of the Massachusetts Supreme Court. Harold Ordway Rugg was the son of Edward Francis and Merion Abbie (Davidson) Rugg. He was brought up in the unimaginative atmosphere of a New England mill city, and in 1902, at the age of 16, left high school to earn a meager "living" for two years as a weaver in a textile mill. After this firsthand, and none too pleasant, study of industrialism, he managed to find his way to Dartmouth. There he took his B. S. in 1908, a year later took a Civil Engineering degree at Dartmouth's Thayer School of Civil Engineering, and then left his books "to spike rails and tamp ties on one of the great Middle Western railroad systems." Mathematical formulae worked out in practice, he was excited to discover; but theory interested him even more. Soon he was half the Civil Engineering Department of James Millikin University in Decatur, Illinois. He spent two years there, and then four at the University of Illinois, combining the teaching of engineering with the graduate study of education, psychology and sociology, and in 1915 taking his Ph. D. in education and sociology. By this time (1912) he had also married Bertha Miller of Franklin, Indiana (they have a son, Donald Alan, and a daughter, Dorothy Elizabeth).

Gradually it had become educational rather than engineering theory which interested him. But it was the era of "salvation through fact finding," and Rugg was busy proclaiming it—by surveys, by books on statistics and mathematics, by intelligence testing. In the winter of 1919 to 1920, the year he became professor of education at Columbia University's Teachers College, he measured and charted the abilities of every child in the Lincoln School there and built up the school's first system of records.

If in those first years Harold Rugg had known almost nothing of the "whole realm of the creative and appreciative processes," by the summer of 1920 that had become his great preoccupation. He had acquired the idea that American life could be presented to pupils in an integrated way rather than by the study of isolated fragments of history, economics and geography, and was busy at work preparing his "Social-Science Pamphlets": 1,000 mimeographed pages dealing with "immigration, town and city life, industries and trade, geographical factors in American life, conservation of natural resources, and the like." These were for the use of Lincoln School pupils only: he didn't know then that he was beginning what he now calls a "life sentence with a blank sheet of paper."

In 1922, with two research assistants, Rugg wrote and published privately the first printed edition of his pamphlets—ten of them. The next year, with more money and 16 research assistants, the second edition was cooperatively published, this time to be distributed to 375 school systems in 38 states. (The pamphlets then numbered 12, each containing some 300 pages.) They were still used under experimental conditions, however, and teachers and administrators gave suggestions for their improvement at round-table meetings all over the country before, in 1927, the pamphlets were scrapped for the first commercial edition put out by Ginn and Company. By 1931 Rugg knew his was a "life sentence." Six 600-page volumes for junior high schools under the general title *Man and His Changing Society,* six *Workbooks of Directed Study* and six *Teacher's Guides* had already appeared, and he was now making plans for the extension of the series "upward and downward."

It was during the depths of the depression that Rugg wrote the "long pamphlet" most frequently quoted against him by his detractors, *The Great Technology* (1933). Critics, however, seldom mention that this was written not for children, but for adult study groups. In Rugg's words, it was meant to serve as a synthesis of the "tangled economic and psychological factors which had caused the recurring 'jams' in our modern society." At about the same time Rugg was interesting himself in the now-defunct Technocracy movement and admittedly agreed with many of its concepts, although rejecting its "authoritarian" tendency. In February 1934 his report at a meeting of the National Education Association created a sensation in the press when he advocated a central planning agency for social science education, but it was a sensation which surprised him, particularly at a time when even conservatives were of the opinion that "something had to be done." In the meanwhile, with Louise Krueger, he had begun designing and writing his eight books for grades three to six, and boards of trustees were not yet worrying about whether or not his textbooks were "subversive."



Mary Morris

HAROLD RUGG

As a matter of fact, Rugg's listing in Elizabeth Dilling's *Red Network* in 1934 (he had made a reference to the Russian youth movement in a 1933 *Herald Tribune* speech) probably set off the spark. A year or two later Rugg was branded "pro-Soviet" on the floor of Congress and someone denounced two of his books as Communistic, but the complaint was thrown out by educational officials. Early in 1938 he traveled 20,000 miles and found no "witch-hunt" going on anywhere. But in the next three years he was to spend almost as much time preparing statements as to his beliefs and defending himself at "heresy" trials and public debates as in bringing his junior high school series up to date and in preparing two new volumes.

In 1939 the campaign against Rugg began in all earnest, and by 1940 it had picked up momentum. Most energetically denunciatory were the Advertising Federation of America, the Hearst newspapers, Merwin K. Hart of the New York State Economic Council, O. K.

RUGG, HAROLD—*Continued*

Armstrong, George Sokolsky (see sketch this issue), Major A. G. Rudd, B. C. Forbes of *Forbes* Magazine and certain representatives of the American Legion. In February 1941 Ralph Robey (see sketch this issue) also quoted Rugg in his criticism of textbooks abstracted for the National Association of Manufacturers. By that time, as a result of the campaign, Rugg's books had been banned in Garden City and Manhasset, Long Island; in Hornell, Olean and Rome, New York; in Cedar Rapids, Iowa; in Mountain Lakes and Wayne Township, New Jersey. There had been fierce battles over them in the District of Columbia, Georgia and other states. Their public burning had been proposed in the Virginia State Legislature and in Binghamton, New York, where they were ordered off the library shelves; and in Bardner, Ohio the books were actually seized at a meeting of the school board and shoved into the furnace Some school administrators who themselves liked the books faced with pressure from their school boards, were deciding discretion was the better part of valor. And it seemed certain that all over the country other authors of other textbooks were frantically scanning them for dangerous thoughts.

On the other hand, in October 1940 Rugg's publishers announced that sales of his books had actually increased as another result of all this publicity. In more than one community the attempted censorship program has been discarded. Leading educators and former Rugg students and their parents (in Manhasset a good proportion wore Willkie buttons) as well as liberal organizations have loudly proclaimed the author's Americanism, some of them for the very reason for which a corresponding secretary of the Daughters of Colonial Wars wanted his books banned in Philadelphia: Rugg "tried to give the children an unbiased viewpoint." Among his better-known defenders are Bishop Francis J. McConnell, Charles Beard (see sketch this issue), Fannie Hurst and Franz Boas, the American Committee on Democracy and Intellectual Freedom and the American Civil Liberties Union.

According to Rugg himself, the cry of his critics is: "I haven't read the books, but," in essence, "they are bad!" Quotations out of context often create a totally erroneous impression, and in his new book he shows this by putting those statements most frequently quoted against him back into place. To the accusation that he advocates "the substitution of a cooperative commonwealth for the present system of American Government" and that he does not believe in "free enterprise" Rugg replies that he had advocated the development of a cooperative commonwealth, never its substitution, and that he believes in private enterprise and in social enterprise, too. To charges of Communism he states that he is not and never has been either a Communist or a Socialist, and that he has actually urged students and teachers not to devote too much time to the study of Marxian ideas. To those who believe children should not study the bad as well as the good features of American life he replies: "To keep issues out of the school is to keep life out of it!" Yet, he says, "I try to sell our democracy. I believe in it, and I make no bones about it."

"Spectacled, enthusiastic" Harold Rugg is now spending much time in his "book-lined, sculpture and watercolor-decorated study" preparing the first volume of a senior high school library to contain some half-dozen social science volumes. He is also continuing to write for *Scholastic,* in which he published more than a hundred articles between the years 1931 and 1941. And he can be heard almost any week in the month, on one public platform or another, defending the right of citizens of a democracy (including citizens in short pants) to be exposed to the viewpoint that the United States might tomorrow be an even more beautiful and prosperous country than it is today.

RUNDSTEDT, GERD VON *See* Rundstedt, K. R. G. von

RUNDSTEDT, KARL (RUDOLF GERD) VON (fôn rōōnt'shtĕt gĕrt) Dec. 12, 1875- German Army officer

Address: Berlin, Chal.-2; Hardenbergstrasse 32, Germany

Perhaps future historians will record as Adolf Hitler's single greatest military achievement no conquest on the battlefield, but a conquest over the German Army tradition. Many believe that discord between the Army and the Nazi Party still stalks the Third Reich and will prove its undoing. No one, however, will try to confirm this by citing as example Field Marshal General Karl von Rundstedt.

The oldest member of the former High Command and the only present member of the Army who was an army corps Chief of Staff in the First World War, Rundstedt is one of Hitler's ablest generals. Fellow officers explaining the ineptitude of Chief of High Command Wilhelm Keitel (see sketch 1940 Annual), Hitler's plodding party hack who was so quickly elevated to his present position, say: "Keitel is such a fool he doesn't even take the advice of General Rundstedt."

To many Von Rundstedt, a thin-lipped, weathered, sharp-featured man with a mustache that looks like a contraction of Hitler's, symbolizes unity in Nazi Germany's military and political affairs. None can say for sure how firm is the basis for this unity, because Rundstedt can scarcely be regarded as an enthusiastic National Socialist. His background and training must cause him to consider Hitler an upstart. Nevertheless, it was at Hitler's orders that he was made a marshal of the Reich following his achievements in Poland and France. This may be regarded as a measure of the Führer's personal favor rather than a matter of military attainment alone, for Hitler has been known to withhold such honors from those deemed lacking in Nazi fervor, despite signal success on the battlefield (General Halder is a case in point). Moreover, Rundstedt's name appeared over a piece of strident nationalism in Hitler's own newspaper, the *Völkischer Beobachter*, during the Polish campaign. The article commemorated the war dead and exhorted the nation to greater sacrifice.

This is evidence, if not of Rundstedt's recent Nazi persuasion, then of his utter devotion to the German Army, regardless of the controlling political power. He demonstrated this devotion even under Social Democracy, which was anathema to the German militarists.

Karl Rudolf Gerd von Rundstedt was born in Aschersleben on December 12, 1875, the son of a general. His family is one of the oldest and most aristocratic in Prussia, and Rundstedt was dedicated to the German Army virtually from the cradle. He was sent to an officers' training school, launching his military career, like the great strategist Clausewitz, at the age of 12.

After receiving his commission, Rundstedt was chosen to attend the exclusive Cadet Academy at Potsdam. By the outbreak of the First World War he had reached the rank of major. It was, however, at the Alsace sector that Rundstedt, as commander of Infantry Regiment 171, first revealed extraordinary initiative under fire. Summoned by the General Staff to aid in formulating grand strategy, he remained with that body for the duration of the War.

Remaining with the Reichswehr, Rundstedt, with the rank of lieutenant colonel, was made commander of the Mark of Brandenburg, Third Military District, which included Berlin. This was a time of confusion during which many of Rundstedt's fellow officers abandoned their Prussian aloofness from political parties. Veteran and national groups, in opposition to nascent socialism, mushroomed everywhere.

Some army leaders, notably Goering (see sketch this issue), embraced the Nazi Party from the beginning and were active in Bavaria where it first took root; others planned to use it for their own ends, pending an eventual point of departure. Rundstedt seems to have been passive while his co-officers at the famous Herren Club in Berlin plotted to establish a "soldier-state" based on the theories of Germany's great politico-militarists and ruled by the Prussian Army caste. An ardent monarchist, as were his fellow-Prussians, Rundstedt was personally antipathetic to Hitlerism and seems to have preferred even the Social Democrats to the bizarre followers of the Austrian ex-paper hanger. An anonymous army officer who kept a diary at the time wrote: "Rundstedt's opinion of the 'Leader' is exactly the same as my own; the two of them don't seem to be exactly the best of friends."

KARL VON RUNDSTEDT

However, as the army authority of Berlin under a Social Democratic state government, Rundstedt found himself in an embarrassing position just before Hitler's ascension to power. This was in 1932 when the over-wily monarchist, Franz von Papen (see sketch this issue), was still making an effort to jockey both Socialism and National Socialism to oblivion. President von Hindenburg had made Von Papen chancellor, replacing Brüning. In a sudden and desperate show of strength Von Papen appointed himself national commissioner for Prussia and ordered the removal of the Social Democratic Prussian state government of Otto Braun, thereby stealing the Nazi thunder and attempting to outmaneuver Hitler in the latter's efforts to attain power.

It was Rundstedt's task to carry out the decree of martial law against Social Democrats with whom he had established friendly relations. For Rundstedt this was an unpleasant chore, and there are reports that he tried to have his army commission withdrawn. It is said that he was so gracious and sympathetic in arresting his unresisting friends that they harbored no resentment and were glad the job had been done by him rather than anyone else! Incidentally, Rundstedt's tact has gain-

RUNDSTEDT, KARL VON—*Continued*

ed him the title of "the first gentleman of the German Army."

Despite his personal animus, Rundstedt was not affected by Hitler's June 1934 blood purge which liquidated the chief source of army opposition nor by the "cold" purge notable for the sudden retirements of high-ranking military officials "for reasons of poor health." It is true that when Rundstedt retired in 1938 there were rumors of political discord, but he had reached the legal age for retirement. Moreover, he was recalled to the colors at the outbreak of the Second World War. This effectively dispelled the myth that he had been actively engaged in opposing Hitler, however he may have disapproved inwardly.

To date Rundstedt's performance in the Second World War has been brilliant. He has proven himself a master of the blitzkrieg technique, a "high priest of strategy," in recognition of which he was granted a marshal's baton on July 19, 1940. His name leaped to fame in 1939 in the opening phases of the War, when he commanded the armies which struck across southern Poland. Under his leadership the famous tank spearheads and *schnelltruppen* of General Guderian and General von Kleist stormed the Jablonica Pass and rolled into Galicia. He was in command at the fall of Kraków, Lódz and Przemyśl and at the battles at the San and the bend of the Vistula Rivers, which culminated in the entry of German troops into bomb-gutted Warsaw.

Rundstedt's role in the defeat of France is also significant. Analysts of the French campaign say it was the work of no one man; it was a blitzkrieg version of the famous "Shlieffen Plan" of 1914, with a few important variations, which took the French High Command completely off guard. General Rundstedt's armies were the first to break through at Sedan on May 14, stabbing the vital organ of the French defensive system and advancing through the Champagne district.

Rundstedt was dispatched to the southern front when Hitler's armies surged over the Russian border. For weeks his armies, for the first time during the current War, were unable to gain blitzkrieg tempo and seemed fated to engage in an agonizing war of attrition. But as General Budenny's (see sketch this issue) Russian forces were gradually pushed back across Bessarabia and over the Dneiper, Rundstedt's armies once again gained momentum, making deep thrusts into the Ukraine, occupying Kiev and entering upon vast encircling movements in conjunction with the armies of Marshal Bock.

But, after the most successful offensive in Hitler's entire Russian campaign, after his armies were smashing toward the oil wealth of the Caucasus, and down the Crimea toward the Black Sea naval base of Sevastopol, something happened to Rundstedt's troops. The tank spearhead group under Von Kleist suddenly found itself threatened at Rostov by a magnificent counter-offensive by Russian troops under Timoshenko (see sketch this issue). For the first time the amazed Nazi armies found themselves unable to hold an important objective. In order to escape a Russian pincers movement, Von Kleist's armies retreated hurriedly from Rostov, with the Russians in hot pursuit. In order to strengthen their position, Rundstedt withdrew troops from the Crimea to stem the Red tide along the Sea of Azov. But this weakened Rundstedt's Crimean offensive to such an extent that the besieged Russians there began to counterattack, and the Nazis lost position after position, as the Russians demonstrated a skill and strength in counter-attack that had been completely unexpected.

Von Rundstedt could provide the key to the intricate entente between aristocratic Prussian militarism and brawling National Socialism, an entente that may yet disintegrate, but which, despite wishful thinking, shows little sign of doing so today.

In 1902 Rundstedt was married to Luise von Götz. They have one son, Hans-Gerd.

RYTI, RISTO (HEIKKI) (rü-tĭ rĭs′tô) Feb. 3, 1889- President of Finland

Address: Helsinki, Finland

Upon the resignation of the late Dr. Kallio as President of the Finnish Republic on November 29, 1940 it was Finland's wartime Prime Minister who was formally named Acting President. In actuality Prime Minister Risto Ryti had been filling the duties of the office since the beginning of Dr. Kallio's illness in the summer. It was therefore no great surprise to anyone when on December 4, 1940 Risto Ryti was elected President of Finland for Dr. Kallio's unexpired term, which ends in March 1943.

This banker-statesman who in 1940 was called "Finland's Alexander Hamilton" was the son of a farmer, Karl Evert Ryti, and of Ida Vivika (Juntilla) Ryti. He was born in 1889 in Huittinen, a small village in southwest Finland. In 1906 he began the study of law at Helsingfors University, was graduated in 1909, for four years practiced at the western seaport of Rauma, then in 1914 went to England for a year's further study at the University of London. He received his LL. B. from the University of Helsingfors the same year. Until 1919 he practiced law in the firm of Serlachius & Ryti in Helsinki, specializing in the laws governing waterways and water power. The Finns are not a talkative people, but the young lawyer must have been eloquent as well as resourceful. One story tells how during the Civil War of November 1917, when the Whites and the Reds were in arms against one another, he escaped from the house of a Finnish magnate, which had been attacked by the Reds. In a field he and his wife (he had married Gerda Paula Serlachius, daughter of the Councilor of Jurisprudence, the year before) were stopped by the bayonet of a Red soldier. Putting an expression of utter amazement on his face, Ryti pointed to something on the man's coat and asked him how in the world it happened that he had a button missing. The soldier looked; soon the two were discussing the mystery of the missing button in a friendly way; and they were still discussing it when the Finnish White Guards stole up on the soldier and disarmed him.

Finnish Information Center

RISTO RYTI

In 1919 Risto Ryti was elected to the Finnish Parliament as a deputy from the National Progressive Party. For a year after his election he was also manager of an export trade company, and from 1921 to 1924, when his term as deputy expired, he served as Minister of Finance as well. In 1923, before taking up new duties as Governor of the Bank of Finland, a state-owned institution chartered by Parliament but protected from governmental interference, he came to America to sign the Finnish debt agreement (not, by the way, a "war" debt but a debt incurred by the loan of food and grain during the civil war) and incidentally struck up a great friendship with Chief Justice Hughes (see sketch this issue).

When he returned to Finland he found necessary a policy of "easy money"—encouraging the Finns to borrow both at home and abroad. Between 1922 and 1930 the foreign debt rose by 25 per cent. It was under Risto Ryti's direction, however, that the capital of the Bank of Finland was built up until it was by far the most important bank in the country, universally respected; and it was Risto Ryti who was Finland's agent in "insisting upon paying, in paying, and in building up the country with debt-paying capacity" that has given the Finns a reputation for absolute honesty and dependability, so helpful to them in the Russo-Finnish War of 1939-40 that the pro-German sympathies of the Finnish Rightists were forgotten. From 1927 to 1929 Ryti again served as deputy as well as Governor of the Bank, and after 1928 as member of the Economic Advisory Council.

About this time the depression hit Finland, and hit it hard. Social and political turmoil culminated in the abortive Fascist *putsch* of 1931. Foreign trade (most of Finland's exports are to the British) sagged and collapsed. It was up to Ryti to put the country back on a sound economic basis. He chose a policy of deflation. Imports were limited; costs were reduced; wages were cut tremendously; only minimum relief was given to the unemployed; public works almost ceased. But "out of the Finnish worker's abstinence," dictated by Ryti, "the foreign creditor was paid," and the country was also ready to get back its competitive position on the world market. By the time the Russo-Finnish War broke out 87 per cent of Finland's indebtedness had been paid. Ryti fostered internal development, too. Since four out of five Finns live on the land, he encouraged the diversification of agriculture and the development of water sites, around which new industrial cities could spring up.

In the meanwhile Ryti had served as delegate to the League of Nations in 1932, and in 1933 had been vice-chairman of Finland's delegation to the World Economic Conference. As one of the financial experts preparing the agenda for the Conference, it was his suggestion that France and the United States leave the gold standard simultaneously so that all countries could enter the parley on equal terms. Later events showed the wisdom of his suggestion. It was not heeded at the time, however, and the Conference was a failure. Again, in 1937, it was Ryti who warned the world of possible deflation. It is little wonder that Montagu Norman, Governor of the Bank of England, with whom Ryti often cooperated, ranked him second only to Germany's Dr. Schacht as a central banker.

On December 1, 1939, the day after the Russo-Finnish War began, the shake-up in the Finnish Cabinet brought Risto Ryti to the front as Prime Minister. It was a logical choice, for in 1938 he had been runner-up for the Presidency. All through the War and the subsequent peace negotiations he continued in office, remaining at his desk in the Bank even during air raids when the Bank itself was closed. He was the lone dissenter in the Cabinet when peace was made in March 1940. On March 27, 1940 he formed a new Cabinet to carry on Finland's vast reconstruction program. The things he verbally emphasized were the importance of a foreign policy of "peace and neutrality"; "friendly confidential relations with all nations"; defense; finding compensation for Finnish losses in industry, agriculture, communications and territory; rebuilding industry and export trade; increasing the exploitation of Finland's natural wealth; stabilizing the financial situation and currency, with the help of foreign loans. This last task he was particularly fitted to do, for it was generally conceded that he owned "the best Finnish voice for catching United States and British ears."

But as President of Finland, Ryti's was no easy task. Finland faced a serious food shortage. There was reconstruction to be done. There were refugees to be housed, clothed and fed. And the problem of relationships with her more powerful neighbors continued. Russia, interesting herself in Finland's recent election, had suggested that a "progressive" government, one friendly to the Soviet Union, would be welcome. Presumably Risto Ryti's election was a disappointment. Next German soldiers were given passage through Finland, the native Nazi movement was reported growing there, and, in the words of Finland's Minister of Supply, there were "malicious reports abroad" to the effect that Finland exported food to Germany. This friendliness toward the Nazis, before long, caused Finland's relations with Great Britain and the United States to become a little less warm than at the time of the Russo-Finnish conflict—and at a time when Finland was still seeking their help.

They became even less warm, and Ryti's problems were increased when, in June 1941, Finland went to war with Russia again, this time on the side of the Nazis. "The Kremlin," Ryti informed his people, "had decided on even more brutal measures against Finland than before." But, he added, "now we are not alone; great Germany, under her leader of genius, Reichsführer Hitler, had decided to wage war against the Soviet and other nations have joined Germany." When this "defensive" war "for the liberty of the fatherland" continued after Finland had recovered the territory lost the year before and Finnish strategy threatened allied shipments to Russia through the port of Murmansk, Stalin asked that England declare war on Finland and United States Secretary of State Hull sent a strongly-worded note to the Finnish Government. President Ryti, however, while refusing to consider a separate peace or to renounce claims to Russian territory that had never belonged to Finland, continued to insist that this was a war in the interest of Finnish "security" alone, without "political aims," that Finland was pursuing "an independent policy"; and this was his contention even after the Finnish Government signed the Anti-Comintern Pact.

Suave, "short, unobtrusive, looking older than his years but always neatly attired in conventional black coat and striped trousers," Risto Ryti is remarkable in many ways. His memory has been called "fantastic"—he never needs a note even when giving a budget message. He has a wide knowledge not only of ancient history but also of military history: when Finland began to prepare years ago it was he who took the chairmanship of a civilian committee on military affairs. One of his most unusual hobbies is reading horoscopes. And he is one of the few foreigners who has ever been knighted by the British Government, with which Finland is officially at war—as Knight Commander of the Royal Victorian Order!

SAINT-GAUDENS, HOMER (SCHIFF) (sânt gô'dĕnz) Sept. 28, 1880- Director of Fine Arts, Carnegie Institute, Pittsburgh, Pa.
Address: b. Carnegie Institute, Pittsburgh, Pa; h. 701 St. James St, Pittsburgh, Pa; Windsor, Vt.

The attack made by Park Commissioner Robert Moses in March 1941 against the museums of New York City reminded some people once more that there are several enterprising and progressive museums in the hinterlands of the country. One such is the Carnegie Institute of Pittsburgh, over the destinies of whose department of Fine Arts Homer Saint-Gaudens, son of a famous father, has presided since 1921. One of the foremost authorities on camouflage methods in the United States, in 1941 Saint-Gaudens was on active military duty in Washington for one year as a lieutenant colonel in the Engineers Reserve Corps. His work in spreading knowledge and understanding of contemporary painting in the United States has won him honors from the governments of France, Hungary, Belgium and Italy.

HOMER SAINT-GAUDENS

Directly and collaterally on both sides of his house, Homer Saint-Gaudens comes of artistic stock. This inheritance he has enlarged and enriched by his own activities. He is the son of Augustus Saint-Gaudens, the great sculptor, and of Augusta Frederica Homer, a member of an old Boston family, who met her husband in Rome where she was a student of painting. Homer Saint-Gaudens' paternal uncle was Louis Saint-Gaudens, also a sculptor, who ranks not far below his greater brother. On the maternal side Homer Saint-Gaudens is a cousin of Sidney Homer, the composer (whose wife is Louise Homer, the opera singer), and is also related to the late Winslow Homer, the marine painter.

Homer Schiff Saint-Gaudens was born in Roxbury, Massachusetts on September 28, 1880, in the home of his maternal grandfather, Thomas Homer, a Boston merchant. He was educated at Lawrenceville School in New Jersey; at Cardwell's in Paris; at Hallam's in Dresden, Germany; and at Brown and Nichols, the college preparatory school in Cambridge, Massachusetts. All his life Saint-Gaudens has lived in an atmosphere of things artistic and among artists, and in boyhood and youth he passed most of his leisure time in his father's studio. Here and in his home he met and mingled with such outstanding artists as John La Farge, John Singer Sargent, Edwin Abbey, John W. Alexander, Frank Millet, Stanford White, Charles Follen McKim and Daniel Burnham. The artist's problems, purposes and point of view became as familiar to him as the technique of marbles or baseball to the ordinary American boy. More impressionable years were passed in Paris, where his father established himself to finish several important commissions.

On his parents' return to America from Europe he entered Harvard, where in extracurricular activities he most distinguished himself in fencing, being captain and easily the best man on the University's team. One of his later associates in the theatre suggests that his skill was a gift from some Gascon ancestor. Saint-Gaudens took his Bachelor's degree in 1903. Writing to the secretary of his class 25 years later, Saint-Gaudens says (with a whimsicality perhaps derived from his relationship with J. M. Barrie, for whom he directed the first American production of *A Kiss for Cinderella*):

"My business or profession is dealing with temperament. Originally, it was solely my own. At present it is almost everybody else's. I started dealing with temperament on the New York *Evening Sun*, but when they made me real-estate editor I decided that temperament in The Bronx was too abstract and illusive and not sufficiently intense for me, so I got out. Next I went to *The Critic* Magazine where I dabbled my fingers in art temperament. Then my sardonic destiny led me to the *Metropolitan Magazine*, which was owned, at that time, by the Whitneys. Consequently, I learned about the temperament of horse racing. [Saint-Gaudens is keenly interested in horses and fox hunting. He owns two horses and is president of the Harts Run Hunt in Pittsburgh.] The editor, R. H. Russell, owned one-half of a race horse. We in the office always wondered which half. It would have guided us in nurturing his temperament. After that I went into the theatre, which is supposed to be to temperament what Harvard is to learning. Mostly I was under the aegis of Maude Adams, who, though she had much occasion to indulge in temperament herself, preferred to distract herself by experimenting with my temperament as an antidote to the troubled waters of other Thespian temperamentalities."

Through his father, who himself had been an ardent devotee of the stage from boyhood, Saint-Gaudens came to know and to love the theatre in Paris. Homer Saint-Gaudens was among the few critics who felt the charm of Barrie's *Peter Pan* when it was first done in New York, and his sympathetic and understanding comments on the fantasy brought him an offer to join the forces of Charles Frohman. He started at the bottom in the Frohman office, but in a few months was made stage director for Maude Adams. For her he directed the revivals of *Peter Pan, The Little Minister* and *What Every Woman Knows*, besides directing *A Kiss for Cinderella*. This work was varied by an association with Harley Granville-Barker in the presentation of *The Trojan Women* and other classical plays at Harvard and Princeton. Later Saint-Gaudens directed the productions of Brieux' *The Red Robe*, in which Lionel Barrymore was the star, and of *Beyond the Horizon*, the first full-length play by Eugene O'Neill and the first of that writer's works to receive a professional production on Broadway. Known as an excellent director in the theatre, Saint-Gaudens handled the pictorial side of the drama resourcefully and introduced several innovations into stage lighting.

Upon the entry of the United States into the First World War, Saint-Gaudens joined the first officers' camp at Plattsburg. He was commissioned first lieutenant and assigned to the work of organizing the first camouflage force in the United States. With this contingent he sailed to France in January 1918, and was soon promoted to captain. In command of Company A, 40th Engineers, he had charge of all the camouflage work of the 2nd Army, which held the line from Pont à Mousson to about 15 miles south of Verdun. "I found myself guiding the emotional destinies of 400 temperamentalities in the form of artists, plumbers, carpenters, and other eccentrics, who ultimately won the War by spreading scenery over the gory fields of the A. E. F." He was awarded the Order of the Purple Heart in the United States after he had been wounded in action.

Saint-Gaudens is now a lieutenant colonel in the Engineers Reserve Corps. Since 1922 he has spent some time each year, with two exceptions, in an army camp, in the interest of the camouflage service of the United States Army. In July 1921 he was made assistant director of Fine Arts at Carnegie Institute, and in 1922 director. He organized 16 of the series of annual international exhibitions of oil paintings, spending some months each year visiting the studios of American and European artists in his search for canvases. As Saint-Gaudens himself puts it: "Finally I came to Pittsburgh, where I am an art director, running an exhibition of modern painting that is supposed to be the news of all the pictorial temperament that's fit to print, carrying some sort of temperamental liquid on both shoulders and endeavoring at the same time to dodge the temperamental bricks hurled at me by advanced and academic temperamental paint jugglers." During his directorship, the Carnegie International, the only annual international exhibition of paintings in the world, grew in importance and was placed first among the exhibitions of paintings in the United States. Owing to world conditions the series was interrupted in 1940, but the hope was expressed of renewing it again at the earliest opportunity.

In his marriage to Carlota Dolley of Philadelphia, a painter of miniatures, Saint-Gaudens made another artistic alliance. They had two children, Augustus and Carlota. The first Mrs. Saint-Gaudens died in 1927. In 1929 he married Mary Louise McBride of Pittsburgh. Their summer home is at Cornish, New Hampshire (post office, Windsor, Vermont), near the Saint-Gaudens Memorial of which Saint-Gaudens is the director. This unique memorial consists of two studios of Augustus Saint-Gaudens and his home, Aspet, practically as he left them, and is visited every year by thousands of people from all parts of the country. The studios contain casts of almost everything the sculptor did. Homer Saint-Gaudens is the editor of *The Reminiscences of Augustus Saint-Gaudens,* published in 1913, and the author of *The American Artist and His Times* (1941). The latter, a history "of American art from Colonial days to the present," has been called a "wise, mellow and altogether charming book."

A spectacled, keen-eyed, dapper man, with curling once-blond hair, Saint-Gaudens has other recreations besides hunting. In 1928 he wrote: "My recreation consists chiefly in alibi-ing my latest game of golf, and in endeavoring to drown myself sailing much-too-small a ketch through the Bahama Islands and catching fish that are never as good as those any one can see in the New York Aquarium." Recently he has given up both golf and vacationing in the Bahamas, however. He is a member of the Century, Harvard and Coffee House Clubs in New York City, and of the Pittsburgh Golf, Allegheny Country and Fox Chapel Clubs. To conclude his record of bouts with temperament, Saint-Gaudens records that he met "my hero, my temperamentless man," in the late Calvin Coolidge. Cornish is just across the Connecticut River from Windsor, Vermont, and Saint-Gaudens knows his Yankee types well.

SAKEL, MANFRED (săk′ĕl) June 6, 1906- Psychiatrist

Address: Murray Hill Hotel, 112 Park Ave, New York City

Dr. Manfred Sakel is the discoverer of "the greatest advance yet made in treating schizophrenia." In 1928, in Vienna, he was working

Blackstone

DR. MANFRED SAKEL

with morphine addicts just taken off their drug. He noted symptoms of high excitement, frenzy, mania and even brief insanity and from them developed a theory: that some physical or bodily change is suffered by the addict, as well as a mental change; that the cells of the brain attract to themselves more than usual quantities of exciting substances from the body's glands. Dr. Sakel decided to use insulin to pacify the drug addicts' excited nerve cells.

"The patients complained less and recovered more rapidly," he says. "The minds of these patients seemed to grow clearer." Then one day "I inadvertently gave a morphine patient an overdose of insulin." The man got insulin shock with convulsions and a coma, and to bring him out of the coma Dr. Sakel used glucose. "I was amazed at the result," he writes. "The patient's mind, until then completely befogged, was absolutely clear."

"This gave me an idea—to produce this effect in schizophrenics." Schizophrenics are people who suffer from a split personality, who live in a world of complete unreality, thinking themselves Napoleon or Cleopatra or haunted by visions of dire persecution. After several treatments these patients became more lucid and began to take an interest in their surroundings, and, of the first group Dr. Sakel treated, 17 per cent became well enough to return to their homes or jobs.

After working for five years Dr. Sakel announced his insulin shock cure before the Vienna Medical Society on November 3, 1933. The psychiatric world at first found the reports incredible, but, later, specialists came from all over the world to see the technique and its results for themselves. The method spread, and a high percentage of recoveries confirmed Dr. Sakel's own results. Of course the treatment is recognized to be dangerous, but Dr. Sakel feels that "when we consider that patients . . . are generally looked on as lost, or very seriously ill in any case, I think there is justification for attempting a therapy, however dangerous, which gives some promise of success."

Probably Dr. Sakel's most famous patient is Vaslav Nijinsky, the famous ballet dancer who was stricken with schizophrenia. Through Dr. Sakel's shock treatments Nijinsky was able for the first time to leave the sanitarium where he had been confined since 1919. When Dr. Sakel, who with professional reticence refuses to discuss the chances of Nijinsky's recovery, came to America, Mme. Nijinsky tried to get an American visa for herself and Nijinsky in order to follow him and continue the cure. It was refused.

Dr. Sakel, who is still in his early 30's, was born in Nadworna, Austria, the son of Major S. and Golde S. Sakel. After attending the Gymnasium he spent four years at Bruenn College in Moravia (Austria) and left it in 1920 to enroll in the University of Vienna Medical School, where he stayed five years. In 1927 he was made head of the Hospital Lichterfelde, Berlin; later he became head of the Park Hospital in Vienna, and in 1933 research associate of the psychiatric clinic of the University of Vienna. In 1937 Dr. Sakel came to America, where he has been active as consultant and lecturer. He was the first to discover the possibilities of metrazol as well as insulin in the treatment of schizophrenia, but from the beginning warned doctors against its general use in preference to insulin shock.

When he can get away from patients and research, bachelor Dr. Sakel goes hiking and mountain climbing. He likes fishing, too.

SALAZAR, ANTONIO DE OLIVEIRA (sä-lä-zär') 1889- Premier of Portugal
Address: Lisbon, Portugal

Throughout the War Portugal has been the front door of Europe. From Lisbon, planes may no longer leave for New York and London, but it is most important for the United States and Britain that it remain neutral. President Roosevelt has announced that the United States cannot afford to see the Portuguese-held Azores in hostile hands. For Britain the defense of the Straits of Gibraltar depends on the use of her Atlantic neighbor's bases. Since the War began the eyes of the world have therefore been turned upon Portugal as well as upon Franco's Spain, wondering what Nazi designs might be, and in December 1941 Australian and Netherland troops found it necessary to occupy the island of Timor because of the presence of Japanese submarines off its shores.

Portugal has been connected with Great Britain by an alliance dating from 1386, and the

Portuguese propaganda department has called the British alliance "one of the cornerstones of Portuguese foreign policy," but this friendship is mainly, today especially, a matter of geographical and economic strategy. Britain's Atlantic neighbor is, like Britain, a small country with large colonial possessions: with an area of around 35,000 square miles and a population of some 7,000,000, she is still the world's fourth biggest colonial power. Her overseas possessions of 809,916 square miles she could not possibly protect by herself. And for a long time most of Portugal's exports—particularly port wine—went to Britain. Nevertheless, Portuguese trade with Germany now tops that with Britain, Nazi soldiers flood nearby Spain, visitors to Lisbon bring back tales of Nazi spies and Nazi propaganda, and it doesn't seem likely that Portugal's Army of 30,000 men and 126,000 reserves or its Navy of six destroyers and three submarines could strike terror into the hearts of any invader. Probably if Germany should move on land, however, the sea powers would quickly grab Portugal's colonies. This fact may keep Europe's front door open and Lisbon unblacked-out—or it may not.

Guiding Portugal's domestic and foreign policy is Dr. Antonio de Oliveira Salazar, an ascetic "little gray man," a Jesuit with a "deep-seated hatred of liberalism" but a genius for finance, for order and for efficiency. There is little question that Portugal is a dictatorship, but it has been called the mildest and least oppressive dictatorship in Europe.

Salazar was born in 1889, only a few weeks after Hitler, in the little town of Santa Comba. His parents were not wealthy, and he was educated by a man who gave private lessons in a cottage for about $1 a month. From earliest childhood he was deeply religious—he came near to being an ordained priest, they say—but he finally chose a lay profession and in 1916 became professor of economic sciences at Coimbra University, where he had been educated and taken his LL. D. Certainly he had no political ambitions then: he was once elected a deputy to the Chamber and did not even take his seat.

In those days Portugal was a republic, though scarcely a model one. A series of armed fights for power followed the revolution of 1910: from 1910 to 1926 there were 16 minor revolutions and 43 cabinets. A fierce anti-clericalism prevailed. No budget had been balanced since 1854. The League of Nations coined the word "Portugesé" to express the absolute low in national welfare.

Finally in 1926 the Army as a whole rose; on May 26 General Gomes da Costa stirred up the garrison at Braga and marched on Lisbon; General Carmona (now President of Portugal) joined him; and together they seized the Government. They found the treasury empty, and called on Dr. Salazar for aid. He spent two days examining the State finances, and his recommendations made the generals wince. Then, since they wouldn't give him full powers as Minister of Finance, he marched back to Coimbra to resume his professional duties.

Casa de Portugal

ANTONIO DE OLIVEIRA SALAZAR

Things went from bad to no better. By April 1928 the generals had reconsidered and were begging the professor to take full charge of the country's financial policy. He did. Salazar balanced his very first State budget—although at the price of great exactions from the country—and since then every budget has shown a surplus. The total public debt was reduced. Portuguese credit was rehabilitated. Portuguese exchange was stabilized at a par with the pound and state revenue enormously increased, partially by property taxes so huge that some peasants had to move off their land (there is no income tax in Portugal). State expenditure was considerably increased, too. A program of improving and building roads, harbors and hospitals began. Old monuments and buildings were restored. Unemployment was reduced. On the whole there is little doubt that Portugal's Minister of Finance did much to change the connotation of "Portugesé," although his adversaries claim that Salazar resembles the kings of the sixteenth century who made the state rich and the people poor.

Although in practice Salazar, rather than General Carmona, governed the country from the very first, he gradually absorbed nearly all the departments of state, too. In 1932 he became Prime Minister and the following year presented Portugal with an entirely new Constitution, one which provided that every trade should be organized on "corporative" lines and work under strictest Government supervision. Two Chambers were to approve all laws, but both were to be exclusively composed of partisans of the Government. Nominally the President was to have executive power, and he could choose his own Premier (provided it was Salazar); the President was also to be elected by plebiscite, but with only one candidate in the field. *The Catholic World* in 1938 called Portugal a

SALAZAR, ANTONIO DE OLIVEIRA— *Continued*

"truly representative democracy," an example of the "model republic" suggested by Pope Pius XI in 1931 as the proper civil foundation for social reconstruction. Dollfuss in Austria, Vargas in Brazil and Franco in Spain were credited with having attempted similar experiments.

It was only a year or two after having become dictator that Salazar formed a political organization to back him—the "National Union"—became its president and dissolved all other parties, including the Catholic Center which he had organized. He retired nearly half of the Army officers and practically disarmed most of the Army, many of whose generals had opposed him. He did, however, furnish a few selected regiments (many of whose members had formerly been expelled from the Army for conspiring against the Republic) with green shirts and heavy arms. An espionage system was originated to keep watch over the officer personnel. Chiefs of the German Secret Service helped him form both his Portuguese Legion and his intelligence service. One commentator called this the transformation of a military dictatorship into a rule of civilians, while another wrote: "It appears indisputable that Dr. Salazar has deliberately disarmed Portugal to force it to follow a policy which can never be opposed to that of Spain."

Other features of Salazar's new State are familiar. Public discussion of politics was forbidden, although people could still criticize and discuss the regime in their homes and in cafes. A militant youth movement organized on Catholic lines sprang up. Religion (with a little arithmetic), was taught in all primary schools once more, and when Dr. Salazar slashed the education fund he announced: "One can be illiterate and very happy at the same time." (Almost 70 per cent of the Portuguese are, at least, illiterate.) Private banking was restricted to the advantage of a state-controlled bank. Strikes and lockouts were prohibited. Large Portugese landowners, however, were left in possession of their estates, and Portugal remained one of the few countries where free exchange still prevailed without currency restrictions.

Foreign policy became less dependent on Britain. Trade relations between France and Portugal were broken by Lisbon. In Portuguese schools German became an obligatory language. Privileges were given to Germans in the Portuguese African colony of Angola. Trade with Britain decreased; trade with Germany grew. Firmly anti-Bolshevist, too, Salazar exerted strong pressure on Chamberlain to prevent a Russo-British pact. During the Spanish War he broke off relations with Republican Spain; in the non-intervention discussions Portugal always sided with Germany and Italy; and Salazar's was the first country to sign a trade pact with Nationalist Spain. Franco simultaneously decorated the chief of the Gestapo, the chief of the Italian secret police and Dr. Salazar, and on March 18, 1939 signed a treaty promising to keep hands off Portugal. In that year, too, the Portuguese-British pact was amplified, Portugal being assured of the aid of the British fleet in the event of aggression and aid in the fortification of a few ports. But in the past few years there are numerous instances in which Britain went to unprecedented lengths to keep Portugal's good will and in which her advances were repeatedly snubbed.

Dr. Salazar is both a recluse and an ascetic. Legend says that he was spurned by his childhood sweetheart and took a vow of chastity; in any case, he is unmarried, although he has two small adopted daughters. He works 17 hours a day for $208 a month. His scholarly face, "not made for laughter," is lined with fatigue. He eats little; he sleeps badly. In eight years he has gone twice to the theatre and twice to the moving pictures, and in each case one visit was official. On his rare public appearances he wears a plain black suit and hat, without any medals or decorations. He insists that he be called, simply, "The Minister." He shuns publicity. He seldom lets himself be photographed. Even his style of speech is "terse and bare." He reads every newspaper he can, and says: "All that reading may be a vice, for what I learn from it does not make up for the time taken by it, but it confirms in me my ideas and brings me back to a prudent silence; if I had to speak every day I should soon have nothing left to say and would necessarily come to utter some stupidities." Dr. Salazar's appeal is too intellectual for him ever to be very popular with his people. Nor does he care for popularity; all he cares for is his work. He says, and means it: "I coldly do my duty."

SARGENT, PORTER (EDWARD) June 6, 1872- Publisher; author

Address: b. 11 Beacon St, Boston, Mass; h. 26 Weybridge Rd, Brookline, Mass.

As described in the *Harvard Educational Review,* Porter Sargent's *Handbook of Private Schools for American Boys and Girls,* the twenty-fifth edition of which appeared in the spring of 1941, is "published primarily for the guidance of those who fancy their offspring misplaced except in schools for 'gentlemen's sons and daughters.'" But Mr. Sargent writes prefaces to these rather snobbish directories—and his prefaces have probably made him as famous as the fact that he knows more about private schools than anyone in the United States. "In such surroundings Mr. Sargent's cocky criticisms of 99 and 44/100 per cent of all educational and social institutions between the ages of fuzzy chin and white beard is like finding a blob of sweet cream in the center of a Roquefort cheese. Finding comments as earnestly honest and unafraid as those in the columns of such a publication as *The Nation* would be stimulating. Finding them in a publication circulating primarily where special privilege is rampant is also astonishing. The moral probably is that no one reads forewords. Or, bone-chilling alternative, perhaps there is loose in the private-school world a considerable number of individuals with forward-looking social intelligence. It must be that no one reads forewords."

Porter Sargent, "lively, lean-faced, high-collared," is, according to his own definition, a typical New Englander. (He claims that "the first New Englanders became New Englanders because they were insurgents and couldn't get along comfortably in old England"; that "the New Englander is an individualist; in his vigorous virility, a radical.") Nevertheless, although he may have spent most of his life in Boston, he cannot claim New England as a birthplace. He was born in Brooklyn, New York on June 6, 1872, the son of Francis Porter and Roselyn (Hitchcock) Sargent. It was 1893 when he came to Harvard—in the days when bathtubs were few and telephones fewer, when the man who carried a football was the Great American Hero, when the Boston Brahmins were utterly secure in their domination over all Harvard fraternities and class offices.

Young Sargent supposed it the greatest university in the world, sat on the bleachers at football games all through his college years and long after "with religious regularity," took his B. A. in 1896 and his M. A. the year afterward, specializing in zoology and neurology, and then "remained at Cambridge, studying and teaching, for eight years after his commencement." From 1896 to 1904 he was a master of science at the Browne and Nichols School there; from 1897 to 1901 he did research in comparative neurology at Harvard, and from 1902 to 1904 worked independently by means of grants from the Carnegie Institute; altogether "Harvard practically ruined me," he says. "For 11 years I lived in this atmosphere and I was rapidly becoming academic-minded. I have since regarded my escape as the most fortunate event in my life."

Bachrach

PORTER SARGENT

He escaped, after being employed from 1903 to 1904 as director of science for the Nautical Preparatory School, by founding a school of his own. It was called Sargent's Travel School for Boys, and for 10 years he divided his time between Europe and going around and around the world with his pupils: five times, to be exact. "In this way I got my real education," he claims. He also gained a rather extensive knowledge of Europe, and prepared a handbook on Rome which was to be the first in a series of travel books. Then the First World War discouraged traveling for pleasure. Nothing daunted, for he had also been doing research on schools, Mr. Sargent published the first guide to American private schools in 1914. It was so successful that he has been publishing them every year since that date.

In the way of furnishing information on education, Mr. Sargent is much more than a cataloger, however. He has published guides to summer camps, biographies of private school teachers; he is the director of the Sargent School Service, which offers advice to parents of prospective students on where to send a backward or precocious child or

SARGENT, PORTER—*Continued*

almost anything they happen to want to know, advice to schools on reorganization, on selection of personnel, on reasons for decreasing enrollment, or just plain advice.

In Sargent's early nineteenth-century Brookline house, on a knoll and surrounded by terraced gardens, his light can be seen burning until 2 a. m. He and his secretary start editing *Private Schools* in January, it usually comes out and is sent to the reviewers around May, and there's very little that it doesn't contain: details on the "history, age of admission, fees, courses, control, management and accrediting" of foreign and American schools and colleges . . . "how to choose schools, what to seek in them, how to fit a child to school, about the higher learning and those who purvey it, of the Angells and the Hutchins of this world, of the Roman Catholic and other churches and their effect upon the schools and upon education, of falling birth rates and what they signify. . . pitfalls for parents, the present educational chaos, gregarious learning, authority and the individual, what to do with children, damaged twigs, mystery or comedy, fetish and symbol, keeping teachers timid, the new economics, the academic mind, and the human comedy."

The prefaces themselves (sometimes published separately, in 1940 under the title *What Makes Lives*) may read more like "a random collection of provocative utterances than the presentation of a reasoned argument"—something like "a compilation of the daily outpourings of a newspaper columnist"—but, according to one reviewer, it is "a far more thoughtful and intelligent columnist than it is our privilege to have read." Mr. Sargent wants us to go back (or rather forward) "to the questing mind of the Greek before Plato, to our rightful heritage, the divine curiosity that man inherited from the Simian." He deplores the fact that so many young people sacrifice "their growing years to the prescribed forms of stultification," as perpetuated in too many educational institutions. He points out their financial control as explanation for what is taught in many of these institutions.

He talks about the "folklore" of education: commencement, the most fantastic and commercialized folkway; the elaborate code of caps and gowns; commencement speakers; history ("a lie agreed upon"); college class groups; the British old school ties; the teaching of Latin. He finds Morgan influence over President Connant of Harvard and President Seymour (see sketch this issue) of Yale, semi-Fascist tendencies in the "medievalism" of Chicago's President Hutchins (see sketch 1940 Annual); he quotes James Harvey Robinson, "whom Butler [see sketch 1940 Annual] forced out of Columbia," as having said: "Any medieval monk would have agreed heartily with Dr. Butler." In 1940 he was insisting that Harvard and other universities had become subservient "to the fog that has blown in from Wall Street and Whitehall," and were leading a propaganda parade to war. In 1941 he was warning against book burnings, witch hunts, against "putting up mental shutters" under the pressure of war.

Indeed, until the Japanese attack on Pearl Harbor he was a rabid anti-interventionist, fond of sending out mimeographed bulletins exposing "British propaganda"; and in April 1941 Mr. Sargent published a 640-page volume titled *Getting Us Into War*, based on the 100 Sargent bulletins, which he promptly dispatched to the leaders of the Roosevelt Administration, to every member of Congress and to prominent educators, especially university presidents and students of the social sciences.

In 1907 Mr. Sargent was married to Margaret Upham of Boston at Rome, Italy. He is now a widower. Both of the Sargent boys were permitted to roam by themselves, without formal education. Upham died in 1934; for Porter, Jr., his father suggested Black Mountain College.

When questioned about his hobbies—aside from his "hobby of humans"—Mr. Sargent replies that he "does not distinguish between work and play." But Oriental art used to be his chief interest, gardening another, and most of his life, until the War, he has spent two months out of the year abroad. He has published numerous articles, and among his books not primarily concerned with the problems of education are *Spoils from a Crowded Life* (poems, 1935); *The New Immoralities* (1935); and *A Handbook of New England* (1916). In preparation is *Youth, Adventure and Revolt: the Story of a Boy's Life, 1913-1934*; *The Course of Human Events*, "reviewing what has led to the present sorry mess, is well along toward completion"; and Mr. Sargent hopes also to write some day a book of "Lives and What Made Them" and an "Alibiography," which will "establish alibis in every direction." In spite of all his writing and publishing he says: "Literary work I do not profess to do. My job is making books. I regard it as a kind of engineering; that is, putting words, sentences and paragraphs in such juxtaposition as to be useful. As an art it is merely a matter of selection and arrangement."

"Caustic without being bitter," blithely inconsistent, he can also say: "It's a good time for 'rugged individualism' of the right sort. It's a great time to live!"

SAVAGE, AUGUSTA (CHRISTINE)
Sculptor

Address: 143 W. 125th St, New York City

Visitors to the New York World's Fair during 1939 and 1940 no doubt noticed in front of the Contemporary Arts Building a piece of black statuary in the shape of a huge harp, an outstretched arm and hand forming the base, and the strings tapering down from the heads of singing Negroes. Kneeling in front of the harp, a Negro youth was holding out a placard with a few bars of music on it. The statue, 16 feet high and made in the semblance of black basalt, was designed to commemorate the Negro's contribution of music to the world.

Augusta Savage, the Negro sculptress who executed this work, was one of four women sculptors to be given commissions by the World's Fair, the others being Malvina Hoffman, Brenda Putnam and Gertrude Whitney (see sketch this issue). She explains that she took for her theme the so-called "Negro National Anthem," *Lift Every Voice and Sing*, by the well known poet, James Weldon Johnson, which begins

> *Lift every voice and sing*
> *Till earth and heaven ring*
> *Ring with the harmonies of liberty.*

The strings of the harp represent Negroes of every type and age, who are "lifting their voices and singing"; the sounding board is the hand and arm of the Creator. The kneeling youth offers the world the gift of song of his people, symbolized by the opening bars of *Lift Every Voice and Sing*.

Miss Savage was born in West Palm Beach, Florida, the daughter of Edward and Cornelia (Murphy) Fells. She attended public school and the State Normal School at Tallahassee. She was interested in sculpturing even as a child and used to model shapes from the red clay found near her home. At a local exhibit of her work she won a special $25 prize. Tourists who saw the exhibit contributed an additional $173, and some of them urged her to come to New York. In 1920 she managed to do so, and there entered Cooper Union, where she studied under George Brewster. What with her art studies, attending high school evenings to make up academic deficiencies and working to earn her board and room she was more than busy, yet managed to complete a four-year course in three years. In 1923 she won one of the one hundred scholarships offered by the French Government to the American Government to be given for study at Fontainbleau, which was retracted when it was learned that she was a Negro. Her compensation came when Herman McNeill offered to take her into his studio for the summer.

Later she did the head of a Negro boy, which she called *Gamin*, and this won for her a Julius Rosenwald scholarship for three successive years, 1929 to 1931. Thereupon she went to Paris for two and one-half years and studied with Felix Beuneteau and at the Grand-Chaumière. Through the aid of the Carnegie Foundation she also had eight months of travel and study in France, Belgium and Germany. She received citations for her work both at the Salon d'Automne and the Salon de Printemps at the Grand Palais, Paris.

AUGUSTA SAVAGE

Though Miss Savage is perhaps best known for her Negro heads, she has not confined her work to these. She has done work in stone, wood carving, painting, applied design and pottery. At an exhibit in the State Museum of New Jersey a carving of hers in wood, *The Chase*, received praise as one of the outstanding pieces of the show. One of her most recent exhibits was a one-man show for six weeks in the spring of 1939, at the Argent Galleries in New York City. Among her 15 works displayed were: *Woman of Martinique*, in Belgian marble; *Sisters in the Rain* (a small group of nuns), in bronze; *Martyr* (a Negro head), in plaster; *The Cat* (a "feline female"), in plaster; *Envy*, a carving in teakwood. Other galleries at which she has exhibited include the Salon d'Automne, Societé des Artistes Français and the Beaux Arts in Paris, the Anderson Galleries in New York City, the Architectural League, the National Association of Women Painters and Sculptors, and a gallery at the Philadelphia Sesquicentennial. She gave the first exhibit by a member of her race at the Douglass High School in Baltimore, Maryland.

Miss Savage has her own galleries, at 143 West 125th Street, New York City. There she not only carries on her creative work, but also gives art lessons. Her studies of African types have helped to stimulate some younger artists, and she has been effective in developing the talents of some of her pupils. She was married to the late Robert L. Poston.

SCHECHTER, A(BEL) A(LAN) (shĕk'tẽr) Aug. 10, 1907- Director of News and Special Events for the National Broadcasting Company

Address: National Broadcasting Co, RCA Bldg, Radio City, New York City; h. 112 Central Park South, New York City

A. A. Schechter is the short, stocky energetic bachelor who directs News and Special Events for the National Broadcasting Company. He has supervised the broadcasts of political conventions, prize fights, ball games, war news. He has arranged a singing mice contest and a talking parrot derby. Through his ingenuity radio listeners have heard the impressions of a deep-sea diver fathoms down, of a jockey streaking down the home stretch. They have heard Tony ("Two-Ton") Galento reading the part of Romeo, cobras hissing, voices from Cheops' tomb in the Great Pyramid. "I yip my head off for more and more good human-interest stories," Schechter explains.

A. A. SCHECHTER

These human-interest stories and much of the history of the early days of radio's newsgathering, together with highlights of Schechter's own saga with NBC, are presented in his book, *I Live on Air*, written with Edward Anthony and published in 1941. Charles Poore of the New York *Times* calls it "the most breezily uninhibited chronicle of alarms and excursions behind the dial's point I have read," and all the other critics call attention to the sense of humor and sense of the dramatic which enliven the book. Columbia Pictures Corporation is said to be interested in its film rights as well as in the rights to Schechter's previous fictionalized book for boys, *Go Ahead, Garrison* (1940).

The man whose job makes him feel sometimes that he is "the city editor of the whole darn world," was born in Central Falls, Rhode Island, the son of George and Celia (Riven) Schechter, and went to high school there. While getting an education he started covering sports for the Providence *Journal*. This was in 1923, and after he had hung around the office for a while and made himself useful the paper finally hired him. Five years later, after commuting to the Boston University School of Journalism in his spare time, Schechter left the *Journal* for the Newark *Star-Eagle*. He was there only a few weeks, however, before he landed a job on the New York *World* and started covering stories like the Crater case and prohibition incidents.

It was while Schechter was working for the *World* that he engineered one of the first of his world-known scoops. The occasion was the marriage of the son of President Coolidge to the daughter of Governor Trumbull of Connecticut; the necessity was born of Coolidge's determination that reporters were not to be allowed in and were to be handed a printed release only after the ceremony was over. Schechter got the caterer to hire him as a waiter. As he tells it: "I spilled water on some of the guests, and the bride asked me for some water and I said, 'Yes, Ma'am,' and never did come back, but I got a lot of color for my story on the Coolidge wedding."

After the *World* folded, Schechter was with the Associated Press for a short time and then went to International News Service as city editor, the youngest in New York. Six months later, in 1932, he was in the publicity department of NBC, and shortly after was made responsible for the organization of news broadcasts. This was a hard job, for those were the days when the press services were withholding news from the radio. Armed with a telephone, tremendous energy and inability to take "no" for an answer, Schechter proceeded to get enough news to supply Lowell Thomas with adequate scripts. He was soon doing more. He was scooping the press services!

Since then the news department of NBC has grown to employ over 100 people, and Schechter as its head since 1938 has been in charge of broadcasts of Presidential inaugurations, American election coverages, the abdication of King Edward, the coronation of King George VI of England, the Sino-Japanese War, the Spanish War, the Austrian Anschluss, Munich, the Czechoslovakian crisis, the Second World War and all the major national and international events of our time. It was he who was responsible for the exclusive NBC broadcasts of the fall of Shanghai and Nanking and the bombing of the United States gunboat *Panay;* he who arranged the scoop by which James Bowen broadcast the scuttling of the *Graf Spee*. He has been in Addis Ababa, in Egypt, in England. He has informed the world of what is happening in every corner of the globe. And he has, besides, given Americans all those "human-interest stories" which, he feels, draw listeners. In October 1941 he began to share his experience with the Government when he was appointed civilian adviser to the Public Relations Division of the War Department.

All this means that Schechter's life is an enormously busy one, and the description of all he does, as told in the "My Day" chapter of *I Live on Air,* is enough to win admiration from the most hardened newspaperman. In the morning, he tells us, he reads his mail, discusses problems of various stations, answers important complaints. From then on he sees people all day long who have ideas for broadcasts; he sends men out on assignments; he answers questions on the material in scripts (is it incorrect? dangerous? in bad taste?); he talks to correspondents in London, Paris, Egypt, China through the batteries of phones on his desk; and after the day is over he frequently comes back at night for more of the same. "I find it necessary to keep in constant touch with my office," he says, "and never get out of telephone communication with the newsroom." This activity is more noticeable today during the War; but it has always gone on and will continue to go on, war or peace, for there are always special events to be thought up, special broadcasts to be given and special scoops to be made when one is director of News and Special Events for NBC.

SCHERER, PAUL (EHRMAN), REV. (shĕr′ ẽr) June 22, 1892- Clergyman; radio broadcaster

Address: h. 3 W. 65th St, New York City

Describing the notable buildings on Central Park West in New York City, the Baedeker-like Rider's *New York City* (1924) remarks: "At the N. W. corner of 65th St. is the Evangelical Lutheran Church of Holy Trinity (estab. 1868). The present structure, erected in 1902, is in the French Gothic style, with a graceful copper *flêche.*" When a reporter visited the church on Palm Sunday 1941 he also noted a bulletin board on the exterior which remarked in large letters that "The Cross Stands Where God Entered the Slums of the Human Heart." This was a sentence from the sermon preached that morning by Pastor Scherer, as he is called according to Lutheran custom.

Pastor Scherer, who in addition to his work in a large and important parish conducts a summer series of radio broadcasts which reaches a varied audience across the continent, has a magnetic personality. He is a man of medium stature but broad-shouldered, with thick iron-gray hair, mobile features which show wrinkles of laughter around his eyes, and a pleasant, resonant voice. During the course of his sermon he quoted from Thomas Hardy and from Eugene O'Neill's play, *Lazarus Laughed,* and enlivened it with a number of colloquial expressions. Unbelievers are trying to "turn God out neck and crop and leave him like a sucked orange by the wayside," the Pastor remarked, and inquired whether his hearers wanted to see God "go down a third time in a sea of things." Struggling human beings sometimes feel that they have been set down to live their lives on an abandoned farm, he said.

THE REV. PAUL SCHERER

On the following Sunday, Pastor Scherer was the preacher at the United Easter Dawn service under the auspices of the Greater New York Federation of Churches, celebrated in a cathedral setting at the Radio City Music Hall in Rockefeller Center, and assisted by a childrens' choir of 200 voices from the Lutheran Church of the Good Shepherd in Brooklyn. His voice and presence were well adapted to these secular surroundings. He declared in his sermon that the first Easter took place in a world "very like our own today."

Paul Ehrman Scherer was born at Mount Holly Springs, Pennsylvania. His father had the imposing Lutheran name of Melanchthon Gideon Groseclose Scherer, and his mother was Alice Melvina Catherine (Ehrman) Scherer. At barely 19, Paul Scherer received his B. A. degree with first honors from the College of Charleston, South Carolina, and two years later obtained a Master's Degree (*magna cum laude*). By this time he had determined to become a minister, and consequently came back north to study at Mount Airy Theological Seminary, Philadelphia, Pennsylvania, which bestowed its Bachelor of Divinity degree on him in 1916.

Scherer remained at Mount Airy the next year on a research fellowship, and in 1918 went to Holy Trinity Lutheran Church, Buffalo, New York, as assistant pastor for a year. Before leaving Buffalo he married Lilie Fry Benbow of that city—on September 4, 1919. It

SCHERER, PAUL, REV.—*Continued*
was 1920 when he came to the Holy Trinity Lutheran Church as pastor, and he has remained there ever since except for numerous excursions into the field. Mrs. Scherer now sings alto in the choir, and two daughters, Barbara Benbow and Pamela Benbow, take part in the numerous activities of the parish. These include a Semper Fidelis Club, The Couple Club, the Intermediate Luther Leagues, the Men's Club and the Ladies' Aid Society. In April 1941 the younger element was hard at work on the rehearsal of "a most unusual and mysterious play" entitled *A Murder Has Been Arranged,* by E. Williams. After a recent rehearsal, according to *This Week,* the parish bulletin, "Miss Angela Jacobs, the beloved and very capable director of the [Senior Luther] League's many successes, explained: 'The cast is doing marvelously and will be prepared to present a production that everyone will enjoy seeing, one that will compare favorably with many a successful Broadway First-Nighter.'"

Dr. Scherer has lectured at Union Theological Seminary, New York City, where he has been a board member since 1937; at Union Theological Seminary, Richmond, Virginia; and at Gettysburg Seminary in Pennsylvania. He preached in England in the summer of 1930 and 1931, and in 1933 was not only Lutheran Day preacher at the Chicago Century of Progress but was also one of the foremost preachers on the occasion of the celebration of Luther's four-hundredth anniversary. He has given his "Great Preacher" series at Reading and Harrisburg, Pennsylvania and elsewhere, and is a familiar figure at various colleges and universities: Rhode Island State College, Vassar, Columbia, Hamilton, Duke, William and Mary.

His time and talent are also donated to the *Lutheran Laymen's Radio Hour* for the talks which he has delivered over the air from June to October ever since 1932. To make his broadcasts he comes to New York in the summer from the Northfield General Conference in Massachusetts, of which he has been general chairman since 1938, and from the Chautauqua Institute, New York, where he is chaplain.

Pastor Scherer has written extensively, from articles published in church publications, *McCall's, Journal of Religious Education, Record of Christian Work,* and the *Lutheran Quarterly Review,* to the two books in which some of his favorite sermons are collected. *When God Hides* (1934) was one of the most popular titles in "Harpers' Pulpit Series," and the publishers said of *Facts That Undergird Life* (1938) that "in content and presentation, each [of the 29 sermons included] is striking in its appeal to contemporary human beings who are striving to find a way of living that is satisfying to their spiritual needs."

Recognized as one of the foremost American preachers, Pastor Scherer has been the recipient of two honorary degrees: an LL. D. from the College of Charleston in 1935 and a Litt. D. from Wittenberg College, Springfield, Ohio, the next year. He was granted his D. D. degree from Roanoke College, Salem, Virginia, in 1923, three years after he began his career at Holy Trinity in New York City.

The atmosphere of Holy Trinity is far from austere, and Pastor Scherer is frequently found in the social rooms of the church enjoying a game of ping-pong. His only other diversion is playing a strictly amateur game of tennis.

SCHLINK, FREDERICK JOHN Oct. 26, 1891- Head of Consumers' Research; author

Address: h. Washington, N. J.

Once upon a time people read advertisements and went shopping in a random sort of way and didn't realize that they were "consumers." That was in the pre-Schlink period, though, the carefree days before everybody started looking for arsenic in the toothpaste and wondering if one brand of tomatoes really should cost twice as much as another. Now for some time at least two organizations have existed solely to tell you what to buy and what to avoid and why, and, more than anyone else, it is "lean, freckled, didactic" Frederick John Schlink who started this trend.

Frederick John Schlink was born in Peoria, Illinois on October 26, 1891, the son of Valentine Louis and Margaret (Brutcher) Schlink. He attended Peoria High School and then went on to the University of Illinois, where he was elected to Sigma Xi, received the degree of Bachelor of Science in 1912, and two years later acquired the degree of Mechanical Engineer, writing his thesis on scientific research for a laboratory instrument he himself invented. His first professional work was in machine design and plant control work, as associate physicist and technical assistant to the director of the United States Bureau of Standards in Washington, D. C. In that position a system of general control was introduced for coordinating and reporting the work going on in the numerous specialized laboratories of the Bureau, and also for facilitating the great volume of technical correspondence involved—especially in answering questions from the military and naval services and from other government departments. This was from 1913 to 1919.

The next year Mr. Schlink held the position of physicist in charge of the instruments-control department of the Firestone Tire and Rubber Company in Akron, Ohio, and here special new methods of test and adjustment were set up and original specifications written for purchase of some of the most widely used types of measuring instruments in the plant. Then in 1920 he accepted another position as mechanical engineer and physicist, doing the designing and testing of apparatus and measuring and testing equipment for the department of the Western Electric Company which later became the Bell Telephone Laboratories; and in 1922 he came to the American Standards Association as assistant secretary, where he worked on all sorts of specifications and methods-of-test questions until 1931.

It was not until 1927 that *Your Money's Worth* was published, written by Mr. Schlink with Stuart Chase. A summary of the "predicament in which competitive advertising and sales pressure place the consumer," it was a Book-of-the-Month Club selection, and immediately brought a stream of letters from readers who wanted help with their problems of selection and purchasing. The book told of the existence of a small local Consumers' Club at White Plains, New York, which Mr. Schlink directed and whose members were banded together to exchange information about various goods. Because of the nationwide demand for such a service, it was decided to turn the local into a national, and by the end of a year there were 565 members. The organization grew until in 1929 it was issuing printed instead of mimeographed reports, and in December of that year it was incorporated under the name of Consumers' Research, Incorporated.

Consumer advice is one business that expanded with the depression. When people have very little money to spend they want to know exactly what they are spending it for. As the pioneer organization in the field, Consumers' Research, working on a non-profit basis, aimed to apply impartial laboratory tests to the advertised claims of trademarked products and sell the results in printed bulletins. At the time of the stock market crash its membership was around 1,200. In 1930 an "angel" appeared with $10,000; by the autumn of that year there were some 5,200 subscribers; by 1931 there were 25,000; by early 1933, 45,000.

FREDERICK JOHN SCHLINK

During this period a young man named Arthur Kallet had been on the board of directors, later working as secretary of the organization. He furnished a great deal of promotional advice, and, with Mr. Schlink, co-authored the best-selling *One Hundred Million Guinea Pigs* (1933). Soon after the appearance of this rather hair-raising book, which told the world that many extensively advertised products (from hair dyes to mouthwash) were either useless or dangerous, the long silent consumer became not only indignant but vocal. Nevertheless, in spite of Messrs. Schlink and Kallet's testimony and their lobbying in Washington, in spite of Senator Wagner's (see sketch this issue) support, the Copeland Bill, which was presently advanced in order to make shopping less adventurous, failed to pass Congress.

In 1933 Consumers' Research had moved its laboratories to a lovely hillside near Washington, New Jersey. One summer the country quiet was disturbed by a strike that was to have repercussions for the future—a strike of technicians and office workers in the Consumers' Research plant. There is more than one version of what it was about, but what is certain is that Mr. Kallet was on the strikers' side, Mr. Schlink on the other; that during the strike Mr. Kallet urged the strikers on and publicly attacked the labor policy of Consumers' Research and of Mr. Schlink; that when the National Labor Relations Board issued directions Consumers' Research ig-

SCHLINK, FREDERICK JOHN—*Cont.*

nored them; and that at the end Mr. Schlink retained control of Consumers' Research while Mr. Kallet, aided by other Consumers' Research experts who had been fired or quit, launched the rival Consumers' Union.

It seems also fairly certain that Mr. Schlink was embittered by the fight, convinced that there is a "conflict between the interests of the consumers and organized labor." He didn't object at all when adviser and vice-president J. B. Matthews later began assisting the Dies Committee. And Consumers' Research today makes a point of not reporting the labor conditions under which articles are made: "unbiased reports on such subject matter are not available from any quarter," they say.

Mr. Schlink's last book was *Eat, Drink and Be Wary* (1935), a discussion of food and diet and food adulteration, but the mass of material which Consumers' Research has assembled has also been the basis for books written by others: *Skin Deep*, by M. C. Phillips (who is married to Mr. Schlink); *Partners in Plunder,* by J. B. Matthews and R. E. Shallcross; and *Guinea Pigs No More*, by J. B. Matthews. Mr. Schlink himself has frequently contributed to technical, scientific and economic journals both in the United States and abroad, has written articles for various encyclopedias and has collaborated in many monographs, theses and school and college textbooks related to the technical testing and scientific investigation of goods and appliances used by "ultimate consumers." The special new field of economics known as "consumption economics" and now taught in many schools and colleges developed directly out of the book, *Your Money's Worth*, and the work begun by Consumers' Research.

In the work of Mr. Schlink's organization there is today "constant contact with several hundred scientific and technical workers in colleges, universities and government laboratories, in fields ranging from the testing and rating of scouring powders, hair dyes and nail polish to the testing of electric-motor-driven washing machines and automobile accessories." The work of these experts is carried on and brought to useful and practical form and conclusions by the organization, and so made available for information of the public and of the 60,000-odd subscribers of Consumers' Research. Technical advice and cooperation in the reporting of tests of consumer goods is also given to *Consumers' Digest*, which was originally developed under the auspices of Consumers' Research, but is now published by a separate organization.

Mr. Schlink, who lives with his wife and mother-in-law "in an old farmhouse heated by a kerosene floor burner" located in the beautiful western New Jersey hill country, has many hobbies: studying the new and second-hand markets for types of instruments prized by the mechanically-minded householder; designing and building radio sets and phonograph systems; inventing new and simplified methods of weighing and measuring that can be used by other home laboratory hobbyists and researchers. He is licensed as a professional engineer, is a member or fellow of numerous professional and specialist societies, and is also a recipient (1919) of the Edward Longstreth Medal of the Franklin Institute, for the invention of a new type of measuring instrument. He and his family, as conscientiously wise and wary consumers, practice what they preach and "scrub their teeth with chalk, their laundry with soap mixed by 'Ma' Phillips," his mother-in-law.

SCHNEIDER, HANNES (schnī'dẽr hän'-ĕs) 1890(?)- Ski master

Address: North Conway, N. H.

During recent years skiing has become a great American sport. The mountains of New England, the snowy reaches of Sun Valley, the peaks of the Pacific Coast all resound with cries of "track" as swiftly moving skiers negotiate their trails. To Hannes Schneider goes most of the credit for their ability to control their wooden runners and their speed in "schussing." His was the development of the "Arlberg" technique which is almost universally a characteristic of American skiing today.

Hannes Schneider skied almost as soon as he could walk. Born in Stuben, Austria, near the Tyrolean border, the son of a goat herder, his first runners were old barrel staves. On them he won a race for which the prize was his first pair of real skis. Then he was able to go faster, stop shorter, balance himself better. By the time he was 17, in 1907, he was hired as a ski instructor by St. Anton's Hotel Post.

In St. Anton am Arlberg, Schneider soon became aware that the Norwegian way of skiing current then was impractical for the long, steep, irregular Alpine slopes. The upright posture of the Norwegians, knees straight, body taut, lacked adaptability to terrain and, even more important, was difficult to do. Schneider began to ski in a crouch, his knees bent, his weight forward. And he taught the guests at St. Anton to do the same.

Then came the First World War and Schneider served with the Austrian Army, first in Russia and then in the Alps. Through officers he had taught at St. Anton he was able to get the job of teaching skiing to officers in all the Alpine regiments. Teaching them, he perfected his own technique, developing the Stem Christiana as its basic speed turn instead of the Norwegian-preferred Telemark. Hannes Schneider never claimed actually to have invented this technique; it had been used before. But without doubt he was the "first skier who tried to find out its principles, define them and understand them and

Bray

HANNES SCHNEIDER

reduce them to the simplest and most logical maneuvers for teaching purposes."

By 1920 Schneider was recognized as the best *Ski Meister* in the Alps. Hired as the leading man in the German film, *The Wonders of Skiing,* he was able through his magnificent performance to popularize skiing in Central Europe. Encouraged by its success, Hannes Schneider opened his Arlberg School in St. Anton and by 1925 it was the headquarters for most of Europe's skiers, would-be skiers and royalty. There were as many as 3,000 pupils a year, 400 a day, including King Alfonso of Spain, Prince Nicholas of Romania, King Albert of Belgium. There was a staff of 25 assistant teachers.

In 1930 Schneider was asked to visit Japan for one month to teach its royal family, army officers and students how to ski. In return the Japanese Government gave him the Sword of Honor, a fine silk kimono and $10,000. Hannes Schneider was prosperous. With the profits from his school and excursions to teach royalty he built the largest house in St. Anton—with thirteen rooms and two baths; he supported the village band, its school, its hospital, the village itself.

By then Schneider wasn't skiing much himself. His had been a career in which he never lost a downhill race or a slalom and had set marks in cross-country running and jumping. Schneider always ran carefully, avoiding acrobatics and trick stunts, but in 1926 he broke his hip and could no longer enter competitions. Still he continued to be one of skiing's greatest figures. At the indoor ski show at Madison Square Garden in New York in 1936 he was the main attraction; his films on skiing were enormously popular, particularly *The Ski Chase* (it was preceded by *Ski Rhythm*), first shown in the United States in 1938. *The Ski Chase* was called "the best skiing picture to reach these shores," and *Cue's* reviewer warned its readers: "If you ski—or hope to—don't miss this."

Shortly after this film opened in New York, Hannes Schneider was arrested. The *Anschluss* between Germany and Austria had come and Schneider had refused to bow to it. Determinedly he tried to keep politics out of his ski school; he refused to fire a Jew; he turned out Nazi agents; he continued to be a devout Catholic. The Nazis, in answer, seized his school and exiled him to Germany under protective custody. He was released only through the protests of ski enthusiasts, and "after 10 months of negotiation on the part of Manhattan banker Harvey D. Gibson" arrived in the United States in February 1939 to continue his teaching at the new Hannes Schneider School at North Conway, New Hampshire.

SCHRAM, EMIL (shrăm) Nov. 23, 1893- President of the New York Stock Exchange
Address: b. New York Stock Exchange, New York City

The selection of Emil Schram on May 6, 1941 for the "complicated, responsible and delicate post" of president of the New York Stock Exchange surprised Wall Street. Its first reaction was that the governors of the Exchange had "sold out" to the Administration, that they had, in the words of *Forbes* Magazine, "lost hope, that they have been so whipped that they have no fight left, that they have abjectly surrendered to Federal Bureaucracy." But much of the country at large, and even some of Wall Street, hailed this attempt to "bury the hatchet in a long feud with the Roosevelt Administration" and saw ahead a closer and more effective relationship between the Stock Exchange and the Government.

Emil Schram himself, who on July 1, 1941 took over his duties after a unanimous election and left more than half a dozen Government posts to do so, hastened to affirm this belief. He hoped, he told newspapermen, that there would be cordial relations

Blackstone

EMIL SCHRAM

between the Exchange and the Government and especially the Securities and Exchange Commission. He hastened, too, to allay the fears of those who felt him tarred with the New Deal brush. "I have never been a radical," he said. "Neither," he added, "do I consent to the name conservative—especially if conservative is defined as 'one who will not look at the new moon out of respect for that ancient and honorable institution, the old one.'" Even more reassuringly he announced: "I do not subscribe to the theory of government in business except as an emergency measure. Free markets are a proper and necessary adjunct of the democratic system." He praised "the constructive influence of speculation by informed people who can afford to assume risks."

The man who before his elevation to the presidency of the New York Stock Exchange had never been connected with the securities business was born in Peru, Indiana, the son of second generation German immigrants, Emil Alexander and Katharine (Graf) Schram. He was brought up in Peru and was graduated from high school there in 1911. Immediately he started working for the J. O. Cole Company, which ran a coal and lumberyard and had some farming interests in the state, first as general handy man and later as bookkeeper. But by the time 1915 came around he had acquired a wife, Mabel Miller of Anderson, Indiana, whom he married in 1914 (they now have three sons), and a much more responsible position.

He had become manager of a 5,000-acre tract of swampland in Illinois, in charge of draining, reclaiming and developing it. Within a few years it became profitable cornfields, and Schram himself acquired an interest in the project, now called the Hartwell Land Trust—an interest which he still keeps. Schram's activities spread out into grain elevators and farming in general, but he remained tremendously interested in drainage, and by 1931 was head of the National Drainage Association. It was through this position that he first became associated with the Federal Government.

Drainage has always been one of the farmer's biggest concerns, and "drainage districts" which issue bonds and collect special taxes for amortization funds have been one solution. When the Reconstruction Finance Corporation was formed in 1932, it found these taxes and bonds a financial problem and set up a Drainage, Levee and Irrigation Division to handle it. In 1933 Schram was chosen to head it and moved to Washington. From handling loans to needy drainage and irrigation districts he was graduated to membership on the board of directors in 1936 and to the management of the RFC's business loan program. On the side, he became president of the Electric Home and Farm Authority and ran its program of financing the sale of electrical appliances.

When Jesse Jones was made Federal Loan Administrator in 1939 he chose Schram to succeed him as chairman of the RFC, and the New York *Times* commented that Schram was "probably the only man in the Government whose work is admired equally warmly by Jesse Jones and Thomas Corcoran"—certainly the only one whose career had been "jointly fostered by this ill-assorted pair." Schram took over the management of the RFC's multifold financial enterprises—supervising the making of loans to organizations as varied as railroads, cities, mink farms, reindeer ranches, mills and factories. Nevertheless he received little publicity, for although he was considered "one of the most capable members of the RFC" he was generally overshadowed by Jesse Jones, who was supposed to be operating the RFC in his capacities as Secretary of Commerce and Federal Loan Administrator. Yet it was he who made rulings as important as his order to retail credit men to work for stable prices and hold down consumer purchases on time.

Schram held a number of positions at the same time—director of the Federal National Mortgage Association, of Federal Prisons Industries, Inc., of the Export-Import Bank of Washington; member of the National Power Policy Commission, president of the Defense Plant Corporation, assistant priorities administrator in the OPM. And from time to time his name came up for still more jobs. One of these suggestions caused much controversy. When the presidency of the Federal Reserve Bank of Chicago became vacant in March 1941, Jesse Jones boosted Schram for the position. Chicago, however, revolted against Washington dictatorship, and after a good deal of publicity Schram lost out.

Jones is supposed to have boosted him again for the presidency of the Stock Exchange after William McChesney Martin, its first paid president, had been drafted into the Army. This time Schram won the $48,000-a-year post, after discussion which centered on his fitness, discussion which took into account both the insight into every type of business he had gained through his RFC position and the fact that he had had no Wall Street experience and had made no conspicuous mark in business, industry or finance. Schram himself accepted the nomination "subject to certain conditions having to do with steps that are now being taken in connection with improving the Administration organization." These conditions included a provision for more authority for the paid personnel and less control of the management by membership committees. And he added that "the presidency of the New York Stock Exchange appeals to me particularly because of the opportunity it affords for public service." Later he told Stock Exchange men that "the answer to [the Exchange's] problem lies in the operation of the Exchange not only as a business enterprise—but in the manner of a public utility as well."

This tall, baldish, blue-eyed, deep-voiced, affable Hoosier is a baseball fan who once had his aides comb New York City for two tickets for a Dodgers-Cardinals double-header. He is definitely not interested in politics: has never been a candidate for office nor boosted anyone else's candidacy. "Not built for it," he explains.

SCHROEDER, R(UDOLPH) W(ILLIAM) (shrōd'ẽr) Aug. 14, 1886- Vice-president, in charge of safety, United Air Lines

Address: b. United Air Lines, 5959 S. Cicero Ave, Chicago, Ill; h. 2126 Thornwood Ave, Wilmette, Ill.

Ever since he began to fly, back around 1910, Major R. W. Schroeder, a tall lean man "with an expression like the attic window of a haunted house," has been making significant pronouncements. "One thing aviation needs to be safer is two of everything"; "there is no place for heroes in flying"; "regular flights at higher altitudes make for safety, comfort and speed"—these are only some of them. Today vice-president in charge of operations of the United Air Lines, for more than 30 years Major Schroeder has developed with the aviation industry.

Back in the days when early opera style horseless carriages were rumbling down Michigan Avenue in Chicago, Schroeder and his mechanic friend, Otto Brodie, began to fly out at the old Clearing field. Schroeder had been born in Chicago, the son of John August and Nora Ann (Reidy) Schroeder, and had attended Crane Technical School for two years. That was all the education he could afford, for his father had died and he had to work. He started in a garage and by 1904 was working as an airplane or auto mechanic whenever he got the chance.

United Air Lines

R. W. SCHROEDER

After he met Otto Brodie, Schroeder spent many hours watching him coasting along in his Farman "pusher" about 50 feet above the ground. This "slow and low" flying made him shudder until one day he finally crawled into the plane and kidded his friend into flying 600 feet above the ground—the highest a plane had ever gone in Chicago until then. "I realized," Major Schroeder explains, "that the higher you go the more room you have and more time to adjust your plane in case of trouble before you reach the earth. After all, you can perform just about any sort of maneuver in the air without trouble, just as long as you get an even keel before you need to land. So then and there I became an apostle of high-altitude flying and I've never had reason to change." Brodie didn't listen to him, and one day his plane stalled at too low an altitude to recover. Chicago's first "regular" pilot was killed.

Schroeder flew more and more and studied more and more. And then in 1916 he enlisted in the aviation section of the United States Army's Signal Corps. Two years later he was chief test pilot for the Army at Dayton, Ohio, given every type and make of plane to test, making the first flight with oxygen up to 20,000 feet. By 1919 he was a major in the Army and chief of the air corps' field engineering staff. He was also busy making discoveries that have radically improved flying. He went up to 30,000 feet to test his theory of the possibility of higher speeds at higher altitudes —this was a world altitude record. He also interested C. F. Kettering of General Motors in the development of an anti-knock fuel for high compression engines; he conducted the first tests of a controllable pitch propeller and invented one which still pays him royalties;

SCHROEDER, R. W.—*Continued*

he developed and personally tested parachute flares for night landings; he made tests of the first turn indicator and out of that work recommended the same combination of blind flight instruments in use today; and in 1919 he made the first deliberately blind flight in aviation history over a plotted course.

Major Schroeder's experiments with high altitude flights almost cost him his life in 1920 when his oxygen tube failed, his eyeballs froze and his plane went into a dive of six miles in two minutes. His reaction was typical. This, he says, "taught me something. It taught me that sub-stratosphere high altitude flying will be done in a sealed cabin." It also confirmed his belief, despite everything, that "higher flying is safer flying."

In 1920 Major Schroeder left the Army and years later wrote to the Army chief of staff: "Any contributions I have made, any success that I have had in aviation are the result of the training, opportunities and experience given me by the United States Army Air Corps, and I owe my government a debt of gratitude." For a while after his discharge he did barnstorming and air racing, and then in 1921 he settled down as an aviation engineer for the Underwriters' Laboratories. A few years later he organized and operated for the Ford Motor Company the first large commercial airline in this country, carrying passengers, freight and mail, and by 1925 was its superintendent.

Major Schroeder's next position was that of manager of the Guggenheim Safe Aircraft Competition in 1928. One year later he was manager of the Curtiss Flying Service in Chicago, a position he held until 1931, when he became a partner in Sky Harbor Airport. In 1933 he left private industry temporarily to become chief airline inspector of the Department of Commerce, his job the investigation of accidents, particularly. "Orderly, patient and stubborn," aware from his own experience of the many things that might happen to a plane, his was an impressive record. In 1936 he became assistant director of the Bureau of Air Commerce.

In 1937 Major Schroeder left government service to become vice-president, in charge of safety, of the United Air Lines. At United Air Lines he has developed checks, schemes and regulations to make flying increasingly safe and he has continued to initiate and lead research into altitude flying. He has a pretty clear idea of what is coming in aviation. "The big cabins of future planes," he says, "will resemble good sized houses." And the big supercharged planes of this future will probably average 20,000 feet altitude across the country, their air content always the same, making one stop or flying non-stop, carrying from 30 to 40 passengers in lounge chairs or 20 sleeping. As he describes it: "The weather is always good way up there, the riding smooth, and a passenger can lunch in San Francisco and have dinner in New York, with, of course, tea on the plane."

Major Schroeder, known as "Shorty" wherever aviators are found, was married on July 29, 1934 to Janet T. Carr of Chicago, and they have one daughter. His answer to the question "Hobbies, favorite recreation or sport?" was one simple word, "Aviation." It has been rumored, however, that once in a while he dusts off his accordion, which he learned to play years ago. He knows seven pieces and can't learn any more, because when he learns an eighth he forgets the first. "It's just a blind spot in my psychology," he explains.

SCHULBERG, BUDD (WILSON) (shōōl'-bĕrg) Mar. 27, 1914- Author

Address: c/o Random House, 20 E. 57th St, New York City; h. 1225 Beverly Green, Beverly Hills, Calif.

Budd Schulberg's novel, *What Makes Sammy Run?*, was published on March 27, 1941, his twenty-seventh birthday. Immediately reviewers, even those reviewers who called attention to the book's unevenness, to the debt it owed to other writers, to occasional tendencies toward exaggeration, hailed it as "one of the most interesting and promising first novels to appear in several years."

It is the story of a "heel" in Hollywood, the story of Sammy Glick who gets to the top through cheating, lying, cadging, bullying. Nothing is left out. Sammy appears as copy boy, radio columnist, screen writer, budding genius, playwright and producer, and each step upward is at the expense of someone else. Sammy runs, and the author watches, wonders and finally understands. "I saw Sammy on a battlefield where every soldier was his own cause, his own army and his own flag, and I realized that I had singled him out not because he had been born into the world any more selfish, ruthless and cruel than anybody else, but because in the midst of a war that was selfish, ruthless and cruel Sammy was proving himself the fittest, the fiercest and the fastest."

Sammy's rise is in Hollywood, and everything in Hollywood is in the book, done "with understanding and grim tolerance": the serious artists, the night clubs, the trade paper racket where you buy good reviews; the bankers from New York who own the studios; the studio commissaries full of gossip; the little houses of the little people; the previews; the drinking; the rivalries. Budd Schulberg knows all these things. His mother is Adeline (Jaffe) Schulberg; his father is Benjamin Percival Schulberg, who has been a producer and top-flight executive in Hollywood for more than 20 years; and he himself has been working there off and on since he left college.

Budd Wilson Schulberg even grew up in Hollywood. He was born in New York City, however, and didn't get there until he was five and old enough to enter the kindergarten of the Wilton Place Grammar School. While still in grammar school he wrote a poem ("I'm afraid it was about Jehovah") that moved his mother to tears. "Terrible!" was his father's reaction. But Budd didn't care. From there he went to the Los Angeles High

School, from which he was graduated in 1931, to Deerfield Academy (Massachusetts) and to Dartmouth, which gave him a B. A. in 1936 in spite of the fact that he had "vexed the Tory alumni" by helping the Vermont quarry strikers. Most of the time in school and college Budd was editing his school papers: the *Blue and White Daily* (in which he wrote editorials about keeping the grounds clean), the *Deerfield Scroll* and *The Dartmouth.* And he knew when he left college exactly what he wanted to do.

BUDD SCHULBERG

First of all he married Virginia Ray, a dancer, in 1936. (They now have a daughter, Victoria.) Then he set out for Hollywood, where he had a job as a reader in the David O. Selznick (see sketch this issue) studio's story department and did "under-cover" work on *A Star Is Born* before getting a job as a junior writer. He finally resigned because he wasn't given enough to do. But he was writing stories, too, and eventually they came out in magazines like *Collier's, Liberty, Esquire* and *Story.* By 1940 he had the honor of being included in the late Edward J. O'Brien's Honor Roll for 1939. "I'm not one of those who think Hollywood can destroy you," he says firmly, "unless you are particularly intent on being destroyed. . . I even think it can improve your work, as long as you remember you have other work to do."

Schulberg remembered his other work in the fall of 1940 and set out to write the novel he wanted to write. He limited it to Hollywood, with the idea that if "we can figure out one slice of the world the rest may begin to make sense." He worked on it in Norwich, Connecticut, and when it was finished he returned to Hollywood, where RKO was already making *Passage from Bordeaux,* based on a novelette he had written. There he plans to work on a new novel—probably one about a prize-fighter. And he will also have the job of dramatizing *Sammy* for Broadway production. A "big-shouldered, heavy-handed" young man who "talks shyly, introspectively, without flashy flourishes," Schulberg is rather proud of the fact that he was once Secretary of the Southern California Pigeon Racing Association "and on a good night can sing every libretto of Gilbert and Sullivan." He insists that his life in Hollywood is fairly simple. It has always been that way, he says. "I don't seem to have done any of those things that sound so exciting on the back flaps of books. I mean I have never harpooned whales off the coast of Alaska or sailed around the world in an open boat or put in a season as a sand hog under the Hudson River." If those are really the things that go with being a successful novelist, undoubtedly the answer most critics would give is: "You will, Budd, you will."

SCHUSTER, MAX LINCOLN *See* Simon, R. L. and Schuster, M. L.

SCOTT, RAYMOND Sept. 10, 1909- Composer; bandleader

Address: c/o Music Corporation of America, 745 Fifth Ave, New York City

"This Raymond Scott," wrote Carleton Smith, "is a press agent's natural. He suggests spoons in tones, does musical portraits of cows, fences, weeds, wrote a study on the feel of a thimble, a coin, a telephone." The latest creation of his fertile imagination is "silent" music in which, says *Time*, "the only sound from the stage is a rhythmic swish-swish from the drummer, a froggy slap-slap from the bull-fiddler, a soft plunk-plunk from the pianist. . . It was just

RAYMOND SCOTT

provocative enough to make listeners wonder whether the silence of other bands might sound better than Scott's. But the stunt showed that Mr. Scott still had his bid in as the most elfin of United States bandsters."

Ushering in his career with a "quintet" that contained six men, and a name out of the telephone directory—he was born Harry Warnow, brother of bandleader Mark Warnow of the *Hit Parade* show—Scott wrote brittle interpretative jazz pieces with titles like *Twilight in Turkey* and *Reckless Night on Board an Ocean Liner*. In the past year he has enlarged his band to 14 men, retaining the six-piece unit within the compass of the larger orchestra. The band plays dance music that often sounds "danceable" and even somewhat conventional, but it specializes in the descriptive effects, tone shadings and dynamics that made famous the music of the smaller group.

"Meeting Scott," Carleton Smith informs us, "you're surprised. Thickset, stubby, swarthy, his chief trait is his adolescence. At moments he's neither aware of himself nor of the world. He's no windbag. Nor does he act like a mad screwball. He doesn't smoke or drink. He smiles seldom and often runs his fingers through his shock of upstanding hair. Brooklyn-born, he gives off that same eerie, out-of-the-world charm found in the Dodgers." Scott is five feet ten inches tall, weighs one hundred-eighty pounds, has black hair and very dark brown eyes.

Scott's tendency to label things began during his boyhood. Given to experiments in sound techniques, he and his brother had all sorts of microphones and wires strung about their room, and Scott dubbed the hobby "creative acoustics." He was mood-conscious, as well, and arranged special lighting effects so that he might practice scales in blue, green and orange rooms. His musical likes ran to descriptive music such as Tschaikovsky's *1812 Overture*, with its booming cannon, or the rolling sea of Debussy's *La Mer*.

His father, Joseph Warnow, had been a violinist in Russia (his mother was Sarah [Small] Warnow), and his older brother Mark was already prominent as a conductor-composer when Scott was graduated from Brooklyn Technical High School. At graduation exercises he played his own piano composition, *Metropolis*. The merits of it so impressed Mark that he sent his younger brother to the Institute of Musical Arts, New York City. The first public performance of the work of Raymond Scott took place in 1932, when brother Mark played *Xmas Night in Harlem*.

It was several years before what *Down Beat* called Scott's "huckleberry music" came into its own. Meanwhile he thought up curiously descriptive tunes to amusingly whacky titles because his mind ran that way. Somehow it seemed less dull than the standard dance music, innocuously titled. But Scott had only a limited circle of boosters, of whom CBS producer Phil Cohan was one. For such titles as Scott chose there was some slight precedent in the classical world (Prokofiev's [see sketch this issue] *Love of Three Oranges*) but in the jazz world one found them only as the exceptions (Forsythe's *Serenade to a Wealthy Widow;* Armstrong's *King of the Zulus at a Chitlin' Rag*).

In the 1930's Scott was a house pianist for CBS. He had the appearance of being shy and sensitive, and seemed a little moody at times. He played like a "blues" pianist, his fingers touching the keys lightly and his ear inclined to subtle nuances of tone. In June 1936 the group he played with on a 15-minute jazz spot moved, almost intact, into the band spot on the first network jazz program on the air, *Saturday Night Swing*. In the band, among others, were mustachioed Jerry Colonna, now a Hollywood film star (trombone), Bunny Berigan, now a bandleader, on trumpet, and the famous trap man, Johnny Williams, on drums. The "Quintet" as such was a nucleus of men from this band, and had its bow early in 1937 with *Twilight in Turkey*.

From then on the rise of Raymond Scott, his "Quintet" and his "huckleberry music," was phenomenal—in the best Broadway meaning of that term. In April his first records were waxed, and in August Darryl Zanuck (see sketch this issue) signed him for a year's work at 20th Century-Fox, Hollywood. *Toy Trumpet*, featured in a Shirley Temple picture, became the hit novelty tune of the year, and his adaptation of a Mozart theme, which he called *In An 18th Century Drawing Room*, had a prompt and—for Tin Pan Alley—surprisingly enduring prosperity. By August 1938, Scott and his men had worked in *Ali Baba Goes to Town; Sally, Irene and Mary; Happy Landing;* and *Rebecca of Sunnybrook Farm*. But he was temporarily off Hollywood, reportedly because he didn't approve the costumes in which a producer wished to dress the "Quintet." At any rate the East also had tempting offers, so Scott came back to New York and for the CBS network created a unique jazz laboratory, experimenting with toy trumpets, table tops, sea shells, wire whisks and even buckets of water.

"None of Scott's pieces," the composer said in an interview (he sometimes uses the third person in talking of himself) "are *written* by him. He doesn't compose notes—he composes sounds, tone variations." In creating numbers the band makes stacks of acetates (play-back records), and when a satisfactory one is made the number is transcribed from it. His instructions are not unlike his titles. "Play this loud," he might say, "as loud as you can play it, but no louder than you can play it soft." This is known in the Scott lexicon as "shock excitation."

"Crisp" is Raymond Scott's favorite adjective, and it describes his music. Succinct in statement and relatively free of the clichés that usually beset novelty dance music, it has attracted such discerning listeners as Stravinsky, Heifetz, Whiteman and Duke Ellington (see sketch this issue). Even when tinkering with the rhythm to suggest the waddle of a "Huckleberry Duck"—which turns out to be a duck that likes huckleberries—Scott keeps the crispness. Critic Carleton Smith thinks that he does so partly by driving his men like a drill sergeant and says he can be "unreasonable, demanding, petty about details," but the same has been said of many a conductor in what Mr. Scott's friends call the "longhair" division. The point seems to be that he wants his music a certain way, clearly expressed and technically solid, yet with real feeling, or, as he puts it, "spoiled, not perfect like Kostelanetz."

Scott's tunes are amusingly descriptive, sometimes a formidable task in view of the titles he gives them. Ten transcontinental air trips made him sensitive to the bumpy weather over Newark, New Jersey. Certain sounds and sensations accompanied this situation. The tone of the motor changed as the plane dropped and rose in the air pockets, and there was a definite rhythm to the hostess' repeated instruction, "Fasten your safety belts, please." Ergo, Mr. Scott composed a tune for the world's only six-man quintet, and it was appropriately called *Bumpy Weather Over Newark.*

War Dance for Wooden Indians was slightly more extreme. It was, he explained, "based on a real legend. It seems there's an old abandoned warehouse in a city in Oklahoma, full of wooden Indians. Once a year at midnight, they go into a war dance." And where, Mr. Scott was asked, had he heard the legend? Scott replied, unblinkingly: "I made it up."

Since his *Xmas Night in Harlem* Scott has turned out more than 25 successful numbers in like genre. In October 1939 his band was increased to standard name band dimensions and presented over CBS. In February 1940 the Ballet Theatre put on a six-scene operetta based on Scott's music, and late that year Scott discovered "silent" music.

In 1935 Scott married Pearl Stevens, a petite, pretty brunette. They have one daughter, Carolyn Scott Warnow. He met his wife as the result of a hunch. Friends described her, and Scott asked for her phone number. He phoned her the next day, making a recording of the conversation. When she was about to hang up, he switched on the play-back. Soon after that they were married.

Raymond Scott, like his brother Mark Warnow, has a reputation for absent-minded and/or "whacky" deeds—lacing his shoes before he puts them on, refusing to sign a lease because a landlord won't let him park his limousine in the drawing room, etc. Whether these are fact or fiction, they fit into the public's idea of an almost normal home life for someone capable of writing a *Duet for Pistol and Piano* or *Dinner Music for a Pack of Hungry Cannibals.* Other stories tell of a more serious side, for Scott is more than a hobbyist in his sound experiments, some of his acoustical ideas having gone into practical usage. He is also conscientious in projecting his musical brain children. Mrs. Scott listens to them, and if one sounds even vaguely like another tune, it is discarded. Scott also shows his music to brother Mark, whose opinion is valued highly by the young composer and who grades it by percentage.

Surprising to music fans who might suppose his inventive and organizational talent to be channeled only into the field of composition is the knowledge that Scott is a business executive who operates a record company and a music publishing firm.

SEABURY, DAVID Sept. 11, 1885- Psychologist

Address: b. 124 E. 40th St, New York City; h. 47 Narragansett Ave, Ossining, N. Y.

Perhaps the hardest man to see in New York is also one of the most approachable. If you want to consult David Seabury you must make an appointment months in advance. Yet he spends most of a long working day just seeing people.

The reason is that there are so many perfectly normal people with worries they want to talk over with "the normal man's psychologist." If you are a neurotic or a psychotic, it is easy to find a psychiatrist or a psychoanalyst who is interested in your case. If you want to be told a series of platitudes and merely ordered to cheer up, there are plenty of so-called psychologists to consult. But David Seabury is interested in the practical psychology of the normal human being, in the discovery and assembling of mental resources to create greater power and efficiency, in emotional education and the adjustment of personal and social relationships.

Not many people realize that David Seabury was originally David Dresser. His father was Julius Alphonsus Dresser, a pioneer of "mental healing"; his brother was Horatio W. Dresser, the founder of "New Thought"; his mother was the former Annetta Seabury. He himself

DAVID SEABURY

legally adopted his mother's name of Seabury as his surname, perhaps because his psychological theories were at variance with those of his father and brother, perhaps merely not to be confused with them.

David Seabury was born in Boston and grew up in a home where the names of William James, Josiah Royce and George Santayana were household words. Miss Alice Longfellow ("grave Alice" of her father's poem, *The Children's Hour*) was interested in him as a boy and encouraged him as a young man. His early education was in the historic Chauncey Hall School in Boston; then at 13 he was sent to the Scuola Bettini Recasoli in Florence, Italy, for a year. Returning to America, he studied under private tutors for four years, for two years was a special student at Harvard, then, at Miss Longfellow's suggestion, spent five more years in special study and research in Paris, London, Munich and Rome. He has no college degree, a rare thing for a consulting psychologist of his standing, but he is very far from a mere "popularizer" or a superficial adviser on psychological problems.

When Mr. Seabury finally returned to his native country for good, he settled in New York, where he began practice as a consulting psychologist in 1914. A year later he went to Indiana as consulting psychologist of the Culver Military Academy. In 1916 he was psychological examiner and lecturer for the R. O. T. C. at Fort Benjamin Harrison. He soon began to be known as a lecturer, and now gives up to 100 lectures a year. For many years he has given an annual course of lectures for the members of Town Hall, Incorporated, in New York City.

In 1923 Mr. Seabury was married to Florence Guy. Their home is in Ossining, New York, a beautiful country town. He has little time to enjoy its beauties, however, since he not only keeps long office hours full of interviews with clients but manages to get in several long lecture tours every year, and since 1924 has published 14 books. His lectures and books presented in non-technical language are solidly grounded on his clinical experience.

His first book, *Unmasking Our Minds* (1924), was very popular. It was four years later, however, in 1928, before he had leisure to publish another, *Growing Into Life.* In 1934, after another long interval, *What Makes Us Seem So Queer?* appeared. Since then the books have come faster: *Keep Your Wits* (1935); *How To Worry Successfully* (1936); *Help Yourself To Happiness* and *The Art of Selfishness* in 1937; *Build Your Own Future, Adventures in Self-Discovery* and *How To Get Things Done* (with Alfred M. Uhler) in 1938; *See Yourself As Others See You* and *Why We Love and Hate* in 1939; and *How Jesus Heals Our Minds Today* (1940). Many of these books were originally given as lectures and later worked out in book form.

Mr. Seabury calls his psychological system Centralism, and is the founder of the Centralist School of Psychology. "The only hope of civilization," he says, "lies in the application of psychology to everyday life, to business problems, to friendship, and to marriage." As consultant, as lecturer and as writer, he is chiefly concerned with making people realize things about themselves which they have never properly understood before, and then with getting them to apply this new knowledge to their day-to-day problems and relationships. As evidence of how closely he keeps in touch with the present, he has added a new lecture to his course on the psychology of peace and war. He has no children of his own, but he is keenly interested in young people, and has been particularly successful as a consulting psychologist in dealing with the problems of adolescent boys and girls.

Many of our troubles, he thinks, come from a misuse of the imagination, which should be our most useful servant. He himself is a lover of imaginative literature, especially of the drama, and one of his lectures is on modern drama from the psychological angle. The proper training of emotion, which may be our greatest strength or our greatest weakness, is another of his foundation stones. His whole work is oriented toward the establishment of self-critical judgment and self-administered mental hygiene, with the aim not only of making our lives pleasanter and more effective, but also of preventing the development of neuroses, "nervous breakdowns," and mental quirks.

In appearance, Mr. Seabury bears a striking resemblance to pictures of Shakespeare—as much so, almost, as did the late Sir Hall Caine. His hair has retreated from a high forehead, and he wears a full mustache and a Vandyke beard, both now well tinged with gray. His eyes are deep-set, with the horizontal bar across the top of the nose which so often marks the deep thinker. If one were to search for words to describe his personality the first to come to mind would be "informal", "direct", "practical" and "cheerful." There is nothing of the Pollyanna about David Seabury. Scholarly without being heavy, his books read like what they really are—talks with a man of keen mind and vast experience, who likes people and wants to help them.

Asked by an interviewer how he became first interested in psychology, Mr. Seabury looked bewildered. "Why," he finally said, "I grew up in it. Psychology is as native to me as my mother tongue, or as the customs we all learn as children. In our household, it was a custom we learned as children. The surprising thing would have been if I had become anything except a psychologist."

SELASSIE, HAILE, I *See* Haile Selassie I, Emperor of Ethiopia

SELDES, GEORGE (sĕl'dĕs) Nov. 16, 1890- Author; journalist

Address: b. 19 University Pl, New York City; h. Grist Mill Rd, Norwalk, Conn.

Nearly all his life George Seldes has been carrying on a battle for freedom of the press —freedom to print news as it happens without fear of censorship or distortion for the benefit of advertisers, or stockholders, or the fostering of any particular view in the minds of the public. More than 30 years' experience either trying to get the truth (as he sees it) into the newspapers or trying to get his books reviewed haven't made him any more resigned to the things a none-too-docile reporter finds himself up against. If anything, his indignation has increased with time, perhaps because he sees democracy as impossible without a truly free press, and Fascism as a danger more immediate than ever.

Born in Alliance, New Jersey on November 16, 1890, the son of George Sergius and Anna (Saphro) Seldes, George Seldes found himself in a Utopian colony started by his father, who acted as postmaster, teacher and justice of the peace. It didn't last long after his birth, however, and he went on to attend a perfectly non-Utopian high school in Vineland, New Jersey and the East Liberty Academy in Pittsburgh. He was 18 when he spent his first morning in a newspaper office—the office of the Pittsburgh *Leader*. "Timid, scared, but happy," he confided to the city editor: "My view of journalism is that it is the finest profession on earth. On the freedom of the press all our liberties are built." "Rats!" replied the city editor, who went on to tell him a thing or two. After the first day he didn't need much telling; his first story had been changed to please an advertiser. And after that he learned fast. He still remembers how a case involving the Mellons was so completely suppressed that even the telegraph companies wouldn't send it over their wires.

GEORGE SELDES

After working as a reporter on the *Leader* and as copy desk and night editor on the Pittsburgh *Post* young Seldes decided to go on to college with $675 that he had saved. He picked Harvard (as did his brother Gilbert), spent a year from 1912 to 1913 as a special student—possibly the only pupil of George Pierce Baker who never wrote a play—and then went back to the *Post*. When the First World War began he was writing the headlines most of the time and putting the city edition to bed. In 1916 he became managing editor of *Pulitzer's Review* in New York City.

In October 1916 he went as a free-lance to England, covered the "front," became an assistant in the London office of the United Press, and when the United States finally declared war both he and his brother went to the Embassy and registered for war service. July 1917 found him serving as the entire reportorial staff of the Army edition of the Paris Chicago *Tribune* (of which he was later managing editor) and, one week later, as a member of the press section of the American Expeditionary Force. "We all more or less lied about the War," he says, and tells how "on Armistice Day four of us took an oath on the battlefield that we would tell the truth the rest of our lives, that we would begin telling the truth in time of preparation of war, that we would do what was humanly possible to prevent the recurrence of another such vast and useless horror. Then we all went back to prosaic reporting in America."

He didn't go back, however. He stayed in Europe as assistant to the London correspondent of the *Tribune* in 1919, and he was for nearly 10 years the nominal head of the Berlin Bureau of that paper. But the greater part of his time wasn't spent in Berlin. During the post-War period he investigated the Irish disturbances and interviewed all the Irish

SELDES, GEORGE—*Continued*

heroes, including Michael Collins and Figgis; he was in Italy in 1920 for the Fiume adventure and the so-called Red uprising (he was expelled); he was in Germany that same year for the Kapp *Putsch.* He smuggled news out of Moscow during the famine-days of 1922 and 1923 and was asked to leave the last year; he was expelled from Italy again in 1925 for being the first to report that Mussolini was "the military arm of the chambers of commerce and the manufacturing associations of Italy and that he personally was implicated in the assassination of the leading rival politician" (Matteotti).

Through 1925 and 1926 he was the only American correspondent with the French Army in Syria during the entire war, had a world scoop on the bombardment of Damascus, was accused by the French of starting a mutiny in the Foreign Legion when he interceded to save the life of a deserter, and was threatened with disembowelment by the Arabs on the charge that his dispatches were pro-French. He scooped the Vienna Revolution of 1927, too, and that same year investigated Mexico and discovered the falsity of the Avila documents.

During these years he had covered "wars, uprisings, peace conferences, assassinations and coronations of kings" and watched "the dictators on the march to power" in Europe and the Balkan and Baltic States. They were years of "continual struggle with censorship." He came out with a strong hatred of Fascism, only equalled by his hatred of war and its makers, and also the beginnings of an understanding of the forces in every country that threaten democracy. In 1929, the year after he resigned from the *Tribune,* he published *You Can't Print That.* Largely concerned with those European years, with suppressed stories about such figures as Lenin, Mussolini, Von Hindenberg, Von Ludendorff, Queen Marie, d'Annunzio, Bratianu, Masaryk, Beneš—most of whom he had interviewed—it touched only lightly on the status of freedom of the press in the democracies. It was favorably reviewed and widely read, and the same year saw the publication of the British edition of the book.

Then came the period that Seldes describes as characterized by depression and panic, the rise of the "public utility propaganda system," the NRA, the New Deal, new labor unrest, "new danger of dictatorship." And of growing nationalism and frantic preparation for war—in 1931 Seldes was already predicting world conflict for the early 1940's. *Can These Things Be!* (1931); *Sawdust Caesar* (written in 1932 and published in 1935), the inside story of Mussolini's rise to power, rejected by 24 publishers before printed; *World Panorama, 1918-1933* (1933); *The Vatican: Yesterday, Today, Tomorrow* (1934); *Iron, Blood and Profits* (1934), concerned with the "munitions racket"; and *Freedom of the Press* (1935) were published, each a little more toward the Left than the last in its point of view.

Seldes was listed as an editor of the now defunct magazine, *Ken,* when it started out with brave designs; he withdrew shortly afterward. Then, from December 1936 to May 1937, he was war correspondent in Spain for the New York *Post.* To his mind the things he had seen all tied up at last: he returned to write a book not so much about Spain and Franco as what he described as "a survey of the forces attempting, in the name of patriotism, to make a desert of the Bill of Rights" in the United States (*You Can't Do That,* 1937). This book the *Christian Century* and the *Churchman* found required reading, although the *Saturday Review of Literature* reviewer found it too exclusively preoccupied with the rights of labor.

In 1938 came *Lords of the Press.* Both more liberally documented and more sensational than *Freedom of the Press,* it attempted to find a relation between the interests (financial and otherwise) of the various publishers or owners of American newspapers, newspaper chains and press associations and the particular news-bias which Seldes found in their columns. His conclusions were generally unflattering; Roy Howard, the New York *Times,* the New York *Herald Tribune* came in for a large share of criticism. Most book reviewers ignored it, although various organizations sent letters asking those who had remained silent about their reasons and future intentions. Of those who did review it, Stanley Walker of the *Herald Tribune Books* found it filled with "hysteria, malice, innuendo and invective." On the other hand, the New York *Post* printed one-third of an "entirely favorable review"; William Allen White's son praised it in the *New Republic*; Charles Beard (see sketch this issue) and John Dewey sent letters of approval. And it has probably reached a wider audience than any of Seldes' other books except *You Can't Print That.*

Seldes' most recent books have been *The Catholic Crisis* (1939); and *Witch Hunt,* (1940). In May 1940 the first issue of his first publishing venture—a four-page weekly newsletter, *In Fact*—appeared. Seldes had said: "What I want to do is publish a magazine telling the truth. . . I would like to do what Lincoln Steffens did and I don't mind being called a muckraker." Among its purposes are, he says, to publish "the real inside news, the kind newspapers frequently get but dare not print"; to "fight Fascism." He says further: "The viewpoint of *In Fact* is simple: it is in favor of every idea, movement and organization that is for what we carelessly call liberalism, democracy, progress, but it intends to show up the frauds which hide behind these words; it is pro-labor, and especially pro-progressive labor. It believes in the 'general welfare' as written in the Constitution and challenges any publication feeding out of the hand of Big Business to prove by acts that its policy is the same." It is very definitely far to the Left of Center, and has not escaped charges of bias, however.

Mr. Seldes is married to Helen Larkin Wiesman of St. Louis, Missouri (whom he met in Paris). He has frequently contributed to various magazines: *Harper's, Scribner's, Saturday Evening Post* and *McCall's,* as well as to liberal and radical weeklies, *The Nation, New Republic* and *New Masses.* Only something world-shaking can make him speak on a public platform, however.

SELFRIDGE, H(ARRY) GORDON Jan. 11, 1864(?)- English department store executive

Address: b. Selfridge and Co, 400 Oxford St, London, W. 1, England; h. Brook House, Park Lane, London, W. 1, England

H. GORDON SELFRIDGE

The German *Blitzkrieg* against England did not spare Oxford Street, one of London's greatest shopping centers. One of the stores that "caught it" was the famous house of Selfridge and Company, though business has long since been going on there as usual. Selfridge's big pillared palace of commerce is one of the sights of London and one of the Capital's institutions. It has an information bureau that will tell you in two minutes what horse won the Derby in 1903, when Siam decided to call itself Thailand, what disease Henry VIII died of, and the location of the barber shop nearest to the place from which you are phoning. It has the biggest and highest roof garden in England; its services extend from safe deposits to silk stockings. And this store, the chief office of a big chain of general stores throughout England, is the creation of an American, Harry Gordon Selfridge.

At the age of 39 Selfridge had made some $1,500,000 in America and decided to retire. But he found retirement a bore and went back into business, this time in England. It was not until 1939 that he retired again to take the "inactive, empty post" of president of Selfridge's. And his retirement this time was a good deal less spectacular. Selfridge's, once an enormously profitable concern, has been showing only slight profits for the past few years, and Harry Selfridge left owing it £114,000. Although he had called Hitler a great patriot in 1937, he could blame him for part of his troubles. But there were other reasons, too, among them "an ill-timed expansion scheme" of eight years before. When in 1941 the company was reorganized he was retained as "consultant" at £2,000 a year, over the objections of a number of stockholders who felt the present financial condition of the firm was his fault.

Selfridge was unperturbed by this situation. He continued to work on his biography of the fifteenth-century Florentine trader Cosimo de Medici, and he continued to keep his faith in business as "a wonderful adventure, the greatest fun on earth." Always he has maintained: "I enjoy every minute of business," and this has been his consistent attitude throughout his whole career—throughout its ups and downs.

If any one should suggest that a "business is fun" attitude is easy to understand in the boss of a big concern, Selfridge would probably answer, first, that he began as an employee and a humble one at that; second, that in his store everything is done to make life pleasant for the staff. Employees are given every help for diversion and encouraged, not driven, in their work. "Believe me," Selfridge once told an interviewer, "it is the worst policy to be too harsh with the young. . . Nothing pays worse than savaging employees. Rap a boy or girl over the knuckles unsympathetically and brutally in the morning and you get no more good out of him or her for the rest of the day." Selfridge is also credited with having said that if an employee does not win promotion in three years "there is something wrong with him—or with us." That the employees appreciate policies like these is evidenced by their presentation to Selfridge of a portrait bust of himself by Sir Thomas Brock, R. A., in 1914.

Selfridge is, in the words of the *Manchester Guardian,* "agreeable, unconventional and accessible, and clever in concealing his cleverness. He is also a man of the most ebullient optimism and tireless energy." There are those who like to believe this energy derives from his New England ancestry. Harry Gordon Selfridge was the only son of Robert O. Selfridge and Lois Frances (Baxter) Selfridge. His father was a New Englander who fought on the Northern side in the Civil War and died soon after the birth of his son in Ripon, Wisconsin.

When Harry was a year old his mother took him to Jackson, Michigan, where she

SELFRIDGE, H. GORDON—*Continued*

worked as a schoolteacher. Harry went to the public schools there and spent his vacations working at all sorts of odd jobs. His mother trained him carefully; she used to tell him stories which, "instead of beginning . . . with 'once upon a time' as a preface to a tale of bygone days . . . always looked to the future. 'Supposing, Harry,' she would say, 'that you were a man who had worked his way up and had made a fortune, let us suppose how you would live.'" Mrs. Selfridge lived long enough to find out.

Harry left school at fourteen to work in a bank and stayed there for two years as junior clerk. Then came a short spell as bookkeeper at a factory. By this time he had the necessary Congressman's nomination for Annapolis, but was turned down because he was a quarter of an inch too short. Finally in 1880 he made his real start—with the Chicago mail-order firm of Field, Leiter and Company, which later became the famous house of Marshall Field and Company. He began at $10 a week, mostly traveling. When, a year later, he was offered another job, Field gave him a salary increase and made him deputy manager of a department.

After he had been with Marshall Field almost six years—he was twenty-two then—Selfridge looked over the catalog of a Boston dry goods house and decided it had some good ideas in it for Marshall Field. He went to Boston, and from there to New York and Philadelphia, picking up suggestions, most of which were soon put to use in Chicago. It wasn't long before he had taken over the retail side of the firm, and, still in his middle 20's, was earning $5,000 a year. Journeys to Europe came next, and with them more new ideas—even the idea of starting his own business. Field, appalled at the idea, stepped his salary up to $20,000 at one stroke and in 1892 made him a junior partner in the firm. Then in 1903, when he was 39 and had made a fortune, Selfridge retired.

Selfridge traveled a little, looked after his fine collection of orchids and frequented the Chicago clubs. But he was bored: politics didn't interest him; he was still on the bright side of 40 and full of energy. Then he had a chance to acquire the Chicago firm of Schlesinger and Mayer. He took it, and after some months sold out again to Carson Pirie Scott & Company, having cleared a profit of $250,000. He says he is the only man ever to buy a business from five Jews and sell it to seven Scotchmen at a profit. It was 1906 when he went to London and, after thinking about it for a while, decided to start over again in business there.

The great Selfridge business was started at the west end of Oxford Street. For 10 months 1,500 workmen labored at the construction, which cost something like a million dollars, and finally in March 1909 the store was opened to a fanfare of advertising for its 130 departments. In the first year it sold some five million dollars' worth of goods and went right on from there. It was a social center with reading rooms, rest rooms and a roof garden, as well as a place of commerce. Selfridge insisted that visitors shouldn't be pressed to buy but should be considered welcome guests even when they bought nothing. He attracted them to his store by skillful advertising and little semi-philosophical, beautifully written essays in the London *Times* signed "Callisthenes."

Then after the First World War a number of provincial and London suburban stores were taken under the Selfridge wing, though allowed to retain their distinctive characters. Selfridge himself had by that time written a book called *The Romance of Commerce* (1913) and he continued to live his belief in that romance. He also delivered himself in his years as head of his stores of a number of dicta: "Imagination is one of the very greatest secrets of success. I rank it almost as high as enthusiasm," is one. Another is, "The old homely adage about 'honesty being the best policy' sums up the wisdom of the world. Men sneer at copybook maxims, but if we all acted on them we would get along better than we do at present."

Selfridge lived first in Arlington Street and then in Portman Square, both "good addresses," not far from his business. Later he took the aristocratic Lansdowne House, and later still he moved to Carlton House Terrace. Today he has a flat in Park Lane, among the dukes. His speech, despite all his addresses and years spent as a popular host, still bears traces of America. In fact, it wasn't until May 6, 1937 that Selfridge became a British citizen.

In 1890 he married Rose Buckingham of Chicago, who died in 1918. There are three daughters and one son, H. Gordon Selfridge, Jr., now his father's successor at the head of the business.

SELZNICK, DAVID O(LIVER) May 10, 1902- Motion-picture producer

Address: b. David O. Selznick Productions, Inc, Culver City, Calif; h. 9336 Washington Blvd, Beverly Hills, Calif.

David O. Selznick, second-generation producer, has made a long string of hits since he entered the film industry as a boy in 1921, but he may never get over the experience of making *Gone With the Wind.* He doesn't like to hear *Rebecca* preferred to the fabulous *GWTW,* though he got "Oscars" for producing both. "That makes me furious," Selznick once said (with a grin). "I really am furious—every time I hear that. And don't think I haven't heard it. At least 50 people have said it to me, and each time I go into a regular rage. There is nothing infuriates me so much. . . It was such a stupendous undertaking. Anything else, no matter what we'll ever make, will always seem insignificant after that."

During the last decade Selznick's successes have included: *Dinner at Eight, Dancing Lady* (MGM 1933); *David Copperfield* (MGM 1934); *Anna Karenina, A Tale of Two Cities* (MGM 1935); *Little Lord Fauntleroy, A Star Is Born* (Selznick-International 1936); *Prisoner of Zenda* (Selznick-International 1937); *Nothing Sacred* (United Artists 1937); *The Adventures of Tom Sawyer* (United Artists 1938); *Intermezzo* (United Artists-Selznick 1939); *GWTW* (Selznick-MGM 1940); and *Rebecca* (Selznick-International 1940). As prize getters Selznick pictures have always been successful, but the last-named picture established a record—it accounted for 10 of the 17 major "Oscars" in 1940.

"Mr. Selznick's big effort of 1941," predicts Duncan Underhill, "will be *Claudia, Jane Eyre* or an original by W. Somerset Maugham. The betting is that he will shoot the works on *Jane Eyre.*" There is also the possibility that Selznick will produce a story on which Theodore Dreiser is now working, one that will serve as a vehicle to carry the tunes written by his brother Paul. Mr. Selznick is free to do any or none, renting out his high-priced stars to other studios while he makes up his mind. For he is now his own boss. Selznick-International, formed in 1935 with the backing of the wealthy John Hay (Jock) Whitney and a group of bankers, was dissolved in August 1940, "with profound regret . . . that the risks involved, due to world conditions, made it desirable for us to take this step."

As of that date *GWTW* had grossed $14,000,000 (and has in 1941 gone over the $31,000,000 mark!), and *Rebecca,* a box-office Cinderella in comparison, had earned $1,800,000. In a city where much was said to be colossal, one company had a happy, and colossal, ending. Selznick paced his office, explaining to reporters that Selznick-International had gone to the Hollywood Valhalla but that a new firm, David O. Selznick Productions, Incorporated, would assume its obligations. During the interview Selznick took nervous peeks at a gold wrist watch that bears the inscription, in Whitney's handwriting: "David—Xmas 1939. Praise de Lawd. Jack." In October he joined United Artists, buying a 25 per cent interest for $1,200,000 and agreeing to maintain constant production until he had finished $20,000,000 worth of pictures.

David O. Selznick was born in Pittsburgh, Pennsylvania, May 10, 1902, the son of Lewis Julius and Florence A. (Sachs) Selznick. He was educated at Hamilton Institute for Boys and took special courses at Columbia University. But his real schooling began as office boy in his father's studio. An in-and-outer in early motion pictures, his father's slogan, "Selznick Pictures Make Happy Hours," was known to millions back in the days when a thumping upright piano compensated noisily for the lack of a sound track on the film. The elder Selznick's firm collapsed in 1923 but before that David was in the business himself, having produced and made a profit on his first picture in time to celebrate his twenty-first birthday.

DAVID O. SELZNICK

In 1922, knocking around the hobo jungles of quickie moviedom in New York, Dave saw the possibility of a neat turnover in Luis Angel Firpo, the Wild Bull of the Pampas. The catch was that Firpo's fee was $1,000 a day. "So," relates Duncan Underhill, "Dave hired him at $500 for an afternoon, stuck him in front of a rented camera, and shot a six-reel picture. . . Territorial rights to this gripping drama sold for a net of $3,500 and Dave was on his way."

Opus 2 for the Selznick archives was a "Hollywood beauty contest" presided over by the late Valentino. The girls came by the thousands, but most of the footage in Dave's rented camera went to Valentino. This venture allowed him to pocket an additional profit of $1,500, and he deemed himself ready to storm the Hollywood citadel. Until 1925 he was with Select Pictures, working at publicity and advertising and tinkering with scenarios. In 1926 he went to Metro-Goldwyn-Mayer as junior story editor, bombarding the front office with little interoffice communications on production economies. Meanwhile, in private life he was observing the dictum of his father: "Live expensively. Live beyond your means if you have confidence in yourself. Money isn't

SELZNICK, DAVID O.—*Continued*

important." Dave's concession to this philosophy was an expensive car. The car got lost but the memos found their way to the executives of MGM and Dave was soon on his first production assignment. Sent out to make a Western, he made two. Said Selznick: "I went on location with two sets of stars and one supporting cast. I worked the cast twice."

In 1927 Selznick went to Paramount to head their writers' department but once more he made himself useful in production, and before he left in 1931 he was assistant producer and executive assistant to the general manager. From there he went to RKO Radio Pictures, staying with that firm until 1933 as executive vice-president in charge of production. His last job working for others was with MGM as vice-president in charge of production from 1933 to 1935. Then came the formation of Selznick-International, followed by the present firm that bears his own name. In 1936 MGM tried to tempt him with what is said to have been the largest salary ever offered to any living man for mere services. But Selznick refused. "At MGM I would be supervising the making of pictures," he explained. "I wouldn't be creating them. Here in my own company I create pictures. I have an active part in every phase of production. That's a lot of fun."

In transferring a book to the screen, Selznick likes to adhere as closely as possible to theme, mood, story line and characterizations. That's one reason why costs on *GWTW* were astronomical. And when he is not busy producing, he is an insatiable reader, as was his father. He thought of this in relation to his productions of Twain, Dickens and other authors: "I never realized before why I always wanted to make those pictures. . . Now I know it was because they were favorites of my father."

Mr. Selznick read *Gone With the Wind* before its publication in book form and immediately offered $50,000 for the story. A month after publication he turned down an offer of $350,000 for picture rights. Then began the process of filming it. Film tests alone cost $85,000. The search for a Scarlett O'Hara was far from a publicity stunt, though the newsworthiness of the event was proved by the fact that many of the girls who were film-tested for the part were helped to other jobs. Kyle Crichton tells the story of the meeting of Selznick and Vivien Leigh at a party given by Paulette Goddard, who had previously been tested for the part. He signed up Vivien Leigh almost immediately, and Miss Goddard, in a moment of pique, is alleged to have said: "Poor David! You really can't blame him. He was down to his last Whitney."

Selznick, a fellow producer commented, had "courage and the persistence to follow through. Courage is not worth much if you haven't the persistence to go through with your decisions." As illustration of this quality, writers have observed that in filming *Rebecca*, a story in which the leading character never appears, and in choosing Joan Fontaine, a comparative newcomer, for the role of the fear-ridden girl, he was, from the Hollywood point of view, taking a long chance. Says Mr. Selznick: "I've had some luck in discovering newcomers and if I weren't honest with myself I might be pretty smug about it. But the real truth is that a producer can only find and put over new personalities when he has patience, and the money for overhead, and the authority to refuse to be rushed into making judgments."

In experiments in Technicolor—a field in which Whitney had investments—Selznick produced films in which the color was natural and realistic rather than "pretty" and obtrusive, as had so often been the case before. Among his Technicolor productions have been *A Star Is Born*, *Nothing Sacred*, and *GWTW*. In the first of these occurs a line that reflects Selznick's belief in his own judgment. He had given the leading role to Janet Gaynor, despite hints that she couldn't carry it off. Playing the role of a director in this film, Adolphe Menjou faces the camera and speaks a line supplied by Selznick: "Everyone will say I'm crazy, but I'll take a chance on her."

"If you work with the man," a writer said of Selznick, "you have to agree with him that he can handle your job better than you can. Everybody from cutter to director is reconciled to the voice of authority barking: 'Hey, lemme do that!'" When Director William Wellman received his Academy Award for *A Star Is Born*, he strode across the room and handed it to his boss with the remark: "Take it. You had more to do with winning it than I did." When the 1939 awards were handed out, director Victor Fleming (*GWTW*) was not there to get his. Said Duncan Underhill: "It was reported he was ill, but not with lovesickness for Dave Selznick. Dave dutifully accepted Fleming's 'Oscar.'"

Selznick is six-feet-one, muscular and energetic. He has dark hair, bushy brows and bespectacled brown eyes. In his attitude toward subject matter he has declared himself a believer in escapist pictures. At a Rochester University Round Table discussion he was asked whether he thought the movie industry would ever stop foisting trash on the public. Said Mr. Selznick: "If we don't give it to them, radio will."

His mother, Mrs. Lewis J. Selznick, according to Quentin Reynolds (see sketch this issue), "is known as one of the most charming women in Hollywood, proud of her sons, and only she knows how often both David and Myron come to her for advice." Although his brother, Myron Selznick, is Hollywood's most famous agent, their dealings within the industry are strictly business. Selznick was married on April 29, 1930, in Los Angeles, to Irene Gladys Mayer, and they have two sons. In 1940 he was made a member of the advisory board of the National Education Association's Committee on Motion Pictures, Department of Secondary Education. His studio has yet to count all the honors and awards showered upon him and the pictures he has produced.

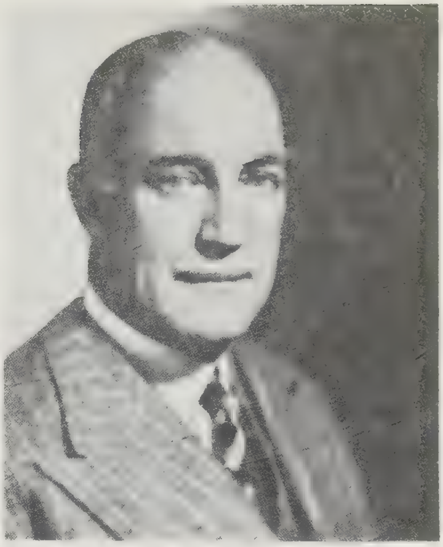
SEVERSKY, ALEXANDER PROCOFIEFF DE *See* De Seversky, A. P.

SEYMOUR, CHARLES (sē'môr) Jan. 1, 1885- President of Yale University; historian

Address: b. Yale University, New Haven, Conn; h. 43 Hillhouse Ave, New Haven, Conn.

Dr. Charles Seymour is president of one of America's great universities and what he has to say on current affairs is, consequently, important. In the past year he has told Yale students and the world at large that "our stake in the defense of Britain is almost as great as that of the British." He has advocated military training for undergraduates (though he feels this should be arranged so as not to interfere with their studies) and he has joined with other educational leaders in urging the universities of the nation to provide a moral and scientific background for a strong national defense.

To Seymour it is important that the colleges "clarify the issues which the citizens will face" and train their students "to think about those issues in reasonable terms." While he does not feel that colleges should "impose specific doctrines in the social, economic or political fields," he believes that they "must hold fast to a firm and definite creed: that there is a difference between right and wrong which cannot be destroyed by any negativist philosophy, that there is a distinction between the truth and the lie, between courage and cowardice, between the moral initiative and cynical irresponsibility. We believe that it is part of our university experience to make the distinction and to give effect to it." Although he voted for Willkie in 1940, he is a firm supporter of President Roosevelt's foreign policy.



Blackstone

CHARLES SEYMOUR

"Ruddy, well-tailored, fond of rough tweed jackets and pipes," Dr. Seymour doesn't look much like the popular conception of a college president or of a distinguished historian. Nor is his hobby of collecting first editions of E. Phillips Oppenheim a conventional one for a man of his position. In his accomplishments as historian and Yale president, however, Dr. Seymour has lived up to all that was expected of a man of his background and training.

He is a Yale man through and through. His great-great-great-grandfather, Joseph Coit, was awarded an honorary degree at Yale's first commencement in 1702; his great-great-grandfather, Thomas Clap, was Yale's president from 1740 to 1776; his great-uncle, Jeremiah Day, was its president from 1817 to 1846; and his father, Thomas Day Seymour, was Hillhouse Professor of Greek language and literature at Yale for more than a quarter of a century. (His mother was Sarah M. [Hitchcock] Seymour.)

Charles Seymour was born in Yale's town, New Haven, Connecticut and was graduated from the Hillhouse High School there. He didn't enter Yale immediately, but went, instead, to King's College in Cambridge, England. With a Cambridge B. A. (1904), he entered Yale as a freshman and distinguished himself in the next four years not only as a scholar (he won a philosophical oration appointment, many prizes in English and the classics and a Phi Beta Kappa key) but as manager of the freshman and varsity crews and a member of Skull and Bones and Alpha Delta Phi. He left Yale with his second B. A. in 1908 for further study abroad—at the University of Paris—and returned after a year to Yale to work for his Ph. D. He received this degree in 1911, with a dissertation

SEYMOUR, CHARLES—*Continued*

entitled *The Development of Democracy in England Since 1832 as Shown in the Reform of the Representative System.* In that same year he married Gladys Marion Watkins. (There are now three Seymour children, and Mrs. Seymour is unanimously recognized as Yale's "most charming hostess.")

Dr. Seymour started his working career at Yale in the fall of 1911 as an instructor in history. By 1915 he was an assistant professor; by 1918, professor. He had already published *Electoral Reform in England and Wales* (1916) and, with D. P. Frary, *How the World Votes* (1918). It was his *The Diplomatic Background of the War* (1916) which brought him to the attention of Woodrow Wilson, however. Wilson appointed him chief of the Austro-Hungarian division of the American Commission to Negotiate Peace and later made him a delegate on the Romanian, Yugoslav and Czechoslovak territorial commissions at the Paris Peace Conference.

It was while he was serving in Europe that Seymour came to know Colonel House well, and the Colonel gave him his personal papers relating to the Peace Conference to form the World War documents collection at Yale, of which Seymour is still curator. Later, too, Seymour was to collect and edit the four volumes of *The Intimate Papers of Colonel House* (1926-28) and to write two books, *American Diplomacy During the World War* (1934) and *American Neutrality, 1914-1917* (1935), based on that association and his experiences. Only this latest one, called "a one-sided volume which certainly added nothing to his academic reputation," was not generally acclaimed. As an historian Seymour has usually "interpreted America's entrance into the War in legalistic rather than economic terms," and his view of the Versailles Treaty is that its mistakes are due not to the leaders at the Conference, but to "the masses in the victorious countries." "If," he says, "the last 20 years of world history reveal an appalling record of failure in the political, economic and social sense, it is not because of certain clauses written into the Versailles Treaty."

After the War and the peace negotiations Dr. Seymour returned to his history courses at Yale, very popular as a lecturer, for students flocked to hear about the negotiations at firsthand. In 1924 he left Yale for a year to become exchange professor at the Universities of Brussels, Ghent, Liège and Louvain. When he came back again in 1925 he was active not only as professor and historian but also in the administration of the University. In 1927 he became its provost, the chief link between Yale's faculty and administration. As provost he coordinated the school and departments, arranged budgetary appropriations and took some executive details off President Angell's hands. In the years before he became president of Yale, Dr. Seymour was active, too, in encouraging the college plan. He helped supervise the building of the colleges and in 1932 became master of one of them, Berkeley. He also was chairman of the Council of Masters.

It was because of these activities that it was felt, when the announcement of his appointment to the presidency of Yale by unanimous vote of the Yale Corporation was made in 1937, that he would continue Angell's principles. Angell himself said of the appointment: "The University is most fortunate in the choice of Provost Charles Seymour to be its next president. He will bring to the position a lifelong acquaintance with Yale and a sympathetic understanding of her traditions and ideals... He brings to his great office qualities of heart and mind which will, I am sure, instantly win the confidence and loyal support of the whole Yale family."

Only *The Nation* was a bit ironic: "He comes of the American intellectual elite, who have always supported the holders of economic power. . . Thorstein Veblen once wrote a brilliant book called *The Higher Learning in America: A Memorandum on the Conduct of the Universities by Business Men.* There is nothing in Provost Seymour's career which makes him from such a point of view an unsafe choice." But Yale undergraduates thought themselves fortunate at this choice of a Yale man for Yale—the Yale *News* wrote: "It is with the greatest confidence and happy anticipation that Yale can look forward to the administration of Charles Seymour."

Who's Who in American Education

SEYSS-INQUART, ARTUR (zīs'ĭng'-kvärt är'to͞or) July 2, 1892- German High Commissioner of The Netherlands

Of all Nazi-occupied countries, The Netherlands is possibly giving its conquerors as unpleasant a time as any. The German High Commissioner there is Artur Seyss-Inquart, an intellectual-looking man whose disdainful expression may be due to the fact that he can hardly see without his spectacles. A decree of March 21, 1941 gives him authority "to set up machinery to execute summary justice—shooting for serious offenses—and to set aside Netherlands officials when necessary for 'public security.'" The Nazis are preparing for any possible future repetition of the riots, strikes and "conspiracies against German authority" that have worried them in the past: Nazi soldiers have been thrown into Dutch canals, among other things. On the other hand, the number of executions and mysterious murders of anti-Fascists that have taken place in Holland makes one wonder, a little, about the kind of "justice" dispensed prior to the decree.

Much water has gone under the bridge since the day in May 1940 when Seyss-Inquart was inducted as German High Commissioner of The Netherlands. Then he announced that: "Dutch laws hitherto observed shall remain in force as far as possible, Dutch officials are to be the instruments of power in the new administration. The independence of legal jurisdiction is to be preserved. . . The German Army would rather have entered this land with its arm raised in friendly salute than with weapons in hand. We did not come here to oppress the people and to deprive the nation of its freedom."

Since that time the economy of The Netherlands has been almost completely incorporated into that of the Reich. Dutch cattle, hogs, butter reserves, tobacco, oil and factory stocks have been fast disappearing, as have Dutch workmen conscripted for manual labor in Germany. Living costs are up, wages down, and although food rationing is apparently less drastic than in Belgium, Hollanders are not the rosy-cheeked, well-fed people they once were. Comprehensive restrictions on all Jewish activities have reduced Jews to the status of persons merely tolerated in the country; they are even forbidden to eat kosher meat.

High Commissioner Seyss-Inquart can remember one country that the Germany Army actually entered "with its arm raised in friendly salute"—although with weapons not completely forgotten. That country was Austria, a country which he himself helped betray to the Nazis. He is not an Austrian, however, but a Sudeten German, born on July 2, 1892 in Stannern near Iglau. Many of the associates of his youth later became leaders in the Czechoslovakian Nazi movement.

Seyss-Inquart was 16 when he first went to Vienna to study at the University of Vienna and take his law degree there. During those years, at least, he had liberal leanings—even toyed with the idea of joining the Social Democratic Party. His law practice interrupted by the World War, he served on the Izonzo front until discharged with a serious leg wound which still makes him limp a little. Another Catholic law student, Kurt Schuschnigg, had commanded the sector next to his; the two men continued their friendship. Schuschnigg, however, later joined the Christian Social Party, while Seyss-Inquart never openly belonged to any party until the days of the Fatherland Front.

Seyss-Inquart's history in the 1930's is an almost incredible Jekyll-and-Hyde story. One aspect is that of Schuschnigg's friend, a highly successful attorney with a large Jewish clientele, "a well-dressed man of aristocratic appearance and impeccable manners," popular in Viennese society, married, with two children and an apple orchard in which he takes great pride. He frankly favors union with Germany but certainly never sympathizes openly with the Austrian National Socialist Party.

ARTUR SEYSS-INQUART

The other aspect is that of Hitler's secret Austrian representative (exactly when he had been converted to National Socialism is not certain). This man directs the agents of Nazi propaganda and terror in Austria, secures for them passports, residence permits, etc.; they meet at his home, they communicate with one another through him, in important matters they rely on his judgment. It seems impossible that for years no one should have discovered that the respectable attorney and the chief of the Nazi Fifth Column were one and the same person, even though Seyss-Inquart was a man with a brilliant mind and memory and a talent for "adjusting his face and manner to the person with whom he was talking."

Some of the facts are particularly hard to believe. When in March 1933 Chancellor Dollfuss made himself dictator of Austria and created the authoritarian Austrian State both Minister Schuschnigg and Artur Seyss-Inquart were made members of the Austrian Corporate Council. Yet shortly before the assassination of Dollfuss by Austrian National Socialists, when Germany sent 80 special agents into Austria to reorganize the outlawed National Socialist Party as an underground movement, the agents met safely at the home of Seyss-Inquart. After the death of Dollfuss, Schuschnigg became Chancellor; Seyss-Inquart's only speech from the floor was a protest against Schuschnigg's attack on pan-Germanism. Said Seyss-Inquart, mildly: "To me that I am a German is just as important as that I am an Austrian; the time is past when we can afford to be divided into national groups." Yet at about this time he was winning over to the cause of National Socialism the organization of Austrian hotel proprietors whose counsel he was—on the grounds that

SEYSS-INQUART, ARTUR—*Continued*

it would bring back their lost German tourist trade. And in 1935 he personally arranged to bring the Austrian Legion back across the border in small groups and hold it in readiness for a German invasion—a plan which later had to be abandoned.

After July 1936 a secret Committee of Seven was established at No. 4 Teinfaltstrasse, Vienna with the purpose of protecting the Austrian National Socialists and helping them infiltrate into Schuschnigg's Fatherland Front. Seyss-Inquart was a member. In January 1938 No. 4 was raided, a plot for revolution revealed and frustrated. Furthermore, when a Nazi terrorist was arrested Seyss-Inquart's address was found on him, as well as plans for an attack on the Chancellery. Nothing more happened to Seyss-Inquart than a cross-examination by the Prefect of Police. But the ominous discovery, with the attendant possibility of a purge by Schuschnigg, made Hitler decide to accelerate his plans.

By February 1938, with the Nazi threat to Austrian independence growing steadily worse, Schuschnigg's trusted adviser Seyss-Inquart (with the help of German Ambassador Von Papen [see sketch this issue]) managed to persuade him to go to Berchtesgaden and try to come to some kind of an understanding with Hitler. It turned out to be a peculiar sort of understanding. Hitler delivered an ultimatum whose terms Schuschnigg was forced to accept two days later. In it he demanded political amnesty and freedom for the Austrian National Socialists and a reconstructed Schuschnigg Cabinet, including Seyss-Inquart as Minister of the Interior with complete authority over the Austrian police apparatus. The alternative was—a German invasion.

Immediately upon receiving his new post from the bewildered Schuschnigg, Seyss-Inquart flew to Berlin to get further instructions from Hitler. Back in Vienna, one of his first moves was to grant the Nazis of Styria the right to wear swastikas and shout "Heil Hitler!" He also made plans to visit other provinces "to lay the foundation for an undisturbed organization of the Nazi movement throughout Austria." (A more surprising act was his order that 11 former Socialist members of the illegal Defense Corps be reinstated in Vienna's Fire Department!)

On March 9 Schuschnigg announced that a plebiscite would be held on March 13 by which the people of Austria would be permitted to vote for or against incorporation in the Reich. Hitler, outraged, presented a second ultimatum on March 11: the plebiscite must be called off, or the Nazis would march. That same evening, with all sorts of rumors going around the city, Schuschnigg's sad voice was heard over the loud-speaker: there would be no plebiscite. Immediately afterward Seyss-Inquart, not so saddened, spoke. He ordered the Austrian Army to make no resistance. What followed everyone knows. Schuschnigg resigned; for the moment Seyss-Inquart became Chancellor and Minister of Defense, and invited Hitler to send troops in to "preserve order." "Austria is free. Austria is National Socialist. . . One People, One Reich, One Leader. Hail to our Leader. Heil Hitler!"

Hitler was more than prompt in accepting the invitation. On March 12 Austria was annexed. Schuschnigg saw his strange friend Seyss-Inquart next at the head of a band of Storm Troopers. Seyss-Inquart ordered the former Chancellor to remain in his apartment, stationed an armed guard there, and finally announced that he would be tried for treason. Yet, according to Oswald Dutch, Seyss-Inquart, too, was a "deceived deceiver." As soon as Hitler moved into Vienna he was given a position subordinate to *Gauleiter* Bürckel—named *Statthalter* of the *Ostmark*.

Seyss-Inquart remained in obscurity until, in March 1939, Bürckel and he began the Nazi campaign for Slovak "independence" with the aid of the Vienna radio station. In that same year he became Minister without Portfolio in the Reich Government, and after Germany took Poland in September 1939 he was honored with another post: Deputy Governor of the occupied territory. Now the man who wanted to govern Austria is governing the stubborn Dutch. According to Ludwig Lore, he says Holland must be brought to such a state of obedience that if the German Army should leave, the Dutch would actually ask it to return—no one must be left to oppose the Nazi rule.

SHAPLEY, HARLOW (shăp'lē) Nov. 2, 1885- Astronomer

Address: b. Harvard College Observatory, Cambridge, Mass.

Harlow Shapley, "probably the country's best-known astronomer," has almost as many awards and medals as the stars he has discovered. The Draper Medal of the National Academy of Sciences, the Gold Medal of the English Royal Astronomical Society, the Janssen Prix of the Astronomical Society of France, the Pius XI Prize for Astronomy (awarded on November 30, 1941) are only a few of the decorations the learned world has given this alert, unruly-haired scientist who has "broken down the barriers of the skies."

Since 1921 Dr. Shapley has been director of the Harvard Observatory, and as Harvard director "has probably had a larger part in the many important recent advances in astronomical knowledge than any other one man." From his desk in Cambridge he is in close touch with the activities of scientists all over the earth who have telescopes in operation over every portion of the heavens. As one commentator put it: the astronomers gathered around him "have divided the heavens among them as if it were so much pie and made tremendous progress in exploring and charting it." At Harvard they have made the most complete collection of celestial photographs in the world and have made Harvard, too, one of the most important centers for astronomical news.

As head of the Harvard Observatory Dr. Shapley is incessantly called on to talk at scientific congresses, to attend meetings all over the world. In 1925, for instance, he was at Cambridge, England, heading the Commission on Variable Stars of the International Astronomical Union; the next year he was in Leyden; in 1933 he was in Mexico inspecting its National Observatory; in 1934 he visited 13 islands in the West Indies; in 1935 he was in Paris. Not infrequently, at these congresses, Dr. Shapley has been known to startle his fellow dignitaries. Once he woke them up sharply by comparing man to a plant louse embedded on a lilac bush.

Harlow Shapley's father, Willis Harlow Shapley, was a teacher who died when Harlow was a boy. His mother, Sarah (Stowell) Shapley, was a descendant of the Massachusetts Stowells who reached the United States in 1640. His parents were living in Nashville, Missouri when Harlow was born. There wasn't a lot of money for the education of Harlow and his younger brother John, former professor of art at the University of Chicago and now visiting professor at Johns Hopkins University, but they both managed well. Harlow went to Carthage Academy and then, after a year's work on a newspaper, entered the University of Missouri when he was 20. At Missouri his most important paper was on "Astronomy in Horace with 46 references to his works."

After a year's postgraduate work at the University of Missouri (he received his M. A. in 1911) Dr. Shapley went to Princeton University, from which he received his Ph. D. in 1913. Then, with his bride, Martha Betz of Kansas City, who became something of an astronomer herself and helped him with his papers, he went to the Mount Wilson Observatory in California. Here he spent seven busy and profitable years, "during which he emerged as one of the most brilliant and original of the younger astronomers."

HARLOW SHAPLEY

His first astronomical work there was on variable stars and especially on the "enigmatical short-period variables known as Cepheids." In 1914 he put forward his "pulsation theory" of these stars. Then he made the discovery that variable stars held the key to stellar distances, a discovery which gave the world a new conception of the universe. Shapley was able to demonstrate that our universe is a thousand times bigger than the astronomers had previously supposed. At Mount Wilson, too, Dr. Shapley discovered a new center of the universe, a spot in the constellation Sagittarius, now called "Shapley Center." In 1918 he showed that our sun is a star of one of the star clusters in the heavens.

While he was measuring stellar distances, Dr. Shapley went off on a totally different line of scientific inquiry. He began to study ants. After he had noticed that the hotter an ant was the faster it would run along a track, he developed a theory about ant speed and temperature measurement on which he published papers. But he returned to investigating "such spectacular phenomena as the Great Gebula in Andromeda and forgot about the ants except for bottled specimens he keeps on his desk."

Since 1921 Dr. Shapley has been at the Harvard Observatory, doing significant research in astronomy and astrophysics and lecturing at various colleges and foundations throughout the world. One of the world's leading astronomers, he is still able to explain in simple language the complexities of the universe. In his writings and lectures he is particularly adept in making the layman see how the study of stars has personal meaning to him. He shows how navigation, keeping appointments, keeping time are all a part of astronomy. One of the "most human scientists

SHAPLEY, HARLOW—*Continued*

imaginable, he never dramatizes what he has done and insists that it is only as he and many others all over the world whittle away together that progress is made. He likes to insist that most of the advance in astronomical knowledge of recent years has been a matter of "girl-hours," the time of the young women who operate the photographic apparatus with which pictures of stars are taken.

Dr. Shapley is "a restless, pipe-smoking enthusiast . . . with a mind that darts from thought to thought so fast that his bristling conversation can hardly keep up with it." He likes people and he likes to discuss the universe with them in pungent talk. Sometimes he talks of religion: he believes "most astronomers are agnostics. Not atheists—that presumes more conviction than religion does. Scientists cannot have faith. Ours is a perpetual inquiry; any acceptance of faith—in a scientific or a metaphysical or an esthetic sense—brings inquiry to a halt." Most often he talks of the heavens, and sometimes, in talking, smiles at himself and other astronomers. "We make all this funny fury about things as old as the stars," he says. "Sometimes I suspect I know what they're twinkling at."

Who's Who in America

SHAW, ARTIE May 26, 1910- Band leader
Address: c/o Andrew Weinberger, 67 W. 44th St, New York City

In March 1941 Artie Shaw completed a series of radio programs, coming East to New York for the last five broadcasts. Before him was the prospect of a vaudeville tour, but Artie turned it down and decided, instead, to refresh his musical point of view by a firsthand glimpse of the grass-roots of American music. Some columnists refused to believe that Artie was really on a grass-roots tour of native rhythms, since it detracted from the press picture of Shaw, the paradox. "Some people in the business think I'm either cracked or a poseur," said Shaw. "They refuse to believe that, with me, music is first."

It is nevertheless true that when Artie left his band in 1939—a year in which his income was close to a quarter of a million dollars—he said that he was fed up with the music business. Speculation as to his next move became so extravagant that one habitué of Lindy's, Broadway theatrical restaurant, said of the rumors: "You can take your pick but, as for me, there ain't no Artie Shaw."

In April 1941 Shaw announced that he would conduct an orchestra at the Lewisohn Stadium in New York City during the coming summer. From there he went on, with an enlarged and reorganized band, to barnstorm the country with a series of one-nighters.

Born in New York City in 1910, there was nothing in Artie Shaw's background to suggest a musical career. His father, Harry Shaw, was a photographer; his mother, Sarah, a seamstress. When Artie was seven the family moved to New Haven, Connecticut, where they established themselves in business.

Artie grew up in a period when at least one child to a city block played the saxophone. At the age of 13 he followed the trend, buying a saxophone with money earned as an errand boy. With it came five free lessons that Artie claimed he had to unlearn in order to play "hot" style later on. Meanwhile this minimum of formal training got him band jobs when he was still in his teens. He was not sure that he wanted to be a musician permanently, though. Once, when stranded with a barnstorming outfit in Lexington, Kentucky, he spent his spare time reading Jack London in the city library, and entertained some idea of being a writer.

But playing in bands was a ready means of earning a livelihood. When Shaw returned to New Haven he played with local bands and in 1925 took up clarinet so that he might get a job with a band in Florida. That, in a way, was the turning point. For the clarinet is Artie's instrument. It stimulated his interest in music and before he was 20 he was experimenting in composition and arrangement.

In 1929, while playing with a band in Cleveland, Ohio, Shaw won an essay contest sponsored by the Cleveland *Plain Dealer*. The prize was a round-trip plane ticket to California and he used it only one way—he joined Irving Aaronson's Orchestra in Los Angeles. Soon after the band came East Shaw left it to job around the radio stations. Playing saxophone more often than clarinet, he worked for many prominent band leaders on broadcasts, earning as much as $500 weekly.

In 1931 Leon (Bix) Beiderbecke, his friend and former roommate, died in comparative obscurity. From Bix (who inspired the novel *Young Man with a Horn*), Artie learned "hot" style. Another influence was that of the famous Negro drummer, the late Chick Webb. The handsome young clarinetist was a familiar figure at the Savoy and other places in Harlem where hot music could be heard.

But Artie hadn't given up the writing bug. In 1935 he bought a typewriter and a farm in Bucks County, Pennsylvania. He had hoped to do a book based on the life of Beiderbecke but, instead, found himself staring at blank pieces of white paper. Somehow he couldn't get the job under way. "It took a year for me to discover that a typewriter isn't a clarinet," said Mr. Shaw in recalling the episode.

On the day of his return from Bucks County he tried unsuccessfully to get work.

From 10 a. m. to 2 p. m. he toured the studios and booking agencies. Everywhere he met with the same reception—he "shouldn't have quit the business cold." From 2 p. m. to 4 p. m. he sat on a park bench, getting panicky. Then he telephoned his mother on the slim chance that there might be a message. There was. A swing concert was scheduled for May 1936, at the Imperial Theatre, and he was invited to participate.

This was Shaw's first appearance as a "hot" soloist, and he made the most of it. He convinced a string quartet that a quintet based on strings and clarinet would be musically effective. They appeared on the stage against a backdrop illustrating music manuscript, the strings striking an incongruous note amongst the "boogie woogie" and "barrelhouse" surrounding them. Reception from "hot" critics was mixed, but the next day Shaw had recording offers from three companies. An agency signed him for a larger band using the same basic instrumentation, with other instruments added. They opened cold in a New York hotel, and though other New York jobs followed, none served to establish the group. On the road they found themselves—as musicians say—working "strictly from hunger." The agency dropped them, and they were on their own once more.

This failure led Artie to junk his first big band. The Phoenix that rose from its ashes was a conventional 14-piece dance band. But even with the new outfit Shaw insisted upon his own musical values. He eschewed hits-of-the-week unless he considered them worthwhile vehicles. Apart from his own compositions, many of which have been popular, his choice of good but somewhat obscure numbers also helped to establish the band. (The recent popularity of *Frenesi* began with his Victor recording of the number.)

Using Tommy Dorsey's old truck, the band went on the road to "break in," sometimes making 600-mile jumps to play $250 dance jobs. They devised a unique system for saving hotel bills. Getting into a town in the morning, they would check in at a local hotel, sleep until it was time to work, then return after the job was over to sleep the night out.

In the spring of 1938 Shaw again broke precedent by taking on as girl vocalist the talented Negro singer, Billie Holiday. At this time Charlie Shribman of Boston saw possibilities in the band. He bought an interest and booked them into his Roseland State Ballroom, where they began the march to fame that led to such incidents as Shaw's having to interview en masse a group of college and school paper editors, playing for 20,000 shag enthusiasts on Boston Common, etc. By summer they had an enviable reputation throughout the country, due as much to their records as to their radio appearances. Working with arranger Jerry Grey, Shaw (whose musicianship has always been a factor in his success) produced solid, concerto-like arrangements of which *Begin The Beguine* was outstanding. (It was, in fact, one of the best-selling records of the 1930's.) Some tunes, such as his own *Back Bay Shuffle,* depended less on the initial arrangement than on performance. The first New York hotel spot for the new band, in the fall of 1938, ran up a deficit but was worth it. After that came a deluge of radio and picture offers.

ARTIE SHAW

The year 1939 was a bonanza year, despite the loss of a few weeks during the spring through illness. In New York Shaw was stricken with *agranulocytopenia,* a usually fatal blood disease, and had to have several transfusions. Leaving his sickbed to fulfill a Hollywood contract, he caught pneumonia and was again laid up for days before he could get to work on his first feature-length picture, *Dancing Co-Ed,* starring Lana Turner. An Associated Press dispatch quoted Hollywood gossips as saying that they "quarreled endlessly throughout the only movie they had made together."

In November 1939 Mr. Shaw got off his famous blast against jitterbugs. Although he denied its sweeping character, a large part of the press quoted him as having said that jitterbugs were morons. He recently corrected this impression by stating: "It was the few rowdies who spoiled the whole thing for most of the kids who just wanted to listen or dance. . . Anyway, I think that sort of music is on its way out."

That month he abruptly left his band and, on the advice of his physician, went to Mexico to rest. "Even before his recent illness," Alden Cook commented glumly, "he was a tense, moody young man." The musical world generally took the whole affair in its stride, regretting the inconvenience to musicians but in agreement with many of the criticisms Artie made of the music business at that time. It remained for the New York *Times* to see the incident in an heroic perspective. "Any commentary that might occur to us," the statement

SHAW, ARTIE—*Continued*

read, "would be lost in the Shakespearean sweep of Mr. Shaw's exodus: the kind of spectacularly irreverent farewell to his work and former associates that even the timidest soul must occasionally dream of, a beautifully incautious burning of all his bridges behind him."

Shaw was already on his way to Mexico when the *Saturday Evening Post* published an article on which he had collaborated. In this he threatened to leave the music business before it had another chance to lay him low, and talked frankly of the musician in America, who "hasn't only a financial and artistic problem with which to contend but must fight politics, corruption and a system of patronage."

Meanwhile, Shaw took time off to loaf and enjoy his two favorite sports, riding and swimming. Ironically, both got him into difficulties. He fractured a knee while rescuing from the Pacific undertow a Greenwich, Connecticut debutante. A few months later, in Hollywood, a fall from a horse laid him up for a few days. But he had returned from Mexico "with his equilibrium, his health and a hit tune called *Frenesi*." With a new 23-man orchestra, he was signed up for the Burns-Allen show on NBC, the Paramount musical *Second Chorus* and many dance engagements.

It was after his return that Shaw started the dance band world by using a large orchestra that included several violins, violas and cellos. And although he maintained his place in the standard polls as a swing band he began to gain in the opposite, or "sweet," category, reflecting both his own versatility and the adaptability of his orchestral treatment. With *Concerto for Clarinet,* which he played in the Paramount film *Second Chorus,* his stock once more took an upward thrust. A little on the *tour de force* side, it brought to the public in a sort of omnibus package all the musical experiences of blues, "boogie woogie," and "hot" jazz that would have been less assimilable in more indigenous settings. In instrumentation, Shaw believes in flexibility and may employ anything from his "Gramercy Five" to an orchestra of concert proportions.

His marriage to movie actress Lana (Julia Jean) Turner—the red-headed "sweater girl" little more than a year out of high school—was Shaw's third. According to Sidney Skolsky, the night preceding their wedding was their first real date. Shaw phoned Lana, said Skolsky, and they went to the Cocoanut Grove (where Artie had played his first Hollywood band job in 1929). In the course of the evening they decided to get married, and flew to Yuma, Arizona, for that purpose. Enroute, the pilot learned that it would be impossible to land at Yuma, so he took them to Las Vegas, Nevada, instead. There they were married, on February 13, 1940. Separation came after only a few months of married life, and on September 12, 1940, Lana Turner was granted a divorce in a Los Angeles court.

Shaw is of medium height, and his dark brown eyes and handsome features have been an asset in Hollywood, though for years *Variety* found his MC-ing stiff and unconvincing. Writing is still a hobby with him and he recalls how, as a youth, he read all he could of Lafcadio Hearn, then proceeded to read books mentioned by Hearn. Called "the intellectual of the swing band maestros," he enjoys fraternizing with writers Steinbeck, Saroyan and Donald Ogden Stewart (see sketch this issue), and he keeps a notebook in which he records his impressions. "I am using myself as a guinea pig," he admits. "My reactions to all this fame and excitement should be worth preserving."

SHEEAN, VINCENT Dec. 5, 1899- Author; journalist

Address: c/o Doubleday, Doran & Co, Inc, 14 W. 49th St, New York City

Although—or perhaps because—his columnist friend Dorothy Thompson can describe him as a man who in another age would have been a great poet, Vincent Sheean represents to the American public the foreign correspondent *par excellence*. He is best known as the man who wrote *Personal History,* although since it appeared in 1935 he has been in the news for a number of books and exploits, not to mention an accident. He tried at least once to desert newspaper work and settle down as a novelist; but the pull of things happening in Europe and the push of newspaper editors were too much for a man with his knack of being where the news pops and picking it up hot—without gloves. Accordingly, he has been an articulate eyewitness of Europe's recent history. He was in Spain during most of its civil war, and witnessed the fall of Catalonia; he was in Czechoslovakia when the Nazis moved up their guns; he was in France when the Low Countries were invaded, and stayed until just before their collapse; he was in London through the intensive bombings and burnings of September 1940 and again in 1941.

Not Peace But a Sword gave his correspondent's-eye view of Europe between March 1938 and March 1939, and was the Book-of-the-Month Club selection for August 1939. Like *Personal History* (which had been a Literary Guild book), it is in the genre that has come to be known as "book journalism": "reporting in a literary style that goes beyond newspaper writing, presenting the temperament, the feelings and thoughts of the observer as he looks at worlds great and small. Within the limits of this genre Vincent Sheean is a master." Another critic hints at what those limits may be: "It is the sense of his living through great moments as quiveringly, as wonderingly, and sometimes as myopically as would you or I that gives to this book its human perspective and blunt reality."

VINCENT SHEEAN

This book may be accepted as a sequel to *Personal History,* which was the first, the most successful, and some critics say the best of the many volumes in which foreign correspondents during the last few years have combined history, autobiography and gossip about the great. It was generally hailed as a "rich, arresting and important piece of work," although few guessed the impact and influence it was to have. Even the least enthusiastic conceded it to be one of the most vivid and forthright chronicles of the period that began with the Armistice in 1918 and ended with the crash in 1929. Nathaniel Peffer's comment about the earlier *An American Among the Riffi* (1926) is typical of the most adverse criticism brought against the author's journalistic books: "Mr. Sheean has all the qualities of the highest type of American newspaperman. He has a sense of the dramatic, he has courage, he can observe, he can write vividly, and he cannot understand the significance of what he sees." Opposite this may be set the exclamation of John Gunther (see sketch this issue) that Sheean "has muscles in his head. He thinks."

At the very beginning of his personal history James Vincent Sheean, in good newspaper style, came to earth just one jump ahead of the twentieth century. He was born in Pana, Illinois, on December 5, 1899, the son of William and Susan (MacDermot) Sheean. He has little to say about his early childhood except that it was "bookish," landing him at the University of Chicago with 17 years of inexperience and more knowledge of French, German and the literature of fiction than of the stodgier school subjects. He was "Jimmy" Sheean in those days, red-haired, freckled, and, rumor says, the darling of the campus. His first newspaper experience was acquired on the college daily, the *Maroon.*

His three and a half years of college life ended when the illness and death of his mother left him with neither the will nor the funds to continue at the University. He took a job with the Chicago *Daily News,* from which he was fired after two or three weeks. In an exit he describes as characteristic, he went straight from the editor's office to the train and proceeded to New York with no luggage

SHEEAN, VINCENT—*Continued*

and not much more money. There he worked on the New York *Daily News* (no relation to its Chicago namesake), then starting out on what was to prove a lucrative career as a tabloid. He "learned the formulas of the trade . . . sat at the feet of various 'radicals' . . . in Greenwich Village . . . got drunk in small bars," and labored valiantly to become sophisticated.

In the spring of 1922 he went to Paris and, after an autumn excursion to Italy, where Black Shirts and castor oil were just coming into vogue, he became foreign correspondent for the Chicago *Tribune*. From Lausanne and Geneva he went to the Rhineland in 1923 and 1924; then to Rome, Madrid, and the London of Ramsay MacDonald; finally, in December of 1924, to Morocco, where he reported the Rif rebellion and was the only foreign correspondent to secure an interview with Abd el-Krim. That adventure is fully described in *An American Among the Riffi*.

He was in China during the early days of the Communist revolution there and made the acquaintance of Madam Sun Yat-sen; in Russia he studied the effects of Bolshevism and underwent a series of social revelations (in later years somewhat modified, and after September 1939 rejected); he was in Jerusalem during the Arab-Jewish riots of 1929, in Europe when the Germany Army marched into the Ruhr Valley, in Ethiopia during the crisis there.

His short-lived determination to desert the newsfront for the ivory tower came in 1935, when he married blue-eyed, dark-haired Diana Forbes-Robertson, daughter of the great English actor Sir Johnston Forbes-Robertson and niece of the late Maxine Elliott. Mrs. Sheean has shared many of his recent adventures, including the London raids, and has made her own contribution to literature as co-editor, with Roger W. Straus, Jr., of *War Letters from Britain*, for which her husband wrote a foreword. She has also written *The Battle of Waterloo Road*, a graphic report on modern London which was published in December 1941. Both Mr. and Mrs. Sheean are active in finding American homes for English children, their natural energies and sympathies prodded to greater effort by remembrance of their own English experiences and concern for their innumerable English friends and connections.

Both had expected to return to England in March of 1941, but the return was delayed by danger they met in New York's peaceful Bronxville. In the middle of a freezing February night, the house they had rented from Dorothy Thompson burst into flame. The occupants were saved, as well as the manuscript of Vincent Sheean's forthcoming novel, *Bird of the Wilderness*; but thousands of dollars' worth of furniture and a formidable collection of mystery stories belonging to Sinclair Lewis perished in the flames.

Mrs. Sheean jumped from the second story holding the three-year-old Linda in her arms, while her husband—wakened by the shrieks of the nurse who had just dropped Linda's baby sister into the snow—jumped the equivalent of three and a half stories, alighting with a damaged leg, bad face burns, and a good deal of his prematurely gray hair singed off. He voted it "a closer call than I ever had in any war." The family moved to a New York hotel to recuperate, while father, before he left for England on an assignment for the *Saturday Evening Post*, finished his slightly scorched novel, perhaps hoping that baptism of fire would warm up its reception.

For his novels, while cordially received, have on the whole roused less spectacular response than the books of autobiographical history with which they have alternated. *The Anatomy of Virtue* in 1927 was greeted as "an interesting first novel" and one critic even called it "a relentless and pitiful story." *Gog and Magog*, a story of Communist Russia published in 1930, was recognized as having the inevitable Sheean verve and richness of political background, but was generally felt to be deficient in character building and story interest. *The Tide*, in 1933, was received with cordial calm as "a thought-provoking satire on the methods of modern journalism." "A newspaperman's novel," it was called, "witty, sometimes hilarious, engaging, realistic . . . somewhat shyly thoughtful and quite modest." As has often been the case with this author, adverse criticism took the form of qualified praise: one critic said *The Tide* "ultimately emerges as very good reading matter but nothing more. It could have been." *The Pieces of a Fan*, 14 short stories published in 1937, were "smooth, civilized, clever. . . For what they are they are capable, even brilliant. Coming from the author of *Personal History* they are grievously disappointing." The two historical novels, *Sanfelice* (1936) and *A Day of Battle* (1938) were praised for their "historic sweep" but not for their characterization. And when it was published in the fall of 1941 critics found *Bird of the Wilderness*, the story, most agreed, of Sheean's own life up to the time when *Personal History* began, a "sensitive study of adolescence" which, despite good writing, drama and insight, somehow "never seemed to come to grips with anything." Few critics attribute to any of the author's fiction so far the importance that is usually assumed for his more journalistic books—which include, besides those mentioned, *The New Persia* (1927). Perhaps Sheean was right when he wrote: "I must have been eminently fitted for a foreign correspondent."

The gray-haired Vincent Sheean who used to be red-haired "Jimmy" Sheean (he is still called that by his friends) is solid, six-foot-two and says he wears the map of Ireland on his face. He likes nothing better than a discussion, except an argument, and confesses that his gifts do not include a talent for leisure. His record and his bibliography—containing articles in most of our leading magazines—bear him out. It is said that his reputation for being always in the thick of things is not mere luck, since "his ardent sympathy for the downtrodden has led him where fire was hottest." Recently, in the summer of 1941, it led him to teach United

States history to schoolteachers in embattled Britain. Even more recently it sent him on a two months' trip to New Zealand, Australia, the Dutch East Indies, India and China to obtain material for articles for magazines and the New York *Herald Tribune* Syndicate on war conditions in the Pacific. His views on the War are not cheerful; or at least they were not in September 1941, when he stated his conviction that if England and America did not take more prompt and decisive action against the Germans they would probably lose the War.

SHEEN, FULTON J(OHN), MGR. May 8, 1895- Roman Catholic priest; writer; educator

Address: Catholic University of America, Washington, D. C.

"Anything that I have comes from God. Glory be to God! Let that be my interview." In these words Father Sheen answered a newspaperman who wished to interview him. To some they will sound like fanaticism, to others like humble and fervent faith. But they are thoroughly characteristic. Everything that Father Sheen does or says is founded on and inseparable from his church.

Fulton John Sheen was born in El Paso, Illinois, the son of Newton Morris Sheen, "an agriculturist and inventor, a farmer with a pronounced mechanical bent," and of Delia (Fulton) Sheen. A younger brother is a practicing physician in New York. Their uncle, Daniel Sheen, was a law partner of the great agnostic, Robert G. Ingersoll. The boys, however, were brought up strictly in the family faith, and were sent to parochial school in Peoria, where the parents moved while Father Sheen was still a small child. (His brother says: "I don't know where Fulton got his ability as a speaker, but I do know that my maternal grandfather used to pay me for making speeches in the house when I was four or five years old. On any topic at all.") Fulton went next to Spaulding Institute, a secondary school conducted by the Christian Brothers, and at St. Viator College in Bourbonnais, Illinois he received his B. A. in 1917 and his M. A. in 1919. That same year he was ordained a priest.

THE RT. REV. MGR. SHEEN

After a year in a seminary in St. Paul, Minnesota, he went to the Catholic University of America, where he received the S. T. B. and J. C. B. degrees together in 1920. He studied next at Louvain University in Belgium, receiving its Ph. D. degree in 1923. The following year he became a D. D. of the University of Rome, and in 1925, while he was teaching at St. Edmund's College, Ware, England (and preaching in the summer at Westminster Cathedral, London), Louvain made him *Agrégé en Philosophie* and awarded him the Cardinal Mercier Prize. His education has been described as "a long and careful training in the rational principles enunciated by Aristotle at the peak of Greek thinking and reaffirmed by St. Thomas at the crest of Scholastic thinking." He has since had honorary LL. D. degrees conferred upon him by St. Viator, Loyola (Chicago) and St. Bonaventure (New York), and Marquette University gave him a Litt. D.

Returning to America with all these honors and achievements and an invitation to teach at the Catholic University of America, Father Sheen was nevertheless sent by his bishop to serve as parish priest in a poor Peoria parish. It was not until the end of 1926 that he joined the faculty of the Catholic University, where he is now a professor in the department of scholastic philosophy. Since that time he has made himself known as the foremost apologist and orator of the Catholic Church and as such has received many honors both from his church and from its educational institutions. From 1928 to 1931, inclusive, he again preached at the summer conferences at Westminster Cathedral, and in 1930 and 1931 he lectured in the Catholic Summer School in Cambridge, England. For several Lenten seasons he was the Sunday evening preacher at the Church of the Paulist Fathers in New York, and since 1931 he has been Lenten orator at St. Patrick's Cathedral in that city. In 1934 he was appointed by Pope Pius XI Papal Chamberlain, with the title of Right Reverend Monsignor, and the next year Domestic Prelate. In 1936 he won the Cardinal Mazella Medal in philosophy.

To the general public, however, he is best known as preacher on the *Sunday Catholic Hour* of the National Broadcasting Company (sponsored by the National Council of Catholic Men). He began speaking on that hour in 1930, and since that time the National Council has distributed nearly 2,000,000 copies of his talks. Father Sheen himself receives from 3,000 to 6,000 letters a day asking him for copies of his talks, for explanations of Catholic doctrine, for marital advice; about a third of them come from non-Catholics. He personally dictates answers to about 200 of these letters every day, giving the rest to a staff of 20 clerks. He also fills some 150 speaking dates annually, in churches and at religious functions.

Father Sheen is not only a regular contributor to Catholic magazines (*Commonweal, America* and *New Scholasticism*), but has published nearly 30 books, among them *God and Intelligence* (1925); *Religion Without God* (1928); *Old Errors and New Labels* (1931); *The Eternal Galilea* (1934); *Philosophy of Science* (1934); *Calvary and the Mass* (1936); *The Moral Universe* (1936); *Communism the Opium of the People* (1937); *The Cross and the Crisis* (1928); *Liberty, Fraternity and Equality* (1938); *Victory Over Vice* (1939); *Freedom Under God* (1940); *Whence Come Wars* (1940); and *War and Guilt* (1941).

Many of his books are reprints of radio addresses on religious and moral topics; others are popular essays; still others are scholarly expositions of the fine points of Catholic doctrine. All of them teach that "the kingdom of God and his justice is the only important concern of life" and find the solution to the ills of the century in the restoration of the primacy of the spiritual in human affairs. Father Sheen attacks modern philosophy's conception of God, modern psychology's conception of man; he finds divorce as unholy a phenomenon as Hitler's breaking of treaties; he is, above all, appalled that "60 per cent of the children of the United States are today growing into manhood and womanhood without any formal moral or religious education." He is possibly most witty when discussing current affairs—when, for instance, ridiculing those who cried out for "academic freedom" during the Bertrand Russell controversy in 1940. However, as a reviewer in *Commonweal* put it: "The things he says are as old as the Catholic Church; it is the way he says them that is unique." His publishers have called him "the modern Chesterton" (he greatly admired Chesterton), and the *Christian Century* is almost alone in quarreling with this description. According to a writer in that magazine, his "style lacks the salty sparkle that preserves Chesterton's overfrequent paradoxes from growing stale. And he knocks down straw men until the battlefield is littered with them."

As for political and economic views, Father Sheen has on more than one occasion spoken out against "liberalism," against "monopolistic capitalism," against Fascism. But it is as the vitriolic opponent of Communism that he has made himself most felt. (In February 1928 he was called the "world's greatest authority" on Communism's technics by the Marquesa de Cienfuegos.) He says that there are but two complete philosophies of life: Communism and Christianity. To him Fascism is merely the reaction against Communism: "There would be no Mussolini or Hitler in the world today if there had been no Communism, just as there would be no rat-traps if there were no rats." In 1931 he agreed with Chesterton's praise of Mussolini, and during the Spanish War he supported Franco, taking his position, which coincided with the official view of the Catholic Church, in the name of religious liberty.

Shortly afterward E. S. Bates asked Father Sheen, in the columns of the *New Republic,* if his support of Franco's brand of religious liberty didn't expose his and other leading Catholic "liberals'" professed support of the separation of Church and State as merely a matter of strategy—if by "religious liberty" they didn't really mean "liberty for no one but Catholics." Michael Williams of *Commonweal,* however, took issue both with Bates' interpretation of the Spanish War and with Bates' use of the term "liberal" in connection with Father Sheen. What Father Sheen actually is, said Williams, is the "foremost American upholder of the great Scholastic tradition," an "ecclesiastical logician," a great apologist. Father Sheen still rejoices in "Christian Spain's" victory.

In the present War Father Sheen heatedly opposes aid to Russia unless the Soviet Union rejects atheism, restores church property—and he insists that if Russia remains communistic she should be barred from the peace council table. Altogether, his position has created some controversy. The America First Committee used a statement by him on lack of religious freedom in Russia in one of its advertisements; Fight for Freedom countered by quoting from leading Catholics who disagreed with him; the far-from-isolationist editor of the *Protestant Digest* called him a subtle "Fascist voice." Father Sheen opposed any alliance of the democracies with Russia long before the Second World War, and in a radio speech reprinted in *Scribner's Commentator* in May 1941 predicted that the "enemy of the world in the near future" was going to be Russia—even Germany was but a close second. In any case, wars are a form of chastisement for sin, he believes, and can be averted by a return to God. He has for some time been predicting that world peace could be achieved through the efforts of the Pope, "the only moral authority that is left in the world."

Affable but always serious, Father Sheen regards himself as a servant of the Church, to be worked to the limit of his strength in its service. He has long been noted as an instructor of Catholic converts, spending about 10 hours a week on their instruction, for each neophyte receives from 40 to 100 hours of training. His best-known convert, perhaps, was the late Heywood Broun, whose funeral sermon he preached about a year after his conversion. He also instructed Colonel Horace A. Mann, the man who was accused of having spread the anti-Catholic propaganda which contributed to the defeat of Alfred E. Smith in 1928; and Henry Ford, II, grandson of Henry Ford, who married a Roman Catholic girl. But the convert of whom he is proudest is his own Negro cook.

"Lean, black-a-vised, hollow-eyed," *Time* called this eloquent Catholic spokesman. But a friendlier commentator, in *PM*, described him in greater detail: "Monsignor Sheen is a slim, straight man in immaculately cut clerical robes who somehow looks taller than his less-than-medium height. His dark hair combs back from a high forehead like a disciplined wave. His gray eyes are deepset, his face long, his lips wide and mobile. He speaks, for the most part, quietly; in his accents is a note of tension, of restrained vigor. He gestures freely." He is busy every moment. In spite of ill health he travels constantly in his capacity as speaker and preacher; he used to make annual journeys to Lourdes; and he still lectures regularly to his university classes and gives part of every day to his writing on metaphysical, ethical and social themes. He is a member of the Catholic Philosophical Association, of which he was secretary-treasurer in 1928. In the fall of 1941 the March of Time presented *The Story of the Vatican,* the first complete motion picture ever made inside Vatican City, narrated by Father Sheen. It is little wonder that he says curtly that he "has no time for amusement."

SHIRER, WILLIAM L(AWRENCE) (shĭr'ĕr) Sept. 23, 1904- Foreign correspondent

Address: b. Columbia Broadcasting System, Inc, 485 Madison Ave, New York City; h. Arlington, Va.

WILLIAM L. SHIRER

"This is Berlin . . . " A voice well known to the American public in broadcasts from Berlin on the Columbia network's regular evening European news roundup was that of William L. Shirer, who returned to this country late in December 1940 and embarked on a lecture tour of the United States. Although listeners to his Berlin radio program were aware that "Bill" Shirer had to speak from a script previously passed upon by authorities and with a censor at his elbow, they were amazed at how much he managed to get across to his American audience. He made intelligent use of a good speaking voice and an ironic sense of humor, knowing that German censors, trained only in academic English, could not catch word-meanings changed by a tone of voice nor get the implications of Shirer's "American" phrasing and slang.

During his stay in Germany, however, Shirer kept diaries and accumulated material which could never get past a censor. This inside, firsthand information about what he actually saw and heard was published in June 1941 in *Berlin Diary,* a July choice of the Book-of-the-Month Club and immediately a best seller. Its story covers all the crucial steps in Hitler's career of conquest which Shirer witnessed, from the 1934 Stavisky riots in Paris through the annexation of Austria in 1937, the signing of the Compiègne Armistice (Shirer had a scoop on this, for he learned that the French would accept the terms three hours before even the German Government knew it) up to the British air raids on Berlin. Called by Joseph Barnes "the most important and the most exciting book written out of Germany since long before the War began," other critics have called attention to its "unusual interest and timeliness," to the completeness of the record of "the destruction of European civilization" observed "from the center of the whirlwind."

For his "consistently outstanding reporting" Shirer was awarded a silver medallion by the Headlines Club in July 1941.

William Lawrence Shirer has been a foreign correspondent since 1925. He was born in Chicago, September 23, 1904, the son of Seward Smith and Bessie Josephine (Tanner) Shirer. But he grew up in Iowa and attended Coe College at Cedar Rapids, from which he was graduated in 1925. He always wanted to be a newspaperman—his first job was a cub reporter's on the Cedar Rapids *Republican*—and when he got out of college he made up his mind that seeing something of the world beyond Iowa wouldn't be a bad idea for journalistic training. Accordingly young Shirer borrowed $200 from an uncle and from his college president, sailed for Europe via Montreal on a cattle boat, and spent $190 seeing England, Belgium and France.

He was down to his last $10, and in a few days due to take the cattle boat back home again. Instead, he got himself a job in the Paris office of the Chicago *Tribune.* His work was so good that in less than a year (1926) Shirer was transferred from the Paris office to the European staff. From then on until 1932 the whole continent became his "beat." He covered assignments not only in Paris, but in London, Rome, Geneva, Brussels, Amsterdam, Vienna and the Balkans. From 1929 to 1932 he was chief of the *Tribune's* Central European Bureau with headquarters in Vienna.

In Vienna in 1931 the young American correspondent met and married Theresa Stiberitz, a Viennese. She became his able assistant. They spent a honeymoon vacation year in 1932 "loafing" on the Catalan coast, swimming, fishing, reading, mountain-climbing.

Just before signing with the Universal News Service, Shirer spent what he calls his "most interesting years" in Afghanistan and India. The former Cedar Rapids cub reporter became a close friend and admirer of Mahatma Gandhi: "I spent much of my time traveling up and down the land with Gandhi," he writes, "and in my opinion he is the greatest man of our times. I studied Hindu philosophy but got badly stymied in the early stages. Still have a poke at it as an antidote for the ideas now popular in Central Europe."

In 1934 he joined the Universal News Service as Berlin correspondent, and three years later became continental representative of the Columbia Broadcasting System, with headquarters in Vienna. The broadcasting of crisis events direct from their source to the United States was in its pioneer stage, and Shirer—along with other foreign correspondents—had to learn while he worked. In an article, "Berlin Speaking," he has described his part and his experiences in developing this new technique. While in Prague during the Czech maneuvers of August 1938, Shirer gave a daily five-minute talk. Getting to the studio itself was often a real hazard; there were other backstage adventures. One day just before he went on the air, "while the troops and air force were rehearsing [their] show, a Skoda fighting plane, diving 10,000 feet, failed to come fully out of its dive and crashed a few feet from my microphone. As soon as we had extracted the pilot and observer from the debris of their plane—they were still alive, though mortally injured—we began our broadcast."

While his wife was in a Vienna hospital having her baby (Eileen Inga), Shirer—between hurried anxious efforts to see her—was trying to broadcast the Austrian *Anschluss.* The trouble was that the Nazis had taken over the radio. "I was a foreigner, unknown to the Nazis," he says. "Maybe I was a spy. Some youths with bayonets invited me to wait outside in the hall. I waited there. . . I was invited to leave. I have never been a man to argue with bayonets. I left. And I have never felt so licked in my life." It was his friend Ed Murrow, fellow CBS broadcaster in England, who came to the rescue by suggesting that he fly to London and give an uncensored broadcast of the Austrian proceedings from there. Shirer did, and that was how America got it.

After the annexation of Austria he transferred his office to Geneva, but went to Berlin at the start of total war in September 1939, where he remained until his return to the United States. In December 1940 *Life* Magazine asked him to write a series of articles on life in wartime Germany. In these, Shirer, using the same warm, informal note familiar to his listeners over 117 stations, told what the German people themselves experience, feel and think during Hitler's conquest regime. He described German life under the R. A. F. bombings, when the *Hauswirte* (air-raid concierges) are the real and feared dictators. He told of the inadequacies of the bombproof shelters for the people in general: the only good one in Berlin belongs to Hitler. "If Hitler has the best . . . the Jews have the worst. In many cases they have none at all." Where they are allowed to hover, "the force of the explosion is felt more and the greatest number of bomb splinters strike." He said that the British have not indiscriminately bombed Berlin in "terror" attacks. "They have too few planes and their bomb loads have been too light to wreak the kind of havoc which the *Luftwaffe* has been able to cause in London." He reported little hatred among the mass of the people against the British; none at all (thus far, because of strict foreign news censorship) against America. "But," he concluded, "were America to enter the War, the effect on German morale would be tremendous. The average German would think of it in very simple terms. 'America entered the War last time while we were still winning. We lost the War. America enters the War now when we are again winning. We will probably lose it a second time.' "

In between work, Shirer tries to find a little time for his hobbies—walking, skiing (he lost an eye in a skiing accident), golf, symphony music, novel reading, and brushing up on history. In the fall of 1941, however, there was not much time for any of these things. Shirer was acting as consultant on a film being made in Hollywood, *Passage from Bordeaux* (at a fee of $20,000), and was also giving frequent lectures. His second daughter was born in December 1941.

Who's Who in America

SHOSTAKOVICH, DMITRI (shŏs-tȧ-kô′-vĭch dmē′trē) Sept. 25, 1906- Composer

Address: Leningrad, Kirovsky pr. 14 KV4, U. S. S. R.

One of the first things Leopold Stokowski (see sketch this issue) did after his return from South America in November 1940 was to direct the first performance outside the Soviet Union of the Sixth Symphony by "the Mozart of modern Russia," Dmitri Shostakovich. The performance was arranged for by negotiations with the Amtorg Trading Corporation and the payment of a fee reputedly so large that it had to be specially approved by the directors of the Philadelphia Orchestra. As always, critics disagreed as to the merits and importance of this new but apparently not very unconventional symphonic work by one of the most controversial figures in modern music; the director enthusiastically defended it; and it seemed likely that the performance would be repeated until his audiences were "educated." Not long afterward Shostakovich received the Soviet Union's 100,000-ruble ($20,000) award for the highest achievement in arts and sciences for a piano quintet which received its American première on April 30, 1941.

According to Walter Duranty, "Shostakovich is regarded as Russia's most important contemporary musician." Born in St. Petersburg (now Leningrad) on September 25, 1906, the composer's entire life has been spent there. At the age of 13 he entered the Conservatory there, studied piano under Professor Nikolaiev, composition under Professor Steinberg and, according to one writer, advanced composition under Glazunov. While still there he composed works which (although they have been said to show the influence of Glazunov and one or two other contemporary Russian composers) gave evidence of "a very fine sensibility, flexibility and a very perceptible depth." Opus 1 consisted of three fantastic dances for the piano;

DMITRI SHOSTAKOVITCH

the First Symphony, written when Shostakovich was in his early teens, was already Opus 10. It has been described as "large and brilliantly colored"—impish, with an undercurrent of seriousness and a long and somber slow movement. It was 1925 when Shostakovich left the Conservatory, and he soon joined the Union of Soviet Composers.

Members of the Union of Soviet Composers were "pledged to support the socialist program of construction with their art." An early interview with the young composer quoted him: "Music cannot help having a political basis... The old composers, whether they knew it or not, were upholding a political theory. Most of them, of course, were bolstering the rule of the upper classes... Lenin himself said that 'music is a means of unifying broad masses of people.' Not a leader of masses, perhaps, but certainly an organizing force! For music has the power of stirring specific emotions in those who listen to it. Good music lifts and heartens and lightens people for work and effort. It may be tragic but it must be strong. It is no longer an end in itself, but a vital weapon in the struggle." He said elsewhere: "I am a Soviet composer, and I see our epoch as something heroic, spirited and joyous."

His Second and Third Symphonies seem to bear out his words. Both use large choruses, "celebrating brotherhood, liberty and revolution." The Second, known as the *October Symphony*, was completed in 1927 and presented in Leningrad, Moscow, Kiev and Karkov on the tenth anniversary of the "fourteen days that shook the world." The Third, dedicated to the May Day Festival, completed in 1929 and first produced in 1930, has been performed on every succeeding May Day in the Soviet Union. A British critic, while finding nothing particularly revolutionary in its mood, called it "the expression of all the generous enthusiasms of young Russia." Then there was music for *The Golden Age*, an "athletic ballet" completed in 1929 and produced at Leningrad in 1930; for *The Bolt*, an "industrial ballet" also produced in 1930; and for Shostakovich's first opera, *The Nose*, based on Gogol's novel and produced for the first time in 1929. Most of these did not attain any great popularity in Russia, but the young composer was already known as "a kind of composer-laureate to the Soviet state" whose music broke away from old, "bourgeois" forms and constituted a "repudiation of false romanticism."

Then, in December 1932, Shostakovich completed his second opera. It was titled *Lady Macbeth of Mzensk*, was based on a novel written in 1864 by Nikolai Leskov, and was concerned with a neurotic woman who poisoned her father-in-law, persuaded her lover to kill her husband and finally drowned herself, dragging down with her the woman who had eventually lured her lover away. Shostakovich said: "Leskov presents her simply as a cruel woman who 'wallows in fat' and murders innocent people. But I have conceived Katerina as a woman clever, gifted and interesting. Set by fate in gloomy, miserable surroundings, belonging to a merchant class which is hard, greedy and 'small,' her life is sorrowful and pitiable." In other words, the opera was directed against the rich merchant class of Czarist days. Intended as the first of four operas which would trace the change in the position of Russian women since 1840, it was given its world première in Moscow in the summer of 1934 and greeted with 35 minutes of "hysterical applause."

Soon it was being given all over the Soviet Union. William Bullitt, at that time American Ambassador, heard it at Moscow and Leningrad and announced that it "should convince all doubters that opera may indeed be a great art." Dr. Rodzinski of the Cleveland Symphony Orchestra heard it six times and made arrangements to bring it to Cleveland. Its American première on January 31, 1935 undoubtedly made Shostakovich more talked about in the United States than any of his previous works, although Stokowski had already given his First, Second and Third Symphonies their American premières and American audiences had also heard his Concerto for Pianoforte and Orchestra, Opus 35.

Rodzinski himself hailed the opera as "one of the most important contributions to contemporary music in the last 25 years"; Patrick Hughes thought it second only to *Wozzeck* as "the best opera of the post-War era"; the composer's sense of good theatre and "the uncanny way the orchestra described each character, each situation" were particularly praised. On the other hand, many critics found it "vulgar", "imitative", "raucous", "melodramatic", "cheaply cynical." It was performed only once in New York City, but Virgil Thomson summed up the situation by saying: "The New York audience loved it. The New York critics hedged."

There seemed to be no doubt abroad that the opera was a typical expression of Soviet art, however. It was in the Soviet Union itself that controversy on that point shortly began to rage. Two articles that appeared in *Pravda* condemned Shostakovich for "deserting the classical path to which Soviet music should cling," called *Lady Macbeth,* "a muddle of sound . . . cacophony and lascivious naturalism" rather than "Socialist realism," even found in it certain "petty bourgeois Leftist" tendencies. At two conferences of the Union of Soviet Composers, filled with speechmaking and "self-criticism," the accusation was taken up. Shostakovich was condemned for pseudo-modernism and decadence, for "formalism, eccentricity, skepticism, straining for effect." Performances of *Lady Macbeth* were canceled at several theatres, and although the composer's ballet *Limpid Stream* was produced a month later, *Pravda* condemned that, too, for "stylization and vulgarization."

Nevertheless the controversy was not so much concerned with the music of one individual as with the entire trend of Soviet art at the time. As someone remarked, Shostakovich bore most of the brunt of the attack because he was considered Russia's most talented composer. At the same time negotiations for his next opera were being carried on, and *Lady Macbeth* continued to be performed at some theatres. And when his Fifth Symphony, "a thoughtful and tuneful glorification of the October Revolution," had its première in 1937 Moscow reviewers were almost unanimous in their approval. According to them it reflected his search for new paths in music creation, was "the expression of a psychological development as active as it is complex." (Previously Shostakovich had withdrawn his Fourth Symphony after a couple of rehearsals because, he said, he had not sufficiently learned his lesson.)

The Sixth Symphony, which was first performed in Moscow on December 3, 1939, was to be dedicated to the memory of Lenin, with a chorus. The chorus, however, was lacking when it was completed, and also lacking was "the universal approbation that greeted the Fifth Symphony." Among those American critics who damned it with faint praise were Virgil Thomson, who found it "clear, obvious, effective, old-fashioned. . . If it were signed by an American composer it would be classifiable as good, salable academicism." But Henry Simon called it "good music," designed to "stir the masses."

Shostakovich, who has worked in the Leningrad Conservatory since 1937, and who planned the world première of his reorchestration of Mussorgsky's *Boris Godunoff* for the end of December 1941 at the Bolshoi Theatre in Moscow, volunteered for service in the Peoples Army of Leningrad after the German attack on the Soviet Union. "I am ready and will spare neither life nor strength to fulfill any order," he said, also announcing: "I am writing my Seventh Symphony. I will attempt to depict the Battle of Leningrad and tell the story of the city's Home Guards." He is described as looking like an incredibly shy schoolboy. Pale, solemn, cherubic, with "tremulous lips and hands", "thatched hair" and "wide eyes behind hornrimmed glasses," he doesn't often discuss his music. But in addition to the works already noted he has composed a great many piano and cello sonatas, pieces for the string octet and for the piano; music for stage productions of *Hamlet* and *King Lear* and for another ballet, *Don Quixote;* music for the sound films, *Golden Mountains, Alone, Maxim's Youth.* Critics have pointed out (many of them disapprovingly) that this music shows the various influences of Prokofieff, Hindemith (see sketches this issue), Stravinsky, Auric, Strauss, Chopin, Tschaikowsky, Mahler, Weber, Borodin, Mussorgsky, Liszt, Beethoven and Mozart—which surely makes it safe to classify him as an "eclectic." But, according to one writer, he is eclectic "in the good as well as the bad sense." Unlike many of his predecessors, Shostakovich seldom repeats a theme even in a transformed version, and tries to refrain from the repetition of *motifs.* "One gets the impression that he wants every bar of his composition to be different from the rest."

SHUMLIN, HERMAN (ELLIOTT) Dec. 6, 1898- Theatrical producer

Address: b. 229 W. 42nd St, New York City; h. 104 E. 40th St, New York City

While Ethel Barrymore (see sketch this issue), the star of Herman Shumlin's latest production, *The Corn Is Green,* was celebrating her fortieth anniversary as a star in February 1941, the producer and director of this play about an English schoolteacher and her young coal-miner protégé had reasons of his own for self-congratulation. The play had won practically unanimous critical acclaim, the theatregoing public was storming the box office and Miss Barrymore was giving the most luminous performance of her career.

It was also the third in an unbroken line of successes produced by Mr. Shumlin in recent seasons. *The Little Foxes* (1939),

Vandamm

HERMAN SHUMLIN

Lillian Hellman's bitter play of the new South, played almost a year and the picture rights were sold to Samuel Goldwyn for $100,000. The James Thurber-Elliott Nugent campus comedy, *The Male Animal,* ran several months in 1940 with a profit of $50,000 and was bought by Warner Brothers for $150,000. The fourth in line was Lillian Hellman's (see sketch this issue) *Watch on the Rhine,* which was the Critics' Circle choice for the best American play of 1941 and which settled down for a long run.

This producer who in 1941 had two enormously successful plays running on Broadway hasn't always been at the top. Before this there had been intervals between hits, and there had been failures and near-successes. The first four plays Mr. Shumlin produced, beginning with *Celebrity* in November 1927, were on view an aggregate of twelve weeks and one hundred eighteen performances. *Days to Come* ran one week in December 1936, and Thornton Wilder's *The Merchant of Yonkers* failed to amuse theatregoers for more than five weeks when produced in December 1938.

Herman Elliott Shumlin was born in Atwood, Colorado (George and Rebecca [Slavin] Shumlin were his parents), grew up in Newark, New Jersey and made his first and probably his last stage appearance in a school pageant as a Sioux warrior chanting an Ojibway ballad. That the play being performed was supposed to be *Alice in Wonderland* merely added to the confusion. He saw Sir Johnston Forbes-Robertson's *Hamlet* at the age of 10 in Newark's Broad Street Theatre, and it interested him in the theatre more than his own stage performance ever had.

Young Shumlin left the classroom in his second year of high school, for his family was not too prosperous. At 15 he was working in the offices of a Newark manufacturing plant, where he was dismissed and called a "Socialist" for asking why safety devices weren't demanded on the machines. Later he found a more interesting job—in the exploitation department of the New Jersey branch of Metro films. From this outpost of the picture industry he moved in on Broadway as reporter on the New York *Clipper,* a theatrical trade publication since defunct, and from there progressed to the *Billboard* as reporter and motion picture critic. Later he turned press agent for Schwab and Mandel, became general manager for Jed Harris during the Broadway runs of *Love 'Em and Leave 'Em, Broadway* (one of the greatest hits of all time) and *Spread Eagle.*

It was in 1927 that Shumlin presented his first production, Willard Keefe's *Celebrity,* with Paul Streger as partner. This lasted only 42 performances, but Shumlin kept on independently, presenting *The Command Performance, Tonight at 12* and *Button, Button* without any noticeable success. Then came *The Last Mile,* a harrowing play set in the death house of a prison, which won critical if not audience applause. Shumlin decided to go on producing what he liked instead of guessing about the public's taste.

It was not until the morning of November 14, 1930 that Shumlin found himself producer of a real hit. Vicki Baum's *Grand Hotel,* staged by Mr. Shumlin himself in his first attempt at direction, caught on immediately and played 257 performances on Broadway before it was made into a motion picture. Shumlin's next attempt, the Spewacks' *Clear All Wires,* did less well. Despite warm critical notices, this comedy about a high-pressure foreign correspondent ran only 12 weeks on Broadway. It later appeared as an MGM film success called *Comrade X.*

In 1934 Shumlin produced another success. Lillian Hellman, who had been his play reader for several years, brought him a play of her own based on one of the celebrated cases in William Roughead's *Bad Companions.* Ironically she called this work, which dealt with the ruin spread in a girls' school by a problem child who started a scandalous rumor about two of her teachers, *The Children's Hour.* Shumlin scoured the country to find suitable actors and found Florence McGee, Anne Revere, Katherine Emery and Robert Keith, who gave the play such a taut and vivid performance that it ran a year and one-half in New York. When it was banned in Boston he launched a campaign which resulted in revision of the State laws regarding censorial procedure. It was produced as a film by Samuel Goldwyn under the title of *These Three*—with a slight change of theme, however.

It was Miss Hellman again who presented Shumlin with his next big success, after two failures of his own productions (*Days to Come* and *The Merchant of Yonkers*) and one by the Theatre Guild (*Wine of Choice*) which he directed in 1938. Miss Hellman's *The Little Foxes,* the story of a family of predatory Southerners, starring temperamental Tallulah Bankhead, opened in 1939. It was followed by *The Corn Is Green,* which began its triumphant career on the evening of November 26, 1940, and in the spring of 1941 by *Watch on the Rhine.*

Herman Shumlin, who himself exhorts: "Establish the mood from the first moment of the play. Make the picture uniform and constant," has been called "a man of impulse and vagaries, who trusts implicitly his feeling for the dramatic and his ear for the authentic." His success has been attributed by a writer in *Theatre* "to his amazingly copious knowledge of useful facts and event and his tremendous energies for completing any undertaking upon which he may have engaged."

This bald, dynamic, intense producer is "a man who simply cannot make small talk," according to *Friday.* "Mention the weather and he launches into a furious discussion of it—the weather today, yesterday, tomorrow, last year, two years ago. He got to thinking about Russian once and before he knew it he was taking lessons. He got to thinking about photography recently and before his friends could stop him, he had a bathroom torn out and a darkroom installed. But this furious transmission of his thoughts into action seldom lasts long. His Russian lessons ended after two weeks. His darkroom has produced only one gray print of Maxwell Anderson's baby. And his campaign to reduce [the price of] theatre tickets lasted only a few weeks."

Shumlin is known as a man of strong convictions, not averse to a battle. (Early in 1940, for instance, he refused to play Finnish benefits, and at that time had the epithet "Communist" hurled at him.) The anti-Nazi hero of *Watch on the Rhine* expresses his own views on the necessity of fighting "again and again" for "our great human heritage." He says, too: "I do not want to die simply because there are many wrong things in the world. I want to live and do something about them."

Outside the theatre Shumlin has few hobbies. Five years ago he tried to master the piano but gave it up after a heroic struggle. He is divorced from the actress Rose Keane, whom he married in 1930, and since the prosperity of *The Children's Hour* he has had offices on the sixth floor of the Selwyn Theatre Building on West Forty-Second Street. One of the properties moved to his office at that time included a cigaret box used in *Tonight at 12* and labeled by its owner: "This cost $25,000."

SHUSTER, GEORGE N(AUMAN) Aug. 27, 1894- Author; educator

Address: Hunter College, 68th St. and Park Ave, New York City

Worldwide

GEORGE N. SHUSTER

George N. Shuster, who in 1940 became president of New York City's Hunter College, has sent us the following sketch of himself:

"I was born in Lancaster, Wisconsin, August 27, 1894, the son of Anthony and Elizabeth (Nauman) Shuster. My father's people were German Catholics, my great-grandfather having come to the United States with his children during 1848 because of the Revolution. My mother's people were German Lutherans, who had originally settled in Pennsylvania. The romance of my boyhood was the aftermath of the Civil War, Lancaster being a favorite place for G. A. R. conventions. Then the little town—a very pretty replica of New England villages—was literally fenced in with white tents, where the veterans bivouacked and (it must be confessed) drank copiously and long.

"My secondary education was received at St. Lawrence's College, Fond du Lac, Wisconsin, which was a German Gymnasium transplanted to the New World. We studied Latin and Greek incessantly, but we also learned modern languages, German and French. Notre Dame was my college—then a small institution, with a football team on the first rung of the ladder of fame. My dream was to enter West Point, but when the War came I turned instead to journalism and spent one hectic year trying to be a reporter. Then came 1917, military service, and thereupon 18 months of life with the A. E. F., first as a member of the Intelligence Section, G. H. Q., serving at the front during almost all the major battles in which the American Army was engaged, and then as an interpreter in the Army of Occupation. Subsequently I attended the University of Poitiers, France, emerging with a *Certificat d'Aptitude.*

SHUSTER, GEORGE N.—*Continued*

"Therewith began my deep interest in modern Europe. I had seen a good deal of post-War Germany—fighting in the streets, the first electoral campaign, hunger, the heavy pressure of the Armistice terms. And I had also seen a good deal of what went on round about the Peace Conference. But when I returned to the United States I had first of all to think of my health, which had been put to a severe strain. Quite accidentally a call came to teach English at Notre Dame, and I answered it thinking that the quiet life I had known on the campus would help me to recuperate. But the president of the University, the Rev. Father James Burns, and I became fast friends. I took my master's degree in French literature, became head of the department of English and remained at the University until my marriage to Doris Parks Cunningham in 1924. The principal literary product of those years was *The Catholic Spirit in Modern English Literature* (1922).

"Going to New York for graduate study at Columbia, I came into contact quite accidentally with the newly-formed *Commonweal* group, bent on starting a weekly magazine similar in character to *The Nation* and the *New Republic* but dedicated to religious principles. By the end of the year 1924 the magazine had begun publication, and I had started writing editorials for it. After six months I decided to sever my academic connections and to accept an editorial position first as associate editor and then as managing editor. The amount of work required by this periodical during the next 12 years was tremendous, but I retained some teaching connections, usually giving a course of lectures in some New York college. Books written during these years included one or two on Catholic subjects—*The Catholic Spirit in America* (1927); and *The Catholic Church and Current Literature* (1929). More and more, however, my thinking and reading were concerned with modern Germany, which I visited for long periods after 1929. This is reflected in such books as *The Germans* (1932); *Strong Man Rules* (1934); and *Like a Mighty Army* (1935). Translations from the German likewise followed in almost-too-rapid succession.

"During 1937 the Carnegie Corporation awarded me a very beguiling two-year fellowship in the study of the Weimar Republic and in particular of the Center Party. I spent most of the following two years abroad, witnessing among other things the taking over of Austria and the development of the Czechoslovak crisis. The book to be written is still in the writing, but I did manage to write the notes for the Reynal and Hitchcock edition of the English version of *Mein Kampf*. Meanwhile I had, largely for reasons of relaxation, turned to the writing of fiction. Here the most successful book was a novel, entitled *Look Away* (1939). The most recent publication, however, is once more in the field of English literature, *The English Ode from Milton to Keats* (1940).

"The Board of Higher Education of the City of New York invited me, in 1939, to become academic dean and acting president of Hunter College. After a year of service I became president. Meanwhile the degree of doctor of philosophy had been earned at Columbia University. I shall hope that the tasks, and they are many, of guiding an educational institution will not deflect me from the pursuits of rose-growing, carpentry and tennis in which I remain interested."

Dr. Shuster, according to *PM*, "often works at the college in the evening, takes only a sandwich for lunch, has never seen the color of his desk because of the papers piled on it. He drives a Buick, smokes Pall Malls, eats all kinds of breakfast foods, and buys his clothes at Altman's." He has one son, Robert.

SILVER, ABBA HILLEL, RABBI (ăb′ă hĭl′ĕl) Jan. 28, 1893- Rabbi of Temple Tifereth Israel, Cleveland; author; social worker

Address: b. The Temple, E. 105th St. & Ansel Rd, Cleveland, Ohio; h. 246 E. 105th St, Cleveland, Ohio

"The church is a dynamic agency," wrote Rabbi Abba Hillel Silver in his book, *Religion in a Changing World,* published in 1930. Nobody can doubt this after glancing at the astronomical range of Rabbi Silver's own interests. At the top of the list is Zionism, and in this field he has, since Hitler's rise to power, been even more active than before, because he believes the Jewish homeland to be an even more crucial need today than in the past. Other interests, however, include many charities, unemployment relief, child welfare, Jewish education, civil liberties, birth control and the World Court.

Who's Who in America alone lists more than 30 organizational affiliations. This, probably, is no surprise to thousands, for Rabbi Silver's reputation is national in scope, and he is as well known in New York and San Francisco as in his adopted Cleveland. His radio broadcasts for Jewish holy days and other occasions over the national networks have brought his ringing voice to uncounted homes, while his personal appearances before various congregations have extended to many cities. He has traveled throughout the nation in behalf of overseas relief and is credited with having helped to raise millions of dollars for the relief of distressed Jews throughout the world.

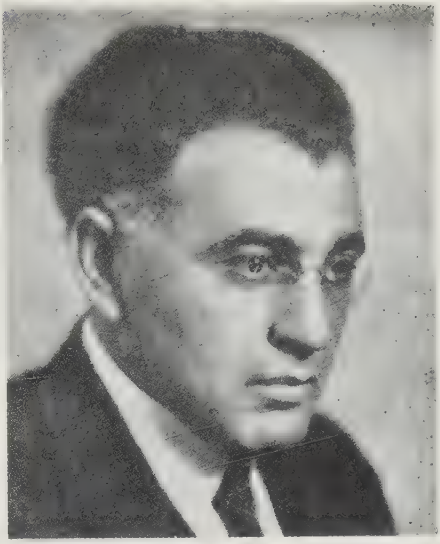
Nevertheless Rabbi Silver has managed to find the time to write four books, at least three of which have definite contemporaneous interest and one of which will unquestionably rank as a definitive reference work for Jewish scholars. Recognized, with Rabbi Stephen S. Wise (see sketch this issue) of New York, as one of the major voices of Zionism, Rabbi Silver has tried to synthesize Jewish tradition with American civilization, without, however, permitting the surrender of the former in the fancied interests of the latter.

Rabbi Silver's scholarly thin face is topped by pompadoured black hair edged with gray, and his eyes, behind rimless spectacles, mirror alert intensity. He was born in Neinstadt, Schirwindt, Lithuania in 1893, the son of Moses and Diana (Seamon) Silver. Brought to America when he was nine years old, the future Rabbi rapidly entered into the life of the New World and proved especially proficient in scholarship. Receiving a B. A. from the University of Cincinnati in 1915, he went on to the Hebrew Union College, from which he was graduated as a qualified rabbi. From the same college he received his D. D. degree in 1925. (He also received an honorary Litt D. from Western Reserve, and Hebrew Union College awarded him a D. H. L. degree in 1941.) Following his induction as a clergyman Rabbi Silver served from 1915 to 1917 in the Congregation L'Shem Shamayim in Wheeling, West Virginia. Here he met Virginia Horkheimer (the daughter of Louis and Clementine Horkheimer), whom he married in 1923.

Receiving a call from The Temple of Cleveland (Tifereth Israel), Rabbi Silver returned to the state where he had attended college. Since 1917 he has made his home in Cleveland. Two children, both boys, were born in that city. During the War he served with the armed forces in France and was decorated by the French Government with the medal of the Officier de l'Instruction Publique. Later President Hoover placed him on a national committee to alleviate unemployment.

Rabbi Silver's published works include: *The Messianic Speculation in Israel* (1927); *The Democratic Impulse in Jewish History* (1928); *Religion in a Changing World* (1930); and *The World Crisis and Jewish Survival* (1941). *The Messianic Speculation* is an interesting compilation of writings by Jewish prophets of antiquity and the pseudo-prophets of Medievalism on the subject of the Messiah. It is documented with references to the original Hebrew sources, and traces references in the *Talmud* as well as in the occult writings of the medieval cabalists.

The Democratic Impulse is an historical capitulation of Jewish social thought from earliest times to the present and an examination of the strivings by the Jewish people for a democratic order. In *Religion in a Changing World* Rabbi Silver squares political liberalism with modern religion, sees the supposed "revolt" against religion as an ultraconservative and illiberal manifestation rather than a daring innovation or a quest for freedom, and attempts to resolve the familiar conflict between science and religion by categorizing the non-conflicting role of each in current civilization. In addition, Rabbi Silver describes the necessity for an activist role by the church in the social scheme and analyzes the relation of the Jew to his environment. Rejecting "assimilation," he states his belief that this would only mean distorting Jewish personality and renouncing its unique qualities. He states that communion of minds, which is the only basis for true fellowship between Jew and non-Jew, does not decree the surrender of Jewish distinctiveness, but on the contrary means its careful survival. *The World Crisis* deals with the subject that is possibly Rabbi Silver's major concern: the question of preserving Jewish culture and Jewish life in a world of war and persecution.



Harry A. Cole

RABBI ABBA HILLEL SILVER

Ohioans call Rabbi Silver the father of the unemployment insurance movement in that state. It was he who, as far back as 1928, persuaded the Consumers League of Ohio to undertake a survey of unemployment and unemployment insurance. As chairman of the Committee on Unemployment Insurance, he helped to frame the state's pioneer legislation on the subject, and he has been appointed by Governor White as a member of the state commission to study the problem. He has also served as chairman of the Ohio Committee on Unemployment Insurance. Widely known as a liberal, Rabbi Silver has been chosen to help arbitrate many industrial disputes and is highly regarded by organized labor.

Active in civic affairs, Rabbi Silver is often called upon to assume a leading role in charitable or cultural activities from all sorts of local groups. His interest in Cleveland is attested to by his aid in the introduction of the city-manager form of government and, later on, in the fight to retain it from 1927

SILVER, ABBA HILLEL, RABBI—*Cont.*
to 1929 when the question of civic rule became a tremendous issue with the population.

SIMON, RICHARD L(EO) (sī'mŏn) Mar. 6, 1899- Publisher

Address: b. Simon & Schuster, Inc, 1230 Sixth Ave, Rockefeller Center, New York City; h. 245 W. 11th St, New York City

SCHUSTER, M(AX) LINCOLN (shōō'-stẽr) Mar. 2, 1897- Publisher

Address: b. Simon & Schuster, Inc, 1230 Sixth Ave, Rockefeller Center, New York City; h. 11 E. 73rd St, New York City

The publishing house of Simon & Schuster is perhaps the most highly personalized in the United States. The tastes and personalities of its founders, Richard L. Simon and M. Lincoln Schuster, are reflected in everything, from the chatty Inner Sanctum ads to the comparatively small but varied list. Essandess, as the team is known to the trade, has made its fortune mainly with financially profitable self-help books that teach the readers anything from *How To Become a Good Dancer* by Arthur Murray (1938) to *The Art of Thinking* by Abbé Dimnet (1928)—not to mention *How To Win Friends and Influence People* by Dale Carnegie (1938). (The latest venture of this sort is called *How To Do Practically Anything*, and the publishers believe that it will be a "how to" book to end all "how to" books.) It has also purveyed culture to the masses through a series of basic books such as *A Treasury of Art Masterpieces* (1939) and *A Treasury of the Theatre* (1940).

RICHARD L. SIMON

When Simon and Schuster joined forces in 1924, they immediately went counter to many staid publishing traditions: limiting themselves to a book list that was of necessity (and later by choice) comparatively small, they paid more attention to promotion than has ever been done before. They advertised on a hitherto unknown scale (about $150,000 was spent on advertising the Carnegie book in 1937), the first publishers to boost their wares in full-page newspaper advertisements. They were, too, pioneers in what Schuster prefers to call "planned publishing," which consists of assigning ideas to writers. This sort of publishing called for an extensive stock of ideas. Today Robert van Gelder, writing about Max Schuster, is amazed by the extent to which the ideas of his adolescence still shape his distinctly unusual career.

When they met neither of the future team of Essandess had had a particularly exciting career behind him. Richard Leo Simon was born in New York, March 6, 1899, the son of Leo Leopold Simon, a well-to-do wholesale milliner, and his wife, Anna (Mayer) Simon. He was the eldest of five children and, like the rest of the family, intensely musical, a taste that is reflected in a number of Essandess books on music: he used to write music for camp songs, pick up pocket money by accompanying the family's operatic friends, and lead glee clubs in high school and college. He attended Ethical Culture School and afterward went to Columbia University, from which he was graduated in 1920. In 1918 he stayed in Plattsburg, a second infantry lieutenant. His first job after he was graduated from college was in a sugar importing firm. In 1921 he sold pianos for the Aeolian Company. It was then that he met Schuster, who was recommended to him as a possible customer. Schuster did not buy a piano, but the two young men discovered a passion in common for Romain Rolland. From this sprang a friendship that has endured these 20 years. In 1921 Simon became a salesman for Boni and Liveright, where he learned a good deal about publishing, and two years later he was ready to start out on his own. From 1924 on his and Schuster's personal histories become submerged in that of Simon & Schuster, Incorporated.

Max Schuster, the more breathless half of Essandess, was born March 2, 1897, in Kalusz, Austria, the son of Barnet and Esther (Stieglitz) Schuster, and was brought to New York City when he was seven weeks old. His father ran a stationery and cigar store, and Max, who went to public school and De Witt Clinton High School, acquired an early taste for journalism by reading newspapers, which he helped his father sell. Another enthusiasm was for Abraham Lincoln: while in high school young Max adopted Lincoln as his middle name. After he was graduated from high school he went to see Charles Chapin, the celebrated city editor of the old New York *Evening World*, and by means of boyish bravado talked himself into his first full-time job as a copy boy at $5 a week. Joseph Pulitzer, publisher of the *World*, was his boyhood hero. His biography was to be one of the first Simon & Schuster books.

In 1913 he quit the *World*, and his parents, at a great personal sacrifice, sent him to Columbia University and the Pulitzer School of Journalism. At college Max was prominent in an unusually brilliant class and put out, together with Irwin Edman and George E. Sokolsky (see sketch this issue), a radical undergraduate magazine, *Challenge*. He partly earned his expenses in college by writing, selling magazine articles and acting as college correspondent for the Boston *Evening Transcript*. This journalistic experience helped him to get a job after graduation as Washington correspondent for the New Republic News Service, later the United Press. During the First World War he was chief of the publication service of the Bureau of War Risk Insurance of the Treasury Department and later director of publicity for the United States Navy Liberty Loan and Victory Loan campaigns. After he was demobilized he was assistant to Professor Walter B. Pitkin (see sketch this issue), and edited the trade journal of the Motor & Equipment Manufacturers Association. By 1924 he had saved up about $4,000 from his various activities. That sum and a like sum from Simon went into their publishing house, a project which he and Simon had been considering for a long time. They had, besides, "a mass of adolescent enthusiasm" and a lot of ideas, plans and projects, but no authors or contracts.

Although they found out that, contrary to popular belief, authors conspire to discourage new and unknown publishers, their venture was an immediate financial success—even if in a somewhat unorthodox manner. Their first book was a crossword puzzle series which they assigned to the puzzle editors of the Sunday *World*. Characteristically, it was the result of Richard Simon's having overheard his aunt say she wished there were a collection of crossword puzzles for her to give to a sick friend. (*Fun in Bed*, 1932, was another instance of profitable eavesdropping by Simon, who overheard people in stores ask for good books to send to sick friends.) The 47 various volumes have sold over 1,500,000 copies and netted for Simon and Schuster a profit of $100,000. Unfortunately, it also gave them a reputation for being trick publishers, undispelled for a while even by the biography of Pulitzer they put out the same year.

Their best seller of 1926 belonged to an entirely different category. In his undergraduate days Schuster, who studied philosophy under Professor Walter B. Pitkin, thought that a book on the lives of the philosophers would be a fine thing. Pitkin was too busy to write it. But Schuster never forgot the idea, and finally found what he wanted in Will Durant's books, which were being published and sold at a nickel apiece by E. Haldeman-Julius. *Story of Philosophy*, which sold over 500,000 copies and put Essandess definitely in the black, was, like many another Simon and Schuster product, mainly an editing job. Another one was *The Bible Designed To Be Read as Living Literature* (1936), edited by the late Ernest Sutherland Bates and dubbed by Irwin Edman "the King Max Version of the Bible." The Essandess team is very proud of its popularity in England, the home of the King James' version.

M. LINCOLN SCHUSTER

The list of authors to whom Simon and Schuster have assigned ideas is long and impressive. They have, on occasion, called upon their friends, relatives and employees. *With Malice Toward Some*, a 1938 best seller, was written by Margaret Halsey, the wife of Richard Simon's brother Henry, on the occasion of her trip to England. Quincy Howe, the head of the editorial department, has written three books for Simon & Schuster: *England Expects Every American To Do His Duty* (1937), *Blood Is Cheaper Than Water* (1939) and *The News And How To Understand It* (1940). Among the alumni of the Columbia School of Journalism who have written books at the request of their classmate Schuster are Irwin Edman, Silas Seadler and Merryle Rukeyser. Simon even got his lawyer, René Wormser, to write *Your Will And What Not To Do About It* (1937). They try, however, to keep the emphasis off pure business and inspirational subjects and on culture and contemporary political scenes by such assignments as that of *Twelve Against the Gods* (1929) to William Bolitho; of *We Saw It Happen* (1938) to 13 foreign correspondents of the New York *Times*; or of *Men of Wealth* (1941) to John T. Flynn. That phenomenal money maker, Dale Carnegie's *How To Make Friends and Influence People* (which earned the author around a quarter of a million dollars and the staff a sizable year-end bonus), was the idea of the firm's business manager, who had attended the Carnegie course.

SIMON, RICHARD L. and SCHUSTER, M. LINCOLN—*Continued*

Graduating from the rather specialized interest in crossword puzzles, Simon and Schuster have acquired a list which includes Walter Pitkin, Eddie Cantor, Albert Einstein (see sketches this issue), Sidney Lenz, Robert Briffault, Cornelius Vanderbilt, Jr., Robert Ripley, Hendrik Willem Van Loon and Ferdinand Pecora. Although generally preferring to assign books, according to their "planned publishing" idea, Essandess has occasionally published manuscripts submitted to them—solely, it is said, upon the editorial recommendation. *Trader Horn,* a terrific best seller of 1927, was recommended by Clifton Fadiman (see sketch this issue). But this story of a picturesque tatterdemalion and his incredible adventures was given the full benefit of the Essandess promotional facilities to such an extent that it has been claimed that this and other Simon & Schuster best sellers owed their success solely to a high pressure advertising campaign, a statement with which Simon and Schuster disagree. By one method or another they have managed to produce a list of best sellers, so that their books have been selling at an impressive average of 20,000 (the average book sells approximately 1,200 copies).

Another literary triumph was John Cowper Powys' *Wolf Solent,* which was called a modern prose Hamlet by Percy Hutchison of the New York *Times*, to the great delight of the partners, who have always wanted to publish a classic. Generally, however, their fiction list has been rather weak. Clifton Fadiman, before leaving, did a lot to bolster it, being responsible for getting writers like Josephine Johnson, Christina Stead and Hans Fallada. But outside of Millen Brand's *The Outward Room* (1937), and Jerome Weidman's *I Can Get It For You Wholesale* (1939), few Essandess novels have reached the level of their other best sellers. The partners, who still learn as they run, have a small black book in which they record what they call their *flops d'éstime* and *succès de fiasco.* Not exactly in that category but still an unwelcome experience was their publication of Joan Lowell's *Cradle of the Deep* (1929), a roaring but unfortunately far from authentic sea story. Among the classical errors of omission they put their turning down of Grand Duchess Marie's *Education of a Princess,* which subsequently sold 200,000 copies for the Viking Press (1940). It was thereafter referred to in the office as "The Education of a Publisher" and, says Schuster earnestly, has taught them to pay more attention "to the inherent quality of the manuscript rather than to the field or classification in which it fell."

It was in 1927 that Essandess started its personal, chatty Inner Sanctum ads. The Inner Sanctum is the editorial conference room between the partners' offices where their brain children are born. In these ads, in the form of confidential letters to the trade and the public, the Essandess successes and failures are discussed with an amazing lack of inhibition. Occasionally they would chide the public for its lethargic attitude toward their favorite products ("It is simply incredible to your correspondents that a story so beautiful and with so obvious a popular appeal [as Alice Duer Miller's *Forsaking All Others*] can have been bought by so few people"), apologize for bad book jackets, discuss their love of music and admiration for the Philharmonic Symphony Orchestra and congratulate competitors on fortunate ventures.

Simon and Schuster have been too busy instigating books to write many of their own. In 1937 Simon, who is himself no mean photographer, wrote *Miniature Photography,* which was highly praised in an independent Inner Sanctum ad by Schuster, to his partner's great embarrassment. Schuster produced in 1935 *Eyes on the World,* a photographic history of 1934. That was not a great success, but Schuster's *A Treasury of the World's Great Letters* (1940), a lush and handsome job, was a best seller. Schuster had begun working on it about 25 years before, until his letter collection filled many mammoth volumes. A publisher as well as an editor, Schuster had planned the entire project as an integrated whole, always keeping in mind the trade promotion, and putting in it, as inducement to the reader, such facilitating devices as the classified table of contents, the grouping of letters by topics, the carefully thought out and effective headlines and background material. Simon, on his part, contributed an effective brochure to the members of the trade, which grateful Schuster called a "Treasury of Great Trade Letters." The second volume of *A Treasury of the World's Great Letters* came out in the fall of 1941, together with *A Treasury of Gilbert and Sullivan.*

Simon and Schuster function successfully as a team, with Simon on the sales and promotion end and Schuster principally an idea man. Simon, a tall, handsome, rangy man, who has been described as an amiable hedonist, makes frequent trips around the country, selling his firm's books and getting publishing ideas. It was his idea, for example, to enclose referendum cards in their books, asking readers for their opinion of the books. Many of the remarks that come back, besides providing a valuable gauge of public reaction, are quotable (though Simon admits that many others are unprintable) and have been used to good effect in advertisements. In 1934 Simon married Andrea Louise Heinemann, who once was the Simon & Schuster telephone girl, and they now have two daughters, Joanna and Lucy. His favorite recreations are bridge—he is an excellent player—tennis, golf and photography, the last of which he practices in the basement of his home in Greenwich Village. He also often plays the piano with a sure and skillful touch.

M. Lincoln Schuster (Max to his friends), who "looks like a merry young owl," was a confirmed bachelor until May 1940, when he married Ray Levison. Aside from his all-consuming passion for culture, his main characteristic is a maddening love for order. He has built up an elaborate filing system of colored slips of paper, duplicates, photostatic copies and abbreviations. Every morning his left-hand suit pocket is filled with batches of three-by-five colored slips which he covers with jotted notes during the course of the day. This bewildering stream of "M's" (maxims), "E. M.'s" (editorial memos), "M. A.'s" (maxim allusions), "G. A.'s" (good ads) and others flows from his left-hand to his right-hand pocket and is eventually typed and filed away to lie dormant in folders until it emerges in the form of books or advertising campaigns. He has been functioning for years at the speed of a dynamo, busy for 18 hours out of 24. Since his marriage, however, he has stepped down this tempo somewhat and has promised to bring home "my enthusiasms but not my manuscripts." Schuster is fond of gags and quips. In *Who's Who in America* he is listed as a member of Friends of Scripta Mathematica, Three Hours for Lunch Club, Society for Prevention of Cruelty to Newspaper Readers, Wednesday Culture Club That Meets on Fridays, and Downing Street Young Men's Marching Club.

Lately Simon & Schuster, Incorporated, have been installed in a fabulous glass penthouse which has been described as "not only the handsomest but probably the most compact and efficient publishing offices in the country." All the offices have an entire wall of glass (the publishers' offices have two) and are surrounded by a broad terrace with shrubs and flowers that the Radio City management changes every two weeks. Thus equipped for a lifetime of gracious publishing, the two partners are still as excited as ever about their profession. That Max Schuster actually came down with his wife to see his book in the press bespeaks a youthful and touching enthusiasm that more than 15 years in the publishing business might ordinarily be expected to dull.

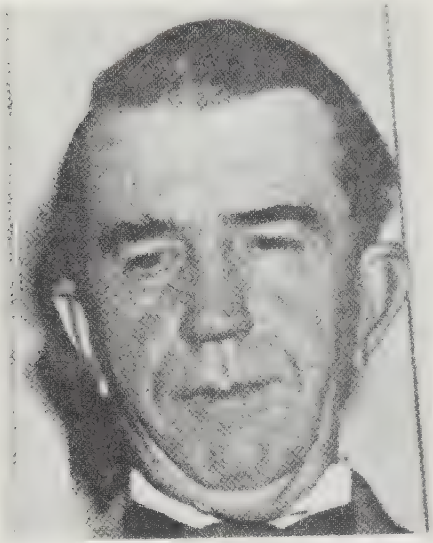
SMITH, HOWARD W(ORTH) Feb. 2, 1883- United States Representative from Virginia

Address: b. House Office Bldg, Washington, D. C.; h. 204 W. Walnut St, Alexandria, Va.



Acme

HOWARD W. SMITH

Mourns Congressman Howard W. Smith: "Labor fellows don't read my bills—they just say, 'Smith, he's anti-labor.' "

"A Virginia bank president, a church pillar and a dead ringer for Edward Everett Horton," late in 1940 Mr. Smith introduced a bill into Congress that Labor *did* read. It provided a 30-day "cooling period" before a strike could be declared in defense industries (plants manufacturing materials for land and naval forces, whether under Government contract or not); it made the closed shop illegal in defense territories; and it provided a sentence of life imprisonment for sabotage. Mr. Smith preferred it to Representative Hoffman's bill, which outlawed defense strikes outright: "I think we ought to try my bill first. You can't do this program by force, and I don't think you can go the whole way. If you told labor it can't strike, the next thing would be a demand that we conscript capital." He said further: "The only objection I got to the sabotage clause of my bill is that it provides life imprisonment—not death." He was "convinced that the public won't stand for monkey business," and that "sentiment is with us."

Nothing happened to this particular bill, and early in 1941 two amendments attached by Mr. Smith to the Lease-Lend Act were defeated in the House. But he didn't give up. Some months later he urged an amendment to the National Labor Relations Act to "restore the God-given right of every man to work without paying tribute to a labor union." He was one of the leaders of the anti-labor bloc in the House of Representatives which threatened to defeat legislation to change the Neutrality Act in November 1941 if anti-strike legislation were not passed, and the next month a drastic anti-strike bill which he introduced was actually passed by the House. Even this bill, however, lost support after Pearl Harbor, and Mr. Smith himself began devoting even more adjectives to the Japanese than to American labor unions.

Howard Worth Smith was born in Broad Run, Virginia on February 2, 1883, the son of William Worth and Lucinda (Lewis) Smith. He was graduated from the Bethel Military Academy in Warrenton, Virginia in 1901, and received his LL. B. from the University of Virginia two years later. In 1904 he hung up his shingle in Alexandria, and by 1917 was assistant general counsel to the Alien Property Custodian, by 1918 commonwealth's attorney of Alexandria. He held that office until 1922, when he became judge in Alexandria's Corporation Court, and a year later he married Anne Corcoran. A judgeship in the 16th Judicial Circuit of Virginia followed in 1928.

It was 1931 when Mr. Smith was first elected to the United States House of Representatives from the 8th Virginia District, and he has been re-elected to every succeeding Congress with the exception of a term as Congressman-at-large from 1933 to 1935. A Democrat, he didn't exactly make himself known as a New Dealer, even at first. He helped to prevent an investigation of silicosis deaths in West Virginia; he voted against appropriations to aid farm tenants; and when Senator Wagner's National Labor Relations Bill came up in 1935 he spoke and voted against it and later advised some employers to ignore it. He voted against every major relief bill. President Roosevelt called him "the greatest obstructionist in Congress" and tried unsuccessfully to "purge" him in 1938.

By 1939 the gentleman from Virginia was something of a leader among members of the anti-New Deal bloc in the House. He proposed a committee of five—the "Smith Committee"—to investigate the National Labor Relations Board, and became its chairman over the protest of Mary Norton, chairlady of the Labor Committee, who asserted: "Certainly he is the last man in the world to pass on labor legislation. I have taken the trouble to investigate his labor record and I have yet to find a single labor bill for the benefit of the workers of the country that he has ever voted for." After three months of study and investigation a set of drastic amendments to the National Labor Relations Act was introduced, approved by three of the five members of the Smith Committee. Senator Wagner (see sketch this issue) called the Smith amendments "a delusive remedy for the worker and a concrete weapon for the oppression of labor."

To Mr. Smith, on the other hand, they merely insured justice for the employer, for it was his opinion that "whatever may have been the sins or shortcomings of industry toward labor in the past, and they have been plenty, it has certainly been punished with sufficient severity in the last five years under the Wagner Act." As for the Act itself, he had decided that it "never intended to be either fair, impartial or judicial."

Congressman Smith is not a publicity seeker. Kenneth Crawford has described him rather as "a convinced, sincere, native American primitive who seems to believe, with Hamilton, that the populace is a beast. The beast must be caged." At that time Mr. Crawford was referring to another of Mr. Smith's bills, before Congress in 1939, which, among other things, recommended that aliens be confined in concentration camps for life if they belonged to any group which so much as "advised a change" in the American form of government. The bill providing for fingerprinting aliens, passed in 1940, is also Mr. Smith's brainchild.

Usually calm and courteous, Mr. Smith "wears a wing collar, fondles a pince-nez, resembles a slick, small town lawyer in the 1880's." He calls himself a "middle-of-the-road man," and is fond of talking of "labor's excesses" and "industry's responsibilities." "It's a question of give and take so that we may all do the same for the other fellow," he says. He blames nearly all strikes on the "Communistic labor board."

Back in Virginia Mr. Smith is not only the president of the Alexandria National Bank but is also engaged in farming and dairying. He is a member of the Maryland-Virginia Milk Producers Association, a Mason, an Odd Fellow, an Elk. An Episcopalian, he is also vice-president and a trustee of the National Crittenton Mission. He has two children: Howard Worth and Violett Adelaide.

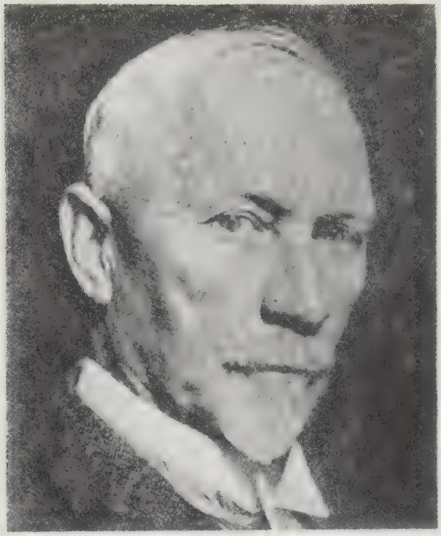
SMUTS, JAN CHRISTIAAN (smŭts) May 24, 1870- Prime Minister of the Union of South Africa

Address: Doornkloof, Irene, near Pretoria, South Africa

In his lifetime as a lawyer, a politician, a soldier, a rebel, a turncoat, a philosopher and a diplomat, Jan Christiaan Smuts—"Slim Jannie" or the "Ou' Baas" to his people—has gained more respect and attracted more hatred than any man in South Africa. One reason might be that Smuts, a stern disciple of duty, has not hesitated to ride roughshod over any obstacles in the way of his responsibilities—there have been many of these, since he has always done the work of three or four men.

In 1941 he conducted his third major war as Prime Minister of the Union of South Africa, officer commanding the Union Defense and a field marshal in the British Army. His activities in this War have been prolific. There has been talk of including him again in an Empire War Cabinet, not yet in existence. He was in Libya with General Wavell (see sketch this issue) when the latter unleashed his Somaliland offensive; it has been said that he was instrumental in carrying through the Ethiopian campaign; and one commentator has even suggested in that connection that he insisted on that campaign in order to insure a military success in Africa necessary to consolidate his precarious majority in the South African Parliament.

South Africa has long been divided into two political groups: one, headed by General James Barry Munnik Hertzog, hopes for a South Africa free of British influence under "reconstructed Afrikanderdom" (the Afrikanders are descendants of the old Dutch or Huguenot stock who were the first to settle in South Africa) and, if necessary, fitted into the totalitarian scheme of the "New Order for Africa." At the head of the other stands Smuts himself, with his program of Anglo-Boer cooperation. The outbreak of the Second World War found Hertzog and not Smuts at the helm of South African Government But on September 6, 1939, the day after Prime Minister Hertzog indicated that his policy would be "to continue as if no war were being waged," he was forced to surrender his office to General Smuts, and a none-too-enthusiastic South Africa again climbed aboard the British war wagon. Since that time Smuts has on several occasions remarked that "South



JAN CHRISTIAAN SMUTS

Africa can have but one peace, and that is a peace through victory."

Jan Christiaan Smuts was born a British subject on a farm in the Cape of Good Hope on May 24, 1870, the year when the Kimberley diamond mines in South Africa were claimed by the British. He was the son of Jacobus Abraham Smuts, a Dutch farmer, and his wife, Catharina de Vries. Until he was 12, young Jan ran the farm as befits a younger son. Then, after his older brother died, he took over the business of family education and went to school in the village of Riebeek West, where he first learned to read and to write.

After four years young Smuts entered Victoria College, in Stellenbosch, where he learned Greek grammar by heart in a week, grew interested in philosophy, English and German poetry, and passed all his examinations at the head of the list. It was there that he met his future wife, Sybella Margaretha Krige, and, with sympathy and admiration, heard Cecil Rhodes speak in the imperial vein, predicting a United Africa. This was a concept which Smuts was to treasure for the rest of his life, even when his admiration for Rhodes was a thing of the past. In 1891 he won the Ebden Scholarship and went to read law at Cambridge. He did brilliantly there: won the George Long Prize, headed both parts of the Law Tripos and wrote *Walt Whitman: A Study in the Evolution of Personality.* This book, a remarkable piece of work for so young a man, though unpublished, was later hailed as an important work, anticipating the theory of psychoanalysis.

In 1895 Smuts returned to South Africa, where he was admitted to the Cape Bar. A successful career was ahead of him, a possibility of becoming one of "Cecil Rhodes' smart young men." This possibility vanished in a cloud of disillusionment when it was found that Rhodes was implicated in the scandalous Jameson Raid. Partly because of this disillusionment, partly to seek greater opportunities, Smuts went to Johannesburg, gave up his British nationality to become a second-class burgher in Paul Kruger's Transvaal. "Oom Paul," recognizing the young man's ability, made him State Attorney at 28. Smuts demonstrated his ability and his proverbial honesty by reforming the corrupt detective department.

At the time Smuts began to share in the fortunes of The Transvaal, South Africa was in the grip of a tension which was finally to resolve itself in the Boer War. The conflict was between the "old" Boers and the "Uitlanders," whose allegiance was to England and who, in spite of their considerable holdings and influence in The Transvaal, felt themselves to be unjustly treated. Smuts wanted to prevent the war. Together with Kruger he conferred with Lord Milner at the futile Bloemfontein meeting and personally negotiated with the British agent in The Transvaal. But when the war came he fought the British with all the cold obstinacy that was so characteristic of him.

After the first encouraging months of war, the weight of numbers began to tell, and Pretoria, The Transvaal capital, fell to the British—but not before Jan Smuts had robbed the Pretorian banks of Government funds and taken them along with him in order to be able to finance the Boer resistance for two more years. In 1901 he went to Cape Colony to become a commandant general and lead a guerrilla band against the English. In his saddle bag he carried a Greek testament and Kant's *Critique of Pure Reason.* For the next two years he carried on a continuous running fight with his ragged *commandos*, helped by Botha, De Wet, De la Rey. The end of the war in 1902 found him besieging the British in Ookiep. From there he traveled to assist in the Vereeniging peace negotiations.

For a while Smuts, who had refused to join Lord Milner's Legislative Council in what was now the Crown Colony of The Transvaal, was an embittered veteran. He spent the next two years tending his garden, like Candide. Then, in the year of Kruger's death, he formed with Botha a People's Party that called itself Het Volk and agitated for responsible government. It was this Party that sent Smuts to England in 1905, when the Liberal Party got into office. His task proved surprisingly easy: with the approval of Sir H. Campbell-Bannerman the British gave the Boers back self-government.

"They gave us back—in everything but name —our country. . . Has such a miracle of trust and magnanimity ever happened before? Only people like the English could do it. They may make mistakes, but they're a big people," wrote Smuts exultantly. This attitude henceforth characterized his relationship with the British and was to bring a great deal of censure on him and his colleague Botha on the part of the irreconcilables, who branded them turncoats and traitors.

In 1907 the first election under Responsible Government was won by the Het Volk Party led by Botha and Smuts. The popular Botha became Prime Minister, with Smuts under him holding the portfolios of Colonial Secretary and Minister of Education. Admittedly Smuts was the brains of the Administration; as such he had to bear the brunt of public criticism for many of his unpopular acts. He was the one to send Gandhi to jail over the question of Indian immigration, and he took the definite stand against Labor that ultimately was to unseat him. When his great dream of the Union of South Africa was finally achieved in 1910, largely due to his efforts, he still had to face distrust on the part of his people. (He took the portfolios of Interior, Mines and Defence, later exchanging the first two for that of Finance.) And it was Smuts who reaped the whole weight of popular discontent when he helped to break the Johannesburg miners' strike by calling out troops and illegally deporting labor leaders without trial, in 1914.

The outbreak of the First World War found many Boers willing to exploit the situation by attempting to wrest their lost independence from the now-occupied British. Smuts was against this policy. Under his direction the Parliament voted to join on Britain's side, but not without a short, angry rebellion led by General Maritz and some of Smuts' fellow campaigners in the Boer War. Smuts had to put this rebellion down before South Africa was able to pay attention to its German neighbor, Southwest Africa. His brilliant campaign in Southwest Africa was one of the first Allied successes.

Nevertheless, the residue of bitterness was left throughout the Union and bore bitter fruit for Jan Smuts in the election campaign of 1915. Smuts' life was threatened in Johannesburg; General Hertzog's Nationalist Party gained; and Smuts said that he "would like nothing better than to be out of this hell into which I have wandered and in which I have lived for the last two years." His wish was granted: in 1916, as a general of the British Army, he was billeted to carry on a successful campaign in German East Africa; in 1917 he went to England to take Premier Botha's place at an Imperial Conference which the Premiers of the different Dominions were to attend.

Sarah Gertrude Millin calls Smuts of that period "the Empire's Handy Man." Acclaimed and feted throughout the British Isles, he joined Lloyd George's War Cabinet of six. In 1917 he presided over the War Priorities Committee and the Air Organization Committee; the R. A. F. is the direct result of the work he did. Because of his immense popularity in Great Britain he was called upon to settle several strikes, notably a strike of Welsh miners. He was offered the Palestine command and the presidency of the Irish Convention, refusing both. He was sent out on missions to kings and called upon to report on the situation on various fronts. He, too, took part in planning war strategy, helping Allenby map out the Palestine campaign which ultimately took place in October of 1918. His opinions were listened to with respect, particularly after his prediction of the breakthrough in the British line.

Then came the Armistice and the end of the War. On December 16, 1918 Smuts' resignation from the War Cabinet was announced. On that same day his plan for a League of Nations was published. "Europe," wrote Smuts, "is being liquidated and the League of Nations must be heir to this great estate." This concept was one of the causes that was nearest to his heart.

That his passion for the League brought him into close sympathy with Wilson was to be expected—the relationship was certainly a closer one than that with Lloyd George. Even in 1918 he had protested against the latter's theory of a "Knock-Down Blow," asking instead for a victory that would not jeopardize "the civilization we are out to save." These differences and Smuts' lonely attack on the Peace Treaty almost led to a quarrel. On the other hand it was Smuts' idea of reparations —with pensions and bonuses included among Germany's liabilities—that Wilson adopted.

The Peace Treaty was very different from what either Wilson or Smuts wanted. In a letter to Lloyd George, Smuts wrote: "This Treaty breathes a poisonous spirit of revenge which may yet scorch the fair face—not of a corner of Europe but of Europe." But Smuts was alone in what was probably the unhappiest time in his life, though with John Maynard Keynes (see sketch this issue) to share his misgivings. At first he refused to sign the Treaty, but was prevailed upon to do so by his friend and superior, Botha, and by Lloyd George. In the same afternoon his historic protest was published. His chief interest throughout the Peace Conference was still in the League of Nations. He drafted many clauses of the Covenant and drew up the celebrated Article XVI, under which sanctions were to be invoked against Italy in 1935.

The War and the making of the peace over, Smuts came back to a South Africa industrially depressed by the War. In August 1919 Botha died, leaving Smuts to assume the burden of Premiership and post-War depression. It was a heavy one, for Smuts' countrymen did not regard him with the wholehearted admiration accorded him in Europe. "Smuts' superlative achievement overseas, his acclaim there, crowned in their eyes his misdemeanors." One of these, in their opinion, was his use of troops to put down the Rand mines strike of 1922. General Hertzog, whose Nationalist Party had been steadily gaining adherents, remarked that "the Prime Minister's footsteps drip with blood," and recalled the "Butchery of Bullhoek" in 1920 when Government troops were sent against a native religious sect entrenched at Bullhoek. The culmination of these attacks came in 1924 when Smuts' Government went to defeat, which Smuts himself took, as was his wont, philosophically.

In spite of his preoccupation with the South African affairs, Jan Smuts' connections with Europe have never been severed. In 1921 he was helpful in bringing the Irish Free State

SMUTS, JAN CHRISTIAAN—*Continued*

into being. In 1923 he defended Wilson's policy and denounced the French policy on the Ruhr. And in 1930 Smuts, who calls it a justification of his life that he has stood unalterably by the Jews, opposed the Quota Law designed to keep Jewish immigrants out of his country, and was able to get some concessions. All during his life he struggled, wrote, spoke of his idea of the League of Nations. It was the greatest disappointment of his life that the United States rejected the League, which alone, he thought, "could save a tottering Europe."

During his years out of office Smuts' way of resting was, as usual, to do some other sort of work. He wrote *Holism and Evolution* (1926), in which he set out his philosophy, which consisted of seeing the world as "a rising series of wholes, from the simplest material patterns to the most advanced." He devoted his time to botany, to lone treks into the Kaffir country, and to farming. In 1929 he presided at the meeting of the British Association for the Advancement of Science. He accepted the Rhodes Memorial Lectureship at Oxford and in 1930 toured the United States and Canada in a series of lectures.

It was while he was in England presiding over the Centenary Meeting of the British Association that Britain went off the gold standard. He urgently recommended that South Africa follow suit, but his advice was derisively rejected by the Government. Nevertheless, it was on the cry of "Off Gold" that Smuts returned to office. The flight of capital from South Africa finally compelled the Government to change its mind. In 1933 coalition was the order of the day: for the good of the country Smuts submitted himself to General Hertzog, and a new Union Government was constituted. Smuts became Minister of Justice with wide powers—a post he kept until 1939, when the Second World War again brought him to the head of his Government.

Today Smuts is a slim, soldierly man with a trimmed gray beard and eyes that are "a cold clear blue, steely to hardness, brilliant, almost dazzling, almost affrighting." His manner is friendly but restrained. Freeman of 10 cities, possessor of 21 honorary degrees of universities in Great Britain, the United States, Canada and South America, he is "that rarity among Boers, a man of Europe." Instinctively he is a diplomat with a diplomat's humor and tastes. There is a great deal of the Puritan in him—"the things from which other people get enjoyment don't amuse him now and never did." Cultivated, erudite, with a good literary background and a colossal memory, he can talk well on any subject and movingly on a great one—but his earnestness sometimes makes it difficult to know whether he is "making an epigram or a cliché." He has never been an envious man and hates to believe that he has enemies. He has an inflexible—some say dangerous—sense of duty, which has often made him take law into his own hands. Like all Boers he is a farmer at heart: he has a model farm 10 miles from Pretoria. Its square, single-storied house is usually full of people—his children (he has two sons and four daughters), grandchildren, relations, pilgrims and other guests invited by the hospitable Mrs. Smuts; but their noisy invasion stops at the door of Smuts' inner sanctum, his library.

SNELL, HENRY SNELL, 1ST BARON

Apr. 1, 1865- British statesman and municipal organizer

Address: Connaught Club, London, W. 2, England

Henry Snell's life is a Dick Whittington story. The 12-year-old boy who stood for hire in the market place at Newark-on-Trent 63 years ago became head of London's great County Council, a peer of the United Kingdom and in his old age captain of His Majesty's Gentlemen at Arms. Snell started life with every disadvantage, yet he rose slowly, quietly, overcoming all the handicaps of birth, lack of education and religious and political heresy. For 18 years now he has been in Parliament and in this period he has won widespread respect for his idealism, his skill in handling large issues in committee and the dignity and poise with which he has fulfilled his Parliamentary function. Today he is recognized as an authority on municipal and colonial affairs; his speeches and writings are informed with style; he is recognized as a scholar, though his only scholarly training was received at a few university extension lectures.

Henry Snell was born in the village of Sutton-on-Trent, Nottinghamshire, the son of farm workers, of a mother who could neither read nor write. His family was large, and Henry started to work at nine. His first job was scaring birds for local farmers. At 12 he was hired as an indoor servant to a farmer near Newark and from then on, through his adolescence, he was employed mainly as a pot-boy in various public houses and for a brief period as a French-polisher in Nottingham. His experiences in public houses left a deep mark on him. Never in his life has he used alcohol in any form or even smoked.

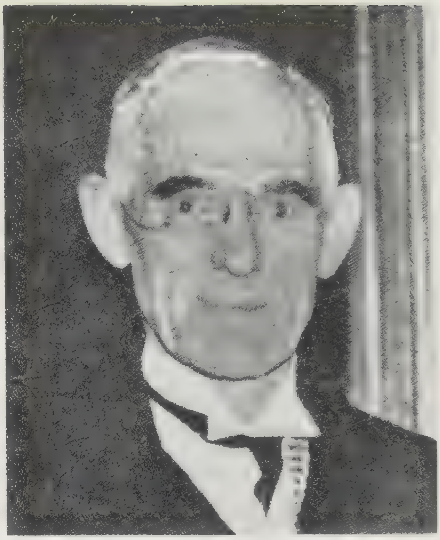
In his spare hours he began to read and Sundays attended a Unitarian chapel in Nottingham. The secretary to the Midland Institution for the Blind, also a chapel member, saw that young Snell was intelligent and made him his assistant, the first decent job he had had. He was still very poor, but his hours were shorter and the work congenial. He read more and more widely, and his interest in religion and politics grew stronger. In both he began to move rapidly to the Left. Soon even Unitarianism was not free enough for him. He became an agnostic and joined the National Secular Society. In politics he became a Socialist, joined the Social Democratic Federation, attended economics lectures by Professor J. E. Symes at University College, Nottingham, and took every opportunity to hear such speakers as William Morris, Charles Bradlaugh, George Jacob Holyoake and Annie Besant.

Early in 1890 Snell went to London as assistant-secretary to the Woolwich Charity Organization Society. All his leisure time, which meant from six or seven in the evenings and Sundays, was spent in ever deeper and deeper study and in open-air speaking for the causes of Rationalism and Socialism. In 1895 he took a big step up when he was appointed secretary to the director of the newly-founded London School of Economics. He was sent all over the country lecturing under the aegis of the Fabian Society (a gradualist Socialist group, of which the Webbs and George Bernard Shaw are famous members). But his health wasn't good and what with the constant traveling, late hours and hotel life, he had a breakdown in 1898.

Dr. Stanton Coit, a pillar of the Rationalist Press, came to the rescue. He offered Snell a three-year engagement as a lecturer which was accepted. Nevertheless, Snell began again to suffer from insomnia and nervous strain, and Coit sent him abroad to Switzerland for the summer of 1900. In 1902 he spent the spring and summer terms at the University of Heidelberg and afterward went on vacation to Grindelwald and to Venice, from which he was driven home by an attack of enteritis.

From 1902 to 1919 Snell continued his work for Socialism and Rationalism. In 1907 he was made secretary of the Secular Education League which worked for the removal of theological teaching from schools, and he conducted its propaganda until 1931. For 20 years he was a member of the executive council of the Fabian Society. When, in 1910, the Huddersfield Labor Party persuaded him to stand for Parliament, he was unsuccessful and he was unsuccessful again in 1918.

It is from 1919 on that Snell emerges as a public figure, for in that year he was elected to the London County Council for East Woolwich. He served there until 1925, and in 1934, when Labor got its first majority on the Council, he was unanimously elected chairman and remained in the Chair until 1938. Meanwhile, in 1922, he had entered the wider sphere of national politics as Labor Member of Parliament for East Woolwich.



BARON SNELL

In Parliament Snell took a special interest in Dominion and Colonial matters, went to South Africa in 1924 as a delegate of the Empire Parliamentary Association and was one of two commissioners appointed in 1926 to report on the economic condition of British Guiana. In 1927 he served on a departmental committee to consider the question of pensions for colonial Governors; and in 1929 he was a member of the Commission of Inquiry into the riots in Palestine. That same year he received the honor of being selected to move the address to His Majesty on the opening of Parliament, a task which he carried out with conspicuous dignity and correctness.

In 1931 Snell was made Parliamentary Under-Secretary of State at the India Office and transferred to the House of Lords, with the chosen title of Baron Snell of Plumstead, in the County of Kent. Other honors he received include the order of the Companion of the British Empire (1930); an honorary LL. D. from London University (1936); and membership in the Privy Council (1937).

Snell's work at the India Office lasted only five months, after which the Labor Government went out of office, but he has continued to expound and maintain the principles of his Party in the House of Lords as one of a very small band of Labor peers. His present Royal Household office, as captain of the Gentlemen at Arms, is but a minor decorative one; but it should be remembered that Snell is 75 years old.

Few men in British public life have won so much affectionate respect from all parties as Henry Snell. He has never been an am-

SNELL, HENRY SNELL, 1ST BARON
—Continued

bitious man. Always he has been a quiet and persistent worker, profoundly concerned with problems of human character and freedom of thought, considering the highest task the betterment of the individual man. Sensitive and studious, he is known for his fair-mindedness. In the days when he had to fight elections, for instance, he would make no allusion at all to his opponent except to ask that he have a fair hearing. In 1936 Snell brought out his autobiography, *Men, Movements, and Myself,* having previously published *Daily Life in Parliament* (1930). He is unmarried.

Who's Who

SNOW, EDGAR (PARKS) July 19, 1905-
Foreign correspondent; author

Address: b. c/o Random House, 20 E. 57th St, New York City; h. Mungertown Rd, Madison, Conn.

EDGAR SNOW

For more than a decade Edgar Snow, "the most adventurous and enterprising newspaperman in China," has been wandering up and down the coast of Asia and penetrating far into the interior. From his wanderings have come newspaper reports, magazine articles and books, the latest of which is *The Battle for Asia* (1941). Called by Joseph Barnes, foreign editor of the New York *Herald Tribune,* "a newspaperman's book, in the best sense," it is a "serious, comprehensive and supremely authoritative job of reporting" made rich with vivid pictures of the fighting around Peiping and Shanghai; weighted with facts and figures, social and political trends; dramatized by accounts of personal adventures, illuminating sketches of people in Asia and their work, tales of terror and sudden death. It was around the time of its publication that Snow returned to the United States for the first time in many months. (Not long afterward *Smash Hitler's International,* of which he was co-author, appeared.)

In *The Battle for Asia,* Edgar Snow draws a number of conclusions, not all of them acceptable to the critics who praise his brilliant and accurate writing. He still believes, as he believed when he wrote *Red Star Over China* (1938), that "political democracy and agrarian reform are China's great needs." As part of that, he states in *The Battle for Asia* that the struggle for China may well be lost if Chiang Kai-shek and the Communists fight each other. And he believes that American help should be sent, not to the Chinese bureaucracy, but to be administered jointly by a high committee representing all anti-Japanese groups in China in cooperation with United States advisers on the spot.

Edgar Parks Snow, who spent part of his youth as a harvest hand and later as a railway worker and seaman, was born a long way from China, in Kansas City, Missouri, the son of James Edgar and Anna Catherine (Edelman) Snow. After public school in Kansas City he spent 1923 and 1924 studying at Kansas City Junior College and from there went on to the University of Missouri. He left the University in 1926 for the Columbia School of Journalism and left Columbia, in 1927, for his first newspaper job—as a correspondent for the Kansas City *Star.*

This was followed by newspaper work in New York, interrupted one day later in 1927 when the thought suddenly occurred to him that one really should see Madagascar. His career as a traveling journalist, which has since taken him by steamer, junk, sampan, pony, camel, cart, palanquin and on foot through thousands of miles of the Orient, which has led him to know Indian saints and Annamite rebels, Chinese "Reds" and Japanese war barons, was under way.

Snow went first to Central America, then to Hawaii, supporting himself by writing for newspapers and magazines. By the end of 1928 he had wandered on to the Far East. He intended to stay there only six weeks and then to push on to Madagascar—he stayed there 12 years. For a while he lived in Shanghai, where he was assistant editor of the China *Weekly Review,* but this was merely his base. In 1929, at the invitation of Dr. Sun Fo (son of the deceased Dr. Sun Yat-sen), then Minister of Railways, he traveled over the entire system of government railways in China and Manchuria and toured Korea. A series of guide books on China was the result of these journeys.

During the Northwest famine, the worst in history, Snow visited Suiyuan, Shansi and Inner Mongolia and brought back for the New York *Herald Tribune* the first eyewitness accounts of that colossal tragedy in which more than 2,000,000 people met their death. Later, as correspondent for the Chicago *Tribune*, assisting J. B. Powell, the *Tribune's* veteran correspondent in the Far East, he covered the Sino-Russian hostilities in Manchuria during 1929 and 1930.

Shortly after this assignment, in 1930, Snow was appointed staff correspondent for the Consolidated Press Association and started off on assignments that took him to many of the known and some of the almost unknown places of the Middle and Far East. He organized a caravan and crossed southwestern China, through bandit-ridden, mountainous and little-traveled Yünnan, going by way of the Tali snow ranges down through the Shen States and Upper Burma into India. For months he lived almost entirely with Asiatics—often with people who had never seen a white man.

Other assignments took him to Formosa, where he narrowly missed death in a head-hunters' uprising in which more than 200 Japanese were massacred; to Indo-China, where he was the only American correspondent to report the serious agrarian revolt of 1930; to India, to follow the Satyagraha (non-resistance) movement; to Burma, where he was the only American correspondent to report the Tharawaddy uprisings against British rule; to the Dutch Indies, during the mutiny of the crew of the DeZeven Provincien; to milder adventures in Ceylon, Malay, Bali, the Celebes, Borneo and the Philippines.

During this time Snow was a special correspondent for the New York *Sun* and for the London *Daily Herald* and in 1934 he gave up his staff position with the Consolidated Press Association to devote his time to these two newspapers while continuing to write for many magazines, including the *Saturday Evening Post, Asia, Current History, Fortune* and *Look* Magazine. He had already published his first book, *The Far Eastern Front* (1933), which covered his experiences as a correspondent during the Sino-Japanese conflict from the outbreak of the Manchurian hostilities down to the Tangku armistice.

For a little while Edgar Snow and his wife, Helen Foster, who as "Nym Wales" has also written books and articles about the Far East (they were married in 1932), settled down in Peiping while Mr. Snow gave a series of lectures at Yenching University. Two years later, after varied newspaper reporting, he started off into the Communist part of China. Before he left he wrote: "In all these years the Reds have been in action no foreign newspaperman, practically no foreigner at all, in fact, has penetrated into these Red-controlled regions. If I get through it will be a world scoop."

Snow did get through Red territory, took pictures and came out again to score his world scoop with articles to the London *Daily Herald* and the *Saturday Evening Post.* His accounts of the Communist leaders, of the inside story of the kidnapping of Chiang Kai-shek, of the Red Army itself, of China's war tactics and objectives were published also, in 1938, in *Red Star Over China.* (*Living China,* a collection of short stories by various Chinese, edited and translated by Snow, had been published the year before.) Immediately it became an international best seller, critics calling it "one of the most remarkable books ever written by a journalist about a foreign country," a "vitally important historical and political volume, rich in present significance and even more wealthy for future reference."

There were some critics, however, who felt that Snow's "interpretations of the course of the Chinese Revolution and his theorizing on the nature of the Chinese Communist movement" were "open to criticism." And there have been others, since the publication of his latest book, who deplore his sympathy for the Chinese Communists. Actually Edgar Snow belongs to no political group. He believes that the Communist movement in China is an attempt by the Chinese to rid themselves not only of foreign imperialistic designs but also of centuries of old oppression by bureaucratic officialdom, greedy bankers and others; that "the alleged Communism is largely a striving toward a democratic republic."

Still, it is in cooperatives that he sees the greatest hope for China. "The best thing I ever did," he says, "was to help draw up the plan for Chinese Industrial Cooperatives, of which I was co-founder, with Rewi Alley and my wife, Nym Wales. We conceived this form of 'productive relief' as a means of human rehabilitation, of quickly rebuilding industry lost during the present War, of fortifying the morale of the Chinese people, and of laying down an economic basis for protracted resistance—a kind of guerrilla industry to support China's guerrilla warfare. It was a huge success and has won international support. Unless it is suppressed by the Kuomintang (ruling party of China), Indusco (as Chinese Industrial Cooperatives are called) may provide for China an entirely new form in which to achieve industrialization."

Who's Who in America

SOKOLSKY, GEORGE E(PHRAIM)

(sô-kôl'skê) Sept. 5, 1893- Author; columnist; industrial consultant

Address: b. National Association of Manufacturers, New York City; h. 330 West End Ave, New York City

Called by *Time* Magazine "a star-spangled spieler for capitalism," and "a one-man intellectual front for conservative capital," George Sokolsky, author, lecturer, industrial consultant, has numerous outlets for his defense of the *status quo* in the "American way" of life. For several years a columnist for the New York *Herald Tribune,* he now conducts a similar column of comment, political and otherwise, for the New York *Sun*; he has done weekly broad-

GEORGE E. SOKOLSKY

casts for the National Association of Manufacturers since 1937; he is the author of six books and numerous magazine articles; he is well known to the general public through his appearances on such radio programs as the *Town Meeting of the Air.*

An ardent believer in the premise that "democracy and private enterprise are in practice inseparable," Sokolsky has been highly paid for his services as an industrial "consultant." In testimony before the La Follette Civil Liberties Committee it was disclosed that "Mr. Sokolsky received $28,599 from Hill and Knowlton, June 1936 to February 1938, for services to the American Iron and Steel Institute, for consultation and help in preparing booklets, as well as for some lectures and radio talks." According to Kenneth M. Lloyd, chairman of the Little Steel and Iron Institute, Sokolsky is the "outstanding advocate of the open shop in America."

In his writings Sokolsky has often frankly stated his own position and beliefs. "The right to win and use private wealth and to keep and use the benefits that derive from it is part of democracy," he asserts. "I am a conservative in the major ways of life, a capitalist in my economic thinking and a rigid constitutionalist in my political thinking. More than anything else, I fear the concentration of power in the hands of any one individual in government; no matter how benevolent he may be, no matter how sweet-tempered and kind-hearted, I fear the dictatorship of anybody."

The man who is capitalism's chief supporter began his adult life as a rabid young radical. Sokolsky explains his "conversion": two years in Russia during the Kerensky and early Lenin regimes completely "cured" him and placed him irrevocably in conservative ranks. "It was [my] firsthand acquaintance with Communists and the actual practice of Communism," he said recently. "The Russian Revolution made me fearful of all revolutions, the brutality of the mob, the ruthlessness in the suppression of the individual . . . the utilization of all the machinery of despotisms to achieve an ideal . . . to me all this was distressing and disgusting."

George Ephraim Sokolsky was born in Utica, New York on September 5, 1893, the son of Solomon and Bertha (Rappaport) Sokolsky. They later moved to New York City. He writes that his people are "Polish Jews, mostly rabbis and musicians. On my mother's side there is a line that goes back to Italy several centuries ago—a line that moved over all of Europe, and is still moving. . . [I have] a red-headed aunt—might not that be attributable to the rape of Jewish women by Gustavus Adolphus's soldiers? My father came to this country in the 1880's to be a rabbi among struggling tailors, peddlers, and junk dealers. His was the task of keeping a poverty-stricken head high among the *nouveaux riches* who transferred their packs to shops and became department-store owners or manufacturers. His was a life of serving an ideal of faith, while the rewards went to the unholy and sometimes to the wicked."

From the New York City public schools Sokolsky went to Columbia University, where he studied journalism from 1913 to 1917. Following his graduation he went to Russia in 1917, filled with eager enthusiasm for what he felt was the dawn of a new era, not only for Russia but for the whole world. In Petrograd he edited the Russian *Daily News,* the only English-language newspaper there, and witnessed Kerensky's rise and fall and the beginning of the new Communist regime. His reactions soon became reflected in his paper; and in March 1918 he was ordered to leave the country and was placed on a Harbin-bound express train.

When he arrived in Harbin, China, Sokolsky possessed $1 in American money, but by various expedients managed to reach Peiping, where he obtained a position as an assistant editor of the newly established North China *Star.* A few months later he became adviser to the chief of police in the Province of Chihli. In 1919 he was a reporter for the Shanghai *Gazette,* owned by Dr. Sun Yat-sen. He became adviser to the Chinese Student Union and was employed by the Chinese to organize the Bureau of Public Information. From 1921 to 1924 he was president of the Shanghai *Journal of Commerce.* There followed 10 years of political reporting as a special correspondent in the Far East, during which time he represented such papers as the Philadelphia *Public Ledger,* the New York *Evening Post* and the London *Daily Express.* He was an intimate of Dr. Sun Yat-sen and other Chinese leaders and acquired a reputation as one of the best-informed American authorities on the Orient.

It was in 1922 that Sokolsky married a Chinese girl, Rosalind Phang. She was born in the West Indies and educated in England; they met in Shanghai. Of this marriage between a poor Polish-Jewish youth from New

York's East Side and a Chinese girl, Sokolsky has written (*Atlantic Monthly,* August 1933): "Mine is perhaps the most mixed of marriages. My wife is a Hakka. The Hakkas are the most vital of the aboriginal people of China; they are strong, independent, vigorous; excellent pirates, and splendid merchants. Their women never bound their feet; they carried short swords in their hair as a protection against rape by the conquering sons of Han." He says their marriage "did not fail" because "marriage is essentially a matter of readjustment—the more sensitive the individuals, the more delicate the readjustments. A mixed marriage is then, first of all, only a marriage; but should not be entered into by individuals who are not certain that they have transcended racial, national and religious affiliations." The couple had one son, Eric Solomon; Rosalind Phang died October 6, 1933. In 1935 Sokolsky married Dorothy Fiske of New York City; a son, George Ephraim, Jr., was born of this second marriage.

Back in the United States after 14 years in Asia, conditions here—even during depression years—struck Sokolsky with fresh impact and led him to "a keener appreciation of American traditions and principles." He became convinced that there was no place like America and no economic and political system as good as America's. These convictions he set down in the New York *Herald Tribune,* in articles for *Liberty,* etc. In 1928 he published *Outline of Universal History,* and in 1932 *The Tinder Box of Asia.* The latter was received with mixed reactions. According to *The Nation* (February 6, 1935): "If Mr. Sokolsky's book has not been written by the National Association of Manufacturers it should have been. . . It is sheer propaganda —crude, stupid and vicious." The Boston *Transcript* pointed out, however, that "the great amount of documentary evidence introduced in the various chapters adds much to the value of the book and strengthens its claim to a place among the permanent contributions to international history in these chaotic decades," and even the liberal *New Republic* called it "an unprejudiced factual study of the unique problem of China in world politics." Sokolsky's next book, *We Jews* (1935), received in general a consistently favorable press.

His most recent book, *The American Way of Life* (1939), consists of "a series of articles, originally published in *Liberty,* in which Mr. Sokolsky answers the authors of the 'guinea-pig' books and defends American advertising by showing how it has improved American ways of living." Of it the *Saturday Review of Literature* said: "This maladept attempt to whitewash the advertising game wholesale will create more critics of advertising than would any number of books about millions and millions of guinea pigs." George Watt, writing in *Consumers' Digest* (July 1939), says that "Sokolsky is delighted that modern women can get their meals out of packages and cans. He intimates that all we need do to live happily and energetically is to read the advertisements, turn the crank on the cans, eat, drink and be merry—never wary. He assures us that 'you know what you're getting because you have read about it in advertisements.'" Mr. Watt says, however, that when he wrote Sokolsky telling him (with documented reports included) that some of the best-advertised foods contained all kinds of filth, animal and mineral, Mr. Sokolsky failed to acknowledge receipt of the reports sent him. One of the few favorable comments on the book came from the New York *Herald Tribune's* critic, who found it "a well-organized and interesting presentation of facts and conditions that have shown up piecemeal here and there in the various sham and real battles between politicians and businessmen."

The author of *The American Way of Life* lives on West End Avenue in New York City, in "a spacious apartment filled with antiques and rare Chinese art objects," and spends his summers on a farm near Otis, Massachusetts. Besides writing and lecturing, his favorite indoor sports include visits with like-minded neighbors. The late Heywood Broun reported in one of his columns (the *New Republic* June 22, 1938) how Sokolsky went often to see Isaac Don Levine, with whom he had "an affinity because he and I once believed in the Russian Revolution and we both now know what a shabby trick has been played upon the Russian people. So we can always spend a delightful day together swearing at the Communists, which is a splendid indoor sport. It might even be tried outdoors."

Up to the time of Pearl Harbor, Sokolsky opposed the Lend-Lease Bill, the transfer of great numbers of planes and ships to Great Britain, American aid to Russia, and preached the wisdom of remaining friends with Japan. He supports the war now, however.

In 1938 Sokolsky was awarded Columbia University's Medal for Distinction in Public Service, and he seems assured of his broadcast programs for the National Association of Manufacturers, and his place in the *Sun,* for as long as he continues his chosen career.

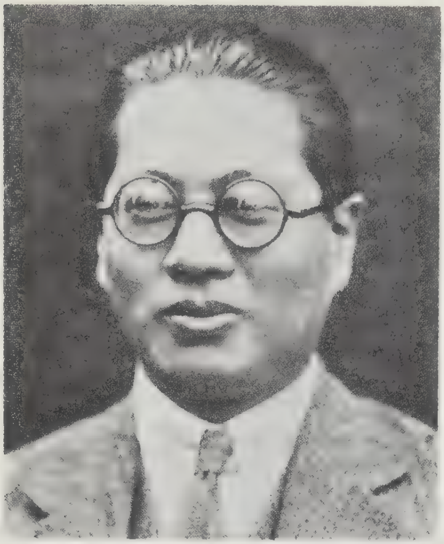
SOONG, T. V. (sōōng) 1894- Foreign Minister of China

Address: Chungking, China

Bulletin: On December 23, 1941 T. V. Soong was made Foreign Minister of China. Political quarters interpreted his appointment as indicating new and intense cooperation among Generalissimo Chiang Kai-shek and his two brothers-in-law,



China Institute in America

T. V. SOONG

Soong and H. H. Kung, Finance Minister. Mr. Soong was in the United States at the time of his appointment. He replaces Dr. Quo Taichi, former Ambassador to Great Britain.

From March 1941 issue (revised):

T. V. Soong, China's former Finance Minister and now president of the Bank of China, is a "boyish, earnest, round-faced, spectacled" Chinese who is considered one of the shrewdest international financiers now on the world scene. Probably more than any one man he has kept China fairly good collateral against heavy odds; probably more than any one man he is responsible for English and American loans to his country. In 1939 the United States and England both lent $25,000,000 to finance Chinese purchases, and in 1940 Soong personally led a mission to the United States which brought forth in December a credit of $100,000,000. "Dr. Soong certainly knows how to sell the spirit of China," commented Secretary of Commerce Jesse Jones.

He was still selling it in 1941. In April he and United States Secretary of the Treasury Morgenthau signed a currency stabilization agreement involving the purchase of $50,000,000 of *yuan*, Chinese currency, by the American stabilization fund. In July this support was extended for another year.

This man who is supposed to have taught the Chinese "the art of central banking" is a member of the famous Soong family, the most influential in China. His father, Charles Jones Soong, came to America in his youth, became a Christian, took an American name, peddled hammocks in the Southern states, was graduated from Vanderbilt University and then went to China as a missionary. In China he helped found the Y. M. C. A. and established himself as a publisher of Bibles. Eventually he entered politics and served Sun Yat-sen as secretary and treasurer. His wife, and T. V. Soong's mother, was a Miss Kwai Tsung Nie, "a strong, effective woman of unusual charm and perspicacity" who saw that her three sons and three daughters had the best education possible.

The parents' efforts with their children were successful: all grew up to achieve positions of importance in their country. Of the daughters, Mei-ling became the wife of Chiang Kai-shek and a leader of China; Ai-ling became the wife of H. H. Kung, China's Finance Minister; Ching-ling married Sun Yat-sen, the father of the Chinese Revolution. Of the sons, T. L. Soong has been manager of the Southwest Export and Import Bureau and of the Central Bank of China; T. A. Soong was a director of the salt tax; and T. V. Soong, the eldest of the sons, has been probably the most important factor in financing the Revolution and the present war against Japan.

T. V. Soong (Sung Tsu-wen) was born in Shanghai, China and received part of his high school education at St. John's in Shanghai, before his parents came to the United States to put their children in school. In this country Soong attended Vanderbilt University in Tennessee for a while and then shifted to Harvard, from which he was graduated in 1915. He went on to Columbia, where he was a brilliant student in economics. Then T. V. Soong went to work for a time in New York banking houses until he decided to return to China.

Back in his own country Soong started a business career, but he found the adjustment difficult and he was "impatient for the welfare of his country." In 1923 he went to Canton, where the Nationalist Government was established. He first became director of the Department of Commerce and then, in 1924, general manager of the Central Bank. Without adequate equipment or experience, almost overnight he "earned the reputation of a sound and competent financier." He introduced banking practices he had learned in the United States; he checked fraud and corruption, and caused the revenues to flow in. Yet, when he followed the Nationalist armies from Canton to Hankow, he was unable to repeat his success. A depression had set in.

In 1927, as *Life* tells it, it was Soong who ventured into Shanghai and persuaded the bankers in that city to support Chiang Kai-shek against the Communists, who had been up to that time eligible for membership in the Kuomintang but who, it was felt, were growing too strong; and shortly after his visit Chiang formed the new "Moderate" Government at Nanking which immediately broke with the Communists. (Strangely enough, it was also Soong who later, when Japan invaded the country, helped to persuade Chiang to fight the Japanese rather than the Reds.)

For a while at Nanking, where in 1928 he became Minister of Finance, all went well again. Soong was able to finance the Northern Expedition and secure the revenues necessary to consolidate the Nationalist Government. In the years in which he was Finance Minister, Chinese finances were put on a Western basis, the budget system was introduced, domestic tariff barriers were abolished, taxes were collected, a central banking system was established and the currency was unified.

In 1933, however, Soong resigned. His resignation was interpreted as a protest against the tremendous military expenditures of Chiang Kai-shek, leader of the Nationalist forces, and a protest, even more, against Chiang's early policy of conciliation toward Japan. Soong then formed the China Development and Finance Company, a banking discount and brokerage firm designed to hit Japan's capitalists in the pocketbook by developing competing factories and plants. And in 1936 he founded the Bank of China, of which he was and is the first chairman.

For some time after that, Soong and Chiang Kai-shek continued to be at odds. Soong tried to reduce military expenditures, while Chiang tried to increase them; by this time Soong's attitude toward the Communists and other groups was a friendly one, for he always felt that dissident elements should be united for defense; Chiang's was a less compromising one. Today, however, the two men are in agreement, for Chiang has met Soong halfway. As president of the Bank of China, Soong is now working closely with the military chief.

Those Americans who came to know Soong on his recent trip to the United States (he brought along his wife and three children) were impressed both by his fluent command of English and of American slang and by his Western appearance—"he can hardly be imagined wearing Chinese clothes," one commentator said. In his home in Shanghai can be seen as many evidences of his Western training as of his Eastern inheritance. His villa looks modern at first glance, but actually it is a treasure house of ancient jades and porcelains.

Americans were able to learn something of Soong's personality, too, when he was here. All have agreed that he is brilliant and hardworking; and most of them will concur with John Gunther's (see sketch this issue) estimate: "Stocky, glossy, with hair stiffly *en brosse*; diffident and direct by turn; not afraid to be rude, and intolerant of bores; enormously competent."

ISAAC SOYER

Brother-combinations in the art world seem to hold a special attraction for critics and public alike. This is certainly true of the Soyers, whose "family style" in painting and lithography has been the subject of much speculation and some controversy. In early 1941 both Moses and Raphael were having one-man shows, and the old questions were again revived. Meanwhile the Soyers went on painting, each in his own way, pointing to such historic precedents as the brothers Van Eyck to those bewildered by prodigality of talent in one family.

The Soyers admit a fraternal relationship. Beyond that each claims to go his own way, painting the subject matter of his choice in his own manner. At an early age the brothers decided to avoid being in the same school together at the same time and never to share the same studio. The latter rule was broken only once, in 1939 when the Treasury Section of Fine Arts commissioned Moses and Raphael to do two panels on opposite walls of Kingsessing Postal Station in Philadelphia.

Their first intention had been to do the two panels separately, each signing one, but when they looked over the walls they decided this job would give admirable scope in which to test their ability to collaborate. As the mural got under way they discovered with amazement that each had his own painting habits, his own approach to the job at

Macbeth Gallery

MOSES SOYER

hand, and his own palette. This was a source of satisfaction, confirming their own ideas. Collaboration then became a serious creative effort in which dissimilar traits found expression.

The Soyer brothers bear a family resemblance to each other but are far from being peas in a pod. Even Raphael and Moses, who are twins, differ noticeably. This difference was more marked in the past, when Raphael's thin face contrasted with the chubby features of his brother. And though both had the same shade of brown eyes, those of Moses seemed brighter. Raphael and Moses are small-statured, their brother Isaac taller. Isaac is prematurely gray, and might appear older at first glance. The vigorous features of the younger brother are accented by dark brown, almost black, eyes beneath thick brows, and a great shock of hair.

The twins were born on December 25, 1899, Isaac on April 20, 1907—all three in the Tambov region of what was then Czarist Russia. From early childhood they looked to America as a land of promise. "Our favorite books," writes Moses, "were *Tom Sawyer, Uncle Tom's Cabin* and *Hiawatha,* and among the heroes of our childhood George Washington and Abraham Lincoln led all the rest. On week ends and holidays our mother would cover the large, round dining-room table with a shiny oilcloth, on which in barbaric red and green was pictured Brooklyn Bridge (Brooklynski Most), spanning the East River and joining the 'glass' skyscrapers of Manhattan with the slums of Brooklyn." And their father shared this enthusiasm. "'Who knows,' he would say wistfully, 'perhaps you too might one day be citizens of this great republic and contribute your talents and strength to its growth.'"

Their father had much to do with shaping the Soyer talent to productive maturity. The following description was written by Moses a year before his father's death in 1940: "Our father is a truly remarkable man. Self-taught and self-made, in the real American sense of the phrase, he toiled hard all his life, and has never deviated from the ideals he set for himself in his youth. At 70, presenting an appearance of a Rembrandtesque scholar, he is still full of life, tolerant to youth and vitally interested in world affairs."

The family name is an adaptation of the Hebrew *Schoar,* which means sentinel. Abraham Soyer came from a small Lithuanian village about which he wrote a two-volume book. He married Bella Schneyer and made a modest living teaching Hebrew and writing in Hebrew and Russian for newspapers in Odessa and elsewhere.

Life in Russia was not altogether happy for the Soyers. The shadow of racial persecution hung over the father, whose liberal ideas found little favor with the Governor of the province. Living, too, was a problem, though perhaps no more so than it was to be in America where Abraham Soyer had to start all over again in a strange land. Despite these difficulties Abraham and Bella Soyer made the home an island of warmth and sympathy for their children, from which they could view without rancor the realities of an oftentimes hostile world. Moses affords a glimpse of this family life when he writes of their mother, "We used to love to watch her embroider on towels and table spreads, illustrations of Russian fairy tales, in vivid, bright color schemes."

Their interest in art was stimulated by their father's drawings—primitive, yet alive—of people, birds and animals, often done to illustrate a point in scripture. Encouraged by their parents, the walls of the living room were always decorated with their childish efforts. Nor was academic training neglected. Both Raphael and Moses, the oldest of the children, knew some French, German and Hebrew, as well as their native Russian, and in the Gymnasium Raphael distinguished himself in drawing and writing. An adventure for the children came when three of them were bitten by a mad cat. Their father took them to Moscow for the Pasteur treatment, but there they saw only monuments, public buildings and stodgy pictorial art.

In 1912 the Governor of the province refused to renew the residence permit of Abraham Soyer. This was tantamount to exile. The Soyers packed hurriedly and took ship for America, settling finally in the East Bronx, not far from the "glass" skyscrapers but living in a world that harassed them with its poverty and bewildered them with its unfamiliar words. The language difficulty was so great that Moses and Raphael, who had been in advance of their age-group in Russia, did not enter high school until 1915.

The contrast between the home and the world outside was such that the children, and especially Raphael, tended to find a sanctuary within the narrow walls of the East Bronx apartment. There Raphael could brood and draw to his heart's content. He was less strong than Moses, though both suffered at one time from ill health. Some critics believe that through this background Raphael found a temperamental affinity with the weakly maladjusted. If this was so, however, it was because beneath his shyness was a core of strength, a stern and spiritual rightness. And while Moses had recourse to a similar inner balance he was more positive outwardly and could—as he did once—have it out with a bully who had been making life miserable for him and Raphael.

Writing for the Hebrew and Yiddish press and teaching private classes, the head of the Soyer family eked out a meager living that erased forever the dream he had had of sending his children to college. They still had their art, though, and kept at it despite all obstacles. A realization that they should help to support the family—now eight persons—forced Raphael and Moses to quit high school after a year. They had worked even before this, at part-time factory jobs and tending newsstands on Third Avenue. All three brothers had the experience of working at very low-paid jobs, for long hours, crowding their studies and their artistic ambitions in-between. Working for as little as $4 weekly, Raphael still managed to put aside nickels and dimes for art school tuition. Evenings he and Moses studied drawing at Cooper Union.

Both of the twins studied at the National Academy, beginning about 1918, and while there they decided on different studios and, in so far as was possible, different schools. However, the influences upon them were so often experiences made real through sharing that their paths crossed frequently. Isaac followed his brothers to Cooper Union and while at the Academy Raphael and Moses went to sketch classes at the Beaux Arts Institute. Later Isaac, too, went to Beaux Arts.

While at the Academy Moses went to a Sunday art class at a club named after the Spanish labor leader Francisco Ferrer. There Henri and Bellows gave criticisms. "What a warm, generous, magnetic personality was Henri's!" Moses Soyer wrote, in recalling how Henri helped to show him the way he wanted to go, but began by looking at a drawing by Moses, taking it apart mercilessly, "pointing out its superficiality, its lack of character and its empty cleverness." Then the gaunt, lined, Lincolnian Henri showed Moses a Daumier reproduction from *The Liberator*. "Ignorant as I was," said Moses, "I could not help but be struck by the feeling of turbulence and movement, by the noble, unadorned simplicity of the drawing. I also felt the love and sympathy with which the artist drew this group of gaunt men and women and their sad-eyed, undernourished children."

A clue to what there may be of "family style" may be drawn from what followed. Moses bought a copy of *The Liberator,* rushed home with it and showed his brothers the Daumier and reproductions of such Americans as Sloan, Henri, Minor and Luks. "What impressed us most," he recalled, "was their up-to-dateness, the contemporary spirit of the content." The influence of Degas upon the twins, and to possibly a lesser extent on Isaac, began at this time. It was inevitable that in a family so close what one liked the others liked in greater or lesser degree. Raphael admitted, for example, to an indebtedness to Rembrandt, Breughel, Goya, Eakins and Homer, and his brothers showed much the same likes.

Moses broke away from the Academy earlier than Raphael, going to the Educational Alliance, where he taught a life class from 1924 to 1926. In the same year that Moses began his teaching experience Raphael left the Academy to go to the Art Students League, where his teacher was Guy Pène du Bois. During these years art was only a part-time activity. All three brothers worked and all three, like their father, occasionally tutored youngsters in Hebrew. Among Moses' students was Ida Chassner, a tall angular girl with wide-set blue eyes and high cheekbones, who studied dancing at the Neighborhood Playhouse. They were married in 1926, when Moses was given a traveling fellowship, and went to Europe together, leaving the class at Educational Alliance for Isaac to take over.

Almost simultaneously, Raphael exhibited a painting called *Bronx Street Scene* in the Salons of America show. Through it he met Alexander Brook (see sketch this issue), who helped him to start selling his work both through the Whitney Studio Club and through the Daniel Gallery. In the early 1930's Valentine Dudensing sponsored him, buying four of the paintings in Raphael's one-man show for his own collection. Isaac and his pretty, exotic-looking wife had gone to Paris in 1928, the year Moses and Ida returned to America, but Raphael got a teaching job at the Art Students League in 1932 and didn't get abroad until three years later. On his trip he saw not only the galleries of Europe but went on to the U. S. S. R., where he was invited to speak before the International Society of Artists.

When critics speak of the "family style" they usually refer back to a period in the early 1930's when a group of painters—some, like Cikovsky and Berman, who had met the Soyers at the Educational Alliance or along the way—had similar traits in their work. There were impressionistic slashings of bright color that sometimes got on the fuzzy side and an undeniable similarity of subjects—even though the "languor and softness of the Soyer women" most often applied to the work of Raphael. This subject matter consisted of a frank identification with life, with young people—dancers, unemployed, shoppers and Left-wing groups—all the teeming life of a non-Park Avenue New York. Many critics objected to their continued emphasis on proletarian themes.

Edward Alden Jewell has said that the differences between the three brothers might easily be resolved by the simple expedient of

Associated American Artists' Galleries

RAPHAEL SOYER

a group show. This would be especially enlightening if the paintings were chronological. In the early, somewhat primitive paintings by Raphael and Moses there are distinctions that point to their later development. Raphael's are intimate, with naïvely humorous touches, for, as Walter Gutman wrote: "He somehow feels into people as they see themselves, and into inanimate objects he reads a character that is humble and natural." And while in a comparable style, Moses' paintings of this period are more abstracted.

Sloan, Luks and Bellows—for all their differences—were harbingers of a new approach to realism. The Soyers stem from this influence. The model is never completely abstracted and is often a real personality like Walter Broe, the homeless wanderer (he died in 1940) who once suggested to Raphael that he include in a painting the sign from a Bowery Mission, "How Long Since You Wrote To Mother?" Discovered by Raphael, he became a favorite model of many prominent American artists, moved to the relative opulence of a Mills hotel and toward the end of his life learned to mouth wistfully such phrases as "the contemporary American scene."

Raphael's work found earlier and wider acceptance than that of his brothers. In 1932 he won the Kohnstamm Prize at the Chicago Art Institute, in 1934 his portrait of "Gitel" won him the PAFA Beck Gold Medal, and about the same time a painting of his was purchased by the Metropolitan Museum of Art. A rhythmic aptness of design and what might be called a distinctly impressionistic manner of painting mark his work. Like his brothers he "finds it futile to paint social content pictures consciously." All three have been categorized as belonging to the "social content" school, yet seldom has their work been classed as outright propaganda. Each of the brothers distinguished himself in work done for governmental art projects.

Moses paints with a heavy outline and often with much impasto, using a palette knife more often than Raphael; Isaac works almost entirely with brushes, and his work is more thinly painted. Some of Moses' most effective work is in tight compact designs such as *Spanish Refugees* and *Mother and Children.* A type of dispersed composition, such as *Studio Rehearsal* and *The Green Room,* suggests a tendency toward the mural form and, indeed, his mural panels at Greenpoint Hospital in Brooklyn bear this out. Moses' work has vigor, a sturdy objective quality, and his remarkable knowledge of anatomy enables him to give spontaneity to what Margaret Bruening called "the give and take of muscular tension, the apparently careless but really practical control of posture."

Growing up with a younger generation than his brothers, Isaac's approach has in it more of the direct question and challenge that marked youth in the depression years. His ambitious compositional trend was noted by McBride, who found in his work "a classical feeling for balance and harmony." The familiar "spiral" design of the Old Masters may be noted in *Where Next?,* the study of the Spanish Civil War, in *School Girls* and in *Employment Agency* (the latter at the Whitney Museum). Isaac's palette might be said to follow Raphael's somewhat, though without such strongly accented grays and browns. One might hazard also the guess that Moses has more often used bright lemon yellows, oranges and reds, though lately Raphael has certainly used more "blonde" color. All three brothers, incidentally, are expert lithographers and have been honored for their graphic work.

Raphael most resembles his youthful self, and one could almost describe him just as Harry Salpeter did in 1938: "A fairly stiff wind might knock Raphael down, he looks that frail. Some years ago Alexander Brook did a full-length portrait of him, dressed in a sack of an overcoat and with as formless a hat pressing down upon his fawnlike ears. . . His body is as thin and small as it ever was, his eyes no less tired and his voice still the husky whisper."

The Soyers have little time for hobbies. Isaac still teaches Hebrew in The Bronx Y. M. H. A., all three teach at the New Art School that they founded two years ago and of which Moses was appointed director in March 1941, all three are married and each couple has one child. Like his younger brother Israel, Moses Soyer likes to write, and his wife Ida dances with Tamiris.

All three brothers are represented at the Whitney Museum of American Art; Moses and Raphael in the Phillips Memorial Gallery in Washington, D. C. and the Metropolitan Museum of Art (New York). Raphael's work is also in collections of the following museums: New York Public Library, Baltimore (Maryland) Museum of Art, Addison Museum

(Andover, Massachusetts), Columbus (Ohio) Gallery of Fine Arts. Moses is represented in the Toledo (Ohio) Museum of Art, Worcester (Massachusetts) Museum, New York Historical Society and Los Angeles (California) Museum. Their New York City galleries are: Raphael, Associated American Artists; Isaac, Midtown Galleries; Moses, Macbeth Gallery. Moses was given a one-man show in 1941 at the Little Gallery in Washington, D. C.

ARMSTRONG SPERRY

SPERRY, ARMSTRONG Nov. (?), 1897- Author; artist

Address: b. The Macmillan Co, 60 Fifth Avenue, New York City; h. New Canaan, Conn.

The Newbery Medal for "the most distinguished contribution to American books for children in 1940" was awarded to Armstrong Sperry, author and illustrator of *Call It Courage* (1940), a story for boys about a Polynesian youth, Mafatu, who learned to overcome fear. The Medal was presented to Mr. Sperry in June 1941 at a meeting of the American Library Association in Boston, together with a presentation of the 1940 Caldecott Medal to illustrator Robert Lawson (see sketch this issue).

At least two special qualifications make Armstrong Sperry outstanding among the many notable writers of children's books. One is his unusual and authentic South Sea subject matter; another the fact that he is both writer and artist. Helen Follett, whose own juvenile books Sperry has illustrated, said to him: "The astonishing thing about you, 'Arm,' is not that you're a fine artist, or a fine writer, but that you are both!" At which "Arm" chuckled and remarked that being both was a "lot of hard work," but also "lots of fun." Since the appearance of his book he has had the opportunity of doing some more hard work that is "lots of fun": lecturing to groups of young students as well as to librarians and teachers.

The high standard of literary and artistic accomplishment in *Call It Courage* is the outgrowth of meticulous work in the juvenile book field, of careful and loving study of young readers' needs. In his Medal acceptance speech Sperry said: *"Call It Courage* meant a great deal to me in the writing but I had no idea that the response to the book would be so wide among children. I had feared that the concept of spiritual courage might be too adult for the age group such a book would reach, and that young people would find it less thrilling than the physical courage which battles pirates unconcerned or outstares the crouching lion. But it seems I was wrong—which only serves to prove that children have imagination enough to grasp any idea which you present to them with honesty and without patronage." Of the book's style Doris Patee has written: "In Armstrong Sperry's beautiful prose the tale moves smoothly and rapidly like a native chant, and its music rises and falls like the billows of the sea in its setting. Storytellers who have used the story often find children entranced not only by the story itself but by the cadence and rhythm of the language."

Connecticut-born, Armstrong Sperry's forebears were among the state's earliest settlers. On one side of his family the men followed the sea; on the other side they were farmers. "To this day Armstrong Sperry is aware of these two conflicting impulses with himself. He has a farm in the green hills of Vermont, and likes to make his acres yield a fine crop. Then he hankers for the sound of surf breaking, for the sight of tall ships. This hankering on a number of occasions has brought him down from the hills to the sea." As a boy young Sperry listened wide-eyed to the yarns of his great-grandfather, Captain Sereno Armstrong, who could tell of hair-raising adventures with pirates in the China Sea and among cannibals in lagoon-islands rich with pearls. In particular he spoke of a wonderful South Sea island, Bora Bora. Some day, the boy knew, he would have to find that island. Meantime, like other adventure-loving boys, he had to go to school. But at the Stamford

SPERRY, ARMSTRONG—*Continued*

Preparatory School he spent most of his time drawing pictures and scribbling stories. "His teachers shook their heads in gloomy doubt, certain that no good could come of any boy who preferred drawing cannibals to solving the knotty problems of algebra."

Sperry got his first formal training in art when he entered the Yale Art School. Then came the First World War, and he joined the Navy. But as soon as he was mustered out of service he headed for New York City and the Art Students League, where he studied for three years under George Bellows and Luis Mora. His practical career began when he answered an ad for "Help Wanted—Artist." He got the position—at $25 a week. A year followed during which he drew luscious pictures of vacuum cleaners, canned soup and beautiful blonde ladies who wore Venida hair nets. Somehow he found himself thinking more and more of old Captain Armstrong, the South Seas, and Bora Bora in particular. Sperry says that it was really Frederick O'Brien's *White Shadows in the South Seas*, which so enchanted him in his youth, that gave him the impetus to go there. "But this was before Hollywood discovered Tahiti, and before Miss Dorothy Lamour had made the sarong a national commodity." He wrote to O'Brien, however, concerning ways and means. "And that was how I came to be standing on the deck of a copra schooner, 16 years ago this month [June 1941], sailing from Tahiti to Bora Bora."

And his first sight of Bora Bora was all that he had ever dreamed: "I saw a single great peak that towered 2,000 feet, straight up from the plane of the sea. And the peak was buttressed like the walls of an ancient fortress, and it was made of basalt—volcanic rock—which glistened in the sun like amethyst. And there were waterfalls spilling from the clouds, and up in the mountains the wild goats were leaping from peak to peak. There was something so fresh about that island that it seemed as if it had just risen up from the floor of the sea that morning, and the spray was still shining on it."

He spent several months on this primitive enchanted island. He tells what happened there during a vanilla-bean boom, when a blight of the vanilla vine struck all the other islands except Bora Bora, which took on the aspect of a boom town in the Gold Rush days. The people found themselves millionaires over night: movie palaces sprang up, the men bought automobiles, the women Paris gowns. Murder and theft, too, came with these riches. As the old chief, Opu Nui, observed sadly, the people were losing their initiative, their good native customs and ways of living. Then suddenly the vanilla boom was over—new vines replaced the stricken ones in other islands. And the season of storms arrived. One afternoon a great hurricane struck. Their fine houses and possessions destroyed, the people fled to the mountains. They faced famine, and they had grown soft from easy living. Yet, led by the old chief, they rallied to win "a victory not so much over elemental disaster as a personal victory over themselves."

Sperry says: "The thing which remains with me most vividly from those months in Bora Bora, stronger than the manifold charm of the island, is the remembrance of the great courage with which that little band of Polynesians faced the destruction of their world and faced it down, and stooped, only to rebuild. And it is that courage which, in one form or another, I have tried to communicate to the readers of my books."

Children seemed the logical audience for the wealth of material in these South Sea experiences which he dually visualized in words and pictures. Sperry's first book, *One Day With Manu*, a tale of everyday life in Bora Bora, appeared in 1933. An immediate success, it was followed by *One Day With Jambi in Sumatra* (1934), with a Sumatran background. *One Day With Tuktu, an Eskimo Boy* (1935), telling of the life of an Eskimo boy, was based on research, not firsthand experience, and Sperry found such a book more difficult to do. There followed a sea story, *All Sail Set* (1935), a story of the clipper ship *Flying Cloud*. Then a land story, *Wagons Westward* (1936), based on his journey, by car, over the old Santa Fe Trail. The Southwest opened up a new field for him. Out of this came *Little Eagle, a Navajo Boy* (1938), a story of the Navajos. One more South Sea book, *Lost Lagoon* (1939), appeared just prior to *Call It Courage*, his eighth book for children. He illustrated Helen Follett's *Stars To Steer By* (1934).

Armstrong Sperry lives with his family in New Canaan, Connecticut. There is a daughter, Susan, who is the first audience and critic of her father's tales of high adventure. Young John Armstrong will be ready in a few years to lend her a hand. Sperry's first book was dedicated to his wife, Margaret, "who helped to make it grow." Of her Helen Follett writes: "She herself is an inspiring individual who understands and respects the needs of others. She realizes, of course, that a studio without a telephone is part of the working equipment for the daily routine her husband has established so definitely for himself. She understands the deep and insistent need of a creative artist for spiritual isolation, and that such a need for Armstrong Sperry is as essential as the air he breathes. . . To her, it is as if he sought the refuge of a banana tree on some tropical island, his typewriter and drawing board beside him. Sometimes, she says, you can almost hear the swish of encircling waters that make the isolation complete. Then, later on, you can almost hear them recede as he walks into the living room to become once again the head of the family, delightful host, and sterling friend."

SPRING, HOWARD 1889- Author

Address: c/o The Viking Press, 18 E. 48th St, New York City; h. Hoopers Hill, Mylor, Falmouth, England

Author of the 1938 best seller, *My Son, My Son!*, Robert Howard Spring, noted British novelist equally admired in England and America, was able almost to equal his earlier achievement in his book, *Fame Is The Spur* (November 1940). Critics in general applaud this story of a man's rise to political power in England in our time. Hamer Shawcross, brought up in the slums of Manchester, becomes, through his leadership, ability and sincere ideals, chief of the British Labor Party. Mr. Spring presents a powerful character who impetuously pursues fame and wins that fame at the cost of personal disintegration. How the achievement of power corrupts a man who begins with the noblest intentions is the book's major theme: its whole background, however, is a vividly detailed panorama of England between 1890 and the present. Of it Mary Ross writes in the New York *Herald Tribune* Books: "The hold of this story and its glowing reality lie in the fact that Mr. Spring has not merely pictured a great man but has made you believe in him... *Fame Is the Spur* is a notable novel in its breadth and depth and in the fascination of the calvacade of pictures. Its theme, while immemorial, is of particular moment to our times."

In his autobiography, *Heaven Lies About Us* (1939), Howard Spring writes the poignant story of his boyhood of poverty, adventure and courage in Cardiff, Wales, where he was born in 1889. He was one of seven children brought up in a small crowded house in the "tough" part of town near the bars along the docks. His father was a day-laborer who never made enough to make ends meet and who died when young Howard was not yet in his teens. He and his brother Frank had to find jobs. Howard split kindling, ran errands as a butcher's boy, peddled rhubarb. He had to quit school at 12, but the brothers determined to get an education by studying evenings. Valiantly they slaved away at English, French, Latin and mathematics. "As I see it," Mr. Spring writes, "only the indefatigable realism of my mother kept us afloat. She worked her fingers to the bone, scrubbing and charring. It cost her much to bring up her sons."

Then, "blind chance took me to a newspaper office. I was happy there at once; and I have been happy in newspaper offices ever since." He was 22 when he joined the staff of the *Yorkshire Observer;* and in 1915 went to work on the *Manchester Guardian,* where he remained until 1931, when he joined the London *Evening Standard.* There he was book critic until he found it possible to give his time wholly to his own writing. During his newspaper career he married Marion Ursula Pye; the couple have two sons, David and Michael.

Mr. Spring began to be a writer, however, at a tender age. His first literary work, he says, was an *Ode on the Death of Mr. Gladstone.* "I was nine years old. I do not know why Mr. Gladstone's decease should have given birth to my muse, nor do I remember anything of the ode except the last line, 'The sun that sets in cloud shall rise in glory.'" This noble effort he hid in a tobacco tin in his bureau; and "from time to time I would sneak up to the bedroom, unearth the ode, gloat sinfully upon it, and then bury it again."

F. W. Schmidt

HOWARD SPRING

In the sanctity of his bedroom he also produced his first novel. He shoved aside the time-honored but never-used basin and jug "set" on the washstand and got to work on a fine imitation of *David Copperfield.* This he sent to Dickens' publishers, thus giving them "the opportunity of keeping in the great tradition." It was a heavy blow to him when, alas, the manuscript came back. His first check (for £1, 12s. 6d.) came for a rollicking tale of public school life—no one had a more virginal knowledge of English public schools than poor young Howard. But it bought him a new overcoat, with a leftover "half crown in change to jingle in my pocket."

His first published book (1932) was *Darkie and Co.,* a tale for children, followed by another, *Sampson's Circus* (1936). In 1939 he wrote his third children's book, *Tumbledown Dick.* A work for adults was *Shabby Tiger* (1935), followed by its sequel, *Rachel Rosing* (1936), the story of a Jewish actress. Soon after this he began *My Son, My Son!* (published in England as *O Absalom!*), which achieved immediate and phenomenal success. It is the story of a boy who grew up in Manchester, but the author denies that it is autobiographical in any sense.

SPRING, HOWARD—*Continued*

In a letter (December 1939) to his publishers Mr. Spring wrote: "I am still doing no writing work. I'm busy with our local Defense Volunteers, which means patrolling the coast at dawn, looking out for invaders by air or water. One of these days, I suppose, they'll come; and then we'll see."

STEEL, JOHANNES Aug. 3, 1906- Commentator for WMCA; writer; lecturer

Address: WMCA, 1657 Broadway, New York City

Perhaps more than any other commentator, Johannes Steel has reason to understand the psychology of the German mind, the mercilessly efficient working of the German machine. He himself was a small, reluctant cog in it at one time, working for Dr. Hjalmar Schacht. It is that special personal knowledge that has been responsible for many of his amazing scoops.

Johannes Herbert von Stahl (he had his name legally changed to Johannes Steel when he came to the United States in 1934) was born in Heidelberg in 1906, the son of Lieutenant Colonel Herman and Carolina (Norwood) von Stahl. His father was a nobly born staff officer with strong monarchist tendencies. His mother, an Englishwoman, lived in Germany through the War and suffered bitterly from social ostracism and the constant struggle to get enough to eat for her two sons in the midst of general famine. Johannes was educated at the Heidelberg Real Gymnasium and later went to the University of Heidelberg (his education was supplemented by studies at Oxford and Geneva). At that time student life at Heidelberg was entirely different from the operetta version, and the young German grew to maturity "in violently unstable social and political surroundings with nobody to help him understand the nature of the changes amid which he lived." His father's considerable fortune had disappeared, and the specter of inflation haunted his youth; young Steel therefore eked out the family fortunes by precarious speculation on the Black Bourse.

In the early '20s Steel was seeing many of his schoolmates join the National Socialist Party. He himself became a member of the Social Democratic Party and wielded considerable influence among his fellow students in the University of Berlin, to which he transferred. As he himself says, his activity at that time was largely political, not scholastic, and in 1928 he was rewarded by a seat in the Prussian Diet. His experience as a politician, however, proved short-lived: disinclined to follow rigid parliamentary discipline, he was soon relieved of his mandate. In the meantime he had been writing and had had his articles printed in provincial newspapers.

Later that same year Johannes Steel was given a post in the Commercial Intelligence Service connected with the Ministry of Economics. The purpose of the Service was to keep all branches of industry and commerce in Germany informed as to commercial possibilities in almost every part of the world, and to build up German products by almost any means. Afterward he was to call his work that "of a glorified traveling salesman on behalf of German industry and commerce." But at that time it gave him an opportunity to travel around the world, thus providing valuable background for his later work as a columnist and commentator. He went to Warsaw, Constantinople; he visited Greece, Egypt, Japan, the Far East. All kinds of strange and fascinating things, which he has described vividly in his biographical *Escape to the Present* (1937), happened to him. He rubbed elbows with armament kings and dope merchants; on his way to Baghdad, he was caught in a simoon; he rescued a captive Frenchwoman from the harem of the Arab sheik whose guest he was. The missions on which he was sent required tact, presence ot mind and audacity, and that Steel possessed these qualifications was shown by his promotion in 1930 to the position of Foreign Economic Observer. In that capacity he made a tour of South America and stayed in Washington.

In 1932 Steel returned to Germany "as a private citizen, ready to do whatever I could to stop the Fascist onslaught." He found Von Papen (see sketch this issue) in power and the big industrialists maneuvering Hitler into position. He earned Nazi dislike by writing anti-Hitler editorials for the *Essener National Zeitung* and by attacking other Nazi leaders elsewhere, but since he was a bright young man with valuable contacts outside of Germany, an attempt was made to win him over. He turned down an offer made personally by finance wizard Schacht. Finally, on February 8, 1933, a week after Hitler had been made Chancellor, he was arrested and thrown into a National Socialist *blockwarte.* On the tenth day of his captivity he escaped by slugging his guard on the head with a poker and taking his uniform. A friend met him with clothes behind the statue of an emperor in the Sieges Allee, and the next day he arrived at the Gare du Nord in Paris. Like Heine, he had nothing to declare but his spirit: he had nothing on him except a few francs and a lottery ticket which he sent back to his family. (The ticket, by the way, won $600, and his family lived on it for the next six months.)

After a while Steel went on to London. There he got a part-time job on the *Sunday Chronicle* on the strength of an interview with the inaccessible film director Joseph von Sternberg. (Steel describes vividly his feelings on seeing that interview appear later under the quaint headline "Human Oyster Talks at Last But Not About Marlene's Legs.") He got another job with a curious publication called *New Britain,* run by a Serb named Mitrinović who was known in his leisure hours as "Cosmoi, the Spirit of the Earth." And during his stay in England he was also able to write and publish his book *Hitler as Frankenstein* (1933). These, however, were fairly lean days for Johannes Steel, colored by anxiety for his parents in Germany and grief for his brother Eric, who had been killed by the Nazis.

In January 1934 Steel finally decided to come to the United States. He arrived at that decision, he says, after reading the story of Carl Schurz, another German who had found refuge in America. His first few months here were spent in unadorned poverty, relieved by occasional articles published in *The Nation* and occasional lectures. It wasn't until June 1934 that he gained recognition—with a shrewd forecast of bloodletting in the Nazi ranks which he sold to Harry T. Saylor, the editor of the New York *Post.* Steel and the New York *Post,* which had gone out on the limb with this prediction, held their breaths until finally the blood purge of June 30 vindicated Steel's prophecy and assured his future as a journalist. Steel's valuable connections abroad finally bore fruit, and his record as a prophet was completed by his prediction of the assassinations of Dollfuss in Austria and of King Alexander in Marseilles. As a result of his *Putsch* scoop Steel became the foreign editor of the New York *Post.* In that same year appeared his *Second World War,* "a remarkably concise analysis of the European and Far Eastern situations and their potentialities for trouble."

From 1935 on, Johannes Steel covered Europe as correspondent for the *Post,* the Philadelphia *Record* and the Camden *Courier.* In 1937 he became associated with WMCA and WOR as commentator and news analyst. His highly personalized, vital talks have since that time made him very popular with listeners, who like to hear his vivid diatribes against Hitler, his knowledgeable hints that bespeak a rich political background and limitless pipe lines from abroad. A colorful note is also injected into his broadcasts by his accent, an odd mixture of German purr and Scotch burr. Like many another commentator, his reputation was considerably helped by his work during Munich, that commentators' Roman holiday, and in response to requests by his listeners a collection of his broadcasts entitled *Truth About Munich* was published in pamphlet form. Altogether, Johannes Steel is rather proud of the fact that his exploits in journalism and radio have made the Nazis uncomfortable enough to retaliate by depriving him of his German citizenship along with Thomas Mann, Arnold Zweig and others. There have been, he claims, several attempts to kidnap him across the German border during his trips abroad.

Volpé

JOHANNES STEEL

In September 1935 Johannes Steel married Rhys Caparn, a young sculptress in whose work he found "an expression of those things that Hitler and Mussolini were trying their best to destroy." Three years later he became an American citizen. A tall fair man with a round face and charming manners, he is also an excitable and voluble talker who gesticulates freely while broadcasting. Besides his work on the radio he is kept busy with lectures, with writing articles for such publications as *The Nation, Esquire, Current History* and *Liberty,* the last of which sent him abroad to interview British Cabinet ministers in May

STEEL, JOHANNES—*Continued*

1941, and with work on the executive board of the Overseas Press Club of America.

STEELMAN, JOHN R(OY) June 23, 1900- Director of the United States Conciliation Service

Address: b. Department of Labor Bldg, Washington, D. C.

Bulletin: Heading the three-man board appointed by President Roosevelt in November 1941 to settle the crucial captive mines dispute, on December 2 Steelman cast an affirmative vote in the decision that granted the closed shop to the United Mine Workers.

From May 1941 issue:

In 1941 the question of industrial peace is one of the most important the United States has to settle. Strikes, lockouts, stoppages have been occurring widely in plants manufacturing defense materials; Congress has been debating compulsory legislation against these outbreaks; the public has been daily becoming more concerned. And the United States Conciliation Service has been working day and night to bring peace between employers and employees.

Its director, John R. Steelman, has spent days in conferences with the miners and the soft coal operators; he has flown out to the Allis-Chalmers plant in Milwaukee; he has discussed the strikes at the International Harvester Company's plants; he brought an end to the Vultee Aircraft Corporation strike; he has been hopping all over the country trying to settle the many small strikes that crop up in defense production. He has been doing all this without any authority or coercive powers. When he sits down with the owners or workers "he can only reason, plead—and maybe bluff."

The United States Conciliation Service, which employs 118 Commissioners of Conciliation distributed over the country, enters a controversy at the request of one or both of the parties involved. The conciliator assigned listens to both sides and tries to find where compromises can be made. As Steelman puts it: "The Service works on the theory that, if a dispute is settled by the parties themselves at the conference table, the resultant peace will be more enduring and leave less bitterness and rancor than if the dispute had been settled by authority of law or force." There must be no pressure of the government in the process on one side or the other. "The minute you make a cop of a conciliator," he says, "you have destroyed his usefulness. We do not want police authority. We believe it to be the very antithesis of the spirit in which really effective conciliation is carried on." He has been quoted: "Abolition of the right to strike was the entering wedge of Fascism in each of the countries it conquered."

That such a policy has been successful is evidenced by the record. In 1940 the Conciliation Service was called in on a total of 4,665 situations—strikes, threatened strikes, controversies, consultations, arbitrations, lockouts—and less than three per cent of these were listed as unable to adjust. It has been endorsed by groups as varied as the A F of L, the CIO, the National Association of Manufacturers, the United States Chamber of Commerce, all of whom expect it to maintain its record even during national defense. Only when there is a dispute which the Service cannot settle will the new National Defense Mediation Board be called in for action.

The "genial 200-pound six footer" who directs the Service was born in Thornton, Arkansas on a small farm from which his father and mother, Ples Cydney and Martha Ann (Richardson) Steelman, did their best to wrest a living. John went to grade school and high school near there and finished his secondary education just in time to get into the Army for the last few months of the First World War. By the time he was discharged from the Army he was a corporal and he was determined to get himself an education.

In the next ten years he attended four colleges and took four degrees, supporting himself during the summers as a logger and sawmill hand, in winters waiting on tables; peddling books and insurance, following wheat harvests, correcting papers for professors. By 1922 he had a B. A. degree from Henderson-Brown College in Arkadelphia, Arkansas; by 1924 an M. A., and by 1925 a Ph. B. from Vanderbilt University; by 1928, after a year's study at Harvard in 1926, a Ph. D. from the University of North Carolina.

Armed with this array of academic degrees, Steelman settled down in 1928 at Alabama College in Montevallo as a professor of sociology and economics. He stayed there until 1934, the year Secretary of Labor Perkins made a speech at Alabama College and met him. Before the year was out she had made him a Commissioner of Conciliation. Three years later, in 1937, he was named Director of the Conciliation Service.

Washington Press Photo Bureau

JOHN R. STEELMAN

Immediately he started working, spending from 10 to 15 hours a day in the office, seeing strings of people late into Saturday afternoon and Sunday. He patched up coal disputes, he helped settle the Washington, D. C. hotel strike, he kept miners, machinists and builders from striking and employers in major industries from lockouts. Each year his department has been handling between three and four thousand cases involving millions of workers, and each year the record of settlement has been a percentage high in the 90's.

There have been times when Steelman kept meetings between employers and employees going for 30 consecutive hours; times when he hasn't left the office for over 60 hours. And there is no time when his telephone isn't ringing. Mrs. Steelman, the former Emma Zimmerman, whom Steelman met at a union convention when she was secretary to the secretary of the Building and Construction Trades Council and married in 1939, says that the telephone starts at about 8 a. m. "Even breakfast is eaten to the ringing of the phone." When they are away on trips (Mrs. Steelman always goes with her husband to the large cities): "We snatch our meals in our hotel rooms because it's hard to be reached by phone in dining rooms or cafes." And this keeps up until 3:30 in the morning. It was because of his constant use of the telephone to discuss problems big and small that Steelman acquired a sort of paralytic cramp of the wrist and palm of his left hand which was relieved only by the installation of a special device that leaves his hands free.

Dr. Steelman doesn't mind the rush, the activity, the strain. He is a "husky vigorous man, with lively eyes and an enveloping warmth of personality," whom you'd be likely to size up "as a dock hand who had hoisted himself up in the world by his bootstraps," rather than as a Ph. D. former college professor. In conferences with workers or management "his words tumble out with an almost juvenile eagerness when he talks, and his most academic discourses are punctuated by an effective choice of profanity which he never picked up in college." Time and again industrialists or powerful unions offer him jobs—at much more than the government pays him—but he turns them down every time. "Hell, this job is too much fun," he says.

Who's Who in America
Who's Who in the Nation's Capital

STEEN, MARGUERITE Author

Address: b. c/o Viking Press, Inc, 18 E. 48th St, New York City; h. 11 Apple Tree Yard, St. James', London, S. W. 1, England

One of the most prolific and gifted of modern English novelists, in *The Sun Is My Undoing* (1941), Marguerite Steen has written a lusty historical novel, this time more than 100 pages longer than *Gone with the Wind*. The violent chronicle of an eighteenth-century slave trader, his African mistress and his mulatto daughter, it is also the story of the "cause and progress of the slave trade and of the minority who, courageously and successfully, fought it out of existence." Its backgrounds range from the Bristol waterfront to the swamps and jungles of the African Gold Coast, from Cuban sugar plantations to Madrid palaces. Critics have been extravagant in their praise.

Miss Steen (she is unmarried) was born in Liverpool, England and started her educational career at the Belvedere Kindergarten in that city. Then, she says, her family left Liverpool and she was sent to a "horrible little private boarding school," whence she was finally removed at her own request to Kendal High School. There she did nothing for three years as a boarder "except have a good time and, within the limits of a strict minimum of work, imbibe a certain disposition to learn."

She had started to write at the age of about eight, and by the time she was fifteen had produced a three-volume prophecy in the form of a novel, containing an almost complete prediction of her own future career up to the age of about 30, with only one mistake—that her eventual career would be the stage, and writing only a sort of stepping stone. This early effort, she confesses, "shows no particular signs of literary talent, beyond a certain crude melodrama and a positively slushy sentiment; and no love affairs! Evidently at 15 my mind was slightly conventional."

During the First World War, at the age of 19, she was "booted unwillingly into schoolteaching." She loathed it, "loathed school environment and the absurd insincerities of the profession." After three years she flung herself into London with about 12

Mme. Yevonde, London

MARGUERITE STEEN

pounds in her pocket to try to get on the stage. (She had already published articles on stage décor.) She failed; spent all of her money and a bit more; pawned her few pawnable possessions and lived on a glass of Horlicks and a bun for 24 hours on end. Then by some chance she was offered a position as teacher of classic dancing and eurythmics in Halifax. She took it, and in three years had a big north country connection and was earning from £500 to £600 a year. But the stage had as great a lure as ever. Eventually she threw up security for £3 a week and an opportunity to tour with the Fred Terry-Julia Neilson Company.

She was with Fred Terry for three years. By 1926 matters were rather desperate. She had been six months out of work, and had only £50 a year of her own. Her "guide, monitor and dearest friend," Ellen Terry, impressed by letters that Marguerite Steen had written for her and by certain theatrical criticisms that she had done, had always insisted that she should write. The late W. J. Locke had also encouraged the idea: although he had read her first novel "and earned the gratitude of the publishers and public by gently but firmly suggesting its suppression," he thought that she had the "writing maggot" in her and would eventually produce something worthwhile. And she had taken their advice to the extent of scribbling away at a "society" novel in theatrical lodgings and scene docks.

That was how the stage became a stepping stone to a career as novelist for Marguerite Steen, directly contrary to her youthful prediction. The novel she had been working on was sold, and published in 1927 as *The Gilt Cage;* and although no critic hailed her as a genius, she continued to write, and to sell what she wrote. Many of her short stories appeared even before the publication of her second novel, *Dark Duel* (1929) (published in England the year before as *Duel in the Dark*), which made use of her stage background in a story of psychological rivalry between an aging stage favorite and her granddaughter.

After that it was a strange year when American readers did not see the publication of at least one novel by Marguerite Steen. In 1930 *Reluctant Madonna* (London, 1929) appeared in the United States, and the next year saw the publication of *They That Go Down in Ships* (published in England the year before as *They That Go Down).* This last book, the story of the life of the daughter of a sailor's widow in the days of Lord Nelson, caused at least one American critic to greet Marguerite Steen as "a figure of individuality and definite promise" among the younger English novelists, and most of the others were equally enthusiastic. *The Wise and the Foolish Virgins* (1932), which, with "tenderness and a strongly controlled intensity, pointed at times with a biting irony," told the tragedy of a slum child who worshipped her very ordinary teacher, was also generally lauded.

Critics, however, differed rather more as to the merits of *Unicorn* (New York 1932; London 1931), the romance of an exiled archduchess who during the post-War years succeeded in rejecting her cold-storage upbringing and marrying a painter. They continued to disagree over *Stallion* (1932), an "earthy" novel with an English village background, and *Spider* (1933), the story of a magnificently unscrupulous widow of a great musical composer who builds a cult around his genius, with herself as high priestess.

The disagreement continued. *Matador* (1934), even though a choice of the Book Society in England and of the Book-of-the-Month Club in the United States, brought comments ranging all the way from the New York *Post's* awed "Only a very little short of being a masterpiece" to the *New Republic's* patronizing "Melodrama according to Hoyle." *One-Eyed Moon* (1935), the second book in a trilogy dealing with Spanish characters, earned high praise in the *Christian Science Monitor* but was rejected by the still patronizing *New Republic* with the suggestion that it "badly needs a breath of fresh air." And the third book of the trilogy, *The Tavern* (1936), which was called "a minor masterpiece" in the New York *Times,* was dismissed by its *Saturday Review of Literature* reviewer on the grounds that Miss Steen's treatment of human nature couldn't be taken seriously. Only the less ambitious *Return of a Heroine* (1936) apparently created the same reaction in them all. That was, it was generally agreed, a "psychological thriller," entertaining but not completely convincing.

All in all, if Marguerite Steen has been reading her clippings over a period of years, she must have occasionally been puzzled at learning that she has an immense talent for subtle character development and only a superficial understanding of people; that her work includes "nothing shopworn" and little but "theatrical episodes"; that her historical and foreign backgrounds are completely convincing and require a great deal more understanding and research; that she writes with absolute realism and with romantic flamboyance; that her novels are fundamentally serious, primarily works of entertainment, profoundly witty and morbidly humorless. She can, however, find something consistent in nearly all the criticism of her work: her novels, she is assured, are rich with dramatic action, and color, and appeal to the senses. Her experience on the stage has served her well, it seems.

Published in England but not in the United States have been *Ancestors* (1930), "a mental aberration" published under the name of Lennox Dryden; *When the Wind Blows* (1931); *Oakfield Plays* (1932); *Peepshow* (1933); *The Lost One, a Biography of Mary (Perdita) Robinson* (1937); *Who Would Have Daughters?* (1937); *The Marriage Will Not Take Place* (1938); *Family Ties* (1939); *Kind of Insolence, and Other Stories* (1940); and *French for Love* (1940) a play written with Derek Patmore. *Hugh Walpole: a Study* (1933), an enthusiastic appreciation of Walpole as the "great romantic" of modern English fiction, was Miss Steen's one published work of literary criticism.

Marguerite Steen's principal occupations, aside from her writing, have long been amateur play producing and painting. She had been drawing and painting since babyhood, and was destined for an artist by her family, but (owing partly to inefficient art instruction between the years of nine and eighteen) her interest lapsed for a while. Before the War her favorite subjects were Paris street scenes: houses give her "a feeling" which she tries to convey on canvas, she says. In peaceful days another hobby was motoring, in a small tourer model "with a gallant heart and an apparently inexhaustible capacity for climbing hills."

STEINHARDT, LAURENCE A(DOLPH)

(stīn'härt) Oct. 6, 1892- United States Ambassador to Russia

Address: American Embassy, Moscow, U. S. S. R.; 30 Pine St, New York City

Bulletin: As the invading Germans approached Moscow, Ambassador Steinhardt, with the rest of the diplomatic corps, moved to the temporary Soviet capital of Kuibyshev. From there he traveled by plane to New York, arriving on November 26, 1941. There were indications that he would not return to Moscow, but would be given another strategic diplomatic post.

Associated Press

LAURENCE A. STEINHARDT

From July 1941 issue:

From August 1939 to June 1941, when the Nazi-Soviet pact was in effect, Laurence A. Steinhardt, the United States Ambassador to Russia, had the difficult task of trying to understand and interpret Russia's maneuverings while at the same time maintaining the necessary business relations between that country and his own. Since June 1941 his task has become even more complicated, for, with Russia at war with Germany, his are the manifold duties of a statesman in a belligerent country, bound to report to the United States not only the progress of the fighting, but the intricacies of Russia's policies.

This would be a hard job almost anywhere today. It has often been particularly difficult and delicate in the Soviet Union, for, as G. E. R. Gedye once explained: "In no other country are rulers at such pains to conceal their true policy from the diplomatic corps as in Russia. There is no other country which has so deliberately isolated its corps, so severely restricted intercourse between diplomats and Soviet Union political leaders and officials." Despite this, Ambassador Steinhardt has managed during the time he has been Ambassador to act as host to Russian Commissars, to entertain representatives of various foreign governments, Axis, Allied and neutral, and to report to Washington as much as possible of those actions and policies which bear on the world situation and the War.

Ambassador Steinhardt is doing this, and doing it with all the necessary qualities of both finesse and hardboiledness, after only seven years of diplomatic experience. These, however, were preceded by many years' experience as a lawyer, and he still believes that there is no training for a diplomat like work at the Bar. Laurence Adolph Steinhardt was born in New York City, the son of

STEINHARDT, LAURENCE A.—*Cont.*

Adolph M. and Addie (Untermyer) Steinhardt, and was educated in that city, first by private tutors, then by Columbia University, which gave him a B. A. in 1913 and an M. A. and an LL. B. in 1915.

Out of college, Steinhardt joined the accounting firm of Deloitte, Plender, Griffiths and Company and worked as an accountant until he was admitted to the Bar in 1916. That was the year when he acted as counsel to Waslaw Nijinsky in the first of the many cases he was to handle for internationally important people. For a while, however, his fast-moving career as a lawyer was halted, and Steinhardt entered the Army as a private. He moved ahead here, too, and soon was a sergeant in the 60th Field Artillery. Not much later he became associate counsel for the War Department; a member of the Provost Marshal General's staff; and an assistant in the Housing and Health Division of the War Department.

This last government position was his in 1919. A year later he became a member of the New York law firm of Guggenheimer, Untermyer & Marshall (the Untermyer part of it was his uncle) and was associated with it until 1933. For the economic background of his law practice, Steinhardt served as director of 10 corporations; he also wrote a number of books and articles on jurisprudence, finance and trade-unions; and he crossed the Atlantic scores of times to handle the affairs of the widely scattered clients of his firm.

Even though he was an important lawyer, Laurence Steinhardt didn't emerge as a political figure until 1932, the year in which he did "Trojan work" for Franklin Delano Roosevelt before the Chicago nominating convention, both as a member of the finance committee of the Democratic National Committee and as a firm supporter—which he has continued to be. Observers didn't hesitate to call Steinhardt's appointment as Minister to Sweden in 1933 a reward for this support, but at the same time they recognized his ability.

In July, Steinhardt set sail and, once in Sweden, helped negotiate the reciprocal trade agreement between the United States and that country. He also distinguished himself by his efficient handling of the aftermath of the Kreuger and Toll collapse and by his investigations into the feasibility of United States' recognition of the Soviet Union.

In 1937 Steinhardt moved to Peru and shortly afterward began diplomatically to prepare the ground for the eighth Pan-American Conference held in Lima in December 1938. It was his close cooperation, later, with Secretary of State Hull that did "much to achieve the eleventh hour success in the Declaration of Lima." After less than two years in this post, however, Steinhardt was recalled and transferred to Russia as the United States' Ambassador, the third to that country.

There was general satisfaction at the appointment because of the new Ambassador's knowledge of Russia and the Russian problem from his previous study of the question of recognition. There was satisfaction, too, because it was known then that the situation would be a difficult one which needed a man with Steinhardt's "tremendous capacity for detail and thoroughness." As Gedye describes him: "No trouble is too great for him, no detail too petty. He is the sort of man who will investigate a report on a given subject from 20 different angles, well knowing that only one stands a chance of being acted on, and is more than satisfied if eventually action is secured."

When Steinhardt left in May 1939 for Russia, accompanied by his wife, the former Dulcie Yates Hofmann whom he married in January 1923, and their daughter Dulcie Ann, his task wasn't an easy one. Yet it was felt by many at that time that the full-fledged military alliance between Britain and the Soviet Union for which Russia seemed anxious might still be negotiated before war broke out. This hope was shattered by the German-Russian nonaggression pact, and whatever other hope the situation still held seemed to be dissipated by the Soviet invasion of Poland, the invasion of Finland and the conclusion of forced pacts with the Baltic States. Steinhardt's job got more and more complicated and important. He not only reported, explained, enlightened his own government on the day to day happenings in Russia, but conferred long and earnestly with Premier-Foreign Commissar Molotov during the Finnish War, went to Tallinn, Estonia in what reporters felt was an attempt to bring about peace, though this was not confirmed in the United States; investigated the situation of the ship, *City of Flint*; gave information to newspapermen; reported in Washington for consultation in 1940; dealt with situations made important to the United States by the Axis conquest of the Balkans and the Russian pact with Japan; conferred with Japanese Foreign Minister Matsuoka (see sketch this issue) both before and after Matsuoka's visit to Berlin; tried to keep his country informed on the progress of the war between Russia and Germany when it finally broke out on June 22, 1941. And once war began he reported Russian progress and Russian needs to his country, later supervising the receipt and distribution of American war supplies.

Before war came to Moscow Ambassador and Mrs. Steinhardt often entertained Moscow's foreign colony and distinguished visitors at Spasso House. Part of this entertainment was made easy by Ambassador and Mrs. Steinhardt's fluency in languages (Russian is the only one he isn't at home in, though he has a working knowledge of it); part by the facilities for entertainment the Steinhardts were able to get together. Very often after a dinner party they would show an up-to-date American moving picture in a specially installed theatre; sometimes they would provide for informal dancing.

STERN, BILL July 1, 1907- NBC sports announcer

Address: National Broadcasting Co, 30 Rockefeller Plaza, New York City

Bill Stern is NBC's sports announcer, with an approach that is dramatic but a little more scholarly than most. Adam hats, B. F. Goodrich tires, Colgate-Palmolive-Peet soap and Twenty Grand cigarets have all had the advantage of having their products mentioned in his persuasive tones along with football games and prize fights. And since 1938 he has been doing sports comment for MGM's *News of the Day*.

One of the younger radio commentators, Bill Stern was born in Rochester, New York on July 1, 1907, the son of a clothing manufacturer. After attending the Hackley School in Tarrytown, New York and the Cascadilla School in Ithaca he went on to Pennsylvania Military College, in Chester, Pennsylvania. There his enthusiasm about sports was more active than vocal. He played football for four years (three as varsity quarterback), participated in tennis, basketball, boxing, crew, and in 1930 came away with three letters as well as a B. S. degree.

It seemed at first that Bill Stern would end up in the theatre. He had led the college orchestra in vaudeville, and after graduation he got a humble start in the show business by becoming an usher. Somewhat later a stock company in Rochester took him on, and next it was on to Hollywood. But it was hard to get past the gate for an interview, and Stern compromised by digging cement postholes on the RKO lot for $5 a day.

For a long time he had annoyed his family by pretending, usually in the shower, that he was manning a "mike" at a big football game. He hadn't considered football announcing as a career, though, until in 1925 he got a job announcing sports over WHAM in Rochester. He continued in Austin, Birmingham, Cincinnati, New Orleans and many other cities throughout the country before he returned to theatre work in 1931 as assistant stage manager of the Roxy Theatre. A year later he became stage manager of the Roxy; and the Music Hall and the Center Theatre, both in Radio City, opened that same year with Stern as stage director.

After a couple of years of stage directing he was anxious for a change. Nostalgic for his mike, he appealed to an NBC executive for permission to broadcast part of a football game—and got it. Although still stage director for the Music Hall and Center Theatre, he worked with Graham McNamee during the 1934 football season and won such wide popularity that he became guest announcer of the Pontiac series that year. Finally, in June 1937, Bill Stern became a regular member of the NBC Special Events staff.

Ray Lee Jackson

BILL STERN

Fight fans are particularly familiar with his voice. For four years, until the contract expired in June 1941, NBC and Adam Hat Stores Inc. were sponsors of the big-time bouts, and boxing enthusiasts grew used to hearing the NBC team of Sam Taub and Bill Stern "describing right hooks and Homburgs with equal competency." Alton Cook of the New York *World-Telegram* is only one of the radio critics who consider him among the finest sports commentators. He can tell a human interest story, too. NBC people remember the time Stern told a couple of million listeners about a boy who saved his dog instead of his new bicycle from a fire—and unwittingly brought on a deluge of cash contributions toward a new bicycle for the boy. (A bicycle manufacturer finally took care of the situation himself.) And when, on the way to cover a football game in Texas, an accident landed him in the hospital for six months, the studio

STERN, BILL—*Continued*

received many anxious inquiries from his listeners.

Movie-goers know Bill Stern as the rather photogenic young man with the dark, intelligent face and the hat pulled down jauntily over one eye who appears for a brief moment before becoming merely the voice behind MGM's *News of the Day.* He is five-feet-ten, has brown hair and brown eyes, and weighs one hundred-fifty pounds. Although he lives in the country with his wife, Harriet May, because he finds the country more peaceful, there is nothing particularly rural about his diversions. His greatest extravagances are fast cars and speedboats; he likes music and the theatre; and he is another one of the growing army of Americans who believe they are experts on swing.

RISË STEVENS

STEVENS, RISË (rē'sȧ) June 11, 1913-
Opera singer

Address: c/o Metropolitan Opera Company, New York City

Risë Stevens is a tall, striking brunette who ever since her Metropolitan debut in 1938 has been delighting American audiences with her rich mezzo-soprano voice, her striking acting, her glamorous appearance. In *Mignon*, as the temptress in *Samson and Delilah*, in the title role of the *Rosenkavalier*, as Cherubino in the *Marriage of Figaro*, in many other operatic parts and in concert appearances, she has scored the sort of ovations for which every aspiring singer prays.

Her hopes and ambitions started many years ago, for it was clear from the time she was a child that she had a lovely voice. Her parents, Mr. and Mrs. Christian Steenbjorg, encouraged her, saw that she had lessons while she was going to school in New York City, where she was born, and were able to see their hopes for her on the way to fulfillment when Risë was only 10. It was then that she appeared, successfully, as a youthful prima donna on a children's radio program. By the time she had been graduated from Newtown High School in Long Island, at the age of 17, she was ready for operatic roles.

Her first opportunity was with the Opéra Comique Series at the Heckscher Theatre in New York, and for two intensive years Risë Stevens sang, two years in which she rose from chorus work to solo parts. It was while she was singing here that she was heard by the noted teacher Madame Anna Schoen-René, who immediately offered to teach her. She continued to teach her after Risë left the Opéra Comique Company to enter the Juilliard School of Music on a scholarship.

At the end of three years at this school, years in which she had been featured in several important student performances of *Orfeo* and *The Merry Wives of Windsor,* she was offered a Metropolitan Opera contract. She turned it down. She didn't have enough experience for the job, she explained. Then she went abroad to get it, working with Gutheil Schoder and Graf, singing in Salzburg and in Switzerland. It was in the spring of 1936 that she made her opera debut abroad —at the Prague Opera House, in *Mignon.* This was followed by appearances in *Carmen, Orfeo* and *Der Rosenkavalier.* Finally her successes in Prague brought her an invitation from the Vienna State Opera House to sing leading roles, and she accepted it.

The late Herbert F. Peyser heard her there as Octavian in *Der Rosenkavalier* and wrote the New York *Times*: "I heard, to begin with, a lovely blooming voice—a voice beautifully cultivated throughout its scale. Further, a skill and fastidiousness of taste in phrasing and nuance that betrayed artistry of a wholly exceptional order. And never have I seen in this opera the figure of Octavian played with such an exuberance paired with distinction or with such complete credibility of boyish verisimilitude." After two years of singing which earned her criticisms equally as flattering, Risë Stevens left Vienna for South America, there to make her debut at the Teatro Colon on September 2, 1938. Once again she appeared in *Der Rosenkavalier*, receiving, according to cable dispatches, "one of the most enthusiastic ovations ever given a newcomer."

By the time of her success here Risë Stevens was as sure that she wanted to perform for the Metropolitan as the Metropolitan was sure they wanted her. She signed a contract, and on November 22, 1938 made her first appearance with this august company, again in *Der Rosenkavalier*, in Philadelphia. She was a sensation. And when she made her New York debut on December 17 in *Mignon*, Olin Downes of the New York *Times* was moved to comment that here was "more than a voice for one or two lyrical roles, for it has unusual range, well adjusted registers, and there are colors in it. . . She gave the part of Mignon dramatic substance." "For her," *Time* summed up, "even the morosest critic prophesied an expansive future."

Mignon was followed by *Der Rosenkavalier* and by other operas, including the Wagner Ring dramas, in which she appeared in Erda and as Fricka. Then in the spring and summer of 1939 Risë Stevens sang at the world-famous Glyndebourne festival in England, the first American-born singer to appear there. She was re-engaged for 1940, when it was planned to feature her in *Carmen*, but the outbreak of war in Europe put an end to this project.

Risë Stevens returned to the Metropolitan Opera House triumphantly in 1939, and when she sang in the fall of 1940 in San Francisco she scored one of the greatest ovations in West Coast history. That same season the Metropolitan revived *Samson and Delilah* especially for her, making her the first American to sing the leading role in more than 22 years, and it was perfectly apparent to the enthralled audience why Samson fell. Meanwhile she continued during the summers to sing with the Teatro Colon in Buenos Aires and to appear in leading roles elsewhere. And there have been concert and radio engagements for this young singer all over this country.

In 1941 Metro-Goldwyn-Mayer, impressed equally by her voice and her unoperatic physical proportions, signed a long-term film contract with her and shortly after put her to work in *The Chocolate Soldier* opposite Nelson Eddy. This picture was released in the fall of 1941, and critics saluted a new movie star with "glamour as well as a voice."

This star who in 1941 was named one of the thirteen best-dressed women in the United States by the Fashion Academy admits that her handsome Hungarian husband, Walter Szurovy, whom she married in 1939, picks out all her hats. She admits, too, to a number of tastes, some usual, some completely unexpected in an opera singer: walking and swimming, collecting good luck mascots, going to the movies, getting up early, eating maraschino cherries, never sleeping on the same sheet twice, collecting Wedgewood china, cashmere sweaters, slim crystal glasses, tweeds, and taking out her dashing dachshund named "Wotan."

STEWART, DONALD OGDEN Nov. 30, 1894- Motion picture scenarist; author
Address: h. Carmel, Calif.

Versatile and gifted Donald Ogden Stewart has to his credit seven books, all in a humorous vein, and has edited another—this time a serious one—compiled of papers read before a Congress of the League of American Writers. His play *Rebound* starred talented Hope Williams in 1930. He has worked on numerous screen plays, often being called in to "doctor" a script or brighten up the dialogue. Among the pictures for which he has received writing credit either as writer or collaborator are: *Tarnished Lady*; *Smilin' Through*; *Dinner at Eight*; *Another Language*; *The White Sister*; *The Barretts of Wimpole Street*; *No More Ladies*; *The Prisoner of Zenda*; *Holiday*; *Marie Antoinette*; *Love Affair; Kitty Foyle; That Uncertain Feeling; A Woman's Face.*

DONALD OGDEN STEWART

Stewart was to do the book for a musical comedy based on Ludwig Bemelmans' (see sketch this issue) articles on hotel life that had appeared in the *New Yorker* Magazine, but by the end of 1941 plans for the show seemed to have fallen through. It would be his second Broadway musical show, the first having been a Joe Cook opus, *Fine and Dandy* (1930). After completing the latter book Mr. Stewart went to Hollywood and in the past 11 years there has rolled up a brilliant record of achievement as a screen writer. Early in 1941 he shared with Dalton Trumbo (see sketch this issue) the Academy of Motion Picture Arts and Sciences Award for the best screen play of 1940—*The Philadelphia Story.*

Born in Columbus, Ohio, November 30, 1894, Donald Ogden Stewart is the son of Gilbert Holland and Clara Landon (Ogden) Stewart. At 14 he was sent to Phillips Exeter, which usually turns out students for Harvard, and he entered Yale in the fall of 1912, taking his B. A. there in 1916. After graduation he worked for public service corporations and during the First World War served in the United States Navy as seaman, quartermaster and chief quartermaster, respectively. He then resumed his business

STEWART, DONALD OGDEN—*Cont.*

"career," but by that time was well on the way to being a writer.

His first book, *A Parody Outline of History*, published in 1921, lampooned the literary styles of William Lyon Phelps, Sinclair Lewis and others. It had an unusual success, as did his subsequent books—produced at the rate of one a year until 1926, a year in which on July 24th at Santa Barbara, California, he married Beatrice Ames. (His two sons, Ames Ogden and Donald Ogden, Jr., are children of this marriage, which ended in divorce on September 8, 1938. On March 4, 1939 Stewart married the former Ella Winter Steffens, widow of Lincoln Steffens. She is well known as a writer under her own name, Ella Winter.)

Described by Alexander Woollcott (see sketch this issue) as a "preposterously tall, blond man," he led the life of an émigré writer prior to his first marriage. While in Vienna in 1922 he "grew a splendid red beard and wrote *Perfect Behavior*." He shaved the beard before moving on to Budapest. In 1926, the year of *Mr. & Mrs. Haddock in Paris, France,* he was, wrote Grant Overton, "very near-sighted, fond of Beethoven, scotch, and Max Beerbohm." And although golf was listed as a hobby early in his career, the truth seems to have been that his favorite forms of relaxation were good books and good music. In the latter realm he progressed so far as an amateur that he could play some of Bach's pieces on the piano.

In 1928 Stewart took up acting, assuming the role of Nick Potter in Philip Barry's *Holiday*. He stayed with it through its long Broadway run that extended into June 1929, and also toured. In 1929 he published *Father William* and acted in his own play, *Rebound,* published in 1931.

In 1930 he went to Hollywood to live and to work, and in his more than 10 years there has become one of the cinema city's most famous screen writers. He has the professional writer's knack of doing the job at hand and doing it exceedingly well. He brought to life the pasteboard romance, *The Prisoner of Zenda,* by turning it into a comedy-romance, and the script of *The Barretts* he treated with the seriousness it deserved.

At a Town Hall (New York) symposium on films and national defense, Stewart quipped: "One man's propaganda can be another man's Zanuck." Hitting deeper than that, he insisted bluntly that people want to see themselves portrayed on the screen as they really are. "Films," he asserted, "must provide a deeper understanding of life than a guy gets out of a whiskey bottle and a sympathetic bartender."

President of the League of American Writers from 1937 to 1941, when Dashiell Hammett was elected, Mr. Stewart has defended it from attacks branding it as Left wing, asserting that its prime purpose has been and is the defense of literary freedom of speech. Quoting from the League's Call for a session opening in New York, June 6, 1941, he said: "Wherever the right to speak is lost we too are the losers."

President of the Hollywood Anti-Nazi League since its inception, Stewart has been the target of many vituperative attacks on the grounds that one or another of the groups he was connected with were Communist "front" organizations. None of these charges has been proved, and in some instances they may be attributed to a proclivity for name calling. What he stands for Stewart admits quite frankly. He is on the board of the Screen Writers' Guild, and his pro-labor bias has been shown in such things as his support of the Harry Bridges case. (He compared Dalton Trumbo's pamphlet on it to *J'Accuse.*)

Since 1940 Stewart has been president of the Hollywood branch of the League of American Writers as well as of the parent body. With a membership of several hundred, this branch has had a leading part in raising some $35,000 for exiled writers, and before that in collecting $25,000 for medical aid to Loyalist Spain. He quoted as his own firm conviction the League credo that: "Wherever civil liberties are abridged, our stories, poems, plays, essays, and books are abridged. The attacks on trade-unions, political minorities, and education are attacks on our basic convictions as writers and as citizens."

Six feet tall, weighing one hundred-eighty pounds, with grayish hair and blue eyes, he has a sobriety about him that makes his humorous asides doubly effective. Wearing rimless spectacles and speaking from the rostrum with little oratorical dash, the humor crops up in his serious speeches—he makes many of them—in sharply barbed phrases that drive home his points more surely than any dry-as-dust appraisal.

In discussing the possibility of a general cultural interchange between the peoples of the Americas, Stewart put forward the suggestion that documentary films replace the present tendency toward personal appearance tours of stars and pictures depicting only the music and gaiety of South America (as seen through the eyes of Hollywood production big-wigs).

While in Hollywood, Donald Ogden Stewart teaches at the League's school along with a faculty of other prominent Hollywood writers, in his spare time from picture work. He is one of the few writers whose part in films is stressed by critics. Dialogue or screen play by Stewart is a circumstance worthy of critical notice.

Who's Who Among North American Authors

Who's Who in America

STEWART, JAMES (MAITLAND) May 20, 1908(?)- Film actor

Address: c/o MGM Studios, Culver City, Calif.

James Stewart, winner of the Academy Award for 1940, has given up being the typical American youth. "I collected dogs and cats but I've stopped being overly extravagant in that fashion," the lanky Pennsylvanian insisted recently. Yet an inventory taken in 1940 of the Brentwood house shared by Stewart and John Swope disclosed: "two cats, a half dozen doves, unnumbered mice, and three dogs of questionable pedigree. Under the house are fifteen wild cats, the offspring of a pair of tame tabbies who took offense one day at Stewart, crawled under the house, multiplied, and have never come out. At night they howl."

Nevertheless, Stewart has stopped being what Kyle Crichton described as "the kid from Elm Street who rents the tux to go to the Junior Prom." He has insisted upon roles that would not exploit his personal qualities of quiet charm and droll humor. The result, in 1940, was his Academy-Award part in *The Philadelphia Story*. Had he been swayed by easy praise, he might long since have been type-casted out of popularity. "Hollywood," he admits frankly, "dishes out too much praise for small things, like my role in *Rose Marie*. I won't let it get me, but too much praise can turn a fellow's head if he doesn't watch his step." And he concludes: "If I hadn't been at some particular place at some particular time and some man hadn't happened to say so-and-so and I hadn't answered this-and-that, I'd still be hunting a job in an architect's office."

James Stewart is six feet two and one-half inches tall, has brown hair and gray eyes. His hair falls into his eyes, and he talks, says Miriam Teichner, "with an engaging little stumble that is almost a stutter. Going to see him, you had the feeling—that nice, sweet, gawky, shy boy stuff of his, with the underlip drooping, is probably just a line." But she discovered this was not so. He is self-conscious about his height, according to Dorothy Kilgallen, "and this makes him walk with a stoop, with his head bent as if he were always afraid of bumping it. He is unhappy about his lankiness, so he wears extra padding in the shoulders of his suits and will try any suggested diet to make him put on weight."

In early 1941 Stewart was still underweight (140 pounds) and deferred by the draft board because of it. MGM was relieved, but Jimmy's feelings were mixed. An added 10 pounds put on with a struggle finally got him accepted on March 21. He thereby became the first motion picture star to be drafted. Since he is an experienced aviator with a plane of his own, he was assigned to the Air Corps. According to news reports he took a pay cut of $11,979 monthly—the difference between his original Army renumeration of $21 monthly and his reported Hollywood income of $12,000 for the same period. Although he was eligible for release from the Army because of age he elected to remain as a soldier.

JAMES STEWART

His father had been in the Spanish-American War and had been a captain in the First World War. On a visit to France in 1939 Stewart searched out the ordnance shops his father had helped build for the A. E. F. in Bourges. None of the natives seemed to know where they were located. Finally he came upon someone able to direct him to "huge, empty buildings, hidden away in the woods." And when Stewart returned from his European holiday the Second World War was already in the air and his ship cut a path through the dark Atlantic, lights dimmed.

James Maitland Stewart was born in Indiana, Pennsylvania, the son of Alexander Maitland and Elizabeth Ruth (Jackson) Stewart. Stewarts had been in the hardware business there since 1840 and young Jimmy liked nothing better than to visit the store. As a child he was thin, wore glasses, and his two pet ambitions were to be a magician and a big game hunter. He dabbled in chemistry, radio and parlor tricks. While a member of a local Boy Scout troop he wrote, produced and acted in his first play, which was about the World War then going on. He even recruited his two younger sisters for parts in the historical production.

Acting in school plays at Model School, adjunct of the state teachers' college, and at Mercersburg Academy, from which he was graduated in 1928, James was still best-known as an accordion player when he entered Princeton. He wasn't quite certain what else he wanted to be. Starting out with a course in civil engineering, he switched to steam engineering but kept up the study of architecture that got him his B. S. in 1932. When not at his studies he was at his accordion or rehearsing for a Triangle Club play. The main inducement of the latter was a Christmas trip to New York—"being met at trains by Princeton alumni, the perfect hosts." In the fall of 1931 he was cheerleader, but the jinx was on Palmer Stadium that season and

STEWART, JAMES—*Continued*

the Tigers won few games. During vacations he and Bill Neff barnstormed in the home territory, combining accordion music with magic.

After graduation Jimmy went up to West Falmouth, Massachusetts, where his friend Josh Logan ran the summer theatre with a group called The University Players. Jobs for young architects were scarce and Stewart was glad to play the accordion for guests at the Old Silver Black Tea Room, also run by Logan. Jimmy had bit parts in *Whistling In The Dark* and in the tryout of *Goodbye Again*. His first New York play was the short-lived *Carrie Nation*. Then he went into the cast of *Goodbye Again* that began its Broadway run in the fall of 1932. "It seems apropos," said the New York *Sun* critic, "to say a few words about James Stewart, a player in this mad piece, who is on the stage for exactly three minutes and speaks no more than eight lines. Yet before this gentleman exits he makes a definite impression on audiences because he makes them laugh so hard."

In 1933 Stewart was stage manager for the Boston run of Jane Cowl's production of *Camille*. One night he rang down the curtain before Camille had had time to die. Reports vary as to what Miss Cowl said on that occasion. Nevertheless Blanche Yurka allowed him to stage-manage *Spring in Autumn*, and when it folded producer Arthur Beckhard found room for Stewart in his New York office, then a part for him in *All Good Americans*. In this play Jimmy was supposed to throw an accordion out the window once during each performance. He rebelled on the grounds that he was "an accordion player by nature," and was finally allowed to substitute a banjo.

There were several other stage parts for Jimmy before he packed his bags and headed West. In one he was supposed to be Viennese and succeeded, in the words of one critic, in being "as Viennese as a hamburger." In another, at the Red Barn Theatre on Long Island, the stage was so small that if Stewart fell prone in a scene when wounded, it would hardly leave room for the others to move about. He solved the problem by staggering blindly for 10 minutes—"literally dying by inches. . . It was," he recalled wryly, "the ham's dream of a great scene, and I was proud of it."

Jimmy and some of his friends—Henry Fonda, Burgess Meredith and others—organized the *Thursday Night Beer Club*. They often had such distinguished guests as Margaret Sullavan, whom Jimmy had dated when she visited Princeton, Helen Hayes and Katharine Cornell (see sketch this issue). Benny Goodman's clarinet often competed—successfully, according to Jimmy—with the battered accordion, and Benny, it was conceded by the group, was the club member "most likely to succeed."

Jimmy's first film was a two-reel comedy made by Warner Brothers in a Long Island studio. He was intrigued more by the $50 a day than by the prospect of a screen career. However, in 1935, after a good year in several plays, he took a test at Fox. It was, he said, "one of those watch-the-horses-run affairs—you gravely turn your head from one side to the other, and assume that you're observing something intently." Nothing came of it, but his next, at MGM, got him a contract and a ticket to the coast. "I don't believe this happened," he drawled in one of his first West coast interviews. "All the while I'm wondering when they're going to change their minds about me."

His wonder became a state of alarm when he saw his first picture, *Murder Man*. "I murdered that part," he confesses. "I was all hands and feet and didn't seem to know what to do with either." It was also frightening to see oneself on the screen for the first time. Minor faults became glaringly obvious in the close-ups. He drew the proper moral and ever since has made a practice of viewing "rushes" of his films. He considers this important to "keep yourself from getting a bag of tricks."

Subsequent and much more successful pictures included *Wife Versus Secretary* (MGM, 1936); *Next Time We Love* (Universal, 1936); and *Seventh Heaven* (20th Century-Fox, 1937). In the following year he did *Shopworn Angel* for MGM, *Vivacious Lady* for RKO and *You Can't Take It With You* for Columbia. The latter was an outstanding comedy success. In a fast-paced Western, *Destry Rides Again* (1939), Stewart shared honors with Marlene Dietrich, and in 1940 in *The Shop Around the Corner* he had a chance to act again with Margaret Sullavan, with whom he had appeared in stage productions years before.

Mr. Smith Goes To Washington was one of the most talked-about pictures of 1939. His acting in the role of Mr. Smith got Jimmy the New York Critics' Award for the Best Male Performance of the year, and he was runner-up for first place in the Film Critics of America voting. The film, said *Theatre Arts*, was more fun than the Senate itself. "We like to remember the way his voice cracked when he got up to read his bill, and the way he dropped his hat when he met the senior Senator's daughter, and the way he whistled at the Senators when they turned their backs on him." The New York Film Critics' Award was presented by Mayor Fiorello La Guardia who, as a former Congressman, praised Stewart for the authenticity of his performance.

As the reporter in *The Philadelphia Story*, James Stewart did what was perhaps his finest acting job to date. It was, said the New York *Times*, a "brilliant performance," and almost all critics concurred in this judgment. His latest film (April 1941) is *Pot o' Gold*, in which he plays his beloved accordion. Unfortunately the producers felt his playing was not good enough and had a professional "dub" in the sound.

Indicative of the seriousness with which Jimmy takes his work is his praise of Director Capra (*You Can't Take It With You*): "Other directors sometimes let you do as you like and you can be so wrong. But Capra tells you, even though he never stops emphasizing the importance of 'keeping it natural.' And whatever he tells you is right. You know by the feel." He is interested in directing as well as acting and should like to be able, some day, both to write and to direct.

Henry Fonda and Josh Logan both shared the Brentwood house for a time. They married, leaving bachelors Swope and Stewart to carry on. Stewart is constantly put on the spot by gossip writers, as about to get serious with this or that glamorous star with whom he has been seen in public. He has a philosophy about marriage, which is: "Most successful marriages are those in which the people concerned are young enough to adapt their actions and thoughts to each other. When a fellow's been a bachelor quite a while he sort of gets in the habit of it." Despite this ominous statement, Jimmy seems in no danger of sinking into stuffiness.

His hobbies are few, if you discount the Brentwood "madhouse," the accordion and the magic. (He is professional on both counts, being an honorary member of the International Brotherhood of Magicians.) He builds model planes and has a pilot's license. He also takes "gag" pictures with a miniature camera. He is exactly the sort of conversationalist one might expect from some of his pictures, with a particular talent for involved allusion.

STILL, WILLIAM GRANT May 11, 1895- Composer; conductor

Address: 3670 Cimarron St, Los Angeles, Calif.

The tone poem which accompanied each six-minute showing of Democracity in the Perisphere, at the New York World's Fair, was a composition of William Grant Still, an American Negro composer whose works range from songs for many Broadway shows, the radio and films to ballets and larger works for symphonic orchestras. The way in which he was chosen was interesting. Recordings of various works by many composers were played to the jury, without the names of the composers being disclosed. The jury liked best *Lenox Avenue* and *From a Deserted Plantation*, both works of Still, the first composed for the Columbia Broadcasting Company, the second for Paul Whiteman's Orchestra.

A musical exposition of the changing vision unfolded in Democracity—an expression in tone that was timed to the second with the action—was what Still presented in his tone poem. The work was orchestrated for a symphony orchestra, with a finale for chorus and orchestra, the chorus singing the theme song of the Fair. Within the six minutes episodes from a whole twenty-four hours were shown. To accompany scenes of the night life of the future Still used just a touch of jazz. The tone poem was played continuously, from recordings. Counting 12 hours to the Fair day there were 120 playings a day—a "multiplicity of presentation achieved by few composers living or dead."

William Grant Still was born in Woodville, Mississippi May 11, 1895, the son of William Grant and Carrie L. (Fambro) Still. He obtained his early training in Little Rock, Arkansas, where his mother taught literature in the high school. He attended Wilberforce University, and then Oberlin Conservatory of Music and the New England Conservatory. At Oberlin he received a scholarship in composition, completing a year's work in less than three months. Recently he has had two Guggenheim Fellowships and also a Rosenwald Fellowship to enable him to continue creative work. It was right after he left Wilberforce

Philadelphia Society for Negro Records & Research

WILLIAM GRANT STILL

University that Still married Grave Bundy. There were three daughters and a son of this marriage, which ended in divorce. In 1939 Still was remarried—to Verna Arvey, pianist and journalist. They now have a son, Duncan Allan Still.

Though some of Still's early work was arranging popular music for jazz orchestras, he soon established himself as a serious composer who merely utilizes jazz idioms. Most of his compositions now are orchestral. He first attracted attention when the International Guild of Composers at one of their New York concerts (1926) presented four of his songs for solo voice and orchestra, in one of which, *Levee Land,* Florence Mills had the solo part and Eugene Goossens did the conducting. Some of Still's other works are: *Darker America,* a symphonic poem; *From the Land of Dreams; Log Cabin Ballads; From the Black Belt*; *Africa,* a symphonic poem; *Afro-American Symphony; New Symphony in G Minor*; three ballets, *Sahdji, La Guiablesse, The Sorcerer; Lenox Avenue,* for chorus and orchestra; and an opera, *Troubled Island,* for which Langston Hughes wrote the libretto, adapting it from his play, *Drums of Haiti.* He has also been the arranger for a number of successful musical shows, *Running Wild, Dixie to Broadway* and the fifth edition of Earl Carroll's *Vanities* among them.

Many of Still's works have been presented under the patronage of Howard Hanson (see sketch this issue) by the Eastman School of Music, Rochester, New York, one of his compositions usually appearing on the program of each annual festival. *Darker America* was first played by the Rochester Orchestra in 1927. In the same year it was played also at the International Music Festival at Frankfurt, Germany. His *Afro-American Symphony* was given its première in Rochester, and was played in 1935 by the New York Philharmonic Orchestra (Hans Lange conducting), subsequently in Philadelphia (by the Philadelphia Symphony Orchestra, under Leopold Stokowski [see sketch this issue]), in Berlin, Leipzig and Stuttgart. The Philadelphia Orchestra, Stokowski conducting, in December 1937 presented his *New Symphony in G Minor,* based on jazz, blues and other American idioms. During the 1940 summer season at the Lewisohn Stadium, New York City, his ballad poem, *And They Lynched Him to a Tree,* words by Katherine Garrison Chapin, had its première under Artur Rodzinski. The poem was orchestrated for a double chorus, contralto solo and orchestra. And in 1941 Still put to music another of Miss Chapin's poems: *Plain Chant for America.*

When Still, in 1936, conducted the Hollywood Bowl Orchestra in his own compositions it was the first time that a Negro had conducted a major orchestra in the United States.

This composer is serious even in his pastimes—when asked his favorite diversion he replied: "The study of life with a view to learning that which will enable me to make my life more serviceable to mankind."

STOCKBERGER, W(ARNER) W. July 10, 1872- Botanist; special adviser to the United States Secretary of Agriculture

Address: b. Department of Agriculture, Washington, D. C.; h. 529 Cedar St, N. W., Washington, D. C.

A pioneer in personnel administration in the Federal Government, Dr. Warner W. Stockberger, who began his career as a botanist, built up in the Department of Agriculture the first central personnel agency, which became a model for similar service in other departments. He served as director of personnel for the United States Department of Agriculture from 1923 until July 1, 1938, when he was appointed special adviser to the Secretary of Agriculture on problems of departmental administration. Ex-Secretary Henry A. Wallace and other officials have paid Dr. Stockberger the highest of tributes for his ability as an organizer and his humanitarian interests. He was in 1941 working on a history of personnel administration in the Department of Agriculture.

"I was born on a farm in Bennington Township, Licking County, Ohio, July 10, 1872," Dr. Stockberger writes us, "the son of George Francis Stockberger and Frances Roena Warner, his wife. She was a granddaughter of Daniel Poppleton, first settler in Hartford, Licking County, Ohio, and great-granddaughter of Samuel Poppleton, a Revolutionary soldier who was with Ethan Allen at the capture of Fort Ticonderoga." Young Warner, slight of build, thin, never in robust health, was "not built for a farmer," but became a studious child who loved to read. The chief family reading material was the exciting serials in the New York *Ledger*, which the boy supplemented on long winter evenings with the exploits of Kit Carson and Robinson Crusoe.

In order to get money for a college education he alternately taught in the public schools and attended the Utica, Ohio, Normal School and Doane Academy at Granville, Ohio. His work as a teacher was so satisfactory that he was soon made high school teacher and superintendent of schools of Hanover, Ohio. In 1896 he married Maude N. Streeter of Croton, Ohio (the couple have one daughter, Lucile), and felt that he did not have the financial means to continue his education. The president of Denison University made it possible for him to do so by asking him to become a student-instructor in history while going on with his college work. On arriving at the campus, however, Stockberger found that this history instructorship no longer existed, but that there was a similar vacancy in botany. It was this fortuitous shift that took him into the field of science, from which he did not turn for 26 years, when, almost as abruptly, he transferred to the business of personnel administration.

After five years of combined teaching and education, in 1902 Stockberger received his B. S. degree from Denison University. During his last year in college and the one following his graduation he held a full instructorship in botany, entering also the Department of Agriculture as an expert in histology, for which he received a salary far above the average for that day. He went on with his work in science at George Washington University, receiving his Ph. D. with majors in botany and biology in 1907.

W. W. STOCKBERGER

During the next 20 years the young scientist published more than 60 articles in the biological field in various professional and trade journals. His works were summarized as "very productive both in scientific investigations along lines of pharmacognosy, physiology and plant breeding, and in the practical application of the results of scientific investigations to problems of crop production and utilization." Stockberger was particularly interested in hop culture; his researches in this took him abroad in 1911 to study European methods of hop production and utilization.

When in 1913 the Office of Drug, Poisonous, and Oil Plant Investigations was formed, Dr. Stockberger was placed in charge. He continued as the nominal head of this Division of Drug and Related Plants (as it is now called) until July 1, 1940. As office supervisor he was in charge of a staff of 25 to 30 employees; and he also held the responsibility for the administration of the Office of Plant Physiological Investigations, which carried another staff of investigators.

Out of this arose his interest in problems of management and human relations. He soon became recognized as an efficient executive, known not only for sound judgment but for his ability to deal with men. He was an effective speaker, and diplomatically handled his own department's relations with those of other government departments. In an article on "The Social Obligations of the Botanist" he early gave evidence of a broad social consciousness. Dr. Stockberger believes that science must take into account "economic and social factors," and must have "a clear view of the readjust-

STOCKBERGER, W. W.—*Continued*

ments and changes which are constantly taking place in the domains of industry and education and in the fields of political and social affairs."

It was not surprising that a man of such beliefs should be chosen by Secretary of Agriculture Henry Wallace, Senior, to carry out the provisions of the Classification Act of 1923 as senior physiologist. The job soon entailed much more than that. Asked to devise a departmental promotion policy, he set up the Office of Personnel, which consolidated in one office many hitherto scattered functions. It was Dr. Stockberger's duty "to supervise and coordinate all departmental business activities, including personnel administration, budget, fiscal and accounting matters, purchasing of supplies and equipment, traffic, housing, etc." The creation of this office was a landmark in the history of personnel administration, both inside and outside the Department of Agriculture. It continued until 1934, when it was split into three parts, one of which retained the title of "Office of Personnel," a separate entity. This reorganization was approved by Dr. Stockberger because it was now possible "to give more consideration to the development of morale and the improvement of human relations within the service."

It is said that Dr. Stockberger's own major contribution is in the field of human relations and the stimulation of employee morale. He feels that administration becomes democratic only "when it is motivated by supreme respect for human personalities." These theories he turned into practicable working account. He did not hesitate to approve employee unions, and was himself a member of the National Federation of Federal Employees prior to becoming personnel director; thereafter he always defended employee unions, although they were quite unpopular in other quarters.

He is particularly proud of the Department of Agriculture Beneficial Association, formed in 1929 to provide economical group insurance for employees of the Department. Another result of his real interest in employee welfare has been the extension of personnel activities into the fields of safety and medical service. A Division of Safety was created in 1937 to study the accident problem, install a uniform system of recording injuries, a means of cooperating with other safety councils, and of conducting a program of safety education. Stockberger recommended also "early provision for the employment of a full-time medical officer and an adequate nursing staff."

A further interest of Dr. Stockberger's, although he feels that not much progress has as yet been made in its development, grew out of his desire to inaugurate supervisory training and career training for positions at the higher levels of personnel responsibility.

Because of his outstanding human interests and leadership Dr. Stockberger's counsel in Washington is always widely sought. William A. Jump, director of Agriculture's Finance Department, once said: "In a place with more 'doctors' to the square yard than probably any other place in the world, it is pretty generally understood when one says, 'Have you seen the Doctor?' he means, 'Have you seen Dr. Stockberger?'" And "the Doctor" is always ready to greet cheerfully every visitor who steps into Room 222 in the Administration Building of Agriculture. "His brow has become deeply furrowed. The wavy hair is turning gray. Deep, expressive lines on his face set off a smiling mouth; and penetrating, quizzical eyes play around the room or fix themselves intently on one spot as he launches into whatever subject the conversation may require. The burden of recent illness has slightly stooped his shoulders. He looks frail. Otherwise, he is the same man who turned to the personnel job in 1923."

He remains the botanist, too; and he retains his early love of history. It is said that history, genealogy and exploration in old graveyards are still his avocations. But liking people comes first. Possibly Dr. Stockberger's most prized possession is an inscribed gold medal given him by the Athletic and Recreational Association on the occasion of his election to honorary life membership in that organization. It shares honors on his watch chain only with his Phi Beta Kappa key.

STOKOWSKI, LEOPOLD (ANTON STANISLAW) (stô-kôf'skê) Apr. 18, 1882- Orchestra conductor

Address: h. New Milford, Conn.

"I would like to have been present, if I could have my choice of all moments in musical history, when Stokowski suddenly became conscious of his beautiful hands."

Those are Oscar Levant's words, but the sentiment is almost universal—or, at any rate, international. Leopold Stokowski ("Stoky" to his men) was in 1940 doing his bit for Pan-American solidarity by waving those same hands for the benefit of South American audiences. His "All-American Youth Orchestra," composed of twenty girls and sixty-odd boys, was acknowledged as sixth or seventh among the seventeen top-flight symphony orchestras of the United States after only three weeks of Maestro Stokowski's expert direction, and departed in July 1940 for a tour of South America, Cuba, Haiti, Puerto Rico and the Virgin Islands. They returned to give a New York concert on September 18, and after that his Philadelphians had him back for several of their regular concerts before he reorganized the group in 1941 for a tour of the United States, Canada and Mexico. In the meanwhile they were, no doubt, swarming to Walt Disney's *Fantasia*. Hollywood had been claiming more and more of their co-conductor's time and attention in recent years, anyway, and in March 1941 Stokowski finally resigned his leadership of the Philadelphia Symphony Orchestra.

Leopold Stokowski, "100 per cent American by training, instinct and absorption," was born in London, the son of a Polish father, Josef Boleslaw Kopernicus Stokowski. His mother was Irish. As a boy he spent a large part of his days studying the violin, playing Bach at night for recreation, and at the age of 16 began to study the organ. He attended Queen's College, Oxford, studying composition under Sir Humber Parry and the late Sir Edward Elgar, took his degree when he was 21, and after working as organist at St. James's Church in Piccadilly went on to study at the Paris Conservatoire and in Germany. It was 1905 when the blond, blue-eyed young man came to the United States and found a position as organist in New York's fashionable St. Bartholomew's Church.

Stokowski was there until 1908: in the summer of that year he conducted a series of concerts in London and "switched his allegiance from the console to the baton." The following year, when there was a movement to reorganize Cincinnati's Symphony Orchestra, he was offered the job. He was 27; "his eyes were blue and absurdly innocent, his hair golden, his mouth small and sensitive"; audiences found that when he moved his baton, music "became alive and spurted electric sparks. A nervous sensuousness informed allegros, staid wallowing adagios." In two years his fame spread. And when the Philadelphia Symphony Orchestra needed a new conductor its board of directors cabled an offer to him in Europe. It was 1912 when he returned to take command.

Musical America

LEOPOLD STOKOWSKI

In staid Philadelphia, Stokowski blossomed as "a veritable Lucius Beebe, wearing his scores like so many changes of attire." In Levant's words: "A musical Lawrence of Arabia, one scarcely knew from whence the authentic Stokowski came, or what his background (prior to the Cincinnati Symphony days) was. Suddenly he emerged in full flower, bringing to orchestral conducting a quality which personalized it almost as completely as Diaghilev did the Russian ballet." It was after only two years in the Quaker city that he insisted on performing Mahler's *Symphony of a Thousand Voices* at an expense of $14,000. He was responsible for a great many of the American premières of Stravinsky, Schönberg, Edgar Varese; he "rewrote symphonic oomph" into Bach fugues; he was the first to add John Hays Hammond's tone-sustaining piano to his orchestra, the first to give a concert of quarter-tone music.

But that was not all. Stokowski conducted *Scheherazade* from behind a screen while the "mystic shapes of the Color Organ played on it"; he reseated his cellos to the right; he introduced Javanese gongs, Indian Temple bells and Chinese scales to the American orchestra; he did away with the institution of

STOKOWSKI, LEOPOLD—*Continued*

concertmaster. His great dream of an invisible orchestra he realized in peculiar fashion—by blotting his men from the audience's vision while beams of rose-colored light coming from three directions played on his own "tawny mane."

What is more, Stokowski tried to teach his audiences etiquette, chiding them for making noise during performances, praising them for being musically conscious enough to hiss new work but often insisting on their hearing music they didn't like, excluding late-comers from the concert hall until intermissions. He even satirized his audiences' behavior by a performance in which his men wandered about the stage during the musical ride of the *Valkyries*, and the flutes walked off, chatting, during four songs by Brahms!

Among his other habits, he not only dispensed with baton and score but made a practice of rushing out of the wings "like a high-powered executive on the way to a million-dollar conference," and once on the podium would give such a rapid-fire signal to start that even a docile audience hardly had time to hush. Said Levant: "It is quite possible that if he had not become bored with music, he eventually would have conducted the orchestra blindfolded, with his left arm tied behind his back."

Although some of these novelties doubtless came under the heading "stage tricks," enhancing his popularity with more people than they irritated and bringing him valuable publicity (it has been said that "the prudence of Mr. Koussevitzky and the humility of Mr. Toscanini were alike foreign to Mr. Stokowski"), a great many of Stokowski's experiments added something substantial to American music. In 1933 he started a series of "Concerts for Youth" at 75 cents top, let his audiences (ages 13 to 25) make up their own programs by vote, packed them in with "speeches, quips, unprogrammed surprises." (He once had them sing the *Internationale!*) He was a pioneer in making recordings, and later became expert in the science of acoustics; he not only introduced a great many modern composers but was one of the first symphony conductors to recognize the importance of jazz; he wasn't afraid to hire young men, and many of them went on to conduct their own orchestras.

And, of course, he made his men make music. That was most important. According to Levant, he created, "in the . . . mid-'20s, an instrument that demonstrated in its exquisitely sensual sound, its urbane virtuosity, how well a hundred men could be made to play together." He drilled them and drilled them until sometimes they detested him and until he himself emerged with hands trembling and clothes dripping with perspiration. The result was "incomparably polished and irridescent." Stokowski's all-Bach programs "scaled Parnassus," as did his men's rendition of Debussy and Stravinsky and the Russians in general. If some criticized him for the liberties he took with Beethoven and found his interpretation of Brahms a little over-refined, that was a matter of taste. Only when Stokowski approached Tschaikowsky did the critics proclaim themselves almost unanimously embarrassed for him. Said one: "Here his penchant for exaggeration in dynamics and shifting of emphasis are given full rein, leaving the same impression one would get from reading a racy novel with the dirty passages underlined in red ink."

That there were many difficulties with Philadelphia's board of directors might have been expected: at one time Stokowski actually resigned in protest. But in the end he usually conquered. Even non-musical Philadelphians didn't underestimate their Maestro's importance to the city (commercially as well as culturally), and were in a constant state of fear that he would leave. So, by means of "a seasoned mixture of pious virtues and magnetic vices plus—very importantly plus—a rare deftness in attaining useful publicity," Leopold Stokowski, "an unwritten character out of Huxley's *Point Counterpoint*," became the first man to get the Bok Award as the "person who has done the most for Philadelphia." He became also the recipient of an honorary doctor's degree from the University of Pennsylvania, and one of the most famous orchestra conductors in the world.

It was not until 1937 that Hollywood seduced him—although he remained co-conductor of the Orchestra with Eugene Ormandy (see sketch this issue) until March 1941, when his resignation was given really firmly—and he made his initial screen appearance in *The Great Broadcast of 1937*. Those who missed seeing his famous hands then have had further opportunities in *One Hundred Men and a Girl* and *Fantasia,* which began as a short (*The Sorcerer's Apprentice*) and which Stokowski persuaded Walt Disney to turn into a full-length feature. The Army was given a chance, too, when he took over the band at Fort MacArthur, California for purposes of experimentation. But the largest audience he has at any one time doesn't see his hands at all—when he conducts the NBC Symphony Orchestra, of which he was made leader for the 1941-1942 season. On these radio concerts Stokowski does his own commentary, interpreting the music for the audience.

One of the conductor's friends once confided: "One week 'Stokie' is a Confucianist, the next week a Buddhist and the third an early Christian." Sometimes he is a vegetarian and sometimes he decides that a heavy meat diet is the thing. He is almost terrifyingly energetic, but his only recorded venture into politics was his orchestra's playing of Charles G. Dawes' *Melody* just before the 1924 Presidential election. He has been married twice: first to Olga Samaroff (a Texas pianist whose real name was Hickenlooper), whom he divorced in 1923; in 1926 to Evangeline Brewster Johnson, the daughter of I. W. Johnson of hospital-supply fame, whom he divorced in 1937. There are three daughters: one, Sonia Maria Noel, by his first marriage; two, Lyuba and Sadja, by his second. March

1938 found him, Garbo and a great many keyhole-peering newspapermen at the Villa Cimbrone in Ravello, Italy—but that was a mere interlude.

According to Stokowski, his most treasured dream is "to make the best possible music and to bring it to the greatest number of people anywhere."

STONE, HARLAN FISKE Oct. 11, 1872- Chief Justice of the United States Supreme Court

Address: b. United States Supreme Court, Washington, D. C.; h. 2340 Wyoming Ave, Washington, D. C.

Harris & Ewing

HARLAN FISKE STONE

President Roosevelt's nomination of Associate Justice Harlan Fiske Stone to the position of Chief Justice of the United States Supreme Court on June 12, 1941 met with unanimous approval. "His experience, his record and his character make his choice obviously fitting," commented Attorney General Jackson, and others emphasized his "scholarship and application, his personal warmth and character." Justice Stone himself said modestly of the appointment: "It is a kind of recognition any man would appreciate. The responsibility is so great that it doesn't create any sense of elation. I should be happy if the thoroughness and efficiency of the recent Chief Justice could be maintained."

Chief Justice Stone has had 16 years on the highest bench in the land and long years of legal experience and training before that to help him achieve that aim. He was born in Chesterfield, New Hampshire, where his mother, Ann Sophia (Butler) Stone, had taught school before her marriage and where his father, Frederick Lauson Stone, was a farmer. Two years after his birth his family moved to Amherst, Massachusetts so that Harlan's eldest brother could go to agricultural school there. Harlan himself went to public school in Amherst part of the time and the rest of the time lived the life of a typical farmer's son: he milked cows, plowed, reaped, pitched hay.

After two years of high school Harlan went to the agricultural school in town and distinguished himself "as the instigator of every ducking party, nightshirt parade and chapel rush which featured college life in those days." One of his escapades—stories differ about which one—proved his undoing, and Harlan was expelled. He decided to try another school and despite his record and despite his not having been graduated from high school was accepted by Amherst College in the class of 1894.

Harlan was a fireball there. He tutored other students, sold insurance and typewriters and still was able to manage the Amherst *Student*, win a Phi Beta Kappa key in his junior year, deliver the class oration, play right guard on the famous team of 1892 which defeated Williams 60 to 0, serve as class president for three years and be chosen "the man who would become most famous." And when his classmates voted on the greatest benefit the college had got from the town

STONE, HARLAN FISKE—*Continued*

of Amherst, the answer was unanimous: "Harlan Stone."

Stone knew he wanted to be a lawyer but knew, too, that it would cost money. Right out of college, therefore, he got a position teaching at the Newburyport High School. A former pupil remembers him as "a big, good-looking young man . . . determined and forceful in his manner without being anything but agreeable," who "gave the impression of physical, mental and moral power." From Newburyport, Stone went to the Columbia University School of Law, supporting himself by teaching history in Adelphi Academy in Brooklyn. In 1898 he received his law degree and was immediately admitted to the Bar.

The law firm of Sullivan and Cromwell got his services then, and later he transferred to the firm of Wilmer and Canfield. Law practice was in Stone's early career supplemented by teaching at Columbia, first as lecturer (1899-1902), then as professor (1902-1905). It wasn't until 1905 that he resigned to give all his time to his firm, which had by then become Satterlee, Canfield and Stone. Stone soon was busy making money, cultivating the connections that a partnership with a son-in-law of the elder J. P. Morgan brought within reach. It was felt that academic life was behind him forever. Yet in 1907, when Nicholas Murray Butler invited him to become dean of the Columbia Law School, Stone accepted—on the condition that Butler would make no appointments without first consulting the law faculty. Butler went over Stone's head almost immediately, and Stone resigned before he had even started. Three years later, in 1910, a group of professors and lawyers again asked Butler to draft Stone. Again Stone accepted, and this time Butler kept his word on professorial appointments.

Stone was popular at Columbia. Member of a downtown law firm, teacher of several classes, he not only found time to handle hundreds of details as dean and to write on legal subjects and institute reforms in the teaching and examining of law students, but he also managed to see any student who had problems and to try to advise him. In classes he stood twirling his glasses on a black silk ribbon, never opening a book, never razzing, never raising his voice above a conversational tone as he talked for an hour. "There was something about the kindliness of his manner, his desire to meet his class more than half way, the sense of fairness permeating everything he did," according to Pearson and Allen (see sketch this issue), "which made Stone loved and revered perhaps more than any other Columbia professor of that day."

There were many of Stone's actions during those years which marked him as something of a liberal. He objected when Professors J. McKeen Cattell and Henry Wadsworth Longfellow Dana were ousted for their pacifist utterances, and he acted as diplomatic go-between in getting a settlement for Cattell when he sued President Butler and the trustees of Columbia. He helped the Wilson Administration deal with conscientious objectors, traveling from camp to camp listening to their stories—a book on his experiences was published after the War. During Attorney General Palmer's "Red raids" he voiced active opposition. Yet to the more Leftish of his colleagues on the Columbia faculty Harlan Stone seemed in those years a complete conservative, for his own courses in personal property, mortgages and the law of equity were dryly legal, and his Wall Street connections and rich neighbors (Thomas W. Lamont and Dwight Morrow among them) in the fashionable suburb of Englewood, New Jersey were well known.

The impression of his conservatism seemed to be confirmed when in 1923 Stone resigned the deanship of the Columbia Law School to enter the law firm of Sullivan and Cromwell, which had a large corporation and estate practice. There he was considered a "hard-working, solid sort of person, willing on occasion to champion the rights of mankind, but safe nevertheless." His appointment by Calvin Coolidge to the Attorney Generalship in April 1924 was, consequently, well received. Coolidge and he had known each other for some time, ever since college, in fact, when Coolidge was a year ahead of Stone. They got to know each other better when Coolidge did some law work for Stone's father, who from a small-time farmer had become the biggest taxpayer in Amherst, thanks to horse swapping, cattle trading and farming. Once Stone was in the Cabinet, Coolidge and he became fairly intimate, and Stone is now reported to have the best stock of Coolidge anecdotes in Washington.

One of the first things Stone did as Attorney General was to rid the Bureau of Criminal Investigation of holdovers from Daugherty's "Red scare" reign. William J. Burns, its head, was ousted and J. Edgar Hoover selected in his place. Then Stone opened his guns against the Aluminum Corporation of America, controlled by the family of the late Andrew Mellon, who was at that time Secretary of the Treasury. He had barely started antitrust proceedings when, in March 1925, less than a year after he had become Attorney General, he was made by Coolidge an Associate Justice of the Supreme Court.

There were some misgivings about the appointment. Gossip had it that he had been "kicked upstairs" because of his antitrust activities. Some liberals attacked him for being a successful lawyer and counsel for great business enterprises. But there wasn't much opposition, actually, and Justice Stone took his place on the bench. At that time a liberal colleague wrote to the late Justice Brandeis: "For 10 years, Mr. Justice," it said, "I've been trying to educate him and have failed miserably. I wish you better luck."

At first it didn't look as though Brandeis would have better luck. Justice Stone moved slowly on the bench, scrupulously fair but still the kind of man whom President Hoover, with whom he used to play medicine ball, could seriously consider for the position of Chief

Justice when it became vacant in 1930. Yet people began to say of Stone that he was "always right the second time," that although his first reaction was often toward the conservatism of his Englewood-Wall Street days, his next was likely to be one of broad humanitarianism. Eventually, influenced somewhat by Oliver Wendell Holmes and by Brandeis, he came to be a pleader for a broader view of the Constitution to suit new needs. Time and again he stood with the liberals on the court against the conservatives, and "Brandeis, Holmes and Stone [later 'and Cardozo'] dissent" became a famous phrase.

Justice Stone's views, as expressed in his Supreme Court opinions, are that law itself is "a human institution for human needs"; that it is "not an end, but a means to an end—the adequate control and protection of those interests, social and economic, which are the special concern of government and hence of law—and that end is to be attained through reasonable accommodation of law to changing economic and social needs." It was part of this philosophy that caused him to crack down especially hard on his old Wall Street associates, on "the towering edifice of business and industry ... that seemed to be the impregnable fortress of a boasted civilization but which has developed unsuspected weaknesses." It was this philosophy, too, that led him, a Republican often mentioned for the Presidency, to uphold the New Deal—in voting for the abrogation of the gold clause contract in government bonds, the TVA, the National Labor Relations Act, the Wage and Hour Law; in dissenting from the decisions on the Guffey coal wage bill, on the New York Minimum Wage Law for women, and on the AAA. It was on this last that perhaps his most famous minority opinion was written; in it he accused the court of "sitting in judgment on the wisdom of legislative action" and contended that Congress' power to tax and spend "includes the right to relieve a nationwide economic maladjustment by conditional gifts of money." For this Alice Roosevelt Longworth shouted "Recreant!" at him.

Stone himself is supposed to have adopted something of the philosophy of Holmes, who said at the end of his long and full life: "About 75 years ago I learned that I was not God. And so when the people of the various states want to do something and I can't find anything in the Constitution expressly forbidding them to do it, I say, whether I like it or not, 'Goddam it, let 'em do it.'" Stone expressed much the same idea when he said: "I have nothing personally against the world in which I grew up. That world has always made me very comfortable. But I don't see why I should let my social predilections interfere with experimental legislation that is not prohibited in the Constitution."

On the bench Stone asks few questions, never heckles counsel, but he is a shrewd and canny fighter who "watches precedents like a hawk," sticks to the narrow issue. His opinions are cautiously phrased, for Stone says he has learned true humility toward the written word after having had his contributions to legal publications as a law professor quoted at him to prove both sides of cases argued before the Supreme Court. He writes them illegibly in outline on a pad with a thick pencil and then from his notes dictates facts and arguments to a stenographer. With this as a basis he and his secretary whip the opinion into shape, for Stone is not deft in expressing himself even though he always knows exactly what he wants to say. His secretary changes every year: he uses the position to launch new Columbia Law School graduates.

To his duties as Associate Justice are now added those of the Chief Justice. Justice Stone, as the Supreme Court's executive officer, now presides at its sessions and conferences and announces its orders. And there are many who feel that as he leans forward from the bench imposingly, his gray hair falling over his forehead, his figure solid, his face broad and clean-shaven, his manner benignly judicial, he is almost as impressive a figure of justice as were Taft and Hughes before him. On October 6, 1941 the nine Justices came together for the 1941 to 1942 term.

He is not a colorful figure, but he is a human one. He and Mrs. Stone, the former Agnes Harvey of Chesterfield, New Hampshire, whom he married in 1899, are very friendly people. They go out more than most of the justices and their wives, and Mr. Justice Stone makes any dinner or party he goes to lively with his stock of yarns. They attend all symphonies and concerts available in Washington, are great supporters of young musicians and artists and of the Washington Municipal Orchestra, and their Monday afternoon teas are jammed with people of all kinds. Summers they spend on Isle au Haut off the coast of Maine, where Mrs. Stone paints water colors and the Chief Justice mows the lawn, drives a dilapidated car and pulls his fishing dory to the mainland. Sometimes they're joined there by their two sons, Lauson, a lawyer and partner in the New York firm of Ignatius and Stone, and Marshall, a professor of mathematics at Harvard who, the Justice says, "writes books I can't understand."

STOUT, WESLEY WINANS Jan. 26, 1890- Editor of the Saturday Evening Post

Address: b. Saturday Evening Post, Independence Sq, Philadelphia, Pa; h. Ambler, Pa.

Since 1937 Wesley Winans Stout has edited the weekly with the largest gross advertising revenue and the largest circulation in the world. "Small, baldish," square-jawed, it is Stout whose penciled veto or acceptance determines what goes between the covers of the *Saturday Evening Post.* On Mondays the staff assembles in his office to "make up" the copy which will reach the public in four weeks—copy which usually includes three or four articles, a couple of serial installments, four or five pieces of fiction, and, of course, editorials, *Post Scripts, Keeping Posted.* In keeping with Curtis profits ($3,044,643.39 in 1940, an increase of 50.6 per cent over 1939), his salary is in figures that editors of smaller magazines must envy. In 1939 the Securities and Exchange Commission listed it as $46,422.76.

Stout became editor of the *Post* when the late George Horace Lorimer retired at the end of 1936. Before that he had been associate editor—for nearly 15 years. And, according to *Time*: "To the non-professional eye Mr. Lorimer trained Mr. Stout so thoroughly that Mr. Lorimer's last New Year's issue and Mr. Stout's first . . . seem to be cut from the same cloth. Each begins with a Leyendecker cherub and ends with a Dutch Cleanser ad, and what lies between is fairly homogeneous." Nor has the homogeneousness of what lies between been confined to that New Year's issue, and this is particularly uncanny in view of the fact that as a person Mr. Stout might have been expected to be remarkably dissimilar to his late employer.

For one thing, he has been an itinerant newspaperman for a good part of his life, rather than a solidly respectable citizen of Philadelphia. Born in Junction City, Kansas on January 26, 1890, the son of Francis Wellington Stout, a farm mortgage broker, and of Dora (Dougherty) Stout, Wesley Winans Stout spent only a year at the University of Kansas. Then, from 1907 to 1917, he kept moving all over the country. After getting his start on the Wichita *Beacon* he worked as a reporter and editor on newspapers from San Antonio and Mexico City to Seattle and San Francisco, seldom saving his money for any purpose but to pack up and go some place else. On the Kansas City *Star* he acquired a reputation as one of the best rewrite men and probably the very best poker player on which the city had ever laid eyes. His wildest adventure in Kansas City, however, was something that didn't really happen: he was reported dead in a pistol duel with Mexican bad men. (Two weeks before, he had lost his wallet on a border-bound train.)

It was 1916 before he got around to seeing New York while working for the New York *Globe.* He did not stay long with the *Globe,* either. In 1917 a friend recruiting for the Navy persuaded him to enlist. He applied for enlistment as a "fabric inspector," but it didn't matter: eventually he went overseas with the United States Naval Air Force. After the War two of the most pleasant years of his life were spent as the non-working "supercargo" of United States Shipping Board tramp steamers, and then in 1922, after another brief period on the *Globe,* he found his place on the *Saturday Evening Post.*

During those years under Mr. Lorimer's tutelage Stout wrote and ghostwrote innumerable articles—the back files of the *Saturday Evening Post* are full of them. They include much regional material on the United States, for Stout already knew remote corners of this country like his own back yard, and he hadn't stopped traveling. (A year after coming to the *Post,* in September 1923, he married an employee—Mary Lee Starr—and began carrying a second passenger in his car.) Stout was known as the only staff member who could say "No" to Lorimer. When he finally inherited Lorimer's desk and corner office on the sixth floor of the Curtis Building, his elderly predecessor was indignant when asked how long Stout had been groomed for the job. "A man makes his own place in this world," announced Lorimer, stiffly, "and Mr. Stout made his. We did not groom him for the post." Curtis' President Walter Dean Fuller (see sketch this issue) was happy to report, however, that Stout shared Lorimer's beliefs in "fundamental American doctrines." Other *Post* editors thought him "safe," too, but also thought that he might be "less rabidly anti-New Deal than his predecessor."

Actually under Stout's editorship the *Saturday Evening Post* seems to have moved hardly a millimeter to the Left, and many traditions have remained intact. Stout, who has a great admiration for his predecessor and who says of Lorimer: "In an age of tenors, he sang bass," still has everyone paid in cash, goes in for the same elaborate fire drills, has everything locked up in the same vault at night, and preserves the old Lorimer custom of having editors or associate editors reply personally to all communications from readers. The year 1937 did see certain other innovations, however: the first photographic covers, 15 new artists, "bleed" art work on inside pages, the publication of works of 147 new writers. Lorimer had never played handball

Photo-Crafters

WESLEY WINANS STOUT

with his staff, either, nor gone in for "convivial daily lunches," as Stout does.

As for Lorimer's stand on World War II, it is hard to say what it might have been. Until May 1941 Stout (or at least the *Post* editorial page) had been consistently isolationist, an editorial in the issue of April 26, 1941 summing up the magazine's position since the passage of the Lease-Lend Bill: ". . . for us the debate was closed when Congress enacted the bill that nobody wrote. . . We were then in the War to defeat Hitler by name. . . How to get through it and out of it all together must become the one shape of our thoughts; and to do it will require all the mind and character we possess." When this "scandalous isolationist policy" was criticized at a Curtis stockholders' meeting Walter Deane Fuller announced: "We believe in the freedom of the press in America. . . We're quite satisfied with the policy of the *Saturday Evening Post.*" Nevertheless, an editorial in the May 24 issue finally announced that the *Saturday Evening Post* accepted the "American crusade" against Hitler; that although "everything we said on the losing side we still believe," for the United States to change its policy now would mean facing "the possibility of national death."

When they are not staying in a hotel room near the office, Mr. and Mrs. Stout live on a 10-acre estate outside Philadelphia. There the busy editor likes to tend his vegetable and flower gardens. Mrs. Stout has one son by a former marriage, but there are no other children. Mr. Stout does the great part of his copyreading at home evenings, but he still finds time to take frequent motor trips with Mrs. Stout and to attend an occasional horse race. Unlike the Lorimers, the Stouts take no part in Philadelphia's social life. According to *Time*, Wesley Winans Stout is "built like a bulldog, but . . . gives the impression of a man still unrooted to any one spot."

Who's Who in America

STOUT, WILLIAM BUSHNELL Mar. 16, 1880- Mechanical engineer; inventor; designer

Address: b. Stout Engineering Laboratories, Dearborn, Mich; h. 149 Lawrence Ave, Detroit, Mich.

When they call him "U. S. industry's most whimsical and unpredictable inventor," nobody argues; nor when they add that he turns out new mechanical devices "the way most men make doodles." Bill Stout, as he is known in the circles that control America's aeronautics and terranautics, is credited with "more technical innovations than any man since Edison." It is said that virtually every transport plane or bomber flying today is using some of his developments.

He has to his credit a substantial list of "firsts" in vehicles for road and rail, as well as for air. Among his minor "doodles" are a brick-conveyor which saved one firm $10,000 a year; a streamlined motorbus two tons lighter than previous models, able to carry 24 passengers at 70 miles an hour; an improved theatre seat; an air-conditioned bed; and a staggering number of mechanical toys. For all his reputation of eccentric genius, hard-headed businessmen have voted him a wizard of salesmanship; and it was he who organized America's first successful all-passenger plane service.

To do that much means starting early, and Bill Stout began when he was a scrawny little boy whose eyes were so bad he couldn't catch a ball. His father, the Reverend James Frank Stout, was a semi-itinerant Methodist preacher who was saving souls in Quincy, Illinois when his wife, Mary C. (Bushnell) Stout, on March 16, 1880, gave birth to William Bushnell Stout.

While the other boys were playing ball young William took refuge in the workshop, where he soon became an expert at devising and whittling out toys which he later taught his friends to make. From that time dates the nickname of "Jack Knife," which he later signed to his syndicated toy columns in Midwestern papers. His tinkering was in the family tradition, for an ancestor, David Bushnell, had produced during the American Revolution a tiny submarine known as "Bushnell's Turtle."

High school was hard on Jack Knife, but things went better after he transferred to the Mechanical Arts High School in St. Paul, where he boarded with friends while his father preached in another town. At the University of Minnesota, after supporting himself by

Society of Automotive Engineers

WILLIAM BUSHNELL STOUT

keeping (and losing) a laundry, waiting on table and teaching manual training, he began to write about the mechanical toys he used to make. His articles brought in enough to finish paying his way through college and later to finance a trip to Europe. As a side line he wrote fiction, which he illustrated himself. The toy columns telling boys how to make strange and wonderful contraptions out of a rubber band, a hairpin and two toothpicks, continued for years, eventually helping to finance aeronautical experiments in a day when the airplane itself was considered a toy—and a daft one at that.

In 1906 Stout married Alma E. Raymond, and they honeymooned through Europe on a motorcycle and shavings from the Jack Knife. Funds were eked out, though almost imperceptibly, by a series of articles on aviation. When the bridal pair returned the groom himself built their St. Paul home and every stick of furniture—no doubt from rubber bands and match boxes. He was then editing a boy's page in the St. Paul *Dispatch*. (His experience with girls' toys has apparently been confined to those for his daughter, Wilma Frances.) From then on, however, the technical engineering articles increased in number and importance.

By 1912 he was writing so authoritatively about various types of motor engines that he was appointed aviation and technical editor of the Chicago *Tribune*. Presently he joined the staff of *Motor Age* and *Automobile*. In Chicago he founded a magazine, *Aerial Age*, and organized some high school boys into a club for building scientifically toy gliders and planes. Two of those boys are today important airplane manufacturers.

In a sense Stout rode to Detroit on his honeymoon horse, for he was called there by Scripps-Booth in 1914 to redesign their motorcycle. The result was the first Scripps-Booth automobile, which the designer was a bit timid about demonstrating—because he had never driven a motorcar before! After several years, in 1917, he left Scripps-Booth to manage the newly formed aircraft division of Packard.

When the First World War came the Government enlisted his knowledge for the Aircraft Production Board, and as technical adviser he exasperated the Army experts by his unorthodox notions about airplane construction. With disapproving frowns they did consent to construction of a trial model, the sight of which gave them technological colic. But when they called in Orville Wright to test it, this dean of the air pronounced it "the next step in aviation." Stout likes to recall that Orville Wright got his first idea for the heavier-than-air machine from the same diagram that gave Stout his first airward impulse: an illustration in a boys' weekly, with directions for making a toy plane of bamboo, tissue paper and a rubber band.

On the strength of the Government experiment, he was able to establish the Stout Engineering Laboratories, where in 1919 he built the first American commercial monoplane, the famous Batwing. This was followed in 1920 by the first all-metal plane designed in America, a torpedo plane for the Navy. The Laboratories' test flights were successful, but the Navy pilot, unfamiliar with the mechanism, wrecked the plane with a crash that spared the flier but was fatal to the builder's solvency.

He still had a typewriter, however, and at once instituted a campaign unprecedented in method and result. He sternly refused to accept money from anyone who expected to profit by the investment or who was not genuinely interested in the project. "Invest with me and lose your shirt" was his theme song; and with an expenditure of less than $100 he raised $128,000, in the process winning fame as "the man who sold the airplane to Henry Ford." His sales letters were actually a correspondence course in aeronautics; every man who received them read every letter, and some still keep them on file. Among those who subscribed $1,000 apiece were Edsel Ford, Walter Chrysler, Edward Budd, William Knudsen, Fred Fisher and Robert Stranahan, who had lost with him on his last two ventures.

Henry Ford, who for years had been declining invitations to take to the air, finally offered two to one for all holdings in the Stout Metal Airplane Company. The enthusiastic stockholders refused to sell, however, until Stout made it possible for them to convert their unpromised profits into an even bolder enterprise, the Stout Air Services.

When Ford bought the Stout Metal Airplane Company he persuaded Stout to come along as vice-president and general manager. Thus it was that Bill Stout became designer of the Ford trimotor plane, which Army experts promptly denounced as a "tin goose," fit only for roasting. Today every Army bomber incorporates the most revolutionary features of that "tin goose."

Having proved the solid worth of another airy notion, Stout was ready for the next round in his highly profitable "one-man dogfight with the past." Again at a two-to-one profit, Stout Air Services was sold in 1929 to a company that was later taken over by United Air Lines, and the Stout Engineering Laboratories were revived for research and development work in aeronautics. In 1941 they are still developing, though work has not been confined to aircraft. Two that fly by earth are the Pullman Railplane, America's first gasoline-driven railroad car, and our first Diesel-electric engine, designed for the Union Pacific. And in 1936 Stout returned to the motorcar with his startling *Scarab*, which is already influential in motorcar design, and is likely to be more so when people accept his idea that "the current automobile is as obsolete . . . as the horse-drawn vehicle."

Streamlined into a beetle, with rear engine, no running boards, and an interior modeled on the cozy living-room plan, the *Scarab* ran from California to Detroit with an unspilled glass of water on its dashboard, to show how it could take the bumps. It gave as many shocks as it absorbed, but the prophecy begins to be fulfilled. However, "by the time they get around to copy us we'll be on to something else." Already he is "on to" a convertible Sky Car that turns into an auto to drive home from the airport, and an all-metal collapsible super-trailer, which its creator believes is in line with prefabricated shelter for the masses and solution of the housing problem. Meanwhile, the market for small planes has opened up, and the second Sky Car will be a stainless steel flier which should sell for about $1,000. The millenium itself, Stout believes, might be manufactured in the right sort of laboratories, for he holds that engineering is the hope of humanity and mass production the only instrument for social betterment.

This is the day when poets look like bond salesmen, and scientists like artists. Stout has the true thatch of genius, a wild mop of hair which he pushes around when he gets excited. He has been described as the least affected and most amiable of men, looking like "a cross between Groucho Marx and Fritz Kreisler," carrying about him the tang of the country store and a large aura of leisure—perhaps made up of the time his speed engines have saved. He, too, preaches a gospel, though not his father's. It is printed in large letters on the wall of his drafting room: SIMPLICATE AND ADD MORE LIGHTNESS.

STRUTHER, JAN June 6, 1901- Author
Address: c/o Harcourt, Brace & Co, Inc, 383 Madison Ave, New York City

Mrs. Miniver, that pleasantly beguiling English lady whose book about herself and her family (published July 1940) became so popular in this country, is Jan Struther, whose real name in turn is Mrs. Maxtone Graham. Miss Struther, shortly after her book's publication in the United States, came to New York to live, bringing two of her children, Janet and Robert. The eldest, 16-year-old James, is in school at home. He happens to be pretty near enlistment age, and, she says, "an excellent shot." She and the younger children came by ship to Canada, along with many other English mothers and children; then on to New York City, where they expect to stay "for the duration."

The reflections of Miss Struther's Mrs. Miniver are revealed through a series of little sketches (previously printed in the London *Times*) on the ordinary, day-by-day incidents in a typical English middle-class household just before the War came in 1939. The majority of reviewers, particularly in America, has found the book, *Mrs. Miniver*, an unqualified delight. Her creator has been compared to —and to the slight disadvantage of—the "Provincial Lady," Virginia Woolf, Charles Lamb and Shakespeare. No one can help quoting from her, Lewis Gannett remarks. "Much of the fun of reading *Mrs. Miniver* lies in the delight of sudden recognition. Mrs. Miniver is beautifully aware of the profundity and universality of trivialities." Among these trivialities are jottings on Christmas for the three children, shopping, going to the dentist, and having "honey sandwiches, brandy-snaps and small ratafia biscuits" for tea in a well-ordered household staffed by four well-trained servants. Other American critics have been impressed by Mrs. Miniver's culture as represented by her love for John Donne and the *New Yorker* Magazine.

The dissenting opinion comes from English reviewers. Rosamond Lehmann writes: "It is not so much that we are irritated by her being pleased with herself . . . it is in her humility that we suspect her most." And E. M. Forster (writing in the *New Statesman and Nation*) says that *Mrs. Miniver* invites a reaction similar to that of a Gloucester parson who was "a kindly, friendly fellow who had the right word for every occasion. But when the right word was spoken and he passed out of earshot, swinging his stick and looking right and left at the sky, the villagers came into their own for a moment and used foul language about him. To preserve their manhood and their self-respect, they had to splutter a little smut." He continues: "She thinks she is in the top drawer of all, and that her good behavior is the best kind of behavior," that she hankers after the feudal stronghold already "condemned as uninhabitable." It may be that Miss Struther created her Mrs. Miniver as an indictment of this typical British middle-class attitude; if so, the Miniver-adoring readers of the London *Times* failed to see this, along with 90 per cent of the book critics. In her interviews with two New York writers, Robert Van Gelder and Stephen Benét, Jan Struther's reflections on her home, her children and her impressions of this country resemble those of her own Mrs. Miniver.

"She is so exactly what her wide reading public expects her delightful Mrs. Miniver to be," write Stephen and Rosemary Benét, "that they not only accept her, but they refuse to separate the two ladies, or allow that there may be any difference between them." Miss Struther says that this leads to unexpected complications, even for her family: she too has a businessman husband and three children of the same ages as Mrs. Miniver's. Miss Struther protests against this adulation on the part of the public for her Mrs. Miniver. "The time came when finally I was heartily sick of the woman. She was so popular that I had to stick to it, but when one of our papers offered a prize for the best parody on *Mrs. Miniver* I wrote much the cruelest parody, sent it in under a pen name, and won the prize." She asked the paper to give the money award to the second-best entry; but they let her keep her winnings, which she sent to "an organization for distressed gentlewomen."

Shelburne

JAN STRUTHER

Jan Struther was born in England June 6, 1901 as Joyce Anstruther. Hence her pen-name, Jan Struther. Her father was Henry Torrens Anstruther; her mother was the Honorable Dame Eva Anstruther, made a Dame because of her service to England in the First World War. She also wrote—under the name Eva Struther. Miss Struther's mother-in-law, too, was a writer. Her husband, Anthony Maxtone Graham, to whom she was married in 1923, is Scotch, and her father-in-law is the senior partner of Maxtone Graham & Sime, of Edinburgh, London and Canada. Miss Struther was educated privately in London and began to publish stories and poems when she was 15.

"In appearance Miss Struther is small, dark-haired and very attractive. Like Elizabeth Barrett she has 'a pair of fine eyes' in an expressive face. She is intelligent, outgiving and pleasant. . . It may annoy her to be told that she has many qualities that we consider American: the quick response, the adaptability which we think of, probably quite mistakenly, as peculiarly our own." In her appearances on *Information Please* radio programs, Miss Struther appealed to listeners by her ready response to the quiz questions, her fine sense of humor, her intelligence. The Benéts say further that what she likes best to write is poetry. She is the author of one volume of serious poems, *The Glass-Blower* (1941), and several collections of light verse. Prior to her present book she published a collection of essays and sketches, *Try Anything Twice* (1938). Of her essays in general it has been said: "These essays are beautifully written, with form, with style and a deceptive simplicity. They may look easy to do. So does Mr. Houseman's poetry look simple to a beginner. In both cases, every word is in place, like the flowers in a pruned and tended garden."

Since coming to New York Miss Struther has spent much time roaming over the city, taking elevated rides, looking in shop windows, visiting the parks and watching the people. She says: "My children are delighted when they hear taxi drivers say 'foist' and 'thoid,' just as in the films. They say, 'Gosh, aren't the cops tough!' with the very greatest admiration. It is good, too, to hear European languages freely spoken without people making notes and whispering, 'Fifth Columnists.'"

STURGES, PRESTON (stûr'jĕs) Aug. 29, 1898- Author; film director; producer
Address: b. 322 Directors' Bldg, Paramount Pictures, Inc, 5451 Marathon St, Hollywood, Calif.

PRESTON STURGES

The Great McGinty, a picture that brought Preston Sturges an "Oscar" in 1941 as the best screen play of 1940, was known to the trade as a "sleeper." Its small budget ($325,000) marked it as Paramount's noble experiment on behalf of its author-director, Preston Sturges. In turn, and as a gesture of good will, Sturges sold the script to Paramount for $10. But when the large neon "Oscar" was turned on outside Hollywood's Biltmore on February 27, 1941, and Darryl Zanuck distributed technical awards, the "sleeper" came to life with a bang. And it seemed something like a parable of Sturges' life, which had "slept" in indecision and unprofitable ventures until an illness in 1927 seemed somehow to put the house in order.

Sturges, Idwal Jones tells us, is "genially extrovert. . . He swings across the lot with rattan cane, sweater looped about his neck, and a straw hat." And his appearance seems to bear out this impression. He has been aptly described as "a big chesty party with a mop of black hair and a black, bristly mustache." Still, the observation that "he has been immune to surprise since the age of three or thereabouts" is possibly surface judgment. An expression, sometimes of worldliness but occasionally of boyish wonder or sly youthfulness, suggests a more dynamic personality.

Born in Chicago, the son of Edmund and Mary (Dempsey) Biden, Preston was adopted by Solomon Sturges, whom his mother married after divorcing her first husband. Preston's foster father was a stockbroker, a sportsman—champion cyclist of Illinois. Little Preston's psyche was to be buffeted about on the one hand by the winds of commerce, whose keen velocity he found refreshing, and the swirling of robes in a Grecian dance. For a peculiarity of the marriage was his parents' agreement that the late Mary Desti—the name by which his mother was best known—should spend six months of each year in Paris. There young Preston Sturges was all but overwhelmed by celebrities, all but smothered in culture. Isadora Duncan was a close friend of his mother and Preston was being groomed to scale Olympus. Often as a small child he was put to bed in the afternoon so that he could be fresh and wide awake for the opera at night. He had his first taste of champagne in his infancy, when Isadora spoon-fed him on it to cure a pulmonary complaint. It was little wonder that when Preston first went to the Coulter School in Chicago he cycled there—but in flowing Greek robes!

"He came out of this life," said Alva Johnston, "hating art and music, burning with zeal to become a stockbroker like his foster father." Sturges learned to draw and paint but the only effective use he made of this talent was in designing advertising posters for his mother's cosmetics shop in Paris. He was taught piano but had to learn all over again to write scores for his musical shows—the scores were not highly successful—and today he plays piano by ear, does not read a note of music! According to Johnston some of his literary "hates"—Shakespeare, Molière—are merely prejudices of this nature.

When he was 11 his parents decided to separate and, asked to choose between them, he chose his father. It was then he learned for the first time that he had been adopted. At about this time Solomon Sturges was seriously injured in an automobile accident. His wife spent a year nursing him back to health, then went to Paris, taking her son with her. She got a divorce from Sturges and was married to Vely Bey, scion of a distinguished Turkish family. Using her husband's family formulas in cosmetics as a basis, Mary Desti in 1911 opened the first modern beauty shop in Paris. While in his teens Preston managed the Deauville branch, and later the one in New York.

Besides studying at the Coulter School, Preston attended at various times the Lycée Janson, Paris; l'Ecole des Roches in Northern France; La Villa Lausanne in Switzerland; a Berlin Gymnasium; and, finally, a school in Dresden.

In 1914, at the age of 16, Preston got a job as runner for a Wall Street brokerage house. His pay was $7 a week but it was raised to $10 before he left the following year. Previous to this experience he had had a short-lived contact with the stage. In 1914, through Isadora Duncan, he was given the job of assistant stage manager for the New York presentation of *Oedipus Rex*. He muffed the signals one night and turned thunder on before lightning, drowning out a speech by one of the principals. It was after this that he embraced Wall Street temporarily.

During the War, Sturges wanted to join the Air Corps but was rejected because of bad eyesight. After official Washington learned that his eyes were good enough for the British Air Corps they relented. He became a member of the 63rd Air Squadron and went to the School of Military Aeronautics at Austin, Texas, where he remained until the Armistice. There he made his first sortie into literature, writing *300 Words of Humor* for the school paper, *Park Field Gnat.*

Returning to New York, Sturges went into the cosmetics business, inventing the kissproof lipstick. He looked toward a future in this growing industry, but the business had to be turned over to his mother, who had had bad luck with her shops in Paris and London. From then until 1927 Sturges tried his hand at various jobs and was a miscellaneous, if not always successful, inventor. In 1927 he and Estelle (Mudge) Sturges, whom he married in 1923, separated, most of his ventures had fizzled or failed entirely, and he was about to be staked jointly to a shop, Maison Desti, by his mother and Solomon Sturges, his foster father. Then came his illness, an appendectomy, and during convalescence an amazing crystallization of his personality. Armed with Brander Matthews' *A Study of The Drama,* he seems to have reached the decision that one did not have to be a social freak in order to be a writer.

An attempt to dramatize his period of hospitalization failed before it was completely written, but *The Guinea Pig* opened in Provincetown in 1929 and had 16 weeks on Broadway. Then came *Strictly Dishonorable,* the comedy about which he might have made his quip that "dialogue consists of the bright things you would like to have said except that you didn't think of them in time." It was a success from the day of its opening, September 18, 1929, but as he watched the action unfold Sturges was so sure he had written a failure that he went off and had a few drinks. His mother awakened him early the next morning with comments such as "the cleverest comedy in town" (John Anderson); "occasionally wobbly in its writing, particularly in its motivations . . . but at all times high-spirited and gay" (John Mason Brown); and "a well-nigh perfect comedy" (J. Brooks Atkinson).

The two plays that followed did not go over well, but the third, *Child of Manhattan* (1931) did, despite Atkinson's comment that it was "tawdry" and "a sophomoric romance." It was later filmed by Columbia (1933), and for its screen rights Sturges was paid $40,000. Meanwhile, in 1931, Universal filmed *Strictly Dishonorable.* An operetta, *The Well of Romance,* was poorly received. The New York *Times'* critic said that the music was not endowed with any great originality but that it was superior to the libretto. In 1932 Sturges moved to Hollywood to do a script of Wells' *The Invisible Man* for Universal. The script was shelved but Sturges stayed on to do a long string of successful scenarios and many original screen plays.

Although the picturization of *Strictly Dishonorable* was his first screen success, so far as the public was concerned, he had had his first contact with films while the play was running on Broadway. In 1929 he did two scenarios for Paramount that were filmed in the company's Eastern studio and starred Miriam Hopkins. He began his Hollywood career at $1,000 a week, climbed rapidly to what Alva Johnston calls the "subsistence level of $2,500." With *The Power and the Glory* (Universal, 1933) he established a precedent by getting a percentage of the gross as well as $17,500 outright. Among the many other successful films he has written are: *30-Day Princess, We Live Again, Diamond Jim, Imitation of Life, Next Time We Love, One Rainy Afternoon, If I Were King, Twentieth Century* and *Sullivan's Travels.*

"If I have any success," Sturges once was quoted as saying, "it is an act of God." A close scrutiny of his life, however, reveals that there was at least some collaboration. It was Sturges who insisted upon directing his own pictures. He finally had the chance when Paramount let him take the script of *McGinty,* which had been kicking around Hollywood for years without any takers, and direct it himself. "When a picture gets good notices," he said, "everyone but the writer is the prince. So I decided I was going to be one of the princes." Then he got his "Oscar" as a writer.

"*McGinty,*" said Archer Winston, "you could dismiss as a lucky inspiration. *Christmas in July* was harder to explain away. Its advertising satire was sharp. But with *The Lady Eve* Sturges performs the impossible of the sow's ear into silk purse." Another critic thought the dialogue somewhat padded in the latter film, and the camera work at times static. Up to this point, according to this observer, he had been "more showman than artist." He suggested that Sturges could handle "more dimensional material than he had in his last two pictures."

Sturges' first marriage ended in divorce in 1928. On April 12, 1930 he married Eleanor Post Hutton, who subsequently inherited more than a million dollars from her grandfather C. W. Post, the cereal king. This marriage was annulled November 3, 1932 on the grounds that the previous (Mexican) divorce was not valid. His third marriage was to Mrs. Louise Sargeant Tevis at Reno, Nevada.

Writing and directing for Paramount, Sturges' income is said to be $2,750 weekly. He also derives an income from his restaurant, The Players, and keeps a hand in business with his concern, the Sturges Engineering Company, manufacturers of vibrationless Diesel engines. He likes sports and good food, has a house that was built according to his ideas, and has a collection of ships' models as well as a yacht and a power launch.

SWANN, W(ILLIAM) F(RANCIS) G(RAY) Aug. 29, 1884- Physicist; director of the Bartol Research Foundation of the Franklin Institute

Address: b. c/o Bartol Research Foundation, Whittier Pl, Swarthmore, Pa; h. 609 Ogden Ave, Swarthmore, Pa.

It was in 1935 that Dr. W. F. G. Swann "went down into a deep bank vault, picked up the murmuring of a cosmic ray . . . and put it on the radio." This is not what bank vaults are ordinarily used for, but the usual is not Dr. Swann's forte. He was making another of his daring and original experiments. That he was also making scientific history was by this time hardly news to a man who has been characterized as "one of the most brilliant physicists in the world." He is one of those twentieth century wizards who deal in quantities and forces too large or too small for the human eye to glimpse or the ordinary mind to grasp. He has been peculiarly successful in working out mechanisms to trap, record and measure such elusive entities as atoms and cosmic rays. He had charge, for example, of the recording machinery that went up in the stratosphere flight sponsored by the United States Army Air Corps and the National Geographic Society in 1935. Incidentally, he was the one who harnessed that "very eminent cosmic ray" that inaugurated the festive illumination of the New York World's Fair in 1939.

Dr. Swann's ray on the radio was described as "a low, noncommittal hill-billy humming which might have been Woodie Guthrie goin' down the road and feelin' bad." The Professor himself had covered a good deal of road before reaching that point. He had traveled all the way from Shropshire, England, where he was born at Ironbridge on August 29, 1884; and from the field of medicine, which he first chose because "it was thought to be a profession in which it was possible to make a living."

His father was William Francis and his mother Anne (Evans) Swann, and he himself a Shropshire lad with a "bad memory and a natural antipathy to physics and mathematics." Rather than learn by heart a proposition from Euclid, he bluffed it through when he was called on and ended by producing a proof that was quite correct—though definitely not Euclid's. In later years he continued to find his own solutions to problems others had solved differently, as well as solutions to some no one had yet answered.

In order to earn money for the microscope indispensable to medical studies, he substituted for a friend who played the cello in a theatre orchestra. The orchestra conductor offered to hire the substitute and fire the regular, but Swann did not fancy either the tactics or the job. Having earned the microscope, he discovered that medicine with all its tongue-twisting terms was very hard on the memory. He also discovered in a bookshop a very old volume, price four cents, which contained an amazing array of mathematical subjects, including calculus, astronomy, dynamics and geodesy. Perhaps that tuppence paid his way into the Hall of Fame. At any rate, there ended his medical career.

Soon he was the happy possessor of a scholarship to the Royal College of London, where he became a junior instructor after graduation, in 1905. Before long his research in physics had gained wide recognition, and in 1907 he was invited to accept a lecturing position at the University of Sheffield. Here, as in a number of posts, he did extracurricular duty as conductor of the University Orchestra. He was a highly individualistic conductor always, one who on one occasion composed the last-act music for a college play during the first intermission. More important to his extracurricular life at Sheffield was his marriage in 1909 to Sarah Frances Mabel Thompson, of Preston Park, Sussex. Mrs. Swann had studied violin at Brussels Conservatory and is today an enthusiastic chamber music player on viola and violin.

The Swanns have been residents of America since 1913, when the Carnegie Institute of Washington called Dr. Swann to be chief of the Physics Division of the Department of Terrestrial Magnetism. In this capacity he designed and saw installed atmospheric electric equipment on the yacht *Carnegie*; and he also superintended the installing of elaborate automatic atmospheric electric equipment in Washington. He found time, however, to deliver a series of lectures for the Bureau of Standards; and the story goes that when he heard they were scheduled for eight in the morning he protested: "An Englishman seldom stays up that late!"

Repartee was perhaps not the chief reason why in 1917 he was made consultant at the Bureau of Standards, where he again became conductor of an orchestra—this time one that included a number of physicists who are now world-famous. During the War he assisted in directing research work on the problem of submarine detection.

He went West in 1918 to be professor of physics at the University of Minnesota. Four years later he accepted a professorship at the University of Chicago, leaving there in 1924 to become professor of physics at Yale University and director of the Sloane Physics Laboratory. In 1927 he became director of the Bartol Research Foundation of the Franklin Institute, and has been since 1923 associate editor of the *Journal of the Franklin Institute.* He has published about one hundred seventy-five scientific papers in various journals, and two books—*The Architecture of the Universe* (1934) and, as part author, *The Story of Human Error* (1936); has contributed to the *Encyclopedia Britannica;* and has been in constant demand for public lectures, as well as for private or public musical performances.

At present he is conductor of the Swarthmore Symphony Orchestra, which he founded and which comprises about 72 players. Because nobody in the group could handle a French horn or a bass clarinet, he and his assistant, Dr. William E. Danforth, devised an electrical "oscillion" so ingenious that it can be made to sound like either instrument, so simple that a child can master it. Dr. Swann himself still plays the cello when his duties as conductor and researcher permit. His three children share the interests of their parents: William Francis, graduated from Harvard University in 1937, is in 1941 in the research laboratories of the Eastman Kodak Company; Charles Paul is at Harvard studying to be an engineer; Sylvia, a student at Wellesley College, has already played piano concerti in public with her father's orchestra in Swarthmore.

1941 finds Dr. Swann's investigations centered chiefly about cosmic radiation; but he is also recognized as an authority in thermal measurements, electromagnetic theory, electroconductivity, relativity, terrestrial magnetism, atmospheric electricity and atomic structure. That formidable array would hardly suggest that one of his great talents is his ability to make abstract theories comprehensible and vivid for the layman. "Think of a fuel," he tells us, "such that a tenth of an ounce would heat a good-sized house for a year . . . an ounce would drive a forty-horsepower automobile eight hours a day for four years, a quarter of an ounce would run a large airplane around the world." This, he goes on, was a fabulous dream of yesterday, and is a potential reality of tomorrow. "It is atomic energy." And from that point he continues to describe, simply and graphically as a radio announcer, the drama that has made cause-and-effect into a crude, outworn concept and has reduced reality itself to a dream, "no more than the reflection of your own thoughts shining upon the face of nature."

This pioneer of our expanding cosmos is a tall man, whose wind-blown gray hair is apt to overtop the heads of those about him. His rugged face shows more lines of laughter than of thought, although both exercises seem to be habitual and effortless with him. His hands are practiced with the golf club as well as with the cello bow and the even more delicate instruments of his laboratory.

W. F. G. SWANN

His honors have been in proportion to his activities, and like them too many to list in full. He was given an honorary M. A. degree by Yale in 1924, and an honorary D. Sc. by Swarthmore College in 1929. (His original D. Sc. was received in 1910 in London.) He is Honorary Fellow of Trinity College, London, member of many honorary societies, past president of the American Physical Society, and secretary and councilor of the American Philosophical Society.

SWOPE, GERARD Dec. 1, 1872- Chairman of the New York City Housing Authority; honorary president of the General Electric Company; member of National Defense Mediation Board

Address: b. 570 Lexington Ave, New York City; 122 E. 42nd St; h. "The Croft," Ossining, N. Y.

GERARD SWOPE

Henry Ford once called Gerard Swope "the world's best salesman." For 20 years he sold the General Electric Company and its products to the world; in 1941, as head of New York City's Housing Authority, he is selling the public his ideas on low-rent public housing. He believes that, financed "by a partnership of the Federal government, the State government and the local government," and with "further work on simplification of financing, standardization of building . . . and generally with steadier work at higher earning . . . we will be nearer to a solution of this serious and difficult problem of providing low-cost housing for the low income groups."

All his life Gerard Swope has been recognized as a successful businessman. "Many call him the finest corporation executive officer that ever struck a balance sheet, precise, exacting, a man of almost frightening purposefulness." He is also a man of broad social outlook, "a New Dealer before the New Deal," who introduced many employee welfare projects into General Electric and was generally active in government projects. His present housing work and his service on the National Defense Mediation Board, to which he was appointed in the spring of 1941, are other manifestations of his social-minded activities.

Gerard Swope was born in St. Louis, Missouri, the son of Jewish parents, Isaac and Ida Swope, and brought up there. His first job was as a helper at $1 a day in the Chicago service shop of the General Electric Company in 1893—he had gone there to see the World's Fair. His next was with the Western Electric Company in 1895. In the meanwhile, however, he had been graduated from the Massachusetts Institute of Technology in 1895 with a degree in electrical engineering. (Since then five colleges have given him honorary degrees.)

From the shops of Western Electric, Swope worked himself up to a manager's position in St. Louis in 1899, and to general sales manager in New York in 1908. By this time he had married Mary Dayton Hill of New Brunswick, New Jersey in 1901. They have five children. In 1913 he rose to vice-president and director. Then came the First World War, and Mr. Swope won the Distinguished Service Medal for his work on the General Staff's Board of Purchase, Storage and Traffic. The War over, he was offered the job of organizing and heading International General Electric, the foreign department of the General Electric Company, and he accepted it. This wasn't the first time General Electric had offered him a position. Back in 1909, when Western Electric sold out its power apparatus business, General Electric Company had offered to take him along with it. But Swope refused: "I'm no chattel," he said. "I'll stay where I am."

As the first president of the International General Electric Company, Swope was able in three years of incessant travel from Japan to England to "build I. G. E. from nothing into a General Electric subsidiary owning or having an interest in practically all of the important electric plants outside the United States from Europe to the Orient." Then, in 1922, when Charles Coffin retired from the presidency of the General Electric Company, Swope was elected its president after only three years with the company. He held this position until his retirement on January 1, 1940, when he became honorary president.

When Mr. Swope took over in 1922, the General Electric Company was hardly a factor in the electric appliance business of this country. The only product it sold widely was the incandescent electric lamp. Today its business has become a business in consumer goods, in refrigerators, vacuum cleaners, washing machines, radios. During his leadership General Electric ceased to be both an engineering firm and a utility operator. In 1924 it cut apart Electric Bond and Share and later other utility holdings; in 1932 it cut loose RCA.

In these years of changing enterprises Mr. Swope was supreme in the realm of production and technology, his ever-present motto the General Electric slogan: "We must keep everlastingly at the job of creating More Goods for More People at Less Cost." It was a profitable motto, for in those years General Electric stockholders never missed a dividend. And at the same time the welfare of the employees was a major consideration—there has never been a strike at the General Electric Company.

In 1936 the employees joined the CIO and have since been working under a contract. They have been given more than just those things a union contract provides, however. The 67,000 or so employees under Swope's leadership have had a profit-sharing plan, cost-of-living wage adjustments and a form of unemployment insurance. They also came to know Mr. Swope through his meetings in the shops with the men and through his answering of any questions put to him there. They have learned his preciseness as well as his understanding. Men who casually suggested, "A fine day," would as often as not have him snap back: "What's fine about it?"

During many of his years at the General Electric Company, Gerard Swope was active in social and economic activities on an even broader scale. As early as 1931 he presented the Swope Plan on Stabilization of Industry, the basic idea of which was that industry be allowed to work out its own problems through an organization of industrial or trade associations. When the NRA came into being under Roosevelt, Swope was a member of its Industrial Advisory Board. Then, when his term of service closed, he announced a plan by which business would keep its self-government, even under the NRA. It provided for a panel of eminent businessmen to act as a board of appeals on any questions that might arise in the interpretation and enforcement of national code provisions. By most businessmen it was welcomed; but *The Nation* called it a plan "for a big business dictatorship of the country," and Roosevelt opposed it.

From the NRA, Swope went to the Department of Commerce in 1933 as the first chairman of its Business Advisory and Planning Council, and in that same year acted as chairman of the Coal Arbitration Board and as a member of the first National Labor Board. In 1934 he was a member of the President's Advisory Council on Economic Security and in 1937 a member of the Advisory Council on Social Security. It was while he served on this last Council that he advanced his plan to provide old-age pensions for the 21,000,000 workers of the country—domestics, farm hands, employees of non-profit organizations—excluded from the Federal scheme. Then in 1938 Mr. Swope served as chairman of the Industrial Relations Commission to Great Britain and Sweden.

In both his activities for his country and his activities for his company Mr. Swope, it is generally agreed, more than justifies the description in the tribute paid to him by the General Electric Company when he retired—"a man who was well ahead of other business heads in vision and sympathy for the welfare of the most humble worker."

TALMADGE, EUGENE Sept. 23, 1884- Governor of Georgia

Address: b. State Capitol, Atlanta, Ga; h. McRae, Ga.

Eugene Talmadge, Governor of Georgia, often talks against "foreign-born professors" —meaning those born out of the state of Georgia. It is undeniable that he himself was born there, the son of Thomas Romalgus and Carrie (Roberts) Talmadge, in the little town of Forsyth. He was educated at the University of Georgia, where he took his law degree in 1907; the next year he was admitted to the Georgia Bar and set up practice in the town of McRae; and in 1909 he married a moderately wealthy widow, Mattie Thurmond, who shortly afterward inherited 1,500 acres of farm land (still in Georgia). From 1912 on Talmadge farmed it and helped neighbors with legal advice to such effect that by 1918 he was solicitor of the McRae City Court, and in 1920 became attorney for Telfair County for a term of three years. In 1927 he ran for his first state office: as Commissioner of Agriculture.

Eugene Talmadge was "just a plain ol' dirt farmer." He said so, and rural voters knew it when they saw him pull up to a courthouse's steps in his horse and buggy, flicking a fly off his horse's ear with a squirt of tobacco juice, snapping his red galluses before climbing down. As Commissioner of Agriculture from 1927 to 1933 his gestures were memorable, too: the dropping of great numbers of people from the payroll for economy's sake; attacks on the "Fertilizer Trust," on Armour-Swift "control" of hog-raisers; the shipment of several carloads of Georgia hogs to Chicago with the guarantee that they would "kill hard." Due to the peculiarities of Georgia hogs this last act apparently cost the State around $20,000, and impeachment loomed, but Talmadge not only managed to get a petition signed demanding that the proceedings be dropped but actually turned the notoriety into valuable publicity. Charged with having stolen $20,000, he assured the farmers: "Sure I stole it. But I stole it for you."

Shortly afterward, in 1932, the dirt farmers' candidate won the Democratic gubernatorial nomination from a field of six—a feat equivalent to election in the solid South. His nomination was due partly to Georgia's "rotten borough" system (three counties, with less than 1,000 voters each, cast as many votes in the primaries as the entire city of Atlanta, and Talmadge is fond of saying, "I can carry any county that ain't got street cars"), but his talents as a campaigner and the varied appeals in his platform also had something to do with it. He would reduce property taxes; he would lower license fees for automobiles; he would compel the public utilities to reduce their rates; he would take the highway department "out of the hands of the politicians and return it to the people."

Before Talmadge came to office in 1933 practically the only appointment the Governor of Georgia controlled was that of his private secretary. But this Governor had learned from his friend Huey Long. He promptly fired everyone who didn't agree with him and replaced them with his own appointees. In order to remove the Highway Commission he had to call out the State militia, so he invoked a clause in the State constitution giving him the right to "quell insurrections." He cut the payrolls of the various State services, thus reducing their operating expenses; he slashed effectually at school appropriations, according to most sources, though he himself says he actually increased them; and he reduced the cost of administering the penal system by pardoning or paroling prisoners by the hundreds. He vetoed any number of bills passed by the State Legislature.

All in all, though, Talmadge kept the first three of his promises, and cut Georgia's debt besides. When his methods were called "crooked, high-handed, unconstitutional, dictatorial and tyrannical" he had his answer ready: "A lot of people say they like what I did, but don't like the way I did it. I don't either, but if a bunch of hogs get into your fields or your garden or your flowers and won't come out when you say 'sooey sooey, sooey,' then you have to use the language and methods that hogs and pigs understand." An article in the *American Mercury* for June 1934 was titled: *Georgia At Last Has a Good Governor*. George Creel, writing in *Collier's* in December 1935, said: ". . . there is general admission that the Wild Man from Sugar Creek, honest, efficient and economical, has made one of the best Governors in the history of the state."

Labor, however, neither liked what he did nor the way he did it. In September 1934 (reportedly after a conference with leading textile manufacturers, who contributed $20,000 to his next campaign fund), the Governor decided to do something about the textile strikes in Georgia. He called out 3,700 National Guardsmen; they seized pickets and put them into an open concentration camp without trial; and for long after that martial law made it a crime in Georgia to picket within "a radius of 500 feet" of any National Guardsman. According to one writer, Talmadge's was an alliance of the small property-owner, the farmer who himself hires a few sharecroppers, with the road contractor and mill-owner "against factory labor, farm labor and the wretched sharecropper." According to Benjamin Stolberg, even as Commissioner of Agriculture, Talmadge had been "in covert intimacy with the Black Shirts, the 'American Fascisti'" who specialized in night riding among Negro sharecroppers. He himself has admitted that he once helped to flog a Negro.

In 1934, when Talmadge was renominated and re-elected, he nevertheless carried 156 out of 159 counties on a platform that had not a single New Deal plank. It was not until Harry Hopkins' (see sketch this issue) action the next year, when he refused to let Talmadge's staff administer relief any longer and put a female Federal agent in control, that the Governor's enmity toward the Roosevelt Administration became open, however. He assailed AAA's "scarcity program," although as Commissioner of Agriculture he himself had advocated a "cotton holiday." He wanted no relief at all—"let 'em starve!" He didn't want skilled labor to have more than 10 cents an hour or unskilled more than 5 cents under the State Relief Administration. He wanted to abolish TVA, NRA, PWA, WPA, social security, old-age pensions. According to Washington's version he had obtained everything he could from Federal agencies for his State and had reduced State expenditures until the Federal Government was carrying almost the entire relief and school burden of Georgia, and was now busying himself with unfair comparisons between Federal "extravagance" and his own economy. According to his own version he was a Jeffersonian Democrat—"I believe the less guv'ment the better"—who was defending the American Constitution and the private enterprise system and who would never forgive Roosevelt for having "killed religion in the hearts of the American people."

With Huey Long he planned to "stop Roosevelt" in 1936, and at the beginning of that year he called a "Grass Roots Convention of Southern Democrats" at Macon, Georgia for that purpose. John Raskob, Pierre du Pont and other heavy contributors apparently hoped that if a third Presidential candidate ran, a Republican might be able to step into the White House. The scantily attended convention, at which literature was distributed showing Mrs. Roosevelt with two Negroes, endorsed Talmadge "as a candidate to lead this country out of the morass of Communism"; and the next day he announced plans for a country-wide speaking tour against the Administration.

Keystone

EUGENE TALMADGE

As it turned out, however, Huey Long was assassinated not long afterward. Talmadge's Presidential boom was a failure, and since he couldn't succeed himself for a third term as Governor he ran for the seat of Georgia's junior Senator. He even took back some of the things he had said about Roosevelt, announcing, in July 1936: "I'll support the President as long as I think he's right. . . I want to protect him from bureaucrats like Wallace and Hopkins." His platform, which included the abolition of tax-exempt government bonds, a Federal budget of less than $1,000,000 a year, 2 cent postage and the abolition of the Federal income tax, didn't get him the Democratic nomination, but he remained undiscouraged, going back to practicing law as a member of the firm of Talmadge, Fraser & Camp and keeping his name before the public eye.

In 1938 an excellent opportunity arose. Roosevelt was favoring a New Deal candidate against senior Senator Walter F. George, and Talmadge was quick to take advantage of the situation by entering the race. This time Big Business was the target of his campaign: "Senator George is very smart. . . Whenever the rights of the people are violated, our senior Senator spoke on one side and voted on the other. . ." But Talmadge's own program would "lead us to the Promised Land," he assured Georgia. "I will provide a homestake and a grubstake for the unemployed. I will protect the farmer and the worker with high tariffs. I will expand the CCC camps. Why, fellow Georgians, I will make America another Garden of Eden!" When the polls closed election night Talmadge was far in the lead, but when he woke up George was ahead. Crying that he had been "counted out in 30 counties," he filed protest, but the election boards ruled against him.

TALMADGE, EUGENE—*Continued*

During the next months, it is reported, Talmadge came to an understanding with Georgia's Governor Rivers, and Talmadge men began getting positions in Rivers' administration. In 1940 Talmadge ran for Governor for the third time with increased support. "I'm going to stick to Georgia this time," he promised. In the elections 162,916 votes gave him the Governorship once more (there were more than 1,500,000 adults in Georgia according to the 1940 census, but there is also a poll tax). And a few hours after his inauguration in January 1941, according to the New York *Times*, he once more turned the Governorship into a "practical dictatorship." During one session of the legislature he obtained the passage of a bill authorizing him to handle all state funds and "maneuvered a resolution extending the Governor's term to four years and specifically extending his own present term."

After that date the "Wild Man from Sugar Creek"—with his eye on the United States Senate, according to many commentators—began earning more nationwide publicity than during any of his previous administrations. Accusing two prominent Georgian educators ("furriners") of advocating the equality of Negroes and Whites, a charge which they denied, he first tried unsuccessfully to get them dismissed by the Board of Regents of Georgia University; then, in July 1941, he revised the Board of Regents and tried again with a board which gave him personal control of the State university system. They were dismissed by a vote of ten to five, but a storm of protest arose both within Georgia and without. Some even recalled that in 1936 Talmadge had been responsible for such statements as: "Hitler is a mighty fine man. . . The man must be helping his people or they'd put him out. Ain't it so?" "What you need in New York is not La Guardia but Mussolini. A little castor oil would go a long way toward starting the wheels of industry goin' again." In August the Governor advocated burning all books favoring racial co-education. In October the Southern University Conference dropped the University of Georgia from its ranks because of "political interference," and students on its campus burned the Governor in effigy; in December the Southern Association of Colleges and Secondary Schools dropped 10 state colleges of Georgia from its accredited list for the same reason.

In spite of his easily caricatured "Harold Lloyd glasses" and "Napoleonic haircut," Talmadge is a "dynamic and powerful stump speaker," a man of "strength and driving force" who, in George Creel's words, is "utterly without doubt as to the justice and wisdom of his own judgment, decisions and actions." Nor is he without charm. He sometimes dresses up in Wild West clothes for photographic purposes; his "How you all?" is "constant and hearty"; he enjoys wrestling, fox hunting and deer shooting with the men; he says he has never been tired in his life and that he knows three-fourths of the citizens of Georgia by their first names. It is rumored that he makes political capital out of being a dirt farmer (he still has a 1,100-acre farm in Monroe County), but can really be grammatical when he tries. He is a good Baptist who refused to consider prohibition repeal in 1933, a member of Sigma Nu and Phi Kappa Phi, a Mason, an Odd Fellow, a Woodman of the World, the father of two sons and two daughters, and the owner and editor of *The Statesman*, a strongly anti-Negro newspaper.

TAYLOR, RICHARD Sept. 18, 1902- Cartoonist; artist

Address: Putnam Park Rd, Bethel, Conn.

"Everything I ever attempted in the way of serious art seemed to me to have a humorous streak in it," says cartoonist Richard Taylor. "I've served my time at playing second fiddle to Picasso and the Paris Boys of the Modern Movement, turning out very bad abstractions in the best Post-Cubist manner. When I stick to humor I think I at least do something with a degree of originality, however small, and that what I do has some power. I came to the conclusion that I would rather be a good buffoon than a mediocre serious artist."

This artist who is famous for his "bug-eyed characters" is finding, after making this decision, that more and more people are taking his buffoonery seriously. His first exhibition of his "unpublished" humorous pictures at the Walker Galleries in New York City in December 1940 inspired enthusiastic comments. "The exhibition provides a happy hour backstage with a deft draftsman whose eye for humanity's foibles is sure and keen," said the *Art Digest.* "His pen, dipped in just enough acid, pierces the very core of fatuousness, pomposity and other frailties of our characters." The *Journal-American's* critic commented: "These drawings, both in black and white and water color, have such fecundity of invention, such beguiling incongruity, such variations of unexpectedness . . . that one might lose sight of the amazing skill of the draftsmanship and the charming color patterns of the papers."

Since this first exhibition there have been others—at Hudson's Gallery in Detroit, at the Albright Art Gallery in Buffalo; shows were given in June 1941 at the Addison Gallery in Andover, Massachusetts and at the Valentine Gallery, New York in December 1941; and the directors of the Whitney Museum, the Museum of Modern Art, and the Metropolitan Museum of Art in New York City, the Museum of Fine Arts in Boston and several private galleries have bought some of his pictures. The art world finds Richard Taylor a far from mediocre artist. And a delighted public continues to grin at the fantasies he continues to publish in the *New Yorker, Collier's* and the *Saturday Evening Post.*

Richard Taylor's "bad dreams about snipe-nosed, chocolate-eyed ladies" have been said to be inspired by "visions of crumpetlike forms which visit him after a heavy meal." He himself admits to having "little visions." But, he hastens to explain: "I don't mean that I go into a trance or anything like that, but I do see, more or less completely, whatever I draw before it is drawn. I never have any trouble getting ideas; all I have to do is get into a corner somewhere where it is reasonably quiet and let my mind wander. At once my imagination becomes filled with the people I draw."

RICHARD TAYLOR

Some come out purely funny, as in the scene of a shoe salesman addressing himself to the sizable foot of a well-set-up woman and asking her: "Now which is the bad little piggie-wiggie?" Sometimes they are satirical—one is the picture of the sculptor starting to attack a monumental block of granite and calling down to the model: "Smile." There are others which "have to do with a kind of eerie and oozy world wherein women hover like vultures over men who rarely escape." And there are others even more sinister—as in *Scourge*, which reveals the horrors of country living.

The artist who is responsible for all these was born in Fort William, Ontario, Canada, of English descent on his father's side; Scottish-Dutch on his mother's. As a child he was always drawing, and at 12 he began his formal art education "under a conservative landscape and figure painter, an associate member of the Royal Canadian Academy." Later Taylor studied at the Ontario College of Art and the Los Angeles School of Art and Design. "No university education. No degrees. No honors." Throughout school, he confesses, he was very dull in everything but history and literary composition, in which he got high marks; "had no mind whatever for mathematics or problems of any sort." He still doesn't, and he seldom guesses the right culprit in the many mystery stories he reads.

TAYLOR, RICHARD—*Continued*

Taylor first began drawing cartoons in 1927 for the *Goblin* Magazine, a Toronto University publication which by that time had become a professional journal. He drew for it until it folded and then "lived precariously doing all sorts of commercial art in Toronto." He painted in his spare time, successfully enough to exhibit with the Ontario Society of Artists and once with the Royal Canadian Academy, though he was never elected to membership in either body.

In 1935 Taylor came to New York with illustrations for a book. When he submitted them to Simon & Schuster, the editors liked the drawings but not the book, and turned it down. Clifton Fadiman (see sketch this issue) suggested, though, that Taylor try the *New Yorker* Magazine and helped him to introduce his work there. Shortly after, his first drawing appeared in this magazine, and since then his work has appeared there regularly, as well as in *Collier's* and the *Saturday Evening Post.* He has also livened various advertising campaigns while continuing to work on the humorous fantasies he first began to draw in 1940.

Richard Taylor does most of his work in Bethel, Connecticut, where he lives in a forest beside a pond full of bull frogs. He is fond of "beer, faded wallpaper and rain," uninterested in sports of any kind except tennis ("plays poorly") and swimming ("after a fashion").

TERBOVEN, JOSEF (tĕr-bō'vĕn) May 23, 1898- Reich Commissioner for Norway

Address: Essen, Bädekerstrasse 23, Germany

One of Nazi Germany's most vociferous proponents of the *herrenvolk,* or rule by a superior caste of Aryan mental and physical giants, is a little man with a mild, negative face behind spectacles. He is Josef Terboven, Reich Commissioner for Norway, who was once a bank clerk and who—despite the lofty honors heaped on him by a grateful Führer—still looks like one.

In spite of his insignificant appearance, Terboven's position is by no means insignificant. As administrator of German rule in a country which, even by Nazi admission, is seething with rebellion, Terboven's efforts have not been crowned with the success that marked his earlier assignments for the Nazi Party; and at times it appears that momentous events threaten to overwhelm this little troubleshooter of the Third Reich.

Josef Terboven was born in Essen, Germany on May 23, 1898 and came of age during the bleak post-War period. It is possible that his first contact with Hitlerism was made at Munich when the struggling Nazi Party was trying to get a foothold in that city. Terboven was attending the university there, after prior study at the University of Freiberg. At a time when thousands of declassed and disillusioned German youth were unemployed and desperately seeking a way out through the various political parties arising in Germany, Terboven managed to get a job in a bank. It is obvious that he did not regard this position as equal to his talents, for in 1925 he became active in the National Socialist Party of Essen.

Terboven's role in the growth of the Party can best be explained by the ground swell that, almost from the first, threatened to rend it apart. Gregor Strasser, an ex-Communist, originally gave Hitlerism its "mass base" by luring to neo-Leftist slogans the industrial proletariat of the Ruhr. On the other hand, Hitler, no anti-capitalist, wished to convince the iron and steel magnates that the real program of the Nazi Party was actually to crush radicalism and trade-union agitation.

In this impending schism Hitler found Terboven an invaluable ally. The young party activist had already proved his worth to National Socialism by his envenomed speech making. His flair for invective, rivaled only by Hitler's, was hated and feared by the political opposition, and had attracted considerable attention. He was made *Gauleiter* of the Essen branch of the Party, in Strasser's Rhineland stronghold.

Terboven denounced the radical faction and proceeded to cajole and bully the Rhine millionaires into financial support of the Nazi Party. In this he was spectacularly successful. Even municipal government officials were soon eating out of his hand. When Hermann Goering (see sketch this issue), himself no amateur in the art of prying open pocketbooks, took a trip to Essen, he was awe-struck at Terboven's feat in having persuaded Franz Bracht, the Mayor of Essen, to open in Terboven's name a secret account of funds from the local treasury. This was the time when Terboven purchased the first of a series of eight-cylinder Mercèdes cars. A psychiatric study of Terboven's love for display—he is inordinately ostentatious—might find it a compensation for his unimpressive physique.

One of the Essen *Gauleiter's* major accomplishments was to persuade the Ruhr magnates to purchase the *Essener National Zeitung* in order to launch an anti-Communist crusade. Terboven was made publisher, and the paper was transformed into an organ of National Socialism. His career was temporarily clouded when a fellow party member brought him up on morals charges involving the former's daughter, but the case was quashed by a friendly judge.

Although Terboven's part in linking the Party with the financial sources of industrial Germany is clear, his aid in liquidating the Strasser opposition is not. In June 1934 Terboven's marriage was celebrated with great pomp at his luxurious villa in Essen. High officials from the entire province came laden with gifts; Hitler and Goering arrived to serve as witnesses. No one dreamed that only two days later, on June 30th, there would occur the famous purge of Strasser, together with a heterogeneous following of Reichswehr and Storm Troop leaders. In all, 700 Nazis were killed in cold blood. Hitler's presence at the wedding was apparently premeditated as a means of throwing the opposition off guard.

On another occasion Terboven figured in important Nazi plans when he was the subject of a testimonial dinner attended by 32 consuls and consuls general. The French Consul General Dobler waxed lyrical in his praise of Terboven and the Führer. The spirit of good will flowed with the champagne, and diplomats regarded the gathering as an omen of international fealty. Two days later the world was stunned by the news that German troops had marched into the demilitarized Rhineland.

JOSEF TERBOVEN

In 1941 Terboven is still Governor of the Rhine Province and district leader of Essen. He is reported to have been a practitioner of "the strategy of terror" long before he was sent to Norway; this is undoubtedly the reason he was selected to subdue the Norwegians. During the Munich crisis and after, Terboven's threats against the Czechs and other peoples were freely offered.

Terboven reached Norway on April 23, 1940. Apparently he was the personal representative of Heinrich Himmler (see sketch this issue), head of the Gestapo, the organization of secret police entrusted with the task of bringing the recalcitrant Northerners to heel. At first the Nazis promised, however, that his role would be temporary, that he would act merely as intermediary between Germany and the Norwegian Administration.

But under Nazi domination of Norway conflict immediately piled on conflict. Major Vidkun Quisling (see sketch 1940 Annual), leader of the Norwegian Nazi Party, the *Nasjonal Samling,* failed completely to gain the backing of the Norwegian people. Prominent churchmen protested Quisling's meddling with the Church. Members of the Supreme Court resigned in a body over interference with the administration of justice. Workers went on strike because of the arrest of their trade-union leaders. Terboven abolished the Norwegian monarchy and the country's parliamentary party, with the exception of the *Samling* (Quisling's Party). But even the puppet parliament was unable to garner the

TERBOVEN, JOSEF—*Continued*

legal two-thirds vote necessary to make official the deposal of King Haakon, who had fled to England.

Silent opposition was shown the invaders by the open display of patriotic symbols and through forms of non-cooperation. General von Falkenhorst, the military occupation official, is believed to have held Terboven somewhat in check for a time, but he was eventually sent to Finland to command German troops there in the war against Russia.

And not all Norwegian opposition was passive. Food trains bound for Germany were derailed; unexplained landslides engulfed Nazi lines; road signs were removed, and secret anti-Quisling newspapers appeared. Quisling had to bear the brunt of National Socialism's unpopularity, and his position became uncertain. In May 1941 he was requested by Terboven to turn back 500,000 *kröner* in state money which he had allegedly taken from the Oslo Finance Ministry for needs of the Party.

As popular unrest mounted, particularly after Germany declared war on Russia, the puppet parliament gave Terboven the power to declare a national state emergency. A state of civil siege was finally declared in the area around Oslo in August 1941. Radios in the coastal areas of Skagerrak and the North Sea, and in five cities on the Swedish border, were confiscated, and a few days later three Norwegians were shot by German firing squads, the first cases of capital punishment in the history of modern Norway. When, on September 9, 1941, British troops suddenly swooped on Spitzbergen, rescuing a group of French soldiers and Norwegian and Russian coal miners and leaving the famed Spitzbergen coal mines in flames, the Nazis had their strongest intimation to date that trouble threatened Norway from without as well as from within.

Since the German High Command indicated it would be tied up in the Russian campaign throughout the winter, Terboven issued orders for Norwegian families to turn in a major portion of their blankets for use by the Nazi troops on the Eastern front, a measure which scarcely served to increase the popularity of the occupying forces. This, however, did not disturb Terboven, who declared in a public statement: "It is a matter of indifference to Germany if several thousand persons, perhaps several hundred thousand Norwegian men, women and children, die of hunger or cold this winter as the result of war."

Meanwhile negotiations were under way to lay the basis for Norway's future role in Hitler's "New Order." It was reported that at the conclusion of the War Terboven planned to withdraw, leaving the regime in charge of a Quislingite, with Quisling himself assuming an important state position (providing the Quisling Party had gained popular roots). In the meantime troops were to be retained "for security of the state" and the future Norway was to cede its most vital harbors to Germany as naval bases.

Yet the continued failure of Germany's efforts to pacify Norway can be prophesied from the ever-growing signs of open and secret opposition, and the ever more violent reprisals by the Nazis. With Quisling's adherents, according to his own figures, estimated at no more than 40,000, or less than one per cent of the total population, and with the future fraught with uncertainty, the position of the little ex-bank clerk from Essen becomes increasingly unenviable.

THORNDIKE, EDWARD L(EE) Aug. 31, 1874- Educator
Address: h. Montrose, N. Y.

Dr. Edward L. Thorndike, educational psychologist and author of the intelligence test bearing his name, became an emeritus professor at Columbia University in July 1940. He has been kept busy since then. In 1941 he lectured at the California Institute of Technology. In 1942 he will be William James lecturer at Harvard University. He has also continued his studies of the social scene begun in 1935 with a large grant from the Carnegie Foundation—studies on a far vaster scale than even he had dreamed of when he was a young student testing the responses and intelligence of fish, baby chicks and primates.

When Dr. Thorndike's researches make headlines, as they did on the publication of his study of newspapers from 28 cities, it is because the startling and oftentimes controversial conclusions result from principles of scientific measurement. In a recent study, published January 1941 in the *Scientific Monthly*, he describes as slanderous the claim that today's newspapers are purely commercial enterprises. "The newspaper of today," says Dr. Thorndike, "with considerable disregard for the cravings of the populace, provides a conventional mixture of facts about what has happened during the past 24 hours at home and abroad, descriptions of athletic contests, statistics about prices, fiction and humor in words and pictures, and notes about women's styles, housekeeping, politics, personal health and happiness, and occasionally about the impersonal world of truth and beauty."

A teacher since 1898, Dr. Thorndike is well known for his work in educational psychology and educational statistics. His first papers, bearing such curious titles as *The Psychology of Fishes* and *The Mental Life of Monkeys*, brought him to the attention of leaders in the field of education, who admired his scholarship and his ability to tackle learning problems scientifically. This work was to have a significance far beyond the limits of his original field. In the 441 items listed in a recent bibliography—from an issue of the *Teachers College Record* commemorating his 40 years at Columbia—many reflect his contributions to social science. Even the profit motive has been fair game for this educator's probing. In 1936 he published his opinion that within specific fields, even cultural ones, the profit motive acted as a fair measure of value and therefore "in our civilization pecuniary profit or loss is regarded as proof and a measure of competence and achievement."

EDWARD L. THORNDIKE

Born in Williamsburg, Massachusetts, August 31, 1874, Edward Lee Thorndike was the son of the Reverend Edward R. and Abby B. (Ladd) Thorndike. He took his first B. A. in 1895 at Wesleyan University, Middletown, Connecticut, and a second at Harvard the following year, staying to work for his M. A. (1897). At Harvard, William James recognized the promise of the young graduate student, and at Columbia, where he took his Doctor's Degree in 1898, Cattell and Boas initiated him into what was then a novelty in psychology, the statistical treatment of test results.

In that year he accepted an instructorship in teaching at the College for Women, Western Reserve University. Dean James E. Russell of Teachers College knew of his experimental studies of the behavior of monkeys and thought of it, with scholarly equanimity, as "a pretty good steppingstone to a study of the nature and behavior of children." He came to see

THORNDIKE, EDWARD L.—*Continued*

Thorndike at Western Reserve. Said Russell: "At that time neither the term nor the subject of educational psychology had been created; but I had a notion that a field of study so obviously fundamental to educational theory and practice should have both a name and a sponsor in the kind of teachers' college which I was planning. After listening to one class exercise, I was satisfied that I had found the right man for the job. I promptly offered him an instructorship and he as characteristically accepted it at once."

As a result of this interview Thorndike came to Teachers College in 1899 as instructor in genetic psychology. His studies in animal psychology were already well known to educators and had even received some attention in the press. A typical experiment, conducted with monkeys, had to do with food placed in boxes that could be easily opened. It was found that monkeys learned from their own impulses when these brought the desired results, while they learned little, if anything, from being taught. Monkeys, Thorndike stated, "occupy an intermediate position in every main psychological feature between mammals in general and the human species."

Thorndike chose measurement as a key to scientific progress in education. To critics who point to the fluidity of action he says: "Everything that exists exists in quantity." Even the mind "is a host of highly particularized and independent faculties." In the course of his work he devised scales for measuring excellence of reading, English composition, handwriting and drawing, and intelligence tests for various grade levels. He has applied exact quantitative methods to the study of human nature, behavior and education, produced measurements of mental fatigue, correlation between various abilities, inheritability of intellect and character and the rate and conditions of effective learning. "His service to pedagogical procedure," says Dean Russell, "has revolutionized educational administration." A recent example of his applications of psychology is given by the definitions and illustrative sentences in the Thorndike Century dictionaries (*Junior Dictionary* 1935; *Senior Dictionary* 1941).

For years there were three Thorndike brothers on the Columbia faculty. According to a jingle circulated among Columbia students:

English, history and psych,
Each one has its own Thorndike.

They were Ashley, the literary scholar and an authority on Shakespeare who died in 1933, Lynn, the historian, and Edward, who got his adjunct professorship in 1901 and the chair of educational psychology in 1904. From 1900 to 1902 he also headed the Department of Comparative Psychology at Woods Hole. On August 29, 1900 he married Elizabeth Moulton of Lynn, Massachusetts. Of the five children born of this marriage, four are living.

A holder of numerous degrees from American and European universities, Dr. Thorndike is the author of several standard psychology texts, one of the first of which was *Educational Psychology* (1903). The next year he published *Mental and Social Measurements* and in 1911 *Animal Intelligence*. In-between were numerous texts and monographs that often anticipated more elaborate works. He has done research on the psychology of arithmetic, the psychology of algebra, and many other curricular questions. One of his best-known works, *A Teacher's Word Book* (1921), is a pioneering effort in the vocabulary field.

From 1917 to 1918 Dr. Thorndike was chairman of a committee on the classification of personnel for the United States Army. He has worked several times on grants from the Carnegie Corporation, through whose help in 1927 he launched a series of investigations into the psychology of learning.

At first glance it might seem ironical that the author of the CAVD intelligence test and of such learned works as *Your City* (1939) and *Human Nature and the Social Order* (1940) should be best known to the general public because of the psychological experiments with animals and fish. In these studies, however, the major objective was to trace the evolution of the intellect. Thorndike's Law of Effect, a law that had its origin in the early tests, was ultimately placed on a stronger basis by ingenious experiments in human learning. And as these researches developed Dr. Thorndike came to the conclusion that repetition and reward were important factors in learning. In 1932 he reported on a series of six experiments with baby chicks: "Rewarding a connection strengthened it; punishing weakened it little or not at all."

A colleague at Teachers College remarked that Thorndike has always been a center of controversy. This has been true not merely of his conclusions based on measurable factors but of his writings in the social science field, where generalities have been inevitable. *Human Nature and the Social Order* starts with original human nature (the genes) as a basis and works down to acquired and environmental additions. It is in studies of this nature that his theories run counter to those of many prominent thinkers. As his writings bear upon the sociological it is not surprising, therefore, that he is thought of as a defender of "capitalism or the system of private enterprise," even though such a designation side-steps the issue of his positive contributions to social science.

Thorndike's eyes are keen and clear, his expression one of quiet concentration. One gets the impression that he has lived seriously, but has enjoyed life. This is testified to by Dean Russell, who writes both of Thorndike, the educator, whose contributions to educational psychology would perhaps resist even his own talents at measuring, and Thorndike, the man, "whose open-mindedness, native honesty, sympathetic understanding, good judgment, readiness to spend himself for others, abounding good will and genial cooperation have given him the place he holds in the affection of all who have had the good fortune to come under his influence."

"In developing the subject of educational psychology and in making it a fit study for students in all departments," said Dean Russell, "Professor Thorndike has shaped the character of the college in its youth. Quick to size up a problem, clear and direct in his thinking about it, almost uncanny in his methods of approach to a solution of it, prompt and positive in giving his conclusions once he had worked his way through it—these traits were as characteristic of him at the beginning of his career as they have come to be peculiarly his own in later years. His mental equipment and his methods of work would have made for success in almost any field of human endeavor."

A member of many learned societies, Dr. Thorndike was president of the American Association for the Advancement of Science in 1934. He is also a past president of the New York Academy of Sciences and of the American Psychological Association.

TIMOSHENKO, SEMYON (KONSTANTINOVICH) (tĭ-mô-shĕn'kô sĕ-myôn') 1895- Marshal of the Red Army

With the Soviet Union and Germany locked in a death struggle, the attention of the world has been focused on Red Army leaders. The attack on the Soviet Union showed Hitler's religious adherence to the program laid out in *Mein Kampf*. Although the Russians may not have expected the Blitzkrieg to strike at the precise moment it did, there is no doubt that they had visualized its possibility and had prepared to meet it. The man who on July 11, 1941 was placed in command of the main Russian line on the central front directly west of Moscow was Marshal Timoshenko, who is a member of the Supreme Military Council headed by Stalin and who until Stalin took charge had been People's Commissar of Defense. In October of that same year he was shifted from heavily beleaguered Moscow to a command in the South where at that time Germans were threatening to cut Russia off from its oil and greatest remaining industrial centers.

Sovfoto

SEMYON TIMOSHENKO

A veteran of the Civil War, schooled in Soviet military academies, Semyon Konstantinovich Timoshenko is a typical product of the Russian military caste. He was born in 1895, in a small poverty-stricken Bessarabian village of Furmanka. At that time Bessarabia was a part of Russia; it was taken over by her neighbor Romania during the Civil War and was reoccupied by the Soviet Union in 1940. Son of a poor peasant, Konstantine Timoshenko by name, young Semyon attended the village school and later worked as a farmhand for the well-to-do peasants ("kulaks" in the later Soviet terminology). According to a Welsh schoolmaster, he is the son of Charles Jenkins, a Welsh technician who married a Russian girl; but the Russians take this story no more seriously than the old joke that he is an Irishman named Tim O'Shenko. He wanted to become a village schoolmaster, but his parents couldn't afford to send him to the city for schooling.

TIMOSHENKO, SEMYON—*Continued*

In 1915 he was conscripted into the Imperial Army and sent to the Western Front, where he was trained in the use of machine guns, the first shipment of which had then come into Russia from the United States.

The regime of the Czarist Army did not seem to agree with the young soldier. His service came to an abrupt end in 1917, when he was court-martialed and jailed for striking an officer, but the Revolution of 1917 set him free. The War went on under the Provisional Government; when that Government was overthrown, Timoshenko's regiment, which had early shown revolutionary tendencies, killed its officers and joined the Red Army. In the years that followed Timoshenko fought White Russians, foreign intervention troops and occasional bandits on many fronts—and invariably on horseback. He was sent with his brigade to put down a restoration movement among the Don Cossacks. In 1918 he joined a Black Sea partisan detachment, in which he was elected, as was then the custom, platoon and later squadron commander.

In 1919, after Budenny's (see sketch this issue) famous First Mounted Army was formed, he was given the command of the 6th and 4th Cavalry Divisions. His was a guerrilla brand of warfare. With his highly mobile regiment he moved and struck swiftly, constantly harrying the unsuspecting foe. The story is still alive of his unexpected appearance in Rostov, where he surrounded the hotel in which the White officers were having their supper and came in to tell them, coolly: "Finish your supper and follow me into the basement; I am Timoshenko of the 4th Cavalry Division of the Red Army."

In 1919 he was entrenched in Tsaritsyn (now Stalingrad), which was being besieged by a formidable White Army force. It was then that he met Stalin and Voroshilov (see sketch this issue), who were commanding the Red Army defense forces. He became very friendly with Stalin; their friendship was to last for 22 years with excellent results for Timoshenko. Stalin later stated that it was Timoshenko who was responsible for "the foundation of the Red Army as a formidable force." However that may be, his exploits made him something of a legendary figure in the lore of the Russian Civil War. In 1920 he participated in the spectacular dash to the gates of Warsaw, was wounded five times while fighting Baron Wrangel at Perekop, in the Crimea. That year, too, he met Lenin for the first time, when the First Mounted Army sent him as its delegate to the Eighth Congress of the Soviets.

The Civil War over and the Soviet regime entrenched, Timoshenko began his training in Russian military schools learning military technique and Marxist political doctrine and incidentally his three R's: like many of the partisan commanders who distinguished themselves in the Civil War, he was virtually illiterate. He attended the special Frunze Higher Military Academy, where his undeniable military experience was supplemented by the formal study of military science; he was graduated in 1922, completed the courses for the higher command in 1927 and those for commander-commissars in 1930. In the meantime he had been given various Red Army commands. In 1925 he was made commander-commissar of the 3rd Cavalry Corps and in 1933 assistant commander of the troops of the White Russian Military Area. By 1935 he had completed his military education by extensive trips abroad to study "capitalistic" armies.

Although a veteran Communist (he joined the party in 1919 and is now a member of the Central Committee of the Communist Party of the Soviet Union), he was strictly an army man, steering clear of politics. Perhaps it was to that fact that he owed his rapid rise to the top at the time when many of his superiors were removed. In September 1935 he became assistant commander of the Kiev Military Area. After the execution of Marshal Tukhachevski and several other top Red Army generals, Timoshenko was given commands in important areas. In June 1937 he was transferred to the North Caucasian Military Area—a vital spot, the site of large oil fields. In February 1938 he returned to Kiev as full commander and member of the Military Council of the Kiev Special Military Area.

His post being next door to Poland, it was Timoshenko who in September 1939 headed the march of the Red Army into Poland after Germany had occupied its western half. It was not precisely a military exploit of high order. The Russian dispatches covering the advance of the Army into Poland featured mainly the mileage it covered daily and the "lofty character" of the Soviet soldier: one of the Soviet papers used as an example the fact that not a single apple hanging over the orchard walls in the line of the Army's march was picked. Of an entirely different caliber was the task which faced him in the winter of 1939, when he was sent with supplementary troops to spur the lagging campaign in Finland. He was placed in command of the operations which ultimately smashed the Mannerheim Line.

The extent of his participation in the Finnish War was, however, not made clear until a few weeks later. On the night of May 7, the centenary of the birth of Peter Ilyitch Tschaikowsky, Semyon Timoshenko appeared in a box of Moscow's Bolshoi Opera House in the illustrious company of three Kremlin big shots—Stalin, Voroshilov and Molotov—and it was apparent to the cheering audience that a new star had risen. The next day the Soviet papers carried the story of the honors heaped on the rugged cavalryman. Together with two other generals active in the Finnish War he was made a marshal of the Red Army. He was also awarded the Order of Lenin, one of Russia's highest honors, and designated a Hero of the Soviet Union for his leadership of the Polish and Finnish campaigns. In this way Stalin gave his old friend most of the credit for bringing the Finnish War to its victorious conclusion. Even more important was his appointment as the People's Commissar of Defense, in the place of Marshal Voroshilov, who was moved up to the post of assistant chairman of the Council of People's Commissars and made a Vice-Premier.

A fit culmination to this success story was the new Marshal's visit in October 1940 to his native village of Furmanka, a trip made possible by the Soviet Union's re-annexation of Bessarabia. This memorable occasion is preserved for posterity in a documentary film called *Soviet Frontiers on the Danube,* which was shown in New York soon after the Soviet-German War was declared. It shows Timoshenko in his resplendent white uniform getting a local-boy-makes-good reception from the villagers and everybody getting quite emotional about it, including himself. After more than 20 years' separation he met his brother Efrem and with old friends participated in an all-night celebration in his honor.

Aside from this lighter aspect of his activities, as a Defense Commissar, Timoshenko had his job of whipping the Red Army into shape for the test that was bound to come. Several public statements on his part indicated that he saw war not far ahead, although diplomatically he avoided mentioning from what direction it would come. On October 5, 1940, in his address to the graduating class of a Russian military academy, he said: "You are entering the ranks when the flames of the second imperialist war are enveloping the West and the East. The Soviet Union . . . stands outside the orbit of war, but this does not mean that we are safe from any provocations that may threaten our borders. Under those conditions we must be ready for any emergency and further strengthen the Red Army's fighting capacity."

In the process of tightening up the Army, Timoshenko used to good effect the lessons he learned in Finland. One was the necessity for the rapid mechanization of the Army. According to Walter Duranty, he felt that there was too much stress on techniques and not enough field training. To remedy this he instituted an elaborate combat training service. In a speech he made to the officer corps in the beginning of the vast military maneuvers that took place last year, Marshal Timoshenko stressed his intention to "check up on the fitness of our small units. . . If each such particle attains real efficiency and imbues genuine military culture in all of our larger units, our troops, should they be called on to fight, will carry on their operations without sustaining heavy losses."

Timoshenko's appointment was a signal for other significant reforms. To his influence was ascribed the temporary eclipse of the political commissars when the military commanders were given full control of military operations. Much of the Red Army's camaraderie vanished with other tightening-up decrees. Regular titles for top officers came back; common soldiers were required to salute their superiors; absolute obedience became the order of the day, although Timoshenko claimed that his idea was to "develop the initiative and energy of the junior ranks without losing the authority of the higher."

Timoshenko, who is a powerfully built man with craggy features and not a hair on his flat-topped head, is about as young a marshal at 46 as a great nation ever had. He is known as a disciplinarian and a hard taskmaster. A song written in his honor by a Ukrainian poet entitled *After the Beloved Commander* claims, however, that "he treats his soldiers like sons," and that they in turn "are ready to follow the beloved commander into any battlefield." He has been copiously decorated. Besides the diamond-studded, gold and platinum star indicating his rank of a Soviet marshal, he has three orders of the Red Banner and an honorary sword for his Civil War exploits and an Order of Lenin for peacetime work. His military slogan today is the same one he used during the Civil War: "Don't ask what the numerical strength of the enemy is but ask *where* it is; then find and destroy it." With the smashing Russian counter-offensive against the Nazis which began in December 1941, he put this slogan to good use.

TOBEY, CHARLES W(ILLIAM) (tō'bê) July 22, 1880- United States Senator from New Hampshire

Address: b. Senate Office Bldg, Washington, D. C.; h. Temple, N. H.

Senator Charles William Tobey is a Republican from New Hampshire with "a hound-keen nose for trouble—a word indissolubly connected in his mind with Franklin Roosevelt." He has smelt trouble in the "encroachment of government upon the liberty and inherent rights of a free people"; in the "camouflage" and "duplicity" and "snooping" of the 1940 census; and, until Pearl Harbor, in the Administration's foreign policy, a "gigantic conspiracy "to drive the American people to war.

Ever since the Lease-Lend Bill was proposed, the spare, partially bald Senator has been on his toes. Back in February 1941 he demanded from Roosevelt a "candid statement" of his intention in the future disposition of units of the American Navy. And once the Bill was passed, he rushed in to battle. On March 31, 1941 he offered a resolution in the Senate against the use of convoys. The action on this, said he, would show the nation whether Administration forces "mean business" in their protestations that they want to keep this country out of the War. It was significant, he felt, when the Senate Foreign Relations Committee put the resolution into a quiet pigeonhole.

Senator Tobey looked into the matter further and a few weeks later announced that he had reports to prove that the American ships were "escorting" British ships to rendezvous in mid-ocean designated by the British Admiralty. His proof, printed boldly in the Washington *Times-Herald* under an eight-column headline, was two letters from unnamed persons: one a relative of a boy in the Navy who said he had been on convoy duty; another, a man who knew a young girl whose fiancé had told her he was leaving on convoy duty. The response to the announcement was tremendous, and the Administration quickly issued a firm denial through Senator Barkley (see sketch this issue), who said that Secretary of the Navy Franklin Knox and Admiral Harold Stark had authorized him to say that "not a single ship, American or foreign, carrying any war materials from any place to any other place had been convoyed or was being convoyed from any place to any other place and that no orders had been received from anybody in authority to give such orders for convoying any ship of any kind from any place to any other place anywhere in the world."

Senator Tobey was not completely convinced and asked Roosevelt, by wire, for "a frank and unequivocal and complete statement" on the "vital matter of convoys." At the same time he continued to line up support in Congress for his anti-convoy resolution. In the beginning of May, however, the Senate Foreign Relations Committee voted down convoy resolutions and voted down, too, holding hearings on them. Tobey said the Committee was so thorough it reminded him of the old Yankee who was asked by the undertaker what should be done with the body of a far-from-favorite relative. The Yankee wired back: "Embalm, bury, cremate and freeze—take no chances." Despite this, Senator Tobey continued the fight in and out of the Senate (speaking at America First Committee meetings and over the radio), and by the fall of 1941, when the Neutrality Act was revised, his indignation had become even more righteous and raucous than before. Events of December 7 changed all this, however.

None of this is going to mellow Senator Tobey's attitude toward the Roosevelt Administration. He is a "New England Yankee farmer," he says, and proud of it. Actually he was born in Roxbury, Massachusetts, the son of William H., and Ellen Hall (Parker) Tobey, and didn't get to the New Hampshire countryside until 1904. Before then he had attended the Roxbury Latin School and spent a good many years earning his living. When he started, at 16, there were jobs for him in insurance, banking and farming until he finally settled down with the F. M. Hoyt Shoe Company in New Hampshire and started the steady, American rise to the company's presidency.

By this time he was living in Temple, New Hampshire on his 100-acre farm and had married (in 1902) Francelia M. Lovett of Boston. He had already made his start in politics by being elected to head the Temple Board of Selectmen. From this position he went on to the New Hampshire House of Representatives in 1915 and 1916, again in 1919 and 1920 (this term he served as Speaker) and once more in 1923 to 1924. A year later he ran for State Senator and was successful both in getting to the Senate and after, for his fellow Senators elected him their president and New Hampshire's Lieutenant Governor.

From there it was only one step to the Governorship itself, and Tobey took it in 1929. His term was made memorable to some by the stir created when he visited the State's asylum for delinquent girls and discovered miserable conditions. Things were soon changed. But from 1930, when he left the Governor's seat, until 1933, when he entered the United States Congress as Representative from the Second New Hampshire District, Senator Tobey was not a widely known figure on the national political front.

This was remedied somewhat when as one of his first actions in Congress he asked what Sol Bloom, head of the United States Constitution Sesquicentennial Commission, was up to. He was active in expressing his opinions and proposing legislation, but it wasn't until 1939 when he transferred from the House of Representatives to the Senate that he cut a really nation wide swath. A year later he presented the Tobey Resolution to strike out the income questions in the census questionnaire and objected to most of the questions being asked. "There is a growing suspicion," he warned, "that the Government has ulterior motives in inquiring into the salary income of the low income groups for the first time." He spoke in forums, in meetings, over the radio, assisted in his work by Charles Tobey, Jr., his son and secretary. (He has another son and two daughters.) He asked the people to start local "anti-snooping clubs" to put an end to "this sort of snooping into your personal affairs." "I may be old-fashioned," he said, "but I am one of those who honestly believes that the rights of the people are fundamental," and he warned legislators that "the American people will cry out with shame and like Macbeth cry, 'Hold, enough!'" They didn't. Roosevelt openly rebuked Tobey for advising the American people to violate the law; the resolution never came to the Senate floor; the American people answered the questions; and, as one commentator put it, this "fast-talking, old-fashioned, nightshirt-wearing, God-fearing New Hampshire gent . . . has done more to advertise this year's census than if Harry Hopkins [see sketch this issue] had hired Billy Rose to do it."

Between his census and convoy fights Senator Tobey was active in the investigation into the settlement of the 1932 radio patent pool monopoly case and as a member of a subcommittee of the Senate Committee on Campaign Expenditures conducting a voting inquiry in New Jersey. His 1932 interest in radio was seen again in 1941 when as a member of the Senate Interstate Commerce Committee he heard the White resolution to investigate the Federal Communications Commission. He also suggested the compilation of records of stations on their broadcasts of speeches on the war issue. In the hearings he was "in rare form—he had everybody on the ropes." He stormed, questioned, rattled every skeleton he could.

He has been generally active on the floor, too—the kind of Senator who frequently gets to shouting during debate. The official shorthand reporters say he talks faster than any other Senator; other Senators say he often talks more to the point than most. Once during Senate hearings he told a railroad executive to "cut out the bunk," and at another hearing involving a Federal judge he insisted: "I don't give a damn for dignity."

In the midst of the hurly-burly that surrounds his Senate career, Senator Tobey, who never drinks ("I've been dry since birth") and whose favorite dish is New England apple pie, confesses that his ambition is "to go back full time to rural life." "I have a country place at Temple, New Hampshire," he once told a reporter, "and I can say to you because of its natural scenery it's the original Garden of Eden without the Original Sin."

TOJO, EIKI See Tojo, H. (tō'yô ā'ê-kê)

TOJO, HIDEKI (tō'yô hê-dä'kê) Dec. 1884- Japanese statesman and general
Address: Kwantung Army Headquarters, Hsinking, Japan

Since 1931 the Japanese Government has been largely dominated by the Japanese Army and the Army has been ruled by a small clique within it known as the Kwantung Army, the army of occupation in Manchukuo. It is this *corps d'élite* to which Tojo, the Prime Minister of Japan, belongs and in which he rose from an ambitious young officer to Chief of Staff. Known throughout his military career as Eiki Tojo, upon his ascension to the Premiership Tojo announced that he preferred Hideki as a first name.

Tojo is often referred to as *Kamiseri* (razor blade) by his military colleagues because of his sharp temperament. He is expected to come "closer to the role of dictator than any man since General Sadao Araki in 1932." Although this is not the first Japanese Cabinet headed by a military person, this is the first time that the Kwantung Army, hitherto content to exert its power more or less indirectly, has come out into the open. By special act of the Emperor, Tojo is permitted to keep his Army post as well as his Premiership, though under Japanese law he

Japanese American News

HIDEKI TOJO

should have resigned from the Army before accepting a political post. Even before the Japanese attack on Pearl Harbor the new Tojo Cabinet, therefore, was generally regarded as "the most military and potentially belligerent government that has come to power in Japan."

Hideki Tojo was born in Tokyo, December 1884, the son of Lieutenant General Eikyo Tojo. Destined as a youth to follow in the military tradition of his family, he entered the Military Staff College and was graduated in 1915. Entering the Army immediately after graduation, he served as aide-de-camp in the War Office and then was sent to Germany in 1919 as resident officer. In 1922 he returned to his Alma Mater, the Military Staff College, to teach.

Finding the career of military instructor too limited for his ambitions, Tojo became the chief mobilization section commander of the 1st Infantry Regiment, the sectional chief of the General Staff Office and commander of the 24th Infantry Brigade. In the Kwantung Bureau he was commander of the Gendarmerie headquarters and chief of police affairs, and in 1937 he became lieutenant general and chief of staff in the Japanese Army in China. For a time he organized a military inquiry which checked Japanese Army loyalty in China. His "red brick headquarters bulged with dossiers on every Kwantung officer, and he was known as Manchukuo's bogey man."

Until 1938 Tojo had concerned himself chiefly with rising in the military hierarchy. When he came near the top, he turned his attention to the acquisition of civil power and accepted the office of Vice-Minister of War under General Seishiro Itagaki, a position which he held from May to December 1938. His insistence upon regimentation of every phase of Japanese life made him so many enemies among influential business groups that in December he was taken out of the ministry and made director of Military Aviation for Japan. In July 1940 he returned to the Cabinet as War Minister, one of the youngest War Ministers in Japanese history. When Premier Konoye's (see sketch 1940 Annual) Cabinet fell in October 1941, Tojo was chosen to form a new Cabinet, and on October 20, 1941 the new Premier made a pilgrimage to the Ise shrine, where he announced his new office to the Sun Goddess. Then he returned by airplane to Tokyo, where he announced his new responsibilities at the shrine of the Emperor Meiji and at the Yasakuni shrine for the war dead.

In 1937 Tojo had said that Japan must be able to fight Russia and China at the same time. In 1940, when Japan joined the Axis, Tojo said he was "overwhelmed with a mingled feeling of austerity and joy" and rejoiced that his nation would go "with renewed strength toward Japan's fixed goal in world affairs." His designation as Premier, however, was regarded by part of the American press as indicative of the victory of "moderate" nationalism. In his very first radio broadcast as Premier, Tojo said that Japan was determined to settle the "China affair" and to fulfill her ultimate object "to contribute to world peace." He continued the Washington conversations and called for November 1941 the first session of the Japanese Diet to be held since 1937.

According to Japanese writers, Tojo's aim was to build Japan into a "high degree defense state . . . a government established on a military economy." "In Tojo's opinion," a Japanese magazine wrote, "the entire nation should move as one cannon ball of fiery resolution." He was known as violently anti-Russian and as the author of some stinging remarks against Britain and the United States. Although he kept the most important portfolios for himself, those of war and home ministries, he chose as Foreign Minister, Shigenori Togo, the former Ambassador to Moscow, who is married to a German woman. In a speech at Osaka, October 26, 1941, Tojo declared that "Japan must go on and develop in ever-expanding progress—there is no retreat! . . If Japan's hundred millions merge and go forward, nothing can stop us. . . Wars can be fought with ease."

On December 16, 1941, a week after the outbreak of Japanese-American hostilities, Premier Tojo, addressing an extraordinary session of the Japanese Diet, asserted that Japan had declared war on the United States only after trying all means of peaceful settlement. On the last day of December he warned the Japanese people to expect a long war despite early successes because the United States had "just begun to mobilize its potential war power."

Tojo is a member of the *samurai* class, the lesser nobility of feudal Japan, now generally characterized as the "headstrong army caste." Described as "smart, hard-boiled, resourceful and contemptuous of theories, sentiments, and negotiations," Tojo speaks "incisively" and is "known by the Japanese people for his quick intellect."

Tojo's rapidity of speech, as well as the quick, jerky puffs of his ever-present cigar, indicates to the observer a great deal of nervous energy. Bald, but young as Japanese Premiers go, he looks out at the world through horn-rimmed spectacles and above a sprawling mustache. He is married to Katsui, eldest daughter of Mantaro Ito.

Who's Who in Japan

TOLAND, GREGG (tō'lănd) May 29, 1904- Film photographer

Address: b. Samuel Goldwyn Studios, Hollywood, Calif; h. 1718 Ambassador Ave, Beverly Hills, Calif

In the spring of 1941 a picture appeared which most critics agreed in calling the most sensational product to date of the United States film industry, with important new techniques in picture making and story telling. The picture was *Citizen Kane*, and the two men largely responsible for it were Orson Welles (see sketch this issue), who directed and played the lead in it, and Gregg Toland, who photographed it. Toland worked on every camera setup and lighting arrangement with the youthful director.

They experimented for new camera angles, new compositions and light effects, tried to achieve power and economy. One of the innovations was the use of low ceilings to intensify the mood and to give the impression of depth. Some of the scenes that were played covered two 100-foot sound stages, and one scene was shot through a hole in the floor. By means of his new method of movie photography called "pan focus" Toland was able to get the whole scene into every shot with foreground, middleground and background equally sharp, and thus to make interesting use of details: a good example of this is a shot of Susan Kane's attempted suicide, with the medicine bottle, glass and spoon in foreground and two frantic figures looming in the back. It shows Toland's fondness for realistic detail (which he has in common with Alfred Hitchcock [see sketch this issue]) and his capacity for consistently achieving fine composition.

The ordinary spectator who sees the picture without understanding the technical angles is merely impressed by the splendid vitality of the picture, the smooth, beautiful and exciting way in which it tells its story, with the camera always deftly pointing up the narrative. But people in the profession appreciate the extraordinary technical novelties that Toland offers: the aged and streaked documentary shots which the *March of Time* runs off after Kane's death; the Opera House sequence where Toland does something which Hollywood has always said you couldn't do—shoot straight into bright lights—and the camera climbs high up into the flies to show the two stagehands' robust reaction to Susan's bad singing; or the scene that takes the spectator from the interior of a house right out into the exterior of a snow scene without a break—a bit that gave Toland and Welles four days of infinite trouble. A rumor had started in Hollywood, where Welles is not too popular, that much of the credit given to Welles by right belongs to Toland. Toland's comment to this was: "I worked out every shot in the picture with Welles. I even sat in on the polishing of the scenario with him. He is one of the greatest directors I ever worked with."

GREGG TOLAND

Toland ought to know, for he has worked with the best of them. A director's rather than a star's cameraman, he shot pictures for William Wyler and John Ford (see sketch this issue). After 20 years on the job he is commonly conceded to be one of the half dozen top men. Gregg Toland was born in Charleston, Illinois on May 29, 1904, the son of Frank and Genieve (Turman) Toland. At a very early age he already knew more or less what he wanted: after a perfunctory trot through intermediate grade school he enrolled in a technical school to study electrical engineering. At 15, after having mastered trigonometry and become unusually proficient in mechanical drawing, he dropped school altogether and went to work in the Fox Studios as an office boy. There he discovered that what he really wanted to do was camera work. He served a year's apprenticeship before becoming an assistant cameraman in 1920.

The apprenticeship in camera work is an arduous and exacting one, and the progression from one step to another slow, with the acolyte

TOLAND, GREGG—*Continued*

having to prove himself every inch of the way. Gregg Toland was an assistant cameraman for six years. His duties were at first purely mechanical, involving tasks like changing the focus, gauging the distance between the player and the camera, loading the camera, etc. Then he was promoted to the status of the operating cameraman, whose function is actually to work the camera. He worked for a number of years under George Barnes, the ace cameraman who got the 1941 annual Academy Award for his photography of *Rebecca*, and followed him into the employ of Samuel Goldwyn in 1922. It is said that when he was working on Gloria Swanson's picture, *The Trespasser*, Laura Hope Crews told Goldwyn: "That young man should be a cameraman. He's got the makings of a great one." At any rate it was Goldwyn who gave him his first chance in 1929 by letting him photograph an Eddie Cantor (see sketch this issue) picture as the director of photography. He has since been under contract to Goldwyn.

Among cameramen Toland's reputation is that of an artist. He has been known for many innovations, for doing "mad, radical" things with his camera, which nevertheless turn out to be remarkably effective. Thus, when shooting *Les Miserables* (which received a nomination for the motion picture Academy Award in 1935), he used the smallest number of lights ever used on a picture, lighting some scenes with only two or three lights and shooting into the shadows. But this departure from time-honored usage succeeded in giving an impression of depth and density to the gloomy picture, and Toland was once more credited with "daring, initiative and imagination." He, too, was responsible for the excellent photography of such varied fare as *Dark Angel* (1935); *Dead End* (another candidate for the motion picture Academy Award in 1937); and *Goldwyn Follies* (1938).

In 1939 his weird windswept effects in *Wuthering Heights*, directed by William Wyler, got him the coveted "Oscar." In 1940 he helped produce other winners: such masterpieces of exceptional photography as *The Grapes of Wrath* (that gained John Ford 1940's directorial award), *The Long Voyage Home* and others. Presumably *Citizen Kane* will bring in more kudos when its turn to be considered as part of the filmland's achievement for 1941 comes up. At any rate it has already brought the man behind the camera more direct praise than it has ever been any cameraman's fortune to receive.

When Toland is assigned to a picture he reads the scenario carefully. Then come numerous conferences with the art director about color and design of the sets, the costumes, the make-up. Numerous make-up tests take place, particularly in the case of new actors, of whom there were so many in *Citizen Kane*. Lights are tried out on sets and on individual actors. Everything is welded into the atmosphere and mood of the story being filmed. Toland is constantly experimenting with new means of achieving realism. A favorite device of his is to conceal an electric bulb inside a candlestick to intensify light.

Toland receives a salary that compares favorably with those of highly paid stars—his contract with Samuel Goldwyn pays him $62,000 a year. On this he lives a quiet, modest life without fanfare, one of a "skilled, unpublicized, tight little fraternity," member of a union as exclusive as a Boston club. One of his major interests is the United States Naval Reserve in which he was commissioned a lieutenant in 1941. He was married to the former Helene Haskin in 1934 and has a daughter, Lothian. Lean, youthful, with a small mustache, Toland reportedly wants to be a director—an ambition which the studios will make every effort to frustrate, for a cameraman of his caliber is even rarer than a good director.

TOMASI, MARI (tô-mä'sē märĭ) Feb. 1, 1910- Author

Address: b. c/o Vermont Writers Project, Post Office Bldg, Montpelier, Vt; h. 63 Barre St, Montpelier, Vt.

Deep Grow the Roots, a first novel by Mari Tomasi, was selected by the American Booksellers' Association and the New York *Herald Tribune* as "one of the 10 most outstanding first novels of the year 1940." The locale of Miss Tomasi's novel is the Piedmont hill country of northern Italy at the time of the Ethiopian War. Two young lovers strive to understand their part in the approaching war. "What is it all about?" asks Luigi, owner of a chestnut grove. "Why must I, Luigi, go to fight in this Ethiopia, give up Nina, leave my trees?" His efforts to escape Mussolini's dream of empire bring him tragedy.

Called by one critic "as delightful a first story as a reviewer can happen upon," and by another "a story of poignant earthy simplicity and beauty, written from tender insight and with exquisite restraint," *Deep Grow the Roots* has also been taken to task for its unrelieved lyricism "drenched in an atmosphere of sunshine and poetic writing."

Miss Tomasi, petite, with gray eyes and brown hair, writes us from her Vermont home: "Most of my first eight years were spent in a wheelchair. Shortly after a successful operation, I visited the Piedmont country of northern Italy with my father. I could never forget the lovely, peaceful atmosphere of that hill country and last year [1940] I employed the Piedmont setting for my first novel—*Deep Grow the Roots.*

"My father, Bartholomew Tomasi, and my mother, Margherita (Contratto) Tomasi, were born in Turin, Italy. After a tour of Central and South America and the States, my father settled in Vermont, feeling that the Green

MARI TOMASI

Mountain State was most like the hill-and-lake country of his Italian home. Here in Vermont, too, he met his childhood friend, Margherita Contratto, and married her.

"I was the third child, born in the apartment over my father's Main Street store—a combination fruit store and cigar manufacturing plant [in Montpelier]. It was difficult to follow the sports of the more active members of the family. One of my favorite pastimes was hiding and curling up behind a showcase, listening to any and all conversations between my father and his customers. I struggled, too, in those early days with a very childish dictionary containing such entries as—Sun: what comes out when it don't rain.

"I was taught by the Sisters of Mercy in St. Michael's parochial grade school. After graduating from the local high school, I had two years of college, one at Wheaton (Norton, Massachusetts, 1926-27); the second at Trinity (Burlington, Vermont). My father's sudden death put an end to my college course. I have taught country school, done private tutoring, and have had short stories published. At present I am employed on the Vermont Writers Project. In my spare time I am working on a new novel which revolves around Italian-American stonecutters in Vermont.

"I am not married. I live with my mother, three brothers, and a sister in a little house just a stone's throw from Montpelier's business section. In spite of the nearness to Main Street, we have a good-size vegetable garden where we grow—for our own use—almost everything from grapes to Chinese cabbage. My special pet is a small flower garden."

TOWERS, J(OHN) H(ENRY)

Jan. 30, 1885- Chief of the United States Navy Department Bureau of Aeronautics

Address: b. Navy Department, Bureau of Aeronautics, Washington, D. C.

"An outline of Admiral Towers' naval career," a commentator once wrote, "is almost a synopsis of the history of American naval aviation." Ever since he first flew a plane in 1911 he has fought to develop the Navy's air arm, and since his promotion to chief of the Navy's Bureau of Aeronautics in 1939 he has been fighting harder than ever. Admiral Towers isn't one of those, however, who demand an independent air command. To him "the aircraft program is part of the naval expansion as a whole"; to him the question is not one of planes versus ships but of planes plus ships.

This blond, spare Navy chief who still gets in about 100 flying hours a year was born in Rome, Georgia, the son of William Magee and Mary (Norton) Towers. He went to grammar and high school in Rome and then, in 1901, entered the Georgia School of Technology to take a civil engineering course. Less than a year later he received an appointment to the United States Naval Academy and in 1906 was graduated.

At Annapolis he had begun his Navy career by training on old square-riggers based there. He continued it after graduation, on the *U. S. S. Kentucky,* where for three years he did engineering duty. His next assignment was to the *U. S. S. Michigan,* on which he was made fire control officer and spotter. When in the spring of 1911 this ship won the Gunnery Trophy and Battle Efficiency Pennant, Lieutenant Towers received letters of commendation for the performance of his duties from the President and the Secretary of the Navy. Throughout the days of steam Towers advanced, serving on many ships that were scrapped long before the First World War.

Ensign Towers applied for aviation duty in November 1910 and was ordered to this duty in the spring of 1911. In August 1911, after instruction under Glenn H. Curtiss, he became the third man to qualify as a United States Naval aviator. The next two years were spent serving at the Navy's first air station at Annapolis, where he was in charge of the Naval Aviation Camp. Here he piloted test flights (in October 1912 he set a world record for endurance in a seaplane and an American record for endurance in any type plane) that helped develop the Navy's earliest seaplanes, catapult launchings, night flying and bomb dropping.

Towers didn't escape without accidents. On June 20, 1912, while flying as a passenger in a Wright seaplane at an altitude of 1,700 feet, both he and the pilot were thrown from the plane by a sudden atmospheric disturbance. The pilot fell clear and was killed, but Lieutenant Towers managed to grasp a forward projection on the plane and to fall with it. The injuries he suffered left him with a damaged left eye which has meant that ever since

U. S. Navy

J. H. TOWERS

he has had to have a co-pilot along when he flies. As a result of this accident safety belts were adopted by the Navy.

In January 1914 Lieutenant Towers was transferred to Pensacola, Florida as executive officer; during the Mexican disturbance that summer he was in command of aviation units established on shore at Vera Cruz. Then, when the European War broke out, he was ordered to duty as an aviation observer in Europe and was attached to the American Embassy in London for more than two years. He married Lily Carstairs of that city in October 1915; there are two children of this marriage, which later ended in a divorce.

In the autumn of 1916 Towers was recalled from Europe, assigned to duty in Operations in charge of naval aviation under that office and also made a supervisor of the Naval Aviation Flying Corps, which at that time was just beginning. When the Division of Aviation in Operations was established he was made assistant director of naval aviation, a position he kept until February 1919.

During the First World War the science of aviation advanced tremendously, and in its advance the soundness of many of Towers' ideas was demonstrated. Convinced that long-distance flights were entirely practicable, he applied for and was given duty in connection with a proposed transatlantic flight, and it was he who organized and commanded a unit of flying boats of the "NC" type which in May 1919 made the first transatlantic flight in the world's history. When his own NC-3 was forced down onto a rough sea short of the Azores, he and the crew rigged sails and sailed it for three days until they reached Ponta Delgada.

His next assignment was that of executive officer of the *U. S. S. Aroostook* and senior aide to Commander Aircraft Squadrons of the Pacific Fleet. He continued in that organization in various capacities, among them as commander of the destroyer *U. S. S. Mugford,* until in November 1921 he was ordered to the Naval Air Station at Pensacola as executive officer. Two years later he was again sent abroad, this time as assistant attaché for aviation at the Embassies in England, France, Italy, Germany and The Netherlands.

When Commander Towers returned to the United States in September 1925 he immediately became a member of the board of inquiry on the loss of the *U. S. S. Shenandoah,* and then was assigned as executive officer of the *U. S. S. Langley,* the first aircraft carrier of the United States Navy. Two years later he was placed in command of this vessel. When an explosion of a main gasoline storage tank took place he fought the fire so effectively that some years later Secretary of the Navy Swanson awarded him a letter of commendation which said: "Your coolness and courage in the face of danger, combined with vigorous action in suppressing the fire, are responsible to a large degree for the prevention of a catastrophe."

In August 1928 Commander Towers was ordered to the Bureau of Aeronautics as head of the Plans Division and in April 1929 was made assistant chief of the Bureau. Commissioned a captain, he not only carried out his Bureau duty under an appointment by President Hoover but served as a member of the National Advisory Committee for Aeronautics, the government organization with jurisdiction over the scientific study of and research into fundamental problems in aeronautics. In August 1930 he was married for the second time, to Pierrette Anne Chauvin de Grandmont.

He left these positions in June 1931 to become chief of staff, commander aircraft, battle force, stationed on the *U. S. S. Saratoga.* Two years later he spent one year at the Naval War College at Newport, Rhode Island and after the completion of his course was ordered to duty as commanding officer at the Naval Air Station at San Diego, California. Here he was in close touch with the fleet, for it is from this station that the majority of aircraft operates and it is also this station which meets the problems of repairing, overhauling and maintaining the fleet squadrons.

After two years here he was again appointed chief of staff, commander aircraft, battle force, and he kept this duty until June 1937, when he was ordered to command the *U. S. S. Saratoga.* This ship, with the *U. S. S. Lexington,* is not only the largest aircraft carrier afloat but the largest ship of any type in the United States Navy. His next shift in June 1938 to the position of assistant chief of the Bureau of Aeronautics made him the only person ever to have held this position twice. And when, one year later, he was appointed by the President to his position of chief of the Bureau of Aeronautics and made a rear admiral, the appointment was widely hailed: most commentators felt it was about time that the Navy air arm have as chief a man who had spent the greater part of his professional career as an airman; and some of them felt that President Roosevelt himself had had a hand in making it.

Since his appointment Admiral Towers has frequently written, talked and reported to governmental bodies on the progress of his department. He has told about progress in the building program for combat planes, carriers, flying boats and torpedo planes with every modern device; he has revealed plans for a naval pilot training program; he has told of the present and given his hopes for the future state of Navy aviation. And always he has urged more planes, not only for ourselves but for Britain. "The British," he says, "are fighting our battle."

TRUEX, ERNEST 1890- (trū'ĕx) Actor
Address: c/o Actors Equity Assn, 45 W. 47th St, New York City

Ernest Truex, the diminutive actor, grew up in the country town of Rich Hill, Missouri. He was born in St. Louis, Missouri in 1890, but moved to Rich Hill when his father, Dr. J. L. Truex, was appointed by local coal operators as physician to the miners.

The actor's career began "by default." To repay a doctor's bill to Ernest's father, an impoverished Shakespearean actor took Ernest as a pupil. The five-year-old child made his first public appearance at the town opera house as Hamlet in the ghost scene. Introduced as "the youngest and smallest actor on any stage, in costume," he was an immediate success. He says that now he is content to be a comedian: he has played his Hamlet.

Vandamm

ERNEST TRUEX

An article in the Rich Hill *Clarion* the next day commented enthusiastically upon his performance. "The star of the company was little Ernest Truex, five years old. . . Master Truex is an artist, and was warmly encored earlier in the evening when he recited *The Fire Fiend* and responded with a burlesque on *Beautiful Snow*. This mere tot came on the stage with the ease of a veteran and, with a voice that would have filled a house twice as large, and with an interpretation far beyond his years, rendered his difficult numbers in a splendid manner."

For two years the young prodigy continued his studies with the Shakespearean tutor, acquiring in that time an extensive repertoire. When he was eight, he toured the Midwest in company with a little girl from the same school. In Kansas City, he went to see O. D. Woodward, manager of the local stock company, who was amused by the child but interested in his talent. As a result of the interview, Truex was hired to play the part of Aulus in *Quo Vadis* in 1899, and remained with the company to take such juvenile roles as Cedric in *Little Lord Fauntleroy* and Willie in *East Lynne*.

There followed a 10-year association with the Illytch Garden Stock Company in Denver, during which Truex played with the greatest stars of the day. In *Alice-Sit-by-the-Fire* he toured the country with Mary Shaw and again with Ezra Kendall in *The Land of the Dollars*.

During high school days in Denver, Truex was a classmate of Douglas Fairbanks and Harold Lloyd. After graduation he set out to conquer New York. Unfortunately, however, no one on Broadway had heard of his remarkable career. While he looked for a part, he took a job making change in Adolph Zukor's penny arcade on Fourteenth Street.

TRUEX, ERNEST—*Continued*

The road to Broadway began in Toronto. At the races he was introduced to Lillian Russell, who asked him if he was riding. When Truex said that he was an actor and not a jockey, she mentioned a jockey role in her next play and took his name. In the autumn of 1908, a telegram offering him the part in *Wildfire* launched Truex's New York career. Three decades later he played the part of Lillian Russell's father on the screen.

The actor recalls his disillusionment, while playing opposite the famous star, in discovering that she smoked cigars. "She liked only those with little yellow spots on them and the others she gave to me," he relates.

When *Wildfire* closed Truex appeared in seven plays in London, the first of which was *The Fall Guy. The First Year, Five O'Clock Girl* and others followed. While appearing in the original production of *Havana* he married Julia Mills, a dancer. Their two sons, Philip and James, were graduated recently from Haverford College in Pennsylvania.

The first Mrs. Truex died in Atlantic City November 15, 1930. The next year Truex married 21-year-old Mary Jane Barrett, a co-player in the *Third Little Show*. She is the mother of Barrett Truex, who, at six, is the only Truex not currently engaged in stage work. James is a member of a road company of *The Man Who Came to Dinner,* while his brother Philip is in a New York production. On October 25, 1938 Mrs. Truex was granted a divorce because she claimed that her husband "spied on her and was unreasonably jealous." In March 1941 Truex was married for the third time—to Sylvia Field, the actress.

The screen version of *Whistling in the Dark,* produced in 1933, was Ernest Truex's first movie. "His acting," wrote a newspaper critic, "is just as effective in the picture as it was on the stage. In fact, he fills the part so well that it is difficult to imagine anybody who could compete with him." Other film successes included *Warrior's Husband* (1933); *The Adventures of Marco Polo* (1938); and, in 1940, *His Girl Friday* and *Slightly Honorable.*

But the stage is his first love and he returned to it in 1940, after four years' absence, in Kaufman and Hart's (see sketches this issue) *George Washington Slept Here,* which is his forty-seventh on Broadway. In this play the comedian encountered all the difficulties of rural existence, not the least of which was an insect plague. The dilapidated house, which Fuller buys for its historical significance, presented one problem after another to the enthusiastic husband and his skeptical wife. His last show before the Hollywood sojourn was *Frederika.*

Ernest Truex has been described as "that endlessly praised actor" and "one of the most artful clowners in the theatre. He has a blissful knack of stirring wistfulness into every pun, pity into every tumble." He is only slightly over five feet tall, has all his clothes made especially for him in New York City. "Just the same height as Napoleon," he says by way of describing his build.

Truex says that his leading ambition is to play in "something that's really fine and real." His conception of acting is incorporated in part of an open letter to his son, written in June 1933: "Consider the willow tree whose dainty branches sway in the greatest breeze, but whose roots go deep and whose trunk is tough and hard to break."

TRUJILLO MOLINA, RAFAEL L(É-ONIDAS) (trōō-hē'lyō) Oct. 24, 1891-
Generalissimo of the Dominican Army

Address: Estancia Ramfis, Ciudad Trujillo, Dominican Republic

In July 1938, when President Roosevelt called the Evian Conference to consider the problems of refugees, one of the few offers of tangible assistance came from Generalissimo Rafael L. Trujillo, at that time President of the Dominican Republic, who donated more than 26,000 acres in Sosua Province, which he bought from the United Fruit Company, for the settlement of refugees. They were guaranteed citizenship, freedom from molestation, discrimination or persecution; the only restriction was that they must be white, for the General wishes to increase the proportion of whites among his people. By January 1941 around 700 families were already settled there, and Trujillo, pleased by the success of his experiment, donated another 50,000 acres. The eventual goal is 100,000 refugees, both Jewish and non-Jewish.

Few democracies have done so much to solve the refugee problem. Oddly enough, the Dominican Republic, which occupies some two-thirds of the island of Haiti, has a population of approximately 1,500,000 and has been ruled by Trujillo since 1930, is not a democracy. There is only one political party in the country. And although there are no records on imprisonments, Trujillo's political enemies say that he is responsible for thousands imprisoned, tortured and murdered —among them writers and editors who refused to praise him, officials of past administrations who wouldn't enter his government (and some who did), plantation owners and peasants who protested confiscation of their land, dissident students and professors.

Under the tight Dominican censorship anyone spreading "information of subversive character, injurious to the authorities or defamatory of the government" is tried as a common criminal; even foreigners have reason to be afraid. The labor movement has practically been destroyed, with labor leaders arrested and imprisoned and striking workers forced back to work by soldiers, although some social legislation, such as an eight-hour day, has been instituted. Trujillo and his near relatives live luxuriously and have gradually acquired a "totalitarian trade monopoly" over salt production, cattle, milk, butter and other products; the Generalissimo has also acquired a large financial interest in an insurance company, a shoe factory and a tobacco farm as well as a 3,000-acre rancho and many large holdings where rice is grown.

This does not mean that there is no one to speak a good word for the "Caribbean Caesar." He himself boasts that there is neither crime nor unemployment in the Dominican capital and that his government has balanced its budget every year during the depression. Oswald Garrison Villard, writing in 1937, listed among the dictator's accomplishments the introduction of compulsory education (although school enrollment was then below the 1920 average!), the building of modern roads, bridges, telegraph and telephone lines. Villard also asserted that Trujillo had distributed parts of the public domain to needy families, had been generous in his charities, had encouraged agriculture and small holdings of land rather than large plantations, and that although there was no doubt at all that he made himself a millionaire, he had also given "pretty honest public service," raising public revenue solely by import and export duties. "One feels that his own spirit of virility and vitality has penetrated the whole nation. . . Foreigners who know the situation declare that he has done more for Santo Domingo than all his predecessors for 50 years back."

Nearly everyone, too, has pointed out that the Dominican Army (which in 1936 got 16 per cent of the budget's attention) is a "very efficient body"—so efficient, according to Helen Lombard, writing in *PM*, that, "outwardly at least, his country is calm and peaceful." She calls the Generalissimo "one of the most colorful 'head guys' in the whole Western Hemisphere."

The facts about the early life of Generalissimo Rafael Léonidas Trujillo Molina—officially Benefactor of the Fatherland, Savior, Hero, Titan, Admiral, Doctor Honoris Causa in the Economic Political Sciences—have not been too well established. It seems to be settled that he was born October 24, 1891 in San Cristóbal, but his father, José Trujillo Valdez, has been variously described as a humble mountain peasant and a storekeeper and a cattle dealer in San Cristóbal. His mother was Julia Molina Chevalier. Carleton Beals (see sketch this issue), who gives the Generalissimo the benefit of few doubts, says that young Rafael was a cattle rustler and forger before joining the National Guard after the United States occupied the country in 1916; another writer says, simply, that young Rafael rose from the post of telegraph operator. According to official biographers, he quit that position to attend a military academy, and was graduated as a second lieutenant.

Dominican Legation

RAFAEL L. TRUJILLO MOLINA

In any case, it is certain that by 1922 he had become a captain in the National Guard; that under Vásquez, who became President in 1924, he was promoted until he became commander of the entire National Guard, which he renamed the "National Army", "recreating the sort of militarism American occupation had attempted to abolish"; and that today he can speak of the United States Marines as his "Alma Mater."

What happened in 1930 and afterward is not so misty. In February of that year there was a revolt against Vásquez, who had been prolonging his four-year Presidential term through changes in the laws governing elections. The Army, under Trujillo's command, did not defend the Government; it is claimed that they had a previous agreement with the revolutionaries. A provisional President was put in immediately, but another Presidential election was to be held in May, and the Confederation of Parties named Trujillo as their candidate. Their terroristic tactics made the opposing ticket of the National Progressive Alliance withdraw, and in the ensuing election Trujillo apparently received more votes than there were registered voters in Santo Domingo. A Supreme Court judge who declared the elections fraudulent had to flee; so did the opposition's candidates, and, eventually, the former provisional President himself, who had been elected Vice-President.

At 37 the world's youngest ruler of a sovereign state, on inauguration day (August 16) Trujillo wore a gold-braided uniform placarded "God and Trujillo." Three weeks after he took office a cyclone almost completely destroyed Santo Domingo, and, according to Villard, he was given an immediate opportunity to show what he could do. With the help of

TRUJILLO MOLINA, RAFAEL L.—*Continued*

the American Red Cross he rebuilt "a new and handsome city, clean and well policed," with "new streets . . . well planned and well paved", "modern buses and good water"; he also spent $2,500,000 "in improving the docks and dredging the channel into the Ozanna River." He announced: "I'm no Marc Antony. I aspire to be a Julius Caesar in deeds. If I were Nero I would burn down Santo Domingo to rebuild it more beautifully."

It was August 1931 when the Dominican Party, with Trujillo at its head, was organized; government employees were required to contribute 10 per cent of their salary to the treasury. In 1932 the Cuban Minister wrote of a "reign of terror, perpetuated by clandestine assassinations"; later the Cuban Government broke off relations with Santo Domingo because of the treatment of its citizens. In 1934 Trujillo was re-elected by "civic reviews"—masses of peasants herded together to shout adherence to his regime. Although no Dominicans except members of the Army and police were allowed to have weapons, there were sporadic revolutionary plots—that year, for example, government buildings in Santiago were bombed. Other conspiracies, it has been claimed, were "trumped up" to suit Trujillo's purposes. But the outside world knew little of the details of his dictatorship until in October 1937 the Dominican Army and police murdered Haitian border residents—men, women and children, all civilians, all defenseless. Their number was estimated as at least 10,000 by Quentin Reynolds (see sketch this issue), writing in *Collier's* not long afterward. He concluded that the affair had been planned by Trujillo and executed at his orders, although excused as a bandit skirmish at the time. More than one observer decided forthwith that the Dominican dictator was "attempting to allay domestic dissension by cooking up a foreign difficulty," and expected war with Haiti to break out, but apologies and a financial settlement were eventually made.

At the same time Trujillo was proclaiming his popularity far and wide. He had an entirely new province and the main city of the country named after him (the city of Santo Domingo became Ciudad Trujillo in 1936), as well as many of the bridges and other public works. He had himself recommended for the Nobel Peace Prize. Across the front page of every newspaper was a large black banner praising him. An electric sign in red, white and blue, with letters a foot high, celebrated "God and Trujillo." "Viva Trujillo!" shouted Dominican automobile license plates, too. In 1938 he refused a third term as President, "following United States precedent," and began to rule instead as Generalissimo of the Army, a title which he had received in 1932. "I voluntarily, and against the wishes of my people, refused re-election to that high office," he announced.

At the same time, too, the "Napoleon of the West Indies" was boasting that the Dominican Republic bases its institutions "on the fundamental principles expressed in the Constitution of the United States." He has often reaffirmed a policy of continental unity and solidarity with the United States, a willingness to cooperate with any defense plans. When running for his second term as President he secured a photograph from President Roosevelt inscribed "To Rafael Trujillo from his good friend Franklin D. Roosevelt," and thousands of copies were nailed to Santo Domingo tree trunks. In the summer of 1939 he visited the United States before sailing for Europe and was fêted in Washington and in New York City. During his second visit in September 1940 the United States agreed to relinquish control of the Dominican customs. Here again in December 1940, he was entertained by General Marshall, Chief of Staff, and by President and Mrs. Roosevelt, and secured a loan of $3,000,000 from the Export-Import Bank. A year later, after the Pearl Harbor disaster, the Dominican Republic declared war on the Axis powers.

The Generalissimo is described as "of medium height and brown complexion," with a "fine figure" and a "close-cropped, fast-graying mustache." Villard says he is "very attractive when he laughs." He "discarded his first wife, a peasant like himself, mother of two daughters, and married a pale aristocratic beauty, Bienvenida Ricardo y Roman." He next divorced Bienvenida and married María de los Ángeles Martinez Alba, by whom he had a son nicknamed "Ramfis" and titled "Illustrious Child," a military genius who was born in 1930 and by 1933 was drawing $150 a month as colonel in the Army. (Maria herself has been allowed to run the country's hardware and laundry monopolies.)

Trujillo "guzzles gallons of champagne, unchilled"; it is said that he has not read more than a dozen serious books in his life, although his political thought can be obtained in three volumes, printed in Spanish; he has a great passion for horseback riding; he once imported to his capital a French cabaret complete with dancing girls, waiters, chefs and liquor. But his life is not altogether lighthearted. When he receives visitors four gunmen train sub-machine guns on them, and his guests walk timorously and respectfully backward out of his presence.

TRUMBO, DALTON 1905- Novelist; screen writer

Address: b. c/o J. B. Lippincott Co, Philadelphia, Pa.

This young novelist and screen writer who brought General Andrew Jackson back to life in *The Remarkable Andrew* (January 1941) is already known to readers for his horrifying anti-war novel, *Johnny Got His Gun* (1939) and to movie-goers for his adaptations of such screen plays as *Kitty Foyle* and *A Man to Remember.* The remarkable thing about Dalton Trumbo is his versatility and fecundity as a writer, plus a genuine—and so far unshakable—integrity. He takes writing for films as seriously as he does his novel writing: "He believes it's a great job and you can make fine pictures in Hollywood if you fight for them."

The Remarkable Andrew is to be released by Paramount in early 1942. As a novel it is a biting, satirical allegory, something on the order of *Candide.* It concerns a poor but honest young bookkeeper, Andrew Long, whose hobby is reading the biographies of America's historically great. One day when young Andrew's books won't balance and he gets into a jam with the town's crooked politicians, to the rescue comes his particular American hero, good old whiskey-drinking General Jackson. The pages in which Jackson talks with his protégé about the War are full of witty, "satiric shafts at New Deal economy and philosophy" and at the Administration's foreign policy. "By Jupiter, it just shows what can happen when a Whig gets into the White House!" growls the General. When told that Roosevelt isn't a Whig, but "the greatest Democratic President since Andrew Jackson," the ghost of Jackson nearly passes out. Major critical opinion lauded the book, in spite of its controversial content, because it was clever, funny, readable—and timely. "It is an important book if only because a man dared to write it with the times so out of joint."

Like the doughty Jackson, Dalton Trumbo is himself a fighter: he fought to get into print exactly what he wanted to say in *The Remarkable Andrew* and in *Johnny Got His Gun.* He has fought Hollywood censorship boards in defending his belief that people want better films. "The American people should be able to exercise their democratic right to approve or disapprove the pictures Hollywood gives them." He has fought for trade union rights, and in 1941 was the author of a pamphlet on the Harry Bridges case, likened by Donald Ogden Stewart (see sketch this issue) to *J'Accuse.*

For Dalton Trumbo comes of fighting American stock. His first ancestor of whom he has direct knowledge was Jacob Trumbo, a mixture of French and Swiss, who settled in Virginia in 1730. His mother's family, the Tillerys, arrived a little later, swung down into Missouri. Both branches fought in the Revolution and the Indian Wars, and on opposite sides during the Civil War. After the Civil War, Trumbo's maternal grandfather moved to Colorado and was a frontier sheriff during the battles between cattlemen and sheepherders. Grandpa was a straight shooter: he died a natural death just before Dalton's first book was published. He always maintained that his grandson was "a damnsight better writer than O. O. McIntyre."

Baskerville

DALTON TRUMBO

Dalton Trumbo was born in 1905 in Colorado in an apartment his parents occupied back of a small-town library. The family moved to Grand Junction, where Dalton went to high school and worked as a cub reporter on the local paper. The westward trek begun by the family 200 years earlier was then completed when they moved on to California. Dalton was in his first year at the University of Colorado; but at the death of his father he joined his family and went to work as a night bread-wrapper in the largest bakery in Los Angeles. There he worked nearly 10 years. During that time he wrote eighty-eight short stories and six novels, all rejected; attended the University of Southern California for almost two years, reviewed movies for a trade magazine and did various other jobs.

Finally he began selling stories and essays to *Vanity Fair, The Forum* and other magazines, and quit his bakery job. In 1934 he became managing editor of the Hollywood *Spectator,* then went to Warner Brothers as a reader in the story department. His first books, *Eclipse* (1935) and *Washington Jitters* (1936, later produced as a stage play by the Theatre Guild) were published. While at Warner's he also sold stories to the *Saturday Evening Post* and *Liberty.*

TRUMBO, DALTON—*Continued*

For his third novel, *Johnny Got His Gun* (1939), Trumbo got the idea from reading about a British officer who was a World War "basket case"—a living thing from which war had taken arms, legs, sight, hearing, speech. How such a pitiable victim felt, thought, finally communicated, told in the stream-of-consciousness method, made "a book that can never be forgotten by anyone who reads it." On his radio program Arch Oboler presented a dramatic monologue of it, played by James Cagney.

Dalton Trumbo has tried to dispel the popular assumption that "all Hollywood writers are hacks." He believes that the position of a script writer should not be that of a hired employee who must carry out orders. He himself once got a 20-day payroll suspension for refusal to accept writing assignments because of the poor quality of the material handed to him. Screen plays, like stage plays, should be written on a free-lance basis, he thinks, so that producers will respect a writer's work. This Trumbo proved feasible by writing three original screen plays in one year and selling each of them. Among his screen plays are *A Bill of Divorcement, We Who Are Young* and *The Man with the Shovel.* He considers *A Man to Remember* his best screen work to date.

Trumbo lives on a mile-high ranch 85 miles from Hollywood with his beautiful wife, Cleo, and their baby daughter. He met his wife when she was working at a roadside hamburger stand, and enjoys telling stuffed shirts that "Cleo was a waitress." He has been East only once. At that time he took pictures with a movie camera of scenes which he felt were relics of the past and which he wants to show his young daughter when she grows up. Trumbo has no other hobbies; he almost never exercises; and he belongs to no organization except the Screen Writers' Guild.

TUGWELL, REX(FORD GUY) July 10, 1891- Governor of Puerto Rico

Address: b. Government House, San Juan, Puerto Rico

REX TUGWELL

Rexford Guy Tugwell, the debonair ex-Brain Truster who on August 25, 1941 was confirmed by the Senate as Governor of Puerto Rico, was born on July 10, 1891 in Sinclairville, New York. The son of Dessie (Rexford) and Charles Henry Tugwell, a prosperous farmer, he attended high school in Buffalo, worked during his last year as reporter on the *Courier*, then in 1911 went on to the Wharton School of Finance and Commerce of the University of Pennsylvania to major in economics.

Four years later he took his B. S. in economics—having been managing editor of the college newspaper, a member of the prom committee and a credit to Delta Upsilon. In 1914 he had married Florence E. Arnold, and for two years after graduation stayed at the University of Pennsylvania as instructor in economics, in 1916 taking his Master's Degree. His ambitions were already apparent; a poem written in 1915 announces:

I am sick of a Nation's stenches;
I am sick of propertied Czars;
I have dreamed my great dream
of their passing.
I have gathered my tools and my
charts;
My plans are fashioned and
practical:
I shall roll up my sleeves—make
America over!

In 1917, when Professor Scott Nearing was dismissed, he rolled up his sleeves and went to the University of Washington as assistant professor of economics. In Paris managing the American University Union during the last months of the First World War, he returned to an instructorship in economics at Columbia University. He was to remain there for many years, one of the most popular lecturers on the campus: assistant professor from 1922 to 1926; associate professor from 1926 to 1931; professor from 1931 to 1937, during his period of Government service in Washington.

That he was already impatient with orthodox economics, convinced that industry should be regulated to serve social ends, was evident from his earliest writings: his doctorate thesis, *The Economic Basis of Public Interest*, published in 1922, when he exchanged his Mister for a Doctor; articles in academic quarterlies and in the *New Republic*, of which he was a contributing editor; an untextbook-like textbook called *American Economic Life and the Means of Its Improvement* (1925), written with two equally experimental colleagues and liberally illustrated with pictures of the contemporary world; *Industry's Coming of Age* (1927), with its prefatory indictment of the way his subject was ordinarily taught.

Tugwell mingled freely with the Socialists of the League for Industrial Democracy and the Civil Liberties Union, and in the summer of 1927 took advantage of an opportunity to spend two months in the Soviet Union with a delegation of 13 trade-unionists and intellectuals which also included Stuart Chase, today one of his most articulate admirers. The result was a critical survey, *Soviet Russia in the Second Decade* (1928), which Tugwell edited and to which he contributed a chapter on Russian agriculture. He came back impressed, convinced that "the Russians and ourselves have much to learn from one another," but completely unsympathetic with revolutionary tactics: "Force never solves anything," he is fond of saying.

That same year, too, Tugwell spent six months making a survey of the American agricultural problem for New York's Governor, and in 1928 he was working for Al Smith's election to the Presidency. Intensely critical of the Harding, Coolidge and Hoover regimes, convinced long before the stock market crash of 1929 that the American economic system was due to collapse if its abuses were not corrected, in December 1931 he made a speech before the American Economic Association of Washington in which he announced that a planned economy would necessarily imply the death of *laissez faire*, the virtual abolishment of business.

His approach to economic problems, in other words, prefigured the New Deal to a certain extent (though in Paul W. Ward's words, he spoke things "that neither Marx or Winchell knew till now"). And when in 1932 Roosevelt was campaigning for the Democratic Presidential nomination, Raymond Moley, who had known Tugwell at Columbia, suggested that he might be a valuable counselor. Tugwell joined Moley and A. A. Berle as one of Roosevelt's close pre-election advisers, particularly on agricultural problems; later he urged Moley to recommend Henry Wallace as Secretary of Agriculture; he, in turn, was asked by Wallace to be Assistant Secretary; and that was how, in 1933, the aloof professor came to the New Deal in an official capacity.

With "brooding eyes and molded features enframed by wavy hair," Tugwell was generally conceded to be the handsomest of the New Deal figures, and by the time the "brain trust" had become little more than a journalist's handle he was generally acknowledged as its spokesman. A widely publicized interview with the Scripps-Howard newspapers on January 26, 1933, in which he had advocated a $5,000,000,000 fund to be used partly for relief, mainly to redistribute purchasing power, and "drastically higher" income and inheritance taxes, may have had something to do with this, even though he was obviously far from having his advice taken on all matters. He opposed internationalism as a foreign policy but urged international agreements to control production; he argued for extremely rapid expenditure of public works money so that its effect might be felt immediately, fought for provisions for consumer-protection in the National Recovery Act—and was defeated on all scores. Within the AAA itself Wallace and Tugwell, who advocated crop reduction rather than the dumping of farm surpluses, were eventually victorious, however, and Tugwell fathered currency legislation, the processing tax, the CCC. In 1934 he was a member of the Housing Board, the Surplus Relief Administration, the Commercial Policy Committee, the Public Works Board.

But he made enemies. His friends called him "too honest to keep his views to himself," his enemies called him a "Socialist" and a "Red." *The Industrial Discipline and the Government Arts* (1933) provided ammunition, although few book critics found it more than "ambitious for a good life for all"; so did *The Battle for Democracy* (1935), mainly a collection of his Washington speeches in favor of economic democracy and in defense of the New Deal; so did his plea for a farmer-labor alliance in Los Angeles that year; and the pure food and drugs law whose drafting he supervised was sniped at for nine months.

He was called both "the Administration's No. 1 embarrassment" and "Roosevelt's whipping-boy." As early as 1933 Mark Sullivan began dropping dire hints that Tugwell had entrapped a fundamentally conservative President into sponsoring a radical policy which would quietly revolutionize America; in June 1934, when he was nominated as Under-Secretary of Agriculture, the Senate Agricultural Committee which confirmed his appointment held a session in which similar suspicions were voiced; a certain Dr. William A. Wirt "discovered" a plot to overthrow the Government and establish a Red dictatorship with Tugwell as the Lenin or Stalin of the movement. To the *American Mercury* he was "the sweetheart of the regimenters," with a "grand-ducal manner"; to the *Saturday Evening Post* his literary style was best described as "Yours for the Revolution; Constitution, I love you." Tugwell, who called himself a conservative bent on saving capitalism from itself, gave up hope "that people who don't know me or anything about me will ever stop talking unknowingly about me." More than once he offered to resign. But there were too many to whom he was a symbol of Washington

TUGWELL, REX—*Continued*

progressivism and who, like Stuart Chase, were grateful that a man "so aware of the major currents in modern life" was "close to the wheel of the ship of state."

Although well in the background by the time of the 1936 elections, Tugwell was put in charge of the land-use part of the $4,800,000 work-relief fund, to be used for soil erosion, rural rehabilitation and electrification. His Resettlement Administration, later absorbed by the Agriculture Department and renamed the Farm Security Administration, also inherited from other departments certain subsistence-homestead projects. Government loans started needy farming families on new land, with new equipment. His controversial green-belt "Tugwelltowns" have since been used by both private enterprise and government as models for low-income suburban housing projects. His work in this Administration was, as always, both praised and attacked. Even one writer in *The Nation* called him a "fumbler" as a man of action, but in November 1936, when he resigned to become an executive vice-president of the American Molasses Company, Henry Wallace told newsmen: "You know, Rex has been one of the most vigorous fighters for the capitalist system that I know of. . . Men of Tugwell's courage and insight are rare. We shall all regret that he is no longer in the Government."

Tugwell did not completely quit politics, however. He continued to write articles urging the continuation of New Deal policies and finally giving regretful reasons for their virtual abandonment, and in April 1938 he was chosen by New York's La Guardia to succeed A. A. Berle as chairman of the City Planning Commission. That year he worked out the first annual capital budget for New York City ever used by any American Government—and he wrote the budget again in November 1940.

Finally, in May 1941, he sailed to Puerto Rico as special adviser to Secretary of the Interior Ickes (see sketch this issue), there holding hearings on the methods for enforcement of the law forbidding corporate ownership of more than 500 acres of land (ignored by the large sugar plantations) and on proposals for implementing the Puerto Rican Land Authority. Barely a month after his return in June he was selected as chancellor of the University of Puerto Rico with the backing of Luis Muñoz Marin, head of the Popular Party; and a few days later he was nominated as Governor of the "small and hungry" Island, rapidly being transformed by the United States into the key link for Caribbean and Canal Zone defense. The Senate Committee on Territories and Insular Affairs approved the nomination on August 18, 1941 and the Senate itself a week later. On September 19 Tugwell took the oath of office, simultaneously resigning as chancellor of the University. In his address he called for cooperation to combat the Island's "chief problem" of poverty.

Tugwell was divorced from his wife in 1938. There are two daughters, Tanis and Marcia. That same year he married Grace Falke. They have a son, Tyler. Tugwell himself is a gourmet, particularly expert in the preparation of rare salads; he scorns contract bridge; he likes to go canoeing around the island his parents own on Lake Ontario; he likes good talk. Raymond Moley once said: "Rex was like a cocktail: his conversation picked you up and made your brain race along." Books by him not previously mentioned are *Our Economic Society and Its Problems* (with Howard Copeland Hill, 1934), an "exceptionally realistic, practical and illuminating exposition," and *Redirecting Education* (with L. H. Keyserling, 1935), which includes his essay titled "Social Objectives in Education."

UREY, HAROLD C(LAYTON) (ū'rĭ) Apr. 29, 1893- Chemist; head of the Department of Chemistry, Columbia University, New York City

Address: b. Columbia University, New York City; h. 355 Highwood Ave, Leonia, N. J.

Harold C. Urey was the youngest man ever to receive the Willard Gibbs Medal of the Chicago Section of the American Chemical Society, one of the highest awards in the chemical world. He was among the youngest to be awarded a still higher honor—the highest, in fact, that a scientist can attain: the Nobel Prize in science. Both came to him in 1934 (he was 41 then), as a result of his work in discovering and isolating that "excessively rare atomic freak known as 'heavy' hydrogen." In the fall of 1940 Professor Urey again was in the news, with sulphur the latest in his now substantial list of heavy atoms.

So rare is the heavy hydrogen atom that it represents only one in every 5,000 atoms of ordinary hydrogen. So costly was it that the "heavy" water manufactured from it was valued at $75,000 a gallon. And cheap at the price; for by the method formerly tried, it would have required an amount of water equal to the weight of the entire universe to produce one cubic centimeter of the precious liquid. So important was the achievement that it started new lines of research in three major scientific fields: chemistry, physics, biology. The entire research staffs of several leading universities, after Dr. Urey's first announcement in 1931 that he had isolated the heavy hydrogen atom, devoted their study to "deuterium," as it was called. The scientific world seemed to agree that no other recent accomplishment had exerted so profound an influence.

While a large number of his colleagues busied themselves digesting the results of his researches, Dr. Urey went on inquiring into the nature of what he had produced. The heavy hydrogen atom itself made possible horizon-shattering experiments with heavy water. But he added new elements to the heavy list in rapid succession, so that by 1938 he was able to announce: "We now have [the heavy isotopes of] hydrogen, oxygen, nitrogen and carbon; atoms from which 75 per cent of all substances are formed." Producing the carbon atom required the use of two deadly poisons, and canaries were kept near the apparatus to give warning by their death if any of the fatal gas was escaping. Aside from labor and apparatus, the new material cost $400 an ounce to produce. It was pointed out that if the carbon in coal came at that price, it would set the householder back $12,800,000 a ton.

HAROLD C. UREY

In the fall of 1940, sulphur joined the heavyweight atoms, its heavy isotope being produced in a tube 150 feet long. Appropriately enough, this new addition, like heavy carbon, was of particular importance to research in biology and medicine; for when Dr. Urey first entered college he intended to make biology his field, and even today he declares that nothing is more fun for him than talking to "a bunch of biologists."

Columbia's "Nobleman" is a product of the Midwest and our rural schools. He was born in Walkerton, Indiana, on April 29, 1893, the son of Samuel Clayton and Cora Rebecca (Reinoehl) Urey. When he was only six his father died, and his early education was due to heroic efforts by his mother, later aided by his stepfather. Rural schools contributed twice to his training, for he taught in them from 1911 to 1914, after his family had moved to Montana.

In 1917 he emerged from the University of Montana with a B. Sc. in zoology, ready to take his place as a biologist delving into the secrets of life. But during the War the country needed chemists, and for the next two years he served the Barrett Chemical Company of Philadelphia in this capacity. He has been serving as a chemist ever since. In 1919 he returned to the University of Montana as instructor in chemistry, but left to take his doctor's degree at the University of California. After receiving this in 1923 he spent a year in Copenhagen, as American-Scandinavian Foundation Fellow, studying under the noted atomic physicist, Professor Nils Bohr.

On his return to America he became associate in chemistry at Johns Hopkins University, where he remained until he joined the Columbia University faculty as associate professor in 1929. In 1930 he added to an extensive bibliography of papers and articles a book, written with A. E. Ruark: *Atoms, Mole-*

UREY, HAROLD C.—*Continued*

cules and Quanta. The year (1934) that brought him the Willard Gibbs Medal and the Nobel Prize also saw him promoted to full professorship at Columbia, where in 1941 he still teaches. In 1939 he was appointed executive officer of the Department of Chemistry.

While teaching at Johns Hopkins, in 1926 he married Frieda Daum, who has passed with honors the course for which there should be a matron of science degree. She has won campus plaudits if not a diploma for gentle firmness toward a husband not always able to resist the lure of a three-story nitrogen machine wrapped in tinfoil. More than once, unable to tear himself away, he has pitched a cot in the laboratory and camped there for the night..

It is whispered, too, that Mrs. Urey is responsible for the fact that her husband has not a wider reputation as an absent-minded professor. Campus reporters claim that he takes endless ribbing about it from those who know, and is generous about sharing the laughs when he walks into a class and begins lecturing, only to discover that he is in the wrong room. The favorite tale is about the day he hurried to his office wearing mismated shoes. They felt so strange he thought they must need shining, but after deep concentration discovered that they were just different shapes. At noon he went home for lunch, delighted at the chance to set his feet right—and returned in the afternoon wearing the same shoes, only this time one of them was shined!

Home is not easy to lunch at now, because he lives in Leonia, New Jersey, in the academic colony of educators from Columbia and other city institutions. As the father of four children (Gertrude Elizabeth, Frieda Rebecca, Mary Alice and John Clayton), his interest in education extends to the public schools, and in 1938 he was elected a member of the Leonia school board. He probably ranks this honor high among the many he has received—and their name is legion. He has honorary degrees from three universities, was editor from 1933 to 1940 of the *Journal of Chemical Physics*, is member of enough illustrious academies and societies to fill a modest telephone book and was awarded the Davy Medal in 1940.

The recipient of all these honors—and in 1935 of the very first bronze "Columbia Lion" awarded by the affiliated Columbia Alumni Clubs of New Jersey—is of medium height, with square shoulders, round face, alert brown eyes and graying brown hair. He periodically breaks himself of smoking two packages of cigarets a day by chewing gum with the vigor that marks all his undertakings. When his jaws have had a six months' workout, he breaks himself of gum-chewing by reverting to cigarets. In addition to being an expert in the structure of atoms and molecules, thermodynamic properties of gases, absorption spectra, Raman spectra and the separation of isotopes, he has other interests.

Professor Urey feels himself as much a citizen as a scientist. Former chairman of the University Federation for Democracy and Intellectual Freedom, champion of Loyalist Spain, one of the scientists actively organized to further the objectives of the Committee for Defending America by Aiding the Allies, ardent in behalf of refugees from Fascist countries, he has never, in his efforts to widen the boundaries of knowledge, lost sight of the fellow humans whose domain he sought to increase. There is no hiatus between his convictions and his work. "A scientist can work best," he declares, "only when he is free to follow up what interests him. No dictator knows enough to tell scientists what to do. . . Only in democratic nations can science flourish."

He himself realizes that the scholar and researcher does not invariably share his emphasis. At the dedication of the New York Museum of Science and Industry in its new Radio City quarters, he voiced a direct challenge to economists and social scientists to secure a proper distribution of the products of science and industry. "It is one of the outstanding disappointments of scientific men that in spite of the accomplishments which I have briefly indicated, people still go cold, and they live in miserable tenements or shacks. . . We challenge our colleagues in other fields of work to undertake the task of bringing these things to the many who need them, and thus bring to them a more abundant life." A more abundant life: those words may be accepted as the goal, the gift, or the self-portrait of the speaker.

VALTIN, JAN (väl-tăN' yän) Dec. 17, 1905- Author

Address: c/o Alliance Book Corp, 212 Fifth Ave, New York City

Perhaps no book in recent years has received so much publicity as Jan Valtin's *Out of the Night.* Originally published in November 1940 as the anonymous autobiography of a former German secret agent of the Communist International, in February 1941 it was published in a revised edition as the selection of the Book-of-the-Month Club. By March 1941 it had sold some 347,000 copies, and was far ahead of any other non-fiction title in popularity. Critics called it "as vast in background, as moving, illuminating and humanly significant as a great novel", "an historical document of the first rank," a story that "casts a flood of light on the international underworld that has grown up in the shadow of the totalitarian dictatorships." It was condensed in two consecutive issues of *Life* (February 24 and March 3, 1941) and in *Reader's Digest* (March 1941); it was plugged on the radio; the New York *Times* wrote an editorial about it.

At the same time the publisher's claims to absolute authenticity had not completely convinced even some of the critics who praised it. The Communists, of course, were vehement in their denunciations. But even Lewis Gannett complained that "such a witness as 'Valtin' is suspect as any story-telling spy . . . it sometimes suggests the anti-Soviet researches of Isaac Don Levine." A few other critics had similar doubts, although most decided, with Vincent Sheean (see sketch this issue), that the harrowing story was, "in the main, true." On the other hand, Freda Utley, Bertram D. Wolfe and *Time* made no such reservations, and W. H. Chamberlin called it "the most valuable work of its kind since the publication of the reminiscences of the fugitive Soviet intelligence officer Krivitzky." Valtin himself admitted some time after its publication that he "put into the story some things that happened to other people, not in order to make them appear my life," but as "typical of the totalitarian way."

Valtin's real identity has by this time been officially established both by records and by his own admission, although at one time he insisted that his life would be endangered if his name were known. He is Richard Julius Herman Krebs and, according to San Quentin prison records, was born in Darmstadt, Germany on December 17, 1905. (In *Out of the Night*, however, Valtin says he was born in 1904, near Mainz, and at another time he mentions that he was 11 by the time of the outbreak of the First World War.) From that point until his arrival in New York his autobiography is almost all that is available for information about him.

In that he tells us that he was the oldest of six children, the son of a traveling employee of the North German Lloyd, and spent his childhood in China, Malaya, Italy and other foreign lands. The First World War came, and left a Germany that was starving and disrupted. Valtin's father, a Social Democrat, was a leader in the Kaiser's fleet in November 1918. The boy himself became a cyclist for the revolutionary sailors' committee in the Weser shipyards in Hamburg, and was with the Young Spartacists throughout the disturbances of the winter. When the movement in Hamburg and in Bremen was crushed, he escaped to sea. By 1923, after varied hardships and humiliations, he returned to Germany, and in May he joined the Communist Party as an "activist" in the maritime unions. During the next two years he traveled all over the world for the Comintern (the Communist International), distributing propaganda, fomenting strikes, engaging in sabotage; and in 1925 he spent a year at the Communist university in Leningrad.

JAN VALTIN

The year 1926 found him in California, where he was ordered by the Comintern to execute a "traitor." Neither willing to do it nor willing to disobey orders, he fumbled the job, and was sentenced to San Quentin for three years. (In the book, Valtin was arrested for striking a man "off a crowded street in broad daylight"; prison records, however, show that he was arrested for slugging a Los Angeles shopkeeper, Maurice L. Goodstein, a registered Republican who had lived in the United States since 1889, in an argument over the price of some shirts. There are also serious discrepancies in the two records of the trial.) His first year in San Quentin was spent in the prison jute mill. But life there was not entirely bad. He had not read a book since his fourteenth birthday; now he read Jack London, Conrad, studied English, French, Spanish, navigation, journalism, map making. (A great deal of this, at least, can be verified, for people at the University of California remember him as a promising former student.) By his second year he was prison librarian, by his third year a teacher of languages and mathematics. At the same time he had 30 articles published in the San Quentin *Bulletin*. Yet, he says, he managed to organize secret Marxist schooling circles, a library of revolutionary literature and an atheist league, and to maintain contact with the Comintern network outside. In the first days of December 1929 he left San Quentin, and

VALTIN, JAN—*Continued*

three days later boarded a steamer bound for Europe.

Back in Germany, Valtin was given steadily more important assignments; by 1931 he had been taken into the "inner circles of the Comintern" and was directing water-front operations in Western Europe. By the next year, at the time of the most violent struggles against the Nazis, he was working in Germany directly under Dimitrov (now General Secretary of the Executive Committee of the Communist International). It was February 1933 when Valtin was captured by the German secret police, the Gestapo; after four years of almost incredible horror in Nazi concentration camps he received orders from the Comintern to get himself accepted as a Gestapo agent. He was successful in his deception and was sent to do espionage in the Soviet Union, but his young son and his wife, Firelei, who years before had joined the Communist Party out of devotion to him, were left as hostages with the Nazis. Moreover, by this time he was thoroughly disillusioned with the Comintern, wanted above all to rescue his wife, and when he returned to working with the OGPU (the Russian secret service), his independent attitude made his comrades suspicious. Valtin escaped, fled. Soon he found himself denounced in the Party press as a Gestapo agent; as a direct result, in July 1938 Firelei was seized by the Gestapo. The book closes after Valtin has received word of his wife's death in prison, in July 1938.

Many critics have described Valtin's book as showing the gradual degradation of the Communist International from an idealistic instrument of world revolution into a tool of the Russian state, of the OGPU; but the picture which Valtin paints shows little but betrayal, deception and errors from the very beginning. On none of his visits to the Soviet Union did Valtin see anything but misery. Furthermore, "the professional revolutionists are, with one or two brief and minor exceptions, represented as lascivious, greedy and cynical men." Even Dimitrov, almost universally remembered as the hero of the Reichstag fire trial, was in Valtin's eyes a "large, soft, flabby-faced individual . . . dressed like a dandy and smelling of heavy perfume," a small-minded tyrant who had secretly collaborated with Nazi leaders in destroying the last shreds of Social Democracy and the trade unions, who at the trial itself had been promised acquittal in advance and merely put up a show of defiance to Goering (see sketch this issue). There is hardly a chapter in which Valtin does not mention his own doubts, his sudden urges to "get free" in order to go back to the sea, to earn his living by writing, or simply to lead a normal life with Firelei. Yet this is the alleged record of 20 years of fanatical devotion to a cause. The book takes its title from William Ernest Henley's *Invictus*:

> *Out of the night that covers me,*
> *Black as the Pit from pole to pole,*
> *I thank whatever gods may be*
> *For my unconquerable soul.*

A story published in *PM* makes Krebs seem even more mysterious than Valtin. Among other things, it quotes a friend of his, Robert Bek-Gran, as saying that he was merely one of seven Hamburg boys who became water-front terrorists, ran errands for various revolutionary societies, at times shipped out as sailors and finally became professional revolutionists. According to Bek-Gran, Krebs was never the "important Communist" that the book portrays, never on any "inner circle of the Comintern." One by one, he says, the seven youths escaped from Nazi prisons or were released and came to the United States; Krebs was the last. Early in 1938 he jumped ship at Norfolk and came to New York to get in touch with the others (Krebs himself at first denied both of these statements, but later said frankly that he "skipped ship" at Norfolk and came up the highways to New York); Bek-Gran helped feed him, and when in the fall of 1939 Krebs contracted pleurisy, Bek-Gran arranged for his hospitalization. Later, Bek-Gran says, he took him to his Connecticut home, where Krebs stayed until 1940 while working on the first draft of his novel, originally a novel of the sea, with neither an anti-Fascist nor an anti-Communist aim.

It is known that Krebs had already had two articles published in *Ken* under the name of Jan Valtin, and that in 1939 Eugene Lyons of the *American Mercury* accepted an article entitled *Communist Agent*. Finally Isaac Don Levine "discovered" Krebs, took him to his place in Danbury, Connecticut, staked him to $10 a week while working, and later did the "cutting" on *Out of the Night*.

There have been mysterious rumors as to Krebs' connections with the FBI, too. Said Leonard Lyons, in his (New York *Post*) gossip column: "Krebs, now being guarded by Federal men, has received permission to remain in this country in return for the assistance he is rendering the government." The reporter from *PM* who interviewed Valtin said he "mentioned the FBI frequently . . . made it clear that he had powerful friends here now." Evidently the Book-of-the Month Club's acceptance of *Out of the Night* was clinched only after A. A. Berle of the State Department had read it. On the other hand, Kenneth Crawford of *PM* announced "with complete assurance" that Krebs had received no immunity from deportation from any branch of the Government, and said he was deportable on five counts, the most important of which was the California conviction for assault in 1926. On March 13 it was reported that the Justice Department had actually begun action to deport him, although obviously there would be difficulty in finding a place to which to send him. On March 28 he was arrested and released on bond after questioning. In the meanwhile, subpoenaed by the Dies subcommittee, Krebs testified that "it is impossible for anyone to be released from a Nazi concentration camp unless he takes a pledge to serve the Gestapo," a generalization which brought protests from groups trying to aid refugees. Deportation hearings continued all this time, but nothing was settled. In August Krebs tried to secure a pardon from the State Advisory Board at San Francisco and William Allen White begged Governor Olson to pardon him, a request which was not granted until November 30.

Two published interviews with Krebs provide a fairly good description of him. His right ear isn't much good; he was slugged with a loaded club, he says. The upper teeth on the right side of his jaw are missing, too. But he is more than six feet tall, with wavy medium brown hair, "a good straight nose, a high forehead and, in general, excellent features," and shows no scars in spite of recounted whippings across the face with wet leather. "His almost childlike Teutonic face is placid, but every once in a while it clouds up and you see violence and turbulence underneath. His voice, too, is by turns quiet and stormy." He is said to show, in conversation, "something of the same remarkable memory that the book implies." Since his arrival in the United States he has been married—to 17-year old Abigail Harris. A son was born to them on July 26, 1941.

Krebs proclaims that he is high on the OGPU's list for assassination, and at his home in the country keeps not only a rifle but also a 200-pound Great Dane, trained "to bark at strangers and to go for the throat at a word." He also religiously hid his face from all photographers until March 1941; what made him change his mind about it all is not known. As for the Gestapo: "I am not so sure they want me—enough, that is, to do anything about it." A new book of short stories is due in February 1942 called *Bird in the River. Out of the Night* is all the "politics" that he is of a mind to write, although an article about the OGPU signed by Jan Valtin and entitled *Why Krivitzky Died* appeared in Hearst's New York *Journal-American* not long after the suicide. In other publications similar articles, as well as articles praising the United States and American democracy, have appeared since then, and their author has been in great demand as a lecturer and radio speaker.

VAN DOREN, IRITA Mar. 16, 1891- Editor

Address: b. Books, New York Herald Tribune, 230 W. 41st St, New York City; h. 6 W. 77th St, New York City

Editor since 1926 of the New York *Herald Tribune's* weekly review section, *Books*, Irita Van Doren holds the high respect of the book trade and book-reading public throughout the country. Her skilled editorial judgment, her efficiency and punctuality in getting news and reviews of the latest books to readers, and her genuinely democratic policy of selecting not only books but reviewers to represent all shades of tastes and opinions, have made *Books* invaluable to authors, publisher, librarians and booksellers, as well as to readers in general.

"Since *Books* is published as part of a large newspaper," Mrs. Van Doren says with regard to her editorial policy, "it must count among its potential readers people of every variety, taste and opinion (not all readers of the *Herald Tribune* are Republicans!)" And, since all kinds of books are published, "it seems only fair to review them from the point of view from which they are written, so that they will ultimately find the audience for whom they are intended. . . We try not to editorialize on book reviews, though our record in this matter is not always 100 per cent good, as it is often difficult to steer a clear course between an editorial attitude and a frank expression of opinion. However, we firmly believe that reviews should be signed, and have followed that policy from the beginning."

Annually *Books* sponsors, together with the American Booksellers' Association, a Book and Author luncheon series held in New York City. Mrs. Van Doren is in charge of selecting the speakers for these luncheons. Among the writers who have spoken at the series

Ben Pinchot

IRITA VAN DOREN

are Vincent Sheean, John Gunther, Jan Struther (see sketches this issue), Eve Curie, Carl Sandburg, Edna Ferber, André Maurois, Dorothy Thompson and Lin Yutang. When she became editor of *Books* Mrs. Van Doren inaugurated a staff of visiting critics as front-page features, which ran for five years. Since then the outstanding book of the week is usually front-page news. Another feature running currently is a weekly biographical-critical study, by Stephen and Rosemary Benét, of some well known contemporary writer. Also of special interest to readers is the chart of best sellers compiled from statistics sent in by booksellers from all over the country. *Books* reviews annually upward of 2,500 books, and nearly 300 reviewers write for the section each year. Each fall and each spring there is a special Children's Book Number, and three other special seasonal numbers annually.

An early interest in and love for books shaped Irita Van Doren's career from the beginning. She was born in Birmingham, Alabama on March 16, 1891, the daughter of John Taylor and Ida (Brooks) Bradford. Her mother's family was from Alabama, her father's lived in Florida; and when she was four the Bradfords moved to Tallahassee. Her father died when she was nine; and her mother was left with the problem of bringing up and educating four children: Irita, the eldest, her sister and two younger brothers. Mrs. Bradford turned her amateur skills to practical use. An accomplished musician, she gave music lessons. She was also a good cook, and the children helped her in putting up the many jars of preserves and jellies which were exchanged at the local stores for staple groceries. They made this work fun: all loved books and they took turns reading aloud on the big shady veranda while guavas and figs were prepared for the boiling kettles.

Irita Bradford attended the Florida State College for Women at Tallahassee, from which she was graduated in 1908—at the precocious age of 17—and in recent years, after the chapter was instituted there, given Phi Beta Kappa honors. She was editor of the college literary magazine, and became interested in going North to study through the influence of S. Marion Tucker, a professor at the college who was a Ph. D. of Columbia University. Accordingly she came in 1909 to Columbia to take her Doctor's Degree. While studying at Columbia she tried all kinds of jobs to earn her tuition, including a year as substitute teacher at Hunter College. Her special interests, in addition to English, were Latin and mathematics.

At Columbia she met Carl Van Doren, well known biographer and critic, who was then also a graduate student there. In August 1912 they were married. He was by this time a young instructor, and during the early years of their marriage Mrs. Van Doren helped him with the research on his first books. The young couple bought an old farm in West Cornwall, Connecticut, where they spent the long summer vacations. Three children were born: Anne (1915), Margaret (1917) and Barbara (1920). The marriage was dissolved by divorce in 1935.

From 1919 to 1922 Mrs. Van Doren was on the editorial staff of *The Nation*, from 1922 to 1923 advertising manager of that weekly, then in 1923 succeeded John Macy as its literary editor. When Stuart P. Sherman was made editor in 1924 of the *Herald Tribune Books*, he came on condition that she become his assistant; since he was interested chiefly in critical writing, he did not want to be responsible for all the details involved in getting out a publication. Under this arrangement Mr. Sherman confined his activities to a weekly critical article and left the running of *Books* largely to Mrs. Van Doren. On his death in 1926 she succeeded him as editor.

Irita Van Doren's unusually vivid, warmly engaging manner and her ready wit make many friends; her real interest in people, her generosity, her tolerant, liberal viewpoint, hold them. With a personality suggesting light over water quickened by a fresh breeze (there is deep water beneath, and the obtuse may well be wary), one is not surprised to learn that Mrs. Van Doren's hobby is sailing. As a girl she spent her summers on the Gulf of Mexico and learned to sail and fish. Now her idea of a real vacation is to sail with friends, cruising preferably along the ragged Maine coast.

Who's Who in America

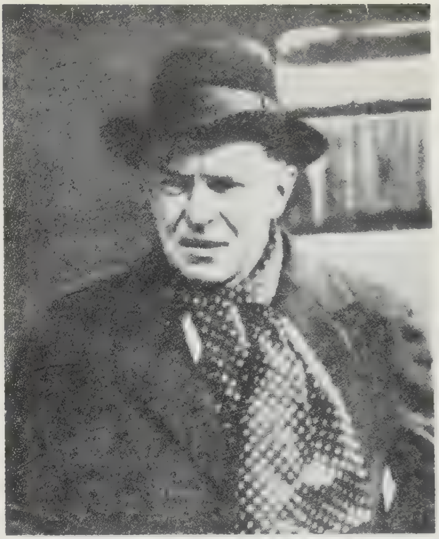
VANSITTART, ROBERT (GILBERT), 1ST BARON (vân-sĭt'ărt) June 25, 1881- British diplomat

Address: 44 Park St, Grosvenor Sq, W. 1, London, England

On June 25, 1941, having reached the age of 60, Baron Robert Vansittart of Denham ("Machiavelli-and-Soda") retired from his post as chief diplomatic adviser to the British Foreign Secretary. Since his appointment to that newly-created office in January 1938 the "magnificent anonymity" of the man who shaped British foreign policy throughout the '30s (and at whose house Cabinet Ministers and kings were happy to dine) had been more magnificent than ever. Between his visit to the United States in the autumn of 1938 and the announcement of his retirement one of the few references to his activities had been a note in *Newsweek* reporting that he was heading a new department entitled the British Council for Publicity Abroad and was attempting to combat Nazi and Fascist propaganda in other countries. After the Second World War his name was mentioned even less frequently, at least until the publication of his *Black Record* early in 1941. It was not until after his retirement that Baron Vansittart of Denham (he was included on King George VI's June honors list) announced that he could "speak plainly."

Eugene C. Young, long-time foreign editor of the New York *Times*, commented on this comparative lack of publicity while Vansittart was still permanent Under-Secretary of State for the Foreign Office. Going through the *Times* morgue, Young found fat envelopes on Simon, Hoare, Eden (see sketches 1940 Annual), Baldwin, almost nothing on Vansittart—"no speeches, no interviews, no exploitation." "Yet," he continued, "I knew this person, in the time under review, had been the real stabilizing power in the London Foreign Office, the one who always had to be consulted when great decisions were to be taken."

The bare facts of Vansittart's life are available enough. He was the eldest son of the late Captain Robert Arnold Vansittart, master of the estate of Huxley and North Cray, himself without a title but with ancestors and close relatives who held high positions in the British Army and Government. Young Robert was educated at Eton and entered the diplomatic service as an attaché in 1902, when he was only 21, after having presented satisfactory references and passed a rigorous examination. The next year he was in Paris, training at the Paris Embassy at a time when France and Britain were quarreling over Africa. A French writer who knew him at the time described him as a good companion, sportsman, linguist who already gave the impression of knowing everyone and everything and of having read every book written. To all appearances the young diplomat was chiefly interested in poetry (particularly that of Henri de Régnier) and the theatre—he himself had written a French play, *Les Pariahs*, which had had a 100-night run at the Théâtre Molière—and yet there was a suggestion of reserve about him.



The New York Public Library
LORD VANSITTART

He was popular with the French. And he rose quickly in the diplomatic service: in 1905 became third secretary, in 1906 earned the decoration of the Royal Victorian Order for unrecorded reasons, and a year later left Paris to spend seven years in the Orient. He was in Teheran in 1907 when Britain was struggling with Russia for control of Persia; the following year he was appointed second secretary; and in 1909, when Britain was trying to get a firm grip on Egypt, he was sent to Cairo. The First World War found him assistant clerk in the Foreign Office, and in 1915 he turned up in Stockholm to try to block Swedish cooperation with the Germans in letting them get supplies from the outside.

After becoming first secretary in 1919 and returning to Paris to collaborate with Sir Eyre Crowe in the peace negotiations and the adjustment of Anglo-French relations, he came to the attention of the newly-appointed British Foreign Secretary, "mammoth, crusty" Lord Curzon, "ardent imperialist and nationalist." Appointed a counselor, he served as Lord Curzon's private secretary until his retirement—from 1920 to 1924—and then became head of Whitehall's American department. In 1928 Prime Minister Stanley Baldwin took him as his principal private secretary (his diplomatic rank by this time was Assistant Under-Secretary of State); Ramsay MacDonald kept him as his own secretary; he accompanied the Prime Minister to the United States and Canada.

It was 1930 when Vansittart was appointed permanent Under-Secretary of State for Foreign Affairs. As one writer phrases it, the man who holds this position must have proved that he is "sound" —"no idealist and no internationalist . . . one who has dedicated his life and career to the country and the Empire and therefore one who will always think in terms

VANSITTART, ROBERT, 1ST BARON
—Continued

of their interests. These men are hard-headed, practical, and, because of their long experience in dealing with diplomatic maneuvering, at least gently cynical realists."

Indeed, Vansittart's was a position far more important than most Cabinet posts, for "no party government could remove him if he personally behaved himself and then it could act only with the consent of the King. He was above party, the acknowledged guardian of the policy and security of Britain and the British Empire . . . the shepherd of Prime Ministers and secretaries." The files of the permanent organization, full of carefully collected facts on every imaginable subject (the permanent Under-Secretary has the British Secret Service under his direct control, and disburses thousands of pounds of the Foreign Office's "secret funds") are consulted whenever any important international issue arises; the King, who must be consulted on all such affairs and give his approval to every Cabinet decision, every important note to an ambassador or minister, also depends chiefly on the permanent office for his decisions.

It was said that Sir Robert was one of the three men who really ruled Britain, and even Karl Abshagen wrote: "It would be difficult to exaggerate the influence this highly intelligent, finely cultured, versatile man has had on his Parliamentary chiefs, particularly those who, like MacDonald and Henderson, were never quite up to his social assurance and his Eton manners, but also on Mr. Baldwin, whose complaisance and irresolution in international affairs he easily parried with his acknowledged superiority in expert knowledge and detailed information! He had, indeed, and probably still has, fuller and more intimate information (though colored and one-sided) in every field of international policy than any other man in England."

When MacDonald visited President Roosevelt in 1933 to arrange for American participation in the World Economic Conference, Vansittart, who in 1931 had been knighted as commander of St. Michael and St. George, was by his side in all important negotiations. He was present at the Stresa Conference; in 1935 he drafted the Anglo-German naval treaty (at which the French cried "Treason!"); at the time of the Ethiopian crisis he initiated the policy by which the Government agreed to sanctions in order to win an electoral victory, afterward made them ineffective and dropped them; and at the Anglo-French Conference on Ethiopia in December 1935 he was constantly with Sir Samuel Hoare while the latter was outlining to Laval (see sketch 1940 Annual) the scheme by which Italy would get more than half of Abyssinia.

When the terms of this last plan were prematurely revealed and public indignation aroused, a great part of the press felt that Hoare was "taking the rap" for Vansittart. Vansittart even offered to resign, and for a while the general impression was that he had retired, but the winter of 1936 found him in Berlin, attending the Olympic games and incidentally persuading Germany that she must not demand territorial concessions from Spain for aiding Franco. Then in July 1937 *Newsweek* reported that he was negotiating with the Royalists among Franco's forces, evidently hoping through them to wean Franco away from both Mussolini and Hitler, and at the same time was wooing the Nazis with an eye to having them help Mussolini less and less. Apparently this was all part of a general plan: "Britain . . . wants Franco to win, but cannot openly support him; and wants Mussolini to lose, but cannot afford to see him withdraw from Spain."

At about the same time the late Robert Dell was writing indignantly in *The Nation* that Anthony Eden, then Foreign Secretary, was being allowed "to say things that he himself believes, or at least half believes," only in order "to deceive people about the real nature and aims of British policy." Dell also accused the permanent Under-Secretary of having tried to break up the Little Entente and the Balkan Entente and of wanting to "reform" the League of Nations into a debating society without coercive powers against an aggressor. According to this writer, Vansittart's aim was to keep Britain aloof from all pacts of mutual assistance east of the Rhine and to disengage France from any such commitments, under the illusion that by the time Hitler had "gone east" England would be strong enough to make an alliance with the Nazis on her own terms and to force France to come into the Anglo-German combination as a second-class power. To back up this interpretation Dell produced evidence that Vansittart had been hostile to the Franco-Russian alliance, had supported Belgium when she broke her British and French alliance, and had encouraged the Henlein Party in Czechoslovakia and Yugoslavia's rapprochement with Italy and Germany. Others have been equally certain that Vansittart's views were by that time strongly anti-German, however, and that he was merely unable to convince the appeasers of the dangers inherent in their policies.

After Chamberlain became Prime Minister in 1937 it was given out that Vansittart had retired, although it was also hinted once more that he might become next Ambassador to the United States. Then in January 1938, after Chamberlain had sent Lord Halifax (see sketch 1940 Annual) to Berlin against Vansittart's will and the mission had failed, the "temporary eclipse of his influence" apparently came to an end. He was elevated to the title of Knight Grand Cross of the Most Honorable Order of the Bath, and a special post was created for him: "chief diplomatic adviser to the Foreign Office," with the duties of "advising the Secretary of State [still Anthony Eden] upon all major questions of policy concerning foreign affairs . . . representing the Foreign Office on any occasions, whether at home or abroad."

He remained in his quarters and kept the same salary (3,000 pounds a year), and although the intimate direction of the experts of the permanent office passed out of his hands to Sir Alexander Cadogan, Robert Dell once again mourned: "In practice he will be a permanent Foreign Secretary responsible only to his nominal superior, who will be obliged to cover him and take the responsibility for his policy . . . more than ever . . . withdrawn from the control of Parliament and public opinion. . . The policy of an understanding with the Fascist powers is likely to be pursued more consistently and perhaps more openly than hitherto."

Nevertheless *Fortune* suggested that Chamberlain "politely kicked Sir Robert Vansittart into an upstairs job that effectively prevents him from raising awkward questions about foreign policy." Circumstances seemed to show that he was in conflict with both Eden and the appeasers, and it seems certain, at least, that his disillusionment with the Nazis considerably preceded Chamberlain's. Others since then have indicated that his chief function was the direction and coordination of British propaganda abroad, but no one seems to have known the exact extent and nature of his activities from that time until his retirement in June 1941. Earlier that year, however, he had published a tract called *Black Record* which caused violent controversy in Britain because of his insistence that the British were fighting not only Hitlerism, but the entire German people, who had always been bloodthirsty.

In 1921 Vansittart married Mrs. Gladys Robinson Duff, an American, the daughter of General William C. Heppenheimer. She died in 1928, leaving one daughter, and in 1931 he married Lady Colville—"Cricket"—Baker, the daughter of the late Herbert Ward. He is tall, broad-shouldered, today "as nervously active . . . as at 36," still an expert tennis player. His face, which "is inclined to look rather gloomy until he smiles," seems "to hide his real feelings at times and leads his enemies to say he is 'faintly sinister.'" He speaks and writes nearly every language, among them Arabic, French and German; three novels and four volumes of his verse have been published; one of his many published plays in English, *The Cap and Bells,* has been produced; and he was the author of much of the dialogue and lyrics of Alexander Korda's *The Thief of Bagdad* and of most of the second half of the film, *Sixty Glorious* years.

VAN WAGONER, MURRAY D(ELOS)

(văn wăg′ŏn-ēr) Mar. 18, 1898- Governor of Michigan

Address: b. Executive Office, Lansing, Mich.

MURRAY D. VAN WAGONER

The burly, decisive Governor who has piloted the storm-tossed relations between Michigan capital and labor in 1941 has yet to be classified by either side as a conservative or a radical. Murray D. Van Wagoner heads an industrial state whose chief executives almost invariably become labeled one way or the other when they attempt to referee labor differences among most laborites. Thus Frank Murphy became the bane of Big Business, while his successor, Bible-spouting Luren D. Dickinson, gained the reputation of an unmitigated reactionary.

Perhaps the difficulty in classifying him is because Van Wagoner has used the big stick with cool impartiality. However, this has not been his only weapon in adjusting industrial differences. He has employed cajolery, persuasion and Jovian calm, and has even resorted to bluster and wrathful threats when the occasion seemed to warrant. Whether because of or in spite of these methods, Van Wagoner larity is unrivaled with trade-union leaders and corporation heads alike, a fact that augurs well has achieved amazing success. Today his popu- for the Governor's political future.

Van Wagoner, a heavy-set, broad-shouldered, ex-collegiate gridiron star, impresses people with his blunt energy and robust laughter. He was born March 18, 1898 on a farm near Kingston, Michigan, of English and Dutch ancestry. His father was James Van Wagoner and his mother Florence (Loomis) Van Wagoner. In 1900 his family moved to Pontiac, where Van Wagoner attended the public schools and early displayed indications of aggressiveness and leadership. At the University of Michigan,

VAN WAGONER, MURRAY D(ELOS)
—Continued

which he entered in 1917, he took a civil engineering course, specializing in highway engineering and highway transport because the family car always got stuck in the mud when he went riding with the girl he later married. She was Helen Jossman, who had been in his third-grade class at Baldwin School. Young Van Wagoner, smitten from the outset, bribed a fellow-pupil to exchange seats with him so that he could be near her. They were married in 1924; their two children, both girls, are Ellen Louise and Jo Ann.

Van Wagoner's college schedule was rather crowded: he worked after classes until midnight in a garage and played on the football team during his freshman and part of his sophomore year, until a knee injury put an end to this part of his career. He spent the summers working at the Pontiac Motor Company in order to earn his way through the University. He was vice-president of his engineering class, president of a university club and a member of three engineering clubs. After receiving his degree in 1921 he secured a position with the State Highway Commission as resident construction engineer and division bridge engineer.

For a while after he was married Van Wagoner worked with a Pontiac engineering firm and then hung out his shingle for his own engineering company, which existed for seven years. His first political venture occurred in 1928 when he ran for county surveyor on the Democratic ticket, following the precedent of his father, James Van Wagoner, who had served as county treasurer for a single term. His father's accomplishment had been no mean feat for an active Democrat in rock-ribbed Republican Oakland County. But Murray Van Wagoner didn't fare so well: he was defeated.

Active in Pontiac civic affairs, Van Wagoner was persuaded to run for county drain commissioner in 1930. Success crowned his campaign, the major plank of which was a promise not to build drains on tax-delinquent property, thus saving money for the taxpayers. He was the first Democrat in 20 years to win the post and was re-elected by a considerable majority two years later. His achievement in cracking the iron Republican façade earned him the unanimous nomination of the 1933 Democratic State Convention for the position of state highway commissioner. In the April election he defeated the Republican nominee, carrying his own county by 15,000 votes. He was the first Democrat to hold this post, and when his term expired four years later in 1937 he was re-elected.

In 1940 Van Wagoner entered the primaries for Governor. A favorable situation had developed for the Democrats because of a split in the opposition party. The aged, eccentric Governor Dickinson, seeking re-election, was not a popular choice even in his own party and was opposed by seven aspirants. He suddenly strengthened his position with a show of boldness, however: he broke with Frank McKay, state Republican boss. The defeat of Dickinson by 131,391 votes in the general election was a personal tribute to Van Wagoner, since the results showed voters had cut a swath across party lines to place him in office. The Republican Party won the Michigan electoral college votes, and Republican Senator Arthur H. Vandenberg defeated his Democratic opponent by a comfortable margin. There were Democrats in some minor offices, but the new Democratic Governor found himself confronted by Republican control of both houses of the State legislature.

On retiring, Governor Dickinson sent a list of 58 appointments to the Senate for confirmation. Van Wagoner, hearing of it, sent his own list so that it reached the Senate floor simultaneously with the Dickinson list. He thus forestalled a last-minute Republican coup. Making an appeal for unity, Van Wagoner received unexpectedly gratifying cooperation from the GOP legislature. His program for reducing the state deficit, for Civil Service, for state salary adjustments and for social legislation was approved to a great degree by the opposition.

Van Wagoner's tenure was crowded with exciting events from the start. He had scarcely been inaugurated when one of the most momentous strikes in the history of the state threatened to tie up all gas and electric power in southern Michigan. This was when members of the International Brotherhood of Electrical Workers, an A F of L affiliate, demanded higher wages and preferential shops in the 900 Southern companies of the Consumers' Power Company. Van Wagoner warned that he would not tolerate a stoppage of power, saying, "If you stop it, I'll throw a switch and start it again. Remember, boys, I'm an engineer." Threatening that if the strike occurred he would declare a state of emergency, the Governor requested the legislature to remain beyond its regular session for the possible declaration of such emergency. Meanwhile the Michigan 30-day "cooling off" law was invoked to delay the walkout, and a special three-man mediation board labored to settle the dispute.

Having weathered one storm, the new Governor faced a troublesome future. Militant labor had made the greatest strides in years and was making itself heard. The next month the Ford Motor Company, long regarded as the bastion of the open shop, flared into industrial conflict. Earlier, a strike had been averted temporarily when the three-man mediation board, certifying that the plant had defense orders, succeeded in invoking the 30-day delay. At the expiration of this period mass picket lines ringed the vast auto empire, and there were reports of violence almost hourly. Van Wagoner spent 36 hours on the telephone urging, imploring and bullying both sides to adjust their differences. He asked Washington to withhold attempts to have the dispute handled by the Defense Labor Mediation Board until all local conciliation facilities were exhausted. Finally, on April 8, Philip Murray (see sketch this issue), president of the CIO, flew to Detroit to confer with Harry Bennett, Ford Personnel Manager, and on April 10 United Auto Workers Union president R. J. Thomas on behalf of his union accepted as a basis for settling the strike a three-point formula presented by Van Wagoner. The proposal included reinstatement of discharged members and arbitration of the grievances of others; mutual consultation before a labor board election to decide which union would represent the workers; and the promise that both labor and management would do the utmost to expedite the election. Thomas declared to Van Wagoner, "I think you have done as fine a job as anyone in the country could" and, in appreciation, withdrew the picket lines from the River Rouge, Highland Park and Detroit Lincoln plants.

After some additional negotiations a CIO victory followed, and auto workers of the sprawling plants in Michigan and of the 34 assembly plants throughout the country returned to work. This was the first time in 38 years of Ford history that the company had dealt with a trade union.

On the heels of the Ford settlement, however, trouble developed at the General Motors Michigan plants, affecting virtually all the company's units throughout the country. As the Governor once again prepared to swing into action, he was checkmated by the Republican-dominated State Mediation Board which invoked the "cooling-off" law without consulting the Governor. Summoning the board before him, Van Wagoner castigated what he called the "hostility and obstructionism" of the two Republican members of the three-man board and demanded their immediate resignation. The two Republicans refused to resign, but Van Wagoner nevertheless appointed two other members in their stead. The new board was successful in staving off a strike.

The next problem which confronted Michigan's Governor was that of putting to work in defense jobs thousands of Detroit factory workers left idle when their plants began the belated switch to all-out defense production. He asked that Army schedules be advanced on items that could be made right away, so that defense orders might flood Michigan during the first half of 1942. He also made plans for a program of post-War building, while vetoing immediate appropriations for the same purpose.

With all his achievement in the field of labor relations Van Wagoner is still the genial, popular, chain-cigar-smoking executive who first confounded the Republicans in Oakland County. He lives with his family in a moderately-large house in Lansing (Michigan boasts no executive mansion), and his close friends call him "Pat." He likes a friendly game of poker and golf, likes to play with the children and to go bowling with his wife. One of his major interests remains highway construction and transportation. He was formerly president of the American Road Builders' Association, was an official delegate to the International Road Congress at The Hague in 1938 as an appointee of President Roosevelt, and is now a member of a national committee on street and highway improvements.

VOORHIS, HORACE JERRY *See* Voorhis, J.

VOORHIS, JERRY (vōōr-ēz) Apr. 6, 1901- United States Representative from California

Address: b. 138 House Office Bldg, Washington, D. C.; h. R. F. D. #1, San Dimas, Calif.

Jerry Voorhis, who wears old clothes, is usually pictured smoking a straight-stem pipe and looks even younger than his not-very many years, would never be chosen to sit for Portrait of a Typical Congressman. His career hasn't followed a typical pattern, either.

Washington Press

JERRY VOORHIS

Horace Jeremiah Voorhis was born in Ottawa, Kansas on April 6, 1901, the son of Charles Brown and Ella Ward (Smith) Voorhis. His father was a very wealthy man, but Jerry was educated in the public schools of Kansas and Michigan until he went to Yale, where he received his B. A. in 1923. He is a member of Phi Delta Kappa and of Phi Beta Kappa. Following his graduation, he traveled in Germany on a good-will tour as a representative of the Y. M. C. A., and then returned to the United States to work as a cowboy in Wyoming, to handle freight on the railroads, and to work in a Ford assembly plant in Charlotte, North Carolina until 1925. In November 1924 he married Alice Louise Livingston of Washington.

From 1925 to 1926 Mr. Voorhis taught at the Allendale Farm School in Lake Villa, Illinois, and during the following year served as director of Dray Cottage at the Home for Boys in Laramie, Wyoming. It was 1928 when he became headmaster and trustee of the Voorhis School for Boys in San Dimas, California—where, in Mr. Voorhis' words, 60 underprivileged boys "make their home, learn farming, printing, mechanics and a number of other vocations; go to school; publish a newspaper; organize athletic teams; and learn from living the fundamentals of Christian citizenship." That same year he received his M. A. degree from Claremont College, California.

In the days before the New Deal, Mr. Voorhis was a registered Socialist, and he lectured on labor problems at California's Pomona College from 1930 until he resigned in 1935, also contributing to *The World Tomorrow* and similar publications. In those days he advocated nationalization of both industry and land—although not the organization of collective farms or anything of the sort. It was 1934 when he first ventured into politics as the Democratic candidate for the California State Assembly, but he was not elected to public office until 1936, when he ran for Congress on the Democratic ticket and was elected by a majority of 8,589. Mr. Voorhis explained his former Socialism by saying: "That was the only way I could vote my protest against the reactionary leadership of both major parties. I was never a full-fledged Socialist, and now Mr. Roosevelt has made it possible for me to be a Democrat with a clear conscience."

He seemed to be a full-fledged New Dealer, at any rate. In Washington he soon became known as a member of the group of Congressmen, most of them young and many of them new to the House of Representatives, who fought against relief cuts, insisted that the problem of unemployment be faced, eschewed "Red-baiting." He called one action of the Dies Committee "reprehensible," and after his re-election in 1938 by a much more substantial majority than before, urged that the Committee be discontinued and its work be carried on by one of the regular committees of the House. Even at that time, however, he gave it as his opinion that the business of every recognized political party or group in the country should be required to be an "open book"—the names of its members known—and advocated the deportation of aliens who preached giving fealty to any foreign government. In February 1939 the late Speaker Bankhead appointed him to the vacancy on the committee which he had so frequently criticized.

The only results could be either a change in the methods and purposes of the Dies Committee or in those of Mr. Voorhis. Most people seem to think that there has been a little of both. According to *Time*: "Having come to check and scoff, the new member remained to respect the work if not the chairman of the Committee." In 1939 he refrained from voting on the much-criticized action of the Committee in publishing the membership list (mailing list, according to some sources) of the American League for Peace and Democracy. On the other hand, there is reason to believe that the unusually temperate tone of the report of the activities of the Dies Committee published in January 1940 was partially his work.

In November 1940 Jerry Voorhis was reelected to the Seventy-Seventh Congress with a majority of 44,000. There he is a member of the Flood Control, the World War Veterans'

Legislation and the Public Lands and Rivers and Harbors Committees. He is also a lay reader in the Episcopal Church—he takes his religion seriously—and a member of the Democratic State Committee and of the American Federation of Teachers. He "talks more like Harvard than Yale." As for hobbies, his, he says, are boys (he has two of his own, Jerry Livingston and Charles Brown, as well as a daughter, Alice Nell), baseball and American history. In 1938 the plant of the Voorhis School for Boys was given to the State of California as an outright gift by the Voorhis family, and it is now used as a vocational school and branch of the state university.

DR. SERGE VORONOFF

VORONOFF, SERGE (vô′rô-nŏf sĕr-gē′) 1866- Surgeon; specialist in surgical grafting procedures

Address: b. c/o Alliance Book Corp, 212 Fifth Ave, New York City

The Russian-born surgeon who back in the '20s captured the popular imagination by his use of grafted animal glands for human rejuvenation was, in the autumn of 1940, a refugee to the United States from occupied France. Dr. Serge Voronoff arrived with his wife (he married a pretty nineteen-year-old Viennese girl, Fraulein Gertrude Schwetz, in 1934), planning to lecture here on his theory of grafting monkey thyroid glands on backward children and hoping to secure a laboratory and monkeys so that he could carry on the research in cancer serum which was interrupted by World War II. "The monkey," according to him, "is a warehouse of spare parts for the whole human body."

No shy, cloistered savant, Dr. Voronoff seems more at home in a *salon* than in the laboratory. Erect, impeccably groomed, looking 10 or 15 years younger than his 70-odd years, he kisses women's hands upon introduction, smokes expensive Turkish cigarets and rents hotel rooms by the suite. When asked whether he has subjected himself to his rejuvenation treatment he replies: "This is my professional secret. If you think I don't look too bad, then you must reach your own conclusions." Seeing him, there can be no doubt that he is a wizard, that he is, in fact, Mephistopheles in person: only the forked chin-beard is necessary to complete the resemblance. "I have produced the super-sheep. . . Some day I may be able to produce the super-man," he said years ago. One believes him.

He began his gland-grafting experiments in 1919. A graduate of the University of Paris, a Doctor in Medicine of the Faculty of Paris and surgeon in chief of the Russian Hospital, during the First World War he was also made surgeon in chief of Military Hospital 197. He was able to carry on his experiments without cash by means of the cooperation of the French Minister of Agriculture. At first he used rams instead of human beings, grafting the sex glands of apes and chimpanzees into their bodies in an attempt to stimulate the flow of sex hormones, checking the blood groups of donor and recipient. Afterward he felt safe in using human "guinea pigs." He began to make sensational claims. The normal life span of man was 140 years, according to this distinguished surgeon, and the Elixir of Life might not prove such a fantastic dream after all. Although conservatives deplored this extravagance, he received signal honors from the French medical profession: in recognition of his success the destructive hunting of monkeys was actually forbidden in French colonial possessions, and he was presented with the Légion d'Honneur.

Because of the wide publicity given to his rejuvenation experiments some years ago, particularly by Gertrude Atherton, few people in the United States connect him with anything else. This particular operation took place before the age of 60, and resulted, it was claimed, in increased brain power and increased physiological vigor for a period of five or six years. (In the case of a woman, however, this was a major rather than a minor operation.) It was flippantly rumored that four San Quentin convicts who were subjected to it, goat rather than monkey glands being used, demonstrated the potency of their new tissues by vaulting their prison walls and escaping! But animals as well as human beings could be rejuvenated. According to Voronoff, "one of my most discussed experiments of this kind was the rejuvenation of a race horse, named

VORONOFF, SERGE—*Continued*

Don Zuniga, which a few years ago, after being rejuvenated, came in first in the Autuil steeplechase." The Italian Government utilized his discoveries in horse-breeding, and in Algeria Voronoff has improved a stock of sheep.

But the grafting of animal glands was not limited to purposes of rejuvenation. Grafting opened up wide possibilities for curing the innumerable ills to which mankind is subject, and Voronoff's most recent work has been concerned with remedying thyroid deficiency—particularly in children—by the grafting of monkey thyroid glands. He has toured all over the world, giving demonstrations for innumerable medical institutions. Once during a visit to the Far East he was agreeably surprised to find on the shelves of the bookshops in the principal Hindu towns a Hindu translation of his books (treatises on surgery, gynecology, the grafting of skin, bones, ovaries, thyroid and interstitial glands, etc.). "Hindu doctors," he said, "had a perfect knowledge of my operative methods. They had themselves discovered several interesting improvements which they explained to me in a most learned fashion."

In France Voronoff was director of the biology laboratory at L'École des Hautes Etudes, and director of experimental surgery of the Station Physiologique of the College de France at Nice. His wife worked with him as laboratory assistant. He came with her to the United States in May 1939 on his way to lectures and conferences in South America and Mexico, but returned to France in December of that year to become an executive in the medical service of the French Army, in charge of a special section on bone and skin grafting at the chief military hospital in Cannes. At Menton he also had a laboratory and a monkey farm with 120 monkeys, where he most recently had been carrying on research in cancer serum. This project was one of the casualties of World War II, for in the French-Italian fighting his laboratory was destroyed, and the Italians took his monkeys into the cold mountains, where he feared they met an uncomfortable death. Shortly afterward Voronoff and his wife fled to Portugal, and thence to the United States, and in January 1941 the Italian Government seized all his property in Italy.

Among Voronoff's books which have been translated into English are: *Rejuvenation by Grafting* (1925); *Conquest of Life* (1928); *Love and Thought in Animals and Men* (1937). He is also co-author of *Testicular Grafting from Ape to Man* (1933), and one of the contributors to *Sidelights from the Surgery* (1938). *From Cretin to Genius* was published in the United States in November 1941.

VOROSHILOV, KLEMENTII (EFREMOVICH) (vō-rŏ-shē'lŭf clā-mĕn-tē yf-rām'-ō-vĭtch) Feb. 3, 1881- First Marshal of the Union of Soviet Socialist Republics

Address: The Kremlin, Moscow, Russia

Marshal Klementii Efremovich Voroshilov, called "Clim" by the Russians, has often been mentioned as Stalin's possible successor. On May 8, 1940 he was relieved of his duties as People's Commissar of Defense and appointed assistant chairman of the Council of People's Commissars, of which he was already a member, and also chairman of the Defense Committee under the Council. Stalin himself assumed direct administrative control of the Red Army after the War with Germany began, and Voroshilov was sent to the fighting front. He organized the defense of Leningrad, then, after Stalin reorganized Russia's western front command, was set to forming great new armies from raw conscripts to take their stand beyond Moscow. In December 1941 it was reported that he had been appointed commander of Soviet forces in the Far East; the Russians "wanted the front well-protected."

Klementii Voroshilov was born in Verkhnii, the District of Yekaterinoslav, in the Ukraine. His father, Efrem, was a railroad watchman; his mother did housework by the day. Until he was 12 years old Klementii was completely illiterate. He was only seven when he began to work in a coal mine twelve hours a day for ten *kopecks* a day, from time to time also assisting in pasturing the village herd and sometimes even going begging with his sister —a more or less respectable profession in Czarist Russia. When he was 12 he attended an agrarian lower school and, after learning to read and write and not much more, joined the workers at a metallurgical plant in Lugansk in 1896. He was a born revolutionary, although he wasn't yet a member of the Social Democratic Party: when only a boy he was arrested for refusing to take his hat off to an officer. Soon he was reading and circulating pamphlets among the workers.

There followed years of political involvement. He organized his first strike in a steel factory in 1899, and was arrested. Later that year he led another, and was blacklisted. He had to leave Lugansk. For the next three years he was "on the run," using aliases—among them "Plakhov" and "Volodka." Finally in 1903, the year he joined the Social-Democratic Party, he returned to Lugansk. He organized fighting units among the workers of the Hartmann Works there in order to defend their meetings against the raids of the Cossacks, and was elected president of the group of Workers' Deputies. Once more he was arrested, but the threat of a general strike forced the police to free him. He ran a revolutionary printing plant and smuggled out papers in the sleeves of his sheepskin coat.

When the Social-Democratic Party split into two factions—the Bolsheviks and the Mensheviks—Voroshilov was on the Bolshevik side. All through 1905 Russia saw "a succession of strikes, street-battles, peasant risings and military mutinies." Some of the most violent fighting took place in Lugansk, where Voroshilov had organized his fighting squads. When the revolt was crushed he supervised the burying of arms and ammunition there, thinking they would be wanted again, and in 1906 went to his Party's conference in Stockholm, where he saw Lenin for the first time. "That remains the most vivid impression of my whole life," he said later. He remained Lenin's supporter, and at the same conference met another of his supporters—the 27-year-old Stalin. He saw both of them again the next year, at the conference in London.

This was the period of the Duma, and trade unions had been legalized. Voroshilov, as chairman of his union, had reorganized his fighting squads into the Red Guard. His arrest was ordered, and finally he was captured and sentenced to three years in Archangel. He escaped, went to Baku, where he was to remain for several years, and immediately made contact with Stalin. When the First World War broke out Voroshilov forged some documents in order to avoid military service, found a job in a St. Petersburg munitions factory and began spreading sedition. He helped to bring the munition-workers out on strike in 1917 to force the abdication of the Czar, was one of a reception committee which welcomed Lenin when he arrived there on April 3, and shortly afterward returned to his old position in Lugansk in order to secure a Bolshevik majority in the Soviet there and overthrow the Provisional Government. It was November 7 when the Bolsheviks seized power in St. Petersburg, and he was sent there as a delegate from his Soviet. He was put in charge of the Defense Committee and became police prefect of the city, working with the Cheka, until the Germans began invading the Ukraine. Then he went back once more.

By 1918 Russia was being invaded not only by the Germans but also by the Allied Armies. As commander of the 5th (then the 10th) Ukranian Army Voroshilov was "successively—and sometimes almost simultaneously—general, political propagandist, engineer and traffic controller." He was appointed commander in chief of the Red forces at Tsaritsin (today Stalingrad), with Stalin his Political Commissar, and held the city against Krasnov's forces. After quarrels with Trotsky, then Minister of War, Voroshilov was transferred to the Ukraine. He became, early in 1919, People's Commissar for the Interior, commander of the military region of Kharkov, and commander of the 14th Army. He created and commanded the First Cavalry Army whose advance through the Ukraine did so much to drive out the invaders then, and, in 1920, the Poles. Although the Russians were eventually defeated by Pilsudski, he brought his army back intact. Voroshilov served again in the Ukraine when General Wrangel was driven into the sea, in 1921 suppressed a mutiny at Kronstadt, and later that year served against the Chinese in Manchuria. It was also in 1921 that he became a member of the Executive Committee of the Communist Party.

Sovfoto

KLEMENTII VOROSHILOV

From 1924 to 1925 Voroshilov was commander of the Moscow military district, in 1925 was appointed People's Commissar for Defense and President of the Revolutionary Military Council of the U. S. S. R. Since 1926 he has been one of the regular members of the Politburo, central directorate of the Soviet Union. In his military capacity (until recently his department was responsible for the Navy and air force as well as the Army), he organized the general staff, mechanized the forces of the Red Army, built up a large air arm, encouraged such novelties as a parachute infantry, and set up two separate and entirely self-sufficient Far Eastern armies.

Voroshilov is supposed to have a genius for strategy and tactics and an intellectual grasp of military problems as well as great physical energy. His avowed aim was to make the Soviet Union so strong that it could resist military attack from any combination of powers, and he always said that no war against the Soviet Union would be fought on Soviet territory. He believes in education, including political education, for the men of the Red Army. According to John Gunther (see sketch this issue), he was "not a very strict disciplinarian, but his men respect him because he allows no cliques or favoritism; he is the guardian of fair play." His only writings have been on military subjects.

VOROSHILOV, KLEMENTII—*Cont.*

According to Gunther, too, Voroshilov is the "most popular leader in the Soviet Union . . . not ambitious, not a politician, and his personality is pleasing. . . He is not an intriguer, not a wirepuller; neither a fanatic nor an arid intellectual, he is easily the most personable of the commissars." In appearance Voroshilov is blue-eyed, pug-nosed, short in the waist, "looks almost like a cherub." Rosita Forbes describes him as a "prodigiously vital" man, one who drinks, swears, storms into a room and shouts, loves noise, food, laughter, vodka, horses, guns, dancing.

Voroshilov had a "whirlwind romance with the exquisite Jadwiga, daughter of his adjutant, whom he married within an hour of an equally impetuous divorce." His heroes are Sweden's Gustavus Adolphus and Alexander the Great. He is one of Stalin's closest friends, although he reputedly disagreed with him several years ago on the question of collectivization of agriculture and, unlike Stalin, believed in arousing the Russian national spirit. Several years ago he said his greatest ambition was "to see my country acknowledged the United States of Europe," and, for himself, to have "great fortifications called after me." The last ambition at least has been realized. The Russian fortifications along the Finnish border were called the Voroshilov line. (And Lugansk is now Voroshilovgrad.)

WAGNER, ROBERT F(ERDINAND) June 8, 1877- United States Senator from New York

Address: b. Senate Office Bldg, Washington, D. C.; h. 530 E. 86th St, New York City

Senator Robert F. Wagner is chairman of the Senate Committee on Banking and Currency and a member of the Senate's Interstate Commerce, Foreign Relations, Expenditures in the Executive Departments, and Public Lands and Surveys Committees. It is not for his membership on these committees that his name is known to millions of Americans, however, but rather for those bills he has sponsored and supported. The NIRA, the Social Security Act, the Railway Pension Law, the United States Housing Act, the highly controversial National Labor Relations Act, anti-lynching bills, bills for Federal aid to the crippled, blind and dependent—these are only some of the measures for which he has been responsible since he first entered the Senate in 1927.

This "small, stocky, inconspicuous, gray-haired" Senator who has placed on the books "legislation more important and more far-reaching than any American in history," was born in Germany, in the town of Nastatten, in Hesse-Nassau. For many years his ancestors had been farmers, teachers and Lutheran ministers in the Rhineland; his father, Reinhardt Wagner, was a farmer; his mother a teacher. Then, like many of their neighbors, the Wagners decided to go to America. They arrived in New York in 1885, when Robert was eight years old, and were met at the pier by Robert's elder brother August, who supported the family until Reinhardt Wagner got a job as janitor of a tenement house on East 106th Street.

Robert grew up in this slum neighborhood, helping his family by selling newspapers on a route that got him up at three in the morning. "My boyhood was a pretty rough passage," the Senator says now, and "impelled me to work for the passage of every measure that I thought would ameliorate the conditions I saw." To those who suggest today that his life is proof that it is possible to rise from and above the slums, Wagner answers furiously: "That is the most god-awful bunk. I came through it, yes. That was luck, luck, luck. Think of the others." Something of his creed and of his feeling toward the United States is found in his testament published in *I Am An American* (1941), a collection.

With his brother's help, and with the help of work as a bellhop at the New York Athletic Club and occasional tutoring jobs, Robert Wagner was graduated from the College of the City of New York in 1898, with a Phi Beta Kappa key and a reputation as a star quarterback. Immediately he got his teacher's certificate and spent the summer after graduation teaching. There was a professor at City College, however, who felt Wagner would be wasting his time as a teacher. He urged him to study law, and with borrowed money Wagner went ahead. By 1900 he had a law degree from the New York Law School.

Even before then he had started his political career. One day, while he was still in law school, Wagner walked into the Algonquin Democratic Club in Yorkville and, fortified by his record as a debater at college, asked to be allowed to make a short speech in the current campaign. "I apparently did all right," he says, "for they asked me to make another speech later." One speech led to another and by 1904 Wagner was a member of the New York Assembly and a staunch Tammany Democrat.

Wagner's first move in the Assembly was to introduce a bill reducing the fare on the Brooklyn elevated from ten to five cents—it was vetoed by the Governor. Soon he was recognized as a rising young Democrat and by 1908 had been elevated to the State Senate, where he served until 1918, floor leader in 1911 and acting lieutenant-governor for a few months in 1914. It was in 1911 that Wagner first became active in proposing the sort of social legislation with which his name is today identified. That was the year of the great fire at the Triangle Shirtwaist Company. Wagner immediately demanded an investigation in the State Senate; a committee was appointed and he was made its chairman. For many months he went all over New York State investigating factory conditions, and from his investigations came a series of 56 laws which have since become a model for other states. Wagner also advocated unemployment insurance as early as 1911 and brought in, later, the first Workmen's Compensation Law.

During these years in New York State politics Wagner was able to build up a successful law practice of his own and won some of the most important cases giving recognition to the rights of labor, including a case which virtually outlawed the "yellow dog" contract in New York State. But he gave up this practice, and his political activities as well, in 1919 when he was elected justice of the Supreme Court of New York.

Wagner served on the bench until 1926, designated in 1924 to the Appellate Division of the First Department. He was regarded as "a sound and able judge" and many of his decisions, especially those concerned with labor law, are still cited in the courts. He upheld the constitutionality of the home rule amendment for New York City and of the wartime emergency rent laws. He sustained the right of employees to engage in collective bargaining and granted the first injunction in favor of a labor union.

Then in 1926 Tammany asked him to run for United States Senator, and due to a split in the ranks for the Republican candidate he won by a narrow margin; he repeated his success in 1932 and 1938 by a much wider one. In the Senate, Wagner immediately established himself as a champion of the underdog. In Coolidge's day he warned: "We are facing a change in industrial organization as revolutionary as that which occurred in the beginning of the last century." He begged for action to control unemployment—"We must tear down the house of misery in which dwell the unemployed." Again and again he submitted bills to obtain reliable unemployment statistics, to remedy unemployment, and again and again he was voted down. No holy reformer, he plodded steadfastly for these things.

Harris & Ewing
ROBERT F. WAGNER

When Hoover came in, Senator Wagner kept up the battle and his bill authorizing the Department of Labor to collect and publish labor statistics was made law in 1930. His bill giving Federal aid to the unemployed—the Garner-Wagner Bill—was vetoed by Hoover, however. In this first term in Congress Senator Wagner advocated more relief, a commission to study unemployment, a stabilization board to plan a public construction program; he was successful in getting passed the Relief and Construction Act of 1932 ("the first clear acceptance of Federal responsibility for the unemployed") and a bill advocating the establishment of a Federal employment agency. He was also active in the creation of the Reconstruction Finance Corporation.

Year after year Senator Wagner called for job insurance, old-age pensions, labor laws, aid for the unemployed. They called him a Socialist, and he countered: "A good Tammany Democrat like me turning Socialist? What's socialistic in limiting hours of labor to give the workers more leisure and to raise their standard of living?" Then came Roosevelt, and Senator Wagner came into his own, "the legislative pilot of the New Deal." One of his first acts was to sponsor the amendment to the Relief Act of 1932 which increased the amount of Federal funds for relief. His next was to get passed the bill for a Federal employment agency which he had proposed, without success, before. And in 1933 he helped draft and put through the Senate the recovery measures of 1933—the NIRA, the $500,000,000 Federal Emergency Relief Administration, the emergency farm mortgage refinancing system, the Federal Employment Stabilization Board for

WAGNER, ROBERT F.—*Continued*

public works planning, the laws setting up the CCC. When the NIRA ran into labor troubles in the summer of 1933 Wagner was made chairman of the National Labor Board.

That was in 1933. In 1934 he introduced the unemployment insurance bill which became the basis for the unemployment insurance features of the Social Security Act of 1936—it was a happy day for him when this measure, for which he had agitated since his first days in the Senate, was finally passed. In 1934, too, he sponsored the Railway Retirement Act of 1934 and subsequent amendments. In the next years there came, through his untiring activities, the Social Security Act and the National Labor Relations Act—which almost everybody calls the Wagner Act.

None of the measures he sponsored aroused as much controversy as this act, eagerly awaited by labor and liberal groups and considered by them labor's "Magna Carta." Employers have charged that it is biased in favor of employees, and even some labor groups have accused it of giving rise to favoritism of one kind or another. Yet, three years after it was passed, Wagner affirmed: "I am more than ever convinced of its essential wisdom, its essential justice and its significant accomplishments." He strongly opposed the suggestions of the House Committee headed by Representative Howard Smith (see sketch this issue) which investigated the Labor Board. These, he insisted, would alter the law so as to make it "a delusive remedy for the worker and a concrete weapon for the oppression of labor." Nevertheless, Wagner has stated again and again that he believes the law is far from perfect, that he believes it should be "perfected in the light of sufficient experience."

After Wagner had had his NLRA passed he turned the greater part of his attention to the problem of housing. In 1935 he had introduced his first housing bill in the Senate after an investigation of public housing in Europe, and in 1936 he pushed it again. Finally, in 1937, the United States Housing Plan was passed, not quite in the form Wagner wanted it, but passed nevertheless, and a year later came the National Housing Act of 1938 which greatly enlarged and expanded the powers of the Federal Housing Administration.

In 1939 Wagner introduced a bill to provide for a national health program, and one of the anti-lynching bills he has perennially introduced into the Senate ever since he became a member. In 1940 he sponsored, among other legislation, a bill to extend the benefits of the Social Security Act, the national hospital bill, a bill for loans to Latin America, another authorizing the freezing of funds and credits in foreign-owned accounts. And in 1941 he not only continued to push these measures, but also introduced a resolution to establish a Post-Emergency Economic Advisory Commission. A serious illness kept him away from his Senatorial duties during much of the year, but he remained a firm supporter of President Roosevelt's foreign policies.

Senator Wagner's history in the Senate is almost a history of progressive legislation during the past years. Some of his proposals have become law; for some of them he is still fighting. And around most of them there has been controversy and criticism. Yet little of this criticism or attack has been leveled against Senator Wagner himself. Even his opponents have recognized his "steadfastness, sentiment, endurance, zest for facts, untiring purpose and fearlessness." They know that he has neither the desire nor the talent to exploit himself; that his speeches are sober, his purpose high-minded.

They know this partly because Senator Wagner never puts on a "good show." He is seldom eloquent, seldom tricky in strategy, avoids personalities, invective and flippancy, and his most impressive appearances are made in committee rooms, where he is "affable, intent, persuasive. . . He never tires of answering questions, never impugns the motives of his opponents. At the same time, as fast as the committee's digestion permits, he pours in the facts." He is a stocky figure, under medium height, with a firm mouth, strong chin and blue eyes.

To some it has seemed an anomaly that this fighter for New Deal causes should still be a supporter of Tammany Hall, one who drops around to chat with the "boys" in his old clubhouse when he is in New York. During the fight between Tammany and Roosevelt in 1932 he was a neutral; when La Guardia was running for Mayor of New York in 1933 and in 1941 he gave nominal support to the Tammany candidate; and Tammany tried to draft him for this job in 1937—a draft he declined. When questioned about his stand on Tammany, Wagner replies that he originally joined Tammany Hall because it was the Democratic organization in New York and because he still thinks of it as "the cradle of modern liberalism."

A man as active as Senator Wagner finds little time for recreation, and a swim in the pool of the Shoreham Hotel where he lives in Washington is about all he has been able to manage lately. But he doesn't feel he's losing out: he is fighting for what he believes in and that is life and work and recreation enough. And he has his son Robert F., Jr., who, after Yale and Harvard, was, in his 20's, in the New York State Legislature and already fighting his father's fight for the underprivileged until his resignation in December 1941 to join the Army.

WALSH, WILLIAM THOMAS (wôlch) Sept. 11, 1891- Author; university professor
Address: b. Manhattanville College of the Sacred Heart, Convent Ave, and 133rd St, New York City; h. 110 Beach Ave, Larchmont, N. Y.

On May 20, 1941, before an audience of 1,000, Dr. William Thomas Walsh was presented with the Laetare Medal. Conferred annually since 1883 on an outstanding member of the Catholic laity by the University of Notre Dame and regarded as the highest honor a Catholic layman can receive in the United States, this award went to a professor of English literature who has published novels, plays and lyric poems as well as historical and biographical studies, but at the ceremony Dr. Walsh's historical findings on Spain came in for particular praise. According to the citation they had "brought Isabella and Ferdinand, the Catholics, out of the dark closets to which pharisaical history has confined them, into the warming light of truth."

Dr. Walsh, acknowledging the tribute and thanking the University, said that the medal "is not so much a tribute to myself but to the truth I have attempted to tell." This truth mainly concerns the past of Catholic Spain, whose history, he found, "had been corrupted and perverted," while the Spanish people had been "misrepresented in a most despicable fashion" as part of a movement against the church. His motive in writing *Isabella of Spain* (1930) was therefore a chivalrous one: "The life of Columbus' patron and America's godmother has never been told completely and coherently in our language. Prescott could never wholly forget the prejudices of an early nineteenth century Bostonian. Condescension is the worst possible attitude for a historian, for condescension is not a window, but a wall." A second biography with a similar aim, *Philip II*, was a choice of the Catholic Book Club in 1937; and in 1940 Dr. Walsh's *Characters of the Inquisition* appeared. In spite of his preoccupation with Catholic themes, Protestant critics have found much to praise in his historical books.

He was born in Waterbury, Connecticut on September 11, 1891. All his ancestors were Irish, his grandfather, Michael Walsh, having come to this country in the years following the potato famine of 1848. Michael Walsh hated slavery. Just before the Civil War he had a small farm in Maryland, not far from Baltimore, and he would sometimes hide runaway Negroes in the attic of his house. When war came he enlisted in the Union Army, was taken prisoner and sent to a Confederate camp; he returned home, shattered in health, to die.

Michael Walsh's widow, unable to run the farm, took her three young children to Connecticut. One of them, William Thomas Walsh, the historian's father, went to work in a factory when he was 11 and continued to work in factories for more than half a century. For a long time after his marriage to Elizabeth Josephine Bligh (who is still living), and the birth of William Thomas, Jr., in Waterbury in 1891, he was a foreman in a watch factory. Hard working, never very far from financial anxiety, he was nevertheless "a contented and happy man, a devout Catholic, loved by a great many people." His son says feelingly, "I think he was one of the greatest men I have ever known," and when a newspaper friend met his father the year before he died he exclaimed: "Walsh, your father is a personage!"

"I think I became a writer instead of a musician because one day I went down a different street (why, I don't remember) and met a man who told me of a job for a high school boy (I was then 16) on the Waterbury *American*," writes Dr. Walsh. "I had previously peddled newspapers and worked for two miserable summers in a factory. Through newspaper work I was able to go to Yale [where he took his B. A. degree in 1913]. There I was correspondent for the Associated Press and also conductor of the Yale University Symphony Orchestra.

"One night I got so interested in a concert at which we played Schubert's *Unfinished Symphony* that I forgot to file my report on the football team, and dear old Bill Myers of the A. P. fired me pronto, and very properly—though he afterward recommended me to several New York editors, after graduation. I was sorry to hear that the following year the University Orchestra gave up serious music, and went back to the balderdash that we did away with in 1912 and 1913. Nobody paid much attention to our reform, which we took very seriously. We had a lot of fun, but I'm rather glad no records were made of our performances of the *Unfinished Symphony* and Haydn's Eleventh, for I don't imagine they would sound so good now."

After graduation Walsh continued newspaper work on Waterbury, New Haven and Hartford papers in Connecticut, and was copy reader and feature writer for the Philadelphia *Public Ledger*. He wrote editorials for the Hartford *Times* and was its correspondent on the Mexican border. Shortly before the outbreak of the First World War he married Helen Gerard Sherwood of Waterbury, Connecticut, in May 1914, and after the United States entered the War he kept the home fires burning in the most practical fashion, as chief of Anthracite Distribution of the Connecticut State Fuel Administration.

From newspaper reporting and coal distribution Walsh went into the teaching field, his first position that of instructor at the Hartford, Connecticut Public High School in 1918. The year following he became head of the English Department at the Roxbury School; he remained there until 1933 (the year he received his Doctor of Literature degree from Fordham University), when he was made professor of English at the Manhattanville College of the Sacred Heart in New York. Dr. Walsh is still teaching there today, and has found time between his duties to write and publish a novel of New England life, *Out of the Whirlwind* (1935); a play in blank verse, *Shekels* (1938); and a volume of poetry, *Lyric Poems* (1939).

Many of the most poignant poems in the latter are addressed to his son and namesake, William Thomas Walsh III, who lived only from February 4, 1921 to September 23, 1922. There is, however, an eighteen-year-old son, Peter Walsh, for whom his father wrote *Legacy For Peter*; and there are four daughters, Betsy Purves, Jane, Grace Sherwood (Sister M. Concepta) and Helen Teresa. The eldest, Betsy, has taught history at Ravenhill Academy, Germantown, Pennsylvania since her graduation from Manhattanville College in 1936, and has recently finished her first novel. Sister M. Concepta lives at the Sacred Heart Convent of the Sisters of Mercy, Belmont, North Carolina.

This is Dr. Walsh's own testimony concerning his devotion to music: "I still get my chief recreation and relaxation out of music. No matter how busy I am, I try to spend a few minutes a day playing on the violin. Eduard Herrmann, from whom I took some lessons in 1924, taught me how to keep in practice with about 15 minutes of intensive work every day—certain exercises, some scales with different bowings, and a few minutes on some concerto. At the MacDowell Colony [in Peterboro, New Hampshire] in 1929 and 1931 I used to do sonatas with Charles Haubeil and Harold Morris and others, and now and then I played with a string quartet.

"Ensemble work of course is the greatest delight. Every evening after dinner I used to play a game of cowboy pool with Edwin Arlington Robinson, after which he would go to his room with an armful of detective stories to read himself to sleep. Robinson's friendship is one of my happiest memories. My play *Shekels* gave him the idea for his poem *Nicodemus*, which he read to me one evening in lieu of the pool game, before sending it to the *Yale Review*, where it was first published."

Dr. Walsh is a powerfully-built man, a six-footer weighing two hundred and ten pounds, and has blue eyes and receding dark hair. He walks, swims and plays tennis, besides playing Bach partitas on his violin (or the sonatas of Bach, Beethoven, Mozart, Brahms and César Franck, if there is a pianist handy.) He doesn't smoke, but enjoys drinking with friends—"or without friends, for that matter." At present he is at work on a life of St. Teresa of Avila, to be published in 1942.

WARNER, MILO J(OSEPH) Nov. 11, 1891- Former National Commander of the American Legion

Address: 3443 Darlington Rd, Toledo, O.

Bretzman

MILO J. WARNER

Those who were associated with Milo J. Warner as he administered the affairs of the office of National Commander of the American Legion know that he is thorough in seeking advice and information before reaching any decision. Throughout his term as Commander which expired September 18, 1941 he used the conference method almost continuously to determine the opinion of the Legion in all sections of the United States. His associates will also testify that, once he reaches a decision, he drives straight through with a plan of action.

Although the basic principles and program of the American Legion have changed very little in a war-torn world, the more than one million members of the organization, now headed by Lynn U. Stambaugh, do have many varying opinions about how their program shall be administered and conducted. The present national emergency has brought many new problems to the Legion, and in interpreting the veterans' viewpoint Commander Warner has had many policy decisions to make. He has urged repeatedly that the United States convoy goods to England and has insisted that there be increased aid of all kinds given to this country, especially since the invasion of Russia, which, however, he believes "does not call for a change in attitude toward the Communist Party in the United States." He has pleaded for continued opposition to Communism as well as Fascism and Nazism and urged the country "as a united nation" to give full support to the President's program of national defense and aid to the allies "free of any selfish, personal or partisan interests."

This heavy-set, ruddy-faced man whom everybody calls "Mike" was born in Lime City, Ohio and spent his early years as a country boy, educated in the traditional little red schoolhouse. His father, Smith Warner, had operated a country store and wind-jamming coal vessel on the Great Lakes before he retired from active work and moved with his wife, Mary Ellen (Brownsberger) Warner, and children into Toledo. It was in Toledo that young Milo Warner received his high school training, ran errands and did chores to earn money. After high school Warner went to Ohio State University, where he was president of the Student Council in his senior year. From this university he received a B. A. in 1913 and three years later his law degree.

As an undergraduate Warner took as much of the military course as he could and found it good basic training for his service with the Ohio National Guard on the Mexican border that followed soon after he left law school. There were months then of dreary service, riding and roaming over the sand dunes in the Rio Grande Valley. But life in the Army on the border had its compensations for Warner, since it was there that he met and married Dorothy Casad Bennett on June 1, 1917. Two days after his wedding he was commissioned a second lieutenant in the regular United States Army and assigned to the 18th Cavalry. Later he was detailed to the third Provisional Officers Training School at Fort Leavenworth.

Two promotions within a few months brought him a captaincy and the command of Battery B of the 76th Field Artillery of the Third Division. With this Battery he arrived in France in April 1918. Not long afterward, near Le Charmel, a lone German plane appeared from out a low-hanging cloud one morning and dropped a bomb that landed in one of the gun emplacements of Battery B. Several men were killed outright, and Captain Warner was one of those critically injured. A splinter of the bomb ripped through the femoral artery of his left leg, another through a shin, and a finger was badly mangled.

Today there are no signs of the wounds Captain Warner suffered, but in 1918 there were many months of hospitalization to be undergone. It was while he was in the hospital in France that he received the news of the birth of his first child, Milo Joseph, Jr. Later two more children were born, Donald Wesley and Carolyn Bennett.

His wounds prevented Captain Warner from continuing his career in the regular Army, and he returned to Toledo to practice law. Here he became associated with the firm of Doyle and Lewis, specialists in insurance, railroad and corporation law. And here he immediately became active in the American Legion, first as post adjutant and service officer of Vernon McCune Post No. 132 at Toledo, then as post commander. In 1924, after serving as chairman of the Lucas County Council of the Legion, he became the State Department Commander of the Legion in Ohio. He served also as national executive committeeman for Ohio, as National Vice-Commander and as chairman of the National Rehabilitation Committee before his landslide election as National Commander on September 26, 1940.

Warner was able, too, to be active in Toledo civic affairs, and has been a member of the Toledo Industrial Peace Board which has won national recognition for its part in maintaining "a better than average industry-labor record" there. He served as trustee of the Toledo Chamber of Commerce and headed the National and State Affairs Committee of that body. He has been president of the Toledo Exchange Club, the Anthony Wayne Chapter of Sons of the American Revolution and the Toledo Memorial Association. And as a lawyer he has served as president of the Toledo Bar Association and chairman of the Committee on Unauthorized Practice of Law for both the Toledo and Ohio Bar Associations. With this record and his Legion record, it is small wonder that Commander Warner is "without a hobby."

The American Legion, under Commander Warner and under his successor, has been intensively engaged in charting a course that will provide the greatest help for the nation in reaching through to a total, all-out defense on land, at sea and in the air. It was this demand for service on the part of the Legion that led Commander Warner to head a mission to Great Britain "to study the manner in which civilian defense efforts have been conducted." In January 1941, with two other Legion heads, he flew the Atlantic and returned to this country after a month abroad with material to evolve the Legion's program for establishing civilian defenses in the United States. Not long afterward he offered Lieutenant General Emmons, commanding the General Headquarters Air Force, the complete facilities of the National Legion organization and its 11,766 posts throughout the country to assist the Air Corps in organizing air raid precautionary services. He hopes, along with every other citizen, that no enemy bomb will ever fall on American soil. But if it does he is determined that, so far as the Legion can prevent it, there will be no civilian unpreparedness.

WATERS, ETHEL Oct. 31, 1900- Singer; actress

Address: h. 352 W. 115th St, New York City

Ethel Waters, the unforgettable singer of *Stormy Weather* and *Dinah*, of *Havin' A Heat Wave* and *Supper Time*, the first Negro of her sex to star alone on Broadway (in *Mamba's Daughters* in 1938 and 1939), in March 1941 completed an eminently successful Broadway run of the musical fable called *Cabin in the Sky* and then took it on tour.

Cabin in the Sky is a Negro fantasy craftily designed to display all of Miss Waters' talents to best advantage—a sort of combination of *Liliom* and *Green Pastures*. The book is by Lynn Root, the lyrics by John Latouche; Vernon Duke (see sketch this issue) wrote the stirring music, which begins with an aria entitled *Taking a Chance on Love* which Miss Waters sings "with elation and ecstacy as though it were a song in praise of all creation"; the Russian choregrapher George Balanchine staged the dances, including one by Miss Waters herself, "the most massive cancan of the season." ("You call those few steps I take dancing," she snorts disdainfully. "Why, I've been dancing all my life, only nobody'd let me do any before on the stage.")

There was a large part of Ethel Waters' life during which she didn't have much to dance about. She was born October 31, 1900 in Chester, Pennsylvania, the daughter of John Wesley Waters and Louisa Tar (Anderson) Waters. The Waters family, which was a large one, moved to Philadelphia. There they lived in great poverty. Miss Waters says: "I've stolen food to live on when I was a child. . . I was a tough child. I was too large and too poor to fit, and I fought back." Occasionally the Sisters in the nuns' school which she attended invented errands for the

Bob Golby

ETHEL WATERS

overgrown, sensitive child and asked her to have lunch or dinner with them in return.

Her first employment was in a second-class Philadelphia hotel, where she worked as chambermaid and laundress for $4.75 a week. On her night out, which happened to be Halloween and her birthday, she went to a night club on Juniper Street. There, protected by a mask, she was persuaded to sing two songs. Two neighborhood boys, much excited, urged her to turn professional, and at 17 she appeared on the stage of the Lincoln Theatre in Baltimore. She was charmed with the $9 paid her until she discovered that her two impresarios were receiving $25 a week from the management.

Other engagements followed, chiefly in the theatres and cabarets of the South. "When I was a honkytonk entertainer," Miss Waters recently told Earl Wilson, "I used to work from nine until unconscious. I was just a young girl and when I tried to sing anything but the double-meaning songs they'd say: "Oh, my God, Ethel, get hot!" At home she sang Negro spirituals.

"Every time they'd write a serious or sweet song," she said to another New York *Post* interviewer two years ago, "they'd give it to Florence Mills, Minto Cato or somebody else." But from an obscure Harlem night club, a cellar cafe at 132nd Street, Ethel Waters finally came downtown to the Plantation Club to substitute for Florence Mills. She created a sensation by singing *Dinah*. Once, as their star, she was invited to sing in Paris. Not really wanting to travel, she asked $500 a week; they took Josephine Baker, an end girl, instead. "But she went great, with my stuff," Miss Waters says.

Her first Broadway appearance was in *Africana*, a Negro revue which "swirled and stomped" at Daly's West Sixty-Third Street Theatre in 1927. In 1930 Lew Leslie placed her in his *Blackbirds*, and the next year in *Rhapsody in Black*. Another *Rhapsody* was produced in 1932, and in 1933 Ethel Waters was starred in Irving Berlin's *As Thousands Cheer* at the Music Box Theatre, with Clifton Webb, Helen Broderick and the late Marilyn Miller. In that musical comedy she did an imitation of Josephine Baker. Berlin and his collaborator, Moss Hart, gave weekly parties for the cast and their friends and repeatedly invited Miss Waters. She never attended, although she offered to come and sing for the company if she might leave immediately afterward.

At Home Abroad (1935), in which she was co-starred with Beatrice Lillie, was the last musical revue in which Ethel Waters appeared. Since 1934 she had been singing on the radio; a recital at Carnegie Hall in 1938 was a new departure for her. But it was in *Mamba's Daughters*, produced in December 1938, that she scored her real personal triumph. She brought it back to Broadway several months later for an engagement at $1.65 top, and "when it was over I just wanted to put myself away and retire," she told one interviewer. "I didn't want nothing to spoil it." In her mind *Cabin in the Sky* can't compare with *Mamba's Daughters*. "Don't mention anything I've ever done on the musical comedy stage in the same breath with Hagar," she cautioned. "It's easy to go along a song. You pick up the lyrics or some special strain in the music and it carries you on. But this straight acting is different. You're out there on your own. You've got to *be* that character—no matter what kind it is—and *stay* that character." Miss Waters has also been featured in one talking picture, *On with the Show*.

This "tawny Yvette Guilbert" and "bronzed Raquel Meller" has earned more than a million dollars since the days when she "went through Swarthmore College in two weeks—as a charwoman." Every Friday night, after receiving her pay check of $2,000, she is in the habit of putting on wedgies (kind to her weak ankles), calling her chauffeur, and riding in her new Lincoln-Zephyr up to 115th Street and Morningside Avenue in Harlem, where she owns two apartment houses. There she ascends to the 10-room suite which she shares with her second husband, Eddie Mallory, a handsome Negro musician who operates a restaurant called Fat Man's Place. (Three or four of her dozen godchildren are usually living with her, too; they call her "Mummy.") One room in her apartment is entirely devoted to religious purposes. Miss Waters, very devout, says laughingly: "I keep praising the Lord so much I don't have any other hobbies. I keep asking Him for some original ideas for me. I ask Him for so much, I guess I keep Him scufflin'!" But she is also the kind of a person who can fight and "loves to fight." In fact, "I used to have such a temper I had to start controlling myself."

There is race prejudice in the theatrical profession as well as in any other. An enthusiastic theatregoer, Miss Waters usually gets a seat in the last row of the orchestra. "One woman gave me a corsage once when she recognized me, but some of them have a way of hurting you." Yet, "I don't lament the prejudice," she told Oliver Claxton. "You can read *Native Son* and there is one statement of the Negro's case, and you can then read *Grapes of Wrath* and realize that white holds down white. It's all a struggle for supremacy."

Ethel Waters is a "tall, solid woman—'monolithic,' a reviewer once called her—with a look of quiet, serenely confident dignity about her." Her favorite dresses are plain black, adorned by some one of her remarkable collection of necklaces, assembled from all over the world. Asked if it were true that she weighs 160 pounds, Miss Waters chortled: "Honey, if you say 185, we'll call it a deal!" She is that kind of person.

WAVELL, SIR ARCHIBALD (PERCIVAL) (wā'vĕl) May 5, 1883- British general; commander in chief in India

Address: b. c/o British War Office, London, England

Bulletin: On July 1, 1941 the British High Command announced that General Sir Archibald Wavell and General Sir Claude Auchinleck were exchanging positions. Wavell was to be general officer commanding in chief in India, and Auchinleck was to assume Wavell's former position as general officer commanding in chief in the Middle East. Newspaper opinion was divided between belief that the change marked a demotion for Wavell and belief that it was an indication of England's desire to have its best general in India in case of a Nazi thrust there.

From March 1941 issue:

On September 12, 1940 the Italians under General Graziani invaded Egypt. Within a short time they had advanced as far as Sidi Barrani, where they were reported to be consolidating a strong position preparatory to a further thrust toward Mersa Matruh. But the British Army of the Middle East was also making its preparations. Highly mechanized and strongly reinforced, plans for the cooperation of the Navy and the R. A. F. had been carefully laid. On December 8 Sir Archibald Wavell struck hard and swiftly, running up tanks to the coast to cut off Sidi Barrani, while the navy and the R. A. F. pounded such Italian forces as were able to retreat westward. Within a fortnight there were no more Italians in Egypt except prisoners. Then, by Christmas, the British had invested Bardia in Italian Libya; by January 1941 they had won the battle for Tobruk; by February advanced units had reached El Agheila.

SIR ARCHIBALD WAVELL

"It is not the victory alone," wrote the London *Times* after Sidi Barrani, "which will hearten and inspire the whole Empire and all our friends outside it; there will also be universal delight in the boldness of Sir Archibald Wavell's conception, the masterly skill of the planning, the dash of the execution and the cooperation of the R. A. F., which blinded the enemy in the skies and prevented him from attempting to retrieve the situation by his favourite dive-bombing tactics." For the first time in the annals of battle, land, air and sea forces had been combined against an enemy who thought himself safe behind his defences, and though credit must go to Cunningham of the navy and Longmore of the R. A. F., these operations definitely marked out Sir Archibald Wavell as a general of the first order. His later successes throughout Libya confirmed this.

Wavell, known to 90 per cent of his army as "Archie," had an orthodox British education, but emerged from "public school" and military college with most unconventional ideas. Some of his public statements make that clear. Once he said: "My ideal infantryman has the qualities of a successful poacher, a cat burglar and a gunman." Lecturing to a Royal United Services Institute, he announced: "There is too much stress on 'spit and polish,' on details of the regulations and of dress, at the expense of mental liveliness and independence of thought." His requirements for leadership—which he himself meets—are these. "A leader must have personality, which is really simply knowing your own mind and being perfectly determined to get it. He must have a genuine interest in, and knowledge of, humanity—the raw material of

WAVELL, SIR ARCHIBALD—*Continued*

his trade. If I had to take one quality as the mark of a really great commander, I should call it the spirit of adventure. He must have at least a touch of the gambler."

Wavell is the grandson of a soldier and the son of a soldier, the late Major General Archibald Graham Wavell, C. B. He was educated at Winchester College, at the Royal Military College, Sandhurst, and at the Staff College, Camberley. In 1901 he passed into the Black Watch as a subaltern, in time to serve in the later stages of the South African War, in which he won a medal with four clasps. He was next heard of in 1908, on the northwest frontier of India, fighting against the Zakka Khel tribesmen; here once more he won a medal with clasp.

Wavell's next and characteristically unconventional step was to obtain leave for the whole of 1910 in order to live with a family in Moscow and learn Russian. He acquired a thorough command of this difficult language and in 1911 (now a junior captain) was sent to Russia to attend the Army maneuvers. With him he took his instructions written in Russian in an envelope marked "Secret." When the police examined him at the frontier, they arrested him for possessing a Russian secret document and threw him in prison. Wavell was able to explain everything, however, and was released the next morning with profuse apologies and a gold watch by way of compensation.

When the First World War came along Wavell went to France and served there from August 1914 to 1916, taking time out in 1915 to marry Eugenie Marie Quirk. (They now have one son and three daughters.) In 1916 he was badly wounded at Le Cateau and was invalided home with the Military Cross and one eye lost. On recovery he was sent in October to use his Russian again as liaison officer with the Army of the Caucasus. Wavell remained in Russia until June 1917 and returned to England with the Orders of St. Vladimir and St. Stanislas. He had made a friend of the Grand Duke Nicholas, too.

Next came three years in the Near East under General Allenby. As fighting officer and as a member of the staff, Wavell followed through the campaign of the Egyptian Expeditionary Force which resulted in the defeat of the Turks in Palestine. He went out there as brevet lieutenant colonel; in 1918 was made a brigadier general of the 20th corps; and during 1919 and 1920 occupied the same position on the staff of the Egyptian Expeditionary Force. He was then transferred for a time to the army of occupation on the Rhine and in 1921 reached the rank of colonel.

From July 1923 to January 1926 Wavell was at the War Office as general staff officer, grade I. Then, after further War Office work, he was appointed commander of the 6th Infantry Brigade at Aldershot in 1930 and served there until 1934. Meanwhile he had been, from 1932 to 1933, A. D. C. to the King, and in 1933 he reached the rank of major general. From 1935 until August 1937 he was in command of the 2nd division at Aldershot. Then he was sent to Palestine to deal with the situation between Jews and Arabs. According to *Time,* he "participated in such ruthless suppression of native revolts that his enemies called him 'the greatest bloodhound' ever sent to put down the Arabs."

After serving in Palestine and Trans-Jordan until April 1938, Wavell returned to England as general officer commanding the Southern Command with the rank of lieutenant general. On the outbreak of the present War he was given the command in the Middle East and on October 25, 1940 was raised to the rank of full general, although during Britain's darkest days in the autumn of 1940 there was great pressure to relieve him of his command. Wavell, however, refuses to move faster than military knowledge tells him is wise, refuses to attack before he is ready, and then believes in attacking suddenly. In the Middle East he has been demonstrating his own dictum, made in 1935, that "the commander of the future must be able to handle air forces with the same knowledge as forces on land. . . It is this combination which will bring success in future wars." And it was General Wavell who in February 1941 dropped "a handful of British parachutists in doubtful uniforms" into Italy.

During these years of service Wavell has become known not only as a successful commander in the field but as a military writer of distinction. His manual on desert fighting is a text in the Staff College, and his book on *The Palestine Campaigns,* begun after his return from Egypt and Palestine in 1920 and published in 1928, is recognized as authoritative. In 1940 he published *Allenby: a Study in Greatness,* an eloquent book on his former commanding officer.

Wavell is a sturdy, quiet, keen, likable man who talks easily and well and who wears a monocle to shield his blind eye. His favorite sport is skiing, but since there hasn't been much opportunity for "schussing" on the desert sands he has compromised on golf. He was made Companion of the Order of St. Michael and St. George in 1919, Companion of the Bath in 1935 and Knight Commander of the Bath in 1939. He also holds the order of Commander of the Légion d'Honneur and those of El Nahda and of the Nile. He is variously called "The Fox", "The Wizard", "The Mediterranean Magician" and "The Bloodhound." Even Germany's General Keitel called Wavell the only one of Britain's full generals who is any good and said: "He is very, very good."

WEBER, MAX (wĕb'ẽr) Apr. 18, 1881- Artist

Address: 10 Hartley Rd, Great Neck, L. I., N. Y.

For over 30 years Max Weber, "one of America's outstanding painters," has been giving exhibitions of his work, exhibitions which "have left their mark on the history of American painting." In 1941 full recognition of this was finally given him. In the beginning of February he received the Temple Gold Medal at the annual exhibition of the Pennsylvania Academy; in that same month the Associated American Artists gave the largest exhibition of his paintings ever held; in March he was awarded the W. A. Clark Prize of $1,000 from the Corcoran Gallery of Art for his canvas *Poor Fishing*; and in October he won first prize of $750 at the Chicago Art Institute with *Winter Twilight.*

His A. A. A. show, which drew 22,000 people and was kept three weeks longer than scheduled, was called by the critics both "warm and stimulating" and "disappointingly vague." Its 58 canvases were diversified—figure themes, landscapes, still lifes, "sweating workmen struggling with structural steel, bearded rabbis wailing in bare-floored synagogues, blimpy Picasso-like nudes." To many observers the Ghetto scenes were the most impressive. To them, works like *The Night Class, Students of the Torah, Chassidic Dance* had "a blend of sadness and gaiety, gentlest irony and profound understanding that makes them stand out as truly distinctive performances." Max Weber's own comment on these paintings was: "I thank God I'm here in America and can have this exhibition and show these bearded rabbis. Only, Hitler should see this!"

"Weber," it was once said, is "the most unpredictable painter in America. He refuses to stand still long enough to be labeled. To the art critic this is perhaps his most exasperating vice; to his art, a sign of undiminishing vitality." He has studied and knows the movements of art, but what he paints is distinguishingly his own. Often he is a symbolist, "one of the few American artists who has sufficient philosophic depth to be able successfully to cloak his symbols in strong pigment garments without being either descriptive or literary." He is "a religious painter who looks upon life from a deeply religious point of view." He is a man who "lives deeply in the spirit and yet, as in *Mexican Pot with Flowers* and *After Bathing,* can make statements for the undiluted joy of making them." He is a still life painter of "massive simplicity." He has a "particular talent for sensitive and richly subdued flower studies." But whatever the inspiration, whatever the theme, "in nearly all of Weber's pictures there are wonderfully rich texture, vigorous line, deep and resonant color and powerful pictorial architecture."

Colten

MAX WEBER

This artist who did so much to introduce modern art to America was born in Bialystok, Russia, the son of Morris and Julia (Getz) Weber. Ten years after his birth in 1881 he came with his family to America and with them settled down in Brooklyn, New York. There he attended the Boys' High School, from which he was graduated in 1898; there he attended Pratt Institute. For three years he studied drawing and art at Pratt under Arthur Wesley Dow (one of these three years on a scholarship), and in 1900 he was graduated.

Weber started out as an art teacher, first in the public schools of Lynchburg, Virginia,

WEBER, MAX—*Continued*

where he taught drawing and manual training; second at the State Normal School in Duluth, Minnesota, where for two years he headed the drawing department. During these teaching years Weber had been saving money, and in 1905 he went to Europe to study, enrolling first under Jean Paul Laurens at the Académie Julien in Paris. After four months there he injured his hand and while it was healing haunted the museums, studying Persian and Chinese art, the Europeans, the Spanish and Italian primitives—"with the true post-impressionist's insatiable interest in art's remoter and more obscure pasts."

In 1906 Weber visited Spain and Italy; in 1907 he spent five months studying the Italian primitives and Renaissance painters. "I can remember," he tells us, "when I arrived in Florence. It was four in the morning in that hour just before dawn when everything is still. . . I left my bags in the station and went immediately to look at the Duomo and Giotto's Tower. . . There it is, I said, and I opened my arms to it as to a dear friend who had come back after years of absence." After this trip, Weber returned to Paris to study at the Académie de la Grande Chaumière and the Académie Colarossi in Paris and to get to know the art of the French modernists. He saw pictures by Cézanne—"as soon as I saw them they gripped me at once and forever"; he studied the work of Matisse and Picasso; he became a good friend of Henri Rousseau. And after studying the art of the Low Countries as well he returned to America in 1908, a foe of the academic formula and all its labeled sources.

This "pioneer for modernism" found America unreceptive. In 1909, at a time when hardly anyone in America had seen the work of Cézanne and other Frenchmen, he gave the first exhibition of his paintings at the Haas Gallery which was located in a basement on Madison Avenue. His work showed the "plastic design or organization of form, space and color which at that time was practically unknown," and it amused the critics, who advised him to forget the odd notions he had picked up in Paris. Weber was almost discouraged, and he was broke. He applied for a job as art instructor in the New York City schools, only to be told, after a test, that he couldn't draw well enough to teach art.

He continued to draw and paint, nevertheless, and to study the art of the American Indian and the works of their ancestors in Central and South America. This he made his own, and this, together with everything in America—skyscrapers, bridges, trains—he put into the pictures of that period: *Chinese Restaurant, Rush Hour, New York at Night.* Some of these works were exhibited by Alfred Stieglitz in 1910 at "291" with the canvases of other artists. In that same year, too, Weber arranged the first Rousseau exhibition in America—his enthusiasm for this painter merely proved to the critics how misguided an artist Weber was.

Weber's first one-man show was held at "291" in 1911. It drew great crowds and bitter attacks. One critic called it "a brutal, vulgar and unnecessary display of art license"; another said it was "difficult to write of these atrocities with moderation, for they are positively an insult to ordinary intelligence." Yet by the time of Weber's next show in 1912 there were a few people who began to see that he could draw and was a fine colorist, among them Robert Henri and Arthur B. Davies. The circle of admirers of the early Webers—the oils, water colors, black and whites, gouaches showing "massed and interblent figures emerging, as if reluctantly, from backgrounds which hold them, in geometric designs or in the indistinctly defined shapes of amorphous earth masses"—began to grow, and by 1913 he was distinguished enough for the Newark Museum to invite him to hold a one-man exhibition. That same year he showed nine of his paintings with the Grafton Group in England on the invitation of Roger Fry. This English art critic admired his works. "I wish to tell you . . ." he wrote, "how greatly struck I was by the extraordinary power that they seemed to me to indicate."

From 1915 to 1923 Weber was in virtual retirement, exhibiting rarely. He continued to work, however, and in the gradual development of his art was seen a turning away from cubism and futurism to a "style of his own." Before 1920 symbolic figure groups began to appear, suggesting, as in *The Musicians* and *The Women,* Old Testament characters or the personifications of anciently meaningful, almost forgotten proverbs. "It was with the entrance of this Hebraic quality into his art," one critic comments, "that his destiny as a great modern religious painter began to show fulfillment."

In 1920 and 1921 Weber taught at the Art Students League in New York and returned there again in 1926 and 1927. Before his second period as teacher, though, he had had, in 1924, two one-man shows. The first museum purchase of his work had also been made, by the Phillips Memorial Gallery in 1926. Soon after, the Metropolitan and then the Whitney followed suit. (In 1941 Weber is represented in the Los Angeles Museum, the Newark Museum, the Museum of Modern Art in New York City, in the Brooklyn Museum, which in March 1941 bought his *Music,* and in many other places.) In 1928, almost 20 years after his first exhibition, the Chicago Art Institute awarded him its Potter Palmer Gold Medal and $1,000.

By 1930 Weber was famous enough to be selected by the Museum of Modern Art as one of the first and few living Americans to whom it gave a retrospective exhibition. There were other exhibitions of his work, the last before the recent Associated American Artists show, in 1937. No longer did the critics scoff or scold; no longer did they fail to understand what he had done and was doing. Weber himself was little impressed by their praise: he received it as calmly as he had received their censure, which he attributed to "bigoted intolerance."

"At 60 Max Weber is painting with augmented power and with intensified eloquence." He remains "as aspiring, as eager, as questioning as a young man." A genial "round-headed bird-like little man," he lives in Great Neck, Long Island with his wife, Frances Abrams, whom he married in 1916, and their two children, Maynard Jay and Judith Sarah, in a rambling stucco house filled with a vast collection of French moderns. "I never saw a family more at peace and quietly devoted or more natural and happy together," Forbes Watson comments on their home life.

Here Max Weber writes poems and essays (his *Cubist Poems* was published in 1914, *Essays on Art* in 1916, *Primitives* in 1927); occasionally does some sculpture (he intends to do more of it in the future); and mostly paints. He is modest about what he has done. "If after a lifetime of living your art," he says, "you can add just a little bit to art, that is something."

WEILL, KURT (wīl) Mar. 2, 1900- Composer

Address: Brook House, South Mountain Rd, New City, N. Y.

Kurt Weill is a composer who has "something of Mozart and the better moments of Cole Porter." He has written symphonic music, opera, songs, arias, popular hits. He has written for the theatre, the radio, the films and will write for any other medium "which can reach the public which wants to listen to music." "I have never acknowledged the difference between 'serious' and 'light' music," he says. "There is only good music and bad music."

Music of every kind has been Kurt Weill's interest all his life. He was born in Dessau, Germany and raised in a home where music was a part of everyday living. His father, Albert Weill, was a Jewish cantor and composer; his mother, Emma (Ackermann) Weill, loved music, too. As a child he studied the piano and by the time he was 17 was almost supporting his family with his earnings as a performer and accompanist. He was also composing seriously—songs, operas, symphonic works.

Hermann-Pix

KURT WEILL

In 1918 Weill entered the Berlin Hochschule to study music under Professors Krasselt and Humperdinck, but he was made restless by the academic teaching and restless by the stodgy music he heard around him. He left after less than a year to take various positions in the German provinces. For a while in 1919 he was coach at the Dessau Theatre; in 1920 he was director of the Ludenscheid Opera House. But a year of directing productions, coaching singers, orchestrating music and conducting operas taught him how little he really knew about music. He returned to Berlin in 1921 to study theory and harmony under the famous Busoni.

Weill remained with Busoni until 1924. He was composing as well as studying, and in 1923 his highly complicated *Fantasy, Passacaglia and Hymn* was finished. Its style was not to remain characteristic of Weill's work, and when he was assigned to do a children's ballet for a Russian company visiting Berlin, it became simple and direct. As one critic was later to comment: "He has everywhere striven for clearness of structure and in his process of simplification has arrived at a style that is adroit in treatment except for the occasional whimsy of a lilting rhythm."

In 1925 Weill was called to Dresden to conduct a performance of Busoni's *Dr. Faust*. Weill told Fritz Busch, the conductor there, that the dramatist Georg Kaiser was writing a play with operatic possibilities. Weill approached Kaiser, persuaded him to make it into an opera, and in 1926 *The Protagonist* had its first appearance at the Dresden State Opera House under Busch. It was Weill's first opera and a great success. The Berlin State Opera was impressed and commissioned Weill to write another with Ivan Goll. This was called *The*

WEILL, KURT—*Continued*

Royal Palace, and because it had "the dullest opera book in existence" it was a failure. Still, in it was an unusual mixture of play, pantomime and opera assisted by films, and in it were evidences of Weill's growing interest in jazz.

After its performance, Weill returned to his first collaborator, Georg Kaiser, and with him turned out a charming *opéra bouffe, The Czar Has Himself Photographed*, which delighted audiences in 80 theatres throughout Germany. While they were enjoying it, Weill was busy with Bert Brecht working on the *Three Penny Opera*, a very free, squalid and savage modernization of Gay's *Beggar's Opera*. When finished it was sent around to all the Berlin producers and turned down by all of them. But Weill finally got a backer, and the opera was produced in 1928 and immediately became a sensation on the whole continent. European critics were ecstatic about this work, in which Weill's wife, Lotte Lenya Blamauer, a singer and *diseuse* of "most extraordinary personality" whom he had married in 1928, starred. They called attention to its combination of short scenes, airs, duets, trios, chorus; to its use of the canon, the rhythms of the tango, the "shimmy," the "blues," marches; to the full harmony, the "merry and devilishly earnest" melodies, the sonorous orchestration; to the effectiveness of the whole. However, when it was produced in the United States in April 1933, most critics snorted. They found the translation inept, the production confused, the whole "highbrow musical comedy stuff" that was a travesty on the original.

With the *Three Penny Opera*, Weill and Brecht settled down as a team, and with its production Weill was convinced of the kind of music he wanted to write. He decided that it was the theatre with music, rather than opera, in which he was interested, a middle ground where all the best techniques of drama, musical comedy, ballet and opera could meet. He was tired of composing for a limited audience, "limited," he felt, "not only numerically but emotionally and intellectually." "I wanted," he said later, "to reach the real people, a more representative public than any opera house attracts." Convinced that "many modern composers have a feeling of superiority toward their audiences," he insisted: "I write for today. I don't give a damn about writing for posterity." The serious music critics had a name for this kind of composing—*Gebrauchsmusik*—music for practical purposes, composed with prospective audiences in mind. They didn't hesitate to label Weill one of its foremost exponents.

However, labels and pigeonholes were far from their minds when they heard the next musical play done by Weill and Brecht. The nucleus of this play had been presented at Baden in 1927 as "a clever and savage skit on the degeneration of society, the triumph of sensualism, the decay of art" based on five poems of Bert Brecht. When it was reworked and presented in 1930 at Leipzig as a full musical play, this tale of three jailbirds who founded a utopian town pandering to man's lowest instincts, *The Rise and Fall of the City of Mahagonny*, provoked "the most tumultous riot in the history of the German stage." During one performance half of the audience threw stink bombs at the other enthusiastic half; police were called in; the lights were kept on throughout all its acts. But even those who loathed its obscenity and its biting iconoclasm agreed that the music was ever vivacious in its rhythms, that there were moments of lyrical force, that jazz had been skillfully used.

In that same year Brecht and Weill were able to edify the school children in over 500 schools throughout Germany. Their *Der Jasager*, presented by the German Government, was a musical play stressing the necessity of sacrifice by the weaker individuals for the good of humanity. Its music showed, it was agreed, "contrapuntal skill and fertility of invention." "It was music that was effective, strongly rhythmed, plain, clearly outlined and unornate in structure."

In 1930, too, Brecht and Weill presented *Lindbergh's Flight*, a classical cantata composed especially for radio performance and intended to be sung, afterward, as a school piece. Weill had originally written it in 1929 with some collaboration with Hindemith (see sketch this issue), but he wrote it in its present form with Brecht alone. Called "one of the few important choral works produced by contemporary music and surely one of the finest," which revealed Weill as "one of the most gifted of Germany's young composers," it was also labeled "over-refined and polished," "lacking in inspiration." This piece and the plays of 1930 were the last produced by the Weill-Brecht collaboration. Brecht had become deeply involved in political activity, and Weill had to seek out another partner.

He found Caspar Nehar and with him wrote *Die Bürgshaft* (The Pledge) for the Berlin Municipal Opera. Like his other works, it inspired divided criticism. There were those to call it "the first operatic work of distinctly modern hue that has met with approval from all quarters of the local musical camp"; others to find it a "long-winded farrago of didactic moralizing and proletarian propaganda" which "mercilessly exposes Weill's inferiority as a writer of straight tune."

Liked or disliked, it was the last of Weill's plays to enjoy a run in Germany. His *Silver Lake*, written with Georg Kaiser, opened simultaneously in 11 large cities in Germany in February 1933 and was hailed the morning after its opening by the majority of the critics. That was what the drama page of the newspapers said; on the front page there was a story saying that henceforth all works by Kurt Weill, that *Kultur Bolshevist*, were banned from Germany forever. There were no second performances, and Weill fled to Paris.

He was received there with open arms and immediately commissioned to write a ballet for Tilly Losch, *The Seven Deadly Sins*. Then Weill, who always sought out original playwrights and persuaded them his music would enrich their dramatic texts, interested Jacques Deval, the author of *Tovarisch,* in writing a musical play. Its title was *Marie Galante*, and it was a fair success in 1934. Later its songs became very famous in Paris. But Weill left Paris for London, where in 1935 with Vambéry he wrote *A Kingdom for a Cow.* London didn't like it, and Weill was easily persuaded to accompany Max Reinhardt to the United States to prepare for the production of *The Eternal Road.* Shortly after his arrival he took out his first citizenship papers.

He, Reinhardt and Franz Werfel had long discussed the creation of the play. "Our common task," he says, "was to bind speech and music into a perfect fusion. I sought to make the musical score an integral part of the action." With the inspiration of the Hebraic melodies he had learned from childhood on, he says, "I tried to create music that would communicate naturally and inevitably the stories of the Old Testament." Before American audiences heard his spiritual, poetic and mystical score for this unwieldy production in 1937 they had been treated to other examples of his work. In 1933 they had heard the *Three Penny Opera* and *Der Jasager,* and in 1934 the New York Philharmonic had presented his symphonic fantasy, *Three Night Scenes.* New York critics found the latter "disappointing", "banal", "prolix," and wondered whether his reasons for writing anything but theatre music were valid. He said: "I consider myself a theatre composer... I write absolute music in order to control my own style. You must turn away from your own habitual way occasionally. So then I write symphonic works."

The critics were much happier about his efforts for *Johnny Johnson,* a play by Paul Green which the Group Theatre produced in 1936. They found his score for this sardonic fable of the First World War "delectable," "roguishly satirical, spiced with a whippy jazz technique, perfectly and admirably suited to its purpose." And the general comment on Broadway was: "From now on all of the boys are going to have to watch their step. We won't be able to get away with the old musical comedy formula very much longer." Hollywood was impressed, too, and gave him a contract under which he produced the musical accompaniment for Fritz Lang's *You and Me.*

He was busy after his return to Broadway from Hollywood. First there was the music for Maxwell Anderson's *Knickerbocker Holiday* in 1938, which to most audiences was clever, rich-sounding, witty and almost good enough to make up for the play's flat book. Then there was the score for *Railroads on Parade* at the New York World's Fair, which backed up the spectacle with effective sequences. There was music for novachord as a part of Elmer Rice's play, *Two on an Island.* There was, in 1940, the music for the Ballet Theatre's performance of *The Judgment of Paris,* and the performance on the *Pursuit of Happiness* program of *Magna Carta* which he wrote with Maxwell Anderson as a "ballad history." Most recently there has been the score for *Lady in the Dark.*

He and Moss Hart (see sketch 1940 Annual) planned this last popular stage work as something different from the usual musical comedy, as a "musical play" in which music, lyrics (by Ira Gershwin) and book were to be welded by a new process. The play went over big, but critics disagreed about Weill's contribution to it. Brooks Atkinson called Weill "the best writer of theatre music in the country. . . Without Mr. Weill's beautifully integrated music it would be difficult to evoke the strange imagery that distinguishes [*Lady in the Dark*] from the ordinary run of musical comedy." Stark Young found the music "very successful," but there were others to say that "Mr. Gershwin's original talent deserves songs less reminiscent than Mr. Weill's." This accusation of a lack of originality in jazz composition has often been hurled at Weill and has often been explained away by referring to his musical background, of which jazz was never a hereditary or integral part, as it was of George Gershwin's, for instance.

It will probably be an integral part of his everyday life from now on, though. This soft-spoken composer, who has thinning dark hair and an oval smooth-shaven face fronted by eye-glasses, has settled down with his wife in an old remodeled house on a farm near Suffern, New York, where he intends to live for many, many years. He never thinks of himself as other than an "American" composer now.

WEIR, ERNEST T(ENER) (wēr) Aug. 1, 1875- Industrialist; chairman of the board of the National Steel Corporation

Address: b. Grant Bldg, Pittsburgh, Pa; h. Schenley Apts, Pittsburgh, Pa.

Ernest T. Weir, chairman of the board and director of the National Steel Corporation, the Weirton Steel Company, the Hanna Iron Ore Corporation, the Bank of Weirton and countless other corporations, looks like a

ERNEST T. WEIR

"genial, kindly and prosperous pastor," with "his healthy pink complexion, soft blue eyes and benevolent expression." Instead, he is one of the fightingest industrialists of this country, firm in his belief that the New Deal leads to business perdition, firm in his determination that his companies will not be organized by the CIO or any other outside union.

These convictions are part of Ernest Weir's philosophy, a philosophy which is based on his belief in free competition, for capital as well as labor. And this philosophy is the result of his own life. "Every dollar I have today," he says, "has come from [the first plant I started] and the large company that grew from it. No one ever gave me anything." Since he was 15 Ernest Weir has been working. That was the year his father, James Weir, died. Ernest left public school in Pittsburgh, the city where he was born, and got himself a job with the Braddock Wire Company as office boy. Every week he brought home to his mother, Margaret (Manson) Weir, the $3 he earned. He had to do this "if there was to be food on the table," he says.

A year later, in 1892, Weir became connected with the Oliver Wire Company. He wasn't an office boy long, and by 1901 had advanced sufficiently to take the position of chief clerk at the Monongahela Tin Plate Mills and marry Mary Kline. (There are twin sons and one daughter of this marriage. His second marriage, to Mrs. Aeola Dickson Siebert, took place in 1926, and after a divorce he married Mary Hayward of New York City on December 11, 1941.) In 1903 he was superintendent of the Monessen Mills of the United States Steel Corporation, and when he left this company in 1905 to form his own, he was manager.

With his brother and J. R. Phillips he bought an old tin plate mill at Clarksburg, West Virginia and scraped together enough capital to put life into it. "We had to fight every inch of the way," Weir recalls. "We had to meet our pay rolls and pay for our materials C. O. D.; the wages we took home to our families often were less than those paid to many of our employees. . . With my associates I worked long hard hours and made financial sacrifices in which my family shared, in the hope that I could help build the company into a strongly founded, successful enterprise. That happened."

This company, the Phillips Sheet and Tin Plate Company, prospered with Weir as its president from 1908 on, and by 1916 it had added several other plants and formed the Weirton Steel Company, a recognized power in the industry. With this company and others like the Hanna Iron Ore Company and the Great Lakes Steel Corporation, Weir formed the National Steel Corporation in 1929. When the depression settled down on the other steel companies, Weir's showed a profit every year —in 1931 National made more than all other steel companies put together; in 1932 it was the only company that showed a profit; and every year after, its books were written in black.

The other steel companies were distrustful. They said Weir made his profits by cutting prices to get business away from others. Some of Weir's employees claimed he made them at their expense. But Weir himself "kept his mouth shut, fought everybody that got in his way and forged ahead," concentrating, unlike the others, on much tonnage in sheet strip and tin plate and little in the heavier forms of steel. In 1941 the National Steel Company continues to be one of the most profitable, and the New York *Times*, in May of that year, reported Weir's salary as $345,000.

From the beginning of his company, Weir says: "We paid a fair wage to workmen," and he has continuously preached high wages. At the same time, "a stubborn, hard-hitting individualist," he has fought any union that tried to secure them for his employees, and has, according to *The Nation*, kept his employees "under strict control" in the city of Weirton, West Virginia, which has grown up around the mills. Weir himself calls the town "a community that is American in principle and spirit."

Most of the controversy between Weir and the unions began in 1933, when the NRA provided the right of employees to collective bargaining and a National Labor Board was set up. Weir made his own arrangements for an employee election in Weirton, and the Amalgamated Association of Iron, Steel and Tin Workers immediately responded with a strike. They lost the strike, and the Labor Board lost the case it brought against Weir for "coercion, intimidation and interference" against Weirton employees.

Soon after the National Labor Relations Act was passed, the Weirton Company was accused of anti-union activity; of flagrant violation of the Wagner Act"; of "conducting a campaign of terrorism"; and after years of litigation was ordered in 1940 to disestablish the union to which it "contributed financial and other support" and to stop "terrorizing" the CIO. During these years the CIO's Steel Workers Organizing Company never got to first base at Weirton, and even in 1937, when it was calling strikes all over Little Steel, "did not dare to strike against Weir." Some observers attribute this to Weir's policy of giving the employees increases before they get to the point of demanding them. This happened in 1937 when, only a few hours before the United States Steel Corporation and the SWOC signed a union contract, he announced he was going to boost the wages of the 21,000 employees in National's mills to $5 a day. This happened again in April 1941 when he granted a 10-cents-an-hour wage increase to his employees while the SWOC was negotiating for the same amount with United States Steel. Of this latter increase Weir said: "There was an improvement in the industry and we felt the workers should share in it."

Weir's most recent battle with the CIO was in the fall of 1941, when his refusal to consider a union shop in the captive mines was followed by the National Defense Mediation's Board decision that precipitated the United Mine Workers' strike. The final decision was against him, however.

Weir's war against the Roosevelt Administration has not been directed against its labor policies only. With some of its aims he has been in sympathy: "The factories, stores and railroads that turn out goods and services have got to turn out income with which their goods and services may be bought," he once said. "What's more they have got to be sure that income is distributed among the workers in such a way that they will be able to buy." He has, too, declared himself "heartily in favor" of unemployment insurance and old-age pensions. With most of its aims, however, and all of the means it has used to achieve them, he is in disagreement.

This man, who wrote in 1936 that "the American business system today represents the highest reach so far attained in man's eternal fight to wrest a better, easier living from nature," has fought bitterly against the restraints that the New Deal has imposed on that system. He has said that the "Federal Administration regards itself as the enemy of [the productive system of the country] and uses the power of government to shackle it on every side." Last year, in his position as president of the Iron and Steel Institute, he criticized the Administration for neglecting our defenses, for permitting excessive exports of scrap steel and failing to build up adequate reserves of strategic raw materials, for pouring billions of dollars down "ratholes of political waste"; and in his position as chairman of the finance committee of the Republican National Committee (he resigned from this in April 1941) urged the defeat of Roosevelt. He was said also to have been one of the heaviest contributors to the America First Committee. In the light of this background there was widespread surprise and no little indignation when Weir announced in April 1941 that he supported the policy of Leon Henderson, price administrator, in "freezing" the steel industry's prices. He said then: "There are no facts available today on which . . . to determine the necessity of a price change now. . . It won't hurt the industry to take three months to produce facts." After the wage boost and this statement there was no explanation needed when the National Steel Corporation in June 1941 withdrew from the American Iron and Steel Institute of which Weir had once been president.

Ernest Weir belongs to almost a score of clubs and enjoys himself at the sports they provide. But his real hobby, he says, is to try to find out what makes our economic system tick, and the extracurricular organization in which he is most interested is the Maurice Falk Foundation, which has $5,000,000,000 to spend for "the encouragement, improvement and betterment of mankind."

WELLES, ORSON May 6, 1915- Producer, actor and director of the theatre, motion pictures and radio

Address: 1430 Broadway, New York City

Ever since Orson Welles burst upon the American stage with the erratic refulgence of a meteor, his great problem has been to keep up with the legend of Orson Welles that has dogged him since the age of two. He has been regarded with mingled alarm and disbelief as a sort of theatrical baby

ORSON WELLES

Gargantua; he has been hailed as the white hope of the American theatre; he has also occasionally been called a ham and a faker. But in view of his achievements this last conclusion has had to be abandoned: "Orson Welles," said one critic after watching him romp through a rehearsal of *Native Son,* with which he returned to the theatre after two years in Hollywood, is "a very noisy young man, but he is no phony."

It is characteristic of Orson Welles to have picked out as his first play since Hollywood the dramatization of *Native Son* by Richard Wright, one of 1940's most controversial and hard-hitting books, the most biting story ever written about a Negro in America. The consensus of opinion was that Orson Welles measured up to the book. Brooks Atkinson wrote about him: "Mr. Welles has come back to the theatre with all the originality and imagination he had when he was setting off firecrackers in the *Mercury*. . . Mr. Welles is a young man with a lot of flaring ideas, and when he is standing on the director's podium, he renews the youth of the theatre."

George Orson Welles was born in Kenosha, Wisconsin, on May 6, 1915, son of Richard Head and Beatrice (Ives) Welles. His father was an inventor and promoter, his mother a talented musician. From an early age Orson moved in a welter of talented personalities: he met painters, musicians, actors, cartoonists, who treated him as if he were an adult. His greatest admirer (later, his guardian) was Dr. Maurice Bernstein, who was impressed by Orson when the latter was a toddler of two, dropping pearls of wisdom from baby lips. Dr. Bernstein was the first to introduce Orson to drama by presenting him with a puppet theatre. At the same time Orson was exposed to other arts, in which he did very well, becoming a proficient cartoonist at the age of 10. As a side line he learned magic from Houdini—this came in handy later when he eloped at the age of nine with a fascinating contemporary, intending to support her by practicing his sleight-of-hand tricks on street corners. During his childhood Orson was at his most glorious. His friends who knew him then tend to disparage his present accomplishments: Orson at twenty-six is overshadowed by the glorious memory of Orson at six.

Young Welles had no education except this informal kind when he was finally sent to school at 10. He had read all of Shakespeare, was proficient in belles lettres, amused himself by a critical analysis of *Thus Spake Zarathustra;* but he didn't know how to add or subtract. When this lack was pointed out to him, "there will always be," he said, "people around to add and subtract for me." He still doesn't know how to add simple figures—though he does considerably better with the astronomic ones that prevail in the motion picture and theatre industry. He finally went to Todd High School, in Woodstock, Illinois, largely because it specialized in dramatics.

Contrary to expectations he enjoyed his stay at Todd's. For one thing he was allowed to revolutionize the place; the school was made into a progressive school to keep up with Orson. Also the Todd dramatics began to include Shakespeare and obscure Elizabethans. He also contracted a friendship with the headmaster, Roger Hill, with whom he was later to cooperate in 1933 in editing Shakespeare for reading and staging by students.

Orson was graduated from high school in 1930, decided against going to college and in a brash advertisement offered his services to the theatre. He was talked by his guardian (his father had died when Orson was 13) into postponing his thespian ambitions and going on a sketching tour in Ireland. Young Orson traveled by donkey cart until fate caught up with him in Dublin when he attended a performance of the Gate Players at the Abbey Theatre. Orson talked the Gate director, Hilton Edwards, into giving him the part of Duke Alexander in *Jew Suss.* His performance, after the mannerisms of an aged Shakespearian actor had been ruthlessly sloughed off, was enthusiastically praised, as were his other performances of the season. He was asked to be a guest star at the Abbey Theatre. He was then only 16—a fact that nobody guessed, Orson having played an adult since he was 10. Later only his American citizenship prevented him from getting juicy roles in London.

In 1932 Orson came back to New York. Nobody raised the customary fuss over him and a supercilious office boy at the Shubert Theatre called him "kiddie." Orson retired to Chicago—and later to Morocco—to sulk Achilles-like in his tent. It was a sad little interim: his first attempt to write a serious play, *Marching Song,* was rejected; but his stories were accepted by a pulp magazine. Orson was crushed. Clouds lifted very soon, however. Thorton Wilder, meeting Orson at a cocktail party, brought glad tidings of Orson's Dublin fame having penetrated to New York, and gave the young man an introduction to Alexander Woollcott (see sketch this issue). Presently young Welles was touring with Katharine Cornell (see sketch this issue), playing Mercutio and Tybalt in Shakespeare and Marchbanks in *Candida.* In 1934 he met John Houseman, the producer of Gertrude Stein's *Four Saints in Three Acts,* and played in MacLeish's *Panic,* which Houseman produced. During the summer of 1935 he participated in the Woodstock Dramatic Festival, acting and directing. He also married the pretty, 18-year-old Virginia Nicholson, who played in the Woodstock Company. Orson Welles is now the father of a little girl named Christopher, but the Welleses were divorced in 1940. (In 1941 it was rumored that Dolores Del Rio would become the next Mrs. Welles.)

In 1935 Orson Welles was back in New York trying to work out a scheme whereby he and John Houseman would enrich the theatre independently. They could not raise enough money. Welles' father, horrified by young Orson's light-hearted way of flinging money around, had left him money which he could not touch until he was 25. Accordingly Orson bestirred himself and began to make money on the radio. He was in great demand, particularly in his characterization of "The Shadow," whose sinister voice sent cold chills down the backs of countless potential criminals.

That year Welles and Houseman were asked by the Government to help launch the Federal Theatre in New York. Young Welles began to do weird and wonderful things to Shakespeare. His first attempt was *Macbeth,* staged in Haiti, with an all-Negro cast, and a generous sprinkling of voodoo-doctors to take the place of three witches. Then followed Marlowe's *Dr. Faustus.* Welles, his face made up grotesquely, his voice mellow as an organ, wandered like a lost soul among gigantic shadows and shifting shafts of light. Critics hailed the revolutionary technique. But it was expensive: Welles had to dip into his own pocket in order to defray the expenses and to cut through the red tape.

The association with the WPA came to a spectacular end after the production of Marc Blitzstein's *The Cradle Will Rock,* when Welles, the production held up by a last minute order from Washington, wandered over New York in search of a theatre, followed by his audience. *The Cradle* became a landmark in the history of the Federal Theatre; Welles and Houseman left WPA and founded the Mercury Theatre, with *Julius Caesar* as its first production. It was played in modern dress, against the background of bare red-brick theatre walls. Caesar strutted in Fascist uniform; Welles as Brutus wore the conservative suit and wide shabby coat of an intellectual. In 1938, the Mercury Theatre presented *Shoemakers' Holiday, Heartbreak House* and *Danton's Death.*

It was in 1938, too, that the *Mercury Theatre of the Air* went on Columbia Broadcasting System, with Welles writing, editing and directing the sketches and often playing in them. On Halloween of that year he broadcasted the script of H. G. Wells' *War of the Worlds.* He had thought the script a bit dull, and enlivened it by setting the invasion of the Martians at Grover's Mill, New Jersey. An appreciable part of the New Jersey population, upon tuning in on the broadcast, took to the hills. The Wonder Boy's interplanetary high jinks had started a serious panic. Welles and CBS were deluged with threats, statistics of minor injuries and calls from people who wanted personally to swear at Welles. The incident provided some valuable material for a Princeton treatise on mass psychology: *The Invasion from Mars* (1940), by Hadley Cantril.

Meanwhile the Mercury Theatre became tarnished by the possession of several flops. *Danton's Death* (1938) was followed by the *Five Kings* (1939)—Welles' pet project since his school days, a combination of five Shakespearian chronicle plays. It proved too ambitious an undertaking even for Orson Welles. Soon thereafter Welles signed a four-way contract with RKO, as writer, actor, director and producer. His first venture was to be Conrad's *Heart of Darkness.* Orson Welles flew to Hollywood in August 1940, with the members of the Mercury Theatre and a beard that he grew in preparation for his work as an actor.

Shrieks of rage arose in Hollywood, provoked as much by the incredible contract as by the beard. Welles got a poor press in Hollywood; he was misquoted, branded a phony, a failure. People sat back and waited for the balloon to collapse. Gene Lockhart contributed a bit of doggerel:

Little Orson Annie's come to our
house to play,
An' josh the motion pitchurs up an'
skeer the stars away
An' shoo the Laughtons off the lot an'
build the sets an' sweep
An' wind the film an' write the talk
an' earn her board-an'-keep;
An' all us other acters, when our
pitchur work is done,
We set around the Derby bar an'
has the mostest fun,
A-list'nin' to the me-tales 'at Annie
tells about,
An' the Gobblewelles'll git YOU
Ef you DON'T WATCH OUT!

But Welles was busy writing two scripts, the *Heart of Darkness* and the *Smiler With a Knife,* both of which were turned down. When his third attempt, *Citizen Kane,* in which Welles himself played the lead, was approved and shot in 10 furious weeks, Hollywood jeers were answered and young Mr. Welles found himself in the headlines again.

Citizen Kane, which was finished in the beginning of 1941, has been hailed by those

WELLES, ORSON—*Continued*

who saw it as "the most sensational product of the U. S. movie industry," full of subtleties, smashing new techniques, extraordinary technical novelties. It is the story of a egomaniac newspaper tycoon, the tragedy of a modern Midas who changes all he touches into gold and dies hungry for humanity. The story presented a certain parallel to the life of William Randolph Hearst, who was said to have objected vociferously, threatening reprisals in form of publicity boycott, sizzling exposés, etc. For a while it looked as if RKO, for whom Welles made his picture, would withhold it from circulation. Welles, who has a 25 per cent interest in the film, on his side threatened legal action. The picture was released in early May in New York City. It was selected as the best film of the year by the National Board of Review of Motion Pictures and by the New York Film Critics' Circle. In June 1941 Welles signed a new contract with RKO to produce and direct three pictures a year.

At 26, Orson Welles is tall and chubby, weighing about 200 pounds. He eats a great deal and exudes energy. Richard Wright says about him: "One Orson Welles on earth is enough. Two of them would no doubt bring civilization itself to an end. If there were 10,000 Orson Welles, society would fly apart like an exploding bomb." He is a noisy, expansive, jovial young man who calls everybody "loveboat," and has kept his love for mugging, for grotesque make-up.

WHIPPLE, MAURINE Jan. 20, 1906- Author

Address: c/o Houghton Mifflin Co, 2 Park St, Boston, Mass.

The Giant Joshua is a first novel that Maurine Whipple, its dark, vivacious, youthful-looking author, calls the only true story about the Mormons ever written. Published in 1941, it has inevitably had to meet comparison with Vardis Fisher's recent *Children of God,* although Fisher's book was primarily an epic of the Mormon migration and Miss Whipple's the story of a particular Mormon settlement—the Dixie Mission in St. George, Utah. Her novel is also unusual in that it discusses the institution of polygamy from a woman's point of view, that of its heroine, Clory, who at 17 becomes the third wife of her guardian.

The story of the Dixie Mission begins in 1861 and covers 26 years of a people's struggle against economic hardship, social disapproval and political persecution. Clory's own life is one of work, poverty, sorrow; of battle against her own lurking doubts of the Mormon faith, against a short-lived love for her husband's eldest son, against the jealousy of Bathseba, her husband's first wife. Nowhere are the Mormons idealized; Miss Whipple calls them "human beings by birth and only saints by adoption." Yet she says, too: "The Mormons were the happiest people that ever lived. They sang their way across the continent and they idolized Brother Brigham." Critics have found her exhaustively detailed book "rich, robust and oddly exciting"; some have criticized its great length, its style or its handling of material, but even one of its sternest critics, Clifton Fadiman (see sketch this issue), remarks that as a piece of reconstruction *The Giant Joshua* is "vigorous, animated and perceptive, even humorous at times."

Few writers are as well equipped as Miss Whipple to write about the Mormons. They are her people; this is her faith; St. George is where she was born on January 20, 1906, the daughter of Charles and Anne (MacAllister) Whipple. It was from her own mother that she learned of the "polygamy raids" by United States marshals that took place after polygamy was outlawed in the '80s. Children were captured and made to give evidence against their parents, and Miss Whipple's mother was forced many times to hide in the sagebrush on freezing nights in order to avoid them.

The story of Clory, too, might be the story of Maurine Whipple's own grandmother, who was only ten years old when she set out from Philadelphia with her father, one of a group chosen by Brigham Young to settle the Dixie Mission. It took her six months to get to Utah, pushing a handcart. She was sixteen when she became the bride of the fifty-year-old missionary who had led her and her father across the plains, and she, like Clory, was one of the Mormon women who were unhappy in polygamy. The other wives were older and resented her; later, when her husband was transferred to another temple, he discarded her for an even younger wife. Yet there were good reasons for the Mormon institution of polygamy, however much it may have warped individual lives. Says Miss Whipple: "When the Mormons arrived in Utah they had been raided and murdered to such an extent that they had five women to every man. Brigham Young saw he had these alternatives: A colony of women who would likely break up into a section of spinsters and prostitutes. Polygamy was the only answer. Each woman would be better off with a fifth of a man than none."

Maurine Whipple herself had a girlhood that was normal enough. She studied first at Dixie Junior College in St. George, then attended the University of Utah. There she lived in a basement, sometimes went without meals, did washing for other students, worked in a store, and in-between times somehow managed to pile up enough credits to get her B. A. in 1926. She also joined Chi Delta Phi. After doing postgraduate work during the summer at the University of California in Los Angeles she proceeded to teach country high schools (although she had majored in English composition, she found herself teaching dramatics and tap dancing); she worked on public playgrounds; and she organized and managed her own private schools in towns throughout Utah, Idaho, Nevada and California. In her spare time she continued to write.

MAURINE WHIPPLE

It was not until 1937, however, that a friend persuaded her to send a story called *Beaver Dam Wash,* written some time before, to the Writers' Conference which was meeting in Boulder, Colorado. She did; members of the Conference—particularly the late Ford Madox Ford—were impressed; and Maurine Whipple received a telegram asking her to come to Colorado at once. She got there by hitchhiking, stayed there by borrowing $100, and the next summer went to the Conference again as a teaching fellow.

The year 1938 was really memorable for other reasons, though. *Beaver Dam Wash* was not sold—hasn't been sold yet, as a matter of fact—but the publishing firm of Houghton, Mifflin awarded Maurine Whipple a $1,000 fellowship in order to write *The*

WHIPPLE, MAURINE—*Continued*

Giant Joshua. At last all the hours she had spent among her people listening with passionate interest to their stories, and all the "burning zeal" which she feels for the Mormons as a group could find their place in a book.

In the summer of 1940 Miss Whipple taught and lectured at the University of Colorado, and after the publication of *The Giant Joshua* she paid a round of visits in Boston, New York and Washington and completed plans for a season's lecture tour. But soon she was hard at work on her second novel. She has no intentions of being a "one book" author, enjoys her work even though she has to bribe herself to get down to it of a morning, and when she gets going sometimes works fifteen hours at a stretch.

As for her tastes—Miss Whipple tells us: "I love children, even unmanageable children. Dogs, cats, books, magazines, flowers—growing them, etc.—and people. Mainly people. Mountain climbing is a favorite diversion, also dancing—tap and ballroom—and swimming." She is not married but has a number of men friends, and says that she is planning one of these days "to settle down with somebody on the top of a rocky mountain and write stories and observe all the goings-on of the neighbors." She tells us further: "I know what it is to be hungry and I also know what it is to be too well-fed. My philosophy is that nothing can get you down as long as you remember to keep laughing—mostly at yourself."

WHITNEY, GERTRUDE (VANDERBILT) Sculptor

Address: 871 Fifth Ave, New York City

In an article devoted to America's wealthiest women *Fortune* said, "There is possibly something symbolic about Gertrude Vanderbilt Whitney's leaning toward marble, for she has all of its strong-mindedness and authority. There is assurance in whatever she undertakes, from running the Whitney Museum to fighting for the custody of her niece Gloria Vanderbilt."

From the same source comes this statement: "The Whitney women have always been as active, as prominent, as newsworthy as the Whitney men. They have had backgrounds, interests, minds of their own." This probably would have been true whether or not Gertrude Vanderbilt had married Harry Payne Whitney. It was this marriage that made the great-granddaughter of Cornelius Vanderbilt one of the richest women in the land. Her husband's net estate, at his death in 1930, was valued at $62,808,000.

Born in New York City in the last century, the daughter of Cornelius and Alice (Gwynne) Vanderbilt, Gertrude Vanderbilt attended Brearley School and began to study art at an early age. Perhaps the prestige of great-grandfather Cornelius, who made his first money rowing market-garden produce from Staten Island to Manhattan, was a challenge to the slight, delicate-featured girl. She studied sculpture under Hendrik C. Andersen and James E. Fraser, took a course at the Art Students League, and later studied under Andrew O'Connor in Paris.

On August 25, 1896, she married Harry Payne Whitney, whose traditional pattern was cut out for him in business and in sports. A director of the Guaranty Trust Company, he was also interested in many other business ventures, and was known as the premier sportsman of his day. Mrs. Whitney took time off from her consuming devotion to art to become familiar with her husband's hobbies and to bring up her children on the lovely 600-acre estate at Old Westbury, Long Island. Her three children are Cornelius Vanderbilt Whitney, Mrs. G. Maccullough Miller and Mrs. Barklie McKee Henry. Though by no means a typical society woman, Mrs. Whitney's scale of living is impressive. In addition to the Long Island estate and a studio in Greenwich Village, she maintains a town house at 871 Fifth Avenue and a box at the Metropolitan Opera House.

Mrs. Whitney first met Juliana Force (see sketch this issue) when she required the assistance of a secretary to help edit a novel she had written. It was a relationship that was to prove immensely valuable to both women, and the novel was all but forgotten as more significant events began to take shape. The younger woman, with her sharp perception and executive ability, helped give direction to Mrs. Whitney's interest in American art and artists. In 1908 the Whitney Studio was opened at 8 West 8th Street with Mrs. Force as director. Two years later Mrs. Whitney discarded the anonymity that had cloaked her own creative efforts, allowing her name to be used when her sculpture, *Paganism Immortal,* won a distinguished rating at a National Academy show.

From then on Mrs. Whitney's artistic life had two facets, to create in her own right and to encourage American artists of talent to create. To a great extent this phase of her life is also the story of Juliana Force, and one need emphasize here only that Mrs. Whitney, who has carved so many and such massive memorials, can claim two monuments to her own interest in art. First, there is the living trend of a native art that she helped to encourage and, second, its embodiment in the Whitney Museum of American Art.

That her participation in this development was never a mere sideline or hobby is testified to in her description of her four passions: that talent be encouraged in youth; that the young artists be given a lay audience that will buy as well as a critical audience that will appraise; that the public know the art of its people; finally, that the development of a characteristic, vigorously American art that has taken place within the last 50 years become part of the country's artistic consciousness. "Mrs. Whitney's interest," says *Fortune,* "has often helped young American artists to get a hearing, it has disproved the theory that American millionaires never buy anything but European Old Masters."

Working in a wide variety of sculptural media, Mrs. Whitney has executed commissioned works for many countries abroad as well as for many parts of her native land. A kind of romantic grandeur distinguishes many of these creations, such as the World's Fair commissioned work, *To the Morrow,* an immense bird in flight, the nude figures of a man and woman where the head would be. But *Peter Stuyvesant,* also done for the World's Fair, had more of Dutch dignity about him, only the largeness of concept marking it as by the same artist. "The great Cornelius," wrote J. T. McGovern, "dealt only in marine and railroad consolidation. Gertrude Vanderbilt Whitney worked in art in the grand manner. Her subjects were lofty in spirit and she executed them on a heroic scale. Consider the *Columbus* statue erected at Palos, 70 feet high; the bronze *Buffalo Bill* on top of Lookout Mountain, said to be the tallest figure in bronze which had up to then been designed by a woman; the A. E. F. *Memorial,* 60 feet high, erected upon a rocky eminence over the harbor of St. Nazaire, where the first troops of the American Expeditionary Force landed in France; and the great group and background *El Dorado* done for the Panama Exposition."

In her commissioned works, where she has usually to deal with specifically historical subject matter, Mrs. Whitney handles with complete equanimity the most realistic materials. In her salon sculpture one might almost be permitted to make a sharp distinction and to say that here we are being shown more intimate aspects of the artist's talent. Most critics agree substantially with Edward Alden Jewell's appraisal of Mrs. Whitney's sculpture, written after he had seen an exhibit of her work in 1936. "The approach in most of this work," said Jewell, "is essentially romantic, often decorative. Sometimes, however, there are graver passages, as in the tragic severed head of *John the Baptist,* held aloft by Salome—her figure treated with a contrasting lightness of touch that would be appropriate in a piece of innocent ornamental sculpture for the garden."

Henry McBride noted in this exhibit of her work the absence of a "feeling for time," and suggested that "she not only escaped the present tempestuous era but escaped as well the domination of the terrible Old Masters." That this statement could not apply to the bulk of her commissioned works is fairly obvious. And one may assume that it was partly because of them that she was one of four women sculptors invited to depict on Flushing Meadows the World of Tomorrow. Authentic detail has always featured Mrs. Whitney's treatment of historical subjects. For the equestrian statue of *Buffalo Bill,* for example, she used a cow pony for a model. Even so, over-zealous newsmen printed a story hinting that the model had been one of her husband's polo ponies!

GERTRUDE WHITNEY

Along with her own creative work, Mrs. Whitney's partisanship of American art and artists has occupied much of her time and absorbed a great deal of her money. Hers was never patronage, however. From the beginning she made it plain that philanthropy could only encourage bad art if it were confused with art appreciation. Mrs. Whitney's philanthropy, therefore, was something distinct from her attitude toward art and artists *per se.* If during the years when the Whitney Studio Club and Gallery existed "many were provided with the absolute necessities of life by Mrs. Whitney," this did not mean that paintings for the Whitney collection were accepted on the basis of the artist's economic need. On the contrary, they were accepted only on artistic merit. And critics might quarrel as to the relative merits of this or that artist, yet agree that in a period of little more than two decades Juliana Force and Gertrude Whitney managed to assemble the most representative collection of modern American art in the country.

Nor was Mrs. Whitney the only buyer during these years. Through Mrs. Force's attractively furnished apartment passed many of the country's most promising younger artists, some of its neglected oldsters, while through Mrs. Whitney's drawing room passed collectors or potential collectors, many of whom made that inevitable visit downtown to the gallery to buy their first Sloan, Luke or Bellows. Thin, unusually tall, Mrs. Whitney's green gowns and brownish hair were a familiar sight at museum and gallery openings. In 1931 the Whitney

WHITNEY, GERTRUDE—*Continued*

Museum of American Art opened its doors with Juliana Force as director and Mrs. Whitney on its board of trustees but otherwise disavowing other than fraternal contact with the modern yet typically American façade built up from three old houses on West 8th Street. This was not discreet self-effacement, and it implied no departure from Mrs. Whitney's lifelong concern for the present and future of native art. It was simply a statement of fact and in this sense a generous tribute to the executive genius and the good judgment of Mrs. Force.

Since its opening there have been two attempts to involve the Whitney Museum in controversy. In 1933 when Juliana Force was named regional head of the Public Works of Art Project she felt compelled to explain to the press that there was, in fact, no connection between the Government and the Museum, that she had received her appointment as a qualified individual. In the year that followed there developed in the State Supreme Court a prolonged legal case as Mrs. Whitney sought to gain custody of her niece, Gloria Laura Morgan Vanderbilt. This case was finally settled in 1936 by Gloria's mother being given custody during summers and vacations, Mrs. Whitney the rest of the time, but not before it had been revealed that $4,000 monthly was required to care for Gloria Vanderbilt. The Museum entered into the picture very briefly when Nathan Burke, counsel for Gloria's mother, wished to photograph some of the nude sculptures, a request denied by the Court.

Mrs. Whitney belongs to numerous art societies and clubs and has been awarded many honorable mentions and medals. "In art" Mrs. Whitney said, "man has always found the comfort and joy, relaxation and aspiration which help to take away heartache. It is music, rhythm of line, color, words, drama, which bring refreshment and which keep alive our trust in human nature and our belief in the future."

WILKINSON, ELLEN (CICELY) 1891- Parliamentary Secretary to the British Ministry of Home Security

Address: 18 Guilford St, London, W. C. 1, England

Ellen Wilkinson, trade-union leader, Laborite, Leftist critic of the British Government, is in 1941 working closely with the Churchill Administration, her job that of Parliamentary Secretary to the Ministry of Home Security. She is still as much of a feminist as she ever was, and has been urging greater utilization of women in Britain's war efforts. Women, she thinks, are needed in every sort of work, and when women are properly trained England will be better prepared for that time when "Hitler throws everything at us, including the kitchen stove."

Almost all her life Ellen Wilkinson has been absorbed in political problems. "I should say," writes Ethel Mannin, "that Ellen Wilkinson cares about politics as most women care about clothes and love, that for her those things will always be unimportant incidentals in the business of living." In spite of that this "stumpy, bright-eyed little person with a permanently quizzical expression and a shock of red hair" is not, the same observer hastens to add, "the de-humanized mass of politics devoid of natural feeling which that statement suggests." She radiates enthusiasm and energy, she is "real."

ELLEN WILKINSON

Ellen Cicely Wilkinson was born in the cotton city of Manchester, where her father, Richard Wilkinson, was an operative in one of the mills. Later he became an insurance agent, but not until Ellen was almost grown up. She was brought up in "one of those dreary little houses which make up many of the streets of Manchester," and attended a State primary school. From there she won a scholarship to the Stretford Road Secondary School in Manchester and after that she went on to the University of Manchester, which gave her a Master of Arts degree.

For a while after graduation Ellen worked as a teacher. Her heart, though, was in politics. As early as 1912 she joined the Independent Labor Party, then a powerful force in the labor movement, and in that same year started agitating for woman suffrage. A year later, when the suffragettes were causing great embarrassment to the Liberal Government, she became organizer to the National Union of Women's Suffrage Societies, a post she kept for two years. Then, with the War on, she threw herself into the trade-union movement; by 1915 she was national organizer for the National Union of Distributive and Allied Workers. She remembers those War years well. Compared with them, she says, life as a member of the House is child's play. This must have been particularly true since she was at the time a member of the Women's International League, opposed to the War.

Always a Leftist within her trade-union, Miss Wilkinson joined the Communist Party of Great Britain when it was founded in 1920, and from 1923 to 1926 sat on the Manchester City Council as a Communist. She was also one of the founders of the University Socialist Federation, one of the first members of the British Bureau of the Red International of Labor Unions (later called the National Minority Movement) and a leader of the Plebs

WILKINSON, ELLEN—*Continued*

League and the Labor Research Department. During the Irish "troubles" she was in Ireland as a member of the Labor Commission on Ireland, dashing in and out of those places where the shooting was fiercest. Later she went to Washington to give evidence on what she saw before the American Commission on Ireland.

In 1923 Miss Wilkinson contested Ashton-under-Lyne as official Labor candidate. She lost the election. The next year she switched from the Communist to the Labor Party, for she saw by then that if she were to do practical work for the laboring people it would have to be under the auspices of the official Labor Party. The switch proved successful, and she was returned for Middlesborough. Once in Parliament, Ellen Wilkinson distinguished herself by asking many and embarrassing questions, by arguing vehemently ("she's a born arguer," her colleagues say) for those things in which she believes. She also made herself conspicuous by her "intrepid spirit and irrepressible perkiness." There was one debate in 1926 when she was being a bit of a nuisance to her opponents. The Conservative Member for Dulwich quietly admonished her: "Be quiet, Miss Perky!" Laughter began to spread around the House, and Ellen herself got only as far as saying: "Mr. Speaker, is it in order for an Honorable Member to describe another . . ?" when she broke down and joined in.

In 1926 Miss Wilkinson played an active part in the General Strike, touring the country up and down, speaking in Parliament, in meeting halls, from soapboxes. As in all her speeches, her strong voice was badly managed; her appearance was unimpressive. But audiences all over England recognized her "clear understanding and assertive will." It was partly as a result of these excursions that she collapsed in the House in 1927 and had to spend some weeks in the country recuperating from a nervous breakdown. She came back ready to continue the fight and stayed in Parliament until the 1931 election, when she was ousted.

During all these years in politics Miss Wilkinson was a prolific journalist and writer whose contributions appeared in many labor and other papers. One of them, an article published in the *New Leader* in 1929, cast doubts on the impartiality of the chairman of the Committee of Ways and Means and got her into trouble. She was censured for breach of privilege. In that same year she brought out a first novel, *Clash*, built upon political issues.

During the four years she was out of Parliament, Ellen Wilkinson continued to write. Her *The Division Bell Mystery* appeared in 1933; *Why War?* and *Why Fascism?* (in collaboration with Dr. E. Conze) in 1934. She did much more than just writing in those years. She was busy with trade-union work; she made a visit to India in 1933 and returned to criticize the Government's administration there; she visited Russia; she was in Germany during the terror which followed the Reichstag fire; she was in Detroit and other United States auto centers in 1935, reporting on the conditions of work, employee organization and the management policy she found there. And always she was an indefatigable worker against Fascism, her flat a center of organization, her services at the disposal of thousands of meetings. She traveled all over Europe and her own country, combating Fascism, reporting what she found in Spain in 1935, in Germany, in England.

She continued this work after she was returned to Parliament in 1935 as Labor Member for Jarrow, a northeastern shipbuilding town which for many years has existed in a state of industrial depression. She fought for Jarrow in Parliament, and when the Jarrow men sent a band of marchers to London to impress the Government with the need of doing something for this town, she marched at their head, despite her frail health. In 1939, too, she published a book on Jarrow, *Town That Was Murdered*, and in it laid the blame for its misfortunes on capitalist greed and mismanagement.

As a member of the National Executive Committee on the Labor Party she was one of the three who in 1938 voted for Sir Stafford Cripps' (see sketch 1940 Annual) proposal for a Popular Front against the Conservatives. But, as Patricia Strauss puts it, "she always managed adroitly not to wander too far from the hearth of orthodox Labor domesticity."

In the House itself she continued to be the question-asking, "perky", "Socialist spitfire" of her previous terms. She initiated there an important piece of legislation in 1938, the Hire-Purchase Act. The issues involved were complicated, and the measure had to be carefully nursed. She did this with such skill that when the bill became law (without a dissenting voice at its third reading) she was congratulated by the attorney general on "her patient and skillful handling of the prolonged negotiations with the various interests concerned."

Her hard work in Parliament definitely put her in line for a position in the all-party Government which Churchill formed in May 1940, and the job of Parliamentary Secretary to the Ministry of Pensions fitted in well with the work for social betterment she had been doing. In October 1940 she left the Ministry of Pensions to help Herbert Morrison, Home Security Minister, provide food and shelter for bombed Londoners. She is known as the "Shelter Queen."

Opinions of her have somewhat changed since the days when she was known in England as "Red Nell." In 1941 there were some on Britain's Left who called her a hireling of the capitalists; there were others who yelled, "Take her away," when in October she made a speech urging "cool strategy" rather than emotion in Britain's attitude toward aid to Russia (Communists blamed the discourtesy on provocateurs); there were some former associates who deplored her belief that England could not open up a second front at that time. But there were also many who were still sure that Ellen Wilkinson "has never forgotten her working-class origin or lost contact with the rank and file of the movement."

Who's Who

WILLIAM II, EMPEROR *See* Wilhelm II, Former German Kaiser

WILLIAMS, EMLYN Nov. 26, 1905-
Playwright; actor
Address: 15 Pelham Crescent, London, S. W. 7, England

The New York Public Library

EMLYN WILLIAMS

At the age of 36 Emlyn Williams is London's reigning playwright and bids fair to become New York's, too. In a dull and dreary theatre season his *The Corn Is Green* opened in November 1940 to give the New York City stage something of its usual glory. A play which, according to Brooks Atkinson of the *Times,* "comes as close to being a masterpiece as a journeyman theatregoer can reasonably expect," it is the story of a woman who turns a surly-mannered, smutty-faced Welsh miner into an educated man. But it wasn't the bare plot that mattered to the wildly enthusiasic critics; it was Emlyn Williams' ability to show depth and integrity of character, to create a "stirring, high-minded drama that . . . illuminated something precious in the long story of man's blind struggle in the network of the stars." Joseph Wood Krutch, writing in *The Nation,* and George Jean Nathan were almost alone in dissenting from the general verdict.

The background of *The Corn Is Green* is very much the background of Emlyn Williams' own life. The son of a Welsh iron-maker, Richard Williams, and his hard-working wife, Mary Williams, he was born in the tiny Welsh hamlet of Mostyn in Flintshire and was eight before he could speak a word of English, nineteen before he ever saw a play. But he was always interested in the theatre—"I'm Welsh and the theatre is one of the fundamental instincts of my people." Almost before he could talk he would dress himself up in sheets and perilously and solitarily act on the edge of his bed dramas he made up himself. Later, as he tells it, "I read a great deal . . . *Pilgrim's Progress* and the Bible; and always as I read I saw the characters between imaginary footlights and back cloths, as people in a play."

Emlyn was sent to the Holywell County School and there trained by interested teachers to become a schoolmaster. He won a scholarship in French to Christ Church, Oxford, spent four brilliant years there and went down with an M. A. But he was sure by then that he would never be a schoolteacher, for at Oxford he had seen his first real play, Somerset Maugham's *The Camel's Back.* "I was caught in a spell that has enthralled me ever since. . . I felt, too, I must create such characters and such situations. So I went home and wrote a play."

The play was *Full Moon,* a rather Chekhovian sort of thing in which everything happened, but life went on. It was acted by the Oxford University Dramatic Society, of which Williams became an active member. But it was not easy to get parts on the stage after he left Oxford and there was a period of standing in long queues at agents' offices and tiresome waiting. Finally in 1927 came a part in *And So to Bed,* a very small one, but a part. Then followed a role in his second play, *Glamour,* called a "youthfully crude but promising effort," which didn't exactly set the Thames on fire and left Williams looking for another acting part. He got a number of them in the next few years, in none of which he achieved fame.

Then, in 1930, came Williams' first success as a playwright. His *A Murder Has Been Arranged* was presented in a Sunday night show and after the first performance managers fought to produce it. The story went around then that Williams invited five managers to his flat, threw the manuscript at them and said, "Bid, Gentlemen, Bid,"—so successfully that he got an advance of £1,000. When he was asked if this were true Williams said: "All but one thing. There were seven managers."

In 1931 came his *Port Said,* in which Williams acted, and then Edgar Wallace's *The Case of the Frightened Lady,* in which Williams was a tremendous success as Lord Lebanon. After a season in other plays in London, Williams came with the Wallace "shocker" to New York in 1933—its name was changed to

WILLIAMS, EMLYN—*Continued*

Criminal at Large—and was praised for "one of the exceptional characterizations of the current season." In that year and the next there were many London plays in which Williams appeared, and his own *Vessels Departing* and *Spring 1600* were produced, as well as his adaptations of *The Late Christopher Bean* and *Josephine.* Then, in 1935, came his *Night Must Fall,* a great hit which ran in London with him in the leading role, for over a year.

This "taut, slick study in psychopathic homicide" is the story of Dan, who murders a woman at the hotel where he is bus boy, plans throughout the play to murder another woman, and finally does. The latter's niece, Olivia, is meanwhile the victim of both terror and fascination. It is a play of "extraordinary tension," called by every critic "first-rate theatre." It has been told that so skillful was Williams' own part in it that an old lady once refused to ride up in an elevator with him. Williams, however, insisted that "my interest in murder is purely objective."

When *Night Must Fall* was brought to the United States in 1936 it flopped despite its success in London, despite Alexander Woollcott's (see sketch this issue) statement that Williams was "one of the half dozen actors left in the world whom I would want to see no matter what the play," despite his and others' praise of the play. A few months later when Wiliams was describing the hectic life of New York he didn't hesitate to say that "the only quiet place in it was the auditorium of the Ethel Barrymore Theatre," where it played. Later his play was made into a film with Robert Montgomery and Rosalind Russell, a critics' if not a box-office success.

After he returned to England, Williams, together with John Gielgud, acted in another of his own plays, *He Was Born Gay,* but it lasted only 10 days. Then he went to the Old Vic Repertory Theatre and for one year appeared in a number of plays, including Shakespeare's *Richard III* and *Measure for Measure,* and Ibsen's *Ghosts.* In 1938 came his own *The Corn Is Green,* in which he acted the part of Morgan Evans, taken in the American performance by Richard Waring. In 1940 it was still playing in London and in the spring of that year was joined by *The Light of Heart,* the story of a drunken, down-at-the-heels actor who gets his last chance to stage a comeback in a production of *King Lear.* Critics hailed this play, too (though iconoclast George Jean Nathan read it and wondered why), and it was planned for Broadway production.

During these years as playwright and actor, Emlyn Williams has also turned his attention to the films. It was in 1932 that he first appeared on the screen—in the adaptation of *The Case of the Frightened Lady*—and from then on he has appeared in a number of motion pictures, including *Night Alone, The Citadel* and *They Drive by Night.* He has also adapted a number of films.

Emlyn Williams is a round-faced, boyish-looking, not very tall man with a mop of hair streaked with gray, an attractive Oxford slur and a habit of lolling around in slightly disheveled suits. Lucius Beebe can "recall few more amiable, approachable or persuasively articulate persons," and there are friends who say he is these even when he's working on a play. According to them he can be interrupted at his work without growling and depends on his powers of concentration to keep him up to schedule. It has been said that he wrote the last scene of *Night Must Fall* during a party. During one of its rowdiest moments he suddenly stood up from the typewriter and exclaimed: "I've finished it!"

For many years Emlyn Williams was a bachelor. But now he is married to Molly O'Shann and they have two children, whom Mrs. Williams brought to the United States in the fall of 1940. Not allowed to bring out money for their support, she arranged for a job as "technical adviser" to Herman Shumlin (see sketch this issue), producer of *The Corn Is Green,* in order to collect enough to provide for them until the royalties came rolling in. In April 1941 she returned to London, however.

WILLIAMS, PAUL R. Feb. 18, 1894- Architect

Address: 3839 Wilshire Blvd, Los Angeles, Calif; 1271 W. 35th St, Los Angeles, Calif.

Shortly before the New York World's Fair closed in 1940 there was held at the Court of Peace on the Fair grounds a Diamond Jubilee celebration of the enactment of the 13th Amendment (which outlawed slavery). A special commemorative stamp had been issued by the United States Post Office Department, and a sheet of 100 of these and a certificate of merit were presented to each of several Negroes in recognition of their achievements.

Among the recipients was Paul R. Williams, Los Angeles architect, one of the leading architects of the West, a member of the Los Angeles Municipal Housing Commission and an associate architect on government jobs in Washington, with offices in both that city and Los Angeles. Mr. Williams has designed homes for a number of film people, including Will Hays, Grace Moore, Bill Robinson (see sketch this issue), Lon Chaney, Corinne Griffith, Zasu Pitts, as well as for many other prominent residents of California and elsewhere. He was architect for other types of buildings also: a Hollywood Y. M. C. A., fraternity and sorority houses for the University of California, the West Coast Company Theatre and the Sunset Plaza Apartments in Hollywood, California. A recent issue of *Life* showed pictures of William Paley's Beverly Hills home, the Saks Fifth Avenue Beverly Hills store, and the Music Corporation of America Building (Beverly Hills), all designed by Williams. One of his latest designs was for the $100,000 home that Charles Cottrell (Andy of "Amos 'n' Andy") has built in Los Angeles.

When Paul Williams was in Polytechnic High School he decided that he wanted to be an architect. He was living in Los Angeles, where he was born, the son of Chester Stanley and Lila (Wright) Williams, and where as a child he had played with other children without being made aware that he was "different." It was not until as a schoolboy he applied for a job that he encountered prejudice: he learned that he was not taken because he was a Negro.

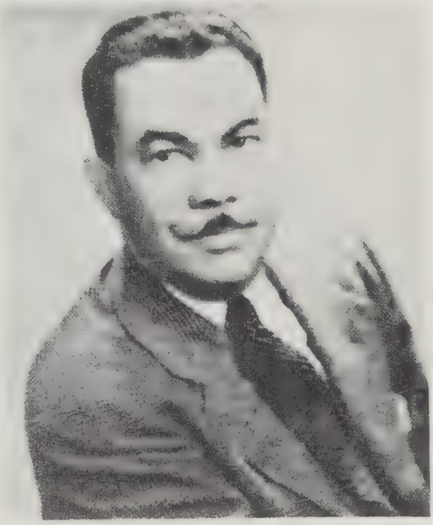
"I passed," he said, "through successive stages of bewilderment, inarticulate resentment and, finally, reconcilation to the status of my race. Eventually, however, as I grew older and thought more clearly, I found in my condition an incentive to personal accomplishment, an inspiring challenge. Without having the wish to 'show them,' I developed a fierce desire to 'show myself.' I wanted to vindicate every ability I had. I wanted to acquire new abilities. I wanted to prove that I, *as an individual,* deserved a place in the world."

Therefore when his instructor tried to have him face reality, by asking him, "Who ever heard of a Negro architect?" he decided that if at this point he allowed the fact that he was a Negro to checkmate his ambition he would be starting a habit of "defeatism"; that he owed it to himself and to his people to accept this challenge—feeling as he did that white people would be fair-minded enough to give him an opportunity to prove his worth as an individual.

He worked his way through the University of California and then attended the Beaux Arts Institute of Design, winning the Beaux Arts Medal. After graduation he got a Los Angeles telephone book and took down the names of all the architects in the city. One by one he went to them, until he found one willing to take a Negro draftsman. He began as general utility man, but gradually worked his way up to chief draftsman, acquiring experience in all branches. The Society of Architects of Los Angeles took him in. By this time he felt that he was ready to open his own office.

A theory that he had about the cause of prejudice helped him to become established: he had decided that most prejudice was unreasoned; that the average American generalized about Negroes as he generalized about many other things, without much thought; that if he could somehow shock some people into looking upon him as an "individual" Negro he might be able to sell his ability. He, therefore, developed several tricks as "attention-getters." Often a person would come into his office not knowing that he was a Negro and would then try to withdraw graciously. Perhaps he would say that he was "just shopping around," that he was thinking of spending about $8,000 but that he was not ready to make a decision. Williams would then say, "I am sorry but I have been forced to make it a rule never to do houses costing less than $10,000—but won't you sit down a moment. Perhaps I may be able to give you some ideas . . ." Frequently in this way he got a hearing, and sometimes a client.

Another device he had of attracting attention was drawing upside-down—right-side-up for the prospective client who was sitting opposite him. As he talked, consulting the client about details, he would make a rough sketch of the plans. This trick, he says, invariably aroused interest.



PAUL R. WILLIAMS

During this time he was forced to accept small commissions—in spite of his trying to give the impression that he handled only large ones. And because they *were* small he acquired what he regards as invaluable experience, for he had to figure costs very rigidly.

When he was first consulted on a residence costing more than $100,000 he tried another trick. The automobile manufacturer who wanted the house built told him that he had already discussed plans with some other ar-

WILLIAMS, PAUL R.—*Continued*

chitects, and asked him how soon he could have preliminary drawings ready. When Williams said by four the next day the manufacturer thought that impossible, since the other architects had all wanted two or three weeks, and was impressed enough to let Williams go ahead. The latter presented the plans at four the next day—by working for twenty-two hours without eating or sleeping.

Mr. Williams is a member of the American Institute of Architects. He has been a registered architect since 1915, and was listed in *Who's Who in Architecture* (of the *American Art Annual*) published in 1924. He has won several western and national competitions. For years now he has had to refuse about 25 per cent of the commissions offered him, commissions that come from other sections of the country as well as from his own state. He has had as many as 13 draftsmen working under him at one time, several of them white. Not long ago he reported that he was planning 33 buildings—business buildings, homes, apartment houses. When he plans private houses he thinks of building *homes* for individuals, and studies the economic problems, the habits and tastes of each client. Designs and descriptions of his buildings are found frequently in *Arts and Decoration, Architectural Forum, California Arts and Decoration* and other journals.

Mr. Williams married Della Givens on June 27, 1917. They have two children.

WILSON, CHARLES E(RWIN) July 18, 1890- President of General Motors Corporation

Address: b. c/o General Motors Corp, Detroit, Mich; h. Bloomfield Hills, Mich.

When William Knudsen was called to Washington in the spring of 1940 to work on the Defense Commission, his place as president of the General Motors Corporation was taken by Charles E. Wilson, "a soft-faced, hard-headed engineer and production man." Since he has headed this large and important company Wilson himself has had a good deal to say on the defense program. Surveying the country as a whole, he has stated that defense can be "successfully completed only by improving efficiency . . . and by sacrifice." And he has given it as his opinion that "unless engineers, technicians, highly skilled mechanics and managers work more than 40 hours a week the program will never be completed on time."

Charles E. Wilson has also informed the public on the part that General Motors is playing in preparedness. In February 1941 he announced that arrangements had been completed for the production of parts and sub-assemblies for 200 twin-engine bombers monthly and that in its Buick and Allison division airplane engine production was being boosted from 500 to 1,500 units a month. The full aviation program that General Motors is undertaking, he estimates, will probably mean the employment of 40,000 additional men.

Production in great quantity, however, was not expected to get under way until the third quarter of 1941. Although backlog defense orders were large, in 1940 only three and one-third per cent of General Motors' output had been for defense, less than eight per cent in the first quarter of 1941, and there was still a boom in the production of private motor cars, the greatest in years.

For more than 20 years Charles Erwin Wilson has been an executive of the General Motors Corporation; he came to that company with years of engineering experience behind him. He was born in Minerva, Ohio, where his father, Thomas Erwin Wilson, was principal of the Minerva School and where his mother, Rosalind (Unkefer) Wilson, had also been a teacher. A few years later the Wilsons moved to Mineral, Ohio, and Charles went to public school there. He finished his pre-college education in Bellevue High School in Pittsburgh, Pennsylvania and then attended the Carnegie Institute of Technology, from which he was graduated in 1909 as an electrical engineer.

Shortly after graduation Charles Wilson joined the engineering staff of the Westinghouse Electric and Manufacturing Company in the Pittsburgh district as a student apprentice. He stayed in the employ of this company for 10 years, and it was here that he received his first real training in the practical application of engineering knowledge. He learned more, too: he learned the importance of costs and of volume manufacturing.

At Westinghouse, Wilson came into contact with automobile manufacturers and grew more and more interested in their problems. In 1912—a year also made important by his marriage to Jessie Ann Curtis—he designed the first automobile starting motors made by the Westinghouse Company. By 1916 he was in charge of all automobile electrical engineering equipment there. When the First World War came along, Wilson was put in charge of design and development of Westinghouse radio generators and dynamotors for the Army and Navy.

In April 1919, after the War was over, Wilson joined the General Motors Corporation as chief engineer and sales manager of the automobile division of the Remy Electric Company, a General Motors subsidiary with headquarters in Detroit. Later he was transferred to Anderson, Indiana as chief engineer of the company. Here he initiated a redesigning program that materially helped to put the Remy Electric Company's operations on a sound financial basis. By December 1921 Wilson was factory manager and four years later became general manager. Then, in 1926, when the Dayton Engineering Laboratories Company was added to the Remy Electric Company, he became president and general manager of the newly organized Delco Remy Corporation.

During the next two years the Delco Remy Corporation, which employed about 12,000 people, developed under his direction the Lovejoy shock absorbers, industrial motors for refrigeration and washing machines, automobile lamps and Delco batteries. By the end of 1928 the Delco Remy Division had spread out from Anderson, Indiana to three other cities, and Mr. Wilson himself had been made a vice-president of the General Motors Corporation and transferred to Detroit.

CHARLES E. WILSON

Wilson's main duties after his promotion were to acquire properties to expand the Corporation's activities (he assisted in arranging for the purchase of minority interests in the Bendix Aviation Corporation and the North American Aviation Corporation as well as for the purchase of many properties and businesses) and to develop its parts and accessory business. His activities spread out from here, and by the time of his promotion to executive vice-president on May 1, 1939 he was interested not only in the operation of the parts and accessory companies, but also in labor relations problems and the business planning of production. On June 6, 1940, when Knudsen left for Washington, Wilson became acting president of the Corporation, and that same month held a press conference in Detroit in which he put the damper on the practicability of the Reuther (see sketch this issue) plan for defense production; in January 1941 he became its president, and in June of that year the Corporation distributed to him as a bonus 3,782 shares of common stock.

When Mr. Wilson can get away from the multitude of duties and responsibilities involved in the leadership of a great corporation, he spends time with his six children (three boys and three girls) and sometimes snatches an hour or two for a game at the Bloomfield, Michigan Golf Club or a meet at the Bloomfield Open Hunt Club.

WILSON, H(ALSEY) W(ILLIAM) May 12, 1868- Publisher

Address: b. The H. W. Wilson Co, 950-972 University Ave, New York City; h. "Greenehold" at Croton Heights, Yorktown Heights, N. Y.

When the members of the American Library Association gathered in Boston in June 1941 for their annual conference, no face was more familiar to the librarians than that of H. W. Wilson, founder and president of The H. W. Wilson Company. In terms of statistics the Boston conference was Mr. Wilson's thirty-fourth, and Association files show that only five living members have exceeded his attendance record. Further, to thousands of other librarians the world over who have never laid eyes on him, the name of H. W. Wilson is as inseparably associated with bibliographical publications as that of Webster with dictionaries or Bartlett with quotations. "We couldn't keep house without the Wilson indexes" is a phrase that has become a byword in the profession.

Halsey William Wilson was born at Wilmington, Vermont, the son of John Thompson and Althea (Dunnell) Wilson. He is a descendant of the great Baptist, Roger Williams, Mary Dyer, the Quaker martyr, and Anne Hutchinson. By the time he was two and a half years old both parents had died, and he lived with his maternal grandparents until he was twelve. At that time he went with an aunt to Iowa and later to Minnesota. He was educated at Beloit College and the University of Minnesota; in 1939 Brown University made him a Doctor of Letters. He married Justina Leavitt of Minneapolis in 1895.

Although the history of what was later to become The H. W. Wilson Company began, strictly speaking, with the first issue of the *Cumulative Book Index* in 1898, the ten years previous paved the way. In December 1889 two students at the University of Minnesota, Henry S. Morris and Halsey W. Wilson, formed a partnership to deal in student textbooks and supplies. The University authorities saw in the enterprise a good thing for the University and granted the use of a nine-by-twelve room in the "Old Main" building on the campus. It was in this tiny space that a corporation which now measures its sales at more than three-quarters of a million dollars annually had its real beginning.

Two years later, after the graduation of Henry Morris, Halsey Wilson carried on alone. At this time an idea took shape for greater efficiency in the book business. Every book dealer or librarian knows the problem posed by the patron who wants information about a new book and who can give the author, or the title, or the general subject classification, but never all three. Unless an up-to-date catalog is at hand the search becomes exasperating. At that time there was no such catalog to consult and H. W. Wilson's idea was to provide a cumulative monthly list of books which should include in one alphabet the author's name, the title and general subject heading. It would be experimental. It would require money. Several years passed. Then in 1898 the project was launched. Estimating the cost of a cumulative list at $500 a year for printing—he expected to do the compiling, copymaking, proofreading, bookkeeping and mailing at home evenings with the assistance of his enthusiastic wife, whose labor was equally cheap—Halsey Wilson was emboldened to risk publication on his own account, in the optimistic hope that 500 subscribers might be found among booksellers and librarians who would pay $1 a year for the service. The first year, as Mr. Wilson recalls it, "was memorable for some heartening endorsements, nearly 300 subscriptions and a rapidly growing deficit." Nevertheless, the undertaking kept going ahead, and, when a change of residence was made, the publishing office occupied a wing with an outside entrance and Marion E. Potter became the first paid editor and started her notable career with The H. W. Wilson Company.

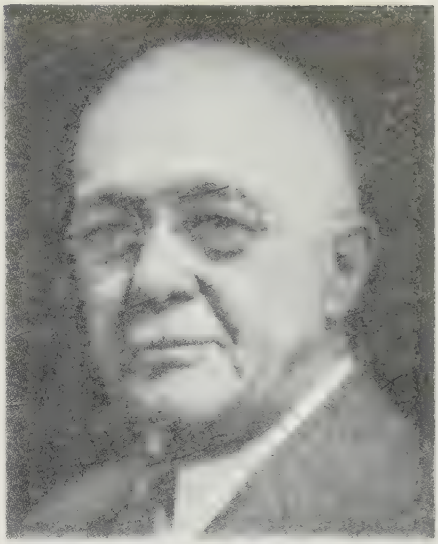
In 1900 Mr. Wilson negotiated the erection of a two-story building just off the campus which housed the book shop and the publishing department. Before long, outside rooms had to be rented to permit expansion. Here the *United States Catalog* saw the light of day and the universally known *Readers' Guide to Periodical Literature* was "born." The *Book Review Digest* appeared in 1905. Shortly afterward a three-story building was erected and the Company moved into its third home. Other publications and a rapidly growing staff marked progress. In 1913 the need of nearness to publishing centers in the East became apparent and Mr. Wilson transplanted his Company, with 13 carloads of equipment to White Plains, New York. Here again quarters were quickly outgrown and a final move was made in 1917 to the present light, airy location on the east bank of the Harlem River, in The Bronx, New York City. The five-story building which housed the Company comfortably in 1917 was supplemented in 1929 by an eight-story modern structure on the south, and in 1938 by a six-story building on the north. The Company, it may be said, is one of the few contemporary publishing houses which do all of their own typesetting, printing and binding.

Today the venture started by a young bookseller and his wife in 1898 employs a staff of 340 people who receive an annual payroll of nearly half a million dollars. Sales for the fiscal year of 1940 were just under $800,000. The Company's activities now comprise some 15 major publications of a subscription or semi-subscription nature and a list of miscellaneous works of bibliography and reference. A department, begun in Minneapolis, stocks more than 2,000,000 copies and sets of back number periodicals for purchase by libraries and individuals who wish to complete sets of magazines.

Cooperation is a favorite word in the Wilson vocabulary, as the following instances will show. Subscribers are asked to vote on material for indexes and matters of editorial policy. Mr. Wilson has invited the American Library Association and the Special Libraries Association to have representatives sit *ex officio* with the Company's board of directors. Shares of dividend-bearing, participating stock in the Company are distributed periodically to the Company's staff. Almost from the beginning the Company's work schedule has been consistently more liberal than required by law. Today there is a uniform five-day week of thirty-six and a half hours, with two weeks' vacation each year with pay. The Company maintains a no-cost hospital plan and participates equally with interested staff members in an annuity retirement benefit.

It is the belief of the staff who know Mr. Wilson well that he might have been an inventor if he had not turned to the "ordered life of bibliography." Countless mechanical processes and short cuts used in the involved business of cumulative indexing and publishing are the product of his never-idle mind. Aside from the cumulative method and its intricate ramifications, perhaps his most revolutionary contribution to the business of bibliographical publishing is his "service basis" method of charge, whereby the cost to each library is in proportion to the use made of the service.

The H. W. Wilson Company has been not only Halsey W. Wilson's career but virtually his whole life, his recreation as well as his work—evenings, Sundays and holidays. His vacations have been few. The longest was a trip to Europe in 1920. There have been many business absences; but motor jaunts with Mrs. Wilson, for week ends or a little longer, have sufficed for vacations. The major outside interest in his life is a 250-acre tract of land near Yorktown Heights, in historic upper Westchester County, New York. Known as Croton Heights, it has direct rail connection with The Wilson Company offices, which are just across the avenue from the terminal of the Putnam Division of the New York Central Railroad. Today some 46 families, including several of The Wilson Company staff, have summer or year around homes at Croton Heights. In the center of the community stands Mr. and Mrs. Wilson's sturdy colonial house, built in 1740. They call it "Greenehold" because it served as Colonel Christopher Greene's headquarters in the darkest hour in Westchester during the Revolutionary War. Close by is Croton Heights Inn, which until 1941 was Mrs. Wilson's summer hobby.



Kaiden-Keystone
H. W. WILSON

When living in the City, Mr. Wilson habitually walks to work, and he is usually the first in the building in the morning and the last to leave at night. He modestly boasts that he has never known a day's illness. He has recently made a tryout of commuting and likes it so well that the City apartment has been given up. Punctuality being almost a fetish, it matters little to him that in order to reach his desk in good season he must rise at six o'clock and walk to the station for a seven-twenty-six train. He prefers the train to driving, as the extra hour morning and evening gives him time to read and work on new publishing projects. Mrs. Wilson shares her husband's energy and capacity for unselfish effort. An ardent worker for suffrage, she became a member of the National Suffrage Board and was appointed by Mrs. Carrie Chapman Catt to write the textbook and conduct suffrage schools throughout the country. Later she did state educational work for the Democratic Party. In 1941 she supervised the publication of a memorial volume entitled *Victory: How Women Won It*, commemorating the centennial anniversary of the woman's rights movement. Several years after her marriage to Halsey Wilson, she returned to the University of Minnesota to complete her college course and today wears a Phi Beta Kappa key. For several years she did editorial work for the *Book Review Digest.*

A "Profile" by Creighton Peet in the *New Yorker* of October 29, 1938 describes Halsey W. Wilson as "a slight, quiet, baldish man

WILSON, H. W.—*Continued*

who wears spectacles and probably looks just as a bibliographer ought to look. . . In spite of the fact that his business has expanded to such enormous proportions, he has never allowed himself any ostentatious gestures. He hasn't even a private office or a personal secretary, and he works in one corner of a large floor filled with editorial employees. He has, however, indulged himself in two minor fancies: the dummy lighthouse on the roof of the building (symbolic of indexes enlightening the world); and a ten-cent mousetrap, unbaited, which stands on one of the bookcases in the editorial room, signifying that the H. W. Wilson indexes are *better* indexes."

Despite his predominant devotion to his Company, Mr. Wilson is by no means antisocial. His college fraternity is Phi Kappa Psi, he is a Scottish Rite Mason and a life member of the American Library Association. He is the author of a concise manual called *The Bookman's Reading and Tools* which has gone through several editions. Also it is an open secret that he is the "Harold Workman Williams" who collaborated in compiling the first of the three *Toaster's Handbooks* published by the Company. He does not smoke, though he does not object to the habit in others. His views on liquor are stronger. He learned to play the pipe organ and piano in his youth and frequently for relaxation spends a half hour at the piano with old classical favorites. Solitaire, motion pictures and clipping and filing jokes are other occasional pastimes. He is accustomed to grasp both sides of a controversial question before reaching conclusions. *The Handbook Series* and *The Reference Shelf* are outgrowths of this deep-seated trait. There is a whimsical quality in his turn of a phrase which is a constant delight to his friends. He loves children and animals. He takes lively interest in young musicians who have talent and the necessary qualifications for developing it. His library shows an increasing number of volumes on the persecution of human beings for their beliefs, on the modern fight for the freedoms and on education for the free man. He is also a modest collector of rare books. Since coming to The Bronx Mr. Wilson has taken active part in civic affairs and has been instrumental in obtaining certain municipal improvements. At the present time he is busily engaged in organizing sentiment and support for a much needed subway extension to serve The West Bronx.

It is a testimonial both to Halsey W. Wilson's gift of vision and practical business ability that his is virtually the only bibliographical venture of any size which has ever succeeded without the aid of subsidies or subventions. But of these faculties, say his fellow-workers, vision has always played the greater part. "Money has never come first with Mr. Wilson," writes a colleague of many years. "That quality (with unfailing patience and hard work) is the key to his success. It is business sense applied to giving libraries, and especially the users of libraries, what his vision tells him they want. That spirit of unselfish service symbolizes the man and the company he founded and has guided for so many years."

WILSON, HUGH (ROBERT) Jan. 29, 1885- Lecturer; former diplomat

Address: Yale University, New Haven, Conn.

"We do not love, we do not hate, we do not judge, we do not condemn; we observe, we reflect, we report." That is the motto of the United States diplomatic service as Hugh Wilson would have it, and it effectively sums up his own career for more than a quarter of a century. Recalled as Ambassador to Germany in November 1938, he was one of Secretary of State Cordell Hull's closest advisers in Washington until his formal resignation in December 1940, and he has since been named to the Lamont Lectureship in Government at Yale University. In March 1941 appeared the second volume of his autobiography, *Diplomat Between Wars*.

Hugh Robert Wilson was born in Evanston, Illinois on January 29, 1885, the son of Hugh Robert Wilson, a Chicago shirt manufacturer, and Alice (Tousey) Wilson. He was educated at the Hill School in Pottstown, Pennsylvania, went on to Yale to take his B. A. in 1906, and the next year entered the family business. "More unhappy than the majority" during his three years of business experience, he still didn't decide to follow his own desires and enter the Foreign Service until 1910, when his mother died. He had inherited an income, his brother Oliver encouraged him to do as he pleased, and he thereupon departed for Paris to enter L'École Libre des Sciences Politiques, one of the best training schools for diplomats-to-be.

Life in Paris was "one of the few things that are better in realization than anticipation." Hugh Wilson was almost sorry when in 1911 the Minister to Lisbon cabled him the offer of a position as his private secretary. "A few months of revolution, old-fashioned border raids, color and bull fights" preceded a visit to Washington late in the autumn of the same year, when Hugh Wilson took his examinations and was accepted as a member of the Foreign Service; and January 1912 found him in Guatemala as United States chargé d'affaires. He had no chief: "in those days of 'dollar diplomacy' and in those regions the voice of the United States was the voice of Jove"; and for nearly two years the young man felt as important as he probably ever did again.

But those untroubled years before the First World War were brief. During a leave of absence in Paris, Katherine Bogle agreed to marry him. They were married on April 25, 1914, and in August set sail for Buenos Aires, where Wilson had been assigned. During the sea voyage war was declared (even at the time of Sarajevo the young diplomat had not been apprehensive, since he had "no real conception of the political commitments of Europe and their ramifications"), and after only a year and a half in Buenos Aires and a vacation in the United States he was ordered to Berlin. That was 1916, and it was as a junior member of the Embassy staff in Berlin that Wilson saw the United States drawn into the First World War.

Upon the breaking of diplomatic relations with Germany, Hugh Wilson crossed the frontier with Gerard and the staff of the Embassy. His next assignment was in Vienna; it was brief, for the United States presently declared war on Austria-Hungary. From Vienna he went to Berne, Switzerland, "perhaps the best international observation post in the world," and for the remainder of the War he was there as chargé d'affaires. Hugh Robert Wilson, III, was born on March 12, 1918.

An attack of influenza brought another leave of absence to Mr. Wilson early in 1919, but by 1921 he was back in Germany as counselor of the Embassy, the highest competitive post in the Foreign Service. In spite of personal bitterness regarding the Treaty of Versailles, he negotiated the Peace Treaty with Germany that year. An assignment in Tokyo followed—peaceful after Germany's post-War chaos—and in 1924 he was back in Washington as chief of the Bureau of Current Information of the State Department and as chief of the Executive Committee of the Foreign Service Personnel Board.

Robert Allen and Drew Pearson (see sketch this issue) wrote of Hugh Wilson that he was at that time among the little group of career diplomats who "appointed themselves and their own tried and trusted friends as members of the Personnel Board to pass upon promotions," who "picked their friends for the best foreign posts and saw to it that the amenable Mr. Kellogg got them approved at the White House." In 1927, they said, "everything that possibly could break against the controlling career clique did break," and the ringleaders, seeing "the handwriting on the wall," appointed themselves to diplomatic posts abroad just before the "smash" occurred. There is little indication of any of this in Mr. Wilson's memoirs, but it is true that in 1927 he was appointed Envoy Extraordinary and Minister Plenipotentiary to Switzerland, a country for which he had always had a particular admiration. He was to spend 10 years there.

HUGH WILSON

During those 10 years Mr. Wilson had a perfect attendance record at the European conferences to which the United States sent delegations. He devoted most of his attention to the League of Nations, sending valuable reports to the State Department; he negotiated numerous treaties under the League, including the only one which is being observed by the belligerent powers today—the treaty on the treatment of war prisoners; he served as delegate to the General Disarmament Conference in Geneva from 1932 to 1935.

On the whole, however, Mr. Wilson believes that it is better for both Europe and the United States that his country stayed out of the League of Nations. He spoke of his doubts and his grave concern as he watched from Geneva the application of the nonrecognition policy to Manchukuo, as he listened to condemnation of Germany "which, like that of Japan, was not backed up by a show of force but remained in the realm of phrases," as he observed the application of sanctions to Italy even after Addis Ababa had fallen. He believed that if such measures could not be applied ruthlessly they should not be applied at all. But he made few claims to prophecy.

It was the summer of 1937, after the role of Geneva in world affairs had almost vanished and the affairs of the Spanish War were in the hands of the "Non-Intervention" Committee in London, that Hugh Wilson was summoned home to serve as Assistant Secretary of State under Cordell Hull. In December of the same year he was appointed Ambassador to Germany to succeed the late William E. Dodd, with the endorsement of the Nazis. And in November of the next year he was recalled, following the Grynszpan shooting in Paris and the subsequent pogroms. Supposedly he was recalled

WILSON, HUGH—*Continued*

merely in order to give a "firsthand picture" of the situation; actually no diplomat took his place after that, and in December 1940 Mr. Wilson formally resigned, having acted for two years as special adviser for Secretary of State Cordell Hull.

Education of a Diplomat, the first chapter of his autobiography, published in 1938, was described by Oswald Garrison Villard as "a delightful little volume, one certain to make every reader eager to meet him and to know the attractive personality he reveals. It has great charm, excellent description, much understanding of men and manners, and a great deal of humor." Martha Dodd was more critical: "The author fulfills all the requirements he thinks a diplomat should have: he is suave, discreet, non-partisan. He makes no attempt to get at the essence of a nation or a race; he skims the surface of life and history wherever he goes; social, cultural and political backgrounds hold no interest for him." The same comments might be equally applicable to the more recently published *Diplomat Between Wars,* which brings his history up to the summer of 1937. Hugh Wilson says: "When and if the third chapter will be written, I am not sure. Certainly the present does not seem to me to be the time for an account of that nature."

Hugh Wilson is described as "mild-mannered and genial," with "keen blue eyes, a broad brow, precise speech, and a distinguished bearing." His own urbanity he finds sadly lacking in most modern diplomacy. The diplomacy characteristic of our era, he finds, is one of "vituperation by radio, of international mudslinging." He says further: "If a choice between sincerity and manners were necessary, I should unhesitatingly choose manners for 99 per cent of the people with whom I come in contact." It may be this emphasis that makes nearly all his characterizations so polite: Goebbels (see sketch this issue) was "an interesting and stimulating conversationalist," Mussolini "courtesy itself." It may also account for his rather extraordinary idea for a coalition government: the Conservatives to run internal affairs, the Socialists to handle foreign relations!

WINANT, JOHN G(ILBERT) (wĭn'ănt) Feb. 23, 1889- United States Ambassador to England

Address: b. American Embassy, London, England; h. 274 Pleasant St, Concord, N. H.

After Joseph Kennedy resigned his post as Ambassador to Great Britain in late 1940, newspapers and commentators began saying that John G. Winant would be his successor. Twice before they were wrong in predicting positions for him—in 1933, when they announced that he was to be the 1936 Republican Presidential nominee, and in July 1940, when they were sure he would be named chairman of the National Labor Relations Board. This time, though, they were right. On February 6, 1941 President Roosevelt announced his appointment to the Court of St. James.

A scholar and a "social-doer," three times Governor of a state that traditionally never re-elects a Governor, a leader in the fight for social security and director of the International Labor Office in Geneva, John Gilbert Winant was born in New York City, the son of Frederick and Jeanette L. (Gilbert) Winant. From a very well-to-do home he went to St. Paul's School in Concord, New Hampshire and from there to Princeton, which years later, in 1925, awarded him an M. A. for graduate study on government problems. In 1912 Winant left Princeton to return to St. Paul's as a teacher of English and assistant rector. He bought land in Concord and proceeded to make himself a citizen of New Hampshire. The First World War interrupted his teaching, however, and in 1917 Winant enlisted in the Army as an aviation private. He rose to be a crack flier, captain and commander of the Eighth Observation Squadron on the French Front.

Back from the War, Winant entered New Hampshire Republican politics. First he ran for the Legislature and served his first term, from 1917 on, in the House of Representatives. In 1921 he shifted to the State Senate and then in 1923 back to the House again. It was in these years that Winant began working for better social conditions: he campaigned in the Legislature for a 48-hour week for women and the abolition of child labor.

Encouraged by his success, Winant ran for Governor of New Hampshire in 1925. His opponents warned the voters against him. He was, they said, a New Yorker; he was rich, bookish; he was a schoolmaster and no politician. Nevertheless, Winant became at 36 the youngest Governor in the country, and proceeded to attack the employers of child labor, the power-trusters, the entrenched interests that were invading public rights, and also Republican Senator George Higgins Moses, who had warned: "That young cock of a schoolmaster had better watch out or he's going to have his wings clipped."

Winant ran for a second term as Governor in 1926, but those were boom years when the people didn't need a champion. He was defeated. When times got hard, the people voted him back, and from 1931 to 1934 he served two terms in the State Capitol, one of the few Republicans who escaped the guillotine of November 1932. A Boston newspaperman once explained his re-election: "The reason probably lies in Winant himself. He seems to be as clean as a blade. He's an idealist but not one of these 'holier than thou' guys. When the situation requires it he fights hard and cleanly. . . He's got common sense, a sincerity you can't laugh off and a beautiful kind of neighborliness." Winant himself partly explains it, too, when he says: "I have never bargained or bartered for public office."

Under Winant, New Hampshire's administrative machinery was overhauled, reorganized and modernized. It was under him that New Hampshire made a notable contribution toward relieving unemployment. Long before the NRA his "New Hampshire Plan" for re-employment by reducing hours, sharing work and making capital and labor equally accountable was helping to relieve the depression for his state.

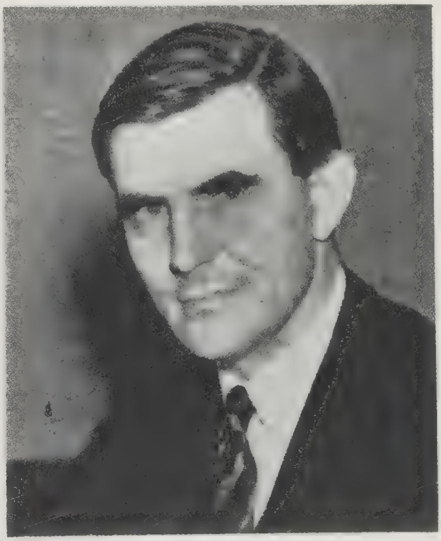
In 1934 President Roosevelt, whom Winant has always supported despite his Republican allegiances (he came out for his election in 1940), appointed him chairman of a three-man board to mediate the big textile strike. Then in 1935 Winant, who already was president of the National Consumers' League, vice-president of the American Association for Labor Legislation and a trustee of the International Y. M. C. A., was made the United States' delegate to the International Labor Office in Geneva. He accepted the appointment, he says, because "I felt that peace was the prime issue before the peoples of the world." Shortly afterward he was elected an assistant director of the I. L. O., which meant that for the first time the I. L. O. was directed by a citizen of a country which was not a member of the League of Nations.

The I. L. O., it should be explained, was set up by the Treaty of Versailles, one part of which stated that the failure of any nation to adopt humane labor standards "is an obstacle in the way of other nations which desire to improve the conditions in their own countries." Its functions are to collect and distribute labor data, conduct investigations, publish a periodical and to adopt "conventions" under which the ratifying countries establish employment agencies, bar child labor, set minimum work weeks, etc. It wasn't until 1934 that the United States joined the I. L. O.

Winant represented his country there until world conditions forced the removal of I. L. O. headquarters from Geneva to Montreal. He returned from Geneva in 1935 for a period "to help organize social security in this country because I believed that if democracy in the United States was to continue to function it must rest on a fairer social base." As the first chairman of the Social Security Board, in 1935 and 1936, Winant "achieved a reputation as an administrator that was virtually unequaled in any of the New Deal agencies." In his resignation, made in order to answer his own party's attacks on the President's social security program, were clearly stated his social beliefs: "Having seen the tragedy of war, I have been consistently interested in the ways of peace. Having seen some of the cruelties of the depression, I have wanted to help with others in lessening the hardships, the suffering and the humiliations forced upon American citizens because of our previous failure as a nation to provide effective social machinery for meeting the problems of dependency and unemployment." For a while after his resignation Winant continued to write and speak on the subject of social security and then returned to Geneva, to the I. L. O. In 1939 he became its director.

Because of his past record, his appointment as Ambassador to Great Britain was felt to be significant. Not only was he already well acquainted with Anthony Eden, Ernest Bevin and other British leaders, but his concern with social problems, it was believed, would have value both during the War and later. Winant gave evidences of his social beliefs when in a nationwide broadcast, shortly after his appointment, he warned the victors, whom he predicted would be the British, to build a "democratic world of tomorrow" based on social justice and economic security as a prerequisite to a "real and lasting peace."

Once in England, he proceeded to carry out the usual duties of ambassadorship plus the extraordinary ones demanded by the United States' entrance into the War and its program of aid to Great Britain. He learned about conditions there, signed the agreement leasing sites for naval and air bases from Britain, conferred with British leaders and reported to President Roosevelt what he knew about the state of affairs. Back in America in June for a short while, he warned this country that the British position was "extremely grave," though England did not face "any immediate or impending disaster." And from time to time he made similar statements.



Underwood & Underwood

JOHN G. WINANT

Tall, dark, with high cheekbones, deep-set eyes and jutting features, Winant has always had something of a Lincolnesque look, and his opponents say he carefully cultivates this by wearing unpressed shiny suits, despite his

WINANT, JOHN G.—*Continued*

income from inherited money and oil wells in the Southwest. Actually he has no pretentions at all, and Mrs. Winant, the former Constance Rivington Russell of New York, whom he married in 1919 (they have three children, John, Jr., Rivington Russell and Constance, who in February 1941 eloped with Peruvian Carlos Valando), has as few as he. Interested in breeding West Highland White Terriers, she placed a sign, "Puppies for Sale," on the Executive Mansion in Concord when her husband, the Governor, moved in.

WISE, STEPHEN S(AMUEL), RABBI Mar. 17, 1874- Rabbi of the Free Synagogue of New York; president of the American Jewish Congress

Address: b. 40 W. 68th St, New York City; h. 340 W. 57th St, New York City

On March 17, 1940 the Free Synagogue of New York City celebrated the 66th birthday of its founder, Dr. Stephen S. Wise, and his 33rd year as its head. The gifts which he received on that occasion were singularly symbolic and appropriate. The members of his congregation presented him with a gold seal ring worn by the late Theodore Herzl, the pioneer of Zionism, and with plans for a new $500,000 synagogue to be built next door to the present temple, with a huge social hall, a 1,250-seat auditorium, a film projection room and other improvements. The presentation of Herzl's ring was most appropriate because Dr. Wise has been one of the most ardent advocates of Zionism in America and has fought tirelessly for this cause during his 45 years of service in the rabbinate.

The new synagogue, besides being a monument to his lifelong services to liberal Judaism, is a most necessary improvement, for Dr. Wise's drawing power as a preacher had long ago proved greater than the auditorium's 600-seat capacity in the old synagogue; his Sunday services had long ago been moved downtown to Carnegie Hall. A less solemn note was struck when the Friendly Sons of St. Patrick of Bridgeport, Connecticut contributed its bit by making Dr. Wise an honorary member of its society.

Dr. Stephen Samuel Wise thinks he has the distinction of being the only rabbi to have been born on St. Patrick's Day. He was born in 1874, in Budapest, Hungary, the son of Dr. Aaron and Sabine de Fischer (Farkashasy) Wise. His father was a rabbi, too—Dr. Wise is the seventh rabbi in direct succession in his family—and his parents brought him to New York when he was one year old. His education followed family tradition in preparing him for the rabbinate: it included public schools; classics and languages at the College of the City of New York, Semitics and philosophy at Columbia. He received his B. A. degree from Columbia in 1892, his Ph. D. in 1901, and at 19 became an assistant to Dr. Henry S. Jacobs at the Madison Avenue Synagogue. Within a year he was its head. Handsome, earnest, with good stage presence, he was a great success as pastor and greatly in demand as lecturer. In 1900, after a lecture on Zionism in Portland, Oregon, he accepted an offer to become rabbi of the Temple Beth Israel there for the next six years. He gained attention by his sermons on political and social matters, "often descending from the temple to the market place to expose civic wrongs."

At the end of six years he left his Portland congregation and came to New York, which as the biggest Jewish community in the United States provided a better field for his endeavors, to "inject some vitality into American Judaism." For a while there was a strong possibility that he would preach from the conservative pulpit of Temple Emanu-El. But Dr. Wise's independence and unwillingness to compromise his freedom of speech prevented this arrangement. He decided to have a synagogue of his own, and his powerful and persuasive personality got him the backing of such men as Henry Morgenthau, Adolph Lewisohn, Oscar Straus and Isaac N. Seligman. By 1907 he had his Free Synagogue, so named because it was to have a free pulpit and a democratic organization, with no pew rents or regular dues, and the rabbi was to have complete freedom in his religious and social work. He has been its rabbi ever since.

In 1898 Dr. Wise, a fervent Zionist from the beginning of his career, had founded the Zionist Organization of America, another manifestation of his lifelong struggle to establish an unrestricted Jewish national home in Palestine. With the end of the First World War imminent, he saw the possibility of his dream coming true. Although for many years he had been an outspoken, uncompromising pacifist, with the coming of the War he had embraced the Allied cause and had made many patriotic and virulently anti-German statements. In 1917 he, together with Supreme Court Justice Louis Brandeis, Felix Frankfurter (see sketch this issue) and others, founded the

American Jewish Congress, whose purpose was to represent Jews "as a group and not solely as individuals." He was present as representative of that Congress at the Versailles Peace Conference in 1919 (he was decorated by the Légion d'Honneur for his activities), and since 1924 he has been alternately its president and honorary president.

As the most ardent spokesman of Zionism in the United States, Dr. Wise has since that time found himself pledged to an existence full of controversy and strife. The conception of a Jewish National Home in Palestine, in conjunction with the sacrifices it requires even from those Jews who have no desire to inhabit it themselves, was not a universally popular one. Conservative Jewry, represented by the American Jewish Committee, was not as willing to engage in demonstrations and mass protests as was the more articulate American Jewish Congress. It feared that to the Gentile mind the Zionist aims would mean that the Jews were plotting a "world superstate." Others believed that Jewish nationalism was an escapist concept which solved no fundamental problems. Dr. Wise is uncompromising in his attitude toward Jewish opponents of Zionism, however. In 1938, speaking in Cleveland in favor of a referendum for a united front for United States Jewry, he was bitter. "In 1933," he said, "we offered German-Jewish groups an opportunity to unite. . . They said they were Germans first, Germans who happened to be Jews. I am a Jew who is an American. I was a Jew before I was an American. I have been an American all my life, but I've been a Jew for 4,000 years."

Dr. Wise also waged a bitter battle against the British Government's attempts to hedge from the promises contained in the Balfour Declaration. "Great Britain," he said on many occasions, "must not fail the Jewish people. American Jews dare not fail Palestine." His dynamic personality made itself felt at most of the international conferences, where the future of the Jewish national home and the interests of Jewry in general were at stake. His voice was ever raised against any compromise, and he has always been the most violent foe of partition. In 1941 he broke into print with a dramatic plea to Britain to arm and equip a Jewish army in Palestine. This plea was made on behalf of the Emergency Committee for Zionist affairs, one of the numerous organizations which Dr. Wise runs (he is co-chairman). "If the Jews in Palestine are murdered by the Arabs and the Axis powers, without a chance to defend themselves, it will be one of the blackest pages in British history. They are wards of Great Britain under a mandate and they should not be permitted to die like rabbits." In September 1941 he presented a declaration, endorsed by the Zionist organization of America, calling upon Great Britain "to proclaim establishment of the Jewish Commonwealth of Palestine as an integral and essential part of a democratic world order" when peace is restored.

Zionism is not the only issue on which Dr. Wise has been vocal. Orthodox Jews, it is said, consider him much too politically minded.

American Hebrew

RABBI STEPHEN S. WISE

Ideas, persons and institutions which he has attacked include "drinking, prohibition, smoking, Henry Ford, war, pacifism, sex forums, suggestive plays, censorship, John Erskine, powder, lipstick, Felix M. Warburg," and, of course, Hitler. Witty, dramatic, "a quick rather than a deep thinker," he has thundered from many pulpits, and has not minded antagonizing important people in the process of "serving his people." He claims, proudly, that he was the "first of the Americans to call attention to the dangers of Nazism."

A reformer with a flair for organization, most of his ventures and the institutions which he has founded have fared well, in the financial as well as spiritual sense. For the past 20-odd years of his association with the American Jewish Congress he has raised and distributed a vast amount of money for support of various activities. In 1922 he founded the Jewish Institute of Religion, a rabbinical school which has been called "a sincere, scholarly attempt to place liberal Judaism on a well-organized basis." One of his more recent activities was the establishment of the Congress House, a non-sectarian home for refugees from European dictatorship. He was also instrumental in opening in March 1941 a research institute with the twofold task of dealing with war conditions affecting Jews and with proposals to settle Jewish questions at any forthcoming peace conference. Under the auspices of this institute, to be known as the Institute of Jewish Affairs, Contemporary and Post-War, the first All-American Jewish Conference in Montevideo, Uruguay took place in July 1941. One of its purposes was to identify Jews in the Western Hemisphere more closely with American life, said Dr. Wise.

With his leonine, rugged head, his burning eyes, his cello-like voice, Dr. Wise has always

WISE, STEPHEN S., RABBI—*Continued*

been an impressive figure, off as well as on the pulpit. He has wit, charm, vitality, generosity. Even his enemies admit that, while accusing him of a certain amount of smugness and fondness for limelight. He lives simply, giving much of his income and most of his time to the causes he espouses. He has a passion for allying himself sensationally with large issues and is perhaps the only rabbi in this country who is well known to non-Jews as well as to Jews. In private life Dr. Wise loses something of his Jehovian aspect and becomes "playful, informal, boisterous, an incessant tease and practical joker." His wife, the former Louise Waterman, whom he married in 1900, has worked side by side with him and is now president of the Women's Division of the American Jewish Congress. She is at present also active in another of Dr. Wise's works: the Congress House. They have two children, Mrs. Justine Wise Polier, a judge in New York City, and James Waterman Wise, author and lecturer, and in June 1941 they adopted a six-year-old British boy, Dennie Edward Mitchell.

In spite of all his other activities, Dr. Wise has found time to write several books, among them *How To See Life* (1917); *Child Versus Parent* (1922); *The Great Betrayal* (with Jacob de Haas, 1930). He edited *Opinion*, a magazine of Jewish life and letters, and his sermons have been published in 10 volumes, under the title *Free Synagogue Pulpit.*

The present war has been enlisting even more of Dr. Wise's inexhaustible energy on behalf of the United States and its Allies. At least one statement was an optimistic one. On March 17, 1941, in celebration of the 45th anniversary of his service in the rabbinate, he stated that he had never been as confident as he is today about the future of civilization. The world, he feels, is beginning to understand that "anti-Jewishness is anti-justice, anti-freedom, anti-democracy, anti-decency and anti-civilization. . . There will be no real Jewish emancipation until there is human emancipation. I believe that after the War, after Hitlerism shall have been crushed forever, the Jewish people will be dealt with justly at the peace table." If so Dr. Wise will certainly be present to see that they get their rights.

WOLFF, MARITTA M. Dec. 25, 1918- Author

Address: c/o Random House, Inc, 20 E. 57th St, New York City

One of the most important first novels that appeared in 1941 was Maritta M. Wolff's *Whistle Stop*, which was the 1940 winner of the major prize in the Avery and Jule Hopwood Awards given at the University of Michigan. Attractive young Miss Wolff wrote the book during her senior year there, and less than a year after her graduation in 1940 Random House was announcing that it had gone into its fifth printing, with 20,000 copies already published.

Whistle Stop, which numbers Sinclair Lewis and Franklin P. Adams (see sketch this issue) among its more fervent admirers, is "a fiercely honest, tough, bare-knuckled excursion into the seamy side of American small-town life." One critic calls the young author "a sort of female James Farrell," another likens her to John Steinbeck and Erskine Caldwell, a third speaks of "the lush vitality of Thomas Wolfe, the concentration on the unusual among the lowly that characterized Carson McCullers' first novel and the rich and casual bawdiness which made Victoria Lincoln's *February Hill* a joyous tale"; the only thing on which they all seem to agree is that she is a realistic writer of unusual talent. Her novel tells the story of the Veeches, "a large, tumultuous and poverty-stricken tribe" who live in a small Michigan town on the outskirts of a city called Ashbury and who have been described by Clifton Fadiman (see sketch this issue) as "the most unpleasant family since *Tobacco Road*," by Edith H. Walton as "people who suffer and struggle and blunder and are intolerably real." According to the former, if Miss Wolff "can write this way at 22, she should be good for a banning in Boston before she's 25."

This controversial new author was born on Christmas Day 1918 at her grandparents' farm in Michigan, when her father was still in France with the A. E. F. She says: "I was a very lonely child, and seldom played with other children. I attended a one-room rural school, after the best American tradition. It would be nice if I could say that I walked two miles to school every day, but if I remember correctly, it was only a half a mile that I walked. I apparently began to write as soon as I grasped the essentials of penmanship, plays, poems, short stories. . . My one hobby, if you like to call it that, was developing, as far back as I can remember, even under the handicap of my somewhat isolated life in the country, an inordinate interest in people and anything and everything happening to them."

After attending high school in Grass Lake, Michigan—a town with a population of some 800—Miss Wolff moved to Ann Arbor. There she entered the university in order to study journalism, "but somehow got sidetracked into the English Department." After receiving two minor Hopwood Awards for short stories which helped pay college expenses, she wrote *Whistle Stop* in her senior year. ("I simply

MARITTA M. WOLFF

wrote down all that I had picked up here and there about life and people in various small towns in Michigan.") All that she had picked up here and there turned out to be quite a lot—two or three times the present length of her novel—and, as Clifton Fadiman said, showed "she did not learn her trade in the college classroom." It was 1940 when she not only received the major Hopwood Award but a Bachelor's Degree in English composition and a Phi Beta Kappa key which she has since refused to wear.

Harry Maule of Random House was enthusiastic when he read Miss Wolff's manuscript, and *Whistle Stop* was soon scheduled for publication in the spring of 1941. Says her editor: "I hope I am not exaggerating too much when I say that there is justification for feeling the same excitement on reading her first book as there was when people read the first books of Scott Fitzgerald, Thomas Wolfe, Ernest Hemingway, etc. I don't mean to compare her to any of these. I merely mean that her first book reveals a tremendous writing talent, and that by any standards whatsoever, *Whistle Stop* is a big and an important novel."

According to its author, her interest in reading began to wane in high school, and she now reads mostly newspapers, poetry and drama rather than novels. She is, however, addicted to jazz (New Orleans style) and boogie-woogie piano playing, and, she says: "My favorite occupation of some long standing is hanging around the places where people congregate, hamburger stands, coffee joints, bars. I have never been able to get interested in much of anything else but people." The *New Yorker* critic announces that she "has no right to be so ruthless and so mature at 22."

WOOD, ROBERT E(LKINGTON) June 13, 1879- Chairman of board, Sears, Roebuck & Company; former acting chairman, America First Committee

Address: b. Sears, Roebuck & Co, Arthington & Homan Aves, Chicago, Ill; h. 162 Laurel Ave, Highland Park, Ill.

Acting chairman of the America First Committee until its formal dissolution in December 1941, for 12 years General Robert E. Wood has also been president of Sears, Roebuck & Company and since 1939 chairman of its board.

Robert Elkington Wood was born in Kansas City, Missouri on June 13, 1879, the son of Robert Whitney and Lillie (Collins) Wood. His father had been with John Brown's raiders, had been a captain in the Union Army, a Kansas homesteader, a Colorado gold prospector, a coal and ice merchant. Young Wood went to West Point as much because he could get a free education there as because the military life appealed to him. He was graduated in 1900, thirteenth in a class of 54 and probably the only cadet with the distinction of having saved money on his government pay of $45 monthly. That same year he was posted to the Philippines (it was at the time of the Philippine Insurrection), and in two years there he was promoted from second to first lieutenant in the 3rd cavalry. For a brief period in 1902 he was posted in Montana; for two years he taught French and Spanish at West Point; and the year 1905 found him in Panama.

He was to spend 10 years there. Promoted from assistant chief quartermaster to chief quartermaster and director of the Panama Railroad Company, during the construction of the Panama Canal he hired thousands of employees, ordered and distributed millions of dollars worth of supplies a year. ("'You're fired,' are the only words many a man ever remembers his saying.") Before the United States entered the First World War, however, Wood retired from the Army. He spent two years, from 1915 to 1917, with Du Pont and as assistant to the president of General Asphalt Company, but in 1918 donned his uniform once more. A colonel and a brigadier general, he acted as quartermaster general for the entire United States until 1919, buying and distributing food, clothing and matériel for 4,000,000 soldiers. Perhaps no one has ever had Army experience so helpful as General Wood's in the operation of a mail-order business.

His first mail-order house was Montgomery Ward, and until 1924 General Wood was vice-president of that company. By the time he left to become vice-president of Sears, Roebuck (*Fortune* has intimated that he was fired), Montgomery Ward was really beginning to show the other firm a contest. But not for long. Both Wood and President Kittle of Sears believed that the next great national growth would come from the South; they opened a string of Southern mail-order houses, then a retail chain in the larger cities. When Kittle died in 1928 General Wood suc-

ROBERT E. WOOD

ceeded to his position, and he began the practice of establishing several medium-sized neighborhood department stores in big cities rather than one mammoth store downtown. As a result, a citified chain store system has been added to the original Chicago mail-order house, which itself sold $200,000,000 worth of merchandise annually.

There are now around 500 Sears Roebuck department stores in nearly every state in the Union, and by themselves they gross from $350,000,000 to $375,000,000 a year. Sears sells 50,000 different things, from auto casualty insurance to mousetraps, and owns a seat on the New York Commodity Exchange. The original Chicago plant now handles 20 per cent (instead of the former 85 per cent) of the mail-order business. In 1938 Sears' gross income was close to $575,000,000, and the company has lost money only one year—in 1932. It was 1939 when, in deference to the Sears' retirement rule, General Wood moved up from president to chairman of the board, but he has remained "in the driver's seat."

In 1938, at least, the editors of *Fortune* looked upon General Wood as a man with an enlightened social philosophy. He himself once said: "I am a firm believer in the capitalistic system. Nevertheless I do not see that the charge of socialism, communism, or regimentation should be hurled at every new proposal or reform. . . A lot of businessmen won't look at the facts. . . Their reasoning is based on their dislikes. When you know the average current income and trend for tenant farmers and sharecroppers in some states, for example, you can't dismiss the problem by saying they are shiftless. Instead, you know something has to be done to protect society against such a focus of trouble, and you lose your horror of the fellow who is willing to try to clear up the mess."

Until his disagreement on foreign policy Wood therefore remained on comparatively friendly terms with New Dealers. He voted for Roosevelt in 1932 and in 1936; he applauded AAA, SEC, Social Security, the housing program; he has been called to Washington dozens of times either to advise or to testify or to serve on committees, and early in 1939 Harry Hopkins (see sketch this issue) appointed him to a temporary post as official adviser on business relations, without title or administrative duties. But he has not been in complete agreement with the Administration's domestic program. During its first years he called for the desterilization of sterilized gold, described the modification of capital gains and undistributed profits taxes as "burning the house down to get roast pig," begged for an end to "hate talks." He had some misgivings about his 1936 vote, and by 1940 had returned to the Republican fold: at one time he himself was mentioned as a possible Republican Presidential candidate.

As for his attitude toward Sears' employees, he believes that Sears' Savings and Profit Sharing Pension Plan "helps to avoid labor unrest and strikes, and gives the employee a feeling of greater security and unity of interest with the employer." A constant-wage plan for seasonal workers and sickness and vacation allowances are other features of Sears' policy.

General Wood is a director in the Atlas Corporation, the United Fruit Company, the Illinois Central Railroad and the National Life Insurance Company; he is department chairman of the Federal Reserve Bank of Chicago; and in September 1938 he became one of the three "public" governors of the New York Stock Exchange by appointment of President Martin. He resigned his post as chairman of the Economic Policy Committee of the National Association of Manufacturers in July 1941.

The General's America First activities brought him under public fire more than once. Secretary of the Interior Ickes (see sketch this issue) once called him "apparently a fellow traveler" of the Nazis. But many interventionists spared him while attacking other prominent isolationists, and although he never showed any signs of open disagreement with Colonel Lindbergh (see sketch this issue) or others, it was frequently rumored that he planned to resign or dissolve the America First Committee if the international situation should grow so critical that disunity placed the country in actual danger. This he apparently did not consider necessary until the Japanese attack on Pearl Harbor. On December 1, 1941 he announced that America First would "go into the 1942 national elections" with support for candidates opposing the Administration's foreign policy, which was condemned as a "trend toward Fascism in America." On December 8 he was quoted: "We opposed participation in this War in good faith, but now that we are in it, we shall support it."

In April 1908 General Wood married Mary Butler Hardwick of Augusta, Georgia. He is a great believer in big families, and they have four daughters and a son. (Grandchildren get 200 shares of Sears common stock when born.) Wood is usually up at 6, full of "storming, gregarious exuberance," and in bed before 11. Clothes don't matter to him; he is sometimes so impatient that he eats caramels with their paper on; he is a "restrained doodler"; his favorite expression is "let's charge," and his company has sometimes been called the "Old Soldiers' Home" because there is more than one retired military man in it. He has a remarkable memory, even more for figures than for people, so inaccuracy makes him lose his temper more quickly than anything else. In Panama they say that he used to turn down parties in order to stay home and study census figures, and today the United States Census reports and the *Statistical Abstract* still comprise his *Book of Revelations!* His life is not entirely a matter of statistics, however. He is a good horseman and dancer, a great reader of biography and history, an enthusiastic shot and fly-fisherman.

Who's Who in Commerce and Industry

WOOLF, VIRGINIA (1883(?)—Mar. (?), 1941 British author who wrote her first novel, *The Voyage Out,* in 1915 and continued to write until her death, by suicide, at her home in Lewes, Sussex, England; critics call her novel, *The Years* (1937), her masterpiece; together with writing, her great interest was fine printing; with her husband she founded the Hogarth Press, a commercial venture where they brought out meritorious works by young authors; critics have placed Mrs. Woolf in the rank of pioneer as a novelist; Hugh Walpole wrote that she and Rebecca West divide the feminine crown of modern English letters between them.

WOOLLCOTT, ALEXANDER (wo͝ol′-kŭt) Jan. 19, 1887- Lecturer; critic; actor
Address: h. Bomoseen, Vt.

The hero of Kaufman and Hart's play, *The Man Who Came to Dinner*, is "an unexpurgated version of Alexander Woollcott." "Taking their good friend and boon companion by the seat of his ample pants, the authors have landed him in a wheel chair in the wilds of a Middle Western town disguised as Sheridan Whiteside, radio speaker, writer and friend of the great." As though this weren't enough, for a long while Woollcott impersonated himself in the road companies of the play, taking a disarming pleasure in acting as crusty, crotchety, selfish and mischief-making as he really is. "It's all Woollcott and a yard wide," the critics agreed.

There are some of his "800 intimate friends," of course, who deny this. They've become used to having him address them as "Hello, repulsive," used to having him tactfully say good-by in choice phrases like "I find you are beginning to disgust me. How about getting the hell out of here?" And they insist that though he likes to give the impression of being a nail-eater, actually he has "a heart modeled after Louisa M. Alcott and Florence Nightingale."

This radio star, playwright, critic, author, actor, lecturer and anthologist, who has a general resemblance to an owl and an anatomy like St. Nicholas, was born in Phalanx, New Jersey, where his grandfather had helped found a socialistic community. It was no longer this by the time Alexander entered it and all that was left was the 85-room building where his mother, Frances Grey (Bucklin) Woollcott, gave birth to him on January 19, 1887. His father, Walter Woollcott, was an Englishman and a good deal of a rolling stone—lawyer, accountant, government clerk, stock exchange operator.

In 1899 he moved his family to Kansas City, Missouri and stayed there long enough to enroll his son in school and let him start his education. Alexander's teacher there, when interviewed much later, remembered him as a frail, delicate lad and a constant reader. "He thirsted for knowledge," she recalls, "and I realized even then that he would go far." In 1895 he went back to Phalanx with his three brothers and sister to continue his schooling and from there went on to Central High School in Philadelphia. He spent his high school days living alone (his father had wandered off again), supporting himself by doing book reviewing and odd jobs for the *Evening Telegraph* and *Record*.

Richard Carver Wood

ALEXANDER WOOLLCOTT

From Philadelphia, Alexander set out for Hamilton College at Clinton, New York and, once there, proceeded to put his finger into every campus pie—except athletics, of course. He distinguished himself as editor of the college magazine; founder, director and actor of the drama club; winner of a Phi Beta Kappa key in his junior year; and wearer of corduroy trousers and a turtle-neck sweater topped off by a red fez. When he was graduated in 1909 there were many sighs of regret. The Woollcott legend was already taking form.

But Woollcott himself entered the Chemical National Bank in New York as a $15-a-week clerk. Fortunately he got a job on the New York *Times* not too long afterward, through the auspices of Samuel Hopkins Adams, a trustee of Hamilton College. Woollcott, according to Wolcott Gibbs, wasn't much of a reporter, "not exactly hostile to facts, but apathetic about them," and definitely disinclined to chase around. After he had been beaten on numberless scoops and worn himself out to the point of a nervous breakdown, the *Times* in 1914 made him its dramatic critic. It wasn't much of a job—the *Times* was somewhat haughty on the subject of the drama—but Woollcott knew he had come into his own.

For three years Woollcott held forth on the *Times*. Already he "gushed one day like a Southern belle, the next flogged like Simon Legree." And he wrote the first of his books, *Mrs. Fiske—Her Views on Actors, Acting and the Problems of Production* (1917), a book which "fairly barks with the joyous shouts of a fox terrier hearing his master's voice on the victrola." All this was interrupted by the First World War, which saw Woollcott in 1917 as a private serving at Base Hospital No. 9 with the Medical Corps. From here he was transferred to Paris as a reporter for the A. E. F. magazine, *The Stars and Stripes*, and given a roving commission. He visited the front lines and came through action "unperforated," to write about men in the trenches "with the same romantic intensity he had once reserved for Mrs. Fiske." Although no one who knew Alexander Woollcott ever believed he really was a soldier even when he appeared in uniform, he left the Army a sergeant.

Woollcott went back to the *Times* and proceeded to indulge wild enthusiasms and deepest hates—a strolling player of not much importance, he once said, was so matchless a genius that "some of us would crawl on our hands and knees" to see him perform. George Jean Nathan remembered this and other extravagances when in 1921 he wrote an article about Woollcott called *The Seidlitz Powder of Times Square.* On the good side, it has been said, his *Times* pieces gave "an excitement, a quality of having been there and seen it yourself which you couldn't get from anyone else."

This same sort of drama criticism persisted when Woollcott went over to the New York *Herald* in 1922 and from there in 1925 to the New York *World*, where he stayed until 1928. Never was he a sober critic searching for the eternal verities of his profession, but a partisan reviewer writing in a style that "combined treacle and pure black bile." Wolcott Gibbs sums up the general impression of Woollcott as a drama reviewer in the *New Yorker.* He had, he says, "enthusiasm, an honest love for the theatre and a gift for the neat and deadly phrase. On the other hand, he was sentimental, partisan and maddeningly positive about everything. . . His style, which could be lucid and witty, could also be muddled and frantic." And these characteristics were even more apparent in his books: in *The Command Is Forward* (1919); *Shouts and Murmurs* (1922); *Enchanted Aisles* (1924); *The Story of Irving Berlin* (1925); *Going to Pieces* (1928); and *Two Gentlemen and a Lady* (1928).

Woollcott's drama columns and his books often showed their author "hot on the scene of personalities and people; gossip, tidbits he can relish, news fictionalized into importance and narrated with a skill which is as uncommon as its zest." Many of them revealed his own expansive social life. It was and continued to be one "that might have seemed exhausting to Catherine of Russia." From the 1920's on, Woollcott emerged as a metropolitan character and an early member of that group which took charge of humor in America. The Thanatopsis Literary and Inside Straight Club, made up of George Kaufman, F. P. Adams (see sketches this issue), the late Heywood Broun, Dorothy Parker, Robert Sherwood, the Marx Brothers and other lights, was its name; the Algonquin Hotel its meeting place; and Woollcott its "spiritual focus." He used to entertain its members and other important people all day long on Sundays, "dressed in rumpled pajamas and an ancient, rather horrible dressing gown," receiving them in his apartment "from a throne in one corner with an air that would have done credit to Queen Victoria." When success started to break up the group, Woollcott managed to keep them together by taking over with others a wooded retreat at Lake Bomoseen, Vermont, at first a cooperative venture, now half-owned and "almost wholly buffaloed by Mr. Woollcott." There Woollcott spends his summers, playing croquet, exchanging quips with people like Marc Connelly, Neysa McMein (see sketch this issue), Dorothy Parker, Harpo Marx, and mostly just talking.

Woollcott resigned from the *World* in 1928 because he was worn out writing theatre criticism and because he was not so thin as he had been—"the after-the-theatre congestion in Times Square was driving him crazy." He began to write intensively for the magazines: on the theatre, on the books he liked and hated, on the restaurants at which he ate, on murder and gruesome Americana. His style was "a heavenly compound of Dickens and Chesterton with perhaps a little earthly leaven of Booth Tarkington and even hellish prophecies here and there of Lucius Beebe."

But the stock market crash upset this pleasant way of earning a living. Woollcott lost heavily, and what with obligations to his family, to his New York apartment and to his place at Bomoseen, money became important. He wrote advertising copy, lectured, wrote, and went on the air. His first radio appearance was in October 1929 in a 15-minute sustaining program called *The Town Crier*; later he took over a sustaining program in which he reviewed books as *The Early Bookworm*. He left radio in March 1931, returned again in September 1933, and was off and on again until 1939, when a 39-week contract seemed too much to commit himself to. "I had other things in mind," he said. As the Town Crier he charmed listeners with anecdotes and plugged the books he liked. "The most influential salesman of books in the United States," those were the days when he "loomed larger on the American cultural scene than Dr. Eliot's five-foot shelf." He had only to mention he had gone "quietly mad" over a book to have the stores and libraries deluged with requests for it. Among those he plugged especially hard were Hilton's *Good-bye, Mr. Chips* and Woollcott's *While Rome Burns* (1934).

This book of his was a collection of his writings, many of them from his "Shouts and Murmurs" column in the *New Yorker*, full of odd, unexpected facts, full of the japes and witticisms of his friends. It sold 290,000 copies. It was followed in 1935 by the *Woollcott Reader* and in 1937 by *Woollcott's Second Reader*, best-selling collections of the writings Woollcott liked best. Only the critics were captious. One pointed out that the *Readers* reveal "Woollcott's chief reasons for reading: a good laugh or a good cry," and Louis Kronenberger called them "second-rate taste at its most formidable and deceptive, tricked out in its Sunday best, beckoning and easy to take." He objected, especially, to Woollcott's critical dicta, to phrases as overwhelming as "the most moving and uplifting tale ever told in the English language," or "as simple and modest and perfect as a Vermeer." To others these judgments were merely characteristic of Woollcott's greatest glory—his refusal to hedge, a refusal he once expressed in what John Mason Brown feels will be his rightful epitaph. "Whenever wishing to say that *Ethan Frome* was the best short story ever written by an American or that *The Greek Commonwealth* was the best historical work ever written anywhere, he never sneaked in a 'probably' or a 'perhaps' under the delusion that in some way it would give him a judicious air or a suggestion of profundity." And there was public recognition of the success of this technique when Archibald MacLeish, Librarian of Congress, appointed Woollcott special counselor to the library to recommend titles for the fiction shelves outside the door of the President's study.

During the days of radio and editing Woollcott hadn't forsaken the stage. His first play, *The Channel Road*, based on De Maupassant and written in collaboration with George S. Kaufman, had been staged in 1929. The critics gleefully fell upon it and tore it to shreds—the kindest thing they said was that it had "fine writing, the sort of fine writing that turns into lead in the theatre." This ran about four weeks, and that was about the length of the run of his second play, *The Dark Tower* (1933), also written with Kaufman. Woollcott likewise graced the stage in these years as an actor. In November 1931 he appeared in S. M. Behrman's *Brief Moment*, and spent his evenings lolling around on a sofa and insulting people. Everybody loved it, and they loved it when he did much the same sort of thing again in Behrman's *Wine of Choice* in 1938. They still loved it when he did it again in *The Man Who Came to Dinner*, a role which he quit in the fall of 1941 to go to England, "crossing the perilous seas at the age of 55, carrying a box of chocolates for Lady Astor." Once there, he returned to the air for CBS, broadcasting to America "tales of humble guts," tales of human interest "with the familiar Woollcott graces, the cheerfully dry eye, the careful throb." He came back to the United States in November, after talking to most of England, with plans for a book and a quotation from himself that had charmed the British: "There'll always be an England, now that Averell's here."

Each stage appearance meant that Woollcott's very elaborate schedule of living became even more complicated. Usually he lays out his engagements at least a month in advance, and when he is in New York his calendar "is as precisely calculated as a dentist's." His hundreds of friends drop in whenever he sends for them, to be treated to splendid luncheons (Woollcott himself had to leave the Coast

WOOLLCOTT, ALEXANDER—*Cont.*

company of *The Man Who Came to Dinner* after a meal of snails, rice balls, bisque of clam, baby squid with sauce à la Genoise, saddle of lamb, fondue of truffles, cress salad) and splendid talk and/or invective. A bachelor who never even came close to getting married, he is a terrific matchmaker who does his best to inveigle his friends into matrimony. When he is not receiving, as often as not he is indulging in his voluminous correspondence, writing letters like that he sent to the headmistress of a school who had received his name as a recommendation for a prospective pupil: "I implore you to accept this unfortunate child and remove her from her shocking environment." And wherever he is, this littérateur—who, with his beaked nose, tight mouth, negligible mustache and thick glasses all closely grouped together, reminds Wolcott Gibbs of Tarkington's description of someone else: "Her face is sort of small but the other parts of her head terribly wide"—always makes himself completely at home. In March 1941, when *The Man Who Came to Dinner* was being performed in Washington, Woollcott stayed at the White House and nearly took over the place. When Mrs. Roosevelt returned there after a trip, he greeted her affably enough, however. "Come right in, Mrs. Roosevelt," he said.

WRIGHT, FRANK LLOYD June 8, 1869- Architect

Address: h. "Taliesin," Spring Green, Wis.

Frank Lloyd Wright is "regarded by many as the greatest architect of the twentieth century and is conceded even by skeptics to have one of the most restless and imaginative minds the art of architecture has ever known." Countries as remote as Holland and Japan count him a major force in the development of their contemporary styles; 31 states in this country contain his work; and there is no state which doesn't have buildings dominated by his influence. At 71 Frank Lloyd Wright is a living "old master."

From November 13, 1940 to January 5, 1941 the Museum of Modern Art in New York presented *Frank Lloyd Wright, American Architect,* a comprehensive exhibition of his work which, according to *Time*, "recorded as exciting a body of architectural thinking as has come from the brain of anyone since Michelangelo." In the exhibition, the first in this country to attempt to show the entire range of his career, were shown 18 models of skyscrapers, factory buildings, houses; of a farm, a bridge, a filling station, all made with the utmost attention to detail. Drawings and architectural plans, large black and white photographs and color transparencies, together with the models, demonstrated the remarkable diversity of Wright's work.

There were shown "Fallingwater," the house built over a waterfall at Bear Run, Pennsylvania; the great hotel Wright built in Tokyo in 1916; a permanent desert camp built of stone, wood and canvas; concrete block houses in California; the Johnson Wax factory at Racine, Wisconsin; and his model of "Broadacres," Wright's answer to the problem of living in a machine and city age, based on his belief that "concentration of population is murder—whether in peace time or war." From all of these emerge the basic ideas of his architecture—modern, functional, often startling, designed to fit into its surroundings and answer the purpose for which it is built. For Frank Lloyd Wright any materials are right: "Stick, stone, steel. Pottery, concrete, glass. Yes, pulp, too, as well as pigment." Any design is right if it fills its purpose. "Consistency? It is seldom the word for the imaginative mind in action."

Frank Lloyd Wright is the grandson of a Welsh hatter and preacher who settled in Spring Valley, Wisconsin and raised a big family of farmers, preachers and schoolteachers. His father, William Russell Cary Wright, was a New England preacher who studied medicine, preached in a Baptist Church in Connecticut and a Unitarian one in the Midwest, taught music, read Sanscrit and finally walked out on his family. His mother, Anna Lloyd (Jones) Wright, brought him up, encouraged him in his work and taught him that "simplicity of heart is just as necessary for an architect as for a farmer or a minister, if the architect is going to build great buildings."

After a youth spent in Richland Center, Wisconsin, where he was born on June 8, 1869, and in Madison, where his uncle had a farm, Frank Lloyd Wright entered the University of Wisconsin in 1884. He wanted to study architecture, but there was no school of architecture. The nearest thing to it the University had was engineering, and for three years, three years of work and poverty, he kept at engineering. In 1887 he gave it up and set out for Chicago with $7 in his pocket.

In Chicago he got himself a job as a draftsman in an architect's office for $8 a week. One year later he was working for

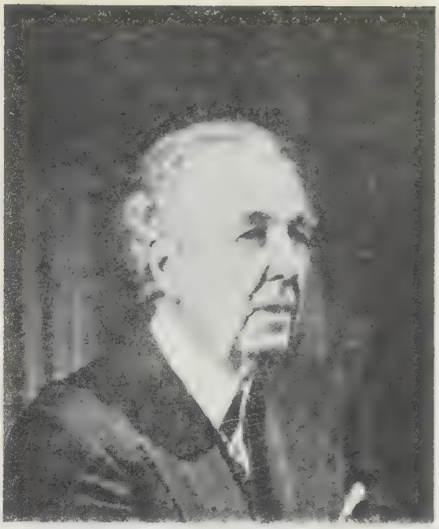
Adler and Sullivan, one of the largest architectural firms in Chicago and the best place in the world to learn architecture as a modern practical progression. Louis Sullivan hated sham; he hated the falsity of the architecture then popular; and in his office Wright learned much. Since Sullivan was interested mainly in building skyscrapers he gave Wright most of the domestic work which came to the firm, and Wright built many houses. By this time he was married to Catherine Lee. His family was growing and, never very provident, his debts began to mount up. On the side he started to execute a few small commissions for houses. When Sullivan discovered this he broke their contract and Wright was on his own. In 1894 he opened his office.

Immediately Wright began to develop a new kind of residence instead of the gloomy ill-proportioned and badly planned Victorian house then in vogue. His compositions, known as "Prairie houses," were low and extended, without attics, with their roofs low-pitched and gardens and terraces made part of the composition. The first dwellings to "break the hold on American builders' minds of centuries of pastward routine," they weren't liked at first—conservatives shuddered at them—but it wasn't long before the attractiveness of their spaciousness was recognized. In 20 years after he left Sullivan, Wright designed and built in the Midwest nearly 100 houses "for which no precedent existed anywhere."

In 1905 Wright designed the first office building in the United States (in Buffalo, New York) to use metal-bound, plate glass doors and windows, all metal furniture, air conditioning, magnesite as an architectural material. The next year he went on a trip to Japan and on his return asked his wife for a divorce. She refused to grant it (there were six children), and Wright left her to go to Tuscany to live.

In 1911 Wright was back in the United States, his first job the building of "Taliesin" ("shining brow" in Welsh), a large farm home in Spring Green, Wisconsin. Two years later this was burned to the ground, but Wright had rebuilt it by 1915. Shortly after, he left for Japan with a commission to build the Imperial Hotel in Tokyo, a difficult engineering problem, for the building had to be made to withstand earthquakes. Wright built a flexible building with structurally independent parts on a cushion of soft mud, and when the great earthquake of 1923 demolished most of the city the Imperial Hotel was still standing.

Back in America, Miriam Noel, the second Mrs. Wright, left him, and in 1928 he was married again to Olga Lazovich of Montenegro after a bitter period of law suits, publicity and poverty and, after "Taliesin" had burned down again and been rebuilt. When the hue and cry died down Wright began to do more and more teaching, writing and lecturing and less building, for although the Paris Exposition of 1925 had given his work a great world impetus, he was not yet fashionable throughout this country. In 1930 he was still ignored by conventional architects, not invited to take part in the Chicago World's Fair, though he had clients.



FRANK LLOYD WRIGHT

In 1931, however, with the publication of a series of lectures he had delivered at Princeton, entitled *Modern Architecture,* Wright's influence began to be more widely felt, until in 1938 an entire issue of the *Architectural Forum* was devoted to his work and in 1941 King George of England awarded him the Royal Gold Medal for Architecture. Meanwhile he had set up "Taliesin" as a workshop, farm and studio for apprentices, where some 50 disciples now work in the fields, do construction work and engage in musical and theatrical activities in buildings that seem to grow naturally and inevitably out of their surroundings.

In his autobiography published in 1932 Frank Lloyd Wright told of his years of work and living—in it he "combined magnificent self-revelation with the most stimulating discussion of architecture ever heard in the United States." From it one learns that Wright is not only responsible for engineering feats such as new concrete blocks, mushroom pillars, cantilevers, new lighting facilities, but that he believes that the spirit behind what is built is what matters. To him architecture is "the Idea of the thing—made to sing to heaven." In him is the belief that "man takes a positive hand in creation whenever he puts a building upon the earth beneath the sun."

At 71 Wright is still in the vanguard. At 71 he continues to make significant designs, secure in his knowledge that though his work has been called "crack-brained, impractical, expensive," no building of his has ever cracked or buckled through faulty engineering. His latest designs, like his earliest, have caused consternation. In 1940 he produced a revolutionary plan for what he called the "first completely functional church," in Kansas City, air conditioned, with pillars of light

WRIGHT, FRANK LLOYD—*Continued*

instead of a tower, and a triple-decker parking space as an integral part—"it is immoral and unethical to build a structure without providing for the traffic it will attract," he convinced the church board. He is also working on a commission for a 25-towered copper and crystal streamlined apartment development in Washington which will cost about $15,000,000 and fill 10 acres with apartment houses, a hotel, a garage and a motion picture theatre.

Frank Lloyd Wright is a small, white-haired, dapper man, immaculate in appearance. Today, as always, he is vocally and unbashfully proud of his work, proud of his books—*Modern Architecture,* (1930); *Disappearing City,* (1932); *Organic Architecture,* (1940); *Frank Lloyd Wright on Architecture* (1941). Yet when one sees his buildings or the Museum of Modern Art show, it doesn't sound like boasting to hear him say, "I have been told that I am the only American who has contributed to the culture of Europe," or to hear him describe the Imperial Hotel in the Tokyo earthquake "somewhat as an angler might describe a very large fish."

WYATT, JOHN WHITLOW (wī'ăt) Sept. 27, 1908- Major-league baseball pitcher
Address: 615 Gibson St, Cedartown, Ga.

European war and national politics took a back seat in the borough of Brooklyn in September 1941. For the first time in some 20 years the Brooklyn Dodgers, after a season-long nip-and-tuck with the St. Louis Cardinals, finally came home with a National League pennant. Brooklyn went berserk, the clamor lasting for days; newspapers rhapsodized and educators solemnly talked of a Brooklyn cultural renaissance.

Next month the bottom dropped out of the borough's brief delirium when "Dem Bums," to use the affectionate Brooklynese, lost the World Series to the New York Yankees. Solace to their defeat, however, was the fact that the Dodgers had been the only team to snatch a World Series game from the well-nigh invincible Yankees since 1927. The man who deserves much of the credit for this lone victory is tall, rangy, partially-bald John Whitlow Wyatt, whom most Brooklynites call "Whit."

"A Southern soldier of misfortune," Wyatt, who throws and bats righthanded, served a fantastically checkered apprenticeship in baseball, shuttling back and forth between the big leagues and the minor leagues for 14 years, stalked by a series of accidents disheartening enough to destroy a dozen careers. Not until he suddenly began to register marked pitching control did he stabilize his position in the big leagues. This was when he had reached his 30's, an age when most players have retired or have passed their peak.

The son of an engineer, Wyatt was born on September 27, 1908 at Kensington, Georgia, near the Civil War battlefield of Chickamaugua Creek. His family tree boasts of many who fought the Yankees, namesakes of Wyatt's non-military adversaries. He was no baseball wizard in his youth, yet his style caught the eye of a Detroit American League scout named Ed Goosetree, who had come to look over one of Whit's classmates at the Cedartown High School. Basketball and football were Wyatt's games and his prowess earned him a grid scholarship to the Georgia School of Technology. Fearing the loss of baseball material, Goosetree offered Wyatt a contract whereby the Detroit team would pay for his tuition, provided he refrained from playing football. Whit accepted, but in two months he left college to devote himself to baseball.

In the summer of 1927 Wyatt pitched for a hosiery mill team in Tennessee and the next year Detroit assigned him to Evansville in the Three-I League, where he won 14 games and lost 12 during his first season. During his second he won 22 and lost six, giving up a total of only 86 earned runs in 255 innings. Convinced he was ready for his big-time debut, the Detroit manager placed him on the pitching staff in 1929. In his new berth Wyatt was surprisingly unimpressive. After serving through 1930 and part of 1931, he was demoted to Beaumont in the Texas League.

Back in the minors, Wyatt reverted to type by promptly winning 11 games and dropping three and gaining a run average of only 1.53 a game. He was reclaimed by the Tigers in the following year and exchanged in May 1933 for Vic Frasier, a pitcher, of the Chicago White Sox.

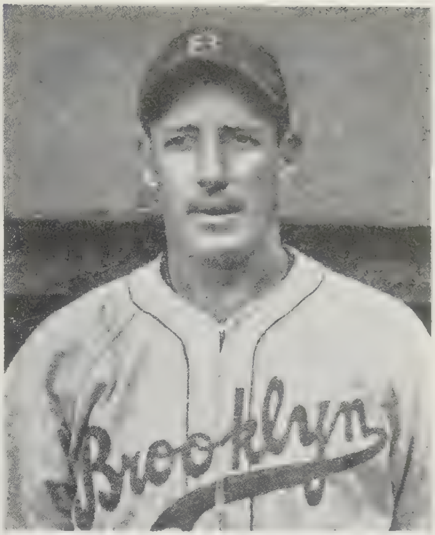
On June 13, 1933 Wyatt was robbed of baseball immortality in the last moments of a game against the St. Louis Browns. Ted Gullic singled in the ninth inning, simultaneously breaking his bat and Wyatt's no-hit record for the game. This happened again in 1941 when Phil Masi of the Boston Braves also singled in the ninth inning to deprive Wyatt of a hitless record.

Wyatt's occupational mishaps are legion; one of the most serious occurred while he was with Chicago. He was forced to undergo an operation in which 14 bone chips were removed from his elbow. Although he remained with the club for two seasons, his efficiency was far below par and eventually he was sent to Kansas City. Here Whit caught his stride again, winning twelve games and sustaining seven defeats and, incidentally, attracting the attention of the Cleveland Indians' scout. His tenure with Cleveland, following the usual pattern, was brief. Some say wildness accounted for this; others, that Cleveland was anxious to take back Ken Keltner, an ex-Indian who was now serving with Milwaukee.

Another factor accounting for the trade was a spell of typical Wyatt hard luck. Hailed from the bull pen in the eighth inning of a tied game with the Yankees, Wyatt was required to smother a sudden rally which had filled two bases. While Wyatt was in the midst of a windup, Ben Chapman of the Yankees stole home from third, scoring the decisive run. Infuriated, Manager Steve O'Neill was doubly receptive to a deal exiling Wyatt to the minors.

Unaccountably, Harry Bendinger, the Milwaukee manager, had an idea that Wyatt, notwithstanding his ups and downs, would yet yield "pay dirt." Wyatt himself didn't think so and in 1928 he was so thoroughly discouraged that he had already written a figurative "finis" on his baseball career and had retired to his 700-acre cotton plantation near Buchanan, Georgia. Earlier, his pitching arm had suddenly gone numb while he was on the mound facing Babe Ruth, and the ball had slithered off to an impotent angle. Bendinger's long-distance call, however, brought an offer of a contract whereby Whit would get 15 per cent of his purchase price if a major-league team bought him at the end of the year.

"I've already been turned down by two major leagues," snorted the embittered Whit. "Who'd buy me? I'm through. I'll sign, but I want a straight contract." This reply eventually cost Whit $5,500, for it turned out he had underestimated himself. Every time Wyatt hit the minor leagues he seemed to bounce back with renewed confidence, and his season with Milwaukee was no exception; he won twenty-three games, lost seven, led the American Association for strike-outs and hurled 10 shutouts. This qualified him as the outstanding pitcher in the minor leagues. As a result his fame spread to Larry MacPhail, shrewd president of the Brooklyn Dodgers. MacPhail, no gambler, watched Wyatt in action, then decided to buy him.



JOHN WHITLOW WYATT

This was one of MacPhail's few flyers, for Wyatt was still a highly uncertain commodity. He reportedly paid something like $30,000. The investment brought gratifying dividends. Wyatt's comeback was assured but his troubles were far from over. In his first year as a Dodger he collided with Lonnie Frey of Cincinnati and suffered a shattered knee cap. An operation was followed by a 42-day hospital sojourn during which his leg was bundled in a cast.

Returning to the mound, Wyatt hobbled through the following season, still bothered by the pain. Meanwhile he developed one of his most valuable assets, a "slider" ball that is virtually unbuntable. He won 15 games and lost 14. In 1941 he garnered 22 and dropped 11. He is a cagey and persevering moundsman whose armory contains a baffling slow ball, a speed curve and a cool head in a crisis. During a game he seems to get better as he goes along, apparently withholding great reserves of power until the final innings.

Wyatt winters on his Georgia farm. Here he first met Edna Elizabeth White, whom he married on February 4, 1933. There are two young children, Barbara Jane and Whitlow, Jr. For exercise Whit likes to work on the farm, go hunting and fishing and play golf. He is one of the most likable players in any ball club, popular alike with players and fans.

ZANUCK, DARRYL F(RANCIS) (zăn'-ŭk) Sept. 5, 1902- Motion picture producer
Address: b. 20th Century-Fox Film Corp, Beverly Hills, Calif; h. 546 Ocean Front, Santa Monica, Calif.

Hollywood is divided into two camps on the subject of Darryl Zanuck: "those who think he is a genius and those who think he is a menace." The year 1941 gave both sides a chance to revise or confirm their convictions, for that was the year in which new policies were inaugurated at 20th Century-Fox, of which Zanuck is vice-president in charge of production.

In January 1941 the company finished its most disastrous year since it was started, with a net loss of more than one-half million dollars. Part of this was due to the loss of European markets; part to flops like *Brigham Young, The Blue Bird, Little Old New York.* And this last, some whispered, could be traced to Zanuck's strongly centralized hold over 20th Century-Fox. True or not, after April 1941 drastic moves toward decentralization were made: there were to be three new producers who would pick and cast their own stories; Zanuck himself, whose contract has been renewed until 1943, was to concentrate on only eight out of twenty-four pictures that year.

This may have meant a change in opinion about Zanuck's genius. It certainly meant a change from the "kind of combination army post and metropolitan newspaper office" that Zanuck has perfected at 20th Century-Fox. Up to this time he has been producing 25 class-A pictures a year, and as much as 90 per cent of each picture as it appears on the screen is usually Zanuck's own work. When he produces a film, he works on the story, holding as many as two conferences a day, in them ad libbing dialogue, acting out parts, directing scenes, producing whole sequences at top speed; then he okays the casting, supervises the costuming and scenery, looks over the daily rushes, cuts the finished film foot by foot—does everything but act in it himself. People under him are consulted (he is the producer who once told an executive, "For God's sake don't say yes until I finish talking"), and they are given details to carry out. But the initiative and responsibility for the entire output of 20th Century-Fox have, until now, been Zanuck's.

This producer, who has been a "wonder boy" for so many years, started his career in the motion pictures much younger than most. He was born in Wahoo, Nebraska, where his father, Frank Zanuck, owned and operated the Grand Hotel. At eight he was taken by his mother, Louise (Torpin) Zanuck, to Los Angeles and placed in the Page Military Academy while she tried to regain her health. He did go to school occasionally; much of the time he was playing hooky to work as an extra on the old Essanay lot in Glendale. When his mother discovered his film career she determinedly cut it short by shipping him back to Nebraska and warning him to study faithfully.

He heeded her warning only until he reached the eighth grade, and fellow workers now nod understandingly when they hear him saying things like "more time for betterment and correctment" or uttering Goldwynisms without the accent. At the age of 14, prompted by "a love of firearms and itch to travel," he enlisted in the Sixth Nebraska Infantry and went down to the Mexican border. From Mexico he went to France, where he served with the 163rd Division of the A. E. F., acted as runner, saw front-line service for nearly a year and boxed in the bantam class. He was mustered out in 1920, still a private. He had, however, already determined on his career. Some letters to his grandfather in Nebraska about life in the A. E. F. had been printed in the local papers and some of them had even been reprinted in the *Stars and Stripes.* Zanuck knew he was going to be a writer.

He began to write furiously—two stories a week. And after a year of this, success came when he sold *Mad Desire* to *Physical Culture* Magazine. He immediately set out for Hollywood, "a slender youth with buck teeth, a hope-chest mustache and a Nebraska accent," sent in a card to William Russell, then acting for Fox Films, and sold him an original story. When he learned that the man who adapted his story got almost three times as much money as he had, he became an adapter and filled in his next opus with technical terms like close-up and fade-in. For the next couple of years he did a brisk business in both originals and adaptations.

Then, in 1923, the tide receded. The studios decided that big names were necessary, proceeded to corner all the important authors they could line up and let the unimportant ones go. Zanuck found himself catching rivets in a San Pedro shipyard, organizing the Darryl Poster Service and selling hair tonic. It was this last occupation that got him back into the motion picture business, for he persuaded the manufacturer to pay for the printing of his book, *Habit and Other Short Stories* (1923). It contained one short story, two rejected scenarios and a one hundred-page hair tonic testimonial, more or less disguised. It was an impressive work in which "Zanuck's characters never looked at things when they might as well rivet jet orbs on them. They never walked through doors when they might as well stride through portals."

And Zanuck sold it, piece by piece, to the film studios: the story, the two rejected scenarios and the hair tonic ad. He got $11,000 for the lot. He also got himself a job. A steady income was useful now that he was married to Virginia Fox, whom he had met on a blind date. She gave up her career as leading lady for Buster Keaton to settle down, raise a family of three children and act as guinea pig for her husband's work. "She has the attitude of a typical movie fan from Omaha," Zanuck says proudly.

For a while Zanuck was scenario editor to Mack Sennett until he was hired by the Fox Film Corporation. After a year in which he wrote almost one picture a week, he was taken over in 1924 by Warners at $150 a week to do scripts for *Rin Tin Tin.* He soon established himself as "the greatest dog-script writer in history." At the same time he was learning how to cut, direct and produce pictures, so thoroughly that by 1927 he had been given his own production unit with a share of the profits. That was the year in which he made the *Jazz Singer* with Al Jolson, the first full-length talkie, and *Noah's Ark,* the first and biggest catastrophe of his career. By 1929 he was Warner's general production chief; by 1931 chief executive in charge of all the productions of the combined Warner and First National Companies.

He had already made a reputation for plucking sensational drama out of the day's news. First there was gang warfare pure and simple—*Doorway to Hell, Little Caesar* and others. Then, when the trend he started was beginning to fade out, there came gang warfare enlivened and heightened by the magnificent stroke of having a man sock a woman—*Public Enemy.* "Every other underworld picture has had a thug with a little bit of good in him," Zanuck explained. "He reforms before the fade-out. This guy is no good at all. It'll go big." It did. So did his *I Am a Fugitive from a Chain Gang,* another example of moving picture journalism in which every box-office rule was violated: the boy didn't get the girl, the fugitive remained a fugitive, the ending was tragic.

DARRYL F. ZANUCK

It was a success and, like most of the other films he produced, it had been cheap to make. Zanuck wasn't content, though, merely to stick to the day's news. He started the musical film cycle with *42nd Street* and a series on the problems of the working girl with *The Office Wife.* And then, after he had made hundreds of pictures for them, he quit Warner Brothers in 1933 on 24 hours' notice, tearing up a $5,000-a-week contract. His reason was that the company had failed to restore a 50 per cent pay cut to the employees two weeks after the date it had been promised.

He went over to United Artists, where independent producers work independently and market their pictures through a cooperative sales organization, and with the help of Joseph Schenck he set up 20th Century Pictures. Schenck, the president of United Artists, became president of the new company and Zanuck its vice-president. Zanuck's first picture was *The Bowery;* shortly after, announcing that the front-page news was dead as a source for films, he started the biographical cycle with *The House of Rothschild,* starring George Arliss. He had taken Arliss over from his former employers along with Constance Bennett, Loretta Young and other stars.

This success was followed by *Lloyds of London* and other historical films, as well as by pictures which retained much of his former melodramatic verve. By May 1935 Zanuck had completed eighteen pictures, of which only one, *Born To Be Bad,* was a failure. His company was flourishing. One month later it had been withdrawn from United Artists and merged with debt-laden Fox Films. Schenck, who had resigned from the head of United

ZANUCK, DARRYL F.—*Continued*

Artists, was to be chairman; Zanuck was to be a vice-president at $260,000 a year. Hollywood was skeptical. Yet after Zanuck had thrown out most of the Fox scripts, stopped shooting on others, installed his own production manager, re-inventoried studio properties, cut down the payroll ten thousand dollars a week and really set to work, the company of 20th Century-Fox showed a profit of three and one-half millions the first year, sixteen million the next two.

Zanuck continued in the new firm his old attitude toward the making of films. "I believe in gearing up a studio to produce pictures for today's audience and not for the Smithsonian Institution," he once said. "A motion picture lives three months at most. There is no use pretending we are making pictures for the ages." Polish to him is unimportant; if the entertainment is strong enough the flaws won't be noticed. And four weeks, he feels, is shooting time enough for an average picture. That this policy works seems to be demonstrated by hits like *Alexander's Ragtime Band, In Old Chicago, Jesse James* and *The Great American Broadcast* and by his winning the Irving G. Thalberg Memorial Award for "the most consistent high quality of production achievement for 1937." (Later it was his company which produced the honest, realistic *Grapes of Wrath,* which won the New York Film Critics' Award as an outstanding production of 1940.) Even the United States Government was impressed by the record. In the beginning of 1941 he was commissioned a lieutenant colonel of the Signal Corps Reserve with the assignment to produce educational shorts which the War Department is circulating throughout the Army camps. That same year he produced *A Yank in the R. A. F.*

The record, however, hasn't been completely perfect. Although Zanuck has made box-office sensations out of a long list of male actors—Tyrone Power, James Cagney, Henry Fonda, Edward G. Robinson, to mention only a few—his history with women actresses has been less spectacular. Sonja Henie and Alice Faye are his only real triumphs. Shirley Temple, too, is considered a Zanuck failure, for he took her out of cheap pictures to star her in expensive ones, at a loss. In general there have been objections to his handling of stars, accusations that he "puts his brand on them in much the same manner that he put his initials in neon tubing on his former Beverly Hills home."

Also on the debit side, to some, is his complete control over his company's outfit; to even more, there is the evidence of the state of his company's finances as of January 1941. This last may be changed under the new organization. What was more certainly changed were Zanuck's work habits. Until then he had been working from 16 to 18 hours a day, up at 8, at the studio at 10.30, work until 7 p. m.; home for dinner; then back at 8.30 to keep at it until 2 or 3 in the morning. In his lush inner office, decorated with large stuffed heads on the wall, a zebra-skin bench and screen and a dead lion on the floor, and in his home, there are dictaphones all over—and Zanuck dictates into them "on any pretext." With more leisure it is expected that he will spend more time riding, boxing, skiing, playing polo (he is an enthusiast at this sport, in which he has a two-goal rating) and swimming in the small basement pool at the studio, in which lumps of ice are kept floating. Many of the people who know this small, thin, light-haired "jumping jack executive" are skeptical, however. Energy like his, they feel, can never be sublimated in chasing polo balls or shooting tigers, or even in teaching soldiers the fine points of hygiene and warfare. After 20 years in the film business, they warn, Zanuck is still a "wonder boy."

ZILBOORG, GREGORY (zĭl'bo͞org) Dec. 25, 1890- Psychiatrist

Address: b. 14 E. 75th St, New York City; h. 885 Park Ave, New York City

One of the best known (and one of the most versatile) practicing psychiatrists in the United States today is Dr. Gregory Zilboorg. Some of the world's most famous personalities have come to his quietly sumptuous office to be turned inside out. There are few dark corners of the human mind that he hasn't pried into: the meaning of loneliness, the real reasons for suicide, the apparently inexplicable impulses behind certain types of murder. His conclusions on such subjects have not only gone into reports before medical and psychiatric associations and into journals of the profession but also into such magazines as *Harper's,* and they have a way of provoking interest and disagreement. Goebbels (see sketch this issue), for instance, could never read this docilely: "True war spirit cannot be created by propaganda. . . War propaganda is somehow helplessly inefficient when people have enough to eat and when they are not afraid and when they are permitted to be socially angry."

Born in Kiev, Russia on December 25, 1890 (Christmas to the Western world), Gregory Zilboorg was the son of Moses and Anne (Braun) Zilboorg. He was graduated from the Gymnasia in Kiev in 1911 and six years later took his M. D. from the Psychoneurological Institute in what was then St. Petersburg. Even before receiving his degree, however, he had served with the Russian Army from 1915 to 1916 as a physician in a base hospital, and had participated in the first revolution in Russia's capital. When the short-lived Lvov Government came into power in 1917 he became secretary to the Minister of Labor, and he continued in that position under the unfortunate Kerensky. He once called himself an "intellectual revolutionist."

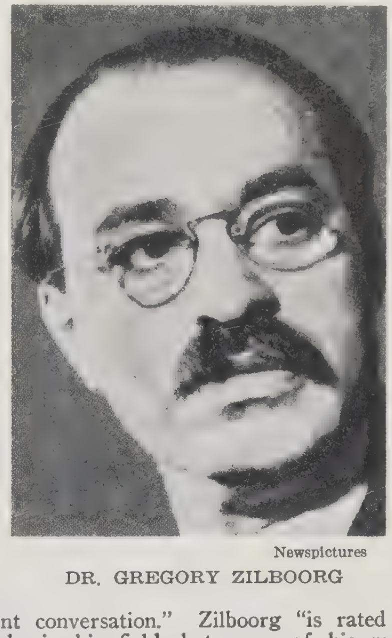
A revolution brings out unexpected talents. From medicine and statesmanship Zilboorg turned effortlessly to journalism, in 1918, and edited a daily paper (*Kiev*) until the Germans occupied South Russia. Forced to leave Russia shortly afterward, he came to the United States in 1919, and in December of that year married Ray Leibow of New York. (There are two children, Gregory and Nancy.) "Lecturing, journalism and the theatre" were his preoccupations for the next seven years. He wrote *The Passing of the Old Order in Europe* (1920); he did translations from the Russian, among them *He Who Gets Slapped,* by Andreev (1921) and *We,* by Zamiatin (1924). But he had never lost his interest in his old love, psychiatry, and by 1926 (the year after he became a United States citizen) he had taken his M. D. from Columbia's College of Physicians and Surgeons and joined the staff of the Bloomingdale Hospital. He remained there for five years, with an interval between 1929 and 1930 as assistant at the Psychoanalytic Institute in Berlin.

Since 1931 Dr. Zilboorg has engaged in private practice in psychiatry and psychoanalysis in New York City. During that time, however, the range of his activities has multiplied, if anything. In 1931 his translation from the German of *The Criminal, the Judge and the Public,* by Alexander and Staub, was published; his translation of *Outline of Clinical Psychoanalysis,* by Fenichel, followed in 1934; in 1935 his own *The Medical Man and the Witch During the Renaissance* appeared. (In that same year he had been Noguchi lecturer on the history of medicine at Johns Hopkins University, and this was a collection of his lectures.)

Articles in his own field published in medical journals around this time reveal a great clinical interest in psychiatric history, in the problems of the parent-child relationship, in the treatment of schizophrenia, in the mentality of the criminal. But an even greater percentage of his writings concerned the problem of suicide: what were the reasons for suicidal tendencies in primitive as well as in modern man, particularly among the young? At the meeting of the American Orthopsychiatric Association in February 1937 Dr. Zilboorg presented some of his conclusions and strongly advocated that a completely new concept of suicide be adopted by his profession. And by 1938 funds had actually been made available (reputedly with the assistance of a wealthy former patient) for setting up a Committee for the Study of Suicide in New York City. Dr. Zilboorg became its secretary and director, and it is expected that the findings of the Committee will be ready for publication soon.

A speech before another annual meeting of the American Orthopsychiatric Association, in February 1939, has not yet produced such concrete results, but may have repercussions in the future. Dr. Zilboorg complained that legal technicalities prevented psychiatrists from studying criminals, and announced that in many cases a murderer might be more socially useful alive than dead; he cited one case in which if the murderer hadn't been executed "he would have presented invaluable material to the psychiatrist" and thus to the courts, which in the future would have to deal with many similar cases.

Dr. Zilboorg is a Freudian who places great emphasis on "instinctual drives" and whose language varies between the smoothly turned, witty phrase and sudden questions like: "What are the creative and what are the disintegrating combinations of this triad: narcissism, megalomania, hostility?" Small, dark, mustached, with thick-lens glasses that lend him a rather enigmatic expression, he looks quite capable of answering them. He is a "minor darling of Manhattan's intellectual cocktail set," which delights in his "waspish wit and fluent conversation." Zilboorg "is rated very highly in his field, but some of his medical colleagues have worked up an intense dislike for him, mainly on two counts: he is unorthodox, and he is phenomenally successful. He has a Whistlerian aptitude in the gentle art of making enemies, evidenced by a bluntness of speech and an outspoken criticism of the work of certain colleagues."



Newspictures

DR. GREGORY ZILBOORG

The medical associations of which he is a member occupy several lines in *Who's Who in America*: among those in which he has held office are the New York Society for Medical History and the Psychoanalytic Society. On

ZILBOORG, GREGORY—*Continued*

November 10, 1941 his *History of Medical Psychology*, written in collaboration with George W. Henry, was brought out by the W. W. Norton Company. It was called by a critic "the best of its kind to appear in English."

ZORINA, VERA (zō-rē'nä) Jan. 2, 1917- Dancer

Address: b. c/o Louis Shurr, 1501 Broadway, New York City; h. 120 East End Ave, New York City

"You'll have to change your name," Colonel de Basil casually remarked.

"No," answered the girl.

"Yes," said the owner of the Ballet Russe. "Everybody changes the name when joining the Russian Ballet."

The girl ran her finger down the column of suggestions and stopped at the last name. "All right," she said, "this one is the least annoying."

And that's how Vera Zorina was born.

Originally, the 17-year-old ballerina had been Eva Brigitta Hartwig. Born in Berlin, Germany on January 2, 1917, the daughter of Fritz and Bille Wimpel (Mann) Hartwig, she was educated in Paris, London and Venice—wherever she happened to be dancing. But Kristiansund, Norway, where her family came from and where she spent her summers as a child, is still her "home town."

On her sixth birthday Brigitta was presented with her first pair of ballet slippers. These she wore constantly in the daytime and was discovered taking them to bed with her. At the age of eight she arranged her first contract—to dance every afternoon in the amusement park of a German spa. As a pupil of Edourdova's, Brigitta went to school in the morning, danced in the afternoon and did her homework in the evening.

After her father's swift and tragic death, the 11-year-old girl turned her whole attention to her career. In Paris she studied under Preobrajeuska and danced publicly whenever she could find an opportunity. From France Brigitta and her mother went to London, where Nicholas Légat became her coach—the same Légat who trained Pavlowa and Nijinsky.

Kristiansund was the scene of her first stage appearance—as a butterfly in a Flower Ballet in December 1923. When she was only 14, Brigitta became the partner of Anton Dolin. With him she danced in Max Reinhardt's *Midsummer Night's Dream* (1929) and *Tales of Hoffman* (1931). A tour of Europe followed during which she was given a chance to dance with Serge Lifar in Venice.

It was during her engagement in *Ballerina* at the Gaiety Theatre, London, in October 1933 that Brigitta was "discovered" by Colonel de Basil and Léonide Massine of the Ballet Russe. After the dancing equivalent of an audition, Brigitta joined the Russian Ballet and, much against her will, became Vera Zorina.

She hoped that the name might be only temporary, but there was much comment in the papers, and "Zorina" stuck. With the company the ballerina appeared at the Metropolitan Opera House in 1934 and at Covent Garden in 1935 and 1936.

Zorina claims that it wasn't until Massine taught her how to interpret painting in terms of dancing and vice versa that she began to get what she had been reaching for. It was then she realized that she must understand painting, music, good writing and dancing in order to get anywhere in any one of them.

After a transcontinental tour of the United States, Zorina returned to England with the Ballet Russe, fully intending to remain in the company. It was there that she met Dwight Deere Wiman, who was producing the English version of *On Your Toes*. Given an audition, Zorina amazed the producer by reading lines from a seduction scene with "level directness and an instinct for humor." Nothing of the usual ballet-actress technique was present in Zorina's interpretation. She got the part of Vera Baranova, which she played at the Palace Theatre, London, in February 1937 and at the Coliseum in April of the same year.

While the dancer was still in London, Sam Goldwyn, Hollywood producer, gave her a part in his new *Follies* without first taking any screen tests of her. Afterward he cabled for shots of "what he had bought." The result was that the small dancing bit Zorina was first scheduled to do was changed to a starred acting role running through the whole picture. Later she had the lead in the movie version of *On Your Toes*.

Director of her dances in the *Goldwyn Follies* was talented George Balanchine, whom Zorina married at Staten Island, New York on Christmas Eve 1938. Today Balanchine keeps her limber with daily lessons and insists that she practice at least one hour before each performance.

New Yorkers got their first glimpse of the Norwegian star on the stage of the Shubert Theatre, where she opened May 11, 1938 as Angel in *I Married An Angel*. In the fall of 1940 *Louisiana Purchase* opened. In it the 23-year-old star was able to "burn them up with a torch dance that combines trucking, ballet turns and conga steps." In the fall of 1941 the musical comedy was taken on tour.

Zorina's face has been described as "the one most of our illustrators have been looking for—oval, pale ivory, framed in a long bob of dark blond hair; slightly humorous, long, gray eyes; high cheekbones; a practically perfect nose and a generous, well-shaped mouth." Her appearance is enhanced by her carefully chosen clothes which made her, in 1941, according to the Fashion Academy, one of America's 13 best-dressed women.

When she isn't dancing, Zorina likes drawing, driving, reading and sleeping. She skis and swims beautifully but does not care for games like golf and tennis. Her pet hates include Brussels sprouts, cigars, small rooms, starched white collars, shopping and bluish lipstick. To keep her ankles slim, Vera Zorina usually wears low-heeled shoes. She never diets, but she likes to breakfast on grapefruit and coffee, lunch on salad, grapefruit and an occasional hamburger. Her main superstition is rain: she insists that it brings good luck on the opening night of a new show. But a checkered horse is good luck, too. Late in 1941 she was looking around for one, because she wanted to be chosen as Maria in the film version of *For Whom The Bell Tolls,* a part for which she had just been tested.

The ballerina has been described as "the hottest musical comedy hit in a decade" and credited with "shaking the mothballs out of the ballet and dancing it back to nationwide popularity. From the old fashioned leaps, pirouettes, and toe stands which used to delight czars and princesses, Zorina has developed a style of hot ballet that thrills Americans."
